9.3E.6.2 Event-triggered Periodic Reporting

For 2Rx RedCap UE, reported SS-RSRP, SS-RSRQ, and SS-SINR measurements contained in event triggered periodic measurement reports shall meet the requirements in clauses 10.1.4D, 10.1.9D and 10.1.14D, respectively, and

For 1Rx RedCap UE, reported SS-RSRP, SS-RSRQ, and SS-SINR measurements contained in event triggered periodic measurement reports shall meet the requirements in clauses 10.1.4D, 10.1.9D and 10.1.14D, respectively, and

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.3E.6.3.

9.3E.6.3 Event-triggered Reporting

The requirements in clause 9.3C.6.3 shall apply except that

For 2Rx Redcap UE, reported SS-RSRP, SS-RSRQ, and SS-SINR measurements contained in event triggered measurement reports shall meet the requirements in clauses 10.1.4D, 10.1.9D and 10.1.14D, respectively, and

For 1Rx Redcap UE, reported SS-RSRP, SS-RSRQ, and SS-SINR measurements contained in event triggered measurement reports shall meet the requirements in clauses 10.1.4D, 10.1.9D and 10.1.14D, respectively, and

- clause 9.3C.4 is replaced with clause 9.3E.4, and
- clause 9.3C.7 is replaced with clause 9.3E.7.

9.3E.7 Inter-frequency measurements without measurement gaps

9.3E.7.1 Inter-frequency Cell identification

The requirements in clause 9.3C.7.1 shall apply except that:

- T_{PSS/SSS_sync_inter}: it is the time period used in PSS/SSS detection given in table 9.3C.7.1-1 for 2Rx RedCap UE and table 9.3E.7.1-1 for 1Rx RedCap UE, and
- $T_{SSB_time_index_inter}$: it is the time period used to acquire the index of the SSB being measured given in table 9.3C.7.1-2 for 2Rx RedCap UE and table 9.3E.7.1-2 for 1Rx RedCap UE, and
- $T_{SSB_measurement_period_inter}$: equal to a measurement period of SSB based measurement given in table 9.3C.7.2-1 for 2Rx RedCap UE and table 9.3E.7.2-1 for 1Rx RedCap UE, and
- $CSSF_{inter}$: it is a carrier specific scaling factor and is determined according to $CSSF_{outside_gap,i}$ in clause 9.1A.5.1, and
- K_p is the scaling factor for a SSB frequency layer to be measured without measurement gaps. $K_p = N_{total_SAN} / N_{available_SAN}$, where $N_{available_SAN}$ and N_{total_SAN} are calculated as follows:
  - For a window W of duration max(SMTC period, MGRP_max), where
    - If UE supports *parallelMeasurementGap-r17* and is configured with concurrent measurement gaps, MGRP_max is the maximum MGRP across all configured per-UE measurement gap. Otherwise, MGRP_max is the MGRP of configured measurement gap.
    - Starting from the beginning of any SMTC occasion:
      - N_{total_SAN} is the total number of SMTC occasions within the window, including those overlapped and non-overlapped with measurement gap occasions within the window, and
      - $N_{available_SAN}$ is the number of SMTC occasions within the window W that do not collide with any non-dropped MG occasion within or outside the window W, after accounting for measurement gap collisions by applying the measurement gap collision rule in clause 9.1E.8.3. The collision rule between SMTC occasion and measurement gap occasion is defined in clause 9.1E.9.1.

  $K_p = 1$ when $N_{available_SAN} = 0$ and measurement gap sharing in clause 9.1.2.1a shall apply.

  $K_p = 1$ when inter-frequency SMTC is fully non overlapping with measurement gaps.

Table 9.3E.7.1-1: Time period for PSS/SSS detection, (FR1) for 1Rx RedCap UE

DRX cycle	T_{PSS/SSS_sync_inter}
No DRX	max(600 ms, ceil(7 x K_p) x SMTC period)[Note 1] x $CSSF_{inter} \times K_{satellite}$
DRX cycle≤ 320 ms	max(600 ms, ceil(1.5x 7 x K_p) x max(SMTC period,DRX cycle)[Note 1]) x $CSSF_{inter} \times K_{satellite}$
DRX cycle>320 ms	ceil(7 x K_p) x DRX cycle x $CSSF_{inter} \times K_{satellite}$
NOTE 1: SMTC period is the SMTC period in SMTC configuration which is associated with the target cell to be measured configured in *SSB-MTC4List-r17*.	

Table 9.3E.7.1-2: Time period for time index detection (FR1) for 1Rx RedCap UE

DRX cycle	$T_{SSB_time_index_inter}$
No DRX	max(160 ms, ceil(6 x K_p) x SMTC period)[Note 1] x $CSSF_{inter} \times K_{satellite}$
DRX cycle≤ 320 ms	max(160 ms, ceil (1.5 x 6 x K_p) x max(SMTC period,DRX cycle)) x $CSSF_{inter} \times K_{satellite}$

DRX cycle>320 ms	Ceil(6 x K_p) x DRX cycle x $CSSF_{inter} \times K_{satellite}$
NOTE 1: SMTC period is the SMTC period in SMTC configuration which is associated with the target cell to be measured configured in *SSB-MTC4List-r17*.	

9.3E.7.2 Measurement period

The UE physical layer shall be capable of reporting SS-RSRP, SS-RSRQ and SS-SINR measurements to higher layers with measurement accuracy as specified in clauses 10.1.4D, 10.1.9D and 10.1.14D for 2Rx RedCap UE and clauses 10.1.4D, 10.1.9D and 10.1.14D for 1Rx RedCap UE, respectively, as shown in table 9.3C.7.2-1 for 2Rx RedCap UE and table 9.3E.7.2-1 for 1Rx RedCap UE, if UE supports inter-frequency measurement without measurement gaps.

Table 9.3E.7.2-1: Measurement period for inter-frequency measurements without gaps (FR1) for 1Rx RedCap UE

DRX cycle	$T_{SSB_measurement_period_inter}$
No DRX	max(200ms, ceil(5 x K_p) x SMTC period)[Note 1] x $CSSF_{inter} \times K_{satellite}$
DRX cycle≤ 320 ms	max(200ms, ceil(1.5x 5 x K_p) x max(SMTC period,DRX cycle)[Note 1]) x $CSSF_{inter} \times K_{satellite}$
DRX cycle>320 ms	ceil(5 x K_p) x DRX cycle x $CSSF_{inter} \times K_{satellite}$
NOTE 1: SMTC period is the SMTC period in SMTC configuration which is associated with the target cell to be measured configured in *SSB-MTC4List-r17*.	

9.3E.7.3 Scheduling availability of UE during inter-frequency measurements

The requirements in clause 9.3C.7.3 shall apply.

9.3E.7.3.1 Scheduling availability of UE performing measurements with a different subcarrier spacing than PDSCH/PDCCH on FR1

The requirements in clause 9.3C.7.3.1 shall apply.

9.3E.7.3.2 Scheduling availability of UE performing measurements in HD-FDD bands on FR1

When UE performs inter-frequency measurements without measurement gaps in a HD-FDD band, the following restrictions apply due to SS-RSRP or SS-SINR measurement

- UE is not expected to transmit PUCCH/PUSCH/SRS on all symbols within SMTC window duration.

When UE performs inter-frequency measurements without measurement gaps in a HD-FDD band, the following restrictions apply due to SS-RSRQ measurement

- UE is not expected to transmit PUCCH/PUSCH/SRS on all symbols within SMTC window duration.

9.4 Inter-RAT measurements

9.4.1 Introduction

The requirements in this clause are specified for NR−E-UTRAN FDD and NR−E-UTRAN TDD measurements and are applicable without an explicit E-UTRAN neighbour cell list containing physical layer cell identities, for a UE:

- in RRC_CONNECTED state, and
- configured
  - with SA or NR-DC operation mode or configured in NE-DC operation mode by PCell with NR−E-UTRAN FDD or TDD measurement (RSRP, RSRQ, RS-SINR, RSTD, or E-CID RSRP and RSRQ) on E-UTRA non-serving frequency carrier, or

- with SA operation mode on NR carrier frequencies with CCA by PCell with NR–E-UTRAN FDD or TDD measurement (RSRP, RSRQ, RS-SINR) on E-UTRA non-serving frequency carrier, and

- configured with an appropriate measurement gap pattern according to table 9.1.2-3.

The requirements in this clause for concurrent measurement gaps are only applied for UE in NR SA operation mode.

For UE supporting *eutra-NeedForGapNCSG-reporting-r17* and indicating *NeedForGapNCSG-InfoEUTRA* for inter-RAT measurement,

- An inter-RAT measurement is defined as measurement without gap if

  - the UE indicates ‘nogap-noncsg’ via *NeedForGapNCSG-InfoEUTRA* for the inter-RAT measurement

  - for UE support FG 32-4, the inter-RAT E-UTRAN measurements without gaps requirements are specified in clause 9.4.8.

- An inter-RAT measurement is defined as measurement with NCSG if

  - the UE indicates ‘ncsg’ via *NeedForGapNCSG-InfoEUTRA* for the inter-RAT measurement

  When network configures measurement gap or NCSG, the delay requirements are specified in clause 9.4.2 and 9.4.3.

- An inter-RAT measurement is defined as measurement with gap if

  - the UE indicates ‘gap’ via *NeedForGapNCSG-InfoEUTRA* for the inter-RAT measurement

  When network configures measurement gap, the delay requirements are specified in clauses 9.4.2 and 9.4.3.

- For inter-RAT measurements with NCSG, UE may cause scheduling restriction as specified in clause 9.4.2.5 and 9.4.3.5.

For UE not supporting *eutra-NeedForGapNCSG-reporting-r17*,

- An inter-RAT measurement is defined as measurement without gap if

  - the UE supports FG32-5 and the CRS is completely contained in the active BWP of the UE, and the inter-RAT EUTRAN measurements without gaps requirements are specified in clause 9.4.8.

For inter-RAT, when measurement is defined as measurement without gap the UE may cause scheduling restriction as specified in clause 9.4.8.3.5 and clause 9.4.8.4.5.

When the UE is in NE-DC operation mode and an NR–E-UTRAN FDD or TDD measurement (RSRP, RSRQ, RS-SINR, or E-CID RSRP and RSRQ) configured by NR PCell is on an E-UTRA serving frequency carrier, then the corresponding E-UTRA intra-frequency measurements requirements specified in clause 8.19 of TS 36.133 [15] shall apply.

When *highSpeedMeasFlag-r16* is configured but UE does not support either *measurementEnhancement-r16* or *interRAT-MeasurementEnhancement-r16*, the UE is not required to meet the requirements specified in table 9.4.2.3-1b and table 9.4.3.3-1b.

Parameter T_{Inter1} used in inter-RAT requirements in clause 9.4 is specified in table 9.4.1-1 when measurement gap is used, and in table 9.4.1-2 when NCSG is used.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

Table 9.4.1-1: Minimum available time for inter-RAT measurements when measurement gap is configured

Gap Pattern Id	MeasurementGap Length (MGL, ms)	Measurement Gap Repetition Period (MGRP, ms)	Minimum available time for inter-frequency and inter-RAT measurements during 480 ms period (Tinter1, ms)
0	6	40	60

1	6	80	30
2	3	40	24 Note 1
3	3	80	12 Note 1
4	6	20	120 Note 1
6	4	20	72 Note 1,3,6
7	4	40	36 Note 1,4,6
8	4	80	18 Note 1,5,6
10	3	20	48 Note 1

NOTE 1: When determining UE requirements using T_{inter1} for gap pattern IDs 2, 3, 4, 6, 7, 8, 10, T_{inter1} = 60 for gap pattern IDs 2, 4, 6, 7, 10, and T_{inter1} = 30 for gap pattern IDs 3 and 8 shall be used.
NOTE 2: Measurement gaps pattern configurations applicability is as specified in Table 9.1.2-1.
NOTE 3: When this gap pattern is used, the T_{inter1} for E-UTRA inter-frequency measurements is 48 ms corresponding to the first 3 ms of the 4 ms gap.
NOTE 4: When this gap pattern is used, the T_{inter1} for E-UTRA inter-frequency measurements is 24 ms corresponding to the first 3 ms of the 4 ms gap.
NOTE 5: When this gap pattern is used, the T_{inter1} for E-UTRA inter-frequency measurements is 12 ms corresponding to the first 3 ms of the 4 ms gap.
NOTE 6: This gap pattern is applicable for E-UTRA inter-frequency measurements only if gap based NR measurements are also configured.
NOTE 7: If multiple concurrent gaps are configured, the MGRP is the periodicity of the MG pattern associated to the E-UTRA inter-RAT frequency layers.

Table 9.4.1-2: Minimum available time for inter-RAT measurements when NCSG is configured

NCSG Pattern Id	Measurement Length (ML, ms)	Visible Interruption Repetition Period (VIRP, ms)	Minimum available time for inter-frequency and inter-RAT measurements during 480 ms period (T_{inter1}, ms)
0	5	40	60
1	5	80	30
2	2	40	24 Note 1
3	2	80	12 Note 1
4	5	20	120 Note 1
6	3	20	72 Note 1,3
7	3	40	36 Note 1,3
8	3	80	18 Note 1,3
10	2	20	48 Note 1

NOTE 1: When determining UE requirements using T_{inter1} for NCSG pattern IDs 2, 3, 4, 6, 7, 8, 10, T_{inter1} = 60 for NCSG pattern IDs 2, 4, 6, 7, 10, and T_{inter1} = 30 for NCSG pattern IDs 3 and 8 shall be used.
NOTE 2: NCSG pattern configurations applicability is as specified in Table 9.1.2C-1.
NOTE 3: This NCSG pattern is applicable for E-UTRA inter-frequency measurements only if NCSG based NR measurements are also configured.

A UE configured with gap/NCSG pattern ID 2, 3 or 10 shall be able to detect a target cell, provided that

- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell begins not earlier than 500 μs from the start of the measurement gap, and

- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell ends not later than 500 μs before the end of the measurement gap in case of FDD and not later than 750 μs before the end of measurement gap in case of TDD.

A UE configured with gap/NCSG pattern ID 6, 7 or 8 shall be able to detect a target cell, provided that

- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell begins not earlier than 500 μs from the start of the measurement gap, and

- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell ends no later than 1500 μs before the end of the measurement gap in case of FDD and no later than 1750 μs before the end of measurement gap in case of TDD.

9.4.2 NR − E-UTRAN FDD measurements

9.4.2.1 Introduction

The requirements are applicable for NR−E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN FDD cell is considered to be detectable when:

- RSRP related conditions in the accuracy requirements in clause 10.2.2 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
- RSRQ related conditions in the accuracy requirements in clause 10.2.3 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
- RS-SINR related conditions in the accuracy requirements in clause 10.2.5 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.19 of TS 36.133 [15].

9.4.2.2 Requirements when no DRX is used

When the UE requires measurement gaps or NCSG to identify and measure inter-RAT cells and an appropriate measurement gap pattern or NCSG is scheduled, or when the UE is capable of concurrent measurement gap patterns and concurrent measurement gap patterns are scheduled, or an appropriate pre-MG is scheduled and activated, or the UE supports capability of conducting such measurements without gaps, the UE shall be able to identify a new detectable FDD cell within $T_{\text{Identify, E-UTRAN FDD}}$ according to the following expression, including UE not configured with measurement gap cancellation according to clause 9.1.14 and conditions in clause 9.1.14.3:

$$T_{\text{Identify,E-UTRAN FDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}} \quad ms,$$

and for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3:

$$T_{\text{Identify,E-UTRAN FDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}} + 480 * \text{ceil}(\text{T1} / 480) \times \text{CSSF}_{\text{interRAT}} \; ms,$$

where:

$T_{\text{BasicIdentify}}$ = 480 ms,

T_{Inter1} is defined in clause 9.4.1,

$\text{CSSF}_{\text{interRAT}} = \text{CSSF}_{\text{within_gap,i}}$ when measurement gaps are configured, or $\text{CSSF}_{\text{within_ncsg,i}}$ when NCSGs are configured, is the scaling factor for the measured inter-RAT E-UTRA carrier *i* which is calculated as specified in clause 9.1.5.2.

For a UE supporting and configured with concurrent GAPs or MUSIM gaps or both concurrent GAPs and MUSIM gaps, $K_{\text{gap_EUTRA}}$: it is the scaling factor for an E-UTRAN frequency layer to be measured within the associated GAP pattern. $K_{\text{gap_EUTRA}} = 1$ when the UE is not configured with concurrent GAPs nor MUSIM gaps. Otherwise, $K_{\text{gap_EUTRA}} = N_{\text{total}} / N_{\text{available}}$ for UE configured with concurrent GAPs.

T1 = ceil($L_{\text{cancel}} \times K_{\text{gapEUTRA}}$)×MGRP applies for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, L_{cancel} is the number of gap occasions cancelled during measurement period during $T_{\text{Identify,E-UTRAN FDD}}$ for PSS/SSS detection.

For a UE supporting concurrent GAPs which is configured via *GapConfig-r17* without *preConfigInd-r17* or *ncsgInd-r17*, if multiple concurrent GAPs are configured, the MGRP is the periodicity of the MG pattern associated to the inter-RAT layer. Otherwise, MGRP is the Measurement Gap Repetition Period of the configured MG.

For a window W of duration xRP_max, where xRP_max is the maximum xRP across all configured per-UE measurement GAPs, periodic MUSIM gaps, and per-FR measurement GAPs for FR1, and starting from the beginning of any associated gap occasion:

N_{total} is the total number of associated GAP occasions within the window, including those dropped and non-dropped occasions within the window, and

$N_{available}$ is the number of non-dropped associated GAP occasions after accounting for measurement GAP and MUSIM gap collisions by applying the collision rules for the GAP and MUSIM gap in clause 9.1.8.3 and 9.1.10.5, respectively.

- xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG, also xRP = MGRP for periodic MUSIM gap.

Requirements do not apply for UE configured with concurrent GAPs or MUSIM gaps, if $N_{available}$ =0

When UE supports *musim-GapPreference-r17* and if the configured aperiodic MUSIM gap collides with the measurement gap associated with the target frequency layer, where MUSIM gap collision rule in clause 9.1.10.4 is applied, longer cell identification period for the target inter-RAT carrier is expected.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{Measure, E\text{-}UTRAN\ FDD}$ defined in table 9.4.2.2-1, including UE not configured with measurement gap cancellation according to clause 9.1.14 and conditions in clause 9.1.14.3, and table 9.4.2.2-2 for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3.

Table 9.4.2.2-1: M**easurement period and measurement bandwidth**

Configuration	Physical Layer Measurement period: $T_{Measure, E\text{-}UTRAN\ FDD}$ [ms]	Measurement bandwidth [RB]
0	480 x [$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA})]	6
1 (Note 1)	240 x [$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA})]	50
NOTE 1: This configuration is optional. NOTE 2: K_{gap_EUTRA} is only applicable for a UE supporting concurrent measurement gaps. Otherwise K_{gap_EUTRA} =1		

Table 9.4.2.2-2: Measurement period and measurement bandwidth with measurement gap cancellation

Configuration	Physical Layer Measurement period: $T_{Measure, E\text{-}UTRAN\ FDD}$ [ms]	Measurement bandwidth [RB]
0	480 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) + 480 x ceil(T1/480) x CSSFinterRAT	6
1 (Note 1)	240 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) + 480 x ceil(T1/480) x CSSFinterRAT	50
NOTE 1: This configuration is optional. NOTE 2: K_{gap_EUTRA} is only applicable for a UE supporting concurrent measurement gaps. Otherwise K_{gap_EUTRA} =1. NOTE 3: T1 = ceil(L_{cancel}×$K_{gapEUTRA}$)×MGRP, where L_{cancel} is the number of gap occasions cancelled during measurement period during $T_{Identify,E\text{-}UTRAN\ FDD}$ for PSS/SSS detection.		

When measurement gaps are scheduled for E-UTRAN FDD inter-RAT measurements, or the UE supports capability of conducting such measurements without gaps, the UE physical layer shall be capable of reporting RSRP, RSRQ, and RS-SINR measurements to higher layers with measurement period $T_{Measure, E\text{-}UTRAN\ FDD}$ given by table 9.4.2.2-1.

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.2.3 Requirements when DRX is used

When DRX is in use and an appropriate measurement gap pattern or NCSG is configured, or when the UE is capable of concurrent measurement gap patterns and concurrent measurement gap patterns are configured, or an appropriate pre-MG is scheduled and activated, the UE shall be able to identify a new detectable E-UTRAN FDD cell within $T_{Identify, E\text{-}UTRAN\ FDD}$ specified in table 9.4.2.3-1. When *highSpeedMeasFlag-r16* is configured and UE supports the enhanced inter-

RAT E-UTRAN measurement requirements, the UE shall be able to identify a new detectable E-UTRAN FDD cell within $T_{Identify, E\text{-}UTRAN\ FDD}$ specified in table 9.4.2.3-1b. When the UE is configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, the UE shall be able to identify a new detectable E-UTRAN FDD cell within $T_{Identify, E\text{-}UTRAN\ FDD}$ specified in table 9.4.2.3-4.

For a UE supporting and configured with concurrent GAPs, or MUSIM gaps or both concurrent GAPs and MUSIM gaps, K_{gap_EUTRA}: it is the scaling factor for an E-UTRAN frequency layer to be measured within the associated GAP pattern. $K_{gap_EUTRA} = 1$ when the UE is not configured with concurrent GAPs nor MUSIM gaps. Otherwise, $K_{gap_EUTRA} = N_{total} / N_{available}$ for UE configured with concurrent GAPs.

For a window W of duration xRP_max, where xRP_max is the maximum xRP across all configured per-UE GAPs, periodic MUSIM gap(s), and per-FR GAPs for FR1, and starting from the beginning of any associated gap occasion:

N_{total} is the total number of associated GAP occasions within the window, including both dropped and non-dropped instances of the associated GAP within the window, and

$N_{available}$ is the number of non-dropped associated GAP occasions after accounting for measurement gap and MUSIM gap collisions by applying the collision rules for the GAP and MUSIM gap in clauses 9.1.8.3 and 9.1.10.5, respectively.

- xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG, also xRP = MGRP for periodic MUSIM gap.

Requirements do not apply for UE configured with concurrent GAPs, or MUSIM gaps, if $N_{available} = 0$

When UE supports *musim-GapPreference-r17* and if the configured aperiodic MUSIM gap collides with the measurement gap associated with the target frequency layer, where MUSIM gap collision rule in clause 9.1.10.4 is applied, longer cell identification period for the target inter-RAT carrier is expected.

Table 9.4.2.3-1: Requirement to identify a newly detectable E-UTRAN FDD cell

DRX cycle length (s)	$T_{Identify, E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)	
	Gap/NCSG period = 40 ms, 20 ms	Gap/NCSG period = 80 ms
≤0.16	Non-DRX requirements in clause 9.4.2.2 apply	Non-DRX requirements in clause 9.4.2.2 apply
0.256	5.12* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	7.68* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (30*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
0.32	6.4* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	7.68* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (24*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
0.32< DRX-cycle ≤10.24	Note1 (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note1 (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))

NOTE 1: The time depends on the DRX cycle length.
NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2.
NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2.
NOTE 3: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs. Otherwise $K_{gap_EUTRA} = 1$
NOTE 4: If multiple concurrent gaps are configured, the gap period is the periodicity of the MG pattern associated to the E-UTRA inter-RAT frequency layer.

Table 9.4.2.3-1b: Requirement to identify a newly detectable E-UTRAN FDD cell when *highSpeedMeasFlag-r16* is configured

DRX cycle length (s)	$T_{Identify, E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)	
	Gap/NCSG period = 40 ms, 20 ms	**Gap/NCSG period = 80 ms**
≤0.16	Non-DRX requirements in clause 9.4.2.2 apply	Non-DRX requirements in clause 9.4.2.2 apply
0.16<DRX cycle≤0.32	Note 1(15*$CSSF_{interRAT}$ x Ceil((K_{gap_EUTRA}))	
0.32<DRX cycle ≤ 0.64	Note 1(10*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	
DRX cycle = 1.024	Note 1(10*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note 1(10*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
DRX cycle = 1.28	Note 1(8*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note 1(8*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
1.28< DRX-cycle ≤10.24	Note1 (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note1 (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))

NOTE 1: The time depends on the DRX cycle length.
NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2.
NOTE 3: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *interRAT-MeasurementEnhancement-r16.*
NOTE 4: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs. Otherwise K_{gap_EUTRA} = 1
NOTE 5: If multiple concurrent gaps are configured, the gap period is the periodicity of the MG pattern associated to the E-UTRA inter-RAT frequency layer.

When DRX is in use, the UE shall be capable of performing NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN FDD cells per E-UTRA FDD frequency layer during each layer 1 measurement period, for up to 7 E-UTRA FDD carrier frequency layers, and the UE physical layer shall be capable of reporting NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements to higher layers with the measurement period $T_{measure,\ E\text{-}UTRAN\ FDD}$ specified in table 9.4.2.3-3, including UE not configured with measurement gap cancellation according to clause 9.1.14 and conditions in clause 9.1.14.3, and table 9.4.2.3-5 for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3.

Table 9.4.2.3-3: Requirement to measure E-UTRAN FDD cells

DRX cycle length (s)	$T_{measure,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)
≤0.08	Non-DRX requirements in clause 9.4.2.2 apply
0.08< DRX-cycle ≤ 10.24	Note1 (5* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2. NOTE 3: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs. Otherwise K_{gap_EUTRA} =1	

Table 9.4.2.3-4: Requirement to identify a newly detectable E-UTRAN FDD cell with measurement gap cancellation

≤0.16	Non-DRX requirements in clause 9.4.2.2 apply	Non-DRX requirements in clause 9.4.2.2 apply
0.256	(5.12+L_{cancel} *0.256)* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) ((20+L_{cancel} *0.256)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	(7.68+L_{cancel} *0.256)* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) ((30+L_{cancel} *0.256)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
0.32	(6.4+L_{cancel} *0.32)* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) ((20+L_{cancel} *0.32)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	(7.68+L_{cancel} *0.32)* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) ((24+L_{cancel} *0.32)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
0.32< DRX-cycle ≤10.24	Note1 ((20+L_{cancel} *DRX-cycle)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note1 ((20+L_{cancel} *DRX-cycle)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2. NOTE 3: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs. Otherwise K_{gap_EUTRA} = 1 NOTE 4: If multiple concurrent gaps are configured, the gap period is the periodicity of the MG pattern associated to the E-UTRA inter-RAT frequency layer. NOTE 5: L_{cancel} is the number of gap occasions cancelled during $T_{Identify,E-UTRAN\ FDD}$ for PSS/SSS detection.		

Table 9.4.2.3-5: Requirement to measure E-UTRAN FDD cells with measurement gap cancellation

DRX cycle length (s)	$T_{measure,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)
≤0.08	Non-DRX requirements in clause 9.4.2.2 apply
0.08< DRX-cycle ≤ 10.24	Note1 ((5*+ L_{cancel} * DRX-cycle) $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2. NOTE 3: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs. Otherwise K_{gap_EUTRA} =1 NOTE 4: L_{cancel} is the number of gap occasions cancelled during $T_{measure,\ E\text{-}UTRAN\ FDD}$ for measurement.	

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.2.4 Measurement reporting requirements

9.4.2.4.1 Periodic Reporting

The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

9.4.2.4.2 Event-Triggered Periodic Reporting

The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The first report in event-triggered periodic measurement reporting shall meet the requirements specified in clause 9.4.2.4.3.

9.4.2.4.3 Event-Triggered Reporting

The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The UE shall not send any event-triggered measurement reports as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify, E-UTRAN FDD}$ defined in clauses 9.4.2.2 and 9.4.2.3 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify, E-UTRAN FDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{Measure, E-UTRAN FDD}$ provided the timing to that cell has not changed more than ± 50 Ts while measurement gap or NCSG has not been available and the L3 filter has not been used.

9.4.2.5 Scheduling Availability During NR − E-UTRAN FDD measurements with NCSG

When a serving cell and an E-UTRA FDD measurement object are in bands with overlapping frequency with different subcarrier spacings, UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on all symbols within NCSG ML. Otherwise, no scheduling restriction to the serving cell is allowed due to NR − E-UTRAN FDD measurements with NCSG.

9.4.3 NR − E-UTRAN TDD measurements

9.4.3.1 Introduction

The requirements are applicable for NR−E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN TDD cell is considered to be detectable when:

- RSRP related conditions in the accuracy requirements in clause 10.2.2 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
- RSRQ related conditions in the accuracy requirements in clause 10.2.3 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],

  RS-SINR related conditions in the accuracy requirements in clause 10.2.5 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.19 of TS 36.133 [15].

9.4.3.2 Requirements when no DRX is used

When the UE requires measurement gaps or NCSG to identify and measure inter-RAT cells and an appropriate measurement gap pattern or NCSG is scheduled, or when the UE is capable of concurrent measurement gap patterns and concurrent measurement gap patterns are scheduled, or an appropriate pre-MG is scheduled and activated or the UE supports capability of conducting such measurements without gaps, the UE shall be able to identify a new detectable TDD cell within $T_{\text{Identify, E-UTRAN TDD}}$ according to the following expression:

- When configuration 0 or configuration 1 in table 9.4.3.2-1 is applied, including UE not configured with measurement gap cancellation according to clause 9.1.14 and conditions in clause 9.1.14.3:

$$T_{\text{Identify,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}}\ ms,$$

- When configuration 2 or configuration 3 in table 9.4.3.2-1 is applied, including UE not configured with measurement gap cancellation according to clause 9.1.14 and conditions in clause 9.1.14.3:

$$T_{\text{Identify,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}} + 240 \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}}\ \ ms,$$

- When configuration 0 or configuration 1 in table 9.4.3.2-1 is applied for UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3:

$$T_{\text{Identify,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}} + 480 * \text{ceil}(\text{T1} / 480) \times \text{CSSF}_{\text{interRAT}}\ ms,$$

- When configuration 2 or configuration 3 in table 9.4.3.2-1 is applied for UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3:

$$T_{\text{Identify,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}} + 240 \cdot \text{CSSF}_{\text{interRAT}} \cdot \text{K}_{\text{gap}_{\text{EUTRA}}} + 480 * \text{ceil}(\text{T1} / 480) \times \text{CSSF}_{\text{interRAT}}\ \ ms,$$

where:

$T_{\text{BasicIdentify}}$ = 480 ms,

T_{Inter1} is defined in clause 9.4.1,

$\text{CSSF}_{\text{interRAT}} = \text{CSSF}_{\text{within_gap,i}}$ when measurement gaps are configured, or $\text{CSSF}_{\text{within_ncsg,i}}$ when NCSGs are configured, is the scaling factor for the measured inter-RAT E-UTRA carrier *i* which is calculated as specified in clause 9.1.5.2.

$\text{T1} = \text{ceil}(\text{L}_{\text{cancel}} \times \text{K}_{\text{gapEUTRA}}) \times \text{MGRP}$, applies for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, L_{cancel} is the number of gap occasions cancelled during measurement period during $T_{\text{Identify,E-UTRAN TDD}}$ for PSS/SSS detection.

For a UE supporting concurrent GAPs, if multiple concurrent GAPs are configured, the MGRP is the periodicity of the MG pattern associated to the inter-RAT layer. Otherwise, MGRP is the Measurement Gap Repetition Period of the configured MG.

For a UE supporting and configured with concurrent GAPs, or MUSIM gaps or both concurrent GAPs and MUSIM gaps, $\text{K}_{\text{gap_EUTRA}}$: it is the scaling factor for an E-UTRAN frequency layer to be measured within the associated GAP

pattern. K_{gap_EUTRA} = 1 when the UE is not configured with concurrent GAPs nor MUSIM gaps. Otherwise, K_{gap_EUTRA} = N_{total} / $N_{available}$ for UE configured with concurrent GAPs or MUSIM gaps.

- For a window W of duration xRP_max , where xRP_max is the maximum xRP across all configured per-UE GAPs, periodic MUSIM gaps,and per-FR GAPs for FR1, and starting from the beginning of any associated gap occasion:
  - N_{total} is the total number of associated GAP occasions within the window, including those overlapped with other GAPs and MUSIM gap ocassions within the window, and
  - $N_{available}$ is the number of non-dropped associated GAP occasions after accounting for GAPs and MUSIM gap collisions by applying the GAP and MUSIM gap in clauses 9.1.8.3 and 9.1.10.5, respectively.
    - xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG, also xRP = MGRP for periodic MUSIM gap.
- Requirements do not apply for UE configured with concurrent GAPs or MUSIM gaps, if $N_{available}$ =0

When UE supports *musim-GapPreference-r17* and if the configured aperiodic MUSIM gap collides with the measurement gap associated with the target frequency layer, where MUSIM gap collision rule in clause 9.1.10.4 is applied, longer cell identification period for the target inter-RAT carrier is expected.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{Measure, E\text{-}UTRAN\ TDD}$ defined in table 9.4.3.2-1, including UE not configured with measurement gap cancellation according to clause 9.1.14 and conditions in clause 9.1.14.3, and table 9.4.3.2-2 for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3.

Table 9.4.3.2-1: $T_{Measure, E\text{-}UTRAN\ TDD}$ for different configurations

Configuration	Measurement bandwidth (RB)	Number of UL/DL sub-frames per half frame (5 ms)		DwPTS		$T_{Measure, E\text{-}UTRAN\ TDD}$ (ms)
		DL	UL	Normal CP	Extended CP	
0	6	2	2	19760×T_s	20480×T_s	480 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA})
1 (Note 1)	50	2	2	19760×T_s	20480×T_s	240 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA})
2	6	1	3	19760×T_s	20480×T_s	720 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA})
3 (Note 1)	50	1	3	19760×T_s	20480×T_s	480 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA})
NOTE 1: This configuration is optional. NOTE 2: Void NOTE 3: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs and/or MUSIM gaps. Otherwise K_{gap_EUTRA} =1						

Table 9.4.3.2-2: $T_{Measure, E\text{-}UTRAN\ TDD}$ for different configurations with measurement gap cancellation

Configuration	Measurement bandwidth (RB)	Number of UL/DL sub-frames per half frame (5 ms)		DwPTS		$T_{Measure, E\text{-}UTRAN\ TDD}$ (ms)
		DL	UL	Normal CP	Extended CP	
0	6	2	2	19760×T_s	20480×T_s	480 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) + 480 x ceil(T1/480) x $CSSF_{interRAT}$
1 (Note 1)	50	2	2	19760×T_s	20480×T_s	240 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) + 480 x ceil(T1/480) x $CSSF_{interRAT}$

2	6	1	3	19760×T_s	20480×T_s	720 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) + 480 x ceil(T1/480) x $CSSF_{interRAT}$
3 (Note 1)	50	1	3	19760×T_s	20480×T_s	480 x $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) + 480 x ceil(T1/480) x $CSSF_{interRAT}$
NOTE 1: This configuration is optional. NOTE 2: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs. Otherwise K_{gap_EUTRA} =1. NOTE 3: T1 = ceil(L_{cancel}×$K_{gapEUTRA}$)×MGRP. L_{cancel} is the number of gap occasions cancelled during measurement period during $T_{measure,\ E\text{-}UTRAN\ TDD}$ for measurement.						

When measurement gaps are scheduled for E-UTRAN TDD inter-RAT measurements, or the UE supports capability of conducting such measurements without gaps, the UE physical layer shall be capable of reporting RSRP, RSRQ, and RS-SINR measurements to higher layers with measurement period $T_{measure,\ E\text{-}UTRAN\ TDD}$ given by table 9.4.3.2-1.

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.3.3 Requirements when DRX is used

When DRX is in use and an appropriate measurement gap pattern or NCSG is configured, or when the UE is capable of concurrent measurement gap patterns and concurrent measurement gap patterns are configured, or an appropriate pre-MG is scheduled and activated, the UE shall be able to identify a new detectable E-UTRAN TDD cell within $T_{Identify,\ E\text{-}UTRAN\ TDD}$ specified in table 9.4.3.3-1. When *highSpeedMeasFlag-r16* is configured and UE supports the enhanced inter-RAT E-UTRAN measurement requirements, the UE shall be able to identify a new detectable E-UTRAN TDD cell within $T_{Identify,\ E\text{-}UTRAN\ TDD}$ specified in table 9.4.3.3-1b. When the UE is configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, the UE shall be able to identify a new detectable E-UTRAN TDD cell within $T_{Identify,\ E\text{-}UTRAN\ TDD}$ specified in table 9.4.3.3-4.

For a UE supporting and configured with concurrent GAPs, or MUSIM gaps or both concurrent GAPs and MUSIM gaps, K_{gap_EUTRA}: it is the scaling factor for an E-UTRAN frequency layer to be measured within the associated GAP pattern. K_{gap_EUTRA} = 1 when the UE is not configured with concurrent GAPs nor MUSIM gaps.. Otherwise, $K_{gap_EUTRA} = N_{total} / N_{available}$ for UE configured with concurrent GAPs or MUSIM gaps.

For a window W of duration xRP_max, where xRP_max is the maximum xRP across all configured per-UE GAPs s, periodic MUSIM gap(s), and per-FR measurement GAPs for FR1, and starting from the beginning of any associated gap occasion: GAPs

N_{total} is the total number of associated GAP occasions within the window, including those overlapped with other measurement GAP and MUSIM gap instances within the window, and

$N_{available}$ is the number of non-dropped associated GAP occasions after accounting for measurement gap and MUSIM gap collisions by applying the collision rules for the GAP and MUSIM gap in clauses 9.1.8.3, 9.1.10.5, 9.1.12.3, and 9.1.13.3, respectively.

- xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG, also xRP = MGRP for periodic MUSIM gap.

Requirements do not apply for UE configured with concurrent GAPs or MUSIM gaps, if $N_{available}$ = 0

When UE supports *musim-GapPreference-r17* and if the configured aperiodic MUSIM gap collides with the measurement gap associated with the target frequency layer, where MUSIM gap collision rule in clause 9.1.10.4 is applied, longer cell identification period for the target inter-RAT carrier is expected.

Table 9.4.3.3-1: Requirement to identify a newly detectable E-UTRAN TDD cell

DRX cycle length (s)	$T_{Identify,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles)	
	Gap/NCSG period = 40 ms, 20 ms	Gap/NCSG period = 80 ms
≤0.16	Non-DRX requirements in clause 9.4.3.2 apply	Non-DRX requirements in clause 9.4.3.2 apply
0.256	5.12* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	7.68* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (30*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
0.32	6.4* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	7.68* $CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}) (24*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
0.32< DRX-cycle ≤10.24	Note1 (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note1 (20*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))

NOTE 1: The time depends on the DRX cycle length.
NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.3.2.
NOTE 3: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs and/or MUSIM gaps. Otherwise K_{gap_EUTRA} =1
NOTE 4: If multiple concurrent gaps are configured, the gap period is the periodicity of the MG pattern associated to the E-UTRA inter-RAT frequency layer.

Table 9.4.3.3-1b: Requirement to identify a newly detectable E-UTRAN TDD cell when *highSpeedMeasFlag-r16* is configured

DRX cycle length (s)	$T_{Identify,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles)	
	Gap/NCSG period = 40 ms, 20 ms	**Gap/NCSG period = 80 ms**
≤0.16	Non-DRX requirements in clause 9.4.3.2 apply	Non-DRX requirements in clause 9.4.3.2 apply
0.16<DRX cycle≤0.32	Note 1(15*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	
0.32<DRX cycle ≤ 0.64	Note 1(10*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	
DRX cycle = 1.024	Note 1(10*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note 1(10*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
DRX cycle = 1.28	Note 1(8*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))	Note 1(8*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))

≤ 0.08	Non-DRX Requirements in clause 9.4.3.2 apply
0.128	For configuration 2 [Note3], non-DRX requirements in clause 9.4.3.2 apply, Otherwise: Note1 ((5 +$L_{cancel,meas}$ * 0.128)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
0.128 < DRX-cycle ≤ 10.24	Note1 ((5 +$L_{cancel,meas}$ * DRX-cycle)*$CSSF_{interRAT}$ x Ceil(K_{gap_EUTRA}))
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.3.2. NOTE 3: See Table 9.4.3.2-1. NOTE 4: K_{gap_EUTRA} is only applicable for a UE supporting concurrent GAPs. Otherwise K_{gap_EUTRA} = 1. NOTE 5: $L_{cancel,meas}$ is the number of gap occasions cancelled during $T_{measure,\ E\text{-}UTRAN\ TDD}$ for measurement.	

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.3.4 Measurement reporting requirements

9.4.3.4.1 Periodic Reporting

The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

9.4.3.4.2 Event-Triggered Periodic Reporting

The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The first report in event-triggered periodic measurement reporting shall meet the requirements specified in clause 9.4.3.4.3.

9.4.3.4.3 Event-Triggered Reporting

The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The UE shall not send any event-triggered measurement reports as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify, E-UTRAN TDD}$ defined in clauses 9.4.3.2 and 9.4.3.3 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify, E-UTRAN TDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{Measure, E-UTRAN TDD}$ provided the timing to that cell has not changed more than ± 50 Ts while measurement gap or NCSG has not been available and the L3 filter has not been used.

9.4.3.5 Scheduling Availability During NR − E-UTRAN TDD measurements with NCSG

When UE supports *simultaneousRxTxInterBandENDC* for a band combination, no scheduling restriction is applicable to NR − E-UTRAN TDD measurements with NCSG in this band combination; otherwise UE is not expected to transmit PUCCH/PUSCH/SRS on all symbols within NCSG ML.

When a serving cell and an E-UTRA TDD measurement object are in bands with overlapping frequency with different subcarrier spacings, UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on all symbols within NCSG ML. Otherwise, no scheduling restriction to the serving cell is allowed due to NR − E-UTRAN TDD measurements with NCSG.

9.4.4 Inter-RAT RSTD measurements

9.4.4.1 NR − E-UTRAN FDD RSTD measurements

9.4.4.1.1 Introduction

The requirements are applicable for NR−E-UTRAN FDD RSTD measurements requested via LPP [22, 27].

When the UE is in NE-DC operation mode and an NR–E-UTRAN FDD RSTD measurement configured by NR PCell is on a E-UTRA serving frequency carrier, then the corresponding E-UTRA intra-frequency measurements requirements as follows shall apply.

- Measurements configured on E-UTRA PSCC shall meet E-UTRAN OTDOA intra-frequency measurements requirements in clause 8.1.2.5. The applicable measurement accuracy requirements are in clause 9.1.10.
- Measurements configured on E-UTRA SCC shall meet all applicable requirements in clause 8.4, except that the terms PCell and primary component carrier shall be deemed to be swapped with PSCell and PSCC. The applicable measurement accuracy requirements are in clause 9.1.12, except that the terms PCell and primary component carrier shall be deemed to be swapped with PSCell and PSCC.

The requirements in clause 9.4.4.1 apply when:

- the UE is provided with the LTE timing information via LPP [27], including both *nr-LTE-SFN-Offset* and *nr-LTE-fineTiming-Offset*, or
- the UE is not provided with *nr-LTE-SFN-Offset* or *nr-LTE-fineTiming-Offset*, or

- the UE is provided with *nr-LTE-SFN-Offset* but not with *nr-LTE-fineTiming-Offset*.

When the UE is not aware of the SFN of at least one LTE cell in the OTDOA assistance data, the UE may be using autonomous gaps to acquire SFN of the OTDOA assistance data reference cell prior to requesting measurement gaps for performing the requested E-UTRA RSTD measurements before the $T_{RSTD_InterRAT,E-UTRAN_FDD}$ time period starts while meeting all the requirements in clause 9.4.4.1.2, provided that the OTDOA assistance data is provided to allow sufficient time for the UE to acquire the SFN before the $T_{RSTD_InterRAT,E-UTRAN_FDD}$ starts.

When the UE is not aware of and cannot derive the subframe timing difference between the NR serving cell and the OTDOA assistance data reference cell, the UE may need to request measurement gaps to perform cell detection for the OTDOA assistance data reference cell prior to requesting measurement gaps for performing the requested E-UTRA RSTD measurements before the $T_{RSTD_InterRAT,E-UTRAN_FDD}$ time period starts while meeting all the requirements in clause 9.4.4.1.2, provided that the OTDOA assistance data is provided to allow sufficient time for the UE to detect the cell before the $T_{RSTD_InterRAT,E-UTRAN_FDD}$ starts.

9.4.4.1.2 Requirements

When the physical layer cell identities of neighbour cells together with the OTDOA assistance data are provided, the UE shall be able to detect and measure inter-RAT E-UTRAN FDD RSTD, specified in TS 38.215 [4], for at least *n*=16 cells, including the reference cell, within $T_{RSTD_InterRAT,E-UTRAN_FDD}$ ms as given below:

$$T_{InterRAT,E-UTRAN_FDD} = T_{PRS} \times (M - 1) + \Delta \ ,$$

where

$T_{RSTD_InterRAT,E-UTRAN_FDD}$ is the total time for detecting and measuring at least *n* cells,
T_{PRS} is the largest value of the cell-specific positioning subframe configuration period, defined in TS 36.211 [23], among the measured *n* cells including the reference cell,
M is the number of PRS positioning occasions as defined in table 9.4.4.1.2-1, where each PRS positioning occasion comprises of N_{PRS} ($1 \leq N_{PRS} \leq 6$) consecutive downlink positioning subframes defined in TS 36.211 [23],
$CSSF_{interRAT}=CSSF_{within_gap,i}$ is the scaling factor determined by the gap sharing scheme for the RSTD measurements on the carrier frequency *i* as defined in clause 9.1.5.2,

$\Delta = 160 \times \left\lceil \frac{n}{M} \right\rceil \Delta = 160 \cdot \left\lceil \frac{n}{M} \right\rceil$ ms is the measurement time for a single PRS positioning occasion which includes the sampling time and the processing time, and

the *n* cells are distributed on up to two E-UTRAN FDD carrier frequencies.

Table 9.4.4.1.2-1: Number of PRS positioning occasions within $T_{RSTD_InterRAT,E-UTRAN_FDD}$

Positioning subframe configuration period, T_{PRS}	Number of PRS positioning occasions, M	
	f2 Note1	f1 and f2 Note2
160 ms	16 × $CSSF_{interRAT}$	32 × $CSSF_{interRAT}$
>160 ms	8 × $CSSF_{interRAT}$	16 × $CSSF_{interRAT}$
NOTE 1: When inter-RAT E-UTRAN FDD RSTD measurements are performed over the reference cell and neighbour cells, which belong to the E-UTRAN FDD carrier frequency f2.		
NOTE 2: When inter-RAT E-UTRAN FDD RSTD measurements are performed over the reference cell and the neighbour cells, which belong to the E-UTRAN FDD carrier frequency f1 and the E-UTRAN FDD carrier frequency f2 respectively.		

The UE physical layer shall be capable of reporting RSTD for the reference cell and all the neighbor cells *i* out of at least (*n*-1) neighbor cells within $T_{RSTD_InterRAT,E-UTRAN_FDD}$ provided:

$(PRS\ \hat{E}s/Iot)_{ref} \geq -6$ dB for all Frequency Bands for the reference cell,
$(PRS\ \hat{E}s/Iot)_i \geq -13$ dB for all Frequency Bands for neighbour cell *i*,
$(PRS\ \hat{E}s/Iot)_{ref}$ and $(PRS\ \hat{E}s/Iot)_i$ conditions apply for all subframes of at least $L = \frac{M}{2}$ PRS positioning occasions,
$PRP\ 1,2|_{dBm}$ according to TS 36.133 [15, Annex B.2.6] for a corresponding band,

PRS Ês/Iot is defined as the ratio of the average received energy per PRS resource element during the useful part of the symbol to the average received power spectral density of the total noise and interference for this resource element, where the ratio is measured over all resource elements which carry PRS.

The time $T_{RSTD_InterRAT,E\text{-}UTRAN_FDD}$ starts from the first subframe of the PRS positioning occasion closest in time after both the *OTDOA-RequestLocationInformation* message and the OTDOA assistance data in the *OTDOA-ProvideAssistanceData* message via LPP as specified in TS 38.305 [22], are delivered to the physical layer of the UE.

The RSTD measurement accuracy for all measured neighbor cells *i* shall be fulfilled according to the accuracy as specified in clause 10.2.4.

9.4.4.1.2.1 RSTD Measurement Reporting Delay

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

9.4.4.1.2.2 Requirements for acquiring the timing of the E-UTRA OTDOA reference cell

When the UE is not aware of the SFN of at least one LTE cell in the OTDOA assistance data, the UE supporting per-FR gaps may make autonomous gaps in downlink reception and uplink transmission of the PCell, PSCell, and each of the SCells in FR1 for acquiring SFN of the reference cell in the E-UTRA OTDOA assistance data, while no autonomous gaps in downlink reception or uplink transmission are allowed in any of the UE serving cells in FR2. The UE, which are only supporting per-UE gaps, may make autonomous gaps in downlink reception and uplink transmission of the PCell, PSCell, and each of the SCells for acquiring the SFN of the reference cell in the E-UTRA OTDOA assistance data.

When the UE is not aware of and cannot derive the subframe timing difference between the NR serving cell and the OTDOA assistance data reference cell, the UE may need to request measurement gaps while indicating *eutra-FineTimingDetection* according to TS 38.331 [2] for detecting the reference cell in the E-UTRA OTDOA assistance data.

When the UE is performing one or both of SFN acquisition or cell detection as specified above, the UE shall be able to determine the timing of the E-UTRA OTDOA assistance data reference cell during the time period

$$T_{RefCell,E\text{-}UTRAN} = T_{Detect,\ E\text{-}UTRAN\ FDD} + T_{MIB} + T_{ECGI}\ ,$$

where

$T_{Detect,\ E\text{-}UTRAN\ FDD} = T_{Identify,\ E\text{-}UTRAN\ FDD} - T_{measure,\ E\text{-}UTRAN\ FDD}$ is according to clause 9.4.2 assuming $CSSF_{interRAT} = 1$ and it is the time needed to detect the E-UTRA OTDOA assistance data reference cell when the UE needs to acquire the subframe and slot timing of the cell, provided the UE is configured with measurement gaps ($T_{Detect,\ E\text{-}UTRAN\ FDD} = 0$ when both *nr-LTE-SFN-Offset* and *nr-LTE-fineTiming-Offset* are provided in the E-UTRA OTDOA assistance data or the E-UTRA OTDOA assistance data reference cell is known to the UE), and

T_{MIB} = 50 ms is the time required to acquire SFN and/or PHICH configuration of the E-UTRA OTDOA assistance data reference cell provided the OTDOA assistance data reference cell is decodable and at least all E-UTRA subframes #0 during T_{MIB} are available at the UE receiver ($T_{MIB} = 0$ when *nr-LTE-SFN-Offset* is provided in the E-UTRA OTDOA assistance data and ECGI acquisition is not needed), and

T_{ECGI} = 100 ms is the time required to acquire ECGI of the E-UTRA OTDOA assistance data reference cell when *cellGlobalId* is included in *OTDOA-ReferenceCellInfo* and the UE is not aware of the ECGI of this cell ($T_{ECGI} = 0$ when *cellGlobalId* is not included in *OTDOA-ReferenceCellInfo* or the UE is aware of the ECGI of the E-UTRA OTDOA assistance data reference cell).

When detecting the E-UTRAN OTDOA reference cell, the requirements in this clause shall be met, provided the conditions for the detectable cell are fulfilled according to clause 9.4.2.1. In addition, the MIB of the E-UTRA OTDOA reference cell whose SFN is acquired shall be considered decodable by the UE provided the PBCH demodulation requirements are met according to TS 36.101 [25].

The requirement for acquiring the timing of the E-UTRA OTDOA reference cell within $T_{RefCell,E\text{-}UTRAN}$ is applicable when no DRX is used as well as when any of the DRX cycles specified in TS 38.331 [2] is used.

When $T_{MIB} > 0$ and UE is using autonomous gaps during T_{MIB}, the UE shall transmit at least $N_{ACK/NACK, MIB, FDD}$ ACK/NACKs on PCell, PSCell, and each of activated SCell(s) in the frequency range where the autonomous gaps are created, specified in table 9.4.4.1.2.2-1. When both $T_{MIB} > 0$ and $T_{ECGI} > 0$ and UE is using autonomous gaps during $T_{MIB} + T_{ECGI}$, the UE shall transmit on PCell, PSCell, and each of activated SCell(s) in the frequency range where autonomous gaps are created at least $N_{ACK/NACK, MIB+ECGI, FDD}$ ACK/NACKs specified in table 9.4.4.1.2.2-3, provided the OTDOA reference cell bandwidth is configured in the OTDOA assistance data [22, 27]. The requirements in Tables 9.4.4.1.2.2-1, 9.4.4.1.2.2-2, and 9.4.4.1.2.2-3 apply, provided that:

- there is continuous DL data allocation,
- no DRX cycle is used,
- no measurement gaps are configured,
- only one code word is transmitted in each slot,
- 2 slot ACK/NACK feedback is configured,
- 20 ms SMTC period is configured,
- SSBs are transmitted in one slot within SMTC window.

9.4.4.2 NR − E-UTRAN TDD RSTD measurements

9.4.4.2.1 Introduction

The requirements are applicable for NR−E-UTRAN TDD RSTD measurements requested via LPP [22, 27].

When the UE is in NE-DC operation mode and an NR–E-UTRAN TDD RSTD measurement configured by NR PCell is on a E-UTRA serving frequency carrier, then the corresponding E-UTRA intra-frequency measurements requirements as follows shall apply.

- Measurements configured on E-UTRA PSCC shall meet E-UTRAN OTDOA intra-frequency measurements requirements in clause 8.1.2.5. The applicable measurement accuracy requirements are in clause 9.1.10.

- Measurements configured on E-UTRA SCC shall meet all applicable requirements in clause 8.4, except that the terms PCell and primary component carrier shall be deemed to be swapped with PSCell and PSCC. The applicable measurement accuracy requirements are in clause 9.1.12, except that the terms PCell and primary component carrier shall be deemed to be swapped with PSCell and PSCC.

The requirements in clause 9.4.4.1 apply when:

- the UE is provided with the LTE timing information via LPP [27], including both *nr-LTE-SFN-Offset* and *nr-LTE-fineTiming-Offset*, or

- the UE is not provided with *nr-LTE-SFN-Offset* or *nr-LTE-fineTiming-Offset*, or

- the UE is provided with *nr-LTE-SFN-Offset* but not with *nr-LTE-fineTiming-Offset*.

When the UE is not aware of the SFN of at least one LTE cell in the OTDOA assistance data, the UE may be using autonomous gaps to acquire SFN of the OTDOA assistance data reference cell prior to requesting measurement gaps for performing the requested E-UTRA RSTD measurements before the $T_{RSTD_InterRAT,E-UTRAN_TDD}$ time period starts while meeting all the requirements in clause 9.4.4.2.2, provided that the OTDOA assistance data is provided to allow sufficient time for the UE to acquire the SFN before the $T_{RSTD\ InterRAT,\ E-UTRAN\ TDD}$ starts. When the UE is not aware of and cannot derive the subframe timing difference between the NR serving cell and the OTDOA assistance data reference cell, the UE may need to request measurement gaps to perform cell detection for the OTDOA assistance data reference cell prior to requesting measurement gaps for performing the requested E-UTRA RSTD measurements before the $T_{RSTD_InterRAT,E-UTRAN_TDD}$ time period starts while meeting all the requirements in clause 9.4.4.2.2, provided that the OTDOA assistance data is provided to allow sufficient time for the UE to detect the cell before the $T_{RSTD_InterRAT,E-UTRAN_TDD}$ starts.

9.4.4.2.2 Requirements

When the physical layer cell identities of neighbour cells together with the OTDOA assistance data are provided, the UE shall be able to detect and measure inter-RAT -UTRAN TDD RSTD, specified in TS 38.215 [4], for at least *n*=16 cells, including the reference cell, within $T_{RSTD_InterRAT,E-UTRAN_TDD}$ ms as given below:

$$T_{InterRAT,E-UTRAN_TDD} = T_{PRS} \times (M-1) + \Delta \quad ,$$

where

$T_{RSTD_InterRAT,E-UTRAN_TDD}$ is the total time for detecting and measuring at least *n* cells,
T_{PRS} is the largest value of the cell-specific positioning subframe configuration period, defined in TS 36.211 [23], among the measured *n* cells including the reference cell,

M is the number of PRS positioning occasions as defined in table 9.4.4.2.2-1, where a PRS positioning occasion is as defined in clause 9.4.4.1.2,

$CSSF_{interRAT}=CSSF_{within_gap,i}$ is the scaling factor determined by the gap sharing scheme for the RSTD measurements on the carrier frequency *i* as defined in clause 9.1.5.2,

$\Delta = 160 \times \frac{n}{M}$ ms is the measurement time for a single PRS positioning occasion which includes the sampling time and the processing time, and

the *n* cells are distributed on up to two E-UTRAN TDD carrier frequencies.

Table 9.4.4.2.2-1: Number of PRS positioning occasions within $T_{RSTD_InterRAT,E-UTRAN_TDD}$

Positioning subframe T_{PRS} configuration period,	Number of PRS positioning occasions, *M*	
	f2 Note1	f1 and f2 Note2
160 ms	16 × $CSSF_{interRAT}$	32 × $CSSF_{interRAT}$

> 160 ms	8 × $CSSF_{interRAT}$	16 × $CSSF_{interRAT}$
NOTE 1: When inter-RAT E-UTRAN TDD RSTD measurements are performed over the reference cell and neighbour cells, which belong to the E-UTRAN TDD carrier frequency f2.		
NOTE 2: When inter-RAT E-UTRAN TDD RSTD measurements are performed over the reference cell and the neighbour cells, which belong to the E-UTRAN TDD carrier frequency f1 and the E-UTRAN TDD carrier frequency f2 respectively.		

The requirements in this clause shall apply for all TDD special subframe configurations specified in TS 36.211 [23] and for the TDD uplink-downlink configurations as specified in table 9.4.4.2.2-2 for UE requiring measurement gaps for these measurements. For UEs capable of performing inter-RAT RSTD measurements without measurement gaps, TDD uplink-downlink subframe configurations as specified in table 9.4.4.2.2-3 shall apply.

Table 9.4.4.2.2-2: TDD uplink-downlink subframe configurations applicable for inter-RAT RSTD requirements

PRS Transmission Bandwidth (RB)	Applicable TDD uplink-downlink configurations
6, 15	3, 4 and 5
25	1, 2, 3, 4, 5 and 6
50, 75, 100	0, 1, 2, 3, 4, 5 and 6
NOTE 1: Uplink-downlink configurations are specified in Table 4.2-2 in TS 36.211 [23].	

Table 9.4.4.2.2-3: TDD uplink-downlink subframe configurations applicable for inter-RAT RSTD requirements without gaps

PRS Transmission Bandwidth (RB)	Applicable TDD uplink-downlink configurations
6, 15	1, 2, 3, 4 and 5
25, 50, 75, 100	0, 1, 2, 3, 4, 5 and 6
NOTE 1: Uplink-downlink configurations are specified in Table 4.2-2 in TS 36.211 [23].	

The UE physical layer shall be capable of reporting RSTD for the reference cell and all the neighbor cells *i* out of at least (*n*-1) neighbor cells within $T_{\text{RSTD InterRAT, E-UTRAN TDD}}$ provided:

$(\text{PRS } \hat{E}s/Iot)_{ref}$ $\left(\text{PRS } \hat{E}_s / \text{Iot}\right)_{ref}$ ≥-6 dB for all Frequency Bands for the reference cell,

$(\text{PRS } \hat{E}s/Iot)_i$ $\left(\text{PRS } \hat{E}_s / \text{Iot}\right)_i$ ≥-13 dB for all Frequency Bands for neighbour cell *i*,

$(\text{PRS } \hat{E}s/Iot)_{ref}$ $\left(\text{PRS } \hat{E}_s / \text{Iot}\right)_{ref}$ and $(\text{PRS } \hat{E}s/Iot)_i$ conditions apply for all subframes of at least $L = \frac{M}{2}$ PRS positioning occasions,

$PRP\ 1,2|_{dBm}$ according to TS 36.133 [15, Annex B.2.6] for a corresponding band,

PRS $\hat{E}s/Iot$ is as defined in clause 9.4.4.1.2.

The time $T_{RSTD_InterRAT,E\text{-}UTRAN_TDD}$ starts from the first subframe of the PRS positioning occasion closest in time after both the OTDOA-RequestLocationInformation message and the OTDOA assistance data in the OTDOA-ProvideAssistanceData message via LPP as specified in TS 38.305 [22], are delivered to the physical layer of the UE.

The RSTD measurement accuracy for all measured neighbor cells *i* shall be fulfilled according to the accuracy as specified in clause 10.2.4.

9.4.4.2.2.1 RSTD Measurement Reporting Delay

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

9.4.4.2.2.2 Requirements for acquiring the timing of the E-UTRA OTDOA reference cell

When the UE is not aware of the SFN of at least one LTE cell in the OTDOA assistance data, the UE supporting per-FR gaps may make autonomous gaps in downlink reception and uplink transmission of the PCell, PSCell, and each of the SCells in FR1 for acquiring SFN of the reference cell in the E-UTRA OTDOA assistance data, while no autonomous gaps in downlink reception or uplink transmission are allowed in any of the UE serving cells in FR2. The UE, which are only supporting per-UE gaps, may make autonomous gaps in downlink reception and uplink transmission of the PCell, PSCell, and each of the SCells for acquiring the SFN of the reference cell in the E-UTRA OTDOA assistance data.

When the UE is not aware of and cannot derive the subframe timing difference between the NR serving cell and the OTDOA assistance data reference cell, the UE may need to request measurement gaps while indicating *eutra-FineTimingDetection* according to TS 38.331 [2] for detecting the reference cell in the E-UTRA OTDOA assistance data.

When the UE is performing one or both of SFN acquisition or cell detection as specified above, the UE shall be able to determine the timing of the E-UTRA OTDOA assistance data reference cell during the time period

$$T_{RefCell,E\text{-}UTRAN} = T_{Detect,\ E\text{-}UTRAN\ TDD} + T_{MIB} + T_{ECGI}\ ,$$

where

$T_{Detect,\ E\text{-}UTRAN\ TDD} = T_{Identify,\ E\text{-}UTRAN\ TDD} - T_{measure,\ E\text{-}UTRAN\ TDD}$ is according to clause 9.4.3 assuming $CSSF_{interRAT} = 1$ and it is the time needed to detect the E-UTRA OTDOA assistance data reference cell when the UE needs to acquire the subframe and slot timing of the cell, provided the UE is configured with measurement gaps ($T_{Detect,\ E\text{-}UTRAN\ TDD} = 0$ when both *nr-LTE-SFN-Offset* and *nr-LTE-fineTiming-Offset* are provided in the E-UTRA OTDOA assistance data or the E-UTRA OTDOA assistance data reference cell is known to the UE), and

T_{MIB} = 50 ms is the time required to acquire SFN and/or PHICH configuration of the E-UTRA OTDOA assistance data reference cell provided the OTDOA assistance data reference cell is decodable and at least all E-UTRA subframes #0 during T_{MIB} are available at the UE receiver ($T_{MIB} = 0$ when *nr-LTE-SFN-Offset* is provided in the E-UTRA OTDOA assistance data and ECGI acquisition is not needed), and

T_{ECGI} = 100 ms is the time required to acquire ECGI of the E-UTRA OTDOA assistance data reference cell when *cellGlobalId* is included in *OTDOA-ReferenceCellInfo* and the UE is not aware of the ECGI of this cell ($T_{ECGI} = 0$ when *cellGlobalId* is not included in *OTDOA-ReferenceCellInfo* or the UE is aware of the ECGI of the E-UTRA OTDOA assistance data reference cell).

When detecting the E-UTRAN OTDOA reference cell, the requirements in this clause shall be met, provided the conditions for the detectable cell are fulfilled according to clause 9.4.3.1. In addition, the MIB of the E-UTRA OTDOA reference cell whose SFN is acquired shall be considered decodable by the UE provided the PBCH demodulation requirements are met according to TS 36.101 [25].

The requirement for acquiring the timing of the E-UTRA OTDOA reference cell within $T_{RefCell,E\text{-}UTRAN}$ is applicable when no DRX is used as well as when any of the DRX cycles specified in TS 38.331 [2] is used.

When $T_{MIB} > 0$ and UE is using autonomous gaps during T_{MIB}, the UE shall transmit at least $N_{ACK/NACK,\ MIB,\ TDD}$ ACK/NACKs on PCell, PSCell, and each of activated SCell(s) in the frequency range where the autonomous gaps are created, specified in table 9.4.4.2.2.2-1. When both $T_{MIB} > 0$ and $T_{ECGI} > 0$ and UE is using autonomous gaps during $T_{MIB}+T_{ECGI}$, the UE shall transmit on PCell, PSCell, and each of activated SCell(s) in the frequency range where autonomous gaps are created at least $N_{ACK/NACK,\ MIB+ECGI,\ TDD}$ ACK/NACKs specified in table 9.4.4.2.2.2-3, provided the OTDOA reference cell bandwidth is configured in the OTDOA assistance data [22, 27]. The requirements in Tables 9.4.4.2.2.2-1, and 9.4.4.2.2.2-3 apply, provided that:

- there is continuous DL data allocation,
- no DRX cycle is used,
- no measurement gaps are configured,
- only one code word is transmitted in each slot,
- 2 slot ACK/NACK feedback is configured,
- 20 ms SMTC period is configured,
- SSBs are transmitted in one slot within SMTC window.

Table 9.4.4.2.2.2-1: Minimum number of ACK/NACKs transmitted by the UE during T_{MIB}

9.4.5 Inter-RAT E-CID measurements

9.4.5.1 NR−E-UTRAN FDD E-CID RSRP and RSRQ measurements

9.4.5.1.1 Introduction

The requirements in clause 9.4.5.1. shall apply provided the UE has received *ECID-RequestLocationInformation* message from LMF via LPP requesting the UE to report inter-RAT E-UTRAN FDD E-CID RSRP and RSRQ measurements [22, 27].

9.4.5.1.2 Requirements

The requirements in clause 9.4.2 also apply for this clause except the measurement reporting requirements. The measurement reporting requirements for E-CID RSRP and RSRQ are defined in clause 9.4.5.1.3.

9.4.5.1.3 Measurement Reporting Delay

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

Reported RSRP and RSRQ measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2.2 and 10.2.3, respectively.

9.4.5.2 NR−E-UTRAN TDD E-CID RSRP and RSRQ measurements

9.4.5.2.1 Introduction

The requirements in clause 9.4.5.2. shall apply provided the UE has received *ECID-RequestLocationInformation* message from LMF via LPP requesting the UE to report inter-RAT E-UTRAN TDD E-CID RSRP and RSRQ measurements [22, 27].

9.4.5.2.2 Requirements

The requirements in clause 9.4.3 also apply for this clause except the measurement reporting requirements. The measurement reporting requirements for E-CID RSRP and RSRQ are defined in clause 9.4.5.2.3.

9.4.5.2.3 Measurement Reporting Delay

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

Reported RSRP and RSRQ measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2.2 and 10.2.3, respectively.

9.4.6 NR − UTRAN FDD measurements

9.4.6.1 Introduction

The requirements are applicable for NR− UTRAN FDD CPICH RSCP and CPICH Ec/No measurements for SRVCC.

9.4.6.2 Requirements when no DRX is used

9.4.6.2.1 Identification of a new UTRA FDD cell

When explicit neighbour list is provided and no DRX is used, either measurement gaps are scheduled or the UE supports capability of conducting such measurements without gaps, the UE shall be able to identify a new detectable cell belonging to the monitored set within

$$T_{identify,UTRA_FDD} = T_{basic_identify_UTRA_FDD} \times \frac{480}{T_{inter1}} \times CSSF_{interRAT}\ ms$$

A cell shall be considered detectable when

- CPICH Ec/Io $\geq$ -20 dB,
- SCH_Ec/Io $\geq$ -17 dB for at least one channel tap and SCH_Ec/Ior is equally divided between primary synchronisation code and secondary synchronisation code. When L3 filtering is used an additional delay can be expected.

9.4.6.2.2 UE UTRA FDD CPICH measurement capability

When measurement gaps are scheduled for UTRA FDD inter RAT measurements, or the UE supports capability of conducting such measurements without gaps, the UE physical layer shall be capable of reporting measurements to higher layers with measurement accuracy as specified in Clause 10 with measurement period given by

$$T_{Measurement_UTRA_FDD} = Max\left\{T_{Measurement_Period_UTRA_FDD} \times CSSF_{interRAT}, T_{basic_measurement_UTRA_FDD} \times \frac{480}{T_{inter1}} \times CSSF_{interRAT}\right\} m$$

The UE shall be capable of performing UTRA FDD CPICH measurements for $X_{\text{basic measurementUTRA_FDD}}$ inter-frequency cells per FDD frequency and the UE physical layer shall be capable of reporting measurements to higher layers with the measurement period of $T_{\text{Measurement_ UTRA_FDD}}$.

$X_{basic\ measurement\ UTRA_FDD} = 6$

$T_{Measurement_Period\ UTRA_FDD}$ = 480 ms. The period used for calculating the measurement period $T_{measurement_UTRA_FDD}$ for UTRA FDD CPICH measurements.

$T_{basic_identify_UTRA_FDD}$ = 300 ms. This is the time period used in the inter-RAT equation in clause 9.4.6.2.1 where the maximum allowed time for the UE to identify a new UTRA FDD cell is defined.

$T_{basic_measurement_UTRA_FDD}$ = 50 ms. This is the time period used in the equation for defining the measurement period for inter-RAT CPICH measurements.

$CSSF_{interRAT} = CSSF_{within_gap,i}$ is the scaling factor for the measured inter-RAT UTRA carrier *i* which is calculated as specified in clause 9.1.5.2.

T_{inter1} is defined in clause 9.4.1.

9.4.6.2.3 Periodic Reporting

Reported measurements in periodically triggered measurement reports shall meet the requirements in clause 10.

9.4.6.2.4 Event Triggered Reporting

Reported measurements in event triggered measurement reports shall meet the requirements in clause 10.

The UE shall not send any event triggered measurement reports, as long as the reporting criteria is not fulfilled.

The measurement reporting delay is defined as the time between any event that will trigger a measurement report until the UE starts to transmit the measurement report over the Uu interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is twice the TTI of the uplink DCCH. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{identify,\ UTRA_FDD}$ defined in clause 9.4.6.2.1 for the minimum requirements. When L3 filtering is used an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{identify,\ UTRA_FDD}$ defined in clause 9.4.6.2.1 for the minimum requirements and then triggers the measurement report as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{measurement_UTRA_FDD}$ defined in clause 9.4.6.2.2 provided the timing to that cell has not changed more than ± 32 chips while measurement gap has not been available and the L3 filter has not been used. When L3 filtering is used, an additional delay can be expected.

9.4.6.2.5 Event-triggered Periodic Reporting

Reported measurements contained in event triggered periodic measurement reports shall meet the requirements in clause 10.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.4.6.2.4 Event Triggered Reporting.

9.4.6.3 Requirements when DRX is used

When explicit neighbour list is provided and DRX is used, either measurement gaps are scheduled or the UE supports capability of conducting such measurements without gaps, the UE shall be able to identify a new detectable cell belonging to the neighbour cell list within $T_{identify,UTRA_FDD}$ as shown in table 9.4.6.3-1

Table 9.4.6.3-1: Requirement to identify a newly detectable UTRA FDD cell

DRX cycle length (s)	$T_{identify,UTRA_FDD}$ (s) (DRX cycles)	
	Gap period = 40 ms	Gap period = 80 ms

≤ 0.04	Non DRX Requirements in clause 9.4.6.2 are applicable	Non DRX Requirements in clause 9.4.6.2 are applicable
0.064	2.56 *$CSSF_{interRAT}$ (40*$CSSF_{interRAT}$)	4.8 *$CSSF_{interRAT}$ (75 *$CSSF_{interRAT}$)
0.08	3.2 *$CSSF_{interRAT}$ (40 *$CSSF_{interRAT}$)	4.8 *$CSSF_{interRAT}$ (60* $CSSF_{interRAT}$)
0.128	3.2 *$CSSF_{interRAT}$ (25* $CSSF_{interRAT}$)	4.8 *$CSSF_{interRAT}$ (37.5* $CSSF_{interRAT}$)
0.16	3.2 *$CSSF_{interRAT}$ (20 *$CSSF_{interRAT}$)	4.8 *$CSSF_{interRAT}$ (30 *$CSSF_{interRAT}$)
0.16 < DRX-cycle ≤ 2.56	Note1 (20 *$CSSF_{interRAT}$)	Note1 (20 *$CSSF_{interRAT}$)
NOTE 1: Time depends upon the DRX cycle in use. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2.		

A cell shall be considered detectable provided following conditions are fulfilled: A cell shall be considered detectable when

- CPICH Ec/Io $\geq$ -20 dB,
- SCH_Ec/Io $\geq$ -17 dB for at least one channel tap and SCH_Ec/Ior is equally divided between primary synchronisation code and secondary synchronisation code. When L3 filtering is used an additional delay can be expected.

The UE shall be capable of performing RSCP and Ec/Io measurements of at least 6 UTRA cells per UTRA FDD carrier for up to 3 UTRA FDD carriers and the UE physical layer shall be capable of reporting RSCP and Ec/Io measurements to higher layers with the measurement period defined in table 9.4.6.3-2 when DRX is used, either measurement gaps are scheduled or the UE supports capability of conducting such measurements without gaps.

Table 9.4.6.3-2: Requirement to measure UTRA FDD cells

DRX cycle length (s)	$T_{measurement_UTRA_FDD}$ (s) (DRX cycles)	
	Gap period = 40 ms	**Gap period = 80 ms**
≤ 0.04	Non DRX Requirements in clause 9.4.6.2 are applicable	Non DRX Requirements in clause 9.4.6.2 are applicable
0.064	0.48* $CSSF_{interRAT}$ (7.5* N_{freq}*$CSSF_{interRAT}$)	0.8 *$CSSF_{interRAT}$ (12.5 *$CSSF_{interRAT}$)
0.08	0.48 *$CSSF_{interRAT}$ (6 *$CSSF_{interRAT}$)	0. 8*$CSSF_{interRAT}$ (10 *$CSSF_{interRAT}$)
0.128	0.64 *$CSSF_{interRAT}$ (5 *$CSSF_{interRAT}$)	0. 8 *$CSSF_{interRAT}$ (6.25 *$CSSF_{interRAT}$)
0.128 < DRX-cycle ≤ 2.56	Note1 (5 *$CSSF_{interRAT}$)	Note1 (5 *$CSSF_{interRAT}$)
NOTE 1: Time depends upon the DRX cycle in use. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.2.2.		

The measurement accuracy for all measured cells shall be as specified in the clause 10.3.

9.4.6.3.1 Periodic Reporting

Reported measurements in periodically triggered measurement reports shall meet the requirements in clause 10.

9.4.6.3.2 Event Triggered Reporting

Reported measurements in event triggered measurement reports shall meet the requirements in clause 10.

The UE shall not send any event triggered measurement reports, as long as the reporting criteria is not fulfilled.

The measurement reporting delay is defined as the time between any event that will trigger a measurement report until the UE starts to transmit the measurement report over the Uu interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is twice the TTI of the uplink DCCH. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{identify,UTRA_FDD}$ defined in clause 9.4.6.3. When L3 filtering is used an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{identify, UTRA_FDD}$ defined in clause 9.4.6.3 and then triggers the measurement report as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{measurement_UTRA_FDD}$ defined in clause 9.4.6.3 provided the timing to that cell has not changed more than ± 32 chips while measurement gap has not been available and the L3 filter has not been used. When L3 filtering is used, an additional delay can be expected.

9.4.6.3.3 Event-triggered Periodic Reporting

Reported measurements contained in event triggered periodic measurement reports shall meet the requirements in clause 10.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.4.6.3.2 Event Triggered Reporting.

9.4.7 NR – E-UTRAN measurements with autonomous gaps

9.4.7.1 CGI identification of an E-UTRA cell with autonomous gaps

The requirements in this clause apply when the UE is configured with standalone NR, NE-DC or NR-DC. The UE shall identify and report the CGI when requested by an NR PCell for the purpose 'reportCGI'. The UE may make autonomous gaps in downlink reception and uplink transmission for receiving MIB and SIB1 message according to clause 5.5.3.1 in TS 38.331 [2]. If autonomous gaps are used for measurement with the purpose of 'reportCGI', regardless of whether DRX is used or not, or regardless of whether SCell(s) are configured or not, the UE shall be able to identify a new CGI of E-UTRA cell within $T_{identify_CGI, E\text{-}UTRAN}$ = 150 ms. This is the maximum allowed time for the UE to identify a new CGI of an E-UTRA cell, provided that the E-UTRA cell has been already identified by the UE.

A cell shall be considered identifiable following conditions are fulfilled:

- RSRP related side conditions given in clause 9.1 in [15] are fulfilled for a corresponding band,
- SCH_RP and SCH Ês/Iot according to Annex B.2.2 in [15] for a corresponding band

The MIB of an E-UTRA cell whose CGI is identified shall be considered decodable by the UE provided the PBCH demodulation requirements are met according to [25].

The requirement for identifying a new CGI of an E-UTRA cell within $T_{identify_CGI, E\text{-}UTRAN}$ is applicable when no DRX is used as well as when any of the DRX cycles specified in TS 38.331 [2] is used.

9.4.7.2 CGI reporting delay

The E-UTRA CGI reporting delay is defined as the time between a command that will trigger an E-UTRA CGI report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty of 2 x TTI_{DCCH} resulting when inserting the measurement report to the TTI of the uplink DCCH. This measurement reporting delay excludes any delay caused by lack of UL resources for UE to send the measurement report.

The CGI reporting delay shall be less than $T_{identify_CGI, E\text{-}UTRAN}$ plus RRC procedure delay defined in clause 12 in TS 38.331 [2], and an additional 30 ms margin.

9.4.8 NR – E-UTRAN measurements without measurement gaps

9.4.8.1 Introduction

The requirements in this clause are specified for NR−E-UTRAN FDD and NR−E-UTRAN TDD measurements and are applicable without an explicit E-UTRAN neighbour cell list containing physical layer cell identities, for a UE:

- in RRC_CONNECTED state, and configured with SA with NR−E-UTRAN FDD or TDD measurement (RSRP, RSRQ, RS-SINR, RSTD, or E-CID RSRP and RSRQ) on E-UTRA frequency carrier

The inter-RAT E-UTRA measurement requirements in this clause are applicable provided

- UE supports eutra-NeedForGapNCSG-reporting-r17 and indicates '*nogap-noncsg*' in the E-UTRA band in *NeedForGapNCSG-InfoEUTRA* for inter-RAT E-UTRA measurement, and UE supports 32-4, or

- UE supports [case b-2].

9.4.8.2 General requirements

If an NR – E-UTRAN measurement does not cause scheduling restriction as defined in clause 9.4.8.3.5 or 9.4.8.4.5, the measurement is performed outside measurement gaps.

If an NR – E-UTRAN measurement causes scheduling restriction as defined in clause 9.4.8.3.5 or 9.4.8.4.5, the measurement is performed within measurement gaps if one of the following conditions is met, and the requirements in clause 9.4.2 or 9.4.3 apply.

- EMW is configured and fully overlapped with measurement gap, and the periodicity of measurement gap and EMW is same, or

- EMW is not configured.

Otherwise, the measurement is performed within EMW occasions and requirements in clause 9.4.8 apply.

When UE is configured with EMW and measurement gap, EMW and measurement gap occasions are considered colliding if the two occasions are fully or partially overlapping in time domain.

When UE is configured with EMW and SMTC or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement, EMW and SMTC or SSB/CSI-RS occasions are considered colliding if the two occasions are fully or partially overlapping in time domain, provided that inter-RAT measurement during EMW would cause scheduling restriction.

In case of collision between EMW and measurement gap and EMW periodicity is smaller than MGRP, scheduling restriction specified in clause 9.4.8.2 does not apply in the EMW occasions colliding with measurement gap.

In case of collision between EMW and SMTC or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement, scheduling restriction specified in clause 9.4.8.2 does not apply in the EMW occasions colliding with SMTC or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement.

Parameter T_{Inter1} used in inter-RAT requirements in clause 9.4.8 is [60]ms if the measurement is performed outside measurement gaps without EMW configuration. If the measurement is performed with EMW configuration, T_{Inter1} is defined at table 9.4.8.2-1.

Table 9.4.8.2-1: The effective measurement window

Configuration	[Effective measurement window periodicity] [ms]	[Effective measurement window duration] [ms]	T_{inter1}
0	40	5	[60]
1	80	5	[30]
2	40	2	[60]
3	80	2	[30]
4	40	5.5	[60]
5	80	5.5	[30]

9.4.8.3 NR − E-UTRAN FDD measurements

9.4.8.3.1 Introduction

The requirements are applicable for NR−E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN FDD cell is considered to be detectable when:

- RSRP related conditions in the accuracy requirements in clause 10.2.2 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],

- RSRQ related conditions in the accuracy requirements in clause 10.2.3 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],

- RS-SINR related conditions in the accuracy requirements in clause 10.2.5 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.19 of TS 36.133 [15].

9.4.8.3.2 Requirements when no DRX is used

The UE shall be able to identify a new detectable FDD cell within $T_{\text{Identify, E-UTRAN FDD}}$ according to the following expression:

$$T_{\text{Identify,E-UTRAN FDD}} = T_{\text{BasicIdentify}} \cdot \frac{[480]}{T_{\text{Inter1}}} \cdot \text{CSSF}_{\text{interRAT}} \cdot K_{\text{P}} \quad ms,$$

where:

$T_{\text{BasicIdentify}}$ = [480 ms],

T_{Inter1} is defined in clause 9.4.8.1,

$\text{CSSF}_{\text{interRAT}}$ = [$\text{CSSF}_{\text{outside_gap,i}}$ in clause 9.1.5.1].

- [K_p is the scaling factor due to overlapping between EMW and SMTC, measurement gap, or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement. K_p =1 if the measurement is performed outside EMW or if EMW is fully non-overlapped with SMTC, SSB/CSI-RS configured for RLM, BFD, CBD or L1-RSRP measurement and measurement gap. Otherwise, $K_p = N_{\text{total}} / N_{\text{available}}$, where $N_{\text{available}}$ and N_{total} are calculated as follows:

  - For a window W of duration max(EMW period, SMTC period, MGRP, T_{SSB}, $T_{CSI\text{-}RS}$), where SMTC period follows *smtc1* if high layer in TS 38.331 [2] signaling of *smtc2* is not present on the same carrier frequency. Otherwise, SMTC period follows *smtc2*, T_{SSB}/$T_{CSI\text{-}RS}$ is the periodicity of SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement on the same carrier frequency, and starting from the beginning of any SMTC occasion.

  - N_{total} is the total number of EMW occasions within the window W, including those overlapped with SMTC, measurement gap, or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement, and

  - $N_{\text{available}}$ is the number of EMW occasions that are not overlapped with any SMTC, measurement gap, or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement within the window W, after accounting for EMW collisions by applying the EMW collision rule in clause 9.4.8.2.

  - No requirement applies for the measurement when $N_{\text{available}} = 0$.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{\text{measure, E-UTRAN FDD}}$ defined in table 9.4.8.3.2-1.

Table 9.4.8.3.2-1: Measurement period and measurement bandwidth configuration

Configuration	Physical Layer Measurement period: $T_{\text{measure, E-UTRAN FDD}}$ [ms]	Measurement bandwidth [RB]
0	480 x $\text{CSSF}_{\text{interRAT}}$ x K_p	6
1 (Note 1)	240 x $\text{CSSF}_{\text{interRAT}}$ x K_p	50
NOTE 1: This configuration is optional.		

The UE physical layer shall be capable of reporting RSRP, RSRQ, and RS-SINR measurements to higher layers with measurement period $T_{\text{measure, E-UTRAN FDD}}$ given by table 9.4.8.3.2-1.

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.8.3.3 Requirements when DRX is used

When DRX is in use the UE shall be able to identify a new detectable E-UTRAN FDD cell within $T_{Identify,\ E\text{-}UTRAN\ FDD}$ specified in table 9.4.8.3.3-1.

Table 9.4.8.3.3-1: Requirement to identify a newly detectable E-UTRAN FDD cell

DRX cycle length (s)	$T_{Identify,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)	
	EMW period = 40 ms, or the measurement is performed without EMW	EMW period = 80 ms
≤ 0.16	Non-DRX requirements in clause 9.4.8.3.2 apply	Non-DRX requirements in clause 9.4.8.3.2 apply
0.256	$5.12*CSSF_{interRAT}*K_p$ ($20*CSSF_{interRAT}*K_p$)	$7.68*CSSF_{interRAT}*K_p$ ($30*CSSF_{interRAT}*K_p$)
0.32	$6.4*CSSF_{interRAT}*K_p$ ($20*CSSF_{interRAT}*K_p$)	$7.68*CSSF_{interRAT}*K_p$ ($24*CSSF_{interRAT}*K_p$)
0.32 < DRX-cycle ≤ 10.24	Note1 ($20*CSSF_{interRAT}*K_p$)	Note1 ($20*CSSF_{interRAT}*K_p$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.8.3.2. NOTE 3: K_p is as defined in clause 9.4.8.3.2. NOTE 4: Void		

When DRX is in use, the UE shall be capable of performing NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN FDD cells per E-UTRA FDD frequency layer during each layer 1 measurement period, for up to 7 E-UTRA FDD carrier frequency layers, and the UE physical layer shall be capable of reporting NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements to higher layers with the measurement period $T_{measure,\ E\text{-}UTRAN\ FDD}$ specified in table 9.4.8.3.3-2.

Table 9.4.8.3.3-2: Requirement to measure E-UTRAN FDD cells

DRX cycle length (s)	$T_{measure,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)
≤ 0.08	[Non-DRX requirements in clause 9.4.8.3.2 apply]
0.08 < DRX-cycle ≤ 10.24	Note1 ($5*CSSF_{interRAT}*K_p$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.8.3.2.	

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.8.3.4 Measurement reporting requirements

9.4.8.3.4.1 Periodic Reporting

The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

9.4.8.3.4.2 Event-Triggered Periodic Reporting

The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The first report in event-triggered periodic measurement reporting shall meet the requirements specified in clause 9.4.8.3.4.3.

9.4.8.3.4.3 Event-Triggered Reporting

The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The UE shall not send any event-triggered measurement reports as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify, E-UTRAN FDD}$ defined in clauses 9.4.8.3.2 and 9.4.8.3.3 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify, E-UTRAN FDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{Measure, E-UTRAN FDD}$ provided the timing to that cell has not changed more than ± 50 Ts while measurement gap or NCSG has not been available and the L3 filter has not been used.

9.4.8.3.5 Scheduling availability during NR − E-UTRAN FDD measurements

When any of the conditions in the following clauses is met, there are restrictions on the scheduling availability; otherwise, there is no scheduling restriction.

9.4.8.3.5.1 Scheduling availability of UE performing inter-RAT measurements with a different subcarrier spacing than PDSCH/PDCCH on FR1

When UE performs inter-RAT measurement outside MG and the E-UTRA carrier is fully or partially overlapping with the DL active BWP of the serving cell, for UE which do not support [*FG32-7]* [14] the following restrictions apply due to RSRP/RSRQ/SINR measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on [all symbols within EMW duration].

9.4.8.4 NR − E-UTRAN TDD measurements

9.4.8.4.1 Introduction

The requirements are applicable for NR−E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN TDD cell is considered to be detectable when:

- RSRP related conditions in the accuracy requirements in clause 10.2.2 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
- RSRQ related conditions in the accuracy requirements in clause 10.2.3 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],

  RS-SINR related conditions in the accuracy requirements in clause 10.2.5 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.19 of TS 36.133 [15].

9.4.8.4.2 Requirements when no DRX is used

The UE shall be able to identify a new detectable TDD cell within $T_{Identify, E-UTRAN TDD}$ according to the following expression:

- When configuration 0 or configuration 1 in table 9.4.8.4.2-1 is applied,

$$T_{\text{Identify,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{[480]}{T_{\text{Inter1}}} \cdot CSSF_{\text{interRAT}} \cdot K_{\text{P}} \quad ms,$$

- When configuration 2 or configuration 3 in table 9.4.8.4.2-1 is applied,

$$T_{\text{Identify,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{[480]}{T_{\text{Inter1}}} \cdot CSSF_{\text{interRAT}} \cdot K_{\text{P}} + 240 \cdot \text{CSSF}_{\text{interRAT}} \cdot K_{\text{P}} \quad ms,$$

where:

$T_{BasicIdentify}$ = [480 ms],

T_{Inter1} is defined in clause 9.4.8.1,

$CSSF_{interRAT}$ = [$CSSF_{outside_gap,i}$ in clause 9.1.5.1].

K_p is the scaling factor due to overlapping between EMW and SMTC, measurement gap, or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement. K_p =1 if the measurement is performed outside EMW or if EMW is fully non-overlapped with SMTC, SSB/CSI-RS configured for RLM, BFD, CBD or L1-RSRP measurement and measurement gap. Otherwise, $K_p = N_{total} / N_{available}$, where $N_{available}$ and N_{total} are calculated as follows:

- For a window W of duration max(EMW period, SMTC period, MGRP, T_{SSB}, T_{CSI-RS}), where SMTC period follows *smtc1* if high layer in TS 38.331 [2] signaling of *smtc2* is not present on the same carrier frequency. Otherwise, SMTC period follows *smtc2*, T_{SSB}/T_{CSI-RS} is the periodicity of SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement on the same carrier frequency, and starting from the beginning of any SMTC occasion

- N_{total} is the total number of EMW occasions within the window, including those overlapped with SMTC, measurement gap, or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement, and

- $N_{available}$ is the number of EMW occasions that are not overlapped with any SMTC, measurement gap, or SSB/CSI-RS configured for RLM/BFD/CBD/L1-RSRP measurement within the window W, after accounting for EMW collisions by applying the EMW collision rule in clause 9.4.8.2.

- No requirement applies for the measurement when $N_{available}$ = 0.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{Measure, E\text{-}UTRAN\ TDD}$ defined in table 9.4.8.4.2-1.

Table 9.4.8.4.2-1: $T_{Measure, E\text{-}UTRAN\ TDD}$ for different configurations

Configuration	Measurement bandwidth (RB)	Number of UL/DL sub-frames per half frame (5 ms)		DwPTS		$T_{Measure, E\text{-}UTRAN\ TDD}$ (ms)
		DL	UL	Normal CP	Extended CP	
0	6	2	2	$19760 \cdot T_s$	$20480 \cdot T_s$	[480 x $CSSF_{interRAT}$ x K_p]
1 (Note 1)	50	2	2	$19760 \cdot T_s$	$20480 \cdot T_s$	[240 x $CSSF_{interRAT}$ x K_p]
2	6	1	3	$19760 \cdot T_s$	$20480 \cdot T_s$	[720 x $CSSF_{interRAT}$ x K_p]
3 (Note 1)	50	1	3	$19760 \cdot T_s$	$20480 \cdot T_s$	[480 x $CSSF_{interRAT}$ x K_p]
NOTE 1: This configuration is optional. NOTE 2: Void						

The UE physical layer shall be capable of reporting RSRP, RSRQ, and RS-SINR measurements to higher layers with measurement period $T_{measure, E\text{-}UTRAN\ TDD}$ given by table 9.4.8.4.2-1.

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.8.4.3 Requirements when DRX is used

When DRX is in use the UE shall be able to identify a new detectable E-UTRAN TDD cell within $T_{Identify, E\text{-}UTRAN\ TDD}$ specified in table 9.4.8.4.3-1.

Table 9.4.8.4.3-1: Requirement to identify a newly detectable E-UTRAN TDD cell

DRX cycle length (s)	$T_{identify,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles)	
	EMW period = 40 ms, or the measurement is performed without EMW	EMW period = 80 ms
≤ 0.16	Non-DRX requirements in clause 9.4.8.4.2 apply	Non-DRX requirements in clause 9.4.8.4.2 apply
0.256	[5.12* $CSSF_{interRAT}$*K_p (20*$CSSF_{interRAT}$*K_p)]	[7.68* $CSSF_{interRAT}$*K_p (30*$CSSF_{interRAT}$*K_p)]
0.32	[6.4* $CSSF_{interRAT}$*K_p (20*$CSSF_{interRAT}$*K_p)]	[7.68* $CSSF_{interRAT}$*K_p (24*$CSSF_{interRAT}$*K_p)]
0.32 < DRX-cycle ≤ 10.24	Note1 (20*$CSSF_{interRAT}$*K_p)	Note1 (20*$CSSF_{interRAT}$*K_p)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.8.4.2. NOTE 3: K_p is as defined in clause 9.4.8.4.2. NOTE 4: Void		

Table 9.4.8.4.3-2: Void

When DRX is in use, the UE shall be capable of performing NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN TDD cells per E-UTRA TDD frequency layer during each layer 1 measurement period, for up to 7 E-UTRA TDD carrier frequency layers, and the UE physical layer shall be capable of reporting NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements to higher layers with the measurement period $T_{measure,\ E\text{-}UTRAN\ TDD}$ specified in table 9.4.8.4.3-3.

Table 9.4.8.4.3-3: Requirement to measure E-UTRAN TDD cells

DRX cycle length (s)	$T_{measure,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles)
≤ 0.08	[Non-DRX Requirements in clause 9.4.8.4.2 apply]
0.128	[For configuration 2 Note3, non-DRX requirements in clause 9.4.8.4.2 apply,] Otherwise: Note1 (5*$CSSF_{interRAT}$*K_p)
0.128 < DRX-cycle ≤ 10.24	Note1 (5*$CSSF_{interRAT}$*K_p)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT}$ is as defined in clause 9.4.8.4.2. NOTE 3: See Table 9.4.8.4.2-1.	

If higher layer filtering is used, an additional cell identification delay can be expected.

The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2.
The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3.
The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

9.4.8.4.4 Measurement reporting requirements

9.4.8.4.4.1 Periodic Reporting

The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

9.4.8.4.4.2 Event-Triggered Periodic Reporting

The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The first report in event-triggered periodic measurement reporting shall meet the requirements specified in clause 9.4.8.4.4.3.

9.4.8.4.4.3 Event-Triggered Reporting

The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

The UE shall not send any event-triggered measurement reports as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify, E-UTRAN TDD}$ defined in clauses 9.4.8.4.2 and 9.4.8.4.3 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify, E-UTRAN TDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{Measure, E-UTRAN TDD}$ provided the timing to that cell has not changed more than $\pm$ 50 Ts while measurement gap or NCSG has not been available and the L3 filter has not been used.

9.4.8.4.5 Scheduling availability during NR − E-UTRAN TDD measurements

When any of the conditions in the following clauses is met, there are restrictions on the scheduling availability; otherwise, there is no scheduling restriction.

9.4.8.4.5.1 Scheduling availability of UE performing inter-RAT measurements in TDD bands on FR1

When the UE performs inter-RAT measurements in a TDD band outside MG and the E-UTRA carrier is within DL active BWP of the serving cell, the following restrictions apply on the NR serving cell due to RSRP, RS-SINR and RSRQ measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on all symbols within EMW duration.

When the UE performs inter-RAT measurement in a TDD band outside MG and the E-UTRA carrier is outside DL active BWP of the serving cell, the following restrictions apply on the NR serving cell due to RSRP/RSRQ/SINR measurement, when the NR serving cell and E-URTA carrier are in a band pair for which UE does not have the capability of supporting *simultaneousRxTxInterBandCA*

- The UE is not expected to transmit PUCCH/PUSCH/SRS on all symbols within EMW duration.

9.4.8.4.5.2 Scheduling availability of UE performing inter-RAT measurements with a different subcarrier spacing than PDSCH/PDCCH on FR1

When UE performs inter-RAT measurement outside MG and the E-UTRA carrier is fully or partially overlapping with the DL active BWP of the serving cell, for UE which do not support [*FG32-7]* [14] the following restrictions apply due to RSRP/RSRQ/SINR measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on all symbols within EMW duration.

9.4A Inter-RAT measurements for RedCap

9.4A.1 Introduction

The requirements in this clause are specified for NR−E-UTRAN FDD and NR−E-UTRAN TDD measurements and are applicable without an explicit E-UTRAN neighbour cell list containing physical layer cell identities, for a UE:

- in RRC_CONNECTED state, and
- configured
  - with SA operation mode by PCell with NR–E-UTRAN FDD or TDD measurement (RSRP, RSRQ, RS-SINR) on E-UTRA non-serving frequency carrier, and
- configured with an appropriate measurement gap pattern according to table 9.1A.2-1 and table 9.1A.2-2.

Parameter T_{Inter1_RedCap} used in inter-RAT requirements in clause 9.4A is specified in table 9.4A.1-1.

Table 9.4A.1-1: Minimum available time for inter-RAT measurements

Gap Pattern Id	MeasurementGap Length (MGL, ms)	Measurement Gap Repetition Period (MGRP, ms)	Minimum available time for inter-frequency and inter-RAT measurements during 480 ms period (T_{inter1_RedCap}, ms)
0	6	40	60
1	6	80	30
2	3	40	24 Note 1
3	3	80	12 Note 1
4	6	20	120 Note 1
6	4	20	72 Note 1,3,6
7	4	40	36 Note 1,4,6
8	4	80	18 Note 1,5,6
10	3	20	48 Note 1

NOTE 1: When determining UE requirements using T_{inter1_RedCap} for gap pattern IDs 2, 3, 4, 6, 7, 8, 10, T_{inter1_RedCap} = 60 for gap pattern IDs 2, 4, 6, 7, 10, and T_{inter1_RedCap} = 30 for gap pattern IDs 3 and 8 shall be used.
NOTE 2: Measurement gaps pattern configurations applicability is as specified in Table 9.1A.2-2.
NOTE 3: When this gap pattern is used, the T_{inter1_RedCap} for E-UTRA inter-frequency measurements is 48 ms corresponding to the first 3 ms of the 4 ms gap.
NOTE 4: When this gap pattern is used, the T_{inter1_RedCap} for E-UTRA inter-frequency measurements is 24 ms corresponding to the first 3 ms of the 4 ms gap.
NOTE 5: When this gap pattern is used, the T_{inter1_RedCap} for E-UTRA inter-frequency measurements is 12 ms corresponding to the first 3 ms of the 4 ms gap.
NOTE 6: This gap pattern is applicable for E-UTRA inter-frequency measurements only if gap based NR measurements are also configured.

A UE configured with gap pattern ID 2, 3 or 10 shall be able to detect a target cell, provided that

- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell begins not earlier than 500 μs from the start of the measurement gap, and
- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell ends not later than 500 μs before the end of the measurement gap in case of FDD and not later than 750 μs before the end of measurement gap in case of TDD.

A UE configured with gap pattern ID 6, 7 or 8 shall be able to detect a target cell, provided that

- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell begins not earlier than 500 μs from the start of the measurement gap, and
- the E-UTRA subframe #0 or #5 of the target E-UTRAN cell ends no later than 1500 μs before the end of the measurement gap in case of FDD and no later than 1750 μs before the end of measurement gap in case of TDD.

In this clause, the SSB terminology applies for both CD-SSB and NCD-SSB.

9.4A.2 NR − E-UTRAN FDD measurements

9.4A.2.1 Introduction

The requirements are applicable for NR−E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN FDD cell is considered to be detectable when:

- For 2 Rx RedCap UE:
  - RSRP related conditions in the accuracy requirements in clause 10.2.2 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
  - RSRQ related conditions in the accuracy requirements in clause 10.2.3 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
  - RS-SINR related conditions in the accuracy requirements in clause 10.2.5 are fulfilled for a corresponding band, together with the corresponding side conditions in annex B.2.3 and Annex B.3.19 of TS 36.133 [15].
- For 1 Rx RedCap UE:
  - RSRP related conditions in the accuracy requirements in clause 10.2A.2 are fulfilled for a corresponding band, together with the corresponding side conditions in annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
  - RSRQ related conditions in the accuracy requirements in clause 10.2A.3 are fulfilled for a corresponding band, together with the corresponding side conditions in annex B.2.3 and annex B.3.3 of TS 36.133 [15],

9.4A.2.2 Requirements when no DRX is used

When the UE requires measurement gaps to identify and measure inter-RAT cells and an appropriate measurement gap pattern is scheduled, the UE shall be able to identify a new detectable FDD cell within $T_{Identify_RedCap,\ E\text{-}UTRAN\ FDD}$ according to the following expression:

$$T_{\text{Identify_RedCap,E-UTRAN FDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1_RedCap}}} \cdot \text{CSSF}_{\text{interRAT_RedCap}} \quad ms,$$

where:

$T_{BasicIdentify}$ = 480 ms,

T_{Inter1_RedCap} is defined in clause 9.4A.1,

$CSSF_{interRAT_RedCap} = CSSF_{within_gap_RedCap,i}$ is the scaling factor for the measured inter-RAT E-UTRA carrier *i* which is calculated as specified in clause 9.1A.5.2.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{Measure_RedCap,\ E\text{-}UTRAN\ FDD}$ defined in table 9.4A.2.2-1 and table 9.4A.2.2-2 for 2 Rx RedCap UE and 1 Rx RedCap UE, respectively.

Table 9.4A.2.2-1: Measurement period and measurement bandwidth for 2Rx RedCap UE

Configuration	Physical Layer Measurement period: $T_{Measure_RedCap,\ E\text{-}UTRAN\ FDD}$ [ms]	Measurement bandwidth [RB]
0	480 x $CSSF_{interRAT_RedCap}$	6
1 (Note 1)	240 x $CSSF_{interRAT_RedCap}$	50
NOTE 1: This configuration is optional.		

Table 9.4A.2.2-2: Measurement period and measurement bandwidth for 1Rx RedCap UE

Configuration	Physical Layer Measurement period: $T_{Measure_RedCap,\ E\text{-}UTRAN\ FDD}$ [ms]	Measurement bandwidth [RB]
0	960 x $CSSF_{interRAT_RedCap}$	6
1 (Note 1)	480 x $CSSF_{interRAT_RedCap}$	50
NOTE 1: This configuration is optional.		

The UE shall be capable of identifying and performing NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN FDD cells per E-UTRA FDD carrier frequency layer during each layer 1 measurement period, for up to 7 E-UTRA FDD carrier frequency layers.

If higher layer filtering is used, an additional cell identification delay can be expected.

For 2 Rx RedCap UE:

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2. The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3. The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

For 1 Rx RedCap UE:

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2A.2. The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2A.3.

9.4A.2.3 Requirements when DRX is used

When DRX is in use and measurement gaps are configured, the UE shall be able to identify a new detectable E-UTRAN FDD cell within $T_{Identify_RedCap,\ E\text{-}UTRAN\ FDD}$ specified in table 9.4A.2.3-1.

Table 9.4A.2.3-1: Requirement to identify a newly detectable E-UTRAN FDD cell

DRX cycle length (s)	$T_{Identify_RedCap,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)	
	Gap period = 40 ms, 20 ms	Gap period = 80 ms
≤ 0.16	Non-DRX requirements in clause 9.4A.2.2 apply	Non-DRX requirements in clause 9.4A.2.2 apply
0.256	5.12* $CSSF_{interRAT_RedCap}$ (20*$CSSF_{interRAT_RedCap}$)	7.68* $CSSF_{interRAT_RedCap}$ (30*$CSSF_{interRAT_RedCap}$)
0.32	6.4* $CSSF_{interRAT_RedCap}$ (20*$CSSF_{interRAT_RedCap}$)	7.68* $CSSF_{interRAT_RedCap}$ (24*$CSSF_{interRAT_RedCap}$)
0.32 < DRX-cycle ≤ 10.24	Note1 (20*$CSSF_{interRAT_RedCap}$)	Note1 (20*$CSSF_{interRAT_RedCap}$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT_RedCap}$ is as defined in clause 9.4A.2.2.		

When DRX is in use, the UE shall be capable of performing NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN FDD cells per E-UTRA FDD frequency layer during each layer 1 measurement period, for up to 7 E-UTRA FDD carrier frequency layers, and the UE physical layer shall be capable of reporting NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements to higher layers with the measurement period $T_{measure_RedCap,\ E\text{-}UTRAN\ FDD}$ specified in table 9.4A.2.3-2 and table 9.4A.2.3-3.

Table 9.4A.2.3-2: Requirement to measure E-UTRAN FDD cells for 2Rx RedCap UE

DRX cycle length (s)	$T_{measure_RedCap,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)
≤ 0.08	Non-DRX requirements in clause 9.4A.2.2 apply
0.08 < DRX-cycle ≤ 10.24	Note1 (5* $CSSF_{interRAT_RedCap}$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT_RedCap}$ is as defined in clause 9.4A.2.2.	

Table 9.4A.2.3-3: Requirement to measure E-UTRAN FDD cells for 1Rx RedCap UE

DRX cycle length (s)	$T_{measure_RedCap,\ E\text{-}UTRAN\ FDD}$ (s) (DRX cycles)
≤0.08	Non-DRX requirements in clause 9.4A.2.2 apply
0.08 < DRX-cycle ≤ 10.24	Note1 (10* $CSSF_{interRAT_RedCap}$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT_RedCap}$ is as defined in clause 9.4A.2.2.	

If higher layer filtering is used, an additional cell identification delay can be expected.

For 2 Rx RedCap UE:

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2. The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3. The NR – E-UTRAN FDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

For 1 Rx RedCap UE:

The NR – E-UTRAN FDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2A.2. The NR – E-UTRAN FDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2A.3.

9.4A.2.4 Measurement reporting requirements

9.4A.2.4.1 Periodic Reporting

For 2 Rx RedCap UE: The requirements in clause 9.4.2.4.1 shall apply.

For 1 Rx RedCap UE: The reported NR – E-UTRAN FDD RSRP and RSRQ measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2A.2 and 10.2A.3, respectively.

9.4A.2.4.2 Event-Triggered Periodic Reporting

For 2 Rx RedCap UE: The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

For 1 Rx RedCap UE: The reported NR – E-UTRAN FDD RSRP and RSRQ measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2A.2 and 10.2A.3, respectively.

The first report in event-triggered periodic measurement reporting shall meet the requirements specified in clause 9.4A.2.4.3.

9.4A.2.4.3 Event-Triggered Reporting

For 2 Rx RedCap UE: The reported NR – E-UTRAN FDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

For 1 Rx RedCap UE: The reported NR – E-UTRAN FDD RSRP and RSRQ measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2A.2 and 10.2A.3, respectively.

The UE shall not send any event-triggered measurement reports as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify_RedCap,\ E\text{-}UTRAN\ FDD}$ defined in clauses 9.4A.2.2 and 9.4A.2.3 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify_RedCap,\ E\text{-}UTRAN\ FDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{Measure_RedCap,\ E\text{-}UTRAN\ FDD}$ provided the timing to that cell has not changed more than ± 50 Ts while measurement gap has not been available and the L3 filter has not been used.

9.4A.3 NR − E-UTRAN TDD measurements

9.4A.3.1 Introduction

The requirements are applicable for NR−E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements.

In the requirements, an E-UTRAN TDD cell is considered to be detectable when:

- For 2 Rx RedCap UE:
  - RSRP related conditions in the accuracy requirements in clause 10.2.2 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
  - RSRQ related conditions in the accuracy requirements in clause 10.2.3 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],

    RS-SINR related conditions in the accuracy requirements in clause 10.2.5 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.19 of TS 36.133 [15].
- For 1 Rx RedCap UE:
  - RSRP related conditions in the accuracy requirements in clause 10.2A.2 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],
  - RSRQ related conditions in the accuracy requirements in clause 10.2A.3 are fulfilled for a corresponding band, together with the corresponding side conditions in Annex B.2.3 and Annex B.3.3 of TS 36.133 [15],

9.4A.3.2 Requirements when no DRX is used

When the UE requires measurement gaps to identify and measure inter-RAT cells and an appropriate measurement gap pattern is scheduled, the UE shall be able to identify a new detectable TDD cell within $T_{\text{Identify_RedCap, E-UTRAN TDD}}$ according to the following expression:

- When configuration 0 or configuration 1 in table 9.4A.3.2-1 is applied,

$$T_{\text{Identify_RedCap,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1_RedCap}}} \cdot \text{CSSF}_{\text{interRAT_RedCap}} \quad ms,$$

- When configuration 2 or configuration 3 in table 9.4A.3.2-1 is applied,

$$T_{\text{Identify_RedCap,E-UTRAN TDD}} = T_{\text{BasicIdentify}} \cdot \frac{480}{T_{\text{Inter1_RedCap}}} \cdot \text{CSSF}_{\text{interRAT_RedCap}} + 240 \cdot \text{CSSF}_{\text{interRAT_RedCap}} \quad ms,$$

where:

$T_{\text{BasicIdentify}}$ = 480 ms,

$T_{\text{Inter1_RedCap}}$ is defined in clause 9.4A.1,

$\text{CSSF}_{\text{interRAT_RedCap}} = \text{CSSF}_{\text{within_gap_RedCap,i}}$ is the scaling factor for the measured inter-RAT E-UTRA carrier *i* which is calculated as specified in clause 9.1A.5.2.

Identification of a cell shall include detection of the cell and additionally performing a single measurement with measurement period of $T_{\text{Measure_RedCap, E-UTRAN TDD}}$ defined in table 9.4A.3.2-1 and table 9.4A.3.2-2 for 2 Rx RedCap UE and 1 Rx RedCap UE, respectively.

Table 9.4A.3.2-1: $T_{\text{Measure_RedCap, E-UTRAN TDD}}$ for different configurations for 2Rx RedCap UE

Configuration	Measurement bandwidth (RB)	Number of UL/DL sub-frames per half frame (5 ms)		DwPTS		$T_{\text{Measure_RedCap, E-UTRAN TDD}}$ (ms)
		DL	UL	Normal CP	Extended CP	
0	6	2	2	$19760 \cdot T_s$	$20480 \cdot T_s$	480 x $\text{CSSF}_{\text{interRAT_RedCap}}$
1 (Note 1)	50	2	2	$19760 \cdot T_s$	$20480 \cdot T_s$	240 x $\text{CSSF}_{\text{interRAT_RedCap}}$
2	6	1	3	$19760 \cdot T_s$	$20480 \cdot T_s$	720 x $\text{CSSF}_{\text{interRAT_RedCap}}$
3 (Note 1)	50	1	3	$19760 \cdot T_s$	$20480 \cdot T_s$	480 x $\text{CSSF}_{\text{interRAT_RedCap}}$

NOTE 1: This configuration is optional.

Table 9.4A.3.2-2: $T_{Measure_RedCap,\ E\text{-}UTRAN\ TDD}$ for different configurations for 1Rx RedCap UE

Configuration	Measurement bandwidth (RB)	Number of UL/DL sub-frames per half frame (5 ms)		DwPTS		$T_{Measure_RedCap,\ E\text{-}UTRAN\ TDD}$ (ms)
		DL	UL	Normal CP	Extended CP	
0	6	2	2	$19760 \cdot T_s$	$20480 \cdot T_s$	960 x $CSSF_{interRAT_RedCap}$
1 (Note 1)	50	2	2	$19760 \cdot T_s$	$20480 \cdot T_s$	480 x $CSSF_{interRAT_RedCap}$
2	6	1	3	$19760 \cdot T_s$	$20480 \cdot T_s$	1440 x $CSSF_{interRAT_RedCap}$
3 (Note 1)	50	1	3	$19760 \cdot T_s$	$20480 \cdot T_s$	960 x $CSSF_{interRAT_RedCap}$
NOTE 1: This configuration is optional.						

The UE shall be capable of identifying and performing NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN TDD cells per E-UTRA TDD carrier frequency layer during each layer 1 measurement period, for up to 7 E-UTRA TDD carrier frequency layers.

If higher layer filtering is used, an additional cell identification delay can be expected.

For 2 Rx RedCap UE:

- The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2. The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3. The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

For 1 Rx RedCap UE:

- The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2A.2. The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2A.3.

9.4A.3.3 Requirements when DRX is used

When DRX is in use and measurement gaps are configured, the UE shall be able to identify a new detectable E-UTRAN TDD cell within $T_{Identify_RedCap,\ E\text{-}UTRAN\ TDD}$ specified in table 9.4A.3.3-1.

Table 9.4A.3.3-1: Requirement to identify a newly detectable E-UTRAN TDD cell

DRX cycle length (s)	$T_{Identify_RedCap,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles)	
	Gap period = 40 ms, 20 ms	Gap period = 80 ms
≤ 0.16	Non-DRX requirements in clause 9.4A.3.2 apply	Non-DRX requirements in clause 9.4A.3.2 apply
0.256	5.12* $CSSF_{interRAT_RedCap}$ (20*$CSSF_{interRAT_RedCap}$)	7.68* $CSSF_{interRAT_RedCap}$ (30*$CSSF_{interRAT_RedCap}$)
0.32	6.4* $CSSF_{interRAT_RedCap}$ (20*$CSSF_{interRAT_RedCap}$)	7.68* $CSSF_{interRAT_RedCap}$ (24*$CSSF_{interRAT_RedCap}$)
0.32 < DRX-cycle ≤ 10.24	Note1 (20*$CSSF_{interRAT_RedCap}$)	Note1 (20*$CSSF_{interRAT_RedCap}$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT_RedCap}$ is as defined in clause 9.4A.3.2.		

When DRX is in use, the UE shall be capable of performing NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements of at least 4 identified E-UTRAN TDD cells per E-UTRA TDD frequency layer during each layer 1 measurement period, for up to 7 E-UTRA TDD carrier frequency layers, and the UE physical layer shall be capable of reporting NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements to higher layers with the measurement period $T_{measure_RedCap,\ E\text{-}UTRAN\ TDD}$ specified in table 9.4A.3.3-2 and table 9.4A.3.3-3 for 2 Rx RedCap UE and 1 Rx RedCap UE, respectively.

Table 9.4A.3.3-2: Requirement to measure E-UTRAN TDD cells for 2Rx RedCap UE

DRX cycle length (s)	$T_{measure_RedCap,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles)
≤ 0.08	Non-DRX Requirements in clause 9.4A.3.2 apply
0.128	For configuration 2 Note3, non-DRX requirements in clause 9.4A.3.2 apply, Otherwise: Note1 ($5*CSSF_{interRAT_RedCap}$)
0.128 < DRX-cycle ≤ 10.24	Note1 ($5*CSSF_{interRAT_RedCap}$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT_RedCap}$ is as defined in clause 9.4A.3.2. NOTE 3: See Table 9.4A.3.2-1.	

Table 9.4A.3.3-3: Requirement to measure E-UTRAN TDD cells for 1Rx RedCap UE

DRX cycle length (s)	$T_{measure_RedCap,\ E\text{-}UTRAN\ TDD}$ (s) (DRX cycles)
≤ 0.08	Non-DRX Requirements in clause [9.4A.3.2] apply
0.128	For configuration 2 Note3, non-DRX requirements in clause [9.4A.3.2] apply, Otherwise: Note1 ($5*CSSF_{interRAT_RedCap}$)
0.128 < DRX-cycle ≤ 10.24	Note1 ($10*CSSF_{interRAT_RedCap}$)
NOTE 1: The time depends on the DRX cycle length. NOTE 2: $CSSF_{interRAT_RedCap}$ is as defined in clause 9.4A.3.2. NOTE 3: See Table 9.4A.3.2-2.	

If higher layer filtering is used, an additional cell identification delay can be expected.

For 2 Rx RedCap UE:

- The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2.2. The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2.3. The NR – E-UTRAN TDD RS-SINR measurement accuracy for all measured cells shall be as specified in clause 10.2.5.

For 1 Rx RedCap UE:

- The NR – E-UTRAN TDD RSRP measurement accuracy for all measured cells shall be as specified in clause 10.2A.2. The NR – E-UTRAN TDD RSRQ measurement accuracy for all measured cells shall be as specified in clause 10.2A.3.

9.4A.3.4 Measurement reporting requirements

9.4A.3.4.1 Periodic Reporting

For 2 Rx RedCap UE: The requirements in clause 9.4.3.4.1 shall apply.

For 1 Rx RedCap UE: The reported NR – E-UTRAN TDD RSRP and RSRQ measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.2A.2 and 10.2A.3, respectively.

9.4A.3.4.2 Event-Triggered Periodic Reporting

For 2 Rx RedCap UE: The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

For 1 Rx RedCap UE: The reported NR – E-UTRAN TDD RSRP and RSRQ measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.2A.2 and 10.2A.3, respectively.

The first report in event-triggered periodic measurement reporting shall meet the requirements specified in clause 9.4A.3.4.3.

9.4A.3.4.3 Event-Triggered Reporting

For 2 Rx RedCap UE: The reported NR – E-UTRAN TDD RSRP, RSRQ, and RS-SINR measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2.2, 10.2.3, and 10.2.5, respectively.

For 1 Rx RedCap UE: The reported NR – E-UTRAN TDD RSRP and RSRQ measurements contained in event-triggered measurement reports shall meet the requirements in clauses 10.2A.2 and 10.2A.3, respectively.

The UE shall not send any event-triggered measurement reports as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than $T_{Identify_RedCap,\ E\text{-}UTRAN\ TDD}$ defined in clauses 9.4A.3.2 and 9.4A.3.3 without DRX and with DRX, respectively. When L3 filtering is used, an additional delay can be expected.

If a cell which has been detectable at least for the time period $T_{Identify_RedCap,\ E\text{-}UTRAN\ TDD}$ becomes undetectable for a period ≤ 5 seconds and then the cell becomes detectable again and triggers an event as per TS 38.331 [2], the event triggered measurement reporting delay shall be less than $T_{Measure_RedCap,\ E\text{-}UTRAN\ TDD}$ provided the timing to that cell has not changed more than ± 50 Ts while measurement gap has not been available and the L3 filter has not been used.

9.4A.4 NR – E-UTRAN measurements with autonomous gaps

9.4A.4.1 CGI identification of an E-UTRA cell with autonomous gaps

The requirements in this clause apply when the 1Rx RedCap UE or 2Rx RedCap UE is configured with standalone NR. The UE shall identify and report the CGI when requested by an NR PCell for the purpose '*reportCGI*'. The UE may make autonomous gaps in downlink reception and uplink transmission for receiving MIB and SIB1 message according to clause 5.5.3.1 in TS 38.331 [2].

For 2Rx RedCap UE: If autonomous gaps are used for measurement with the purpose of 'reportCGI', the UE shall be able to identify a new CGI of E-UTRA cell within $T_{identify_CGI_RedCap,\ E\text{-}UTRAN}$ = 150 ms.

For 1Rx RedCap UE: If autonomous gaps are used for measurement with the purpose of 'reportCGI', the UE shall be able to identify a new CGI of E-UTRA cell within $T_{identify_CGI_RedCap,\ E\text{-}UTRAN}$ = 190 ms.

This is the maximum allowed time for the UE to identify a new CGI of an E-UTRA cell, provided that the E-UTRA cell has been already identified by the UE.

A cell shall be considered identifiable following conditions are fulfilled:

- RSRP related side conditions given in Clause 9.1 in [15] are fulfilled for a corresponding band,
- SCH_RP and SCH Ês/Iot according to Annex B.2.2 in [15] for a corresponding band

The MIB of an E-UTRA cell whose CGI is identified shall be considered decodable by the UE provided the PBCH demodulation requirements are met according to [25].

The requirement for identifying a new CGI of an E-UTRA cell within $T_{identify_CGI_RedCap,\ E\text{-}UTRAN}$ is applicable when no DRX is used as well as when any of the DRX cycles specified in TS 38.331 [2] is used.

9.4A.4.2 CGI reporting delay

The E-UTRA CGI reporting delay is defined as the time between a command that will trigger an E-UTRA CGI report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty of 2 x TTI_{DCCH} resulting when inserting the measurement report to the TTI of the uplink DCCH. This measurement reporting delay excludes any delay caused by lack of UL resources for UE to send the measurement report.

The CGI reporting delay shall be less than $T_{identify_CGI_RedCap,\ E\text{-}UTRAN}$ plus RRC procedure delay defined in clause 12 in TS 38.331 [2], and an additional 30 ms margin.

9.4A.4.3 CGI reporting scheduling restriction

When a UE is identifying CGI of an E-UTRA FDD cell or E-UTRA TDD cell with autonomous gaps, within time period $T_{identify_CGI_RedCap,\ E\text{-}UTRA}$ specified in clause 9.4A.4.1, the UE shall be able to transmit at least the number of ACK/NACKs specified in table 9.4A.4.3-1 on PCell in the frequency range where autonomous gaps are used, provided that:

- there is continuous DL data allocation,
- no DRX cycle is used,
- no measurement gaps are configured,
- only one code word is transmitted in each slot,
- 2 slot ACK/NACK feedback is configured,
- 20 ms SMTC period is configured.

Table 9.4A.4.3-1: Minimum number of ACK/NACKs transmitted by the UE during $T_{identify_CGI_RedCap,\ E\text{-}UTRAN}$

Minimum number of transmitted ACK/NACKs	SCS	
	Duplex mode configuration	SCS
84	FDD	15 kHz
193	FDD	30 kHz
402	FDD	60 kHz
28	TDD Note 1	15 kHz
81	TDD Note 1	30 kHz
159	TDD Note 1	60 kHz
233	TDD Note 2	60 kHz
491	TDD Note 2	120 kHz
NOTE 1: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-1 [18]. NOTE 2: TDD UL-DL configuration is as specified in Table A.3.3.1-1 of TS 38.101-2 [19].		

9.5 L1-RSRP measurements for Reporting

9.5.1 Introduction

When configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP. The measurements shall be performed for a serving cell, including PCell, PSCell, or SCell, on the resources configured for L1-RSRP measurements within the active BWP. For UE supporting *bwpOperationMeasWithoutInterrupt-r18*, the UE shall additionally be able to perform L1-RSRP measurements for a serving cell, including PCell, PSCell, or SCell, on the configured SSB resources for L1-RSRP outside the active BWP, provided that the SSB is within the configured UE-specific CBW.

For UE supporting *ncd-SSB-BWP-Wor-r18*, the SSB and SMTC in this clause applies for both CD-SSB and NCD-SSB if it is not explicitly specified otherwise. If SSB in the active DL BWP of serving cell *i* is NCD-SSB, for serving cell *i* the requirements in clause 9.5 apply provided that serving cell *i* is PCell or activated PSCell.

The UE shall be able to measure all CSI-RS resources and/or SSB resources of the *nzp-CSI-RS-ResourceSet* and/or *csi-SSB-ResourceSet* within the *CSI-ResourceConfig* settings configured for L1-RSRP for the active BWP, provided that the number of resources, including the number of SSB resources of the cell with PCI different from serving cell configured for L1-RSRP measurements in clause 9.13, does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*. If the UE supports *bwpOperationMeasWithoutInterrupt-r18*, UE shall be able to measure the SSB reources of *csi-SSB-ResourceSet* within the *CSI-ResourceConfig* configured outside active BWP, provided that the SSB is within the configured UE-specific CBW.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

For UE supporting *On-demand SSB operation* and when OD-SSB transmission is indicated, the UE shall be able to perform L1-RSRP measurements of configured SSB resources, provided the following conditions are met:

- an OD-SSB transmission in a configured DL BWP without first SSB transmission, or

- an OD-SSB transmission in a configured DL BWP with a first SSB transmission which cannot be used to obtain SIB1 have the following relations:

  - are with the same Cell ID, and

  - are in the same frequency location, and

  - are with same sub-carrier spacing, and

  - are with the same downlink transmit power, and

  - are quasi co-located with respect to Doppler shift, Doppler spread, average gain, average delay, delay spread and, when applicable, spatial RX parameters, when they have a same SSB index.

9.5.2 Requirements applicability

The requirements in clause 9.5 apply, provided:

- The CSI-RS or SSB or CSI-RS and SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clauses 10.1.19.1 and 10.1.20.1 for FR1 and FR2, respectively, for a corresponding band,

- SSB_RP and SSB Ês/Iot according to Annex B.2.4.1 for a corresponding band.

A CSI-RS resource configured for L1-RSRP shall be considered measurable when for each relevant CSI-RS the following conditions are met:

- L1-RSRP related side conditions given in clauses 10.1.19.2 and 10.1.20.2 for FR1 and FR2, respectively, for a corresponding band,

- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.4.2 for a corresponding band.

A CSI-RS and SSB resource configured for L1-RSRP shall be considered measurable when the measurable resource conditions are met for both CSI-RS resource and SSB resource.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

In case the SSB resources configured for L1-RSRP measurements outside SMTCs are overlapped with the PDSCH/PDCCH that is associated to a PCI different from serving cell, L1-RSRP measurement performance degradation is expected.

If *groupBasedBeamReporting-r17* is configured, the requirements in clause 9.5 apply when all SSB resources of *csi-SSB-ResourceSet* or CSI-RS resources of *NZP-CSI-RS-ResourceSet* within the CSI-Resource*Config* settings are configured for L1-RSRP for the active BWP are from a serving cell, including a single PCell, PSCell, or SCell configured for L1-RSRP measurements, when the UE is configured with a single serving cell (PCell, PSCell, or SCell) in FR2-1.

Unless otherwise stated in other sub-clauses of 9.5,

- For a UE that supports both *multiDCI-IntraCellMultiTRP-TwoTA-r18* or *multiDCI-InterCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*, the requirements apply when Rx timing difference is up to MRTD as specified in clause 7.6.8.

- For a UE which do not support *rxTimingDiff-r18*, the requirements apply when Rx timing difference is less than CP.

9.5.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports only for report configurations configured for the active BWP, unless the UE supports *bwpOperationMeasWithoutInterrupt-r18*, provided that the SSB is within the configured UE-specific CBW.

The UE shall report the L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1 dB step size according to clause 10.1.19 for FR1 and 10.1.20 for FR2 if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting* is enabled, or if *groupBasedBeamReporting-r17* is configured, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1.19 for FR1 and 10.1.20 for FR2. The differential L1-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6.

In EN-DC and NE-DC operation, when the UE is configured to perform E-UTRA SRS carrier-based switching an additional delay can be expected in FR1 if the UE is capable of per-FR gap, or an additional delay can be expected in both FR1 and FR2 if the UE is not capable of per-FR gap.

9.5.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively.

The UE shall only send periodic L1-RSRP measurement reports for an active BWP, unless the UE supports *bwpOperationMeasWithoutInterrupt-r18*, provided that the SSB is within the configured UE-specific CBW.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively.

The UE shall only send aperiodic L1-RSRP measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.5.3.4 Event Triggered Reporting for the UE initiated beam management

For a UE configured with a *CSI-ReportConfig* with *csi-ReportUE-IBR-r19* and with *dl-OrJointTCI-StateList*， with or without *eventCountWindow-r19* configuration, the reported L1-RSRP measurements contained in an event triggered L1-RSRP measurement report shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively.

The UE shall not send any event triggered measurement reports if no reporting criteria is fulfilled.

The event triggered L1-RSRP measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE transmits first PUCCH over the air interface.

When *eventCountWindow-r19* is not configured,

The event triggered measurement reporting delay shall be no larger than $T_{L1\text{-}meas_basic} + T_{first_UL_channel}$, where:

$T_{L1\text{-}meas_basic}$ is the maximum of L1-RSRP measurement periods of the reference signals of the beams corresponding to the event

For a UE configured with a CSI-ReportConfig with the higher layer parameter *eventTypeUE-IBR-r19* set to '*event2-r19*', UE shall perform L1-RSRP measurement based on the L1-RSRP measurement period of current beam and new beam(s), respectively.

For a UE configured with a CSI-ReportConfig with the higher layer parameter *eventTypeUE-IBR-r19* set to '*event1-r19*', UE shall perform L1-RSRP measurement based on current beam L1-RSRP measurement period.

As defined in clause 5.2.1.5.4 TS 38.214 [26], if *newBeamResourceSet* is a *CSI-SSB-ResourceSet*:

the L1-RSRP measurement period of the current beam refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ as specified in table 9.5.4.1-1 or 9.5.4.1-2 where T_{Report}. = 0, and T_{SSB} is the periodicity of the *SSB-Index* of the reference signal in the indicated TCI state or the SS/PBCH block which is QCLed with the reference signal in the indicated TCI state for the current beam.

the L1-RSRP measurement period of the new beam refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ as specified in table 9.5.4.1-1 or 9.5.4.1-2 where T_{Report}. = 0, and T_{SSB} is the periodicity of the *SSB-Index* of the reference signal configured by the *newBeamResourceSet-r19*.

As defined in clause 5.2.1.5.4 TS 38.214 [26], if *newBeamResourceSet* is a *NZP-CSI-RS-ResourceSet* configured with *repetition*:

the L1-RSRP measurement period of the current beam refers to $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ as specified in table 9.5.4.2-1 or 9.5.4.2-2 where T_{Report}. = 0, and $T_{CSI\text{-}RS}$ is the periodicity of the reference signal in the indicated TCI state for the current beam.

the L1-RSRP measurement period of the new beam refers to $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ as specified in table 9.5.4.2-1 or 9.5.4.2-2 where T_{Report}. = 0, and $T_{CSI\text{-}RS}$ is the periodicity of the the reference signal configured by the *newBeamResourceSet-r19* for new beams.

For a UE configured with a *CSI-ReportConfig* with the higher layer parameter *eventTypeUE-IBR-r19* set to '*event7-r19*', UE shall perform L1-RSRP measurement based on L1-RSRP measurement period of the beams in active TCI state list and new beams.

As defined in clause 5.2.1.5.4 TS 38.214 [26], if *newBeamResourceSet* is a *CSI-SSB-ResourceSet*:

the L1-RSRP measurement period of each beam of activated TCI states refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ as specified in table 9.5.4.1-1 or 9.5.4.1-2 where T_{Report}. = 0, and T_{SSB} is the periodicity of the *SSB-Index* of the reference signal in the activated TCI states or the SS/PBCH block which is QCLed with the reference signal in the activated TCI states.

the L1-RSRP measurement period of the new beam refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ as specified in table 9.5.4.1-1 or 9.5.4.1-2 where T_{Report}. = 0, and T_{SSB} is the periodicity of the *SSB-Index* of the reference signal configured by the *newBeamResourceSet-r19*.

As defined in clause 5.2.1.5.4 TS 38.214 [26], if *newBeamResourceSet* is a *NZP-CSI-RS-ResourceSet* configured with *repetition*:

the L1-RSRP measurement period of each beam of activated TCI states refers to $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ as specified in table 9.5.4.2-1 or 9.5.4.2-2 where T_{Report}. = 0, and $T_{CSI\text{-}RS}$ is the periodicity of the reference signal in the activated TCI states.

the L1-RSRP measurement period of the new beam refers to $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ as specified in table 9.5.4.2-1 or 9.5.4.2-2 where T_{Report}. = 0, and $T_{CSI\text{-}RS}$ is the periodicity of the the reference signal configured by the *newBeamResourceSet-r19* for new beams.

$T_{first\ UL\ channel}$ is from the time point at RS which triggered the L1 reporting to the time point at next PUCCH transmission occasion

Otherwise, if *eventCountWindow-r19* is provided, the event triggered measurement reporting delay shall be no larger than (*eventInstanceCount-r19* + L) * $T_{L1\text{-}meas_basic}$ + $T_{first\ UL\ channel,}$ where

- *eventInstanceCount-r19* is configured by the network

- $T_{L1\text{-}meas_basic}$ is the measurment period above based on the configuration,

- L is the number of measurement instances ($T_{L1\text{-}meas_basic}$) that do not satisfy the event condition, counted after the event counter is started for the window that will trigger the measurement report and before the required number of events (eventInstanceCount-r19) are detected within the specified time window (*eventDetectionTimeWindow-r19*).

- The above requriement is applicable when *eventDetectionTimeWindow-r19* is not less than (*eventInstanceCount-r19* + L-1) * $T_{L1\text{-}meas_basic}$. The requirement does not apply when *eventDetectionTimeWindow-r19* is less than (*eventInstanceCount-r19* + L-1) * $T_{L1\text{-}meas_basic}$.

9.5.4 L1-RSRP measurement requirements

9.5.4.1 SSB based L1-RSRP Reporting

When *groupBasedBeamReporting-r17* is not configured, the UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB}$.

When *groupBasedBeamReporting-r17* is configured, the UE shall be capable of performing L1-RSRP measurements based on the two configured SSB resource sets for L1-RSRP, and the UE physical layer shall be capable of reporting group-based L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB}$.

When there is no L1-RSRP measurement on LTM neighbor cell(s) to measure within active BWP, the value of $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ is defined in table 9.5.4.1-1 for FR1, the value of $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ is defined in table 9.5.4.1-2 for FR2 when *highSpeedMeasFlagFR2-r17* is not configured and if *groupBasedBeamReporting-r17* is not configured, and defined in table 9.5.4.1-2A for FR2-1 when *highSpeedMeasFlagFR2-r17* is not configured and if *groupBasedBeamReporting-r17* is configured, and defined in table 9.5.4.1-3 for FR2 power class 6 UE when *highSpeedMeasFlagFR2-r17* is configured, where

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise

- The value of N in table 9.5.4.1-2A is 2, 4 or 6 in FR2-1 for UE supporting *fastBeamSweepingMultiRx-r18* according to the conditions described in clause 3.6.19.

- The value of N in table 9.5.4.1-2 is 8.

- The value of N in table 9.5.4.1-3 is 8.

For UE supporting *On-demand SSB operation* and when OD-SSB transmission is indicated, the EMP for L1-RSRP are

- the periodicity of OD-SSBs in the configured DL BWP if no first SSB transmission is configured or if UE supports *timec1nc2* and OD-SSB transmission is indicated with first SSB transmission and the union of the first SSB transmission and OD-SSB transmission has a non-periodic time domain pattern, or

- the periodicity of the union of OD-SSBs and first SSBs if first SSBs are transmitted and the OD-SSB activation is indicated and the union of OD-SSBs and first SSBs has a periodic time domain pattern.

For a UE supporting *LB CA via switching, or* for a UE supporting *concurrentMeasGapsPreMG-r18* and when concurrent measurement gap(s) with Pre-MG(s) are configured, or a UE supporting *concurrentMeasGapsNCSG-r18* and when concurrent measurement gap(s) with NCSG measurement gap(s) are configured, or a UE supporting *concurrentMeasGap-r17* or *musim-GapPreference-r17* or both concurrent GAP and *musim-GapPreference-r17* and when concurrent gaps or periodic MUSIM gaps or both concurrent gaps and periodic MUSIM gaps are configured,

- an SSB or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8 and 9.1.10,

- P value for SSB resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ in FR2 with $N_{available}$ = 0
  - N_{total} / $N_{available}$ in FR2 with $N_{available}$ > 0
- For a window W of duration max($T_{L1,}$ xRP_max, switching pattern periodicity), where xRP_max is the maximum xRP across all configured per-UE GAPs , periodic MUSIM gap(s) and per-FR GAPs, and, in case of Pre-MG, all activated per-UE measurement gaps and per-FR measurement gaps, within the same FR as serving cell, and starting at the beginning of any SSB resource occasion:

  N_{total} is the total number of SSB resource occasions within the window, including those overlapped with GAP occasions, MUSIM gap occasions or SMTC occasions within the window.

  For UEs supporting *LB CA via switching* and configured with low NR inter-band carrier aggregation:

  - for the PCell L1-RSRP measurement, N_{total} also includes SSB resource occasions that overlap with the SDL SCell ON duration within the window,

  - for the SCell L1-RSRP measurement, N_{total} also includes SSB resource occasions that overlap with the PCell ON duration within the window, as defined by the configured switching pattern, and

  - $N_{outside_MG}$ is the number of SSB resource occasions within the window W
    - that are not overlapped with any non-dropped GAP occasion nor non-dropped MUSIM gap occasion or
    - that are not overlapped with SDL SCell ON duration corresponding to the LB CA switching pattern, for the PCell L1-RSRP measurement for a UE supporting *LB CA via switching* with low NR inter-band carrier aggregation configured or
    - that are not overlapped with PCell ON duration corresponding to the LB CA switching pattern, for the SCell L1-RSRP measurement for a UE supporting *LB CA via switching* with low NR inter-band carrier aggregation configured, and
  - L1-RSRP requirement in this clause is not applied when $N_{outside_MG}$ = 0.
  - $N_{available}$ is the number of SSB resource occasions that are not overlapped with any non-dropped GAP occasion, non-dropped MUSIM gap occasion nor any SMTC occasion within the window W.
  - for UEs supporting *LB CA via switching*, switching pattern periodicity is the periodicity of the RRC configured semi-static switching pattern; otherwise, it is not applicable.
  - an SSB or an SMTC occasion is considered to be overlapped with the MUSIM gap if it overlaps a MUSIM gap occasion.

- T_{L1} is periodicity of the target SSB.
- xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG.

Otherwise, for a UE neither supporting *concurrentMeasGap-r17* nor *concurrentMeasGapsPreMG-r18* nor *concurrentMeasGapsNCSG-r18* or when neither of the above configurations applies, i.e. concurrent measurement gaps, concurrent measurement gap(s) with Pre-MG(s) and concurrent measurement gap(s) with NCSG(s) and UE does not support *musim-GapPreference-r17* or when no MUSIM gaps are configured,

For FR1,

- $P=\frac{1}{1-\frac{T_{SSB}}{xRP}}$, when in the monitored cell there are GAPs configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB; and
- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the SSB.

For FR2,

$P_1=\frac{1}{1-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is not overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).

- P_1 is $P_{L1_sharing}*P_{sharing\ factor}$, when SSB is not overlapped with measurement gap and SSB is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$).
- $P_1=\frac{1}{1-\frac{T_{SSB}}{xRP}-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is partially overlapped with GAP and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and
  - $T_{SMTCperiod} \neq xRP$ or
  - $T_{SMTCperiod} = xRP$ and $T_{SSB} < 0.5*T_{SMTCperiod}$
- P is $\frac{P_{sharing\ factor}}{1-\frac{T_{SSB}}{xRP}}$, when SSB is partially overlapped with GAP and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and $T_{SMTCperiod} = xRP$ and $T_{SSB} = 0.5*T_{SMTCperiod}$
- $P_1=\frac{1}{1-\frac{T_{SSB}}{min(T_{SMTCperiod},xRP)}}$, when SSB is partially overlapped with GAP ($T_{SSB} < xRP$) and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with GAP.
- P is $P_{L1_sharing} * \frac{P_{sharing\ factor}}{1-\frac{T_{SSB}}{xRP}}$, when SSB is partially overlapped with measurement gap and SSB is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with GAP ($T_{SMTCperiod} < xRP$)
- If SSB resource from the cell with different PCI is configured for L1-RSRP measurement, and P_2 is valid accoding to clause 9.13.4.1, and any symbol of the SSBs from serving cell and cell with different PCI are overlapping or adjacent (in time domain)
  - $P = \frac{P_1}{1-\frac{P_1*T_{SSB}}{P_2*T_{SSB_CDP}}}$, if $P_1*T_{SSB} < P_2*T_{SSB_CDP}$.
  - $P = P_1$, if $P_1*T_{SSB} > P_2*T_{SSB_CDP}$.
  - $P = 2*P_1$, if $P_1*T_{SSB} = P_2*T_{SSB_CDP}$.
- Otherwise, $P = P_1$

Where:

- T_{SSB} = *ssb-periodicityServingCell* of the serving cell

- $T_{SMTCperiod}$ = the configured SMTC period
- T_{SSB_CDP} = SSB periodicity of the cell with PCI different from serving cell
- $P_{sharing\ factor}$ = 1, if the SSB configured for L1-RSRP measurement outside gap is
  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
  - not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.
- $P_{sharing\ factor}$ = 3, otherwise.
- $P_{L1_sharing}$ = 2, if SSB resource from the cell with different PCI is configured for L1-RSRP measurement, and $P_{sharing_factor,CDP}$ is used in clause 9.13.4.1, and any symbol of the SSBs from serving cell and cell with different PCI are overlapping or adjacent (in time domain). $P_{L1_sharing}$ = 1, otherwise.
  - T_{SSB} = *ssb-periodicityServingCell*
  - $T_{SMTCperiod}$ = the configured SMTC period
- When a measurement gap is configured and the measurement gap is not NCSG,
  - an SSB or an SMTC occasion is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
  - xRP = MGRP
- If the UE is configured with Pre-MG, an SSB or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- Otherwise, when NCSG measurement gap only is configured,
  - an SSB or an SMTC occasion is considered to be overlapped with the GAP if
    - it overlaps the VIL1 or VIL2 of NCSG, or
    - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
- and
    - xRP = VIRP

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ is defined in table 9.5.4.1-4 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* in FR1, table 9.5.4.1-5 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18* in FR1, table 9.5.4.1-6 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* in FR2 and table 9.5.4.1-7 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18* in FR2 when there is L1-RSRP measurement on LTM neighbor cell(s) to measure within active BWP, where

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- N= 8 in table 9.5.4.1-6 and table 9.5.4.1-7.
- P value for SSB resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ in FR2 with $N_{available}$ = 0

- N_{total} / $N_{available}$ in FR2 with $N_{available}$ > 0

For a window W of duration max ($T_{L1,}$ MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any SSB resource occasion:

- N_{total} is the total number of SSB resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
- $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{available}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
- T_{L1} is periodicity of the target SSB.

- $P_{sharing\ factor}$ = 1, if the SSB configured for L1-RSRP measurement outside measurement gap is
  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
  - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,
- $P_{sharing\ factor}$ = 3, otherwise.
- $P_{L1_sharing}$ is defined as
  - When number of neighboring cells configured with SSB based L1-RSRP measurement is 1
    - $P_{L1_sharing}$ = 2, if any symbol of the SSBs from serving cell and neighbor cell are overlapping or adjacent (in time domain)
    - $P_{L1_sharing}$ = 1, otherwise
  - When number of neighboring cells configured with SSB based L1-RSRP measurement is more than 1
    - $P_{L1_sharing}$ = 3.

Note: RRM requirements are not applicable when L1 measurement on the cells with different PCI and LTM L1 measurement on neighbour cells are both configured.

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

For UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, the UE is not required to perform SSB measurements during the cancelled gap occasions.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and GAP configurations does not meet previous conditions.

When UE is configured with aperiodic MUSIM gap and the aperiodic MUSIM gap is overlapping with SSB resource occasion for L1-RSRP, longer evaluation period would be expected.

When UE is configured with MUSIM gap(s), and SSB resource occasions for L1-RSRP are fully overlapped with MUSIM gap(s) or fully overlapped with the union of MUSIM gap(s) and GAPs, no requirement applies for the SSB based L1-RSRP measurement.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

Table 9.5.4.1-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ for FR1

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(K*M*P)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
Note 1: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement if UE not supporting *On-demand SSB operation* or when OD-SSB transmission is not indicated, otherwise, T_{SSB} = EMP of the SSB index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. Note 2: K = 1 when T_{SSB} ≤ 40 ms and *highSpeedMeasFlag-r16 or highSpeedMeasCA-Scell-r17* are configured; otherwise, K = 1.5. Note 3: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *intraNR-MeasurementEnhancement-r16. or measurementEnhancementCA-r17*	

Table 9.5.4.1-2: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ for FR2

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P*N)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P*N)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*M*P*N)*T_{DRX}$
Note: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement if UE not supporting *On-demand SSB operation* or when OD-SSB transmission is not indicated, otherwise, T_{SSB} = EMP of the SSB index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.

9.5.4.2 CSI-RS based L1-RSRP Reporting

When *groupBasedBeamReporting-r17* is not configured, the UE shall be capable of performing L1-RSRP measurements based on the configured CSI-RS resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$.

When *groupBasedBeamReporting-r17* is configured, the UE shall be capable of performing L1-RSRP measurements based on the two configured CSI-RS resource sets for L1-RSRP, and the UE physical layer shall be capable of reporting group-based L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ is defined in table 9.5.4.2-1 for FR1 and in table 9.5.4.2-2 for FR2, where

- For periodic and semi-persistent CSI-RS resources, M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- For aperiodic CSI-RS resources M=1
- For periodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply if *qcl-InfoPeriodicCSI-RS* is configured for all the resources in the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For periodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$) for table 9.5.4.2-2, where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided *qcl-InfoPeriodicCSI-RS* is configured with QCL-TypeD for all resources in the resource set.
- For semi-persistent CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided TCI state is provided for all resources in the resource set in the MAC CE activating the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For semi-persistent CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided TCI state is provided with QCL-TypeD for all resources in the resource set in the MAC CE activating the resource set.
- For aperiodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided *qcl-info* is configured for all resources in the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- - For aperiodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=1. UE is not required to meet the accuracy requirements in clauses 10.1.19.2 and 10.1.20.2 if number of resources in the resource set is smaller than *maxNumberRxBeam*. The requirements apply provided *qcl-info* is configured with QCL-TypeD for all resources in the resource set.

For the value of L1,

1> If UE does not support *supportSBFD* or SBFD is not configured by the network

2> L1 is not applicable

1> else (if UE supports *supportSBFD* and SBFD is configured by the network)

2> if UE is configured to report L1-RSRP for SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the CSI-RS resource that are overlapping with dynamic UL transmission or with non-SBFD symbols during $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$

3> When DRX is configured, L1 is the number of DRX cycles in which at least one occasion of the CSI-RS resource is overlapping with dynamic UL transmission or in which all occasions of the CSI-RS resource are overalapping with non-SBFD symbols during $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$

2> if UE is configured to report L1-RSRP for non-SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the CSI-RS resource that are overlapping with SBFD symbols during $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$, when DRX is not configured

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the CSI-RS resource are overlapping with SBFD symbols during $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$

For a UE supporting *LB CA via switching*, or for a UE supporting *concurrentMeasGapsPreMG-r18* and when concurrent measurement gap(s) with Pre-MG(s) are configured, or a UE supporting *concurrentMeasGapsNCSG-r18* and when concurrent measurement gap(s) with NCSG measurement gap(s) are configured, or a UE supporting *concurrentMeasGap-r17* or *musim-GapPreference-r17* or both concurrent measurement gap and *musim-GapPreference-r17* and when concurrent gaps or periodic MUSIM gaps or both concurrent gaps and periodic MUSIM gaps are configured,

- a CSI-RS or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clauses 9.1.8 and 9.1.10,
- P value for a CSI-RS resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ in FR2 with $N_{available}$ = 0
  - N_{total} / $N_{available}$ in FR2 with $N_{available}$ > 0
- For a window W of duration max($T_{L1,}$ xRP_max, switching pattern periodicity), where xRP_max is the maximum xRP across all configured per-UE measurement gaps or NCSGs, MUSIM gap(s)and per-FR measurement gaps or NCSGs, and, in case of Pre-MG, all activated per-UE measurement gaps and per-FR measurement gaps, within the same FR as serving cell, and starting at the beginning of any CSI-RS resource occasion:
  - N_{total} is the total number of CSI-RS resource occasions within the window W, including those overlapped with measurement gap occasions, MUSIM gap occasions or SMTC occasions within the window W.

    For UEs supporting *LB CA via switching* and configured with low NR inter-band carrier aggregation:

    - for the PCell L1-RSRP measurement, N_{total} also includes CSI-RS resource occasions that overlap with the SDL SCell ON duration within the window,

    - for the SCell L1-RSRP measurement, N_{total} also includes CSI-RS resource occasions that overlap with the PCell ON duration within the window, as defined by the configured switching pattern, and
  - $N_{outside_MG}$ is the number of CSI-RS resource occasions within the window W
    - that are not overlapped with any non-dropped GAP occasion nor non-dropped MUSIM gap occasion or
    - that are not overlapped with SDL SCell ON duration corresponding to the LB CA switching pattern, for the PCell L1-RSRP measurement for a UE supporting *LB CA via switching* with low NR inter-band carrier aggregation configured or
    - that are not overlapped with PCell ON duration corresponding to the LB CA switching pattern, for the SCell L1-RSRP measurement for a UE supporting *LB CA via switching* with low NR inter-band carrier aggregation configured, and
  - L1-RSRP requirement in this clause is not applied when $N_{outside_MG}$ = 0.
  - $N_{available}$ is the number of CSI-RS resource occasions that are not overlapped with any non-dropped GAP occasions, non-dropped MUSIM gap occasion nor any SMTC occasion within the window W.- for UEs supporting *LB CA via switching*, switching pattern periodicity is the periodicity of the RRC configured semi-static switching pattern; otherwise, it is not applicable.
  - a CSI-RS or an SMTC occasion is considered to be overlapped with the MUSIM gap if it overlaps a MUSIM gap occasion.

- xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG.

- T_{L1} is periodicity of the target CSI-RS.

Otherwise, for a UE neither supporting *concurrentMeasGap-r17* nor *concurrentMeasGapsPreMG-r18* nor *concurrentMeasGapsNCSG-r18* or when neither of the above configurations applies, i.e. concurrent measurement gaps, concurrent measurement gap(s) with Pre-MG(s) and concurrent measurement gap(s) with NCSG measurement gap(s), and UE does not support *musim-GapPreference-r17* or when no MUSIM gaps are configured.

For FR1,

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}}$, when in the monitored cell there are GAPs configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and

- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the CSI-RS.

For FR2,

- P=1, when CSI-RS is not overlapped with a GAP and also not overlapped with SMTC occasion.

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}}$, when CSI-RS is partially overlapped with GAP and CSI-RS is not overlapped with SMTC occasion ($T_{CSI-RS} < xRP$)

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is not overlapped with GAP and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$).

- $P=P_{sharing\ factor}$, when CSI-RS is not overlapped with GAP and CSI-RS is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$).

- P=1, when aperiodic CSI-RS resource is not overlapped with GAP

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is partially overlapped with GAP and CSI-RS is partially overlapped with SMTC occasion (TCSI-RS < $T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and

  - $T_{SMTCperiod} \neq xRP$ or

  - $T_{SMTCperiod} = xRP$ and $T_{CSI-RS} < 0.5*T_{SMTCperiod}$

- $P=\frac{3}{1-\frac{T_{CSI-RS}}{xRP}}$, when CSI-RS is partially overlapped with GAP and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and $T_{SMTCperiod} = xRP$ and $T_{CSI-RS} = 0.5*T_{SMTCperiod}$

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{\min(T_{SMTCperiod},xRP)}}$, when CSI-RS is partially overlapped with GAP ($T_{CSI-RS} < xRP$) and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with GAP.

- $P=\frac{P_{sharing\ factor}}{1-\frac{T_{CSI-RS}}{xRP}}$, when CSI-RS is partially overlapped with GAP and CSI-RS is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with GAP ($T_{SMTCperiod} < xRP$)

Where:

- $P_{sharing\ factor}$ = 1, if the CSI-RS configured for L1-RSRP measurement outside gap is

  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

- not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.

- $P_{sharing\ factor}$ = 3, otherwise.

$T_{SMTCperiod}$ = the configured SMTC period.

$T_{CSI\text{-}RS}$ = the periodicity of CSI-RS configured for L1-RSRP measurement

- When a measurement gap is configured and the measurement gap is not NCSG,
  - a CSI-RS or an SMTC occasion is considered to be as overlapped with the GAP if it overlapps a measurement gap occasion, and
  - xRP = MGRP
- If the UE is configured with Pre-MG, a CSI-RS or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.
- Otherwise, when NCSG measurement gap only is configured,
  - a CSI-RS or an SMTC occasion is considered to be as overlapped with the GAP if
    - it overlaps the VIL1 or VIL2 of NCSG, or
    - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
  - and
    - xRP = VIRP

For UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, the UE is not required to perform CSI-RS measurements during the cancelled gap occasions.

When UE is configured with aperiodic MUSIM gap and the aperiodic MUSIM gap is overlapping with CSI-RS resource occasion for L1-RSRP, longer evaluation period would be expected.

When UE is configured with MUSIM gap(s), and CSI-RS resource occasions for L1-RSRP are fully overlapped with MUSIM gap(s) or fully overlapped with the union of MUSIM gap(s) and GAPs, no requirement applies for the CSI-RS based L1-RSRP measurement.

Table 9.5.4.2-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ for FR1

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P)* \max(T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(K*(M+L1)*P)*\max(T_{DRX}, T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle > 320 ms	$\text{ceil}((M+L1)*P)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	
NOTE 3: K = 1 when $T_{CSI\text{-}RS}$ ≤ 40 ms and *highSpeedMeasFlag-r16 or highSpeedMeasCA-Scell-r17* are configured; otherwise K = 1.5.	
NOTE 4: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *intraNR-MeasurementEnhancement-r16 or measurementEnhancementCA-r17.*	
NOTE 5: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for CMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.	

Table 9.5.4.2-2: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ for FR2

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ (ms)

non-DRX	max(T_{Report}, ceil((M+L1)*P*N)* max(T_{CSI-RS}, T_{proc})
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*(M+L1)*P*N)*max(T_{DRX},T_{CSI-RS}, T_{proc}))
DRX cycle > 320 ms	ceil((M+L1)*P*N)*T_{DRX}
NOTE 1: T_{CSI-RS} is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	
NOTE 3: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for CMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.

9.5.4A.1 Void

Table 9.5.4A.1-1: Void

9.5.5 Measurement restriction for CSI-RS and SSB for L1-RSRP measurement

The UE is required to be capable of measuring SSB and CSI-RS for L1-RSRP without measurement gaps. The UE is required to perform the SSB and CSI-RS measurements with measurement restrictions as described in the following clauses.

9.5.5.1 Measurement restriction for SSB based L1-RSRP

For FR1, if UE does not support *rxTimingDiff-r18*, when the SSB for L1-RSRP measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR1, if UE support *rxTimingDiff-r18*, when [the SSB for L1-RSRP measurement and CSI-RS for RLM, BFD, CBD or L1-RSRP measurement are overlapping or partially overlapping in OFDM symbols],

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the SSB for L1-RSRP measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the SSB for L1-RSRP measurement on one CC is in the same OFDM symbol as SSB from cell with additional PCI for BFD, CBD measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the SSB for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as CSI-RS from candidate LTM neighbour cell for intra-frequency L1-RSRP measurement, UE is required to measure one of but not both SSB and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, if the network configures same or mixed numerology between SSB for L1-RSRP measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions in the other band, provided that UE is capable of independent beam management on this FR2 band pair.

For UE supporting *On-demand SSB operation*, when OD-SSB transmission is indicated without first SSB transmission, the measurement restriction is expected for OD-SSB occasions only.

For UE supporting *On-demand SSB operation*, when OD-SSB transmission is indicated with first SSB transmission, no measurement restriction is expected for first SSB occasions if UE supports *Time-C1nC2* and the union of the first SSB transmission and OD-SSB transmission has a non-periodic time domain pattern. Otherwise, the measurement restriction is expected for both first SSB and OD-SSB occasions.

9.5.5.2 Measurement restriction for CSI-RS based L1-RSRP

The SSB mentioned in this clause can be associated with either the serving cell PCI or a PCI different from serving cell PCI or intra-frequency neighbor cell(s) configured with L1-RSRP measurement or inter-frequency neighbor cell(s) configured with L1-RSRP measurement without gap.

For both FR1 and FR2, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement has same SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement has different SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

For FR2, when the CSI-RS for L1-RSRP measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD or L1-RSRP measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as CSI-RS from candidate LTM neighbour cell for intra-frequency L1-RSRP measurement, UE is required to measure one of but not both CSI-RS from serving cell and neighbor cell. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for L1-RSRP measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and the other CSI-RS. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.
  - The CSI-RS for L1-RSRP measurement or the other CSI-RS in a resource set configured with repetition ON, or
  - The other CSI-RS is configured in q1 and beam failure is detected, or
  - The two CSI-RS-es are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

For UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*,

- For both FR1 and FR2, when the CSI-RS for L1-RSRP measurement fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.
- For FR1, when the CSI-RS for L1-RSRP measurement fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap, if CSI-RS and SSB have different SCS and UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP is expected, and no requirements are defined.
- For FR2, when the CSI-RS for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap in the same band, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP is expected, and no requirements are defined.

For FR2-1, when the CSI-RS for L1-RSRP measurement on the one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD or L1-RSRP measurement on the same CC, UE supporting *schedulingMeasurementRelaxation-r18* according to the conditions described in clause 3.6.19 shall be able to measure the CSI-RS for L1-RSRP measurement without restriction when the following conditions are met:

- Both CSI-RSs are not in any CSI-RS resource set with repetition ON, and
- One CSI-RS has same QCL source as either
  - the active TCI state of a PDSCH scheduled in the same OFDM symbol or
  - the QCL source based on the default QCL assumption to be applied in the same OFDM symbol according to 38.214 clause 5.1.5, and
  - the other CSI-RS has same QCL source as either
  - the active TCI state of a PDSCH scheduled in the same OFDM symbol or
  - the QCL source based on the default QCL assumption to be applied in the same OFDM symbol according to 38.214 clause 5.1.5, and
- Resources of the active TCI states of the two PDSCHs, or QCL sources of the default QCL assumption, or the active TCI state of PDSCH and QCL source of the default QCL assumption have been reported as a resource group in Rel-17 group-based RSRP report.

9.5.6 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions described in the following clauses apply when the UE is performing L1-RSRP measurement on serving cell, and UE is receiving PDCCH/PDSCH from serving cell and/or cell(s) with different PCI.

For UE supporting *On-demand SSB operation*, when OD-SSB transmission is indicated without first SSB transmission, the scheduling restriction is expected for OD-SSB occasions only.

For UE supporting *On-demand SSB operation*, when OD-SSB transmission is indicated with first SSB transmission, no scheduling restriction is expected for first SSB occasions if UE supports *Time-C1nC2* and the union of the first SSB transmission and OD-SSB transmission has a non-periodic time domain pattern. Otherwise, the scheduling restriction is expected for both first SSB and OD-SSB occasions.

9.5.6.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

9.5.6.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] and do not support *rxTimingDiff-r18*, the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] but support *rxTimingDiff-r18*, the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI [on symbols that are overlapping or partially overlapping with the symbols corresponding to] the SSB indexes configured for L1-RSRP measurement.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on serving cell where L1-RSRP measurement is performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions on serving cell where L1-RSRP measurement is performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

For UE indicating *intraBandNR-CA-non-collocated-r19*,

1> when UE is configured with maxMIMO-Layers with value equal to 4 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 4"*

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 1"*

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

2> else if *nonCollocatedTypeNR-CA-v1900* is not provided

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

1> when UE is configured with maxMIMO-Layers with value equal to 2 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-r18* is not provided

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2>else

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-RSRP measurement is performed is configured.

When inter-band FR1+FR1 NR-DC is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-RSRP measurement is performed is configured.

9.5.6.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to L1-RSRP measurement.

- For the case where RS for L1-RSRP measurement is CSI-RS which is QCLed with active TCI state for PDCCH/PDSCH and not in a CSI-RS resource set with repetition ON, and N=1 applies as specified in clause 9.5.4.2
  - There are no scheduling restrictions due to L1-RSRP measurement performed based on the CSI-RS.
- For FR2-1 and the case where UE supporting *schedulingMeasurementRelaxation-r1*8 according to the conditions described in clause 3.6.19 is configured to receive two PDSCH transmission occasions from two different QCL sources, there are no scheduling restrictions for the PDSCHs due to L1-RSRP measurement performed based on the CSI-RS, when following conditions are met:
  - The CSI-RS configured for L1-RSRP is not in a CSI-RS resource set with repetition ON, and
  - The CSI-RS configured for L1-RSRP has same QCL source as the active TCI state of one of PDSCHs and has different QCL-TypeD from the other PDSCH, and
  - The CSI-RS configured for L1-RSRP and both PDSCHs are on the same OFDM symbol(s), or the CSI-RS and one of the PDSCHs with different QCL-typeD are on the same OFDM symbol(s) when partially overlapping PDSCHs are scheduled, and
  - Resources of the active TCI states for the two PDSCHs have been reported as a resource group in Rel-17 group-based RSRP report.
- Otherwise
  - For FR2 power class 6 UE which is not configured with *highSpeedMeasFlagFR2-r17*, and for the UE not supporting FR2 power class 6, for FR2-1 or the reference symbols to be measured for L1-RSRP is not using 480 kHz SCS or 960 kHz SCS on FR2-2, the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on
    - symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and/or
    - symbols corresponding to the periodic CSI-RS resource configured for L1-RSRP measurement, and/or
    - symbols corresponding to the semi-persistent CSI-RS resource configured for L1-RSRP measurement when the resource is activated, and/or
    - symbols corresponding to the aperiodic CSI-RS resource configured for L1-RSRP measurement when the reporting is triggered.
  - For FR2-2 and the reference symbols to be measured for L1-RSRP is using 480 kHz SCS or 960 kHz SCS, the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on

- symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and on one data symbol before and one data symbol after the symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and/or

- symbols corresponding to the periodic CSI-RS resource configured for L1-RSRP measurement, and on one data symbol before and one data symbol after the symbols corresponding to the periodic CSI-RS resource configured for L1-RSRP measurement, and/or

- symbols corresponding to the semi-perssitent CSI-RS resource configured for L1-RSRP measurement when the resource is activated, and on one data symbol before and one data symbol after the symbols corresponding to the semi-perssitent CSI-RS resource configured for L1-RSRP measurement when the resource is activated, and/or

- symbols corresponding to the aperiodic CSI-RS resource configured for L1-RSRP measurement when the reporting is triggered, and on one data symbol before and one data symbol after the symbols corresponding to the aperiodic CSI-RS resource configured for L1-RSRP measurement when the reporting is triggered.

- For FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*, the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on

  - symbols corresponding to the SSB indexes configured for L1-RSRP measurement and 1 data symbol before each consecutive SSB symbols to be measured for L1-RSRP and 1 data symbol after each consecutive SSB symbols to be measured for L1-RSRP, and/or

  - symbols corresponding to the periodic CSI-RS resource configured for L1-RSRP measurement and 1 data symbol before each periodic CSI-RS resource to be measured for L1-RSRP and 1 data symbol after each periodic CSI-RS for L1-RSRP measurement symbols to be measured for L1-RSRP, and/or

  - symbols corresponding to the semi-persistent CSI-RS resource configured for L1-RSRP measurement and 1 data symbol before each semi-persistent CSI-RS resource to be measured for L1-RSRP and 1 data symbol after each semi-persistent CSI-RS resource to be measured for L1-RSRP when the resource is activated, and/or

  - symbols corresponding to the aperiodic CSI-RS resource configured for L1-RSRP measurement and 1 data symbol before each aperiodic CSI-RS resource to be measured for L1-RSRP measurement and 1 data symbol after each aperiodic CSI-RS resource to be measured for L1-RSRP measurement when the reporting is triggered.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions on serving cell where L1-RSRP measurement is performed apply to all serving cells in the band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to L1-RSRP measurement performed on FR2 serving cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

If following conditions are met,

- UE has been notified about system information update through paging,

- The gap between UE's reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for L1-RSRP measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for L1-RSRP measurement.

9.5.6.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 serving cell(s) due to L1-RSRP measurement performed on FR2 serving cell(s).

There are no scheduling restrictions on FR2 serving cell(s) due to L1-RSRP measurement performed on FR1 serving cell(s).

9.5.7 Minimum requirement at transitions

For UE supporting *ncd-SSB-BWP-Wor-r18*, when the L1-RSRP measurement transitions from measurements performed on CD-SSB to measurements performed on NCD-SSB or vice versa due to BWP switching during one measurement period, the UE shall use a L1-RSRP measurement period that is the maximum of the L1-RSRP measurement period corresponding to the first SSB type and the second SSB type after the BWP switching.

Subsequent to the above-mentioned measurement periods, the L1-RSRP measurement period requirements are based on the SSB type after the BWP switch.

For UE supporting *On-demand SSB operation*, when UE is indicated, by on-demand SSB Activation/Deactivation MAC CE, adaptation of periodicities for the activated transmission of OD-SSBs when the SCell is activated, the L1-RSRP measurement period requirements are based on the adapted OD-SSB burst periodicity which applies from the first OD-SSB burst after an additional processing time as 2ms or 5ms depending on *OD-SSB post processing time*.

For UE supporting *SSB adaptation*, when UE receives DCI format 2_9 that indicates a change in SSB burst periodicity of the SSB transmission during one mesauremnet period, the L1-RSRP measurement period requirements based on the indicated SSB burst periodicity applies from the first SSB burst after the time point as defined in TS 38.213 plus 2 ms and 3 ms for FR1 and FR2 respectively.

9.5A L1-RSRP measurements for Reporting under CCA

9.5A.1 Introduction

When configured by the network, the UE shall be able to perform L1-RSRP measurements of configured SSB resources for L1-RSRP. The measurements shall be performed for a serving cell under CCA operating mode, including PCell, PSCell, or SCell, on the resources configured for L1-RSRP measurements within the active BWP.

The UE shall be able to measure all SSB resources of the *csi-SSB-ResourceSet* within the *CSI-ResourceConfig* settings configured for L1-RSRP for the active BWP, provided that the number of resources does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

During EN-DC operation in FR-1, when the UE is configured to perform E-UTRA SRS carrier-based switching, an additional delay can be expected.

The requirements in clause 9.5A apply for any *channelAccessMode* configuration [TS 38.331, 2].

In the requirements of clause 9.5A, the term SSB occasion not available at the UE refers to when the SSB is configured by gNB in a cell on a carrier frequency subject to CCA, but the first two successive candidate SSB positions for the same SS/PBCH block index within the set of configured SSB are not available at the UE due to DL CCA failures at gNB during the corresponding evaluation or measurement period; otherwise the SSB occasion is considered as available at the UE.

9.5A.2 Requirements applicability

The requirements in clause 9.5A apply, provided:

- The SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clause 10.1.19.1 for FR1 for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.4.1 for a corresponding band.

An SSB resource configured for L1-RSRP shall be considered measurable when the measurable resource conditions are met for SSB resource.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

9.5A.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports only for report configurations configured for the active BWP.

The UE shall report the L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1 dB step size according to clauses 10.1.19 for FR1 and 10.1.20 for FR2-2 if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting* is enabled, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1.19 for FR1 and 10.1.20 for FR2-2. The differential L1-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6.

During EN-DC operation, for FR1, when the UE is configured to perform E-UTRA SRS carrier-based switching an additional delay can be expected if the UE is capable of per-FR gap, or an additional delay can be expected.

9.5A.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2-2, respectively.

The UE shall only send periodic L1-RSRP measurement reports for an active BWP.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5A.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2-2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

When CCA is used on target frequency, if UE cannot transmit HARQ-ACK for the MAC CE activation command due to UL CCA failure, the UE shall not perform MAC CE activation at the MAC action time based on the originally scheduled HARQ-ACK transmission time specified in clause 5.2.1.5.2 in TS 38.214 [26].

When CCA is used on target frequency, if UE cannot transmit HARQ-ACK for the MAC CE deactivation command due to UL CCA failure, the UE shall perform MAC CE deactivation at the MAC action time based on the originally scheduled HARQ-ACK transmission time specified in clause 5.2.1.5.2 in TS 38.214 [26].

9.5A.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2-2, respectively.

The UE shall only send aperiodic L1-RSRP measurement reports if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.5A.4 L1-RSRP measurement requirements

9.5A.4.1 SSB based L1-RSRP Reporting

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$ is defined in table 9.5A.4.1-1 for FR1, and in table 9.5A.4.1-2 for FR2-2, where,

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- N = 8

For FR1, for a UE supporting *concurrentMeasGapsPreMG-r18* and when concurrent measurement gap(s) with Pre-MG(s) are configured, or a UE supporting *concurrentMeasGapsNCSG-r18* and when concurrent measurement gap(s) with NCSG measurement gap(s) are configured, or a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for an SSB resource to be measured is defined as N_{total} / $N_{outside_MG}$
- For a window W of duration max(T_{L1}, xRP_max), where xRP_max is the maximum xRP across all configured per-UE measurement gaps or NCSGs and per-FR measurement gaps or NCSGs, and, in case of Pre-MG, all activated per-UE measurement gaps and per-FR measurement gaps, within the same FR as serving cell, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window W, including those overlapped with GAP occasions within the window W, and
  - $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any GAP occasion within the window W
  - xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG.

Otherwise, for a UE neither supporting *concurrentMeasGap-r17* nor *concurrentMeasGapsPreMG-r18* nor *concurrentMeasGapsNCSG-r18* or when neither of the above configurations applies, i.e. concurrent measurement gaps, concurrent measurement gap(s) with Pre-MG(s) and concurrent measurement gap(s) with NCSG(s),

For FR1,

- $P=\frac{1}{1-\frac{T_{SSB}}{xRP}}$, when in the monitored cell there are GAPs configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB; and
- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the SSB.

For FR2-2,

- $P=\frac{1}{1-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is not overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).
- P is $P_{sharing\ factor}$, when SSB is not overlapped with measurement gap and SSB is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$).
- $P=\frac{1}{1-\frac{T_{SSB}}{MGRP}-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is partially overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and
  - $T_{SMTCperiod} \neq$ MGRP or

  - $T_{SMTCperiod}$ = MGRP and T_{SSB} < 0.5*$T_{SMTCperiod}$

- P is $\frac{P_{\text{sharing factor}}}{1-\frac{T_{SSB}}{MGRP}}$, when SSB is partially overlapped with measurement gap and SSB is partially overlapped with SMTC occasion (T_{SSB} < $T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod}$ = MGRP and T_{SSB} = 0.5*$T_{SMTCperiod}$

- P= $\frac{1}{1-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when S SSB is partially overlapped with measurement gap (T_{SSB} <MGRP) and SSB is partially overlapped with SMTC occasion (T_{SSB} < $T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.

- P is $\frac{P_{\text{sharing factor}}}{1-\frac{T_{SSB}}{MRGP}}$, when SSB is partially overlapped with measurement gap and SSB is fully overlapped with SMTC occasion (T_{SSB} = $T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod}$ < MGRP)

Where:

- $P_{sharing\ factor}$ = 1, if the SSB configured for L1-RSRP measurement outside measurement gap is

  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

  - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,

- $P_{sharing\ factor}$ = 3, otherwise.

  T_{SSB} = *ssb-periodicityServingCell*

  $T_{SMTCperiod}$ = the configured SMTC1 period or SMTC2 period if configured

- When a measurement gap only is configured,

  - an SSB is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and

  - xRP = MGRP

- If the UE is configured with Pre-MG, an SSB is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.

- When NCSG only is configured,

  - an SSB is considered to be overlapped with the GAP if it overlaps the VIL1 or VIL2 of NCSG, and

  - xRP = VIRP

- When concurrent gaps or concurrent measurement gap(s) with Pre-MG(s) or concurrent measurement gap(s) with NCSG(s) are configured, an SSB or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clause 9.1.8.

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

UE shall report RSRP_0 (Not valid) if L1>$L1_{max}$, where L1 and $L1_{max}$ are defined in table 9.5A.4.1-1.

Table 9.5A.4.1-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$ for FR1

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}((M+L1)*P)*T_{DRX}$

Note 1: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement.
T_{DRX} is the DRX cycle length.
T_{Report} is configured periodicity for reporting.

Note 2: L1=0 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured. Otherwise, when DRX is not configured L1 is the number of SSBs not available at the UE during $T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$, and when DRX is configured L1 is the number of DRX cycles in which at least one SSB is not available at the UE during $T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$, where $L1 \le L1_{max}$. The UE is not required to determine the availability of SSB occasions more frequent than
Once per $\max(T_{Report}, P * T_{SSB})$ if no DRX is used,
Once per $\max(T_{Report}, \text{Ceil}(1.5 * P) * \max(T_{DRX}, T_{SSB}))$ if DRX cycle ≤ 320ms,
Once per $P * T_{DRX}$ if DRX cycle > 320ms.

Note 3: $L1_{max}$ =7 for $\max(T_{DRX},T_{SSB}) \le 40$ms assuming T_{DRX}=0 for non-DRX,
$L1_{max}$ =5 for 40ms < $\max(T_{DRX}, T_{SSB}) \le 320$ms,
$L1_{max}$ =3 for T_{DRX} > 320ms.

Table 9.5A.4.1-2: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$ for FR2-2

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P*N)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P*N)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*(M+L1)*P*N)*T_{DRX}$

Note 1: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement.
T_{DRX} is the DRX cycle length.
T_{Report} is configured periodicity for reporting.

Note 2: L1=0 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured. Otherwise, when DRX is not configured L1 is the number of SSB occasion groups not available at the UE during $T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$, where $L1 \le L1_{max}$. An SSB occasions group consists of N consecutive SSB occasions, and the SSB occasions group is not available at the UE when at least one SSB occasion in the group is not transmitted by the gNB. When DRX is configured, L1 is the number of DRX cycle groups in which at least one SSB occasion is not available at the UE during $T_{L1\text{-}RSRP_Measurement_Period_SSB_CCA}$, where $L1 \le L1_{max}$. A DRX group consists of N DRX cycles, and the DRX cycle group is not available when there is at least one DRX in which at least one SSB occasion is not available. The UE is not required to determine the availability of SSB occasions more frequent than once per DRX cycle length, when configured with DRX.

Note 3: $L1_{max}$ =7 for $\max(T_{DRX},T_{SSB}) \le 40$ms assuming T_{DRX}=0 for non-DRX,
$L1_{max}$ =5 for 40ms < $\max(T_{DRX}, T_{SSB}) \le 320$ms,
$L1_{max}$ =3 for T_{DRX} > 320ms.

9.5A.5 Measurement restriction for L1-RSRP measurement

The UE is required to be capable of measuring SSB for L1-RSRP without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following clauses.

9.5A.5.1 Measurement restriction for SSB based L1-RSRP

When the SSB for L1-RSRP measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure SSB for L1-RSRP measurement.

9.5A.6 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions when the UE is performing L1-RSRP measurement are described in the following clauses.

9.5A.6.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB configured as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

9.5A.6.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on serving cell where L1-RSRP measurement is performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols. When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-RSRP measurement is performed is configured.

9.5A.6.3 Void

9.5A.6.3A Scheduling availability of UE performing L1-RSRP measurement in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR2 serving cell(s) due to L1-RSRP measurement performed on serving cell(s) under CCA.

9.5A.6.3B Scheduling availability of UE performing L1-RSRP measurement on FR2-2

The following scheduling restriction applies due to L1-RSRP measurement on an FR2-2 serving PCell and/or PSCell.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on
  - symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and/or
  - symbols corresponding to the periodic CSI-RS resource configured for L1-RSRP measurement, and/or
  - symbols corresponding to the semi-persistent CSI-RS resource configured for L1-RSRP measurement when the resource is activated, and/or
  - symbols corresponding to the aperiodic CSI-RS resource configured for L1-RSRP measurement when the reporting is triggered.

When intra-band carrier aggregation in FR2-2 is performed, the scheduling restrictions on serving cell where L1-RSRP measurement is performed apply to all serving cells in the band on the symbols that fully or partially overlap with restricted symbols.

For FR2-2, if following conditions are met,

- UE has been notified about system information update through paging,

- The gap between UE's reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for L1-RSRP measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for L1-RSRP measurement.

9.5A.6.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 serving cell(s) due to L1-RSRP measurement performed on FR2-2 serving cell(s) under CCA.

There are no scheduling restrictions on FR2 serving cell(s) due to L1-RSRP measurement performed on FR1 serving cell(s) under CCA.

9.5B L1-RSRP measurements for Reporting for RedCap

9.5B.1 Introduction

The applicability of the requirements for performing L1-RSRP measurements for reporting in subclause 9.5B is defined in clause 3.6. The SSB and SMTC in this clause applies for both CD-SSB and NCD-SSB if it is not additional specified.

When configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP. The measurements shall be performed for PCell, on the resources configured for L1-RSRP measurements within the active BWP.

The UE shall be able to measure all CSI-RS resources and/or SSB resources of the *nzp-CSI-RS-ResourceSet* and/or *csi-SSB-ResourceSet* within the CSI-Resource*Config* settings configured for L1-RSRP for the active BWP, provided that the number of resources does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

9.5B.2 Requirements applicability

The requirements in clause 9.5B apply, provided:

- The CSI-RS or SSB or CSI-RS and SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

For 1 Rx RedCap:

- L1-RSRP related side conditions given in clause 10.1A.14.1 for FR1, respectively, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.4.1 for a corresponding band.

For 2 Rx RedCap:

- L1-RSRP related side conditions given in clauses 10.1.19.1 and 10.1.20.1 for FR1 and FR2, respectively, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.4.1 for a corresponding band.

A CSI-RS resource configured for L1-RSRP shall be considered measurable when for each relevant CSI-RS the following conditions are met:

For 1 Rx RedCap:

- L1-RSRP related side conditions given in clause 10.1A.14.2 for FR1, respectively, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.4.2 for a corresponding band.

For 2 Rx RedCap:

- L1-RSRP related side conditions given in clauses 10.1.19.2 and 10.1.20.2 for FR1 and FR2, respectively, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.4.2 for a corresponding band.

A CSI-RS and SSB resource configured for L1-RSRP shall be considered measurable when the measurable resource conditions are met for both CSI-RS resource and SSB resource.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

9.5B.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports only for report configurations configured for the active BWP.

The UE shall report the L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1dB step size according to clause 10.1A.14 for FR1, for 1 Rx RedCap, and clause 10.1.19 for FR1 and clause 10.1.20 for FR2 for 2 Rx RedCap, if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting* is enabled, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1A.14 for FR1, for 1 Rx RedCap, and clause 10.1.19 for FR1 and clause10.1.20 for FR2 for 2 Rx RedCap. The differential L1-RSRP is quantized to a 4-bit value with 2dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6.

9.5B.3.1 Periodic Reporting

For 1 Rx RedCap, reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clause 10.1A.14 for FR1.

For 2 Rx RedCap, reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively.

The UE shall only send periodic L1-RSRP measurement reports for an active BWP.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5B.3.2 Semi-Persistent Reporting

For 1 Rx RedCap, reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clause 10.1A.14 for FR1. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

For 2 Rx RedCap, reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5B.3.3 Aperiodic Reporting

For 1 Rx RedCap, reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clause 10.1A.14.

For 2 Rx Redcap, reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively.

The UE shall only send aperiodic L1-RSRP measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.5B.4 L1-RSRP measurement requirements

9.5B.4.1 SSB based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ is defined in table 9.5B.4.1-1 for FR1 and table 9.5B.4.1-2 for FR2, for 2 Rx RedCap, and table 9.5B.4.1-3 for FR1 for 1 Rx RedCap, where

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise.
- N= 8.

For FR1,

- $P=\frac{1}{1-\frac{T_{SSB}}{MRGP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB; and
- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

For FR2,

- $P=\frac{1}{1-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is not overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).
- P is $P_{sharing\ factor}$, when SSB is not overlapped with measurement gap and SSB is fully overlapped with SMTC period ($T_{SSB} = T_{SMTCperiod}$).
- $P=\frac{1}{1-\frac{T_{SSB}}{MGRP}-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is partially overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and
  - $T_{SMTCperiod} \neq$ MGRP or
  - $T_{SMTCperiod}$ = MGRP and $T_{SSB} < 0.5*T_{SMTCperiod}$
- P is $\frac{P_{sharing\ factor}}{1-\frac{T_{SSB}}{MGRP}}$, when SSB is partially overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod}$ = MGRP and $T_{SSB} = 0.5*T_{SMTCperiod}$
- $P=\frac{1}{1-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when S SSB is partially overlapped with measurement gap (T_{SSB} <MGRP) and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.

- P is $\frac{P_{\text{sharing factor}}}{1-\frac{T_{SSB}}{MRGP}}$, when SSB is partially overlapped with measurement gap and SSB is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod} < MGRP$)

- $P_{\text{sharing factor}} = 1$, if the SSB configured for L1-RSRP measurement outside measurement gap is

  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

  - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,

- $P_{\text{sharing factor}} = 3$, otherwise.

Where:

- T_{SSB} = *ssb-periodicityServingCell*

- $T_{SMTCperiod}$ = the configured SMTC period

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

Table 9.5B.4.1-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ (FR1) for 2 Rx RedCap

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	

Table 9.5B.4.1-2: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ (FR2) for 2 Rx RedCap

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P*N)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P*N)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*M*P*N)*T_{DRX}$
NOTE: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	

Table 9.5B.4.1-3: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ (FR1) for 1 Rx RedCap

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$

NOTE: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.

9.5B.4.2 CSI-RS based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured CSI-RS resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ is defined in table 9.5B.4.2-1 for FR1 and in table 9.5B.4.2-2 for FR2, for 2 Rx RedCap, and in table 9.5B.4.2-3 for 1 Rx RedCap, where

- For periodic and semi-persistent CSI-RS resources, M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- For aperiodic CSI-RS resources M=1
- For periodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply if *qcl-InfoPeriodicCSI-RS* is configured for all the resources in the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For periodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided *qcl-InfoPeriodicCSI-RS* is configured with QCL-TypeD for all resources in the resource set.
- For semi-persistent CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided TCI state is provided for all resources in the resource set in the MAC CE activating the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For semi-persistent CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided TCI state is provided with QCL-TypeD for all resources in the resource set in the MAC CE activating the resource set.
- For aperiodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided *qcl-info* is configured for all resources in the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For aperiodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=1. UE is not required to meet the accuracy requirements in clauses 10.1.19.2 and 10.1.20.2 if number of resources in the resource set is smaller than *maxNumberRxBeam*. The requirements apply provided *qcl-info* is configured with QCL-TypeD for all resources in the resource set.

For FR1,

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{MGRP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and
- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the CSI-RS.

For FR2,

- P=1, when CSI-RS is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{MGRP}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is not overlapped with SMTC occasion (T_{CSI-RS} < MGRP)
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is not overlapped with measurement gap and CSI-RS is partially overlapped with SMTC occasion (T_{CSI-RS} < $T_{SMTCperiod}$).
- $P=P_{sharing\ factor}$, when CSI-RS is not overlapped with measurement gap and CSI-RS is fully overlapped with SMTC occasion (T_{CSI-RS} = $T_{SMTCperiod}$).
- P=1, when aperiodic CSI-RS resource is not overlapped with measurement gap
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{MGRP}\cdot\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is partially overlapped with SMTC occasion (TCSI-RS < $T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and
  - $T_{SMTCperiod} \neq$ MGRP or
  - $T_{SMTCperiod}$ = MGRP and T_{CSI-RS} < 0.5*$T_{SMTCperiod}$
- $P=\frac{3}{1-\frac{T_{CSI-RS}}{MGRP}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is partially overlapped with SMTC occasion (T_{CSI-RS} < $T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod}$ = MGRP and T_{CSI-RS} = 0.5*$T_{SMTCperiod}$
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is partially overlapped with measurement gap (T_{CSI-RS} < MGRP) and CSI-RS is partially overlapped with SMTC occasion (T_{CSI-RS} < $T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.
- $P=\frac{P_{sharing\ factor}}{1-\frac{T_{CSI-RS}}{MGRP}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is fully overlapped with SMTC occasion (T_{CSI-RS} = $T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod}$ < MGRP)
- $P_{sharing\ factor}$ = 1, if the CSI-RS configured for L1-RSRP measurement outside measurement gap is
  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
  - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured
- $P_{sharing\ factor}$ = 3, otherwise.

Where:

$T_{SMTCperiod}$ = the configured SMTC period.

T_{CSI-RS} = the periodicity of CSI-RS configured for L1-RSRP measurement

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

NOTE: The overlap between CSI-RS for L1-RSRP measurement and SMTC means that CSI-RS for L1-RSRP measurement is within the SMTC window duration.

Longer evaluation period would be expected if the combination of CSI-RS, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 serving cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

Table 9.5B.4.2-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ (FR1) for 2 Rx RedCap

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P)*$T_{CSI\text{-}RS}$)
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P)*max(T_{DRX},$T_{CSI\text{-}RS}$))
DRX cycle > 320 ms	ceil(M*P)*T_{DRX}
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	

Table 9.5B.4.2-2: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ (FR2) for 2 Rx RedCap

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P*N)*$T_{CSI\text{-}RS}$)
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P*N)*max(T_{DRX},$T_{CSI\text{-}RS}$))
DRX cycle > 320 ms	ceil(M*P*N)*T_{DRX}
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	

Table 9.5B.4.2-3: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ (FR1) for 1 Rx RedCap

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P)*$T_{CSI\text{-}RS}$)
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P)*max(T_{DRX},$T_{CSI\text{-}RS}$))
DRX cycle > 320 ms	ceil(M*P)*T_{DRX}
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	

9.5B.5 Measurement restriction for CSI-RS and SSB for L1-RSRP measurement

The UE is required to be capable of measuring SSB and CSI-RS for L1-RSRP without measurement gaps. The UE is required to perform the SSB and CSI-RS measurements with measurement restrictions as described in the following clauses.

9.5B.5.1 Measurement restriction for SSB based L1-RSRP

For FR1, when the SSB for L1-RSRP measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not *support simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the SSB for L1-RSRP measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

9.5B.5.2 Measurement restriction for CSI-RS based L1-RSRP

For both FR1 and FR2, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

9.5B.6 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions when the UE is performing L1-RSRP measurement are described in the following clauses.

9.5B.6.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

For FD-FDD and TDD RedCap UEs, there are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

For HD-FDD RedCap UE, scheduling restrictions apply for transmission on PUCCH/PUSCH/SRS during the CBD evaluation period, as CBD evaluation is prioritized over UL transmission. The CBD evaluation period equals the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ in case L1-RSRP measurement is performed on SSB as defined in clause 9.5B.4.1, or $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ in case L1-RSRP measurement is performed on CSI-RS and/or SSB as defined in clause 9.5B.4.1.

9.5B.6.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- For FD-FDD and TDD RedCap UEs, the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

- For HD-FDD RedCap UE, scheduling restrictions apply for transmission on PUCCH/PUSCH/SRS during the CBD evaluation period, as CBD evaluation is prioritized over UL transmission. The CBD evaluation period equals the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_RedCap}$ in case L1-RSRP measurement is performed on SSB as defined in clause 9.5B.4.1, or $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_RedCap}$ in case L1-RSRP measurement is performed on CSI-RS and/or SSB as defined in clause 9.5B.4.1.

9.5B.6.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to L1-RSRP measurement.

- For the case where RS for L1-RSRP measurement is CSI-RS which is QCLed with active TCI state for PDCCH/PDSCH and not in a CSI-RS resource set with repetition ON, and N=1 applies as specified in clause 9.5B.4.2
  - There are no scheduling restrictions due to L1-RSRP measurement performed based on the CSI-RS.
- Otherwise
  - The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on
    - symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and/or
    - symbols corresponding to the periodic CSI-RS resource configured for L1-RSRP measurement, and/or
    - symbols corresponding to the semi-persistent CSI-RS resource configured for L1-RSRP measurement when the resource is activated, and/or
    - symbols corresponding to the aperiodic CSI-RS resource configured for L1-RSRP measurement when the reporting is triggered.

If following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for L1-RSRP measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for L1-RSRP measurement.

9.5C L1-RSRP measurements for Reporting for satellite access

9.5C.1 Introduction

When configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP. The measurements shall be performed for PCell on the resources configured for L1-RSRP measurements within the active BWP.

The UE shall be able to measure all CSI-RS resources and/or SSB resources of the *nzp-CSI-RS-ResourceSet* and/or *csi-SSB-ResourceSet* within the *CSI-ResourceConfig* settings configured for L1-RSRP for the active BWP, provided that the number of resources does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

9.5C.2 Requirements applicability

The requirements in clause 9.5C apply, provided:

- The CSI-RS or SSB or CSI-RS and SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clause 10.1.19C.1 for FR1-NTN, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.19.1 for a corresponding band.

A CSI-RS resource configured for L1-RSRP shall be considered measurable when for each relevant CSI-RS the following conditions are met:

- L1-RSRP related side conditions given in clauses 10.1.19C.2 for FR1-NTN, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.19.2 for a corresponding band.

A CSI-RS and SSB resource configured for L1-RSRP shall be considered measurable when the measurable resource conditions are met for both CSI-RS resource and SSB resource.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

9.5C.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports only for report configurations configured for the active BWP.

The UE shall report the L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1 dB step size according to clause 10.1.19C for FR1-NTN if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting* is enabled, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1.19C for FR1-NTN. The differential L1-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6.

9.5C.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clause 10.1.19C.

The UE shall only send periodic L1-RSRP measurement reports for an active BWP.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5C.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clause 10.1.19C. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5C.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clause 10.1.19C.

The UE shall only send aperiodic L1-RSRP measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.5C.4 L1-RSRP measurement requirements

9.5C.4.1 SSB based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$ is defined in table 9.5C.4.1-1 for FR1-NTN, where

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- P value for SSB resource to be measured is defined as
  - $P_{sharing\ factor} * N_{total} / N_{outside_MG}$ with $N_{available} = 0$
  - $N_{total} / N_{available}$ with $N_{available} > 0$
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is
    - the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W, if UE does not support *parallelMeasurementWithoutRestriction-r17* and LEO satellites are measured for intra-frequency measurement, and
    - same as $N_{outside_MG}$, otherwise
  - T_{L1} is periodicity of the target SSB.
  - $P_{sharing\ factor} = 3$.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

Table 9.5C.4.1-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$ for FR1-NTN

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P)*T_{SSB})
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P)*max(T_{DRX},T_{SSB}))
DRX cycle > 320 ms	ceil(M*P)*T_{DRX}
NOTE: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	

9.5C.4.2 CSI-RS based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured CSI-RS resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_SAN}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ is defined in table 9.5C.4.2-1 for FR1-NTN, where

- For periodic and semi-persistent CSI-RS resources, M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- For aperiodic CSI-RS resources M=1
- P value for a CSI-RS resource to be measured is defined as
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ with $N_{available}$ = 0
  - N_{total} / $N_{available}$ with $N_{available}$ > 0
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any CSI-RS resource occasion:
  - N_{total} is the total number of CSI-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is
    - the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W, if UE does not support *parallelMeasurementWithoutRestriction-r17* and LEO satellites are measured for intra-frequency measurement, and
    - same as $N_{outside_MG}$, otherwise
  - T_{L1} is periodicity of the target CSI-RS.
  - $P_{sharing\ factor}$ = 3.

NOTE: The overlap between CSI-RS for L1-RSRP measurement and SMTC means that CSI-RS for L1-RSRP measurement is within the SMTC window duration.

Longer evaluation period would be expected if the combination of CSI-RS, SMTC occasion and measurement gap configurations does not meet previous conditions.

Table 9.5C.4.2-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_SAN}$ for FR1-NTN

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_SAN}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P)*$T_{CSI\text{-}RS}$)
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P)*max(T_{DRX},$T_{CSI\text{-}RS}$))

DRX cycle > 320 ms	ceil(M*P)*T_{DRX}
NOTE 1: T_{CSI-RS} is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	

9.5C.5 Measurement restriction for L1-RSRP measurement

The UE is required to be capable of measuring SSB and CSI-RS for L1-RSRP without measurement gaps. The UE is required to perform the SSB and CSI-RS measurements with measurement restrictions as described in the following clauses.

9.5C.5.1 Measurement restriction for SSB based L1-RSRP

For FR1-NTN, when the SSB for L1-RSRP measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

9.5C.5.2 Measurement restriction for CSI-RS based L1-RSRP

For FR1-NTN, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.

For FR1-NTN, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1-NTN, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR1-NTN, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

9.5C.6 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions when the UE is performing L1-RSRP measurement are described in the following clauses. For UL, the scheduling restriction applies to UL symbols that fully or partially overlap with the restricted symbols as defined below.

9.5C.6.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1-NTN

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1-NTN.

9.5C.6.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1-NTN

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

9.5C.7 L1-RSRP measurement requirements for NTN band above 10 GHz

9.5C.7.1 SSB based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$ is defined in table 9.5C.7.1-1, where

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- P value for SSB resource to be measured is defined as
  - $P_{sharing\ factor} * N_{total} / N_{outside_MG}$ with $N_{available} = 0$
  - $N_{total} / N_{available}$ with $N_{available} > 0$
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is same as $N_{outside_MG}$
  - T_{L1} is periodicity of the target SSB.
  - $P_{sharing\ factor} = 3$.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

Table 9.5C.7.1-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_SAN}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P)*T_{SSB})
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P)*max(T_{DRX},T_{SSB}))
DRX cycle > 320 ms	ceil(M*P)*T_{DRX}
NOTE: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	

9.5C.7.2 CSI-RS based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured CSI-RS resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_SAN}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ is defined in table 9.5C.7.2-1, where

- For periodic and semi-persistent CSI-RS resources, M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- For aperiodic CSI-RS resources M=1
- P value for a CSI-RS resource to be measured is defined as
  - $P_{sharing\ factor} * N_{total} / N_{outside_MG}$ with $N_{available} = 0$
  - $N_{total} / N_{available}$ with $N_{available} > 0$
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any CSI-RS resource occasion:
  - N_{total} is the total number of CSI-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is
    - the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W, if UE does not support *parallelMeasurementWithoutRestriction-r17* and LEO satellites are measured for intra-frequency measurement, and
    - same as $N_{outside_MG}$, otherwise
  - T_{L1} is periodicity of the target CSI-RS.
  - $P_{sharing\ factor} = 3$.

NOTE: The overlap between CSI-RS for L1-RSRP measurement and SMTC means that CSI-RS for L1-RSRP measurement is within the SMTC window duration.

Longer evaluation period would be expected if the combination of CSI-RS, SMTC occasion and measurement gap configurations does not meet previous conditions.

Table 9.5C.7.2-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_SAN}$

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_SAN}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{CSI\text{-}RS})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P)*\max(T_{DRX}, T_{CSI\text{-}RS}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	

9.5C.8 Measurement restriction for L1-RSRP measurement for NTN band above 10 GHz

The UE is required to be capable of measuring SSB and CSI-RS for L1-RSRP without measurement gaps. The UE is required to perform the SSB and CSI-RS measurements with measurement restrictions as described in the following clauses.

9.5C.8.1 Measurement restriction for SSB based L1-RSRP

L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

9.5C.8.2 Measurement restriction for CSI-RS based L1-RSRP

For NTN bands above 10 GHz, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.

For NTN bands above 10 GHz, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For NTN bands above 10 GHz, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For NTN bands above 10 GHz, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

9.5C.9 Scheduling availability of UE during L1-RSRP measurement for NTN band above 10 GHz

Scheduling availability restrictions when the UE is performing L1-RSRP measurement are described in the following clauses. For UL, the scheduling restriction applies to UL symbols that fully or partially overlap with the restricted symbols as defined below.

9.5C.9.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on NTN bands above 10 GHz

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH.

9.5C.9.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on NTN bands above 10 GHz

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

9.5D L1-RSRP measurements for Reporting for ATG

9.5D.1 Introduction

When configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP. The measurements shall be performed for a serving cell, including PCell or SCell, on the resources configured for L1-RSRP measurements within the active BWP.

The UE shall be able to measure all CSI-RS resources and/or SSB resources of the *nzp-CSI-RS-ResourceSet* and/or *csi-SSB-ResourceSet* within the *CSI-ResourceConfig* settings configured for L1-RSRP for the active BWP, provided that the number of resources does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

9.5D.2 Requirements applicability

The requirements in clause 9.5D apply, provided:

- The CSI-RS or SSB or CSI-RS and SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clause 10.1.19.1 for FR1, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.4.1 for a corresponding band.

A CSI-RS resource configured for L1-RSRP shall be considered measurable when for each relevant CSI-RS the following conditions are met:

- L1-RSRP related side conditions given in clause 10.1.19.2 for FR1, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.4.2 for a corresponding band.

A CSI-RS and SSB resource configured for L1-RSRP shall be considered measurable when the measurable resource conditions are met for both CSI-RS resource and SSB resource.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

9.5D.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports only for report configurations configured for the active BWP.

The UE shall report the L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1 dB step size according to clause 10.1.19 for FR1 if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting* is enabled, the UE shall use differential L1-RSRP based reporting as defined in clause

10.1.19 for FR1. The differential L1-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6.

9.5D.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clause 10.1.19 for FR1.

The UE shall only send periodic L1-RSRP measurement reports for an active BWP.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5D.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clause 10.1.19 for FR1. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5D.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clause 10.1.19 for FR1.

The UE shall only send aperiodic L1-RSRP measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.5D.4 L1-RSRP measurement requirements

9.5D.4.1 SSB based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_ATG}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_ATG}$ is defined in table 9.5D.4.1-1 for FR1, where

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise

For ATG UE with the capable of *antennaArrayType-r18* on the measured carrier,

P value for SSB resource to be measured is defined as

- N_{total} / $N_{available}$ with $N_{available} > 0$
- $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ with $N_{available} = 0$
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and

- $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
- $N_{available}$ is
  - if the measured carrier is the SCC with *servingcellMO* configured, and the network indication *neighSCellMeasSkipping* is set to 'enable' to UE
    - if inter-band carrier aggregation within FR1 is configured, and UE not capable of *antennaArrayType-r18* on the other serving carrier, or UE support two simultaneous separate Rx beams
      - the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
    - otherwise,
      - the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements of other serving cell within the window W
  - otherwise,
    - if inter-band carrier aggregation within FR1 is configured, and UE not capable of *antennaArrayType-r18* on the other serving carrier, or UE support two simultaneous separate Rx beams
      - the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements of same serving cell within the window W
    - otherwise,
      - the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements within the window W
- T_{L1} is periodicity of the target SSB
- $P_{sharing\ factor} = 3$.

Otherwise, for UE with one or multiple omni-directional antennas

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for SSB resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
  - $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
  - T_{L1} is periodicity of the target SSB.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

- $P=\frac{1}{1-\frac{T_{SSB}}{xGP}}$, when in the monitored cell there are GAPs configured for intra-frequency or inter-frequency, which are overlapping with some but not all occasions of the SSB; and
- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the SSB.

Where:

- T_{SSB} = *ssb-periodicityServingCell* of the serving cell
- an SSB or an SMTC occasion is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
  - xRP = MGRP

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and GAP configurations does not meet previous conditions.

Table 9.5D.4.1-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_ATG}$ for FR1

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_ATG}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE: T_{SSB} = *ssb-periodicityServingCell* is the periodicity of the SSB-Index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	

9.5D.4.2 CSI-RS based L1-RSRP Reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured CSI-RS resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_ATG}$.

- For periodic and semi-persistent CSI-RS resources, M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise

- For aperiodic CSI-RS resources M=1

For ATG UE capable of *antennaArrayType-r18* on the measured carrier,

- P value for a CSI-RS resource to be measured is defined as
  - N_{total} / $N_{available}$ with $N_{available}$ > 0
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ with $N_{available}$ = 0
  - For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any CSI-RS resource occasion:
    - N_{total} is the total number of CSI-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
    - $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
    - $N_{available}$ is
      - if the measured carrier is the SCC with *servingcellMO* configured, and the network indication *neighSCellMeasSkipping* is set to 'enable' to UE,
        - if inter-band carrier aggregation within FR1 is configured, and UE not capable of *antennaArrayType-r18* on the other serving carrier, or UE support two simultaneous separate Rx beams

- the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W

- otherwise,

- the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements of other serving cell within the window W

  - otherwise,

    - if inter-band carrier aggregation within FR1 is configured, and UE not capable of *antennaArrayType-r18* on the other serving carrier, or UE support two simultaneous separate Rx beams

- the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements of same serving cell within the window W

  - otherwise,

- the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements within the window W

  - T_{L1} is periodicity of the target CSI-RS

  - $P_{sharing\ factor} = 3$.

Otherwise, for UE with one or multiple omni-directional antenna(s)

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for a CSI-RS resource to be measured is defined as

  - N_{total} / $N_{outside_MG}$ in FR1

- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any CSI-RS resource occasion:

  - N_{total} is the total number of CSI-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and

  - $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W

  T_{L1} is periodicity of the target CSI-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}}$, when in the monitored cell there are GAPs configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and

- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the CSI-RS.

Where:

T_{CSI-RS} = the periodicity of CSI-RS configured for L1-RSRP measurement

- a CSI-RS or an SMTC occasion is considered to be as overlapped with the GAP if it overlaps a measurement gap occasion, and

- xRP = MGRP

Table 9.5D.4.2-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_ATG}$ for FR1

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_ATG}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P)*$T_{CSI\text{-}RS}$)
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P)*max(T_{DRX},$T_{CSI\text{-}RS}$))
DRX cycle > 320 ms	ceil(M*P)*T_{DRX}

NOTE 1:	T_{CSI-RS} is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.
NOTE 2:	the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.

9.5D.5 Measurement restriction for CSI-RS and SSB for L1-RSRP measurement

The UE is required to be capable of measuring SSB and CSI-RS for L1-RSRP without measurement gaps. The UE is required to perform the SSB and CSI-RS measurements with measurement restrictions as described in the following clauses.

9.5D.5.1 Measurement restriction for SSB based L1-RSRP

For FR1, when the SSB for L1-RSRP measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

9.5D.5.2 Measurement restriction for CSI-RS based L1-RSRP

The SSB mentioned in this clause can be associated with the serving cell PCI.

For FR1, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

9.5D.6 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions described in the following clauses apply when the UE is performing L1-RSRP measurement on serving cell, and UE is receiving PDCCH/PDSCH from serving cell and/or cell(s) with different PCI.

9.5D.6.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

9.5D.6.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on serving cell where L1-RSRP measurement is performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-RSRP measurement is performed is configured.

9.5E L1-RSRP measurements for Reporting for RedCap UEs with satellite access

9.5E.1 Introduction

The requirements in clause 9.5C.1 apply.

9.5E.2 Requirements applicability

The requirements in clause 9.5E apply, provided:

- The CSI-RS or SSB or CSI-RS and SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

For 1 Rx RedCap UE with NTN:

- L1-RSRP related side conditions given in clauses 10.1.19F.2 for FR1, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.19.2 for a corresponding band.

For 2 Rx RedCap UE with NTN:

- L1-RSRP related side conditions given in clauses 10.1.19F.2 for FR1, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.19.2 for a corresponding band.

A CSI-RS resource configured for L1-RSRP shall be considered measurable when for each relevant CSI-RS the following conditions are met:

For 1 Rx RedCap UE with NTN:

- L1-RSRP related side conditions given in clauses 10.1.19F.2 for FR1, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.19.2 for a corresponding band.

For 2 Rx RedCap UE with NTN:

- L1-RSRP related side conditions given in clauses 10.1.19F.2 for FR1, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.19.2 for a corresponding band.

A CSI-RS and SSB resource configured for L1-RSRP shall be considered measurable when the measurable resource conditions are met for both CSI-RS resource and SSB resource.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

9.5E.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports only for report configurations configured for the active BWP.

The UE shall report the L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1 dB step size according to clause 10.1.19F for FR1 for 2 Rx RedCap UE with NTN, and clause 10.1.19F for FR1 for 1 Rx RedCap UE with NTN, if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting* is enabled, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1.19F for FR1 for 2 Rx RedCap UE with NTN, and clause 10.1.19F for FR1 for 1 Rx RedCap UE with NTN. The differential L1-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6.

9.5E.3.1 Periodic Reporting

For 1 Rx RedCap UE with NTN, reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clause 10.1.19F for FR1.

For 2 Rx RedCap UE with NTN, reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clause 10.1.19F.

The UE shall only send periodic L1-RSRP measurement reports for an active BWP.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5E.3.2 Semi-Persistent Reporting

For 1 Rx RedCap UE with NTN, reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clause 10.1.19F. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

For 2 Rx RedCap UE with NTN, reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clause 10.1.19F. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5E.3.3 Aperiodic Reporting

For 1 Rx RedCap UE with NTN, reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clause 10.1.19F.

For 2 Rx RedCap UE with NTN, reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clause 10.1.19F.

The UE shall only send aperiodic L1-RSRP measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.5E.4 L1-RSRP measurement requirements

9.5E.4.1 SSB based L1-RSRP Reporting

The requirements in clause 9.5C.4.1 shall apply for both 1Rx and 2Rx RedCap UE.

9.5E.4.2 CSI-RS based L1-RSRP Reporting

For HD-FDD RedCap UE indicating *CollisionHandlingOfHDFDDOperation*, the requirements in clause 9.5C.4.2 shall apply, provided that the following conditions are met:

- there is no collision between the CSI-RS resources for L1-RSRP measurements and UL transmission when network indicates *ntn-PrioritizeUl-semiStatichalfDuplexRedCapcollision*, or
- in case of collision between the CSI-RS resources for L1-RSRP measurements and UL transmission except PRACH, and *ntn-PrioritizeUl-semiStatichalfDuplexRedCapcollision* is not indicated by network.
- there is no collision between the CSI-RS resources for L1-RSRP measurements and PRACH.

Otherwise, the requirements in clause 9.5C.4.2 shall apply.

9.5E.5 Measurement restriction for L1-RSRP measurement

The requirements in clause 9.5C.5 shall apply for both 1Rx and 2Rx RedCap UE, when the L1-RSRP measurement requirements in 9.5E.4 are applicable.

9.5E.6 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions when the UE is performing L1-RSRP measurement are described in the following clauses. For UL, the scheduling restriction applies to UL symbols that fully or partially overlap with the restricted symbols as defined below.

9.5E.6.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

For FD-FDD and TDD RedCap UEs, there are no scheduling restrictions due to L1-RSRP measurement performed on SSB and CSI-RS configured as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

For HD-FDD RedCap UE, scheduling restrictions apply for transmission on PUCCH/PUSCH/SRS during L1-RSRP measurement period, except when UE indicates *CollisionHandlingOfHDFDDOperation* and is indicated that UL transmission is prioritized over L1-RSRP measurement via *ntn-PrioritizeUl-semiStatichalfDuplexRedCapcollision* in case of collision between CSI-RS resources to be measured and UL transmission. .

9.5E.6.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14], the requirements in clause 9.5E.6.1 shall apply.

For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement. The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

9.5F L1-RSRP measurements Reporting for Beam Prediction

9.5F.1 Introduction

For UE supporting *UE-sided RS- prediction for reportQuantity-r19 and nroftimeinstance-r19* is not configured, when configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP for determine the reported P-CRI. For UE supporting UE-sided RS prediction with p-cri-RSRP-r19 for *reportQuantity-r19* and *nroftimeinstance-r19* is not configured, when configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP for determine the reported P-CRI, and P-L1-RSRP.

For UE supporting *UE-sided RS- prediction for reportQuantity-r19 with 'p-cri-r19' or 'p-ssb-index-r19' and nroftimeinstance-r19* is configured, when configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP for determine the reported P-CRI, P-SSBRI. For UE supporting UE-sided RS prediction *for reportQuantity-r19* with '*p-cri-RSRP-r19*' or *'p-ssb-Index-RSRP-r19'* and *nroftimeinstance-r19* is configured, when configured by the network, the UE shall be able to perform L1-RSRP measurements of configured CSI-RS, SSB or CSI-RS and SSB resources for L1-RSRP for determine the reported P-CRI, and P-L1-RSRP.

The measurements shall be performed for a serving cell, including PCell, on the resources configured for L1-RSRP measurements within the active BWP.

The UE shall be able to measure all CSI-RS resources and/or SSB resources of the *nzp-CSI-RS-ResourceSet* and/or *csi-SSB-ResourceSet* within the CSI-Resource*Config* settings configured for L1-RSRP for the active BWP, provided that the number of resources does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*.

The UE shall report the measurement quantity (*reportQuantity-r19 set to 'p-cri-r19', 'p-cri-RSRP-r19', 'p-ssb-index-r19' or 'p-ssb-index-RSRP-r19'*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

9.5F.2 Requirements applicability

The requirements in clause 9.5F apply, provided:

- The CSI-RS or SSB or CSI-RS and SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clauses 10.x for FR2 for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.4.1 for a corresponding band.

A CSI-RS resource configured for L1-RSRP shall be considered measurable when for each relevant CSI-RS the following conditions are met:

- L1-RSRP related side conditions given in clauses 10.x for FR2, respectively, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex [B.2x] for a corresponding band.

A CSI-RS and SSB resource configured for L1-RSRP shall be considered measurable when the measurable resource conditions are met for both CSI-RS resource and SSB resource.

Requirements are defined for periodic, semi-persistent and aperiodic resources, with the exception for UE sided RS prediction when *nroftimeinstance-r19* is configured, it is not applicable for aperiodic CSI-RS resources.

For UE sided RS prediction when *nroftimeinstance-r19* is not configured, there is no requirement if UE is configured with *reportQuantity-r19* set to 'p-ssb-index-r19' or 'p-ssb-index-RSRP-r19'.

For UE sided RS prediction when *nroftimeinstance-r19* is configured, there is no requirement if higher layer parameter *timeRestrictionForChannelMeasurement* is not configured.

9.5F.3 Measurement Reporting Requirements

For a *CSI-ReportConfig* with *reportQuantity-r19* set to 'p-cri-r19', 'p-ssb-index-r19', the UE shall send P-CRI, P-SSBRI reports only for report configurations configured for the active BWP.

For a *CSI-ReportConfig* with *reportQuantity-r19* set to 'p-cri-r19', 'p-cri-RSRP-r19', 'p-ssb-index-r19' or 'p-ssb-index-RSRP-r19', the UE shall send P-CRI, P-SSBRI, and P-L1-RSRP reports only for report configurations configured for the active BWP. The UE shall report the P-L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1dB step size according to clause 10.x for FR2 if *nroftimeinstance-r19* is not configured or *nroftimeinstance-r19* is configured with the value set to 1, and if *nrofreportedpredictedrs-r19* is configured to be one. If *nroftimeinstance-r19* is not configured or *nroftimeinstance-r19* is configured with the value set to 1, and if *nrofreportedpredictedrs-r19* is configured to be larger than 1, the UE shall use differential L1-RSRP based reporting as defined in clause 10.x for FR2. The largest predicted value of P-L1-RSRP is quantized to a 7-bit value in the range [-140, -44] dBm with 1dB step size and the differential P-L1-RSRP value is computed with 2 dB step size with a reference to the largest P-L1-RSRP value which is part of the same P-L1-RSRP reporting instance. The mapping between the reported P-L1-RSRP value and the predicted L1-RSRP quantity is described in 10.x.

9.5F.3.1 Periodic Reporting

Reported P-CRI, P-SSBRI, and/or P-L1-RSRP contained in periodic P-CRI, P-SSBRI, and/or P-L1-RSRP reports shall meet the requirements in clauses 10.x for P-CRI, P-SSBRI, and in clause 10.x for P-L1-RSRP, respectively.

The UE shall only send periodic P-CRI, P-SSBRI, and/or P-L1-RSRP reports for an active BWP.

The UE shall transmit the periodic P-CRI, P-SSBRI, and/or P-L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5F.3.2 Semi-Persistent Reporting

Reported P-CRI, P-SSBRI, and/or P-L1-RSRP contained in a Semi-Persistent P-CRI, P-SSBRI, and/or P-L1-RSRP report shall meet the requirements in clauses 10.1.20 for FR2. This requirement applies for semi-persistent P-CRI, P-SSBRI, and/or P-L1-RSRP P reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent P-CRI, P-SSBRI, and/or P-L1-RSRP reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent P-CRI, P-SSBRI, and/or P-L1-RSRP reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent P-CRI, P-SSBRI, and/or P-L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.5F.3.3 Aperiodic Reporting

Reported P-CRI, and/or P-L1-RSRP contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent reports shall meet the requirements in clauses 10.1.20 for P-CRI, and in clause 10.x for P-L1-RSRP, respectively.

The UE shall only send aperiodic P-CRI, and/or P-L1-RSRP reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic P-CRI, and/or P-L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.5F.4 L1-RSRP measurement and prediction requirements

9.5F.4.1 SSB based RS prediction reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting P-CRI, P-SSBRI, and/or P-L1-RSRP based on the L1-RSRP measurements over the prediction period of $T_{L1\text{-}RSRP_Prediction_Period_SSB}$.

The value of $T_{L1\text{-}RSRP_Prediction_Period_SSB}$ is defined in Table 9.5F.4.1-2 for FR2, where

- For UE sided RS prediction when *nroftimeinstance-r19* is not configured, M= 1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise; And for UE sided RS prediction when *nroftimeinstance-r19* is configured, M =1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured

- N= 8

- K_{BM}=1 for UE sided RS prediction when *nroftimeinstance-r19* is not configured. And for UE sided RS prediction when *nroftimeinstance-r19* is configured, K_{BM} is indicated by *UE capability on number of latest consecutive transmission occasion*.

For FR2,

- $P=\frac{1}{1-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is not overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$).

- P is $P_{sharing\ factor}$, when SSB is not overlapped with measurement gap and SSB is fully overlapped with SMTC period ($T_{SSB} = T_{SMTCperiod}$).

- $P=\frac{1}{1-\frac{T_{SSB}}{MGRP}-\frac{T_{SSB}}{T_{SMTCperiod}}}$, when SSB is partially overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and

  - $T_{SMTCperiod} \neq$ MGRP or

  - $T_{SMTCperiod}$ = MGRP and $T_{SSB} < 0.5*T_{SMTCperiod}$

- P is $\frac{1}{1-\frac{T_{SSB}}{MGRP}}$* $P_{sharing\ factor}$, when SSB is partially overlapped with measurement gap and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod}$ = MGRP and $T_{SSB} = 0.5*T_{SMTCperiod}$

- $P=\frac{1}{1-\frac{T_{SSB}}{\min(T_{SMTCperiod},MGRP)}}$, when SSB is partially overlapped with measurement gap (T_{SSB} <MGRP) and SSB is partially overlapped with SMTC occasion ($T_{SSB} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.

- P is $\frac{1}{1-\frac{T_{SSB}}{MRGP}}$* $P_{sharing\ factor}$, when SSB is partially overlapped with measurement gap and SSB is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod} <$ MGRP)

- P is $\frac{1}{1-\frac{T_{SSB}}{MGRP}}$* $P_{sharing\ factor}$, when SSB is partially overlapped with measurement gap and SSB is fully overlapped with SMTC occasion ($T_{SSB} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod} <$ MGRP)$P_{sharing\ factor}$ = 1

  - not overlapped with the SSB symbols indicated by SSB-ToMeasure and 1 data symbol before each consecutive SSB symbols indicated by SSB-ToMeasure and 1 data symbol after each consecutive SSB symbols indicated by SSB-ToMeasure, given that SSB-ToMeasure is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

  - not overlapped with the RSSI symbols indicated by ss-RSSI-Measurement and 1data symbol before each RSSI symbol indicated by ss-RSSI-Measurement and 1 data symbol after each RSSI symbol indicated by ss-RSSI-Measurement, given that ss-RSSI-Measurement is configured,

- $P_{sharing\ factor}$ = 3, otherwise.

Where:

T_{SSB} = ssb-periodicityServingCell

$T_{SMTCperiod}$ = the configured SMTC period

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Longer prediction period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet pervious conditions.

Table 9.5F.4.1-2: Prediction period $T_{L1\text{-}RSRP_Prediction_Period_SSB}$ for FR2

Configuration	$T_{L1\text{-}RSRP_Prediction_Period_SSB}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(K_{BM}*M*P*N)*T_{SSB}+\underline{T_{inference}})$
DRX cycle ≤ 320ms	$\max(T_{Report}, \text{ceil}(1.5*K_{BM}*M*P*N)*\max(T_{DRX},T_{SSB})+\underline{T_{inference}})$
DRX cycle > 320ms	$\text{ceil}(1.5*K_{BM}*M*P*N)*T_{DRX}+\underline{T_{inference}}$
Note: T_{SSB} = ssb-periodicityServingCell is the periodicity of the SSB-Index configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. $\underline{T_{inference}}$ is the time required for model inference, which is defined by d' as specified according to clause 5.4 in TS 38.214 [26].	

9.5F.4.2 CSI-RS based RS prediction reporting

The UE shall be capable of performing L1-RSRP measurements based on the configured CSI-RS resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting P-CRI, and/or P-L1-RSRP based on the L1-RSRP measurements measured over the prediction period of $T_{L1\text{-}RSRP_Prediction_Period_CSI\text{-}RS}$.

The value of $T_{L1\text{-}RSRP_Prediction_Period_CSI\text{-}RS}$ is defined in in Table 9.5F.4.2-2 for FR2, where

- For periodic and semi-persistent CSI-RS resources, for UE sided RS prediction when *nroftimeinstance-r19* is not configured, M= 1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise. And for UE sided RS prediction when *nroftimeinstance-r19* is configured, M= 1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured.

- For aperiodic CSI-RS resources M= 1

- For periodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided *qcl-InfoPeriodicCSI-RS* is configured for all resources in the resource set.

  - SSB for L1-RSRP measurement, or

  - another CSI-RS in resource set configured with repetition ON.

- For periodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided *qcl-InfoPeriodicCSI-RS* is configured for with QCL-TypeD all resources in the resource set.

- For semi-persistent CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided TCI state is provided for all resources in the resource set in the MAC CE activating the resource set and for each resource one RS has QCL-TypeD with

  - SSB for L1-RSRP measurement, or

  - another CSI-RS in resource set configured with repetition ON.

- For semi-persistent CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided TCI state is provided with QCL-TypeD for all resources in the resource set in the MAC CE activating the resource set.

- For aperiodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided *qcl-info* is configured for all resources in the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For aperiodic CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to ON, N=1. UE is not required to meet the accuracy requirements in clause 10.1.19.2 and 10.1.20.2 if number of resources in the resource set is smaller than *maxNumberRxBeam*. The requirements apply provided *qcl-info* is configured with QCL-TypeD for all resources in the resource set.
- K_{BM}=1 for UE sided RS prediction when *nroftimeinstance-r19 is not configured.* And for UE sided RS prediction when *nroftimeinstance-r19 is configured*, K_{BM} is indicated by *UE capability on number of latest consecutive transmission occasion*.

For FR2,

- P=1, when CSI-RS is not overlapped with measurement gap and also not overlapped with SMTC occasion.
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{MGRP}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is not overlapped with SMTC occasion (T_{CSI-RS} < MGRP)
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is not overlapped with measurement gap and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$).
- $P=P_{sharing\ factor}$, when CSI-RS is not overlapped with measurement gap and CSI-RS is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$).
- P=1, when aperiodic CSI-RS resource is not overlapped with measurement gap.
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{MGRP}-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is partially overlapped with SMTC occasion (TCSI-RS < $T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and
  - $T_{SMTCperiod} \neq$ MGRP or
  - $T_{SMTCperiod}$ = MGRP and $T_{CSI-RS} < 0.5*T_{SMTCperiod}$
- $P=\frac{3}{1-\frac{T_{CSI-RS}}{MGRP}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and $T_{SMTCperiod}$ = MGRP and $T_{CSI-RS} = 0.5*T_{SMTCperiod}$
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{\min(T_{SMTCperiod},MGRP)}}$, when CSI-RS is partially overlapped with measurement gap (T_{CSI-RS} < MGRP) and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.
- $P=\frac{3}{1-\frac{T_{CSI-RS}}{MGRP}}$, when CSI-RS is partially overlapped with measurement gap and CSI-RS is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with measurement gap ($T_{SMTCperiod}$ < MGRP)
- $P_{sharing\ factor}$ = 1, if the CSI-RS configured for L1-RSRP measurement outside measurement gap is
  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

- not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured

- $P_{sharing\ factor} = 3$, otherwise.

Where:

$T_{SMTCperiod}$ = the configured SMTC period.

T_{CSI-RS} = the periodicity of CSI-RS configured for L1-RSRP measurement

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Note: The overlap between CSI-RS for L1-RSRP measurement and SMTC means that CSI-RS for L1-RSRP measurement is within the SMTC window duration.

Longer prediction period would be expected if the combination of CSI-RS, SMTC occasion and measurement gap configurations does not meet pervious conditions.

Table 9.5F.4.2-2: Prediction period $T_{L1\text{-}RSRP_Prediction_Period_CSI\text{-}RS}$ for FR2

Configuration	$T_{L1\text{-}RSRP_Prediction_Period_CSI\text{-}RS}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(K_{BM}*M*P*N)*T_{CSI\text{-}RS}+\underline{T_{inference}})$
DRX cycle ≤ 320ms	$\max(T_{Report}, \text{ceil}(1.5*K_{BM}*M*P*N)*\max(T_{DRX},T_{CSI\text{-}RS}) +\underline{T_{inference}})$
DRX cycle > 320ms	$\text{ceil}(K_{BM}*M*P*N)*T_{DRX}+\underline{T_{inference}}$
Note 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. $\underline{T_{inference}}$ is the time required for model inference, which is defined by d' as specified according to clause 5.4 in TS 38.214 [26].	
Note 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	

9.6 NE-DC: Measurements

9.6.1 Introduction

This clause contains requirements for UE supporting dual connectivity with NR PCell and E-UTRA FDD or TDD PSCell. The requirements apply to UEs that have been configured with NE-DC.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.6.2 SFTD Measurements

9.6.2.1 Introduction

This clause contains requirements on UE capabilities for reporting of SFN and frame time difference between NR PCell and E-UTRA PSCell in RRC_CONNECTED state. The requirements comprise measurement reporting delay and measurement accuracy. The overall measurement reporting delay includes an RRC procedure delay specified in TS 38.331 [2], and the SFTD measurement reporting delay specified below.

9.6.2.2 SFTD Measurement requirements

When no DRX is used in either of the NR PCell and E-UTRA PSCell, the physical layer measurement period of the SFTD measurement shall be $T_{measure_SFTD1}$ = max(0.2, 5 * SMTC period) s.

When DRX is used in either of the NR PCell or the E-UTRA PSCell, or in both PCell and PSCell, the physical layer measurement period ($T_{measure_SFTD1}$) of the SFTD measurement shall be as specified in table 9.6.2.2-1.

Table 9.6.2.2-1: SFTD measurement requirement when DRX is used

DRX cycle length (s)[Note2]	$T_{measure_SFTD1}$ (s)
DRX cycle≤0.04	max(0.2,5 x SMTC period) (Note1)
0.04<DRX cycle≤0.32	8 x max(DRX cycle, SMTC period)
0.32<DRX cycle≤10.24	5 x DRX cycle
Note1: Number of DRX cycles depends upon the DRX cycle in use Note2: DRX cycle length in this table refers to the DRX cycle length configured for PCell or E-UTRA PSCell. When DRX is used in both PCell and E-UTRA PSCell, DRX cycle length in this table refers to the longer of the DRX cycle lengths for PCell and E-UTRA PSCell.	

If E-UTRA PSCell is changed without changing carrier frequency of E-UTRA PSCell while the UE is performing SFTD measurements, the UE shall still meet SFTD measurement and accuracy requirements for the new E-UTRA PSCell. In this case the UE shall restart the SFTD measurement, and the total physical layer measurement period shall not exceed $T_{measure_SFTD2}$ as defined by the following expression:

$$T_{measure_SFTD2} = (M+1)*(T_{measure_SFTD1}) + M*T_{PSCell_change_NEDC}$$

where:

M is the number of times the E-UTRA PSCell is changed over the measurement period ($T_{measure_SFTD2}$), and

$T_{PSCell_change_NEDC}$ is the time necessary to change the E-UTRA PSCell; it can be up to 25 ms.

If PCell is changed, or if E-UTRA PSCell is changed to a different carrier frequency, the UE shall terminate the SFTD measurement.

The measurement accuracy for the SFTD measurement when DRX is used as well as when no DRX is used shall be as specified in clause 10.1.21.1.

9.7 Cross Link Interference measurements

9.7.1 Introduction

The UE capable of performing CLI measurements shall be able to measure SRS-RSRP and CLI-RSSI which are defined in TS 38.215 [4] within active DL BWP. The measurements requirements in this clause apply for TDD mode only.

CLI measurements are only applicable for RRC_CONNECTED intra-frequency:

- when SRS-RSRP measurement resource is fully confined within BW of DL active BWP
- when CLI-RSSI measurement resource is configured within active BWP

When the UE measures SRS-RSRP and CLI-RSSI, a constant offset relative to the downlink reference timing in the serving cell shall be applied. The constant offset value is derived by UE implementation and shall be at least $Tc*N_{TA_offset}$.

For performing CLI measurement in FR2, UE can assume the configured CLI measurement resources are QCL-ed with TypeD to one of the latest received PDSCH and the latest monitored CORESET.

CLI measurement requirements defined in clause 9.7 are applicable if

- CLI measurement is not performed on an NR carrier in the same band as E-UTRA serving carrier; and
- UE supports simultaneous Rx/Tx for inter-band CA, inter-band EN-DC, inter-band NE-DC, and NR-DC.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.7.2 SRS-RSRP measurements

9.7.2.1 Introduction

When configured by the network, the UE shall be able to perform SRS-RSRP measurements of configured *srs-ResourceConfigCLI*. The requirements apply when the subcarrier spacing for SRS-RSRP measurement resource configuration is the same as the subcarrier spacing of the active DL BWP of serving cell. The UE is not required to measure SRS using different SCS compared to the downlink active BWP SCS of the same carrier.

9.7.2.2 Requirements applicability

The requirements in clause 9.7.2 apply, provided:

- SRS resources configured for SRS-RSRP measurements are measurable.

An SRS resource configured for SRS-RSRP shall be considered measurable when for each relevant SRS the following conditions are met:

- SRS-RSRP related side conditions given in clauses 10.1.22.1 for FR1 and FR2 for a corresponding band,
- SRS_RP and SRS Ês/Iot according to Annex B.2.7 for a corresponding band.

9.7.2.3 Measurement Reporting Requirements

The UE shall send SRS-RSRP reports only for report configurations according to *reportType* which is *cliPeriodical* or *cliEventTriggered* when SRS-RSRP report is configured.

The UE shall report the SRS-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1 dB step size according to clause 10.1.22.1 for FR1 and FR2.

9.7.2.3.1 Periodic Reporting

Reported SRS-RSRP measurements contained in periodically triggered measurement reports shall meet the requirements in clause 10.1.22.1.

9.7.2.3.2 Event-triggered Periodic Reporting

Reported SRS-RSRP measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.22.1.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.7.2.3.3.

9.7.2.3.3 Event Triggered Reporting

Reported SRS-RSRP measurements contained in periodically triggered measurement reports shall meet the requirements in clause 10.1.22.1.

The UE shall not send any event triggered measurement reports as long as no reporting criteria is fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH}. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report on.

9.7.2.4 Measurement capability

The UE shall be capable of performing SRS-RSRP measurements on the SRS resources configured for measurement, provided that the number of SRS to be monitored by UE does not exceed 8 within a slot, and the total number of SRSs to be monitored by the UE does not exceed 32.

9.7.2.5 SRS-RSRP measurement period

The UE shall be capable of performing SRS-RSRP measurement based on the configured SRS resource, and the UE shall be capable of reporting SRS-RSRP measured over measurement period of $T_{SRS_RSRP_measurement_period}$ for FR1 and FR2.

Table 9.7.2.5-1 Measurement period $T_{SRS_RSRP_measurement_period}$

Configuration	$T_{SRS_measurement_period}$ (ms)
No DRX	Max(60, 3 X T_{SRS})
DRX cycle ≤ 320 ms	Max(60, Ceil(1.5 X 3) X max(T_{SRS}, T_{DRX}))
DRX cycle > 320 ms	3 X T_{DRX}
NOTE: T_{SRS} is SRS measurement periodicity configured *SRS-PeriodicityAndOffset*, and T_{DRX} is the DRX cycle length.	

If the SRS resources configured for measurement are partially or fully overlapping with SMTC window, SSB or CSI-RS configured for RLM, BFD, CBD or L1-RSRP measurement or measurement gaps, requirements are not specified for $T_{SRS_RSRP_measurement_period}$.

9.7.3 CLI-RSSI measurements

9.7.3.1 Introduction

When configured by the network, the UE shall be able to perform CLI-RSSI measurement of configured *rssi-ResourceConfigCLI*. The subcarrier spacing for CLI-RSSI measurement resource configuration can be same or different from the subcarrier spacing of active BWP. UE shall perform CLI-RSSI measurement with the SCS of the active BWP.

9.7.3.2 Requirements applicability

The requirements in clause 9.7.3 apply, provided:

- The measurement resources configured for CLI-RSSI measurements are measurable.

A measurement resource configured for CLI-RSSI shall be considered measurable when for each relevant CLI-RSSI resource the following conditions are met:

- CLI-RSSI related side conditions given in clauses 10.1.22.2 for FR1 and FR2 for a corresponding band.

9.7.3.3 Measurement Reporting Requirements

The UE shall send CLI-RSSI reports only for report configurations according to *reportType* which is *cliPeriodical* or *cliEventTriggered* when CLI-RSSI report is configured.

The UE shall report the CLI-RSSI value as a 7-bit value in the range [-100, -25] dBm with 1 dB step size according to clause 10.1.22.2 for FR1 and FR2.

9.7.3.3.1 Periodic Reporting

Reported CLI-RSSI measurements contained in periodically triggered measurement reports shall meet the requirements in clause 10.1.22.2.

9.7.3.3.2 Event-triggered Periodic Reporting

Reported CLI-RSSI measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.22.2.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.7.3.3.3.

9.7.3.3.3 Event Triggered Reporting

Reported CLI-RSSI measurements contained in periodically triggered measurement reports shall meet the requirements in clause 10.1.22.2.

The UE shall not send any event triggered measurement reports as long as no reporting criteria is fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH}. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report on.

9.7.3.4 Measurement capability

The UE shall be capable of performing CLI-RSSI measurement based on the configured resource, provided that the maximum number of CLI-RSSI measurement resources for the UE does not exceed 64.

9.7.3.5 CLI-RSSI measurement period

The UE shall be capable of performing CLI-RSSI measurement based on the configured measurement resource within $T_{CLI_RSSI_measurement_period}$. The UE shall be able to provide a single RSSI sample for each measurement resource configured for CLI-RSSI measurement occurring with a configured periodicity. The CLI-RSSI measurement period $T_{CLI_RSSI_measurement_period}$ corresponds to the CLI-RSSI measurement resource periodicity, which is configured for by higher layers via *RSSI-PeriodicityAndOffset*.

If the CLI-RSSI measurement resources configured for measurement are partially or fully overlapping with SMTC window, SSB or CSI-RS configured for RLM, BFD, CBD or L1-RSRP measurement or measurement gaps, requirements are not specified for $T_{CLI_RSSI_measurement_period}$.

9.7.4 Scheduling availability of UE during CLI measurements

Scheduling availability restrictions when the UE is performing CLI measurements which are SRS-RSRP and CLI-RSSI are described in the following clause.

9.7.4.1 Scheduling availability of UE performing measurement on FR1

The following scheduling restriction applies due to CLI measurements.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs CLI measurements, and on 1 data symbol before an OFDM symbol used for CLI measurements for 15 kHz and 30 kHz subcarrier spacing.

- For the UE which does not support *cli-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs SRS-RSRP measurements, and on 1 data symbol before an OFDM symbol used for SRS-RSRP measurements for 15 kHz and 30 kHz subcarrier spacing.

- For the UE which does not support *cli-RSSI-FDM-DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs CLI-RSSI measurements, and on 1 data symbol before an OFDM symbol used for CLI-RSSI measurements for 15 kHz and 30 kHz subcarrier spacing.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs CLI measurement, and on 2 data symbols before an OFDM symbol used for CLI measurements for 60 kHz subcarrier spacing.

- For the UE which does not support *cli-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs SRS-RSRP measurement, and on 2 data symbols before an OFDM symbol used for SRS-RSRP measurements for 60 kHz subcarrier spacing.

- For the UE which does not support *cli-RSSI-FDM-DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs CLI-RSSI measurement, and on 2 data symbols before an OFDM symbol used for CLI-RSSI measurements for 60 kHz subcarrier spacing.

When TDD intra-band carrier aggregation is configured, the scheduling restrictions on serving cell where CLI measurements are performed apply on all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions on serving cell where CLI measurements are performed apply on all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

For UE indicating *intraBandNR-CA-non-collocated-r19,*

1> when UE is configured with maxMIMO-Layers with value equal to 4 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 4"*

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 1"*

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

2> else if *nonCollocatedTypeNR-CA-v1900* is not provided

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.1> when UE is configured with maxMIMO-Layers with value equal to 2 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-r18* is not provided

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2>else

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

9.7.4.2 Scheduling availability of UE performing measurement on FR2

The following scheduling restriction applies due to CLI measurements.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs CLI measurements, and on 1 data symbol before an OFDM symbol used for CLI measurements for 60 kHz subcarrier spacing.

- For the UE which does not support *cli-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs SRS-

RSRP measurements, and on 1 data symbol before an OFDM symbol used for SRS-RSRP measurements for 60 kHz subcarrier spacing.

- For the UE which does not support *cli-RSSI-FDM-DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs CLI-RSSI measurements, and on 1 data symbol before an OFDM symbol used for CLI-RSSI measurements for 60 kHz subcarrier spacing.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs CLI measurements, and on 2 data symbols before an OFDM symbol used for CLI measurements for 120 kHz subcarrier spacing.

- For the UE which does not support *cli-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs SRS-RSRP measurements, and on 2 data symbols before an OFDM symbol used for SRS-RSRP measurements for 120 kHz subcarrier spacing.

- For the UE which does not support *cli-RSSI-FDM-DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs CLI-RSSI measurements, and on 2 data symbols before an OFDM symbol used for CLI-RSSI measurements for 120 kHz subcarrier spacing.

When TDD intra-band carrier aggregation is configured, the scheduling restrictions on serving cell where CLI measurements are performed apply on all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

9.8 L1-SINR measurements for Reporting

9.8.1 Introduction

When configured by the network, the UE shall be able to perform L1-SINR measurements with the measurement resources configured as the selection of:

- CSI-RS based CMR and no dedicated IMR configured;

- SSB based CMR and dedicated IMR configured;

- CSI-RS based CMR and dedicated IMR configured.

For UE supporting *On-demand SSB operation* and when OD- SSB transmission is indicated, the UE shall be able to perform L1-SINR measurements of SSB resources based CMR and dedicated IMR configured, provided the following conditions are met:

- an OD-SSB transmission in a configured DL BWP without first SSB transmission, or

- an OD-SSB transmission in a configured DL BWP with a first SSB transmission which cannot be used to obtain SIB1 have the following relations:

  - are with the same Cell ID, and

  - are in the same frequency location, and

  - are with same sub-carrier spacing, and

  - are with the same downlink transmit power, and

  - are quasi co-located with respect to Doppler shift, Doppler spread, average gain, average delay, delay spread and, when applicable, spatial RX parameters, when they have a same SSB index.

The measurements shall be performed for a serving cell, including PCell, PSCell, or SCell, on the resources configured for L1-SINR measurements within the active BWP. For UE supporting *bwpOperationMeasWithoutInterrupt-r18*, the UE shall additionally be able to perform L1-SINR measurements for a serving cell, including PCell, PSCell, or SCell, on the resources configured for L1-SINR outside the active BWP, provided that the SSB is within the configured UE-specific CBW. For UE supporting *ncd-SSB-BWP-Wor-r18*, the SSB and SMTC in this clause applies for both CD-SSB and NCD-SSB if it is not explicitly specified otherwise. If SSB in the active DL BWP of serving cell *i* is NCD-SSB, for serving cell *i* the requirements in clause 9.8 apply provided that serving cell *i* is PCell or activated PSCell. For UE

supporting *On-demand SSB operation*, the UE shall additionally be able to perform L1-SINR measurements for a SCell on the OD-SSB resources configured for L1-SINR within the active BWP.

The UE shall be able to measure all CSI-RS resources and/or SSB resources and/or CSI-IM resources of the *nzp-CSI-RS-ResourceSet* and/or *csi-SSB-ResourceSet and/or CSI-IM-ResourceSet* within the *CSI-ResourceConfig* settings for L1-SINR for the active BWP, and measure interference on corresponding NZP CSI-RS or CSI-IM resources if configured, provided that the number of resources does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*. If the UE supports *bwpOperationMeasWithoutInterrupt-r18*, UE shall be able to measure the SSB reources of *csi-SSB-ResourceSet* within the *CSI-ResourceConfig* configured outside active BWP, provided that the SSB is within the configured UE-specific CBW.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.8.2 Requirements applicability

The requirements in clause 9.8 apply, provided:

- CMR resources configured for L1-SINR measurements are measurable, and
- NZP-IMR resources configured for L1-SINR measurements if applicable are measurable.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

For CSI-RS based CMR and no dedicated IMR configured, a CSI-RS resource configured for L1-SINR shall be considered measurable when for each relevant CSI-RS the following conditions are met:

- L1-SINR related side conditions given in clauses 10.1.27 and 10.1.28 for FR1 and FR2, respectively, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.8.1 for a corresponding band.

For SSB based CMR and dedicated IMR configured, a SSB and a dedicated IMR configured for L1-SINR shall be considered measurable when for each relevant SSB and IMR the following conditions are met:

- L1-SINR related side conditions given in clauses 10.1.27 and 10.1.28 for FR1 and FR2, respectively, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.8.2 for a corresponding band.
- NZP-IMR Ês/Iot according to Annex B.2.8.2 for a corresponding band, if NZP-IMR is configured as dedicated IMR.

For CSI-RS based CMR and dedicated IMR configured, a CSI-RS and a dedicated IMR configured for L1-SINR shall be considered measurable when for each relevant CSI-RS and IMR the following conditions are met:

- L1-SINR related side conditions given in clauses 10.1.27 and 10.1.28 for FR1 and FR2, respectively, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.8.3 for a corresponding band
- NZP-IMR Ês/Iot according to Annex B.2.8.3 for a corresponding band, if NZP-IMR is configured as dedicated IMR.

9.8.3 Measurement Reporting Requirements

The UE shall send L1-SINR reports only for report configurations configured for the active BWP, unless the UE supports *bwpOperationMeasWithoutInterrupt-r18*, provided that the SSB is within the configured UE-specific CBW.

The UE shall report the L1-SINR value as a 7-bit value in the range [-23, 40] dB with 0.5 dB step size if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if

groupBasedBeamReporting is enabled, the UE shall use differential L1-SINR based reporting. The differential L1-SINR is quantized to a 4-bit value with 1 dB step size. The mapping between the reported L1-SINR value and the measured quantity is described in clause 10.1.16.

9.8.3.1 Periodic Reporting

Reported L1-SINR measurements contained in periodic L1-SINR measurement reports shall meet the requirements in clauses 10.1.27 for FR1 and 10.1.28 for FR2, respectively.

The UE shall transmit the periodic L1-SINR reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.8.3.2 Semi-Persistent Reporting

Reported L1-SINR measurements contained in a Semi-Persistent L1-SINR measurement report shall meet the requirements in clauses 10.1.27 for FR1 and 10.1.28 for FR2, respectively. This requirement applies for semi-persistent L1-SINR reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-SINR measurement reports on PUSCH, if a DCI for triggering report has been received.

The UE shall only send semi-persistent L1-SINR measurement reports on PUCCH, if an activation command as described in clause 6.1.3.16 in TS 38.321 [7] has been received.

The UE shall transmit the semi-persistent L1-SINR reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.8.3.3 Aperiodic Reporting

Reported L1-SINR measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-SINR reports shall meet the requirements in clauses 10.1.27 for FR1 and 10.1.28 for FR2, respectively.

The UE shall only send aperiodic L1-SINR measurement reports, if a DCI for triggering report has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-SINR reporting on PUSCH over the air interface at the time specified according to clause 5.2.1.4 in TS 38.214 [26].

9.8.4 L1-SINR measurement requirements

9.8.4.1 L1-SINR reporting with CSI-RS based CMR and no dedicated IMR configured

The UE shall be capable of performing L1-SINR measurements with the CSI-RS resource configured as CMR and no dedicated resource configured as IMR for L1-SINR computation, and the UE physical layer shall be capable of reporting L1-SINR measured over the measurement period of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$.

The value of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$ is defined in table 9.8.4.1-1 for FR1 and in table 9.8.4.1-2 for FR2, where

For the value of M,

- For periodic and semi-persistent CSI-RS resources as CMR, M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise;

- For aperiodic CSI-RS resources as CMR, M=1.

For the value of N in FR2

- For periodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply if *qcl-InfoPeriodicCSI-RS* is configured for all the resources in the resource set and for each resource one RS has QCL-TypeD with

- SSB for L1-RSRP or L1-SINR measurement, or
- another CSI-RS in resource set configured with repetition ON.

- For periodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided *qcl-InfoPeriodicCSI-RS* is configured for all resources in the resource set.
- For semi-persistent CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided TCI state is provided for all resources in the resource set in the MAC CE activating the resource set and for each resource has QCL-TypeD with
  - SSB for L1-RSRP or L1-SINR measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For semi-persistent CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided TCI state is provided for all resources in the resource set in the MAC CE activating the resource set.
- For aperiodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requriements apply provided *qcl-info* is configured for all resources in the resource set and for each resource has QCL-TypeD with
  - SSB for L1-RSRP or L1-SINR measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For aperiodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to ON, N=1. UE is not required to meet the accuracy requirements in clauses 10.1.28.1 and 10.1.28.3 if number of resources in the resource set is smaller than *maxNumberRxBeam*. The requriements apply provided *qcl-info* is configured for all resources in the resource set.

For the value of L1,

1> If UE does not support *supportSBFD* or SBFD is not configured by the network

2> L1 is not applicable

1> else (if UE supports *supportSBFD* and SBFD is configured by the network)

2> if UE is configured to report L1-SINR for SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the CSI-RS resource as CMR that are overlapping with dynamic UL transmission or with non-SBFD symbols during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$

3> When DRX is configured, L1 is the number of DRX cycles in which at least one occasion of the CSI-RS resource as CMR is overlapping with dynamic UL transmission or in which all occasions of the CSI-RS resource as CMR are overalapping with non-SBFD symbols during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$

2> if UE is configured to report L1-SINR for non-SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the CSI-RS resource as CMR that are overlapping with SBFD symbols during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the CSI-RS resource as CMR are overlapping with SBFD symbols during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$

For a UE supporting *LB CA via switching*, or for a UE supporting *concurrentMeasGapsPreMG-r18* and when concurrent measurement gap(s) with Pre-MG(s) are configured, or a UE supporting *concurrentMeasGapsNCSG-r18* and when concurrent GAP(s) with NCSG(s) are configured, or a UE supporting *concurrentMeasGap-r17* or *musim-GapPreference-r17* or both concurrent measurement gap and *musim-GapPreference-r17* and when concurrent GAPs or periodic MUSIM gaps or both concurrent gaps and periodic MUSIM gaps are configured,

- a CSI-RS or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to 9.1.8 and 9.1.10,

- P value for a CSI-RS resource to be measured is defined as

  - N_{total} / $N_{outside_MG}$ in FR1

  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ in FR2 with $N_{available}$ = 0

  - N_{total} / $N_{available}$ in FR2 with $N_{available}$ > 0

- For a window W of duration max($T_{L1,}$ xRP_max, switching pattern periodicity), where xRP_max is the maximum xRP across all configured per-UE GAPs or periodic MUSIM gap(s) and per-FR GAPs, and, in case of Pre-MG, all activated per-UE measurement gaps and per-FR measurement gaps, within the same FR as serving cell, and starting at the beginning of any CSI-RS resource occasion:

  - N_{total} is the total number of CSI-RS resource occasions within the window, including those overlapped with GAP occasions, MUSIM gap occasions or SMTC occasions within the window,

    For UEs supporting *LB CA via switching* and configured with low NR inter-band carrier aggregation:

    - for the PCell L1-SINR measurement, N_{total} also includes CSI-RS resource occasions that overlap with the SDL SCell ON duration within the window,

    - for the SCell L1-SINR measurement, N_{total} also includes CSI-RS resource occasions that overlap with the PCell ON duration within the window, as defined by the configured switching pattern, and

  - $N_{outside_MG}$ is the number of CSI-RS resource occasions within the window W

    - that are not overlapped with any non-dropped GAP occasion nor non-dropped MUSIM gap occasion or

    - that are not overlapped with SDL SCell ON duration corresponding to the LB CA switching pattern, for the PCell L1-SINR measurement for a UE supporting *LB CA via switching* with low NR inter-band carrier aggregation configured or

    - that are not overlapped with PCell ON duration corresponding to the LB CA switching pattern, for the SCell L1-SINR measurement for a UE supporting *LB CA via switching* with low NR inter-band carrier aggregation configured, and

  - L1-SINR requirement in this clause is not applied when $N_{outside_MG}$ = 0.

  - $N_{available}$ is the number of CSI-RS resource occasions that are not overlapped with any non-dropped GAP occasion, non-dropped MUSIM gap occasion nor any SMTC occasion within the window W.

  - for UEs supporting *LB CA via switching*, switching pattern periodicity is the periodicity of the RRC configured semi-static switching pattern; otherwise, it is not applicable.

  - a CSI-RS or an SMTC occasion is considered to be overlapped with the MUSIM gap if it overlaps a MUSIM gap occasion.

  - T_{L1} is periodicity of the target CSI-RS.

  - xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG.

Otherwise, for a UE neither supporting *concurrentMeasGap-r17* nor *concurrentMeasGapsPreMG-r18* nor *concurrentMeasGapsNCSG-r18* or when neither of the above configurations applies, i.e. concurrent measurement gaps, concurrent measurement gap(s) with Pre-MG(s) and concurrent GAP(s) with NCSG(s) and UE does not support *musim-GapPreference-r17* or when no MUSIM gaps are configured,

For the value of P in FR1,

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}}$, when in the monitored cell there are GAP configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and

- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the CSI-RS.

For the value of P in FR2,

- P=1, when CSI-RS is not overlapped with GAP and also not overlapped with SMTC occasion.
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}}$, when CSI-RS is partially overlapped with GAP and CSI-RS is not overlapped with SMTC occasion (T_{CSI-RS} < xRP)
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is not overlapped with GAP and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$).
- P is $P_{sharing\ factor}$,, when CSI-RS is not overlapped with GAP and CSI-RS is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$).
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}-\frac{T_{CSI-RS}}{T_{SMTCperiod}}}$, when CSI-RS is partially overlapped with [measurement gap] and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and
  - $T_{SMTCperiod} \neq$ xRP or
  - $T_{SMTCperiod}$ = xRP and $T_{CSI-RS} < 0.5*T_{SMTCperiod}$
- $P=\frac{P_{sharing\ factor}}{1-\frac{T_{CSI-RS}}{xRP}}$, when CSI-RS is partially overlapped with GAP and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and $T_{SMTCperiod}$ = xRP and $T_{CSI-RS} = 0.5*T_{SMTCperiod}$
- $P=\frac{1}{1-\frac{T_{CSI-RS}}{\min(T_{SMTCperiod},xRP)}}$, when CSI-RS is partially overlapped with GAP (T_{CSI-RS} < xRP) and CSI-RS is partially overlapped with SMTC occasion ($T_{CSI-RS} < T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with GAP.
- $P=\frac{P_{sharing\ factor}}{1-\frac{T_{CSI-RS}}{xRP}}$, when CSI-RS is partially overlapped with GAP and CSI-RS is fully overlapped with SMTC occasion ($T_{CSI-RS} = T_{SMTCperiod}$) and SMTC occasion is partially overlapped with GAP ($T_{SMTCperiod}$ < xRP)

Where:

$P_{sharing\ factor}$ = 1, if the CSI-RS configured for L1-SINR measurement outside gap is

not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

not overlapped by the RSSI symbols indicated by *ss-RSSI-Measurement* and 1 data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured.

- $P_{sharing\ factor}$ = 3, otherwise.
  - $T_{SMTCperiod}$ = the configured SMTC1 period or SMTC2 period if configured.
  - T_{CSI-RS} = the periodicity of CSI-RS configured for L1-SINR measurement
- When a measurement gap is configured and the measurement gap is not NCSG,
  - a CSI-RS is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and
  - xRP = MGRP
- If the UE is configured with Pre-MG, a CSI-RS reourse or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.

- Otherwise, when NCSG measurement gap only is configured,
  - a CSI-RS is considered to be overlapped with the GAP if
    - it overlaps the VIL1 or VIL2 of NCSG, or
    - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,
  - and
    - xRP = VIRP

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*.

Note: The overlap between CSI-RS for L1-SINR measurement and SMTC means that CSI-RS for L1-SINR measurement is within the SMTC window duration.

For UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, the UE is not required to perform CSI-RS measurements during the cancelled gap occasions.

When UE is configured with aperiodic MUSIM gap and the aperiodic MUSIM gap is overlapping with CSI-RS resource occasion for L1-SINR, longer evaluation period would be expected.

When UE is configured with MUSIM gap(s), and CSI-RS resource occasions for L1-SINR are fully overlapped with MUSIM gap(s) or fully overlapped with the union of MUSIM gap(s) and GAPs, no requirement applies for the CSI-RS based L1-SINR measurement.

Longer evaluation period would be expected if the combination of CSI-RS, SMTC occasion and GAP configurations does not meet previous conditions.

Table 9.8.4.1-1: Measurement period $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$ for FR1

Configuration	$T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P)* \max(T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P)*\max(T_{DRX},T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle > 320 ms	$\text{ceil}((M+L1)*P)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-SINR measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-SINR measurement is transmitted with Density = 3. NOTE 3: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for CMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.	

Table 9.8.4.1-2: Measurement period $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$ for FR2

Configuration	$T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P*N)* \max(T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P*N)*\max(T_{DRX},T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle > 320 ms	$\text{ceil}((M+L1)*P*N)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-SINR measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-SINR measurement is transmitted with Density = 3. NOTE 3: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for CMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.	

9.8.4.2 L1-SINR reporting with SSB based CMR and dedicated IMR configured

The UE shall be capable of performing L1-SINR measurements with the SSB configured as CMR and dedicated resource configured as IMR for L1-SINR computation, in which the NZP-CSI-RS or CSI-IM resource configured as dedicated IMR shall be 1-to-1 mapped to SSB configured as CMR, with the same periodicity. The UE physical layer shall be capable of reporting L1-SINR measured over the measurement period of $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$.

The requirements in this clause are not applicable if NZP-CSI-RS or CSI-IM resource configured as dedicated IMR is scheduled with different periodicity as SSB configured as CMR.

For UE supporting *On-demand SSB operation* and when OD- SSB transmission is indicated, the EMP for L1-SINR are

- the periodicity of OD-SSBs in the configured DL BWP if no first SSB transmission is configured or if UE supports *timec1nc2* and OD-SSB transmission is indicated with first SSB transmission and the union of the first SSB transmission and OD-SSB transmission has a non-periodic time domain pattern, or
- the periodicity of the union of OD-SSBs and first SSBs if first SSBs are transmitted and the OD-SSB activation is indicated and the union of OD-SSBs and first SSBs has a periodic time domain pattern.

The value of $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$ is defined in table 9.8.4.2-1 for FR1 and in table 9.8.4.2-2 for FR2 when *highSpeedMeasFlagFR2-r17* is not configured, and defined in table 9.8.4.2-3 for FR2 power class 6 UE when *highSpeedMeasFlagFR2-r17* is configured, where

For the value of M

- For periodic or semi-persistent NZP CSI-RS or CSI-IM resource as dedicated IMR, M=1 if the higher layer parameters *timeRestrictionForChannelMeasurements* and/or *timeRestrictionForInterferenceMeasurements* are configured, and M=3 otherwise;

For the value of N in FR2

- N = 2, 4 or 6 in FR2-1 for UE supporting *fastBeamSweepingMultiRx-r1*8, according to the conditions described in clause 3.6.19,
- N = 8 otherwise.

For the value of L1,

1> If UE does not support *supportSBFD* or SBFD is not configured by the network

2> L1 is not applicable

1> else (if UE supports *supportSBFD* and SBFD is configured by the network)

2> if UE is configured to report L1-SINR for SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the CSI-RS/CSI-IM resource as IMR that are overlapping with dynamic UL transmission or with non-SBFD symbols during $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$

3> When DRX is configured, L1 is the number of DRX cycles in which at least one occasion of the CSI-RS/CSI-IM resource as IMR is overlapping with dynamic UL transmission or in which all occasions of the CSI-RS/CSI-IM resource as IMR are overalapping with non-SBFD symbols during $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$

2> if UE is configured to report L1-SINR for non-SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the CSI-RS/CSI-IM resource as IMR that are overlapping with non-SBFD symbols, during $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the CSI-RS/CSI-IM resource as IMR are overlapping with non-SBFD symbols, during $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$

P is defined as the maximum value between P_{CMR} and P_{IMR}, i.e., $P = \max(P_{CMR}, P_{IMR})$, where

- the value of P_{CMR} shall be derived in the same way as the value of P used for SSB based L1-RSRP measurement in clause 9.5.4.1, in which the occasions and period of the SSB for CMR shall be used instead.

- the value of P_{IMR} shall be derived in the same way as the value of P used for CSI-RS based L1-RSRP measurement in clause 9.5.4.2, in which the occasions and period of the NZP CSI-RS for NZP-IMR or CSI-IM for ZP-IMR shall be used instead.

For UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, the UE is not required to perform SSB measurements during the cancelled gap occasions.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

For L1-SINR measurement with SSB as CMR and CSI-RS or CSI-IM as IMR, the requirement shall apply if the CSI-RS is configured as IMR with repetition field as “repetition = OFF” or CSI-IM is configured as IMR.

For L1-SINR measurement with SSB as CMR and CSI-RS/CSI-IM as IMR, no requirement shall apply if SSB occasions for CMR or CSI-RS/CSI-IM occasions for IMR are fully overlapped with the configured measurement gap

Table 9.8.4.2-1: Measurement period $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$ for FR1

Configuration	$T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P)* \max(T_{SSB}, T_{proc}))$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P)*\max(T_{DRX},T_{SSB}, T_{proc}))$
DRX cycle > 320 ms	$\text{ceil}((M+L1)*P)*T_{DRX}$
NOTE 1: T_{SSB} = ssb-periodicityServingCell is the periodicity of the SSB-Index configured for L1-SINR channel measurement if UE not supporting *On-demand SSB operation* or when OD-SSB transmission is not indicated, otherwise, T_{SSB} = EMP of the SSB index configured for L1-SINR channel measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: The requirements are applicable provided that the CSI-RS resource configured for interference measurement shall be 1-to-1 mapped to SSB configured for channel measurement, with the same periodicity. NOTE 3: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for IMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.

Configuration	$T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P*N)* \max(T_{SSB}, T_{proc}))$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P*N)*\max(T_{DRX},T_{SSB}, T_{proc}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*(M+L1)*P*N)*T_{DRX}$
NOTE 1: T_{SSB} = ssb-periodicityServingCell is the periodicity of the SSB-Index configured for L1-SINR measurement if UE not supporting *On-demand SSB operation* or when OD-SSB transmission is not indicated, otherwise, T_{SSB} = EMP of the SSB index configured for L1-SINR channel measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: The requirements are applicable provided that the CSI-RS resource configured for interference measurement shall be 1-to-1 mapped to SSB configured for channel measurement, with the same periodicity. NOTE 3: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for IMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.	

Table 9.8.4.2-3: Measurement period $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$ configured with *highSpeedMeasFlagFR2-r17* for FR2-1

Configuration	$T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P*N1^{Note\ 3})* \max(T_{SSB}, T_{proc}))$
DRX cycle ≤ 80 ms	$\max(T_{Report}, \text{ceil}((M+L1)*P*N1^{Note\ 3}*M2)*\max(T_{DRX},T_{SSB}, T_{proc}))$

80 ms< DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*(M+L1)*P*N)*max(T_{DRX},T_{SSB}))
DRX cycle > 320 ms	ceil(1.5*(M+L1)*P*N)*T_{DRX}
NOTE 1: T_{SSB} = ssb-periodicityServingCell is the periodicity of the SSB-Index configured for L1-SINR measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: The requirements are applicable provided that the CSI-RS resource configured for interference measurement shall be 1-to-1 mapped to SSB configured for channel measurement, with the same periodicity.	
NOTE 3: N1 = 2 when *highSpeedMeasFlagFR2-r17* = set1; N1 = 6 when *highSpeedMeasFlagFR2-r17* = set2.	
NOTE 4: M2 = 1.5 if SMTC periodicity > 40 ms; otherwise M2 = 1	
NOTE 5: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for IMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.	

9.8.4.3 L1-SINR reporting with CSI-RS based CMR and dedicated IMR configured

The UE shall be capable of performing L1-SINR measurements with the CSI-RS resource configured as CMR and dedicated resource configured as IMR for L1-SINR computation, in which the NZP-CSI-RS or CSI-IM resource configured as dedicated IMR shall be 1-to-1 mapped to CSI-RS resource configured as CMR, with the same periodicity. The UE physical layer shall be capable of reporting L1-SINR measured over the measurement period of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$.

The requirements in this clause are not applicable if NZP-CSI-RS or CSI-IM resource configured as dedicated IMR is scheduled with different periodicity as CSI-RS resource configured as CMR.

The value of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$ is defined in table 9.8.4.3-1 for FR1 and in table 9.8.4.3-2 for FR2, where

For the value of M,

- M=1 shall be applied if
  - aperiodic NZP-CSI-RS as CMR or dedicated IMR, or
  - aperiodic CSI-IM as dedicated IMR, or
  - periodic and semi-persistent NZP-CSI-RS as CMR or dedicated IMR and the higher layer parameters *timeRestrictionForChannelMeasurement* and/or *timeRestrictionForInterferenceMeasurements* are configured, or
  - periodic and semi-persistent CSI-IM as dedicated IMR and the higher layer parameters *timeRestrictionForChannelMeasurement* and/or *timeRestrictionForInterferenceMeasurements* are configured;
- M=3 otherwise.

For the value of N in FR2

- For periodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply if *qcl-InfoPeriodicCSI-RS* is configured for all the resources in the resource set and for each resource one RS has QCL-TypeD with
  - SSB for L1-RSRP or L1-SINR measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For periodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided *qcl-InfoPeriodicCSI-RS* is configured for all resources in the resource set.
- For semi-persistent CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requirements apply provided TCI state is provided for all resources in the resource set in the MAC CE activating the resource set and for each resource has QCL-TypeD with

- SSB for L1-RSRP or L1-SINR measurement, or
- another CSI-RS in resource set configured with repetition ON.

- For semi-persistent CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to ON, N=ceil(*maxNumberRxBeam* / $N_{res_per_set}$), where $N_{res_per_set}$ is number of resources in the resource set. The requirements apply provided TCI state is provided for all resources in the resource set in the MAC CE activating the resource set.
- For aperiodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to OFF, N=1. The requriements apply provided *qcl-info* is configured for all resources in the resource set and for each resource has QCL-TypeD with
  - SSB for L1-RSRP or L1-SINR measurement, or
  - another CSI-RS in resource set configured with repetition ON.
- For aperiodic CSI-RS resources as CMR in a resource set configured with higher layer parameter *repetition* set to ON, N=1. UE is not required to meet the accuracy requirements in clause 10.1.28.1 and 10.1.28.3 if number of resources in the resource set is smaller than *maxNumberRxBeam*. The requriements apply provided *qcl-info* is configured for all resources in the resource set.

For the value of L1,

1> If UE does not support *supportSBFD* or SBFD is not configured by the network

2> L1 is not applicable

1> else (if UE supports *supportSBFD* and SBFD is configured by the network)

2> if UE is configured to report L1-SINR for SBFD symbols

3> When DRX is not configured, L1 is the maximum between number of occasions of the CSI-RS resource as CMR that are overlapping with dynamic UL transmission or with non-SBFD symbols and number of occasions of the CSI-RS/CSI-IM resource as IMR that are overlapping with dynamic UL transmission or with non-SBFD symbols, during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$

3> When DRX is configured, L1 is the number of DRX cycles in which at least one occasion of the CSI-RS resource as CMR or at least one occasion of the CSI-RS/CSI-IM resource as IMR is overlapping with dynamic UL transmission or in which all occasions of the CSI-RS resource as CMR or all occasions of the CSI-RS/CSI-IM resource as IMR are overalapping with non-SBFD symbols, during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$

2> if UE is configured to report L1-SINR for non-SBFD symbols

3> When DRX is not configured, L1 is the maximum between number of occasions of the CSI-RS resource as CMR that are overlapping with non-SBFD symbols and number of occasions of the CSI-RS/CSI-IM resource as IMR that are overlapping with non-SBFD symbols, during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the CSI-RS resource as CMR or at least one occasion of the CSI-RS/CSI-IM resource as IMR are overlapping with non-SBFD symbols, during $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$

P is defined as the maximum value between P_{CMR} and P_{IMR}, i.e., $P = \max(P_{CMR}, P_{IMR})$, where

- The value of P_{CMR} and P_{IMR} shall be derived in the same way as the value of P used for CSI-RS based L1-RSRP measurement in clause 9.5.4.2, in which the occasions and period of the CSI-RS for CMR and NZP CSI-RS for NZP-IMR or CSI-IM for ZP-IMR shall be used instead respectively.

For UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, the UE is not required to perform CSI-RS measurements during the cancelled gap occasions.

Longer evaluation period would be expected if the combination of CSI-RS, SMTC occasion and measurement gap configurations does not meet previous conditions.

For L1-SINR measurement with CSI-RS as CMR and CSI-RS as IMR, the requirement shall apply only if CSI-RS resources as CMR and IMR are configured with the same repetition field and the number of CSI-RS resources in the resource sets for CMR and IMR are same.

For L1-SINR measurement with CSI-RS as CMR and CSI-IM as IMR, the requirement shall apply only if the number of CSI-RS resources in the resource set for CMR and the number of CSI-IM resources in the resource set for IMR are same.

For L1-SINR measurement with CSI-RS as CMR and CSI-RS/CSI-IM as IMR, no requirement shall apply if CSI-RS occasions for CMR or CSI-RS/CSI-IM occasions for IMR are fully overlapped with the configured measurement gap.

Table 9.8.4.3-1: Measurement period $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$ for FR1

Configuration	$T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P)*\max(T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P)*\max(T_{DRX}, T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle > 320 ms	$\text{ceil}((M+L1)*P)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-SINR measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-SINR measurement is transmitted with Density = 3.	
NOTE 3: The requirements are applicable provided that the CSI-RS resource configured for interference measurement shall be 1-to-1 mapped to CSI-RS configured for channel measurement, with the same periodicity.	
NOTE 4: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for CMR or IMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.	

Table 9.8.4.3-2: Measurement period $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$ for FR2

Configuration	$T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}((M+L1)*P*N)*\max(T_{CSI\text{-}RS}, T_{proc})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*(M+L1)*P*N)*\max(T_{DRX}, T_{CSI\text{-}RS}, T_{proc}))$
DRX cycle > 320 ms	$\text{ceil}((M+L1)*P*N)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-SINR measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-SINR measurement is transmitted with Density = 3.	
NOTE 3: The requirements are applicable provided that the CSI-RS resource configured for interference measurement shall be 1-to-1 mapped to CSI-RS configured for channel measurement, with the same periodicity.	
NOTE 4: If UE indicates *needForScaledCSIProcTimeDualDL* and the CSI-RS resource for CMR or IMR is across 2 DL subbands, T_{proc} = 8ms; otherwise T_{proc} = 0.	

9.8.5 Measurement restriction for L1-SINR measurement

The UE is required to be capable of measuring L1-SINR without measurement gaps. The UE is required to perform the SSB and CSI-RS/CSI-IM measurements with measurement restrictions as described in the following clauses.

9.8.5.1 Measurement restriction if SSB configured for L1-SINR Measurement

For FR1, when the SSB configured as CMR for L1-SINR measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-SINR measurement without any restriction;

- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-SINR measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-SINR measurement and CSI-RS. Longer measurement period for SSB based L1-SINR measurement is expected, and no requirements are defined.

For FR2, when the SSB configured as CMR for L1-SINR measurement on one CC is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for L1-SINR measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, there is no measurement restriction allowed when the network configures mixed numerology between SSB configured as CMR for L1-SINR measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, provided that UE is capable of independent beam management on this FR2 band pair.

For FR2, for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*,when the SSB configured as CMR for L1-SINR measurement on one CC fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap in the same band, UE is required to measure one of but not both SSB for L1-SINR measurement and SSB for L1-RSRP measurement on neighbor cell. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For UE supporting *On-demand SSB operation*, when OD-SSB transmission is indicated without first SSB transmission, the measurement restriction is expected for OD-SSB occasions only.

For UE supporting *On-demand SSB operation*, when OD-SSB transmission is indicated with first SSB transmission, no measurement restriction is expected for first SSB occasions if UE supports *Time-C1nC2* and the union of the first SSB transmission and OD-SSB transmission has a non-periodic time domain pattern. Otherwise, the measurement restriction is expected for both first SSB and OD-SSB occasions.

9.8.5.2 Measurement restriction if CSI-RS configured for L1-SINR measurement

For both FR1 and FR2, when the CSI-RS configured for L1-SINR measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement, UE is not required to receive CSI-RS for L1-SINR measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement has same SCS than CSI-RS configured for L1-SINR measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement has different SCS than CSI-RS configured for L1-SINR me

- If the UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-SINR measurement and SSB. Longer measurement period for CSI-RS based L1-SINR measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS configured for L1-SINR measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement, UE shall be able to measure the CSI-RS for L1-SINR measurement without any restriction.

For FR2, when the CSI-RS configured for L1-SINR measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD, L1-RSRP or L1-SINR measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-RS for L1-SINR measurement and SSB. Longer measurement period for CSI-RS based L1-SINR measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS configured for L1-SINR measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-RS for L1-SINR measurement and the other CSI-RS. Longer measurement period for CSI-RS based L1-SINR measurement is expected, and no requirements are defined.
  - The CSI-RS for L1-SINR measurement or the other CSI-RS in a resource set configured with repetition ON, or
  - The CSI-RS or the other CSI-RS is configured as dedicated IMR for L1-SINR computation with SSB as CMR, or
  - The other CSI-RS is configured in q1 and beam failure is detected, or
  - The two CSI-RS-es are not QCL-ed with respect to QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-RS configured for L1-SINR measurement without any restriction.

For UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*,

- For both FR1 and FR2, when the CSI-RS configured for L1-SINR measurement fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap, UE is not required to receive CSI-RS for L1-SINR measurement in the PRBs that overlap with an SSB.
- For FR1, when the CSI-RS configured for L1-SINR measurement fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap, if CSI-RS and SSB have different SCS and UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-SINR measurement and SSB. Longer measurement period for CSI-RS based L1-SINR measurement is expected, and no requirements are defined.
- For FR2, when the CSI-RS configured for L1-SINR measurement on one CC fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap in the same band, UE is required to measure one of but not both CSI-RS for L1-SINR measurement and SSB. Longer measurement period for CSI-RS based L1-SINR measurement is expected, and no requirements are defined.

For FR2, when the UE is indicated with two TCI states for simultaneous PDSCH reception, when the CSI-RS configured for L1-SINR measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the same CC or different CCs in the same band, the UE supporting *schedulingMeasurementRelaxation-r1*8 according to the conditions described in clause 3.6.19 shall be able to measure the CSI-RS configured for L1-SINR measurement without any restriction under the following conditions:

- Both CSI-RSs are not in any CSI-RS resource set with repetition ON,
- One CSI-RS has same QCL source as either,
  - the active TCI state of a PDSCH scheduled in the same OFDM symbol or
  - the QCL source based on the default QCL assumption to be applied in the same OFDM symbol according to 38.214 clause 5.1.5, and
- the other CSI-RS has same QCL source as either
  - the active TCI state of a PDSCH scheduled in the same OFDM symbol or
  - the QCL source based on the default QCL assumption to be applied in the same OFDM symbol according to 38.214 clause 5.1.5.

- Resources of the active TCI states of the two PDSCHs, and or QCL sources of the default QCL assumption, or the active TCI state of PDSCH and QCL source of the default QCL assumption have been reported as a resource group in Rel-17 group-based RSRP report.

9.8.5.3 Measurement restriction if CSI-IM configured for L1-SINR measurement

For both FR1 and FR2, when the CSI-IM configured for L1-SINR measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement, UE is not required to measure CSI-IM for L1-SINR measurement in the PRBs that overlap with an SSB.

For FR1, UE shall be able to measure the CSI-IM configured for L1-SINR measurement without any restriction.

For FR2, when the CSI-IM configured for L1-SINR measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD, L1-RSRP or L1-SINR measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-IM for L1-SINR measurement and SSB. Longer measurement period for L1-SINR measurement is expected, and no requirements are defined.

For FR2, when the CSI-IM configured for L1-SINR measurement on one CC is in the same OFDM symbol as the CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-IM for L1-SINR measurement and CSI-RS. Longer measurement period for L1-SINR measurement is expected, and no requirements are defined.
  - The CSI-RS in a resource set configured with repetition ON, or
  - The CSI-IM or the CSI-RS is configured as dedicated IMR for L1-SINR computation with SSB as CMR, or
  - The CSI-RS is configured in q1 and beam failure is detected, or
  - The CMR for L1-SINR measurement and the CSI-RS are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,
- Otherwise, UE shall be able to measure the CSI-IM configured for L1-SINR measurement without any restriction.

For UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*,

- For both FR1 and FR2, when the CSI-IM configured for L1-SINR measurement fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap, UE is not required to receive CSI-IM for L1-SINR measurement in the PRBs that overlap with an SSB.
- For FR2, when the CSI-IM configured for L1-SINR measurement on one CC fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap in the same band, UE is required to measure one of but not both CSI-RS for L1-SINR measurement and SSB. Longer measurement period for CSI-IM based L1-SINR measurement is expected, and no requirements are defined.

9.8.6 Scheduling availability of UE during L1-SINR measurement

Scheduling availability restrictions when the UE is performing L1-SINR measurement are described in the following clauses.

For UE supporting On-demand SSB operation, when OD-SSB transmission is indicated without first SSB transmission, the scheduling restriction is expected for OD-SSB occasions only.

For UE supporting *On-demand SSB operation*, when OD-SSB transmission is indicated with first SSB transmission, no measurement restriction is expected for first SSB occasions if UE supports *Time-C1nC2* and the union of the first SSB transmission and OD-SSB transmission has a non-periodic time domain pattern. Otherwise, the measurement restriction is expected for both first SSB and OD-SSB occasions.

9.8.6.1 Scheduling availability of UE performing L1-SINR measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-SINR measurement performed on SSB and CSI-RS configured for L1-SINR measurement with the same SCS as PDSCH/PDCCH in FR1.

9.8.6.2 Scheduling availability of UE performing L1-SINR measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-SINR measurement based on SSB configured for L1-SINR measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-SINR measurement based on SSB configured for L1-SINR measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking /CSI-RS for CQI on SSB symbols to be measured for L1-SINR measurement.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on serving cell where L1-SINR measurement is performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions on serving cell where L1-SINR measurement is performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided

For UE indicating *intraBandNR-CA-non-collocated-r19*,

1> when UE is configured with maxMIMO-Layers with value equal to 4 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 4"*

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 1"*

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

2> else if *nonCollocatedTypeNR-CA-v1900* is not provided

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

1> when UE is configured with maxMIMO-Layers with value equal to 2 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-r18* is not provided

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2>else

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-SINR measurement is performed is configured.

9.8.6.3 Scheduling availability of UE performing L1-SINR measurement on FR2

The following scheduling restriction applies due to L1-SINR measurement.

- For UE not supporting *schedulingMeasurementRelaxation-r1*8, for the cases of CSI-RS used for L1-SINR measurement of CSI-RS based CMR only case and CSI-RS based CMR plus CSI-RS based ZP-IMR/NZP-IMR case and CSI-RS based CMR plus ZP-IMR case, where CSI-RS is QCLed with active TCI state for PDCCH/PDSCH and not in a CSI-RS resource set with repetition ON, and N=1 applies as specified in clause 9.8.4, or
- For FR2-1 for UE supporting *schedulingMeasurementRelaxation-r1*8 according to the conditions described in clause 3.6.19, there are no scheduling restrictions due to L1-SINR measurement performed based on the CSI-RS for the cases of CSI-RS used for L1-SINR measurement of CSI-RS based CMR only case and CSI-RS based CMR plus CSI-RS based ZP-IMR/NZP-IMR case and CSI-RS based CMR plus ZP-IMR case, where N=1 applies as specified in clause 9.8.4, and where the following additional conditions are met:
  - The CSI-RS is not in a CSI-RS resource set with repetition ON.
  - The CSI-RS has same QCL source as the active TCI state of one of the PDSCHs and has different QCL-TypeD from the other PDSCH.
  - The CSI-RS and both of the PDSCHs are on the same OFDM symbol(s), or the CSI-RS and one of the PDSCHs with different QCL-typeD are on the same OFDM symbol(s) when partially overlapping PDSCHs are scheduled, and
  - Resources of the active TCI states for the two PDSCHs have been reported as a resource group in Rel-17 group-based RSRP report.
- Otherwise
  - The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the symbols to be measured for L1-SINR for FR2 power class 6 UE which is not configured with *highSpeedMeasFlagFR2-r17*, and for the UE not supporting FR2 power class 6;
  - The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the symbols to be measured for L1-SINR, and on 1 data symbol before symbols to be measured for L1-SINR and 1 data symbol after symbols to be measured for L1-SINR for FR2 power class 6 UE configured with *highSpeedMeasFlagFR2-r17*.

When intra-band carrier aggregation is performed, the scheduling restrictions on serving cell where L1-SINR measurement is performed apply to all serving cells in the band on the symbols that fully or partially overlap with restricted symbols.

If following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

for the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for L1-SINR measurement; and

for the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for L1-SINR measurement.

9.8.6.4 Scheduling availability of UE performing L1-SINR measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 serving cell(s) due to L1-SINR measurement performed on FR2 serving cell(s).

There are no scheduling restrictions on FR2 serving cell(s) due to L1-SINR measurement performed on FR1 serving cell(s).

9.8.7 Minimum requirement at transitions

For UE supporting *ncd-SSB-BWP-Wor-r18*, when the L1-SINR measurement transitions from measurements performed on CD-SSB to measurements performed on NCD-SSB or vice versa due to BWP switching during one measurement period, the UE shall use a L1-SINR measurement period that is the maximum of the L1-SINR measurement period corresponding to the first SSB type and the second SSB type after the BWP switching.

Subsequent to the above-mentioned measurement periods, the L1-SINR measurement period requirements are based on the SSB type after the BWP switch.

For UE supporting OD-SSB operation, when UE is indicated by an OD-SSB parameter update MAC-CE, adaptation of periodicities for the activated transmission of OD-SSBs when the SCell is activated, the L1-RSRP measurement period requirements are based on the EMP of adapted OD-SSB burst periodicity which applies from the first OD-SSB burst after the time point as defined in TS 38.213 for adaptation of the second SS/PBCH blocks transmission plus additional processing time of OD-SSB parameter update capability.

For UE supporting *ssb-BurstPeriodicityAdaptation-r19*, when UE receives DCI format 2_9 that indicates a change in SSB burst periodicity of the SSB transmission, the L1-SINR measurement period requirements based on the indicated SSB burst periodicity apply from the first SSB burst after the time point as defined in TS 38.213 plus 2 ms and 3 ms for FR1 and FR2, respectively.

9.8D L1-SINR measurements for Reporting for ATG

9.8D.1 Introduction

When configured by the network, the UE shall be able to perform L1-SINR measurements with the measurement resources configured as the selection of:

- CSI-RS based CMR and no dedicated IMR configured;
- SSB based CMR and dedicated IMR configured;
- CSI-RS based CMR and dedicated IMR configured.

The measurements shall be performed for a serving cell including PCell, or SCell, on the resources configured for L1-SINR measurements within the active BWP.

The UE shall be able to measure all CSI-RS resources and/or SSB resources and/or CSI-IM resources of the *nzp-CSI-RS-ResourceSet* and/or *csi-SSB-ResourceSet and/or CSI-IM-ResourceSet* within the *CSI-ResourceConfig* settings for L1-SINR for the active BWP and measure interference on corresponding NZP CSI-RS or CSI-IM resources if configured, provided that the number of resources does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the *reportConfigType* according to the CSI reporting configuration(s) (*CSI-ReportConfig*) for the active BWP.

9.8D.2 Requirements applicability

The requirements in clause 9.8D apply, provided:

- CMR resources configured for L1-SINR measurements are measurable, and
- NZP-IMR resources configured for L1-SINR measurements if applicable are measurable.

Requirements are defined for periodic, semi-persistent and aperiodic resources.

For CSI-RS based CMR and no dedicated IMR configured, a CSI-RS resource configured for L1-SINR shall be considered measurable when for each relevant CSI-RS the following conditions are met:

- L1-SINR related side conditions given in clauses 10.1.27, respectively, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.8.1 for a corresponding band.

For SSB based CMR and dedicated IMR configured, a SSB and a dedicated IMR configured for L1-SINR shall be considered measurable when for each relevant SSB and IMR the following conditions are met:

- L1-SINR related side conditions given in clauses 10.1.27, respectively, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.8.2 for a corresponding band.
- NZP-IMR Ês/Iot according to Annex B.2.8.2 for a corresponding band, if NZP-IMR is configured as dedicated IMR.

For CSI-RS based CMR and dedicated IMR configured, a CSI-RS and a dedicated IMR configured for L1-SINR shall be considered measurable when for each relevant CSI-RS and IMR the following conditions are met:

- L1-SINR related side conditions given in clauses 10.1.27, respectively, for a corresponding band,
- CSI-RS_RP and CSI-RS Ês/Iot according to Annex B.2.8.3 for a corresponding band
- NZP-IMR Ês/Iot according to Annex B.2.8.3 for a corresponding band, if NZP-IMR is configured as dedicated IMR.

9.8D.3 Measurement Reporting Requirements

The UE shall send L1-SINR reports only for report configurations configured for the active BWP.

The UE shall report the L1-SINR value as a 7-bit value in the range [-23, 40] dB with 0.5 dB step size if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting* is enabled, the UE shall use differential L1-SINR based reporting. The differential L1-SINR is quantized to a 4-bit value with 1 dB step size. The mapping between the reported L1-SINR value and the measured quantity is described in clause 10.1.16.

9.8D.3.1 Periodic Reporting

Reported L1-SINR measurements contained in periodic L1-SINR measurement reports shall meet the requirements in clauses 10.1.27.

The UE shall transmit the periodic L1-SINR reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.8D.3.2 Semi-Persistent Reporting

Reported L1-SINR measurements contained in a Semi-Persistent L1-SINR measurement report shall meet the requirements in clause 10.1.27. This requirement applies for semi-persistent L1-SINR reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-SINR measurement reports on PUSCH, if a DCI for triggering report has been received.

The UE shall only send semi-persistent L1-SINR measurement reports on PUCCH, if an activation command as described in clause 6.1.3.16 in TS 38.321 [7] has been received.

The UE shall transmit the semi-persistent L1-SINR reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.8D.3.3 Aperiodic Reporting

Reported L1-SINR measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-SINR reports shall meet the requirements in clauses 10.1.27.

The UE shall only send aperiodic L1-SINR measurement reports, if a DCI for triggering report has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-SINR reporting on PUSCH over the air interface at the time specified according to clause 5.2.1.4 in TS 38.214 [26].

9.8D.4 L1-SINR measurement requirements

9.8D.4.1 L1-SINR reporting with CSI-RS based CMR and no dedicated IMR configured

The UE shall be capable of performing L1-SINR measurements with the CSI-RS configured as CMR and no dedicated resource configured as IMR for L1-SINR computation, and the UE physical layer shall be capable of reporting L1-SINR measured over the measurement period of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only_ATG}$.

The value of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only_ATG}$ is defined in table 9.8D.4.1-1 for FR1, where

For the value of M,

- For periodic and semi-persistent CSI-RS resources as CMR, M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise;
- For aperiodic CSI-RS resources as CMR, M=1.

For ATG UE capable of *antennaArrayType-r18* on the measured carrier,

P value for a CSI-RS resource to be measured is defined as

- N_{total} / $N_{available}$ with $N_{available}$ > 0
- $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ with $N_{available}$ = 0
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any CSI-RS resource occasion:
  - N_{total} is the total number of CSI-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and
  - $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is
    - If the measured carrier is the SCC with *servingcellMO* configured, and the network indication *neighSCellMeasSkipping* is set to ‘enable’ to UE,
      - If inter-band carrier aggregation within FR1 is configured, and UE not capable of *antennaArrayType-r18* on the other serving carrier or UE support two simultaneous separate Rx beams,
        - the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W.
      - Otherwise,
        - the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements of other serving cell within the window W.
    - Otherwise,
      - If inter-band carrier aggregation within FR1 is configured, and UE not capable of *antennaArrayType-r18* on the other serving carrier or UE support two simultaneous separate Rx beams
        - the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements of same serving cell within the window W.
      - Otherwise,

- the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion nor CSI-RS resource occasions for L3 measurements within the window W.

- T_{L1} is periodicity of the target CSI-RS

- $P_{sharing\ factor} = 3$.

Otherwise, for UE with one or multiple omni-directional antenna(s)

For a UE supporting *concurrentMeasGap-r17* and when concurrent gaps are configured,

- P value for a CSI-RS resource to be measured is defined as

  - $N_{total} / N_{outside_MG}$

- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gaps, and starting at the beginning of any CSI-RS resource occasion:

  - N_{total} is the total number of CSI-RS resource occasions within the window W, including those overlapped with measurement gap occasions or SMTC occasions within the window W, and

  - $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W

  - T_{L1} is periodicity of the target CSI-RS.

Otherwise, for a UE not supporting *concurrentMeasGap-r17* or when concurrent gaps are not configured,

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xGP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency or inter-frequency, which are overlapping with some but not all occasions of the CSI-RS; and

- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the CSI-RS.

Where:

- T_{CSI-RS} = the periodicity of CSI-RS configured for L1-SINR measurement

- a CSI-RS is considered to be overlapped with the GAP if it overlaps a measurement gap occasion, and

- xRP = MGRP

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*.

Note: The overlap between CSI-RS for L1-SINR measurement and SMTC means that CSI-RS for L1-SINR measurement is within the SMTC window duration.

Longer evaluation period would be expected if the combination of CSI-RS, SMTC occasion and GAP configurations does not meet previous conditions.

Table 9.8D.4.1-1: Measurement period $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only_ATG}$ for FR1

Configuration	$T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_Only_ATG}$ (ms)
non-DRX	max(T_{Report}, ceil(M*P)*$T_{CSI\text{-}RS}$)
DRX cycle ≤ 320 ms	max(T_{Report}, ceil(1.5*M*P)*max(T_{DRX},$T_{CSI\text{-}RS}$))
DRX cycle > 320 ms	ceil(M*P)*T_{DRX}
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-SINR measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-SINR measurement is transmitted with Density = 3.	

9.8D.4.2 L1-SINR reporting with SSB based CMR and dedicated IMR configured

The UE shall be capable of performing L1-SINR measurements with the SSB configured as CMR and dedicated resource configured as IMR for L1-SINR computation, in which the NZP-CSI-RS or CSI-IM resource configured as dedicated IMR shall be 1-to-1 mapped to SSB configured as CMR, with the same periodicity. The UE physical layer shall be capable of reporting L1-SINR measured over the measurement period of $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR_ATG}$.

The requirements in this clause are not applicable if NZP-CSI-RS or CSI-IM resource configured as dedicated IMR is scheduled with different periodicity as SSB configured as CMR.

The value of $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR_ATG}$ is defined in table 9.8D.4.2-1, where

For the value of M

- For periodic or semi-persistent NZP CSI-RS or CSI-IM resource as dedicated IMR, M=1 if the higher layer parameters *timeRestrictionForChannelMeasurements* and/or *timeRestrictionForInterferenceMeasurements* are configured, and M=3 otherwise;

P is defined as the maximum value between P_{CMR} and P_{IMR}, i.e., $P = \max(P_{CMR}, P_{IMR})$, where

- the value of P_{CMR} shall be derived in the same way as the value of P used for SSB based L1-RSRP measurement in clause 9.5D.4.1, in which the occasions and period of the SSB for CMR shall be used instead.
- the value of P_{IMR} shall be derived in the same way as the value of P used for CSI-RS based L1-RSRP measurement in clause 9.5D.4.2, in which the occasions and period of the NZP CSI-RS for NZP-IMR or CSI-IM for ZP-IMR shall be used instead.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

For L1-SINR measurement with SSB as CMR and CSI-RS or CSI-IM as IMR, the requirement shall apply if the CSI-RS is configured as IMR with repetition field as “repetition = OFF” or CSI-IM is configured as IMR.

For L1-SINR measurement with SSB as CMR and CSI-RS/CSI-IM as IMR, no requirement shall apply if SSB occasions for CMR or CSI-RS/CSI-IM occasions for IMR are fully overlapped with the configured measurement gap

Table 9.8D.4.2-1: Measurement period $T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR_ATG}$ for FR1

Configuration	$T_{L1\text{-}SINR_Measurement_Period_SSB_CMR_IMR_ATG}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P)*\max(T_{DRX},T_{SSB}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE 1: T_{SSB} = ssb-periodicityServingCell is the periodicity of the SSB-Index configured for L1-SINR channel measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: The requirements are applicable provided that the CSI-RS resource configured for interference measurement shall be 1-to-1 mapped to SSB configured for channel measurement, with the same periodicity.	

9.8D.4.3 L1-SINR reporting with CSI-RS based CMR and dedicated IMR configured

The UE shall be capable of performing L1-SINR measurements with the CSI-RS resource configured as CMR and dedicated resource configured as IMR for L1-SINR computation, in which the NZP-CSI-RS or CSI-IM resource configured as dedicated IMR shall be 1-to-1 mapped to CSI-RS resource configured as CMR, with the same periodicity. The UE physical layer shall be capable of reporting L1-SINR measured over the measurement period of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR_ATG}$.

The requirements in this clause are not applicable if NZP-CSI-RS or CSI-IM resource configured as dedicated IMR is scheduled with different periodicity as CSI-RS resource configured as CMR.

The value of $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR_ATG}$ is defined in table 9.8D.4.3-1, where

For the value of M,

- M=1 shall be applied if
  - aperiodic NZP-CSI-RS as CMR or dedicated IMR, or
  - aperiodic CSI-IMR as dedicated IMR, or
  - periodic and semi-persistent NZP-CSI-RS as CMR or dedicated IMR and the higher layer parameters *timeRestrictionForChannelMeasurement* and/or *timeRestrictionForInterferenceMeasurements* are configured, or
  - periodic and semi-persistent CSI-IM as dedicated IMR and the higher layer parameters *timeRestrictionForChannelMeasurement* and/or *timeRestrictionForInterferenceMeasurements* are configured;
- M=3 otherwise.

P is defined as the maximum value between P_{CMR} and P_{IMR}, i.e., $P = \max(P_{CMR}, P_{IMR})$, where

- The value of P_{CMR} and P_{IMR} shall be derived in the same way as the value of P used for CSI-RS based L1-RSRP measurement in clause 9.5D.4.2, in which the occasions and period of the CSI-RS for CMR and NZP CSI-RS for NZP-IMR or CSI-IM for ZP-IMR shall be used instead respectively.

Longer evaluation period would be expected if the combination of CSI-RS, SMTC occasion and measurement gap configurations does not meet previous conditions.

For L1-SINR measurement with CSI-RS as CMR and CSI-RS as IMR, the requirement shall apply only if CSI-RS resources as CMR and IMR are configured with the same repetition field and the number of CSI-RS resources in the resource sets for CMR and IMR are same.

For L1-SINR measurement with CSI-RS as CMR and CSI-IM as IMR, the requirement shall apply only if the number of CSI-RS resources in the resource set for CMR and the number of CSI-IM resources in the resource set for IMR are same.

For L1-SINR measurement with CSI-RS as CMR and CSI-RS/CSI-IM as IMR, no requirement shall apply if CSI-RS occasions for CMR or CSI-RS/CSI-IM occasions for IMR are fully overlapped with the configured measurement gap.

Table 9.8D.4.3-1: Measurement period $T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR_ATG}$ for FR1

Configuration	$T_{L1\text{-}SINR_Measurement_Period_CSI\text{-}RS_CMR_IMR_ATG}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{CSI\text{-}RS})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P)*\max(T_{DRX}, T_{CSI\text{-}RS}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for L1-SINR measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-SINR measurement is transmitted with Density = 3. NOTE 3: The requirements are applicable provided that the CSI-RS resource configured for interference measurement shall be 1-to-1 mapped to CSI-RS configured for channel measurement, with the same periodicity.	

9.8D.5 Measurement restriction for L1-SINR measurement

The UE is required to be capable of measuring L1-SINR without measurement gaps. The UE is required to perform the SSB and CSI-RS/CSI-IM measurements with measurement restrictions as described in the following clauses.

9.8D.5.1 Measurement restriction if SSB configured for L1-SINR Measurement

For FR1, when the SSB configured as CMR for L1-SINR measurement is in the same OFDM symbol as CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-SINR measurement without any restriction;

- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-SINR measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-SINR measurement and CSI-RS. Longer measurement period for SSB based L1-SINR measurement is expected, and no requirements are defined.

9.8D.5.2 Measurement restriction if CSI-RS configured for L1-SINR measurement

When the CSI-RS configured for L1-SINR measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement, UE is not required to receive CSI-RS for L1-SINR measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement is within the active BWP and has same SCS than CSI-RS configured for L1-SINR measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement is within the active BWP and has different SCS than CSI-RS configured for L1-SINR measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-SINR measurement and SSB. Longer measurement period for CSI-RS based L1-SINR measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS configured for L1-SINR measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement, UE shall be able to measure the CSI-RS for L1-SINR measurement without any restriction.

9.8D.5.3 Measurement restriction if CSI-IM configured for L1-SINR measurement

When the CSI-IM configured for L1-SINR measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement, UE is not required to measure CSI-IM for L1-SINR measurement in the PRBs that overlap with an SSB.

For FR1, UE shall be able to measure the CSI-IM configured for L1-SINR measurement without any restriction.

9.8D.6 Scheduling availability of UE during L1-SINR measurement

Scheduling availability restrictions when the UE is performing L1-SINR measurement are described in the following clauses.

9.8D.6.1 Scheduling availability of UE performing L1-SINR measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-SINR measurement performed on SSB and CSI-RS configured for L1-SINR measurement with the same SCS as PDSCH/PDCCH in FR1.

9.8D.6.2 Scheduling availability of UE performing L1-SINR measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-SINR measurement based on SSB configured for L1-SINR measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-SINR measurement based on SSB configured for L1-SINR measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking /CSI-RS for CQI on SSB symbols to be measured for L1-SINR measurement.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions on serving cell where L1-SINR measurement is performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-SINR measurement is performed is configured.

9.9 NR measurements for positioning

9.9.1 Introduction

This clause contains requirements for UE capable of performing NR positioning measurements defined in TS 38.215 [4], including RSTD, PRS-RSRP, UE Rx-Tx time difference, NR E-CID, PRS-RSRPP, RSCPD with RSTD, and RSCP with UE Rx-Tx time difference measurements.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.9.1.1 General Aspects of Gap-based Measurement

For gap-based RSTD, RSTD based on aggregated PRS resources from multiple PFLs, PRS-RSRP, UE Rx-Tx time difference, UE Rx-Tx time difference based on aggregated PRS resources and aggregated SRS resources from multiple PFLs, PRS-RSRPP, DL RSCPD reported with RSTD, DL RSCP reported with UE Rx-Tx time difference measurements, the requirements in clauses 9.9.2.5, 9.9.2.10, 9.9.3.5, 9.9.4.5, 9.9.4.9, 9.9.6.5, 9.9.7, and 9.9.8 apply provided:

- the UE is configured or pre-configured with measurement gaps or configured with concurrent measurement gaps
  - all positioning frequency layers are measured or associated with only one per-UE measurement gap, or
  - for the UE supporting *independentGapConfigPRS-r17*, all positioning frequency layers in the same FR are measured or associated with only one per-FR measurement gap in the corresponding FR.
- if the measurement gap is pre-configured, the gap must be activated throughout the measurement period, and
- if concurrent measurement gaps are configured, one of the gap combinations specified in clause 9.1.8.2 is configured, and
- if the UE does not support *independentGapConfigPRS-r17*, the configured or pre-configured gap used to perform the PRS measurements must be of per-UE type, and
- No active BWP switching occurs during the measurement gaps for PRS measurement.

All measurement requirements specified in clauses 9.9.2.5, 9.9.2.10, 9.9.3.5, 9.9.4.5, 9.9.4.9, 9.9.6.5, 9.9.7 and 9.9.8 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

UE is only required to measure PRS resources that are fully or partially overlapped with measurement gaps, and the requirements in clauses 9.9.2.5, 9.9.2.10, 9.9.3.5, 9.9.4.5, 9.9.4.9, 9.9.6.5, 9.9.7, and 9.9.8 are applicable to PRS resources that are fully or partially overlapped with measurement gaps.

A PRS resource is considered to be fully (partially) overlapped with measurement gaps if all (some) of its instances are overlapped with a measurement gap occasion. A PRS resource instance is considered to be overlapped with measurement gap occasion if the minimum number of unmuted repetitions of the instance taking into account *nr-DL-PRS-ExpectedRSTD-Uncertainty* and *nr-DL-PRS-ExpectedRSTD* is fully covered by the MGL excluding RF switching time, where the minimum number is given in the accuracy requirements in clause 10.1.23, 10.1.23A, 10.1.24, 10.1.25, 10.1.25A, and 10.1.38 for RSTD, RSTD based on aggregated PRS resources from multiple PFLs, PRS-RSRP, UE Rx-Tx time difference and UE Rx-Tx time difference based on aggregated PRS resources and aggregated SRS resources from multiple PFLs, PRS-RSRPP, respectively.

When UE is configured with measurement for more than one positioning requests, the measurement period for each request may be longer than measurement period when UE is configured with measurement for single positioning request.

If a positioning measurement gap is configured via *PosGapConfig* and activated by MAC CE, the measurement requirements in clauses 9.9.2.5, 9.9.2.10, 9.9.3.5, 9.9.4.5, 9.9.4.9, 9.9.6.5, 9.9.7, and 9.9.8 apply provided that no other MGs are configured, and only one measurement gap configured via *PosGapConfig* is activated.

When UE supports *musim-GapPreference-r17* and if the configured aperiodic MUSIM gap collides with the measurement gap associated with PRS measurement, where MUSIM gap collision rule in clause 9.1.10.4 is applied, longer measurement period for the PRS measurement is expected than the requirements as defined in clauses 9.9.2.5, 9.9.2.10, 9.9.3.5, 9.9.4.5, 9.9.4.9, 9.9.6.5, 9.9.7, and 9.9.8.

9.9.1.2 General Aspects of Gapless Measurement

The requirements for RSTD, PRS-RSRP, UE Rx-Tx time difference, and PRS-RSRPP measurement without measurement gaps specified in clauses 9.9.2.7, 9.9.3.6, 9.9.4.6 and 9.9.6.6 shall apply provided that:

Positioning frequency layer to be measured is within an active BWP,

UE is configured with PPW, and the PPW for the active BWP containing the positioning frequency layer to be measured is activated,

No active BWP switching occurs during the measurement period specified in clauses 9.9.2.7, 9.9.3.6, 9.9.4.6, and 9.9.6.6,

PRS is within PPW and does not overlap with other signals/channels of higher priority,

- for PPW type 1A/1B, the PPW does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,
- for PPW type 2, PRS does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,

$\max |\Delta T| \leq THR$, where

ΔT is the time difference between the start of a slot containing PRS from the neighbor cell/TRP and the start of the closest slot from the serving cell;

the range of ΔT is determined by the expected RSTD and expected RSTD uncertainty in the assistance data;

THR is the threshold as reported in UE capability *prs-MeasurementWithoutMG-r17*.

SCS of PRS within PPW and SCS of DL active BWP are the same.

All measurement requirements specified in clauses 9.9.2.7, 9.9.3.6, 9.9.4.6 and 9.9.6.6 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

The UE is not required to perform additional SSB measurement for the SSB configured as QCL source of PRS resources.

The UE is only required to measure PRS resources that are unmuted and fully or partially overlapped with PPW, and the requirements in clauses 9.9.2.7, 9.9.3.6, 9.9.4.6 and 9.9.6.6 are applicable to PRS resources that are unmuted and fully or partially overlapped with PPW.

A PRS resource is considered to be fully (partially) overlapped with PPW if all (some) of its instances are overlapped with a PPW occasion. A PRS resource instance is considered to be overlapped with PPW occasion if the minimum number of unmuted repetitions of the instance taking into account Rx time difference between serving and non-serving cell is fully covered by the PPW , where the minimum number is given in the accuracy requirements in clause 10.1.23, 10.1.24, 10.1.25 and 10.1.38 for RSTD, PRS-RSRP, UE Rx-Tx time difference and PRS-RSRPP, respectively.

When UE is configured with measurement for more than one positioning requests, the measurement period for each request may be longer than measurement period when UE is configured with measurement for single positioning request.

When UE supports *MUSIM-GapConfig-17* and the PPW occasion of the target positioning frequency layer is overlapping with the configured aperiodic MUSIM gap, longer period for the PRS measurement is expected than the requirements as defined in clause 9.9.2.7, 9.9.3.6, 9.9.4.6 and 9.9.6.6.

9.9.1.3 Scheduling Availability of UE during PRS Measurement without Measurement Gaps

The requirements in this clause apply for UE performing RSTD, PRS-RSRP, UE Rx-Tx time difference and PRS-RSRPP measurement without measurement gaps.

If *prs-ProcessingWindowType1A-r17* UE capable of supporting priority options 1, 2 and 3 is configured with a *type1A* PRS processing window with priority value '*st1*' for PRS measurement, then UE is not expected to receive PDCCH/PDSCH/CSI-RS from any serving cell on all symbols within PRS processing window.

If *prs-ProcessingWindowType1A-r17* UE capable of supporting priority option 2 is configured with a *type1A* PRS processing window with priority value '*st2*' for PRS measurement, then UE is not expected to receive PDSCH/CSI-RS from any serving cell on all symbols within PRS processing window but shall receive PDCCH and URLLC PDSCH within PRS processing window.

If *prs-ProcessingWindowType1B-r17* UE capable of supporting priority options 1, 2 and 3 is configured with a *type1B* PRS processing window with priority value '*st1*' for PRS measurement, then UE is not expected to receive PDCCH/PDSCH/CSI-RS from serving cells in the same band as DL PRS on all symbols within PRS processing window.

If *prs-ProcessingWindowType1B-r17* UE capable of supporting priority option 2 is configured with a *type1B* PRS processing window with priority value '*st2*' for PRS measurement, then UE is not expected to receive PDSCH/CSI-RS from a certain band but shall receive PDCCH and URLLC PDSCH from serving cells in the same band as DL PRS on all symbols within PRS processing window.

If *prs-ProcessingWindowType2-r17* UE capable of supporting priority options 1, 2 and 3 is configured with a *type2* PRS processing window with priority value '*st1*' for PRS measurement, then the UE is not expected to receive PDCCH/PDSCH/CSI-RS from the serving cell containing DL PRS in case of FR1 or from serving cells in the same band as DL PRSi n case of FR2 on the symbols overlapped with DL PRS within PRS processing window.

If *prs-ProcessingWindowType2-r17* UE capable of supporting priority option 2 is configured with a *type2* PRS processing window with priority value '*st2*' for PRS measurement, then UE is not expected to receive PDSCH/CSI-RS on the symbols overlapped with DL PRS within PRS processing window but shall receive PDCCH and URLLC PDSCH from the serving cell containing DL PRS in case of FR1 or from serving cells in the same band as DL PRSi n case of FR2 on the symbols overlapped with DL PRS within PRS processing window.

When PRS is lower priority than the DL signals/channels the following applies when UEs have an activated PRS processing window with *type1A* or *type1B*:

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS in the PPW no later than N_2 symbols, defined in clause 6.4 of TS 38.214 [26] for the subcarrier spacing μ of the DL PRS, before the start of the PPW, UE expects to receive the DL signals/channels and drop all DL PRS in the PPW.

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS in the PPW later than N_2 symbols, defined in clause 6.4 of TS 38.214 [26] for the subcarrier spacing μ of the DL PRS, before the start of the PPW, UE is not required to receive the other DL signals/channels except SSB of higher priority and may receive the DL PRS in the PPW.

When PRS is lower priority than the DL signals/channels the following applies when UEs have an activated PRS processing window with *type2*:

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS on a PRS symbol no later than N_2 symbols, defined in clause 6.4 of TS 38.214 [26] for the subcarrier spacing μ of the DL PRS, before the PRS symbol, UE expects to receive the DL signals/channels and drop the PRS symbol.

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS on a PRS symbol later than N_2 symbols, defined in clause 6.4 of TS 38.214 [26] for the subcarrier spacing μ of the DL PRS, before the PRS symbol, UE is not required to receive the other DL signals/channels except SSB of higher priority and may receive the PRS symbol.

For inter-band case for FR2 for the DL signals/channels from a different FR2 band than the FR2 band of the DL PRS, if the same Rx beam is used for both FR2 bands and the DL PRS is determined to be higher priority, UEs are not expected to receive the DL signals/channels if they are expected to measurement the DL PRS in a configured DL PRS processing window with *type1B* or *type2*.

9.9.2 RSTD measurements

9.9.2.1 Introduction

The requirements in clause 9.9.2 shall apply provided the UE has received *NR-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to measure and report DL RSTD measurements defined in TS 38.215 [4].

9.9.2.2 Requirements Applicability

The requirements in clause 9.9.2 apply for periodic and triggered RSTD measurements, provided:

- PRS-RSTD related side conditions given in clause 10.1.23 for FR1 and FR2 are fulfilled, for a corresponding band.

9.9.2.3 Measurement Capability

UE PRS RSTD measurement capability is as indicated by the UE in *NR-DL-TDOA-ProvideCapabilities*, according to TS 37.355[34].

9.9.2.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the periodic measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The reported RSTD measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clauses 10.1.23.3.

The RSTD measurements performed and reported according to this clause shall meet the RSTD measurement accuracy requirements in clause 10.1.23, for each measured DL PRS resource.

9.9.2.4.1 Void

9.9.2.4.2 Void

9.9.2.4.3 Void

9.9.2.5 Measurements Period Requirements

When physical layer receives last of *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34], the UE shall be able to measure multiple (up to the UE

capability specified in clause 9.9.2.3) DL RSTD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSTD,Total}$ defined as:

$$T_{RSTD,Total} = \sum_{i=1}^{L} T_{RSTD,i} + (L-1) * \max(T_{effect,i})$$

Where ,

i is the index of positioning frequency layer,

L is total number of positioning frequency layers, and

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i

$T_{RSTD,i}$ is the measurement period for PRS RSTD measurement in positioning frequency layer *i* as specified below:

$$T_{RSTD,i} = \left(k_{multiTEG,i} * CSSF_{PRS,i} * \text{ceil}(K_{p,PRS,i}) * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last,i},$$

where:

$N_{RxBeam,i}$ is the UE Rx beam sweeping factor. In FR1, $N_{RxBeam,i}$ = 1;

and in FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$CSSF_{PRS,i}$ is the carrier-specific scaling factor for NR PRS-based positioning measurements in positioning frequency layer i as defined in clause 9.1.5.2.

$k_{multiTEG,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG,i}$=1 if UE is not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*;

otherwise,

$k_{multiTEG,i}$ =$N_{TEG,i}$, if UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG,i}$ =$\left\lceil \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rceil$ if UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

where

$N_{TEG,i}$ is the number of Rx TEGs with which UE is requested to measure a PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*, and in case ‘n0’ is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$K_{p,PRS,i}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap or MUSIM gap or both concurrent measurement gap and MUSIM gap. $K_{p,PRS,i}$ = 1 for UE not configured with concurrent measurement gap and not configured with MUSIM gaps.

- For a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer and periodic MUSIM gaps, and starting at the beginning of any associated gap occasions covering the PRS occasion:

- N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and

- $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG and MUSIM gaps collisions by applying the selected gap collision rule

- Requirements do not apply if $N_{available}$ =0.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources in positioning frequency layer *i* configured in a slot.

$L_{available_PRS,i}$ is the time duration of available PRS in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only the PRS resources unmuted and fully or partially overlapped with MG are considered.

N_{sample} is the number of PRS RSTD measurement samples, where

- N_{sample} = 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:

  - PRS bandwidth is within the active BWP and

  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.

- N_{sample} = 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:

  - PRS bandwidth is within the active BWP and

  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.

- N_{sample} = 4 otherwise.

$T_{last,i}$ is the measurement duration for the last PRS RSTD sample in positioning frequency layer *i*, including the

sampling time and processing time. If all of the PRS resources to be measured are available in the same MG occasion during $T_{availabe}$, $T_{last,i} = T_i$ +MGL. Otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$,

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i defined as:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

Where,

T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34],

$T_{available_PRS,i} = LCM(T_{PRS,i}, MGRP_i)$, the least common multiple between $T_{PRS,i}$ and $MGRP_i$.

$MGRP_i$ is the repetition periodicity of the measurement gap applicable for measurement in the PRS frequency layer i.

$T_{PRS,i}$ is the periodicity of DL PRS resource with muting on positioning frequency layer *i*.

If more than one PRS periodicities are configured in positioning frequency layer *i*, the least common multiple of PRS periodicities $T_{per}^{PRS\ with\ muting}$ among all DL PRS resource sets in the positioning frequency layer is used to derive $T_{PRS,i}$, where,

$T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, is the PRS periodicity with muting per PRS resource,

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where

T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$ which is given by the higher-layer parameter *NR-MutingPattern-r16* included in *DL-PRS-MutingOption1-r16*.

- Note: For the purpose of calculating $T_{PRS,i}$, only the PRS resources fully or partially covered by the MG are considered.

$\{N, T\}$ is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSysmbols* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in TS 37.355 [34].

N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfDL-PRS-ResProcessedPerSlot* specified in TS 37.355 [34].

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{RSTD,Total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after both the *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message are delivered from LMF to the physical layer of UE via LPP [34].

For deferred MT-LR with other event than “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{RSTD,Total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the RSTD measurement in each reporting period and activate the location report at the time when the periodic timer expires.

NOTE: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

When PRS-RSRP is configured for DL-TDOA, RSTD and PRS-RSRP are performed over the measurement period defined in clause 9.9.2.5.

When PRS-RSRPP is configured for DL-TDOA, RSTD and PRS-RSRPP are performed over the measurement period defined in clause 9.9.2.5.

If during the measurement period of one or more positioning frequency layers, the MG pattern is reconfigured, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{RSTD,Total}$ within measurement gaps due to collisions with other signals; otherwise, the measurement period can be longer.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource, if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$.

The measurement requirements do not apply for a PRS resource, if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in clause 9.9.2 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-TDOA-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while RSTD measurements are being performed, then the UE shall continue and complete the on-going RSTD measurements. The RSTD measurement period can be longer. The UE shall meet the RSTD measurement accuracy requirements in clause 10.1.23.

9.9.2.6 Void

9.9.2.7 Measurements Period Requirements without Measurement Gaps

When physical layer receives last of *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34], the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.2.3) DL RSTD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSTD,Total}$ defined as:

$T_{RSTD,Total} = \sum_{i=1}^{L} T_{RSTD_wo_gap,i} + (L-1) * \max(T_{effect,i})$, if any of the positioning frequency layers are in Case 1, or

$T_{RSTD,Total} = \max(T_{RSTD_wo_gap,i} + T_{uncertainty,i})$, if all the positioning frequency layers are in Case 2,

Where,

i is the index of positioning frequency layer, and

L is total number of positioning frequency layers, and

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i, and

$T_{uncertainty,i}$ is the time from the start of the first PPW occasion for positioning frequency layer i to the start of measurement period $T_{RSTD,Total}$.

A positioning frequency layer is in Case 1 if UE reports *ppw-durationOfPRS-Processing1-r17* for the band containing the positioning frequency layer, and a positioning frequency layer is in Case 2 if UE reports *ppw-durationOfPRS-Processing2-r17* for the band containing the positioning frequency layer.

$T_{RSTD_wo_gap,i}$ is the measurement period for PRS RSTD measurement in positioning frequency layer *i* as specified below.

$$T_{RSTD_wo_gap,i} = \left(k_{multiTEG,i} * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last,i},$$

where:

$N_{RxBeam,i}$ is the UE Rx beam sweeping factor. In FR1, $N_{RxBeam,i}$ = 1; and in FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$k_{multiTEG,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG,i}$=1 if UE is not supported *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*;

otherwise,

$k_{multiTEG,i}$ =$N_{TEG,i}$, if the UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG,i}$ =$\left\lceil \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rceil$ if the UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

where

$N_{TEG,i}$ is the number of Rx TEGs with which UE is requested to measure a PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*, and in case ‘n0’ is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources in positioning frequency layer *i* configured in a slot.

$L_{available_PRS,\mathrm{i}}$ is the time duration of available PRS in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,\mathrm{i}}$,

only the PRS resources unmuted and fully or partially overlapped with PPW are considered, if positioning frequency layer i is in Case 1, or

only the PRS resources unmuted and fully or partially overlapped with the first (PPWL-T2) ms of PPW are considered, if positioning frequency layer i is in Case 2, where PPWL is the PPW length and T2 corresponds to *ppw-durationOfPRS-ProcessingSymbolsT2*.

N_{sample} is the number of PRS RSTD measurement samples, where

- N_{sample}= 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample}=2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
- Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample}=4 otherwise.

$T_{last,i}$ is the measurement duration for the last PRS RSTD sample in positioning frequency layer *i*, including the sampling time and processing time.

If positioning frequency layer *i* is in Case 1 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,\mathrm{i}} = T_{\mathrm{i}}$ +PPWL, else

if positioning frequency layer *i* is in Case 2 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,\mathrm{i}}$ = PPWL;

otherwise, $T_{last,\mathrm{i}} = T_{\mathrm{i}} + T_{available_PRS,\mathrm{i}}$.

$T_{\mathrm{effect},i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i defined as:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

Where,

T_i corresponds to *ppw-durationOfPRS-ProcessingSymbolsT* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponds to the sum of *ppw-durationOfPRS-ProcessingSymbolsT2* and *ppw*-durationOfPRS-*ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

$T_{available_PRS,\mathrm{i}} = LCM(T_{PRS,\mathrm{i}}, PPWRP_{\mathrm{i}})$, the least common multiple between $T_{PRS,\mathrm{i}}$ and $PPWRP_{\mathrm{i}}$.

$PPWRP_{\mathrm{i}}$ is the repetition periodicity of the PRS processing window applicable for measurements in the positioning frequency layer *i*.

$T_{PRS,i}$ is the periodicity of DL PRS resource with muting on positioning frequency layer *i*.

If more than one PRS periodicities are configured in positioning frequency layer *i*, the least common multiple of PRS periodicities $T_{per}^{PRS\ with\ muting}$ among all DL PRS resource sets in the positioning frequency layer is used to derive $T_{PRS,i}$, where,

$T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, is the PRS periodicity with muting per PRS resource,

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*,

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources that meet the conditions for PRS measurement outside measurement gaps as defined in clause 9.9.1.2 are considered.

N is a duration of DL PRS symbols in ms corresponding to *ppw-durationOfPRS-ProcessingSymbolsN* in TS 37.355 [34] if positioning frequency layer i is in Case 1, or corresponding to *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer i is in Case 2.

N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *ppw-maxNumOfDL-PRS-ResProcessedPerSlot* specified in TS 37.355 [34].

The time $T_{RSTD_wo_gap,i}$ starts from the first instance of the activated PPW for measurement of positioning frequency layer *i* aligned with a DL PRS resource(s) in the assistance data after both the *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation*message are delivered from LMF to the physical layer of UE via LPP [34].

When PRS-RSRP is configured for DL-TDOA, RSTD and RSRP are performed over the same measurement period.

When PRS-RSRPP is configured for DL-TDOA, RSTD and RSRPP are performed over the same measurement period.

If during the measurement period of one or more positioning frequency layers, the PPW is re-configured or reactivated, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{RSTD_wo_gap,i}$ within PPW due to collisions with other signals; otherwise, the measurement period can be longer.

The measurement requirements do not apply for a PRS resource, if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$.

The measurement requirements do not apply for a PRS resource, if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in clause 9.9.2 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-TDOA-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while RSTD measurements are being performed, then the UE shall continue and complete the on-going RSTD measurements. The RSTD measurement period can be longer. The UE shall meet the RSTD measurement accuracy requirements in clause 10.1.23.

If any positioning frequency layer is in Case 2, the requirements in this clause apply provided that the PPWL corresponding to the positioning frequency layer is larger than (T2+X) ms.

The requirements in this clause apply provided that a single positioning frequency layer is configured for measurement in each PPW.

9.9.2.8 Void

9.9.2.9 Measurements Period Requirements with both MG and PPW

If the UE is configured with both MG applicable to positioning measurement and PPW, the UE shall measure positioning frequency layer *i* within

- MG, if PRS resources on positioning frequency layer *i* are overlapped with MG, or
- PPW, if PRS resources on positioning frequency layer *i* are overlapped with PPW.

The measurement period $T_{RSTD,Total}$ is defined as:

$$T_{RSTD,Total} = T_{RSTD,Total,MG} + T_{RSTD,Total,PPW} + T_{guard},$$

Where

- $T_{RSTD,Total,MG}$ is defined in clause 9.9.2.5 and includes all positioning frequency layers to be measured within MG,
- $T_{RSTD,Total,PPW}$ is defined in clause 9.9.2.7 and includes all positioning frequency layers to be measured within PPW,
- T_{guard} is the maximum T_{effect} defined in clauses 9.9.2.5 and 9.9.2.7 among all PFLs.

The requirements apply provided the following conditions are satisfied:

- MGs and PPWs do not overlap in time;
- Each PFL in the assistance data can be measured completely (all PRS resources) either within MG or within activated PPW.

9.9.2.10 Measurements Period Requirements with Bandwidth Aggregation

When UE physical layer receives last of *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34] with a request to perform measurement by aggregating PRS resources from multiple PFLs via *nr-DL-PRS-JointMeasurementRequestedPFL-List*, the UE shall be able to perform RSTD measurement by aggregating PRS resources from multiple PFLs (up to the UE capability specified in clause 9.9.2.3) defined in TS 38.215 [4], during the measurement period $T_{RSTD_aggregate,\ Total}$ defined as:

$$T_{RSTD_aggregate,\ Total} = T_{non_aggregate_RSTD} + T_{aggregate_RSTD} + T_{margin},$$

where,

$T_{non_aggregate_RSTD}$ is the total measurement period for RSTD measurement on PFLs that do not contain PRS resources for aggregation.

Calculation of $T_{non_aggregate_RSTD}$ is based on clause 9.9.2.5 with the following exceptions,

- only PFLs containing resource set(s) not linked to any other resource set(s) are considered in *L*
- on each PFL i, only resource set(s) not linked to any other resource set(s) are considered in $T_{available_PRS,i}$, $N_{PRS,i}^{slot}$ and $L_{available_PRS,i}$
- N_{sample} = 2 if the UE supports the capability of positioning measurements with reduced number of samples as indicated by *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* specified in TS 37.355 [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples,
- $(L-1) * \max(T_{effect,i})$ is replace by $(L-1) * T'_{margin}$.

$T_{non_aggregate_RSTD}$ is equal to zero if UE is not configured to perform non-aggregated measurements by the LMF.

If UE is configured to perform positioning measurements on PFLs that contain PRS resources for aggregation and on PFLs that do not contain PRS resources for aggregation, $T_{margin} = T'_{margin}$ is delay margin to account for

delay between RSTD measurement performed by UE on PFLs that contain PRS resources for aggregation and RSTD measurement performed by UE on PFLs that do not contain PRS resources for aggregation.

If UE is only configured to perform measurements on PFLs that contain PRS resources for aggregation or if UE is only configured to perform measurements on PFLs that do not contain PRS resources for aggregation, then $T_{margin} = 0$.

$T'_{margin} = \max(Teffect, i)$, when both aggregated PFLs and non-aggregated PFLs are configured for positioning measurement.

If UE is capable of performing latency reduced positioning measurements and is configured to perform latency reduced positioning measurement by LMF via *reducedDL-PRS-ProcessingSamples-r17* [34], then $N_{sample} = 2$ shall be considered in calculations of $T_{aggregate_RSTD}$ and $T_{non\text{-}aggregate_RSTD}$.

If UE is not capable to perform latency reduced positioning measurements or is not configured to perform latency reduced positioning measurement by LMF via *reducedDL-PRS-ProcessingSamples-r17* [34], then $N_{sample} = 4$ shall be considered in calculations of $T_{aggregate_RSTD}$ and $T_{non\text{-}aggregate_RSTD}$.

$T_{aggregate_RSTD}$, total measurement period for RSTD measurements performed by UE by aggregating PRS resources from multiple PFLs as defined in TS 38.214 [26], is defined as:

$$T_{aggregate_RSTD} = \sum_{i=1}^{G} T_{RSTD_aggregate,i} + (G-1) * T'_{margin},$$

where

i is the index of effective PFL, corresponding to the group of PFLs containing linked PRS resource sets to be aggregated for RSTD measurement,

G denotes the number of effective PFLs that UE is configured to perform aggregated measurements on. G is configured by LMF and is provisioned to UE via *nr-DL-PRS-AggregationInfo*.

$T_{RSTD_aggregate,i}$ is the measurement period for PRS RSTD measurement in the effective PFL *i* as specified below:

$$T_{RSTD_aggregate,i} = \left(k_{multiTEG_agg,i} \times CSSF_{PRS_agg,i} \times ceil(K_{p,PRS_agg,i}) \times N_{RxBeam,i} \times \left\lceil \frac{N^{slot}_{PRS_agg,i}}{N'_{agg}} \right\rceil \left\lceil \frac{L_{available_PRS_agg,i}}{N_{agg}} \right\rceil \times N_{sample_agg} - 1\right) \times T_{effect_agg,i} + T_{last_agg,i},$$

where:

$N_{RxBeam,i}$ is the UE Rx beam sweeping factor.

In FR1, $N_{RxBeam,i} = 1$.

In FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing effective PFL i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$CSSF_{PRS_agg,i}$ is the carrier-specific scaling factor for NR PRS-based positioning measurements in effective PFL i as defined in clause 9.1.5.2.

$k_{multiTEG_agg,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG_agg,i} = 1$ if UE is not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*;

Otherwise,

$k_{multiTEG_agg,i} = N_{TEG,i}$, if UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG_{agg,i}}=\left\lceil \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rceil$ if UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

where

$N_{TEG,i}$ is the number of Rx TEGs with which UE is requested to measure aggregated PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*, and in case 'n0' is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$K_{p,PRS_agg,i}$ is a scaling factor for effective PFL i to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS_agg,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap, and $K_{p,PRS_agg,i} = 1$ for UE not configured with concurrent measurement gap.

For a window W of duration max($T_{PRS_agg,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the effective PFL, and starting at the beginning of any associated gap occasions covering the PRS occasion:

- N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and
- $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG collisions by applying the selected gap collision rule
- Requirements do not apply if $N_{available} = 0$.

$N^{slot}_{PRS_agg,i}$ is the maximum number of DL PRS resources in effective PFL i configured in a slot.

$L_{available_PRS_agg,i}$ is the time duration of available PRS in the effective PFL i to be measured during $T_{available_PRS_agg,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS_agg,i}$, only the PRS resources unmuted and fully or partially overlapped with MG and satisfying the conditions for PRS BW aggregation are considered.

N_{sample_agg} is the number of PRS RSTD measurement samples.

$T_{last_agg,i}$ is the measurement duration for the last PRS RSTD sample in the effective PFL i, including the sampling time and processing time. If all of the PRS resources to be measured are available in the same MG occasion during $T_{availabe_agg}$, $T_{last_agg,i} = T_{agg,i} + MGL$. Otherwise, $T_{last_agg,i} = T_{agg,i} + T_{available_PRS_agg,i}$,

$T_{effect_agg,i}$ is the periodicity of the PRS RSTD measurement in the effective PFL i defined as:

$$T_{effect_agg,i} = \left\lceil \frac{T_{agg,i}}{T_{available_PRS_agg,i}} \right\rceil \times T_{available_PRS_agg,i}$$

where,

$T_{available_PRS_agg,i} = LCM(T_{PRS_agg,i}, MGRP_i)$, the least common multiple between $T_{PRS_agg,i}$ and $MGRP_i$. $MGRP_i$ is the repetition periodicity of the measurement gap applicable for measurement in the effective PFL i.

$T_{PRS_agg,i}$ is the periodicity of DL PRS resources meeting the bandwidth aggregation conditions with muting on effective PFL i. If more than one PRS periodicities are configured in effective PFL i, the least common multiple of PRS periodicities $T^{PRS\ with\ muting}_{per_agg}$ among all DL PRS resource sets in the effective PFL is used to derive $T_{PRS_agg,i}$, where,

$T^{PRS\ with\ muting}_{per_agg} = N_{muting} \times T^{PRS}_{per_agg}$, is the PRS periodicity with muting per PRS resource configured for aggregation,

$T^{PRS}_{per_agg}$ is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS_agg} \times L_{muting}$, where $T_{muting}^{PRS_agg}$ is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

- Note: For the purpose of calculating $T_{PRS_agg,i}$, only the PRS resources fully or partially covered by the MG and PRS resources that satisfy the conditions for PRS BW aggregation are considered.

$\{N_{agg}, T_{agg,i}\}$ is UE capability combination per band to aggregate PRS resources from multiple PFLs within an effective PFL where N_{agg} is a duration of DL PRS symbols in ms corresponding to *prs-durationOfTwoPRS-BWA-ProcessingSymbolsN-r18* or *prs-durationOfThreePRS-BWA-ProcessingSymbolsN-r18* in TS 37.355 [34] processed every $T_{agg,i}$ ms corresponding to *prs-durationOfTwoPRS-BWA-ProcessingSymbolsT-r18* or *prs-durationOfThreePRS-BWA-ProcessingSymbolsT* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *maximumOfTwoAggregatedDL-PRS-Bandwidth* or *maximumOfThreeAggregatedDL-PRS-Bandwidth* in TS 37.355 [34]

N'_{agg} is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfAggregatedDL-PRS-ResourcePerSlot-FR1-r18* for FR1 and *maxNumOfAggregatedDL-PRS-ResourcePerSlot-FR2-r18* for FR2 specified in TS 37.355 [34].

The requirements in this clause for aggregated measurements apply provided that the linked PRS resource sets on multiple PFLs for aggregated measurements satisfy all the conditions specified in clause 5.1.6.5.3 in TS 38.214 [26].

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{RSTD_aggregate,Total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data for aggregation after both the *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message are delivered from LMF to the physical layer of UE via LPP [34] including a request to perform measurement by aggregating PRS resources from multiple PFLs via *nr-DL-PRS-JointMeasurementRequestedPFL-List*.

For deferred MT-LR with other event than “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{RSTD_aggregate,Total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event “Periodic Location” as defined in clause 4.1a.5.1 TS 23.27] [44], the UE shall perform the aggregated RSTD measurement in each reporting period and activate the location report at the time when the periodic timer expires.

When PRS-RSRP is also reported by UE together with RSTD measurement based on aggregated DL-PRS resources from multiple-PFLs, PRS-RSRP are performed over the measurement period defined in clause 9.9.2.10.

When PRS-RSRPP is also reported by UE together with RSTD measurement based on aggregated DL-PRS resources from multiple-PFLs, PRS-RSRPP are performed over the measurement period defined in clause 9.9.2.10.

If during the measurement period of one or more effective PFLs, the MG pattern is reconfigured, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{RSTD_aggregate,Total}$ within measurement gaps due to collisions with other signals; otherwise, the measurement period can be longer.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for aggregated PRS resources, if the PRS resources to be aggregated are across two sampling duration of N_{agg} within duration $L_{available_PRS_agg,i}$.

The measurement requirements do not apply, if time span of the instance of the PRS resources to be aggregated (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N_{agg}.

The requirements in clause 9.9.2.10 do not apply if the PRS configuration given by higher layer parameters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-TDOA-ProvideCapabilities*, and it is up to UE implementation which aggregated PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while aggregated RSTD measurements are being performed, then the UE shall continue and complete the on-going aggregated RSTD measurements. The aggregated RSTD measurement period can be longer. The UE shall meet the RSTD measurement accuracy requirements in clause 10.1.23A.2.

9.9.3 PRS-RSRP measurements

9.9.3.1 Introduction

The requirements in clause 9.9.3.5 shall apply provided the UE has received a message from LMF via LPP [34] requesting the UE to measure and report PRS-RSRP measurements defined in TS 38.215 [4].

9.9.3.2 Requirements applicability

The requirements in clause 9.9.3 apply for periodic and triggered PRS-RSRP measurements, provided:

- PRS-RSRP related side conditions given in clause 10.1.24 are met for a corresponding band.

9.9.3.3 Measurement Capability

UE PRS-RSRP measurement capability is as indicated by the UE in *NR-DL-AoD-ProvideCapabilities* according to TS 37.355 [34].

9.9.3.4 Measurement Reporting Requirements

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The reported PRS-RSRP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clauses 10.1.24.3.

The PRS-RSRP measurement accuracy for all measured PRS resources shall be fulfilled according to the accuracy requriements specified in the clauses 10.1.24.

9.9.3.5 Measurement Period Requirements

When the physical layer receives *NR-DL-AoD-ProvideAssistanceData* message and *NR-DL-AoD-RequestLocationInformation* message from LMF via LPP [34], the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.3.3) PRS-RSRP measurements, defined in TS 38.215 [4], from configured PRS resources for configured TRPs on configured positioning frequency layers, within $T_{PRS-RSRP,total}$ ms.

$$T_{PRS-RSRP,\,total} = \sum_{i=1}^{L} T_{PRS-RSRP,i} + (L-1) * \max\left(T_{effect,i}\right)$$

where

i is the index of positioning frequency layer,

L is total number of positioning frequency layers,

$T_{effect,i}$ is the periodicity of the PRS-RSRP measurement in positioning frequency layer *i*.

$$T_{PRS-RSRP,i} = \left(CSSF_i * ceil(K_{p,PRS,i}) * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last}$$

where

$CSSF_i$ is the carrier specific scaling factor for PRS-RSRP measurements specified in clause 9.1.5.2,

$K_{p,PRS,i}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap or MUSIM gap or both concurrent measurement gap and MUSIM gap. $K_{p,PRS,i} = 1$ for UE not configured with concurrent measurement gap and not configured with MUSIM gaps.

For a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioining frequency layer and periodic MUSIM gaps, and starting at the beginning of any associated gap occasions covering the PRS occasion:

N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and

$N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG and MUSIM gaps collisions by applying the selected gap collision rule

Requirements do not apply if $N_{available}$ =0.

$N_{RxBeam,i}$ is the scaling factor for Rx beam sweeping, and $N_{RxBeam,i}$=1 if positioning frequency layer *i* is in FR1 and if positioning frequency layer *i* is in FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$L_{available_PRS,i}$ is the time duration of available PRS to be measured in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only the PRS resources unmuted and fully or partially overlapped with MG are considered.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSysmbols* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in TS 37.355 [34],

N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfDL-PRS-ResProcessedPerSlot* in clause 6.4.3 of TS 37.355 [34],

N_{sample} is the number of PRS-RSRP measurement samples, where

- N_{sample} = 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 4 otherwise.

$T_{last,i} = T_i + T_{available_PRS,i}$ is the measurement duration for the last PRS-RSRP sample, including the sampling time and processing time, if not all PRS resources to be measured are available in the same measurement gap occasion during $T_{available_PRS,i}$, otherwise $T_{last,i} = T_i + MGL$,

$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$ is the periodicity of PRS-RSRP measurement in positioning frequency layer i,

T_i corresponds to durationOfPRS-ProcessingSymbolsInEveryTms in TS 37.355 [34],

$T_{available_PRS,i} = LCM(T_{PRS,i}, MGRP_i)$ is the least common multiple between $T_{PRS,i}$ and $MGRP_i$,

$T_{PRS,i}$ is the maximum PRS resource periodicity among all PRS resources in positioning frequency layer i,

$MGRP_i$ is the measurement gap repetition period in positioning frequency layer i.

If positioning frequency layer *i* has more than one DL PRS resource set with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among the DL PRS resource sets is used to derive $T_{PRS,i}$, where:

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$ which is given by the higher-layer parameter *NR-MutingPattern-r16* included in *DL-PRS-MutingOption1-r16*.

Note: For the purpose of calculating $T_{PRS,i}$, only the PRS resources fully or partially covered by the MG are considered.

When PRS-RSRP measurements are configured for DL-AoD, except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{PRS-RSRP,total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data after both the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

For deferred MT-LR with other event than “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{PRS-RSRP,total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the PRS-RSRP measurement in each reporting period and activate the location report at the time when the periodic timer expires.

NOTE: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

When the PRS-RSRP measurement is configured together with RSTD measurement then the PRS-RSRP measurement shall meet the RSTD measurement requirements defined in clause 9.9.2.

When the PRS-RSRP measurement is configured together with UE Rx-Tx time difference measurement then the PRS-RSRP measurement shall meet the UE Rx-Tx time difference measurement requirements defined in clause 9.9.4.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource:

– if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or

– if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

If during the measurement period of one or more positioning frequency layers, the MG pattern is reconfigured either per UE request or not per UE request, the measurement period can be longer.

The requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{PRS-RSRP,total}$ within measurement gaps due to collisions with other signals; otherwise, a longer measurement period may be used.

The requirements in clause 9.9.3 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-AoD-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while PRS-RSRP measurements are being performed then the UE shall complete the ongoing PRS-RSRP measurements session. The PRS-RSRP measurement period can be longer. The UE shall meet the PRS-RSRP measurement accuracy requirements in clause 10.1.24.

9.9.3.6 Measurement Period Requirements without Measurement Gaps

When the physical layer receives *NR-DL-AoD-ProvideAssistanceData* message and *NR-DL-AoD-RequestLocationInformation* message from LMF via LPP [34], the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.3.3) PRS-RSRP measurements as defined in TS 38.215 [4] without measurement gap, on configured positioning frequency layer *i*, within $T_{PRS-RSRP,total}$ ms.

$T_{PRS-RSRP,\ total} = \sum_{i=1}^{L} T_{PRS-RSRP,i} + (L-1) * \max(T_{effect,i})$ if any of the positioning frequency layers are in Case 1, or

$T_{PRS-RSRP,\ total} = \max(T_{PRS-RSRP,i} + T_{uncertainty,i})$, if all the positioning frequency layers are in Case 2,

Where,

i is the index of positioning frequency layer, and

L is total number of positioning frequency layers, and

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i, and

$T_{uncertainty,i}$ is the time from the start of the first PPW occasion for positioning frequency layer i to the start of measurement period $T_{PRS-RSRP,\ total}$.

A positioning frequency layer is in Case 1 if UE reports *ppw-durationOfPRS-Processing1-r17* for the band containing the positioning frequency layer, and a positioning frequency layer is in Case 2 if UE reports *ppw-durationOfPRS-Processing2-r17* for the band containing the positioning frequency layer.

$T_{PRS-RSRP,i}$ is the measurement period for PRS-RSRP measurement in positioning frequency layer *i* as specified below.

$$T_{PRS-RSRP,i} = \left(N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last}$$

where

$T_{effect,i}$ is the periodicity of the PRS-RSRP measurement in positioning frequency layer *i*.

$N_{RxBeam,i}$ is the scaling factor for Rx beam sweeping, and $N_{RxBeam,i}$=1 if positioning frequency layer *i* is in FR1. If positioning frequency layer *i* is in FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$L_{available_PRS,i}$ is the time duration of available PRS to be measured in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$,

only unmuted PRS resource instances that meet the applicability conditions and fully or partially overlapped with PRS processing window are considered, if positioning frequency layer i is in Case 1, or

only the PRS resources unmuted and fully or partially overlapped with the first (PPWL-T2) ms of PPW are considered, if positioning frequency layer i is in Case 2, where PPWL is the PPW length and T2 corresponds to *ppw-durationOfPRS-ProcessingSymbolsT2*.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *ppw-durationOfPRS-ProcessingSymbolsN* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponding to *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

N′ is UE capability for number of DL PRS resources that it can process in a slot as indicated by *ppw-maxNumOfDL-PRS-ResProcessedPerSlot* in clause 6.4.3 of TS 37.355 [34],

N_{sample} is the number of PRS RSRP measurement samples, where

- N_{sample} = 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 4 otherwise.

T_{last} is the measurement duration for the last PRS-RSRP sample, including the sampling time and processing time.

If positioning frequency layer *i* is in Case 1 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i} = T_i$ +PPWL, else

if positioning frequency layer *i* is in Case 2 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i}$ = PPWL;

otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$.

$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$ is the periodicity of PRS-RSRP measurement in positioning frequency layer *i*,

T_i corresponds to *ppw-durationOfPRS-ProcessingSymbolsT* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponds to the sum of *ppw-durationOfPRS-ProcessingSymbolsT2* and *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2

$T_{available_PRS,i} = LCM(T_{PRS,i}, PPWRP_i)$ is the least common multiple between $T_{PRS,i}$ and $PPWRP_i$,

$T_{PRS,i}$ is the maximum PRS resource periodicity among all PRS resources in positioning frequency layer i,

$PPWRP_i$ is the PRS processing window repetition period in positioning frequency layer i.

If positioning frequency layer *i* has more than one DL PRS resource set with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among the DL PRS resource sets is used to derive $T_{PRS,i}$, where:

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. If bitmap $\{b^1\}$ for higher-layer parameter *DL-*
N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources that meet the applicability conditions and fully or partially covered by the PRS processing window are considered.

When PRS-RSRP measurements are configured for DL-AoD, the time $T_{PRS-RSRP,i}$ starts from the first PRS processing window instance aligned with DL PRS resources in the assistance data after both the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

NOTE: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

When the PRS-RSRP measurement is configured together with RSTD measurement then the PRS-RSRP measurement shall meet the RSTD measurement requirements defined in clause 9.9.2.

When the PRS-RSRP measurement is configured together with UE Rx-Tx time difference measurement then the PRS-RSRP measurement shall meet the UE Rx-Tx time difference measurement requirements defined in clause 9.9.4.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource:

if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or

if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in clause 9.9.3 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-AoD-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If during the measurement period of one or more positioning frequency layers, the PPW is reconfigured or reactivated, the PRS-RSRP measurement period can be longer.

If any positioning frequency layer is in Case 2, the requirements in this clause apply provided that the PPWL corresponding to the positioning frequency layer is larger than (T2+X) ms.

The requirements in this clause apply provided that a single positioning frequency layer is configured for measurement in each PPW.

9.9.3.7 Void

9.9.3.8 Measurements Period Requirements with both MG and PPW

If the UE is configured with both MG applicable to positioning measurement and PPW, the UE shall measure positioning frequency layer *i* within

- MG, if PRS resources on positioning frequency layer *i* are overlapped with MG, or
- PPW, if PRS resources on positioning frequency layer *i* are overlapped with PPW.

The measurement period $T_{PRS-RSRP,\ total}$ is defined as:

$$T_{PRS-RSRP,\ total} = T_{PRS-RSRP,Total,MG} + T_{PRS-RSRP,Total,PPW} + T_{guard},$$

Where

- $T_{PRS-RSRP,Total,MG}$ is defined in clause 9.9.3.5 and includes all positioning frequency layers to be measured within MG,

- $T_{PRS-RSRP,Total,PPW}$ is defined in clause 9.9.3.6 and includes all positioning frequency layers to be measured within PPW,

- T_{guard} is the maximum T_{effect} defined in clauses 9.9.3.5 and 9.9.3.6 among all PFLs.

The requirements apply provided the following conditions are satisfied:

- MGs and PPWs do not overlap in time;

- Each PFL in the assistance data can be measured completely (all PRS resources) either within MG or within activated PPW.

9.9.4 UE Rx-Tx time difference measurements

9.9.4.1 Introduction

The requirements in this clause shall apply, provided the UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to measure and report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4].

9.9.4.2 Requirements Applicability

The requirements in clause 9.9.4 apply for periodic and triggered UE Rx-Tx time difference measurements, provided:

- UE Rx-Tx time difference measurement related side conditions given in clause 10.1.25 are met for a corresponding band.

- UE Rx-Tx time difference measurement related side conditions given in clause 10.1.25A are met for PRS aggregation from multiple PFLs.

- SRS is configured on at least one of the PCell, PSCell and SCell.

- The UE transmits SRS within the range from -160 ms to 160 ms of at least one DL PRS resource of each of the TRPs in the assistance data.

9.9.4.3 Measurement Capability

UE Rx-Tx time difference measurement capability is as indicated by the UE in *NR-Multi-RTT-ProvideCapabilities,* according to TS 37.355 [34].

9.9.4.4 Measurement Reporting Requirements

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The UE Rx-Tx time difference measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.25.

The UE Rx-Tx time difference measurement accuracy for all measured DL PRS resources shall be fulfilled according to the accuracy requirements specified in clause 10.1.25.

9.9.4.5 Measurement Period Requirements

When physical layer receives last of *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34], UE shall be able to measure multiple (up to the UE

capability specified in clause 9.9.4.3) UE Rx-Tx time difference measurements as defined in TS 38.215 [4] in configured positioning frequency layers within the measurement period $T_{UERxTx,Total}$ ms.

$$T_{UERxTx,\ Total} = \sum_{i=1}^{L} T_{UERxTx,i} + (L-1) * \max(T_{effect,i}).$$

where i is the index of positioning frequency layer,

$T_{UERxTx,i}$ is the measurement period for UE Rx-Tx time difference measurements in positioning frequency layer i as further defined in this clause,

L is total number of positioning frequency layers, and

$T_{effect,i}$ is the periodicity of the UE Rx-Tx time difference measurement in positioning frequency layer i as defined further in this clause.

$$T_{UERxTx,i} = \left(k_{multiTEG,i} * CSSF_i * \text{ceil}(K_{p,PRS,i}) * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1 \right) * T_{effect,i} + T_{last,i}$$

Where

$CSSF_i$ is the carrier-specific scaling factor for NR PRS-based measurement in the positioning frequency layer i as defined in clause 9.1.5.2,

$k_{multiTEG,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG,i}$=1 if UE is not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* [34] in *NR-Multi-RTT-RequestLocationInformation*;

otherwise,

$k_{multiTEG,i}$ =$N_{TEG,i}$, if UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG,i}$ =$\left\lceil \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rceil$ if UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

where

$N_{TEG,i}$ is the number of Rx TEGs or RxTx TEGs with which UE is requested to measure a PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* [34] in *NR-Multi-RTT-RequestLocationInformation*, and in case 'n0' is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$K_{p,PRS,i}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap or MUSIM gap or both concurrent measurement gap and MUSIM gap. $K_{p,PRS,i} = 1$ for UE not configured with concurrent measurement gap and not configured with MUSIM gaps.

For a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer and periodic MUSIM gaps, and starting at the beginning of any associated gap occasions covering the PRS occasion:

N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and

$N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG and MUSIM gaps collisions by applying the selected gap collision rule

Requirements do not apply if $N_{available}$ =0.

$N_{RxBeam,i}$ is the scaling factor for Rx beam sweeping, and $N_{RxBeam,i}$=1 if positioning frequency layer *i* is in FR1 and if positioning frequency layer *i* is in FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-Multi-RTT-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$L_{available_PRS,i}$ is the time duration of available PRS resources in the positioning frequency layer *i*, to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only the PRS resources unmuted and fully or partially overlapped with MG are considered.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSysmbols* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in clause 4.2.7.2 of TS 37.355 [34],

N' is UE capability for number of DL PRS resources that it can process in a slot corresponding to *maxNumOfDL-PRS-ResProcessedPerSlot* as specified in clause 6.4.3 of TS 37.355 [34],

N_{sample} is the number of UE Rx-Tx time difference measurement samples:

- N_{sample} = 1 if the UE is capable of *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* defined in [34] and LMF requests the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples* [34] and the following conditions are met:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 2 if the UE is capable of *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* defined in [34] and the LMF requests the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples* [34] but the following conditions are not met:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 4 otherwise.

$T_{last,i}$ is the measurement duration for the last UE Rx-Tx time difference measurement sample in the positioning layer i, including the sampling time and processing time, $T_{last,i} = T_i + T_{available_PRS,i}$,

$T_{effect,i}$ is periodicity of UE Rx-Tx time difference measurement in positioning frequency layer *i*:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

where

T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34],

$T_{available_PRS,i} = LCM(T_{PRS,i}, MGRP_i)$, the least common multiple between $T_{PRS,i}$ and $MGRP_i$

$MGRP_i$ is the measurement gap repetition periodicity in positioning frequency layer *i*.

$T_{PRS,i}$ is the PRS resource periodicity in positioning frequency layer *i*. If the positioning frequency layer *i* has more than one DL PRS resource sets with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among DL PRS resource sets is used to derive $T_{PRS,i}$, where

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$ which is given by the higher-layer parameter *NR-MutingPattern-r16* included in *DL-PRS-MutingOption1-r16*

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources fully or partially covered by the MG are considered.

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{UERxTx,Total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data after both the *NR-Multi-RTT-RequestLocationInformation* message and *NR-Multi-RTT-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

For deferred MT-LR with other event than “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{UERxTx,Total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the PRS-RSRP measurement in each reporting period and activate the location report at the time when the periodic timer expires.

NOTE: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

The UE Rx-Tx time difference measurement period is restarted if HO occurs during the measurement period and after SRS reconfiguration on the target cell is complete.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or
- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

If during the measurement period of one or more positioning frequency layers, the MG pattern is reconfigured either per UE request or not per UE request, the measurement period can be longer.

The requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{UERxTx,Total}$ within measurement gaps due to collisions with other signals; otherwise, a longer measurement period may be used.

When PRS-RSRP is configured for multi-RTT, the UE Rx-Tx time difference measurements and PRS-RSRP measurements are performed over the same measurement period.

When PRS-RSRPP is configured for multi-RTT, the UE Rx-Tx time difference measurements and PRS-RSRPP measurements are performed over the same measurement period.

The requirements in clause 9.9.4 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-Multi-RTT-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

When PSCell or SCell addition or release does not cause SRS reconfiguration during the measurement period, UE continues the UE Rx-Tx time difference measurement, and the measurement period requirements apply.

When PSCell or SCell addition or release causes SRS reconfiguration during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration on the target cell is complete.

When SRS is reconfigured without serving cell change during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration is complete.If UE uplink transmission timing changes due to the network-configured Timing Advance command during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

When a serving cell change occurs during the measurement period, the UE shall continue and complete the UE Rx-Tx time difference measurement provided that the serving cell change does not impact SRS configuration for the UE Rx-Tx time difference measurement.

If UE uplink transmission timing changes due to the change in the N_{TA_offset} defined in table 7.1.2-2 during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the UE autonomous timing adjustment defined in clause 7.1.2 during the UE Rx-Tx time difference measurement period, then:

- UE Rx-Tx time difference measurement period requirements in this clause shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1.1) for SRS transmission.
- UE Rx-Tx time difference measurement period requirements in this clause shall not apply for a cell, which is not the downlink reference cell (defined in clause 7.1.1) for SRS transmission. The UE Rx-Tx time difference measurement period may be restarted in such case.

9.9.4.6 Measurement Period Requirements without Measurement Gaps

When physical layer receives last of *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34], UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.4.3) UE Rx-Tx time difference measurements as defined in TS 38.215 [4] in configured positioning frequency layers within the measurement period $T_{UERxTx_wo_gap,Total}$ ms.

$T_{UERxTx_wo_gap,\,Total} = \sum_{i=1}^{L} T_{UERxTx_wo_gap,i} + (L-1) * \max(T_{effect,i})$, if any of the positioning frequency layers are in Case 1, or

$T_{UERxTx_wo_gap,\,Total} = \max(T_{UERxTx_wo_gap,i} + T_{uncertainty,i})$, if all the positioning frequency layers are in Case 2.

Where,

i is the index of positioning frequency layer, and

L is total number of positioning frequency layers, and

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i, and

$T_{uncertainty,i}$ is the time from the start of the first PPW occasion for positioning frequency layer i to the start of measurement period $T_{UERxTx_wo_gap,\,Total}$.

A positioning frequency layer is in Case 1 if UE reports *ppw-durationOfPRS-Processing1-r17* for the band containing the positioning frequency layer, and a positioning frequency layer is in Case 2 if UE reports *ppw-durationOfPRS-Processing2-r17* for the band containing the positioning frequency layer.

$T_{UERxTx_wo_gap,i}$ is the measurement period for UE Rx-Tx time difference measurement in positioning frequency layer *i* as specified below.

$$T_{UERxTx_wo_gap,i} = \left(k_{multiTEG,i} * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last,i}$$

Where

$T_{effect,i}$ is the periodicity of the UE Rx-Tx time difference measurement in positioning frequency layer *i* as defined further in this clause.

$k_{multiTEG,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG,i}$=1 if UE is not supported *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* [34] in *NR-Multi-RTT-RequestLocationInformation*;

otherwise,

$k_{multiTEG,i}$ =$N_{TEG,i}$, if UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG,i}$ =$\left\lceil \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rceil$ if UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

where

$N_{TEG,i}$ is the number of Rx TEGs or RxTx TEGs with which UE is requested to measure a PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* [34] in *NR-Multi-RTT-RequestLocationInformation*, and in case 'n0' is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$N_{RxBeam,i}$ is the scaling factor for Rx beam sweeping, and $N_{RxBeam,i}$=1 if positioning frequency layer *i* is in FR1. If positioning frequency layer *i* is in FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-Multi-RTT-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$L_{available_PRS,i}$ is the time duration of available PRS resources in the positioning frequency layer *i*, to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$,

only the unmuted PRS resources that meet the applicability conditions and fully or partially overlapped with PRS processing window are considered, if positioning frequency layer i is in Case 1, or

only the PRS resources unmuted and fully or partially overlapped with the first (PPWL-T2) ms of PPW are considered, if positioning frequency layer i is in Case 2, where PPWL is the PPW length and T2 corresponds to *ppw-durationOfPRS-ProcessingSymbolsT2*.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *ppw-durationOfPRS-ProcessingSymbolsN* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponding to *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

- N' is UE capability for number of DL PRS resources that it can process in a slot corresponding to *ppw-maxNumOfDL-PRS-ResProcessedPerSlot* as specified in clause 6.4.3 of TS 37.355 [34],

- N_{sample} is the number of UE Rx-Tx time difference measurement samples:

  - N_{sample} = 1 if the UE is capable of *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* defined in [34] and LMF requests the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples* [34] and the following conditions are met:

    - PRS bandwidth is within the active BWP and

    - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.

- N_{sample}= 2 if the UE is capable of *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* defined in [34] and the LMF requests the UE to perform positioning measurements with reduced number of samples by *reducedDL-PRS-ProcessingSamples* [34] but the following conditions are not met:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample}= 4 otherwise.

- $T_{last,i}$ is the measurement duration for the last UE Rx-Tx time difference measurement sample in the positioning layer i, including the sampling time and processing time.

  If positioning frequency layer *i* is in Case 1 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i} = T_i$ +PPWL, else

  if positioning frequency layer *i* is in Case 2 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i}$ = PPWL;

  otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$.

- $T_{effect,i}$ is periodicity of UE Rx-Tx time difference measurement in positioning frequency layer *i*:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_{PRS},i}} \right\rceil * T_{available_{PRS},i}$$

where

T_i corresponds to *ppw-durationOfPRS-ProcessingSymbolsT* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponds to the sum of *ppw-durationOfPRS-ProcessingSymbolsT2* and *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

$T_{available_PRS,i} = LCM(T_{PRS,i}, PPWRP_i)$, the least common multiple between $T_{PRS,i}$ and $PPWRP_i$

$PPWRP_i$ is the PRS processing window repetition periodicity in positioning frequency layer *i*.

$T_{PRS,i}$ is the PRS resource periodicity in positioning frequency layer *i*. If the positioning frequency layer *i* has more than one DL PRS resource sets with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among DL PRS resource sets is used to derive $T_{PRS,i}$, where

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources that meet the applicability conditions and fully or partially covered by the PRS processing window are considered.

The time $T_{UERxTx_wo_gap,i}$ starts from the first PRS processing window instance aligned with DL PRS resources in the assistance data after both the *NR-Multi-RTT-RequestLocationInformation* message and *NR-Multi-RTT-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

The UE Rx-Tx time difference measurement period is restarted if HO occurs during the measurement period and after SRS reconfiguration on the target cell is complete.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or
- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

If during the measurement period of one or more positioning frequency layers, the PRS processing window is reconfigured or reactivated either per UE request or not per UE request, the measurement period can be longer.

The requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{UERxTx_wo_gap,i}$ within PRS processing window due to collisions with other signals; otherwise, a longer measurement period may be used.

When PRS-RSRP is configured for multi-RTT, the UE Rx-Tx time difference measurements and PRS-RSRP measurements are performed over the same measurement period.

When PRS-RSRPP is configured for multi-RTT, the UE Rx-Tx time difference measurements and PRS-RSRPP measurements are performed over the same measurement period.

The requirements in clause 9.9.4.6 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-Multi-RTT-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

When PSCell or SCell addition or release does not cause SRS reconfiguration during the measurement period, UE continues the UE Rx-Tx time difference measurement, and the measurement period requirements apply.

When PSCell or SCell addition or release causes SRS reconfiguration during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration on the target cell is complete.

When SRS is reconfigured without cell change during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration on the target cell is complete.

If UE uplink transmission timing changes due to the network-configured Timing Advance command during the UE Rx-Tx measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the change in the N_{TA_offset} defined in table 7.1.2-2 during the UE Rx-Tx measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the UE autonomous timing adjustment defined in clause 7.1.2 during the UE Rx-Tx time difference measurement period, then:

- UE Rx-Tx time difference measurement period requirements in this clause shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1.1) for SRS transmission.
- UE Rx-Tx time difference measurement period requirements in this clause shall not apply for a cell, which is not the downlink reference cell (defined in clause 7.1.1) for SRS transmission. The UE Rx-Tx time difference measurement period may be restarted in such case.

If any positioning frequency layer is in Case 2, the requirements in this clause apply provided that the PPWL corresponding to the positioning frequency layer is larger than (T2+X) ms.

The requirements in this clause apply provided that a single positioning frequency layer is configured for measurement in each PPW.

9.9.4.7 Void

9.9.4.8 Measurements Period Requirements with both MG and PPW

If the UE is configured with both MG applicable to positioning measurement and PPW, the UE shall measure positioning frequency layer *i* within

- MG, if PRS resources on positioning frequency layer *i* are overlapped with MG, or
- PPW, if PRS resources on positioning frequency layer *i* are overlapped with PPW.

The measurement period $T_{UERxTx,\ Total}$ is defined as:

$$T_{UERxTx,\ Total} = T_{UERxTx,Total,MG} + T_{UERxTx,Total,PPW} + T_{guard},$$

Where

- $T_{UERxTx,Total,MG}$ is defined in clause 9.9.4.5 and includes all positioning frequency layers to be measured within MG,
- $T_{UERxTx,Total,PPW}$ is defined in clause 9.9.4.6 and includes all positioning frequency layers to be measured within PPW,
- T_{guard} is the maximum T_{effect} defined in clauses 9.9.4.5 and 9.9.4.6 among all PFLs.

The requirements apply provided the following conditions are satisfied:

- MGs and PPWs do not overlap in time;
- Each PFL in the assistance data can be measured completely (all PRS resources) either within MG or within activated PPW.

9.9.4.9 Measurements Period Requirements with Bandwidth Aggregation

When UE physical layer receives last of *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34] with a request to perform measurement by aggregating PRS resources from multiple PFLs via *nr-DL-PRS-JointMeasurementRequestedPFL-List*, the UE shall be able to perform UE Rx-Tx time difference measurement by aggregating PRS resources from multiple PFLs (up to the UE capability specified in clause 9.9.2.3) defined in TS 38.215 [4], during the measurement period $T_{UE_RxTx_aggregated,\ Total}$ defined as:

$$T_{UE_RxTx_aggregated,\ Total} = T_{non\text{-}aggregate_RxTx} + T_{aggregated_RxTx} + T_{margin},$$

where,

$T_{non_aggregate_RxTx}$ is the total measurement period for UE Rx-Tx time difference measurement on PFLs that do not contain PRS resources for aggregation.

Calculation of $T_{non_aggregate}$ is based on clause 9.9.4.5 with the following exceptions,

- only PFLs containing resource set(s) not linked to any other resource set(s) are considered in L
- on each PFL i, only resource set(s) not linked to any other resource set(s) are considered in $T_{available_PRS,i}$, $N_{PRS,i}^{slot}$ and $L_{available_PRS,i}$
- N_{sample} = 2 if the UE supports the capability of positioning measurements with reduced number of samples as indicated by *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* specified in TS 37.355 [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples,
- $(L-1) * \max(T_{effect,i})$ is replaced by $(L-1) * T'_{margin}$.

$T_{non_aggregate_RxTx}$ is equal to zero if UE is not configured to perform non-aggregated measurements by the LMF.

$T_{aggregate_RxTx}$ is the total measurement period for UE Rx-Tx time difference measurements performed by UE by aggregating PRS resources from multiple PFLs as defined in TS 38.214 [26].

If UE is configured to perform measurements on PFLs that contain PRS resources for aggregation and on PFLs that do not contain PRS resources for aggregation, $T_{margin} = T'_{margin}$ is delay margin to account for delay between Rx-Tx time difference measurement performed by UE on PFLs that contain PRS resources for aggregation and Rx-Tx time difference measurement performed by UE on PFLs that do not contain PRS resources for aggregation.

If UE is only configured to perform measurements on PFLs that contain PRS resources for aggregation or if UE is only configured to perform measurements on PFLs that do not contain PRS resources for aggregation, then $T_{margin} = 0$.

$T'_{margin} = \max(Teffect, i)$, by considering both aggregated PFLs and non-aggregated PFLs configured for positioning measurement.

If UE is capable of performing latency reduced positioning measurements and is configured to perform latency reduced positioning measurement by LMF via *reducedDL-PRS-ProcessingSamples-r17* [34], then N_{sample} = 2 shall be considered in calculations of $T_{aggregate_RxTx}$ and $T_{non\text{-}aggregate_RxTx}$.

If UE is not capable to perform latency reduced positioning measurements or is not configured to perform latency reduced positioning measurement by LMF via *reducedDL-PRS-ProcessingSamples-r17* [34], then N_{sample} = 4 shall be considered in calculations of $T_{aggregate_RxTx}$ and $T_{non\text{-}aggregate_RxTx}$.

$T_{aggregate_RxTx}$, total measurement period for UE Rx-Tx time difference measurements performed by UE by aggregating PRS resources from multiple PFLs as defined in TS 38.214 [26], is defined as:

$$T_{aggregate_RxTx} = \sum_{i=1}^{G} T_{RxTx_aggregate,i} + (G-1) * T'_{margin} \quad ,$$

where

i is the index of effective PFL, corresponding to the group of PFLs containing linked PRS resource sets to be aggregated for UE Rx-Tx time difference measurement,

G denotes the number of effective PFLs that UE is configured to perform aggregated measurements on. G is configured by LMF and is provisioned to UE via *nr-DL-PRS-AggregationInfo*.

$T_{RxTx_aggregate,i}$ is the measurement period for UE Rx-Tx time difference measurement in the effective positioning frequency layer *i* as specified below:

$$T_{RxTx_aggregate,i} = \left(k_{multiTEG_agg,i} \times CSSF_{PRS_agg,i} \times ceil(K_{p,PRS_agg,i}) \times N_{RxBeam_agg,i} \times \left\lceil \frac{N^{slot}_{PRS_agg,i}}{N'_{agg}} \right\rceil \left\lceil \frac{L_{available_PRS_agg,i}}{N_{agg}} \right\rceil \times N_{sample_agg} - 1\right) \times T_{effect_agg,i} + T_{last_agg,i} \ ,$$

where:

$N_{RxBeam,i}$ is the UE Rx beam sweeping factor.

In FR1, $N_{RxBeam,i}$ = 1.

In FR2, $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing effective positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-Multi-RTT-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$CSSF_{PRS_agg,i}$ is the carrier-specific scaling factor for NR PRS-based positioning measurements in effective positioning frequency layer i as defined in clause 9.1.5.2.

$k_{multiTEG_agg,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG,i}$ = 1 if UE is not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] or *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* [34] in *NR-Multi-RTT-RequestLocationInformation*;

Otherwise,

$k_{multiTEG,i}$ = $N_{TEG,i}$, if UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG,i} = \left\lceil \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rceil$ if UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

where

$N_{TEG,i}$ is the number of Rx TEGs with which UE is requested to measure aggregated PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or *measureSameDL-PRS-ResourceWithDifferentRxTxTEGs-r17* [34] in *NR-Multi-RTT-RequestLocationInformation*, and in case 'n0' is

indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$K_{p,PRS_agg,i}$ is a scaling factor for effective positioning frequency layer i to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS_agg,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap, and $K_{p,PRS_agg,i} = 1$ for UE not configured with concurrent measurement gap.

For a window W of duration max($T_{PRS_agg,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the effective positioning frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion:

- N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and
- $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG collisions by applying the selected gap collision rule

- Requirements do not apply if $N_{available} = 0$.

$N^{slot}_{PRS_agg,i}$ is the maximum number of DL PRS resources in effective positioning frequency layer i configured in a slot.

$L_{available_PRS_agg,i}$ is the time duration of available PRS in the effective positioning frequency layer i to be measured during $T_{available_PRS_agg,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS_agg,i}$, only the PRS resources unmuted and fully or partially overlapped with MG and satisfying the conditions for PRS BW aggregation are considered.

N_{sample_agg} is the number of UE Rx-Tx time difference measurement samples.

$T_{last_agg,i}$ is the measurement duration for the last UE Rx-Tx time difference measurement sample in the effective positioning frequency layer i, including the sampling time and processing time. If all of the PRS resources to be measured are available in the same MG occasion during $T_{availabe_agg}$, $T_{last_agg,i} = T_{agg,i} + MGL$. Otherwise, $T_{last_agg,i} = T_{agg,i} + T_{available_PRS_agg,i}$,

$T_{effect_agg,i}$ is the periodicity of the UE Rx-Tx time difference measurement in the effective positioning frequency layer i defined as:

$$T_{effect_agg,i} = \left\lceil \frac{T_{agg,i}}{T_{available_PRS_agg,i}} \right\rceil \times T_{available_PRS_agg,i}$$

where,

$T_{available_PRS_agg,i} = LCM(T_{PRS_agg,i}, MGRP_i)$, the least common multiple between $T_{PRS_agg,i}$ and $MGRP_i$. $MGRP_i$ is the repetition periodicity of the measurement gap applicable for measurement in the effective PRS frequency layer i.

$T_{PRS_agg,i}$ is the periodicity of DL PRS resources meeting the bandwidth aggregation conditions with muting on effective positioning frequency layer i. If more than one PRS periodicities are configured in effective positioning frequency layer i, the least common multiple of PRS periodicities $T^{PRS\ with\ muting}_{per_agg}$ among all DL PRS resource sets in the effective positioning frequency layer is used to derive $T_{PRS_agg,i}$, where,

$T^{PRS\ with\ muting}_{per_agg} = N_{muting} \times T^{PRS}_{per_agg}$, is the PRS periodicity with muting per PRS resource configured for aggregation,

$T^{PRS}_{per_agg}$ is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS_agg} \times L_{muting}$, where $T_{muting}^{PRS_agg}$ is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

Note: For the purpose of calculating $T_{PRS_agg,i}$, only the PRS resources fully or partially covered by the MG and PRS resources that satisfy the conditions for PRS BW aggregation are considered.

$\{N_{agg}, T_{agg,i}\}$ is UE capability combination per band to aggregate PRS resources from multiple PFLs within an effective PFL where N_{agg} is a duration of DL PRS symbols in ms corresponding to *prs-durationOfTwoPRS-BWA-ProcessingSymbolsN* or *prs-durationOfThreePRS-BWA-ProcessingSymbolsN* in TS 37.355 [34] processed every $T_{agg,i}$ ms corresponding to *prs-durationOfTwoPRS-BWA-ProcessingSymbolsT* or *prs-durationOfThreePRS-BWA-ProcessingSymbolsT* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *maximumOfTwoAggregatedDL-PRS-Bandwidth* or *maximumOfThreeAggregatedDL-PRS-Bandwidth* in TS 37.355 [34]

N'_{agg} is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfAggregatedDL-PRS-ResourcePerSlot* specified in TS 37.355 [34].

The requirements in this clause for aggregated measurements apply provided that the linked PRS resource sets on multiple PFLs for aggregated measurements satisfy all the conditions specified in clause 5.1.6.5.3 in TS 38.214 [26].

Except for deferred MT-LR as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{UE_RxTx_aggregated,Total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data for aggregation after both the *NR-Multi-RTT-RequestLocationInformation* message and *NR-Multi-RTT-ProvideAssistanceData* message are delivered from LMF to the physical layer of UE via LPP [34] including a request to perform measurement by aggregating PRS resources from multiple PFLs via *nr-DL-PRS-JointMeasurementRequested*.

For deferred MT-LR with other event than "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{UE_RxTx_aggregated,Total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the aggregated UE Rx-Tx time difference measurement in each reporting period and activate the location report at the time when the periodic timer expires.

When PRS-RSRP is also reported by UE together with UE RX-Tx time difference measurement based on aggregated DL-PRS resources from multiple-PFLs, PRS-RSRP are performed over the measurement period defined in 9.9.4.9.

When PRS-RSRPP is also reported by UE together with UE Rx-Tx time difference measurement based on aggregated DL-PRS resources from multiple-PFLs, PRS-RSRPP are performed over the measurement period defined in 9.9.4.9.

If during the measurement period of one or more effective positioning frequency layers, the MG pattern is reconfigured, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{UE_RxTx_aggregated,Total}$ within measurement gaps due to collisions with other signals; otherwise, the measurement period can be longer.

The requirements in clause 9.9.4.9 do not apply if the PRS configuration given by higher layer parameters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-Multi-RTT-ProvideCapabilities*, and it is up to UE implementation which aggregated PRS resources are measured, subject to UE measurement capabilities.

When PSCell or SCell addition or release does not cause SRS reconfiguration during the measurement period, UE continues the UE Rx-Tx time difference measurement, and the measurement period requirements apply.

When PSCell or SCell addition or release causes SRS reconfiguration during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration on the target cell is complete.

When SRS is reconfigured without serving cell change during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration is complete. If UE uplink transmission timing changes due to the network-configured Timing Advance command during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

When a serving cell change occurs during the measurement period, the UE shall continue and complete the UE Rx-Tx time difference measurement provided that the serving cell change does not impact SRS configuration for the UE Rx-Tx time difference measurement.

If UE uplink transmission timing changes due to the change in the N_{TA_offset} defined in table 7.1.2-2 during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the UE autonomous timing adjustment defined in clause 7.1.2 during the UE Rx-Tx time difference measurement period, then:

- UE Rx-Tx time difference measurement period requirements in this clause shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1.1) for SRS transmission.
- UE Rx-Tx time difference measurement period requirements in this clause shall not apply for a cell, which is not the downlink reference cell (defined in clause 7.1.1) for SRS transmission. The UE Rx-Tx time difference measurement period may be restarted in such case.

The UE shall meet the UE Rx-Tx time difference measurement accuracy requirements in clause 10.1.25A.2.

9.9.5 E-CID measurements

9.9.5.1 Introduction

The requirements in clause 9.9.5 shall apply provided the UE has received *nr-ECID-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to report one or more of the following measurements for NR E-CID positioning [22]: SS-RSRP, SS-RSRQ, CSI-RSRP, and CSI-RSRQ.

9.9.5.2 Measurement Requirements

9.9.5.2.1 Intra-frequency Measurement Requirements

The intra-frequency NR E-CID measurements shall meet the requirements in clause 9.2 and clause 9.10.2, except the measurement reporting requirements. The NR E-CID measurement reporting requirements are defined in clause 9.9.5.2.3.

The reported intra-frequency NR E-CID measurements shall also meet:

- for FR1 SS-RSRP, the accuracy requirements in clause 10.1.2.1,
- for FR1 SS-RSRQ, the accuracy requirements in clause 10.1.7.1,
- for FR1 CSI-RSRP, the accuracy requirements in clause 10.1.2.3,
- for FR1 CSI-RSRQ, the accuracy requirements in clause 10.1.7.2,
- for FR2 SS-RSRP, the accuracy requirements in clause 10.1.3.1,
- for FR2 SS-RSRQ, the accuracy requirements in clause 10.1.8.1,
- for FR2 CSI-RSRP, the accuracy requirements in clause 10.1.3.3,
- for FR2 CSI-RSRQ, the accuracy requirements in clause 10.1.8.2.

9.9.5.2.2 Inter-frequency Measurement Requirements

The inter-frequency NR E-CID measurements shall meet the requirements in clause 9.3 and 9.10.4, except the measurement reporting requirements. The NR E-CID measurement reporting requirements are defined in clause 9.9.5.2.3.

The reported inter-frequency NR E-CID measurements shall also meet:

- for FR1 SS-RSRP, the accuracy requirements in clause 10.1.4.1,
- for FR1 SS-RSRQ, the accuracy requirements in clause 10.1.9.1,
- for FR1 CSI-RSRP, the accuracy requirements in clause 10.1.4.3,
- for FR1 CSI-RSRQ, the accuracy requirements in clause 10.1.9.2,
- for FR2 SS-RSRP, the accuracy requirements in clause 10.1.5.1,
- for FR2 SS-RSRQ, the accuracy requirements in clause 10.1.10.1,
- for FR2 CSI-RSRP, the accuracy requirements in clause 10.1.5.3,
- for FR2 CSI-RSRQ, the accuracy requirements in clause 10.1.10.2.

9.9.5.2.3 Measurement Reporting Delay

The measurement reporting delay is defined as the time between the moment when the periodic measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The reported NR E-CID measurement values contained in periodically triggered measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.6 for SS-RSRP and CSI-RSRP, and clause 10.1.11 for SS-RSRQ and CSI-RSRQ.

The UE shall not send any measurement reports as long as no corresponding reporting criteria specified in clause 9.1.4 are fulfilled.

9.9.6 PRS-RSRPP measurements

9.9.6.1 Introduction

The requirements in clause 9.9.6.5 shall apply when UE is performing PRS measurement in the configured MG and provided the UE has received a message from LMF via LPP requesting the UE to measure and report PRS-RSRPP measurements defined in TS 38.215 [4].

The requirements in clause 9.9.6.6 shall apply when UE is performing PRS measurement without gap and provided the UE has received a message from LMF via LPP requesting the UE to measure and report PRS-RSRPP measurements defined in TS 38.215 [4].

9.9.6.2 Requirements applicability

The requirements in clause 9.9.6 apply for periodic and triggered PRS-RSRPP measurements, provided:

- PRS-RSRPP related side conditions given in clause 10.1.38 are met for a corresponding band.

9.9.6.3 Measurement capability

UE PRS-RSRPP measurement capability is as indicated by the UE in *NR-DL-AoD-ProvideCapabilities* according to TS 37.355 [34].

9.9.6.4 Measurement reporting requirements

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes the delay uncertainty caused by inserting the measurement report into the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot

when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The reported PRS-RSRPP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clauses 10.1.38.3.

The PRS-RSRPP measurement accuracy for all measured PRS resources shall be fulfilled according to the accuracy requriements specified in the clauses 10.1.38.2.

9.9.6.5 Measurement period requirements

For PRS measurement within MG configured to UE, measurement period requirements for PRS-RSRP defined in clause 9.9.3.5 is re-used for PRS-RSRPP.

9.9.6.6 Measurement Period Requirements without Measurement Gaps

For PRS measurement without MG configured to UE, measurement period requirements for PRS-RSRP defined in clause 9.9.3.6 is re-used for PRS-RSRPP.

The PRS-RSRPP measurement requirements in this clause apply for the first path PRS-RSRP measurement.

9.9.6.7 Void

9.9.6.8 Measurements Period Requirements with both MG and PPW

If the UE is configured with both MG applicable to positioning measurement and PPW, the measurement period requirements for PRS-RSRP defined in clause 9.9.3.8 is re-used for PRS-RSRPP.

9.9.7 Measurement requirements for DL RSCPD reported with RSTD

9.9.7.1 Introduction

The requirements in clause 9.9.7 shall apply provided the UE has received *NR-DL-TDOA-RequestLocationInformation* message with *dl-PRS-RSCPD-Request-r18* from LMF via LPP [34] requesting the UE to measure and report RSCPD measurement together with DL RSTD measurements defined in TS 38.215 [4].

9.9.7.2 Requirements Applicability

The requirements in clause 9.9.7 apply for periodic and triggered reporting of RSCPD with RSTD measurements, provided:

- PRS-RSTD related side conditions given in clause 10.1.23 for FR1 and FR2 are fulfilled, for a corresponding band.
- RSCPD related side conditions given in clause 10.1.43.2 for FR1 and FR2 are fulfilled, for a corresponding band.

9.9.7.3 Measurement Capability

UE PRS RSTD and RSCPD measurement capabilities are as indicated by the UE in *NR-DL-TDOA-ProvideCapabilities*, according to TS 37.355[34].

9.9.7.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the periodic measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot

when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The reported RSTD measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.23.3.

The reported RSCPD measurement values contained in the measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.43.3.

The RSTD measurements performed and reported according to this clause shall meet the RSTD measurement accuracy requirements in clause 10.1.23, for the measured DL PRS resource.

The RSCPD measurements performed and reported according to this clause shall meet the RSCPD measurement accuracy requirements in clause 10.1.43.2, for the measured DL PRS resource.

9.9.7.5 Measurements Period Requirements for DL RSCPD reported with RSTD

After receiving both *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message with *dl-PRS-RSCPD-Request-r18* from the LMF via LPP [34], the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.7.3) DL RSTD and RSCPD measurements, defined in TS 38.215 [4], during the time window only.

When LMF does not configure measurement time window(s):

- When a single PFL, requirements in clause 9.9.2.5 apply to both RSCPD and RSTD measurements.
- When multiple PFLs are configured for legacy measurements, the UE performs RSCPD measurement on a single PFL that is common between the reference TRP and the target TRP. The requirement in clause 9.9.2.5 apply to both RSTD and RSCPD measurements.

When LMF configures measurement time window(s), but UE does not support performing RSCPD measurement inside the indicated time window subject to *supportOfMeasurementsInTimeWindow*:

- The UE performs RSCPD measurement on the indicated PFL by the network. The requirement in clause 9.9.2.5 apply to both RSTD and RSCPD measurements.

When LMF configures measurement time window(s), but UE does not support performing RSTD measurement inside the indicated time window but supports performing RSCPD measurement inside the indicated time window subject to *supportOfMeasurementsInTimeWindow*:

- The requirements in the clause 9.9.2.5 apply to RSTD measurements.
- The requirements in clause 9.9.7.5 apply to RSCPD measurement for the PRS resource(s) that have occasions only within the measurement time window.

When LMF configures measurement time window(s), and UE supports performing both RSTD and RSCPD measurement inside the indicated time window subject to *supportOfMeasurementsInTimeWindow*:

- The requirements in Clause 9.9.7.5 apply to DL RSTD measurement and DL RSCPD measurement.

If a one-shot time window is configured, the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.7.3) DL RSTD and DL RSCPD measurements, defined in TS 38.215 [4], based on the indicated PRS resource sets occurring inside the one-shot time window during the measurement period $T_{RSCPD\ with\ RSTD,Total}$ defined as:

$$T_{RSCPD\ with\ RSTD,Total} = \min(L_{window}, \mathrm{MGL}) + T_i \ ,$$

and the UE shall be able to measure multiple DL RSTD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSTD,Total,with\ one\ shot\ window}$ defined as:

$$T_{RSTD,Total,with\ one\ shot\ window} = T_{RSCPD\ with\ RSTD,Total} + max\left(T_{effect,i}\right) + T_{RSTD,Total} \ ,$$

where:

- the start of the measurement is the start of the one-shot time window, and
- L_{window} is the length of the one-shot window, and

- $T_{effect,i}$ and T_i are defined in the following of this clause, and
- $T_{RSTD,Total}$ is defined in clause 9.9.2.5, and
- MGL is the measurement gap length.

The requirements with one-shot window assume scaling factors equal 1 for the PFLs, for which the one-shot time window is configured.

If a periodic time window is configured, the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.7.3) RSTD and DL RSCPD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSCPD\ with\ RSTD,Total}$ defined as:

$$T_{\text{RSCPD with RSTD,Total}} = \sum_{i=1}^{L} T_{\text{RSCPD with RSTD,i}} + (L-1) * \max\left(T_{\text{effect,i}}\right)$$

where:

- i is the index of positioning frequency layer,
- L is total number of positioning frequency layers, and
- $T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i

$T_{\text{RSCPD with RSTD,i}}$ is the measurement period for PRS RSTD with RSCPD measurement in positioning frequency layer i as specified below:

$$T_{\text{RSCPD with RSTD,i}} = \left(k_{multiTEG,i} \times \text{CSSF}_{\text{PRS,i}} \times \text{ceil}(K_{p,\text{PRS,i}}) \times N_{RxBeam,i} \times \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil \times N_{sample} - 1\right) \times T_{\text{effect,i}} + T_{\text{last,i}},$$

where:

DL-RSCPD measurement performed during $T_{\text{RSCPD with RSTD,i}}$ is a single sample measurement. The DL-RSCPD measurement of reference TRP and the target TRP is performed on the same PFL.

$N_{RxBeam,i}$, $CSSF_{PRS,i}$, $k_{multiTEG,i}$, $N_{PRS,i}^{slot}$, N, N', $T_{\text{effect,i}}$, and $T_{\text{last,i}}$ are defined in clause 9.9.2.5.

N_{sample} = 1 or 2 or 4 as defined in clause 9.9.2.5.

$L_{available_{PRS},i}$ is the time duration of available PRS in the positioning frequency layer to be measured during $T_{available_{PRS},i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26].

When periodic time window(s) are configured by the LMF and PFL i is associated with the configured time window, $T_{available_{PRS},i} = LCM(T_{prs,i}, MGRP, T_{window})$, the least common multiple between $T_{prs,i}$, $MGRP$ and T_{window}, T_{window} being the maximum periodicity of the indicated time window(s).

When the periodic time window(s) are configured by the LMF and the PFL i is not associated with the configured time window, $T_{available_{PRS},i} = LCM(T_{prs,i}, MGRP)$.

$T_{prs,i}$ and $MGRP$ are defined in clause 9.9.2.5.

$L_{available_{PRS},i}$ and $T_{prs,i}$ are calculated by only considering the PRS resources in the indicated resources sets overlapping with both the MG and the indicated time window(s).

$K_{p,\text{PRS,i}}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,\text{PRS,i}} = N_{\text{total}} / N_{\text{available}}$ for UE configured with concurrent measurement gap, and $K_{p,\text{PRS,i}} = 1$ for UE not configured with concurrent measurement gap.

When periodic time window(s) are configured by the LMF, for a window W of duration max($T_{PRS,i}$, MGRP_max, T_{window}), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion and the periodic time window:

N_{total} is the total number of associated gap occasions covering PRS occasions and the periodic time window(s) within the window W, including both dropped and non-dropped instances of the associated measurement gap within the window W, and

$N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions and the periodic time window(s) within the window W, after further accounting for MG collisions by applying the selected gap collision rule.

Requirements do not apply if $N_{available}$ =0.

Otherwise, for a window W of duration max($T_{PRS,i,}$ MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion:

N_{total} is the total number of associated gap occasions covering PRS occasions within the window W, including both dropped and non-dropped instances of the associated measurement gap within the window, and

$N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG collisions by applying the selected gap collision rule

Requirements do not apply if $N_{available}$ =0.

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{RSCPD\ with\ RSTD}$ starts from the first time window (T_{RSCPD}) configured by LMF within MG instance aligned with a DL PRS resource(s) in the assistance data after both the *NR-TDOA-ProvideAssistanceData* message and *NR-TDOA-RequestLocationInformation* message are delivered from LMF to the physical layer of UE via LPP [34].

For deferred MT-LR with other event than “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{RSCPD\ with\ RSTD}$ starts from the first time window (T_{RSCPD}) configured by LMF within MG instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the RSCPD with RSTD measurement in each reporting period within the time window(T_{RSCPD}) configured by LMF within MG instance and activate the location report at the time when the periodic timer expires.

If during the measurement period, the MG pattern is reconfigured or time window (T_{RSCPD}) for RSCPD measurement is reconfigured, the measurement period can be longer.

When PRS-RSRP is also configured to UE, RSCPD with RSTD and RSRP are performed over the same measurement period.

When PRS-RSRPP is also configured to UE, RSCPD with RSTD and RSRPP are performed over the same measurement period.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{RSCPD\ with\ RSTD,i}$ within measurement gaps due to collisions with other signals; otherwise, the measurement period can be longer.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource, if the PRS resource is across two sampling duration of N within duration $L_{available_{PRS,i}}$.

The measurement requirements do not apply for a PRS resource, if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in clause 9.9.7 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-TDOA-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while RSTD and RSCPD measurements are being performed together by UE, then the UE shall continue and complete the on-going RSTD and RSCPD measurements. The measurement period for RSCPD with

RSTD measurement can be longer. The UE shall meet the RSTD measurement accuracy requirements in clause 10.1.23. The UE shall also meet the RSCPD measurement accuracy requirements in clause 10.1.43.2.

9.9.8 Measurement requirements for DL RSCP reported with UE Rx-Tx time difference

9.9.8.1 Introduction

The requirements in this clause shall apply, provided the UE has received *nr-Multi-RTT-RequestLocationInformation* message with *dl-PRS-RSCP-Request-r18* from LMF via LPP [34] requesting the UE to measure and report one or more DL RSCP measurements together with UE Rx-Tx time difference measurements defined in TS 38.215 [4].

9.9.8.2 Requirements Applicability

The requirements in clause 9.9.8 apply for periodic and triggered UE Rx-Tx time difference measurements, provided:

- UE Rx-Tx time difference measurement related side conditions given in clause 10.1.25 are met for a corresponding band.
- DL RSCP related side conditions given in clause 10.1.44.2 for FR1 and FR2 are fulfilled, for a corresponding band.
- SRS is configured on at least one of the PCell, PSCell and SCell.
- The UE transmits SRS within the range from -160 ms to 160 ms of at least one DL PRS resource of each of the TRPs in the assistance data.

9.9.8.3 Measurement Capability

UE Rx-Tx time difference and DL-RSCP measurement capabilities are as indicated by the UE in *NR-Multi-RTT-ProvideCapabilities*, according to TS 37.355 [34].

9.9.8.4 Measurement Reporting Requirements

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The UE Rx-Tx time difference measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.25.

The DL RSCP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.44.

The UE Rx-Tx time difference measurement accuracy for all measured DL PRS resources shall be fulfilled according to the accuracy requirements specified in clause 10.1.25.

The DL RSCP measurement accuracy for all measured DL PRS resources shall be fulfilled according to the accuracy requirements specified in clause 10.1.44.

9.9.8.5 Measurement Period Requirements for DL RSCP and UE Rx-Tx time difference

When the physical layer receives the last of *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34] with *dl-PRS-RSCP-Request-r18* and is configured with a measurement time window via *nr-DL-PRS-MeasurementTimeWindowsConfig*, subject to UE capabilities *supportOfMeasurementsInTimeWindow*, the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.8.3) UE Rx-Tx time difference and DL RSCP measurements, defined in TS 38.215 [4], during the time window only.

When LMF does not configure measurement time window(s):

- When a single PFL is configured, requirements in clause 9.9.4.5 apply to both RSCP and UE Rx-Tx time difference measurements.
- When multiple PFLs are configured for legacy measurements, the UE performs RSCP measurement on a single PFL that is common between the reference TRP and the target TRP. The requirement in clause 9.9.4.5 apply to both RSCP and UE Rx-Tx time difference measurements.

When LMF configures measurement time window(s), but UE does not support performing RSCP measurement inside the indicated time window subject to *supportOfMeasurementsInTimeWindow*:

– The UE performs RSCP measurement on the indicated PFL by the network. The requirement in clause 9.9.4.5 apply to both UE Rx-Tx and RSCP measurements.

When LMF configures measurement time window(s), but UE does not support performing UE Rx-Tx measurement inside the indicated time window but supports performing RSCP measurement inside the indicated time window subject to *supportOfMeasurementsInTimeWindow*:

The requirements in the clause 9.9.4.5 apply to UE Rx-Tx time difference measurement.

The requirements in clause 9.9.8.5 apply to RSCP measurement for the PRS resource(s) that have occasions only within the measurement time window.

When LMF configures measurement time window(s), and UE supports performing both UE Rx-Tx measurement and RSCP measurement inside the indicated time window subject to *supportOfMeasurementsInTimeWindow*:

- The requirements in Clause 9.9.8.5 apply to UE Rx-Tx time difference measurement and DL RSCP measurement.

If a one-shot time window is configured, the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.8.3) UE Rx-Tx time difference and DL RSCP measurements, defined in TS 38.215 [4], based on the indicated PRS resource sets occurring inside the one-shot time window during the measurement period $T_{\text{DL RSCP with UERxTx,Total}}$ defined as:

$$T_{\text{DL RSCP with UERxTx,Total}} = \min(L_{window}, \text{MGL}) + T_i \quad ,$$

and the UE shall be able to measure multiple UE Rx-Tx time difference measurements, defined in TS 38.215 [4], during the measurement period $T_{UERxTx,Total,with\ one\ shot\ window}$ defined as:

$$T_{UERxTx,Total,with\ one\ shot\ window} = T_{\text{DL RSCP with UERxTx,Total}} + max(T_{effect,i}) + T_{UERxTx,Total}$$

Where:

- the start of the measurement is the start of the one-shot time window, and
- L_{window} is the length of the one-shot window, and
- $T_{\text{effect},i}$ and T_i are defined in the following of this clause, and
- $T_{UERxTx,Total}$ is defined in clause 9.9.4.5, and
- MGL is the measurement gap length.

The requirements with one-shot window assume scaling factors equal to 1 for the PFLs, for which the one-shot time window is configured.

If a periodic time window is configured, the UE shall be able to measure multiple (up to the UE capability specified in clause 9.9.8.3) UE Rx-Tx and DL RSCP measurements, defined in TS 38.215 [4], during the measurement period $T_{RSCP\ with\ UERxTx,Total}$ defined as:

$$T_{\text{DL RSCP with UERxTx,Total}} = \sum_{i=1}^{L} T_{\text{DL RSCP with UERxTx,i}} + (L-1) * \max(T_{\text{effect,i}}),$$

where:

- i is the index of positioning frequency layer,

- L is total number of positioning frequency layers, and
- $T_{effect,i}$ is the periodicity of the UE Rx-Tx time difference measurement in positioning frequency layer *i*.

$T_{\text{DL RSCP with UERxTx,i}}$ is the measurement period for DL RSCP with UE Rx-Tx measurement in positioning frequency layer *i* as specified below:

$$T_{\text{DL RSCP with UERxTx,i}} = \left(k_{multiTEG,i} * \text{CSSF}_{\text{PRS,i}} * \text{ceil}(K_{p,PRS,i}) * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_{PRS},i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last,i},$$

where:

- DL RSCP performed during $T_{\text{DL RSCP with UERxTx}}$ is a single sample measurement where DL RSCP and UE Rx-Tx measurements are performed on the same PFL.
- $N_{RxBeam,i}$, $CSSF_{PRS,i}$, $k_{multiTEG,i}$, N_{sample}, $N_{PRS,i}^{slot}$, N, N', $T_{effect,i}$, and $T_{last,i}$ are defined in clause 9.9.4.5.
- N_{sample} = 1 or 2 or 4 as defined in clause 9.9.4.
- $K_{p,PRS,i}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap, and $K_{p,PRS,i} = 1$ for UE not configured with concurrent measurement gap.

  When periodic time window(s) are configured by the LMF, for a window W of duration max($T_{PRS,i}$, MGRP_max, T_{window}), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion and the periodic time window:

  N_{total} is the total number of associated gap occasions covering PRS occasions and the periodic time window(s) within the window W, including both dropped and non-dropped instances of the associated measurement gap within the window W, and

  $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions and the periodic time window(s) within the window W, after further accounting for MG collisions by applying the selected gap collision rule.

  Requirements do not apply if $N_{available}$ =0.

  Otherwise, for a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion:

  N_{total} is the total number of associated gap occasions covering PRS occasions within the window W, including both dropped and non-dropped instances of the associated measurement gap within the window W, and

  $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG collisions by applying the selected gap collision rule

  Requirements do not apply if $N_{available}$ =0.

- $L_{available_PRS,i}$ is the time duration of available PRS resources in the positioning frequency layer, to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26].
- When periodic time window(s) are configured by the LMF and PFL *i* is associated with the configured time window, $T_{available_PRS,i} = LCM(T_{prs,i}, MGRP, T_{window})$, the least common multiple between $T_{prs,i}$, MGRP , and T_{window}, T_{window} being the maximum periodicity of the indicated time window(s).
- When periodic time window(s) are configured by the LMF and the PFL *i* is not associated with the configured time window, $T_{available_PRS,i} = LCM(T_{prs,i}, MGRP)$.
- $T_{prs,i}$ and MGRP are defined in clause 9.9.8.5.

- $L_{available_PRS,i}$ and $T_{prs,i}$ are calculated by only considering the PRS resources in the indicated resources sets overlapping with both the MG and the indicated time window(s).

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{\text{DL RSCP with UERxTx}}$ starts from the first time window ($T_{\text{DL RSCP}}$) configured by LMF within MG instance aligned with DL PRS resource(s) in the assistance data after both the *NR-Multi-RTT-RequestLocationInformation* message and *NR-Multi-RTT-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

For deferred MT-LR with other event than "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{\text{DL RSCP with UERxTx}}$ starts from the first time window ($T_{\text{DL RSCP}}$) configured by LMF within MG instance aligned with DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the DL RSCP with UE Rx-Tx time difference measurement in each reporting period and activate the location report at the time when the periodic timer expires.

The DL RSCP with UE Rx-Tx time difference measurement period is restarted if HO occurs during the measurement period and after SRS reconfiguration on the target cell is complete.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS}$ or

- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

If during the measurement period of the positioning frequency layer, the MG pattern is reconfigured either per UE request or not per UE request, the measurement period can be longer.

The requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{\text{DL RSCP with UERxTx}}$ within measurement gaps due to collisions with other signals; otherwise, a longer measurement period may be used.

When PRS-RSRP is configured for multi-RTT,with a request to perform RSCP with UE Rx-Tx time difference measurement, the UE Rx-Tx time difference measurements and PRS-RSRP measurements are performed over the same measurement period.

When PRS-RSRPP is configured for multi-RTT with a request to perform RSCP with UE Rx-Tx time difference measurement, RSCP with UE Rx-Tx time difference measurements and PRS-RSRPP measurements are performed over the same measurement period.

The requirements in clause 9.9.8 do not apply if the PRS configuration given by higher layer parameters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-Multi-RTT-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

When PSCell or SCell addition or release does not cause SRS reconfiguration during the measurement period, UE shall continue and complete the DL RSCP and UE Rx-Tx time difference measurements, and the measurement period requirements apply.

When PSCell or SCell addition or release causes SRS reconfiguration during the measurement period, UE shall restart the DL RSCP and UE Rx-Tx time difference measurement after the SRS reconfiguration on the target cell is complete.

When SRS is reconfigured without serving cell change during the measurement period, UE shall restart the DL RSCP and UE Rx-Tx time difference measurement after the SRS reconfiguration is complete.

When a serving cell change occurs during the measurement period, the UE shall restart DL RSCP and UE Rx-Tx time difference measurements.

If UE uplink transmission timing changes due to the network-configured Timing Advance command during the measurement period, then the DL RSCP with UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the DL RSCP and UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the change in the N_{TA_offset} defined in table 7.1.2-2 during the measurement period, then the DL RSCP with UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the DL RSCP and UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the UE autonomous timing adjustment defined in clause 7.1.2 during the measurement period, then:

- DL RSCP and UE Rx-Tx measurement period requirements in this clause shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1.1) for SRS transmission.
- DL RSCP and UE Rx-Tx measurement period requirements in this clause shall not apply for a cell, which is not the downlink reference cell (defined in clause 7.1.1) for SRS transmission. The DL RSCP with UE Rx-Tx time difference measurement period may be restarted in such case.

9.9A NR measurements for positioning for RedCap

9.9A.1 Introduction

This clause contains requirements for RedCap UE capable of performing NR positioning measurements defined in TS 38.215 [4], including RSTD, PRS-RSRP, UE Rx-Tx time difference, and PRS-RSRPP measurements.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

This clause applies to both RedCap positioning with and without FH.

9.9A.1.1 General Aspects of Gap-based Measurement

For gap-based RSTD, PRS-RSRP, UE Rx-Tx time difference, and PRS-RSRPP measurements, the requirements in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5 apply provided:

- the RedCap UE is configured or pre-configured with measurement gaps or configured with concurrent measurement gaps
  - all positioning frequency layers are measured or associated with only one per-UE measurement gap, or
- for the RedCap UE supporting *independentGapConfigPRS-r17*, all positioning frequency layers in the same FR are measured or associated with only one per-FR measurement gap in the corresponding FR.
- if the measurement gap is pre-configured, the gap must be activated throughout the measurement period, and
- if concurrent measurement gaps are configured, one of the gap combinations specified in clause 9.1.8.2 is configured, and
- if the RedCap UE does not support *independentGapConfigPRS-r17*, the configured or pre-configured gap used to perform the PRS measurements must be of per-UE type, and
- No active BWP switching occurs during the measurement gaps for PRS measurement, and

All measurement requirements specified in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

RedCap UE is only required to measure PRS resources that are fully or partially overlapped with measurement gaps, and the requirements in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5 are applicable to PRS resources that are fully or partially overlapped with measurement gaps.

A PRS resource is considered to be fully (partially) overlapped with measurement gaps if all (some) of its instances are overlapped with a measurement gap occasion. A PRS resource instance is considered to be overlapped with measurement gap occasion if the minimum number of unmuted repetitions of the instance taking into account *nr-DL-PRS-ExpectedRSTD-Uncertainty* and *nr-DL-PRS-ExpectedRSTD* is fully covered by the MGL excluding RF switching time, where

- the minimum number is given in the accuracy requirements without FH for 2Rx RedCap UEs in clause 10.1.23.2 for RSTD measurement, 10.1.24.2 for PRS-RSRP measurement, 10.1.25.2 for UE Rx-Tx time difference measurement, and 10.1.38.2 for PRS-RSRPP measurement,

- the minimum number is given in the accuracy requirements without FH for 1Rx RedCap UEs in clause 10.1A.16.2.1 for RSTD measurement, 10.1A.17.2 for PRS-RSRP measurement, 10.1A.18.2.2 for UE Rx-Tx time difference measurement, and 10.1A.19.2 for PRS-RSRPP measurement,

- the minimum number is given in the accuracy requirements with FH for 2Rx RedCap UEs in clause 10.1A.16.2.2 for RSTD measurement, 10.1A.17.2 for PRS-RSRP measurement, 10.1A.18.2.3 for UE Rx-Tx time difference measurement, and 10.1A.19.2 for PRS-RSRPP measurement,and

- the minimum number is given in the accuracy requirements with FH for 1Rx RedCap UEs in clause 10.1A.16.2.2 for RSTD measurement, 10.1A.17.2 for PRS-RSRP measurement, 10.1A.18.2.4 for UE Rx-Tx time difference measurement, and 10.1A.19.2 for PRS-RSRPP measurement.

When RedCap UE is configured with measurement for more than one positioning requests, the measurement period for each request may be longer than measurement period when RedCap UE is configured with measurement for single positioning request.

If a positioning measurement gap is configured via *PosGapConfig* and activated by MAC CE, the measurement requirements in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5 apply provided that no other MGs are configured, and only one measurement gap configured via *PosGapConfig* is activated.

9.9A.1.2 General Aspects of Gapless Measurement for RedCap positioning without FH

The requirements for RSTD, PRS-RSRP, UE Rx-Tx time difference, and PRS-RSRPP measurement without measurement gaps specified in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5 shall apply provided that:

- Positioning frequency layer to be measured is within an active BWP,

- UE is configured with PPW, and the PPW for the active BWP containing the positioning frequency layer to be measured is activated,

- No active BWP switching occurs during the measurement period specified in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5,

- PRS is within PPW and does not overlap with other signals/channels of higher priority,

  - for PPW type 1A/1B, the PPW does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,

  - for PPW type 2, PRS does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,

- $\max | \Delta T | \leq \text{THR}$, where

  - ΔT is the time difference between the start of a slot containing PRS from the neighbor cell/TRP and the start of the closest slot from the serving cell;

  - the range of ΔT is determined by the expected RSTD and expected RSTD uncertainty in the assistance data;

  - THR is the threshold as reported in UE capability *prs-MeasurementWithoutMG-r17*.

- SCS of PRS within PPW and SCS of DL active BWP are the same.

All measurement requirements specified in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

The UE is not required to perform additional SSB measurement for the SSB configured as QCL source of PRS resources.

The UE is only required to measure PRS resources that are unmuted and fully or partially overlapped with PPW, and the requirements in clauses 9.9A.2, 9.9A.3, 9.9A.4 and 9.9A.5 are applicable to PRS resources that are unmuted and fully or partially overlapped with PPW.

A PRS resource is considered to be fully (partially) overlapped with PPW if all (some) of its instances are overlapped with a PPW occasion. A PRS resource instance is considered to be overlapped with PPW occasion if the minimum number of unmuted repetitions of the instance taking into account Rx time difference between serving and non-serving cell is fully covered by the PPW , where

- the minimum number is given in the accuracy requirements without FH for 2Rx RedCap UEs in clauses 10.1.23.2 for RSTD measurement, 10.1.24.2 for PRS-RSRP measurement, 10.1.25.2 for UE Rx-Tx time difference measurement, and 10.1.38.2 for PRS-RSRPP measurement, and

- the minimum number is given in the accuracy requirements without FH for 1Rx RedCap UEs in clauses 10.1A.16.2.1 for RSTD measurement, 10.1A.17.2 for PRS-RSRP measurement, 10.1A.18.2.2 for UE Rx-Tx time difference measurement, and 10.1A.19.2 for PRS-RSRPP measurement.

When UE is configured with measurement for more than one positioning requests, the measurement period for each request may be longer than measurement period when UE is configured with measurement for single positioning request.

9.9A.1.3 Scheduling Availability of UE during PRS Measurement without Measurement Gaps for RedCap positioning without FH

The requirements in this clause apply for RedCap UE performing RSTD, PRS-RSRP, UE Rx-Tx time difference and PRS-RSRPP measurement without measurement gaps.

If *prs-ProcessingWindowType1A-r17* UE capable of supporting priority options 1, 2 and 3 is configured with a *type1A* PRS processing window with priority value '*st1*' for PRS measurement, then UE is not expected to receive PDCCH/PDSCH/CSI-RS on all symbols within PRS processing window.

If *prs-ProcessingWindowType1A-r17* UE capable of supporting priority option 2 is configured with a *type1A* PRS processing window with priority state '*st2*' for PRS measurement, then UE is not expected to receive PDSCH/CSI-RS on all symbols within PRS processing window but shall receive PDCCH and URLLC PDSCH within PRS processing window.

If *prs-ProcessingWindowType1B-r17* UE capable of supporting priority options 1, 2 and 3 is configured with a *type1B* priority value '*st1*' for PRS measurement, then UE is not expected to receive PDCCH/PDSCH/CSI-RS from serving cells in the same band as DL PRS on all symbols within PRS processing window.

If *prs-ProcessingWindowType1B-r17* UE capable of supporting priority option 2 is configured with a *type1B* PRS processing window with priority value '*st2*' for PRS measurement, then UE is not expected to receive PDSCH/CSI-RS from a certain band but shall receive PDCCH and URLLC PDSCH from serving cells in the same band as DL PRS on all symbols within PRS processing window.

If *prs-ProcessingWindowType2-r17* UE capable of supporting priority options 1, 2 and 3 is configured with a *type2* PRS processing window with priority value '*st1*' for PRS measurement, then the UE is not expected to receive PDCCH/PDSCH/CSI-RS on the symbols overlapped with DL PRS within PRS processing window.

If *prs-ProcessingWindowType2-r17* UE capable of supporting priority option 2 is configured with a *type2* PRS processing window with priority value '*st2*' for PRS measurement, then UE is not expected to receive PDSCH/CSI-RS on the symbols overlapped with DL PRS within PRS processing window but shall receive PDCCH and URLLC PDSCH on the symbols overlapped with DL PRS within PRS processing window.

When PRS is lower priority than the DL signals/channels the following applies when UEs have an activated PRS processing window with *type1A* or *type1B*:

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS in the PPW no later than N_2 symbols, defined in clause 6.4 of [26], for the subcarrier spacing μ of the DL PRS, before the start of the PPW, UE expects to receive the DL signals/channels and drop all DL PRS in the PPW.

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS in the PPW later than N_2 symbols, defined in clause 6.4 of [26], for the subcarrier spacing μ of the DL PRS, before the start of the PPW, UE is not required to receive the other DL signals/channels except SSB of higher priority and may receive the DL PRS in the PPW.

When PRS is lower priority than the DL signals/channels the following applies when UEs have an activated PRS processing window with *type2*:

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS on a PRS symbol no later than N_2 symbols, defined in clause 6.4 of [26] for the subcarrier spacing μ of the DL PRS, before the PRS symbol, UE expects to receive the DL signals/channels and drop the PRS symbol.

- If UE determines the presence of other DL signals/channels except SSB of higher priority than PRS on a PRS symbol later than N_2 symbols, defined in clause 6.4 of [26] for the subcarrier spacing μ of the DL PRS, before the PRS symbol, UE is not required to receive the other DL signals/channels except SSB of higher priority and may receive the PRS symbol.

For inter-band case for FR2 for the DL signals/channels from a different FR2 band than the FR2 band of the DL PRS, if the same Rx beam is used for both FR2 bands and the DL PRS is determined to be higher priority, UEs are not expected to receive the DL signals/channels if they are expected to measure the DL PRS in a configured DL PRS processing window with *type1B* or *type2*.

9.9A.2 RSTD measurements for RedCap

9.9A.2.1 Introduction

The requirements in clause 9.9A.2 shall apply provided the RedCap UE has received *NR-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34] requesting the RedCap UE to measure and report DL RSTD measurements defined in TS 38.215 [4].

The requirements in clause 9.9A.2.5 shall apply provided the RedCap UE does not support, or support but not configured, to measure PRS resources with Frequency Hopping (FH), subject to UE capability indicated via *NR-DL-AoD-ProvideCapabilities.*

The requirements in clause 9.9A.2.6 shall apply provided the RedCap UE supports and is configured to measure PRS resources with Frequency Hopping (FH), subject to UE capability indicated via *NR-DL-AoD-ProvideCapabilities*.

9.9A.2.2 Requirements Applicability

The requirements in clause 9.9A.2.5 apply for periodic and triggered RSTD measurements without FH, provided:

- PRS-RSTD related side conditions for 2 Rx RedCap UE given in clause 10.1.23.2 for FR1 and FR2 are fulfilled, for a corresponding band, or

- PRS-RSTD related side conditions for 1 Rx RedCap UE given in clause 10.1A.16.2.1 for FR1 are fulfilled, for a corresponding band.

The requirements in clause 9.9A.2.6 apply for periodic and triggered RSTD measurements with FH, provided:

- PRS-RSTD related side conditions for 2 Rx RedCap UE given in clause 10.1A.16.2.2 for FR1 and FR2 are fulfilled, for a corresponding band. or

- PRS-RSTD related side conditions for 1 Rx RedCap UE given in clause 10.1A.16.2.2 for FR1 are fulfilled, for a corresponding band.

9.9A.2.3 Measurement Capability

RedCap UE PRS RSTD measurement capability is as indicated by the RedCap UE in *NR-DL-TDOA-ProvideCapabilities*, according to TS 37.355[34].

9.9A.2.4 Measurement Reporting Requirements

The requirements in clause 9.9.2.4 shall apply except for RSTD measurement accuracy. The RSTD measurements performed and reported according to this clause shall meet the RSTD measurement accuracy requirements in clause 10.1A.16.2 for each measured DL PRS resource.

9.9A.2.5 Measurements Period Requirements without FH

9.9A.2.5.1 Measurements Period Requirements without FH with MG

When physical layer receives last of *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34], the RedCap UE shall be able to measure multiple (up to the RedCap UE capability specified in clause 9.9A.2.3) DL RSTD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSTD,Total}$ defined as:

$$\mathrm{T_{RSTD,Total}} = \sum_{\mathrm{i=1}}^{\mathrm{L}} \mathrm{T_{RSTD,i}} + (\mathrm{L}-1) * \max\left(\mathrm{T_{effect,i}}\right),$$

where

i is the index of positioning frequency layer,

L is total number of positioning frequency layers, and

$\mathrm{T_{effect},_i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i

$\mathrm{T_{RSTD,i}}$ is the measurement period for PRS RSTD measurement in positioning frequency layer *i* as specified below:

$$\mathrm{T_{RSTD,i}} = \left(k_{multiTEG,i} * \mathrm{CSSF_{PRS_RedCap,i}} * \mathrm{ceil}(\mathrm{K_{p,PRS,i}}) * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * \mathrm{T_{effect,i}} + \mathrm{T_{last,i}},$$

where:

$N_{RxBeam,i}$ is the RedCap UE Rx beam sweeping factor. In FR1 (for 2 Rx or 1 Rx RedCap UE), $N_{RxBeam,i}$ = 1;

and in FR2 (for 2 Rx RedCap UE only), $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$CSSF_{PRS_RedCap,i}$ is the carrier-specific scaling factor for NR PRS-based positioning measurements in positioning frequency layer i as defined in clause 9.1A.5.2.

$k_{multiTEG,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG,i}$=1 if UE is not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*;

otherwise,

$k_{multiTEG}$=$N_{TEG,i}$, if UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG}$=$\left\lfloor \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rfloor$ if UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

where

$N_{TEG,i}$ is the number of Rx TEGs with which UE is requested to measure a PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-*

RequestLocationInformation, and in case 'n0' is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$K_{p,PRS,i}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap, and $K_{p,PRS,i} = 1$ for UE not configured with concurrent measurement gap.

- For a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion:
  - N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and
  - $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG collisions by applying the selected gap collision rule
  - Requirements do not apply if $N_{available}$ =0.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources in positioning frequency layer *i* configured in a slot.

$L_{available_PRS,i}$ is the time duration of available PRS in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only the PRS resources unmuted and fully or partially overlapped with MG are considered.

N_{sample} is the number of PRS RSTD measurement samples, where

- N_{sample} = 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 4 otherwise.

$T_{last,i}$ is the measurement duration for the last PRS RSTD sample in positioning frequency layer *i*, including the

sampling time and processing time. If all of the PRS resources to be measured are available in the same MG occasion during $T_{availabe}$, $T_{last,i} = T_i$ +MGL. Otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$,

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i defined as:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

Where,

T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34],

$T_{available_PRS,i} = LCM(T_{PRS,i}, MGRP_i)$, the least common multiple between $T_{PRS,i}$ and $MGRP_i$.

$MGRP_i$ is the repetition periodicity of the measurement gap applicable for measurement in the PRS frequency layer i.$T_{PRS,i}$ is the periodicity of DL PRS resource with muting on positioning frequency layer *i*.

If more than one PRS periodicities are configured in positioning frequency layer *i*, the least common multiple of PRS periodicities $T_{per}^{PRS\ with\ muting}$ among all DL PRS resource sets in the positioning frequency layer is used to derive $T_{PRS,i}$, where,

$T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, is the PRS periodicity with muting per PRS resource,

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where

T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

- Note: For the purpose of calculating $T_{PRS,i}$, only the PRS resources fully or partially covered by the MG are considered.

$\{N, T\}$ is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSysmbols* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in TS 37.355 [34].

N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfDL-PRS-ResProcessedPerSlot* specified in TS 37.355 [34].

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{RSTD,Total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after both the *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message are delivered from LMF to the physical layer of UE via LPP [34].

For deferred MT-LR with other event than "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{RSTD,Total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the RSTD measurement in each reporting period and activate the location report at the time when the periodic timer expires.

Note: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

When PRS-RSRP is configured for DL-TDOA, RSTD and RSRP are performed over the same measurement period.

When PRS-RSRPP is configured for DL-TDOA, RSTD and RSRPP are performed over the same measurement period.

If during the measurement period of one or more positioning frequency layers, the MG pattern is reconfigured, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{RSTD,Total}$ within measurement gaps due to collisions with other signals; otherwise, the measurement period can be longer.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource, if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$.

The measurement requirements do not apply for a PRS resource, if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in clause 9.9A.2 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-TDOA-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while RSTD measurements are being performed, then the UE shall continue and complete the on-going RSTD measurements. The RSTD measurement period can be longer. The UE shall meet the RSTD measurement accuracy requirements in clause 10.1A.16.2.

9.9A.2.5.2 Measurements Period Requirements without FH without MG

When physical layer receives last of *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34], the RedCap UE shall be able to measure multiple (up to the RedCap UE capability specified in clause 9.9A.2.3) DL RSTD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSTD,Total}$ defined as:

$T_{RSTD,Total} = \sum_{i=1}^{L} T_{RSTD_wo_gap,i} + (L-1) * \max(T_{effect,i})$, if any of the positioning frequency layers are in Case 1, or

$T_{RSTD,Total} = \max(T_{RSTD_wo_gap,i} + T_{uncertainty,i})$, if all the positioning frequency layers are in Case 2,

Where,

i is the index of positioning frequency layer, and

L is total number of positioning frequency layers, and

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i, and

$T_{uncertainty,i}$ is the time from the start of the first PPW occasion for positioning frequency layer i to the start of measurement period $T_{RSTD,Total}$.

A positioning frequency layer is in Case 1 if UE reports *ppw-durationOfPRS-Processing1-r17* for the band containing the positioning frequency layer, and a positioning frequency layer is in Case 2 if UE reports *ppw-durationOfPRS-Processing2-r17* for the band containing the positioning frequency layer.

$T_{RSTD_wo_gap,i}$ is the measurement period for PRS RSTD measurement in positioning frequency layer *i* as specified below.

$$T_{RSTD_wo_gap,i} = \left(k_{multiTEG,i} * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last,i},$$

where:

$N_{RxBeam,i}$ is the UE Rx beam sweeping factor. In FR1 (for 2 Rx or 1 Rx RedCap UE), $N_{RxBeam,i}$ = 1; and in FR2 (for 2 Rx RedCap UE only), $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$k_{multiTEG,i}$ is the scaling factor for measurement of same PRS resource with multiple Rx TEGs.

$k_{multiTEG,i}$=1 if UE is not supported *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* or not requested by LMF to measure a PRS resource with multiple Rx TEGs via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*;

otherwise,

$k_{multiTEG}$=$N_{TEG,i}$, if the UE is not capable of receiving same DL PRS resource simultaneously from multiple Rx TEGs, and

$k_{multiTEG}$=$\left\lceil \frac{N_{TEG,i}}{k_{TEG,simul,i}} \right\rceil$ if the UE is capable of receiving the same DL PRS resource simultaneously from multiple Rx TEGs.

Where

$N_{TEG,i}$ is the number of Rx TEGs with which UE is requested to measure a PRS resource indicated via *measureSameDL-PRS-ResourceWithDifferentRxTEGs-r17* [34] in *NR-DL-TDOA-RequestLocationInformation*, and in case 'n0' is indicated, $N_{TEG,i}$ is the maximum number of Rx TEGs with which UE can support to measure the same PRS resource as reported in *NR-UE-TEG-Capability*, and

$k_{TEG,simul,i}$ is the number of Rx TEGs UE can measure simultaneously which is reported via *measureSameDL-PRS-ResourceWithDifferentRxTEGsSimul*.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources in positioning frequency layer *i* configured in a slot.

$L_{available_PRS,\mathrm{i}}$ is the time duration of available PRS in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,\mathrm{i}}$,

only the PRS resources unmuted and fully or partially overlapped with PPW are considered, if positioning frequency layer i is in Case 1, or

only the PRS resources unmuted and fully or partially overlapped with the first (PPWL-T2) ms of PPW are considered, if positioning frequency layer i is in Case 2, where PPWL is the PPW length and T2 corresponds to *ppw-durationOfPRS-ProcessingSymbolsT2*.

N_{sample} is the number of PRS RSTD measurement samples, where

- N_{sample} = 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} =2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
- Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 4 otherwise.

$T_{last,i}$ is the measurement duration for the last PRS RSTD sample in positioning frequency layer *i*, including the sampling time and processing time.

If positioning frequency layer *i* is in Case 1 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i} = T_i$ +PPWL, else

if positioning frequency layer *i* is in Case 2 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i}$ = PPWL;

otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$.

$T_{effect,i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i defined as:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

Where,

T_i corresponds to *ppw-durationOfPRS-ProcessingSymbolsT* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponds to the sum of *ppw-durationOfPRS-ProcessingSymbolsT2* and *ppw*-durationOfPRS-*ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

$T_{available_PRS,\mathrm{i}} = LCM(T_{PRS,\mathrm{i}}, PPWRP_{\mathrm{i}})$, the least common multiple between $T_{PRS,\mathrm{i}}$ and $PPWRP_{\mathrm{i}}$.

$PPWRP_{\mathrm{i}}$ is the repetition periodicity of the PRS processing window applicable for measurements in the positioning frequency layer *i*.

$T_{PRS,\mathrm{i}}$ is the periodicity of DL PRS resource with muting on positioning frequency layer *i*.

If more than one PRS periodicities are configured in positioning frequency layer *i*, the least common multiple of PRS periodicities $T_{per}^{PRS\ with\ muting}$ among all DL PRS resource sets in the positioning frequency layer is used to derive $T_{PRS,\mathrm{i}}$, where,

$T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, is the PRS periodicity with muting per PRS resource,

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*,

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

Note: For the purpose of calculating $T_{PRS,\mathrm{i}}$, only the PRS resources that meet the conditions for PRS measurement outside measurement gaps as defined in clause 9.9.1.2 are considered.

N is a duration of DL PRS symbols in ms corresponding to *ppw-durationOfPRS-ProcessingSymbolsN* in TS 37.355 [34] if positioning frequency layer i is in Case 1, or corresponding to *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer i is in Case 2.

N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *ppw-maxNumOfDL-PRS-ResProcessedPerSlot* specified in TS 37.355 [34].

The time $T_{\mathrm{RSTD_wo_gap,i}}$ starts from the first instance of the activated PPW for measurement of positioning frequency layer *i* aligned with a DL PRS resource(s) in the assistance data after both the *NR-DL-TDOA-ProvideAssistanceData* message and *NR-DL-TDOA-RequestLocationInformation* message are delivered from LMF to the physical layer of UE via LPP [34].

When PRS-RSRP is configured for DL-TDOA, RSTD and RSRP are performed over the same measurement period.

When PRS-RSRPP is configured for DL-TDOA, RSTD and RSRPP are performed over the same measurement period.

If during the measurement period of one or more positioning frequency layers, the PPW is re-configured or reactivated, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{\mathrm{RSTD_wo_gap,i}}$ within PPW due to collisions with other signals; otherwise, the measurement period can be longer.

The measurement requirements do not apply for a PRS resource, if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,\mathrm{i}}$.

The measurement requirements do not apply for a PRS resource, if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in clause 9.9A.2 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-TDOA-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while RSTD measurements are being performed, then the UE shall continue and complete the on-going RSTD measurements. The RSTD measurement period can be longer. The UE shall meet the RSTD measurement accuracy requirements in clause 10.1A.16.2.1.

If any positioning frequency layer is in Case 2, the requirements in this clause apply provided that the PPWL corresponding to the positioning frequency layer is larger than (T2+X) ms.

The requirements in this clause apply provided that a single positioning frequency layer is configured for measurement in each PPW.

9.9A.2.5.3 Measurements Period Requirements without FH with both MG and PPW

If the RedCap UE is configured with both MG applicable to positioning measurement and PPW, the UE shall measure positioning frequency layer *i* within

- MG, if PRS resources on positioning frequency layer *i* are overlapped with MG, or
- PPW, if PRS resources on positioning frequency layer *i* are overlapped with PPW.

The measurement period $T_{RSTD,Total}$ is defined as:

$$T_{RSTD,Total} = T_{RSTD,Total,MG} + T_{RSTD,Total,PPW} + T_{guard},$$

Where

- $T_{RSTD,Total,MG}$ is defined in clause 9.9A.2.5.1 and includes all positioning frequency layers to be measured within MG,
- $T_{RSTD,Total,PPW}$ is defined in clause 9.9A.2.5.2 and includes all positioning frequency layers to be measured within PPW,
- T_{guard} is the maximum T_{effect} defined in clauses 9.9A.2.5.1 and 9.9A.2.5.2 among all PFLs.

The requirements apply provided the following conditions are satisfied:

- MGs and PPWs do not overlap in time;
- Each PFL in the assistance data can be measured completely (all PRS resources) either within MG or within activated PPW.

9.9A.2.6 Measurements Period Requirements with FH

9.9A.2.6.1 Measurements Period Requirements with FH with MG

When UE physical layer receives last of *NR-TDOA-ProvideAssistanceData* message and *NR-TDOA-RequestLocationInformation* message from LMF via LPP [34], requesting RedCap UE to measure DL RSTD measurement with FH, the RedCap UE shall be able to measure multiple (up to the RedCap UE capability specified in clause 9.9A.2.3) DL RSTD measurements, defined in TS 38.215 [4], during the measurement period $T_{RSTD,Total}$ defined in clause 9.9A.2.5.1 with using the following definition for N_{sample} and $L_{available_PRS,i}$:

- N_{sample} is the number of PRS RSTD measurement samples, where
  - N_{sample} = 2 if the RedCap UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples.
  - N_{sample} = 4 otherwise.
- A measurement sample with FH is defined as a PRS measurement over multiple hops within a single measurement gap occasion.
- $L_{available_PRS,i}$ is the time duration of available PRS in the positioning frequency layer i to be measured during a MG, and is calculated by:

$$L_{available_PRS,i} = \sum_{j=1}^{J} N_{hop,i,j} * L_{per-hop,i,j}$$

where,

- $N_{hop,i,j}$ is the number of hops that UE can do in an MG occasion *j* as defined in the following, and

- $L_{per-hop,i,j}$ is the time duration of available PRS resources in the positioning frequency layer *i* in each hop to be measured in MG instance *j* during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{per-hop,i,j}$, only the PRS resources unmuted and fully or partially overlapped with the sampling duration in each hop are considered;

- *J* is the number of MG instance during $T_{available_PRS,i}$.

The sampling window per hop is the first $T_{sample,hop}$ symbols in each hop, where $T_{sample,hop} = T_{hop} - RRT_{FH}$, T_{hop} is the applicable length per hop as defined in table 9.9A.2.6.1-1, and RRT_{FH} is the retuning time between Rx hops as reported by UE in *rf-RxRetuneTimeFR1* or *rf-RxRetuneTimeFR2* via *NR-DL-PRS-ProcessingCapability* [34]. The first hop within a MG instance starts at no earlier than the earliest arrival time of the first unmuted PRS resource fully or partially overlapped with the MG instance taking into account the *expectedRSTD* and *expectedRSTD-uncertainty* in the PRS assistance data.

Table 9.9A.2.6.1-1: Applicable number of hops per slot and applicable length of each hop

RRT_{FH}	(comb size, Number of PRS symbols)	Applicable number of hops per slot (N_{hops}^{slot})	Applicable length per hop (T_{hop}) in number of symbols
$RRT_{FH} \leq 2$ symbols	(2, 12) with SCS 15 kHz, 30 kHz, 60 kHz in FR2, 120 kHz	2	7
	All others	1	14
2 symbols $< RRT_{FH} \leq 6$ symbols	(≤ 6, any)	1	14
	(12, 12)	½	28
$RRT_{FH} > 6$ symbols	Any combination	½	28

The number of hops within a single MG occasion $N_{hop,i,j}$ is defined as

$$N_{hop,i,j} = min\left(N_{hops,effect,i,j}, \left\lfloor \frac{N3_i}{L_{per-hop,i,j}} \right\rfloor, N_{hop,max,i}\right)$$

where

- $N_{hop,max,i}$ is the maximum number of Rx hops signaled by UE in *maximumFH-Hops* via *NR-DL-PRS-ProcessingCapability* as specified in [34] for positioning frequency layer *i*

- $N3_i$ is indicated via UE capability *processingPRS-SymbolsDurationN3-r18* for positioning frequency layer *i*

- $N_{hops,effect,i,j}$ is the effective number of Rx hops within a MG instance *j*,

- $N_{hops,effect,i,j} = 2 * N_{rep}^{PRS}$, if $N_{hops}^{slot} = 2$,

- $N_{hops,effect,i,j} = N_{rep}^{PRS}$, if $N_{hops}^{slot} = 1$,

- $N_{hops,effect,i,j} = N_{rep}^{PRS}$, if $N_{hops}^{slot} = 1/2$ and $M_{rep}^{PRS} > 1$,

- $N_{hops,effect,i,j} = \left\lfloor \frac{(N_{rep}^{PRS}-1)}{2} \right\rfloor + 1$, if $N_{hops}^{slot} = 1/2$ and $M_{rep}^{PRS} = 1$,

  - where N_{rep}^{PRS} is the number of inter-slot PRS repetitions within the MG occasion, excluding the gap retuning times, which are unmuted and fully or partially overlapped with the sampling duration within each hop. M_{rep}^{PRS} is the PRS repetition interval configured by *dl-PRS-ResourceTimeGap*, N_{hops}^{slot} is the applicable number of hops per slot as defined in table 9.9A.2.6.1-1.

The measurement period requirement with the above modifications applies provided all PRS resources in each PFL have the same number of PRS repetitions (N_{rep}^{PRS}) within an MG instance and the same PRS repetition interval (M_{rep}^{PRS}), otherwise the measurement period can be longer.

UE shall be able to measure PRS resources with multiple hops at least over the BW of BW_{total} defined as

$$BW_{total} = min\left(BW_{PRS}, N_{hop} * BW_{per-hop} - \left(N_{hop} - 1\right) * BW_{overlap}\right)$$

where

BW_{PRS} is the minimum among

- configured PRS BW, and
- UE capability of maximum PRS BW across all hops indicated via *maximumPRS-BandwidthAcrossAllHopsFR1-r18* or *maximumPRS-BandwidthAcrossAllHopsFR2-r18* as specified in [34], and
- total BW of all hops requested by LMF via *nr-DL-PRS-RxHoppingTotalBandwidth-r18*.as specified in [34],

$N_{hop,i,j}$ is number of hops within a single MG occasion as define above,

$BW_{per-hop}$ is the UE capability on PRS BW per hop indicated via *supportedBandwidthPRS-r16* as specified in [34],

$BW_{overlap}$ $BW_{overlap}$ is the UE capability on BW of the overlapping RB indicated via *numOfOverlappingPRB-r18* as specified in [34].

9.9A.3 PRS-RSRP measurements for RedCap

9.9A.3.1 Introduction

The requirements in clause 9.9A.3 shall apply provided the RedCap UE has received a message from LMF via LPP [34] requesting the RedCap UE to measure and report PRS-RSRP measurements defined in TS 38.215 [4].

The requirements in clause 9.9A.3.5 shall apply provided the RedCap UE does not support, or support but not configured, to measure PRS resources with Frequency Hopping (FH), subject to UE capability indicated in *NR-DL-AoD-ProvideCapabilities.*

The requirements in clause 9.9A.3.6 shall apply provided the RedCap UE supports and is configured to measure PRS resources with Frequency Hopping (FH), subject to UE capability indicated in *NR-DL-AoD-ProvideCapabilities*.

9.9A.3.2 Requirements applicability

The requirements in clause 9.9A.3.5 apply for periodic and triggered PRS-RSRP measurements without FH, provided:

- PRS-RSRP related side conditions for 2 Rx RedCap UE given in clause 10.1.24.2 for FR1 and FR2 are met for a corresponding band, or
- PRS-RSRP related side conditions for 1 Rx RedCap UE given in clause 10.1A.17.2 for FR1 are met for a corresponding band.

The requirements in clause 9.9A.3.6 apply for periodic and triggered PRS-RSRP measurements with FH, provided:

- PRS-RSRP related side conditions for 2 Rx RedCap UE given in clause 10.1.24.2 for FR1 and FR2 are met for a corresponding band, or
- PRS-RSRP related side conditions for 1 Rx RedCap UE given in clause 10.1A.17.2 for FR1 are met for a corresponding band.

9.9A.3.3 Measurement Capability

UE PRS-RSRP measurement capability is as indicated by the UE in *NR-DL-AoD-ProvideCapabilities* according to TS 37.355 [34].

9.9A.3.4 Measurement Reporting Requirements

The requirements in clause 9.9.3.4 shall apply except for PRS-RSRP measurement accuracy. The PRS-RSRP measurement accuracy for all measured PRS resources shall be fulfilled according to the accuracy requriements specified in the clauses 10.1A.17.2.

9.9A.3.5 Measurements Period Requirements without FH

9.9A.3.5.1 Measurement Period Requirements without FH with MG

When the physical layer receives *NR-DL-AoD-ProvideAssistanceData* message and *NR-DL-AoD-RequestLocationInformation* message from LMF via LPP [34], the RedCap UE shall be able to measure multiple (up to the RedCapUE capability specified in clause 9.9A.3.3) PRS-RSRP measurements, defined in TS 38.215 [4], from configured PRS resources for configured TRPs on configured positioning frequency layers, within $T_{PRS-RSRP,total}$ ms.

$$T_{PRS-RSRP,\ total} = \sum_{i=1}^{L} T_{PRS-RSRP,i} + (L-1) * \max\left(T_{effect,i}\right)$$

where

i is the index of positioning frequency layer,

L is total number of positioning frequency layers,

$T_{effect,i}$ is the periodicity of the PRS-RSRP measurement in positioning frequency layer *i*.

$$T_{PRS-RSRP,i} = \left(CSSF_{PRS_RedCap,i} * \text{ceil}(K_{p,PRS,i}) * N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last}$$

where

$CSSF_{PRS_RedCap,i}$ is the carrier specific scaling factor for PRS-RSRP measurements specified in clause 9.1A.5.2,

$K_{p,PRS,i}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap, and $K_{p,PRS,i} = 1$ for UE not configured with concurrent measurement gap.

For a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioining frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion:

N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and

$N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG collisions by applying the selected gap collision rule

Requirements do not apply if $N_{available}$ =0.

$N_{RxBeam,i}$ is the scaling factor for Rx beam sweeping, and $N_{RxBeam,i}$=1 if positioning frequency layer *i* is in FR1 (for 2 Rx or 1 Rx RedCap UE) and if positioning frequency layer *i* is in FR2 (for 2 Rx RedCap UE only), $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$L_{available_PRS,i}$ is the time duration of available PRS to be measured in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only the PRS resources unmuted and fully or partially overlapped with MG are considered.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSysmbols* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in TS 37.355 [34],

N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfDL-PRS-ResProcessedPerSlot* in clause 6.4.3 of TS 37.355 [34],

N_{sample} is the number of PRS-RSRP measurement samples, where

- N_{sample} = 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 4 otherwise.

$T_{last,i} = T_i + T_{available_PRS,i}$ is the measurement duration for the last PRS-RSRP sample, including the sampling time and processing time, if not all PRS resources to be measured are available in the same measurement gap occasion during $T_{available_PRS,i}$, otherwise $T_{last,i} = T_i + MGL$,

$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$ is the periodicity of PRS-RSRP measurement in positioning frequency layer *i*,

T_i corresponds to durationOfPRS-ProcessingSymbolsInEveryTms in TS 37.355 [34],

$T_{available_PRS,i} = LCM(T_{PRS,i}, MGRP_i)$ is the least common multiple between $T_{PRS,i}$ and $MGRP_i$,

$T_{PRS,i}$ is the maximum PRS resource periodicity among all PRS resources in positioning frequency layer i,

$MGRP_i$ is the measurement gap repetition period in positioning frequency layer i.

If positioning frequency layer *i* has more than one DL PRS resource set with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among the DL PRS resource sets is used to derive $T_{PRS,i}$, where:

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources fully or partially covered by the MG are considered.

When PRS-RSRP measurements are configured for DL-AoD, except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{PRS-RSRP,total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data after both the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

For deferred MT-LR with other event than "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{PRS-RSRP,total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event "Periodic Location" as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the PRS-RSRP measurement in each reporting period and activate the location report at the time when the periodic timer expires.

Note: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

When the PRS-RSRP measurement is configured together with RSTD measurement then the PRS-RSRP measurement shall meet the RSTD measurement requirements defined in clause 9.9.2.

When the PRS-RSRP measurement is configured together with UE Rx-Tx time difference measurement then the PRS-RSRP measurement shall meet the UE Rx-Tx time difference measurement requirements defined in clause 9.9.4.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource:

if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,\mathrm{i}}$ or

if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

If during the measurement period of one or more positioning frequency layers, the MG pattern is reconfigured either per UE request or not per UE request, the measurement period can be longer.

The requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $\mathrm{T}_{\mathrm{PRS-RSRP,total}}$ within measurement gaps due to collisions with other signals; otherwise, a longer measurement period may be used.

The requirements in clause 9.9A.3 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-AoD-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If handover occurs while PRS-RSRP measurements are being performed then the UE shall complete the ongoing PRS-RSRP measurements session. The PRS-RSRP measurement period can be longer. The UE shall meet the PRS-RSRP measurement accuracy requirements in clause 10.1A.17.2.

9.9A.3.5.2 Measurement Period Requirements without FH without MG

When the physical layer receives *NR-DL-AoD-ProvideAssistanceData* message and *NR-DL-AoD-RequestLocationInformation* message from LMF via LPP [34], the RedCap UE shall be able to measure multiple (up to the RedCap UE capability specified in clause 9.9A.3.3) PRS-RSRP measurements as defined in TS 38.215 [4] without measurement gap, on configured positioning frequency layer *i*, within $\mathrm{T}_{\mathrm{PRS-RSRP,total}}$ ms.

$\mathrm{T}_{\mathrm{PRS-RSRP,\,total}} = \sum_{i=1}^{L} \mathrm{T}_{\mathrm{PRS-RSRP},i} + (L-1) * \max\left(\mathrm{T}_{\mathrm{effect},i}\right)$ if any of the positioning frequency layers are in Case 1, or

$\mathrm{T}_{\mathrm{PRS-RSRP,\,total}} = \max\left(\mathrm{T}_{\mathrm{PRS-RSRP},i} + \mathrm{T}_{\mathrm{uncertainty,i}}\right)$, if all the positioning frequency layers are in Case 2,

Where,

i is the index of positioning frequency layer, and

L is total number of positioning frequency layers, and

$\mathrm{T}_{\mathrm{effect},i}$ is the periodicity of the PRS RSTD measurement in positioning frequency layer i, and

$\mathrm{T}_{\mathrm{uncertainty,i}}$ is the time from the start of the first PPW occasion for positioning frequency layer i to the start of measurement period $\mathrm{T}_{\mathrm{PRS-RSRP,\,total}}$.

A positioning frequency layer is in Case 1 if UE reports *ppw-durationOfPRS-Processing1-r17* for the band containing the positioning frequency layer, and a positioning frequency layer is in Case 2 if UE reports *ppw-durationOfPRS-Processing2-r17* for the band containing the positioning frequency layer.

$T_{PRS-RSRP,i}$ is the measurement period for PRS-RSRP measurement in positioning frequency layer *i* as specified below.

$$T_{PRS-RSRP,i} = \left(N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1\right) * T_{effect,i} + T_{last}$$

where

$T_{effect,i}$ is the periodicity of the PRS-RSRP measurement in positioning frequency layer *i*.

$N_{RxBeam,i}$ is the scaling factor for Rx beam sweeping, and $N_{RxBeam,i}$=1 if positioning frequency layer *i* is in FR1 (for 2 Rx or 1 Rx RedCap UE). If positioning frequency layer *i* is in FR2 (for 2 Rx RedCap UE only), $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-TDOA-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

$L_{available_PRS,i}$ is the time duration of available PRS to be measured in the positioning frequency layer i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$,

only unmuted PRS resource instances that meet the applicability conditions and fully or partially overlapped with PRS processing window are considered, if positioning frequency layer i is in Case 1, or

only the PRS resources unmuted and fully or partially overlapped with the first (PPWL-T2) ms of PPW are considered, if positioning frequency layer i is in Case 2, where PPWL is the PPW length and T2 corresponds to *ppw-durationOfPRS-ProcessingSymbolsT2*.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *ppw-durationOfPRS-ProcessingSymbolsN* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponding to *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

N′ is UE capability for number of DL PRS resources that it can process in a slot as indicated by *ppw-maxNumOfDL-PRS-ResProcessedPerSlot* in clause 6.4.3 of TS 37.355 [34],

N_{sample} is the number of PRS-RSRP measurement samples, where

- N_{sample} = 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample} = 4 otherwise.

T_{last} is the measurement duration for the last PRS-RSRP sample, including the sampling time and processing time.

If positioning frequency layer *i* is in Case 1 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i} = T_i$ +PPWL, else

if positioning frequency layer *i* is in Case 2 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i}$ = PPWL;

otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$.

$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$ is the periodicity of PRS-RSRP measurement in positioning frequency layer *i*,

T_i corresponds to *ppw-durationOfPRS-ProcessingSymbolsT* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponds to the sum of *ppw-durationOfPRS-ProcessingSymbolsT2* and *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2

$T_{available_PRS,i} = LCM(T_{PRS,i}, PPWRP_i)$ is the least common multiple between $T_{PRS,i}$ and $PPWRP_i$,

$T_{PRS,i}$ is the maximum PRS resource periodicity among all PRS resources in positioning frequency layer *i*,

$PPWRP_i$ is the PRS processing window repetition period in positioning frequency layer i.

If positioning frequency layer *i* has more than one DL PRS resource set with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among the DL PRS resource sets is used to derive $T_{PRS,i}$, where:

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. If bitmap $\{b^1\}$ for higher-layer parameter *DL-*
N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

Note: For the purpose of calculating $T_{PRS,i}$, only the PRS resources that meet the applicability conditions and fully or partially covered by the PRS processing window are considered.

When PRS-RSRP measurements are configured for DL-AoD, the time $T_{PRS-RSRP,i}$ starts from the first PRS processing window instance aligned with DL PRS resources in the assistance data after both the *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

Note: No per-positioning frequency layer requirement is applied in scenarios when multiple positioning frequency layers are configured.

When the PRS-RSRP measurement is configured together with RSTD measurement then the PRS-RSRP measurement shall meet the RSTD measurement requirements defined in clause 9.9A.2.

When the PRS-RSRP measurement is configured together with UE Rx-Tx time difference measurement then the PRS-RSRP measurement shall meet the UE Rx-Tx time difference measurement requirements defined in clause 9.9A.4.

If CSSF changes during the measurement period, the measurement period could be longer.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or
- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in clause 9.9A.3 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-AoD-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

If during the measurement period of one or more positioning frequency layers, the PPW is reconfigured or reactivated, the PRS-RSRP measurement period can be longer.

If any positioning frequency layer is in Case 2, the requirements in this clause apply provided that the PPWL corresponding to the positioning frequency layer is larger than (T2+X) ms.

The requirements in this clause apply provided that a single positioning frequency layer is configured for measurement in each PPW.

9.9A.3.5.3 Measurements Period Requirements without FH with both MG and PPW

If the RedCap UE is configured with both MG applicable to positioning measurement and PPW, the UE shall measure positioning frequency layer *i* within

- MG, if PRS resources on positioning frequency layer *i* are overlapped with MG, or
- PPW, if PRS resources on positioning frequency layer *i* are overlapped with PPW.

The measurement period $T_{PRS-RSRP,\ total}$ is defined as:

$$T_{PRS-RSRP,\ total} = T_{PRS-RSRP,Total,MG} + T_{PRS-RSRP,Total,PPW} + T_{guard},$$

Where

- $T_{PRS-RSRP,Total,MG}$ is defined in clause 9.9A.3.5.1 and includes all positioning frequency layers to be measured within MG,
- $T_{PRS-RSRP,Total,PPW}$ is defined in clause 9.9A.3.5.2 and includes all positioning frequency layers to be measured within PPW,
- T_{guard} is the maximum T_{effect} defined in clauses 9.9A.3.5.1 and 9.9A.3.5.2 among all PFLs.

The requirements apply provided the following conditions are satisfied:

- MGs and PPWs do not overlap in time;
- Each PFL in the assistance data can be measured completely (all PRS resources) either within MG or within activated PPW.

9.9A.3.6 Measurements Period Requirements with FH

9.9A.3.6.1 Measurements Period Requirements with FH with MG

When the UE the physical layer receives *NR-DL-AoD-ProvideAssistanceData* message and *NR-DL-AoD-RequestLocationInformation* message from LMF via LPP [34], requesting RedCap UE to measure PRS-RSRP measurement with FH, the RedCap UE shall be able to measure multiple (up to the RedCapUE capability specified in clause 9.9A.3.3) PRS-RSRP measurements, defined in TS 38.215 [4], from configured PRS resources for configured TRPs on configured positioning frequency layers, within $T_{PRS-RSRP,total}$ ms as defined clause 9.9A.3.5.1 with using the following definition for N_{sample} and $L_{available_PRS,i}$:

- N_{sample} is the number of PRS-RSRP measurement samples, where
  - N_{sample} = 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples.
  - N_{sample} = 4 otherwise.
- A measurement sample with FH is defined as a PRS measurement over multiple hops within a single measurement gap occasion.
- $L_{available_PRS,i}$ is the time duration of available PRS in the positioning frequency layer i to be measured during a MG, and is calculated by:

$$L_{available_PRS,i} = \sum_{j=1}^{J} N_{hop,i,j} * L_{per-hop,i,j}$$

where,

- $N_{hop,i,j}$ is the number of hops that UE can do in an MG occasion *j* as defined in the following, and
- $L_{per-hop,i,j}$ is the time duration of available PRS resources in the positioning frequency layer *i* in each hop to be measured in MG instance *j* during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{per-hop,i,j}$, only the PRS resources unmuted and fully or partially overlapped with the sampling duration in each hop are considered;
- *J* is the number of MG instance during $T_{available_PRS,i}$.

The sampling window per hop is the first $T_{sample,hop}$ symbols in each hop, where $T_{sample,hop} = T_{hop} - RRT_{FH}$, T_{hop} is the applicable length per hop as defined in table 9.9A.3.6.1-1, and RRT_{FH} is the retuning time between Rx hops as reported by UE in *rf-RxRetuneTimeFR1* or *rf-RxRetuneTimeFR2* via *NR-DL-PRS-ProcessingCapability* [34]. The first hop within a MG instance starts at no earlier than the earliest arrival time of the first unmuted PRS resource fully or partially overlapped with the MG instance taking into account the *expectedRSTD* and *expectedRSTD-uncertainty* in the PRS assistance data.

Table 9.9A.3.6.1-1: Applicable number of hops per slot and applicable length of each hop

RRT_{FH}	(comb size, Number of PRS symbols)	Applicable number of hops per slot (N_{hops}^{slot})	Applicable length per hop (T_{per}) in number of symbols
$RRT_{FH} \leq 2$ symbols	(2, 12) with SCS 15 kHz, 30 kHz, 60 kHz in FR2, 120 kHz	2	7
	All others	1	14
2 symbols $< RRT_{FH} \leq 6$ symbols	(≤ 6, any)	1	14
	(12, 12)	½	28
$RRT_{FH} > 6$ symbols	Any combination	½	28

The number of hops within a single MG occasion $N_{hop,i,j}$ is defined as

$$N_{hop,i,j} = min\left(N_{hops,effect,i,j}, \left\lfloor \frac{N3_i}{L_{per-hop,i,j}} \right\rfloor, N_{hop,max,i}\right)$$

where

- $N_{hop,max}$ is the maximum number of Rx hops signaled by UE in *maximumFH-Hops* via *NR-DL-PRS-ProcessingCapability* as specified in [34] for positioning frequency layer *i*
- $N3_i$ is indicated via UE capability *processingPRS-SymbolsDurationN3-r18* for positioning frequency layer *i*
- $N_{hops,effect,i,j}$ is the effective number of Rx hops within a MG instance *j*,
- $N_{hops,effect,i,j} = 2 * N_{rep}^{PRS}$, if $N_{hops}^{slot} = 2$,
- $N_{hops,effect,i,j} = N_{rep}^{PRS}$, if $N_{hops}^{slot} = 1$,
- $N_{hops,effect,i,j} = N_{rep}^{PRS}$, if $N_{hops}^{slot} = 1/2$ and $M_{rep}^{PRS} > 1$,
- $N_{hops,effect,i,j} = \left\lfloor \frac{(N_{rep}^{PRS}-1)}{2} \right\rfloor + 1$, if $N_{hops}^{slot} = 1/2$ and $M_{rep}^{PRS} = 1$,
- where N_{rep}^{PRS} is the number of inter-slot PRS repetitions within the MG occasion, excluding the gap retuning times, which are unmuted and fully or partially overlapped with the sampling duration within each hop. M_{rep}^{PRS} is the PRS repetition interval configured by *dl-PRS-ResourceTimeGap*, N_{hops}^{slot} is the applicable number of hops per slot as defined in table 9.9A.3.6.1-1.

The measurement period requirement with the above modifications applies provided all PRS resources in each PFL have the same number of PRS repetitions (N_{rep}^{PRS}) within an MG instance and the same PRS repetition interval (M_{rep}^{PRS}), otherwise the measurement period can be longer.

UE shall be able to measure PRS resources with multiple hops at least over the BW of BW_{total} defined as

$$BW_{total} = min\left(BW_{PRS}, N_{hop} * BW_{per-hop} - \left(N_{hop} - 1\right) * BW_{overlap}\right)$$

where

- BW_{PRS} is the minimum among
- configured PRS BW, and
- UE capability of maximum PRS BW across all hops indicated via *maximumPRS-BandwidthAcrossAllHopsFR1-r18* or *maximumPRS-BandwidthAcrossAllHopsFR2-r18*, and
- total BW of all hops requested by LMF via *nr-DL-PRS-RxHoppingTotalBandwidth-r18* as specified in [34],

$N_{hop,i,j}$ is number of hops within a single MG occasion as define above,

$BW_{per-hop}$ is the UE capability on PRS BW per hop indicated via *supportedBandwidthPRS-r16* as specified in [34],

$BW_{overlap}$ is the UE capability on BW of the overlapping RB indicated via *numOfOverlappingPRB-r18* as specified in [34].

9.9A.4 UE Rx-Tx time difference measurements for RedCap

9.9A.4.1 Introduction

The requirements in this clause apply for RedCap UE, when the UE received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP specified in TS 37.355 [34] requesting the UE to measure and report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4].

If UE does not support RX FH for PRS measurement as indicated by UE capability *NR-DL-PRS-ProcessingCapability*, or if LMF does not request UE to use RX FH for PRS measurement as indicated via *NR-Multi-RTT-RequestLocationInformation* in the measurement request, the requirements in clauses 9.9A.4.5, 9.9A.4.6 and 9.9A.4.7 shall apply for applicable configurations.

If UE supports RX FH for PRS measurement as indicated by UE capability *NR-DL-PRS-ProcessingCapability*, and LMF requests UE to use RX FH for PRS measurement as indicated via *NR-Multi-RTT-RequestLocationInformation* in the measurement request, the requirements in clause 9.9A.4.8 shall apply.

9.9A.4.2 Requirements Applicability

The requirements in clause 9.9A.4 apply for periodic and triggered UE Rx-Tx time difference measurements, provided:

- UE Rx-Tx time difference measurement related side conditions given in clause 10.1A.18.2 are met for a corresponding band.
- SRS is configured on at least one of the PCell, PSCell and SCell.
- The UE transmits SRS within the range from -160 ms to 160 ms of at least one DL PRS resource of each of the TRPs in the assistance data.

9.9A.4.3 Measurement Capability

UE Rx-Tx time difference measurement capability is as indicated by the UE in *NR-Multi-RTT-ProvideCapabilities*, according to TS 37.355 [34].

9.9A.4.4 Measurement Reporting Requirements

The requirements in clause 9.9.4.4 shall apply except that the UE Rx-Tx time difference measurement accuracy for all measured DL PRS resources shall be fulfilled according to the accuracy requirements specified in clause 10.1A.18.2.

9.9A.4.5 Measurement Period Requirements without FH with MG

The requirements in clause 9.9.4.5 shall apply.

9.9A.4.6 Measurement Period Requirements without FH without MG

The requirements in clause 9.9.4.6 shall apply.

9.9A.4.7 Measurements Period Requirements without FH with both MG and PPW

The requirements in clause 9.9.4.8 shall apply.

9.9A.4.8 Measurements Period Requirements with FH

The requirements in this clause apply when a RedCap UE is requested by the LMF to perform measurements with FH, and UE reports measurement based on multiple hops.

The requirements in clause 9.9A.4.5 shall apply with the following modifications.

- N_{sample} = 2 if the UE supports the capability of positioning measurements with reduced number of samples as indicated by *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* specified in TS 37.355 [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples. Otherwise, N_{sample} = 4.

- A measurement sample with FH is defined as a PRS measurement over multiple hops within a single measurement gap.

- $L_{available_PRS,i} = \sum_{j=1}^{J} N_{hop,i,j} * L_{per-hop,i,j}$, where

  - $N_{hop,i,j}$ is the number of hops that UE can do in an MG occasion *j* as defined in the following, and

  - $L_{per-hop,i,j}$ is the time duration of available PRS resources in the positioning frequency layer *i* in each hop to be measured in MG instance *j* during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{per-hop,i,j}$, only the PRS resources unmuted and fully or partially overlapped with the sampling duration in each hop are considered;

  - *J* is the number of MG instance during $T_{available_PRS,i}$.

The sampling window per hop is the first $T_{sample,hop}$ symbols in each hop, where $T_{sample,hop} = T_{hop} - RRT_{FH}$, T_{hop} is the applicable length per hop as defined in table 9.9A.4.8-1, and RRT_{FH} is the retuning time between Rx hops as reported by UE in *rf-RxRetuneTimeFR1* or *rf-RxRetuneTimeFR2* via *NR-DL-PRS-ProcessingCapability* specified in TS 37.355 [34]. The first hop within a MG instance starts at no earlier than the earliest arrival time of the first unmuted PRS resource fully or partially overlapped with the MG instance taking into account the *expectedRSTD* and *expectedRSTD-uncertainty* in the PRS assistance data.

Table 9.9A.4.8-1: Applicable number of hops per slot and applicable length of each hop

RRT_{FH}	(comb size, Number of PRS symbols)	Applicable number of hops per slot (N_{hops}^{slot})	Applicable length per hop (T_{hop}) in number of symbols
$RRT_{FH} \leq 2$ symbols	(2, 12) with SCS 15 kHz, 30 kHz, 60 kHz in FR2, 120 kHz	2	7
	All others	1	14
2 symbols $< RRT_{FH} \leq 6$ symbols	(≤ 6, any)	1	14
	(12, 12)	½	28
$RRT_{FH} > 6$ symbols	Any combination	½	28

The number of hops within a single MG occasion $N_{hop,i,j}$ is defined as

$$N_{hop,i,j} = min\left(N_{hops,effect,i,j}, \left\lfloor \frac{N3_i}{L_{per-hop,i,j}} \right\rfloor, N_{hop,max,i}\right)$$

where

- $N_{hop,max}$ is the maximum number of Rx hops signaled by UE in *maximumFH-Hops* via *NR-DL-PRS-ProcessingCapability* as specified in TS 37.355 [34] for positioning frequency layer *i*
- $N3_i$ is indicated via UE capability *processingPRS-SymbolsDurationN3-r18* for positioning frequency layer *i*
- $N_{hops,effect,i,j}$ is the effective number of Rx hops within a MG instance,
- $N_{hops,effect,i,j} = 2 * N_{rep}^{PRS}$, if $N_{hops}^{slot} = 2$,
- $N_{hops,effect,i,j} = N_{rep}^{PRS}$, if $N_{hops}^{slot} = 1$,
- $N_{hops,effect,i,j} = N_{rep}^{PRS}$, if $N_{hops}^{slot} = 1/2$ and $M_{rep}^{PRS} > 1$,
- $N_{hops,effect,i,j} = \left\lfloor \frac{(N_{rep}^{PRS}-1)}{2} \right\rfloor + 1$, if $N_{hops}^{slot} = 1/2$ and $M_{rep}^{PRS} = 1$,
- where N_{rep}^{PRS} is the number of inter-slot PRS repetitions within the MG occasion excluding the gap retuning times, which are unmuted and fully or partially overlapped with the sampling duration within each hop. M_{rep}^{PRS} is the PRS repetition interval configured by *dl-PRS-ResourceTimeGap* and N_{hops}^{slot} is the applicable number of hops per slot as defined in table 9.9A.4.8-1.

The measurement period requirement with the above modifications applies provided all PRS resources in each PFL have the same number of PRS repetitions $\left(N_{rep}^{PRS}\right)$ within an MG instance and the same PRS repetition interval $\left(M_{rep}^{PRS}\right)$, otherwise the measurement period can be longer.

UE shall be able to measure PRS resources with multiple hops at least over the BW of BW_{total} defined as

$$BW_{total} = min\left(BW_{PRS}, N_{hop,i,j} * BW_{per-hop} - \left(N_{hop} - 1\right) * BW_{overlap}\right)$$

where

- BW_{PRS} is the minimum among
- configured PRS BW, and
- UE capability of maximum PRS BW across all hops indicated via *maximumPRS-BandwidthAcrossAllHopsFR1-r18* or *maximumPRS-BandwidthAcrossAllHopsFR2-r18*, and
- total BW of all hops requested by LMF via *nr-DL-PRS-RxHoppingTotalBandwidth-r18* as specified in TS 37.355 [34],

  $N_{hop,i,j}$ is number of hops within a single MG occasion as define above,

  $BW_{per-hop}$ is the UE capability on PRS BW per hop indicated via *supportedBandwidthPRS-r16* as specified in TS 37.355 [34],

  $BW_{overlap}$ is the UE capability on BW of the overlapping RB indicated via *numOfOverlappingPRB-r18* as specified in TS 37.355 [34].

9.9A.5 PRS-RSRPP measurements for RedCap

9.9A.5.1 Introduction

The requirements in this clause apply for RedCap UE, when the UE received *NR-DL-AoD-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to measure and report one or more PRS-RSRPP measurements defined in TS 38.215 [4].

If UE does not support FH for PRS measurement as indicated by UE capability *NR-DL-AoD-ProvideCapabilities*, or if LMF does not request UE to use FH for PRS measurement as indicated via *NR-DL-AoD-RequestLocationInformation* in the measurement request, the requirements in clauses 9.9A.5.5, 9.9A.5.6 and 9.9A.5.7 shall apply for applicable configurations.

If UE supports FH for PRS measurement as indicated by UE capability *NR-DL-AoD-ProvideCapabilities*, and LMF requests UE to use FH for PRS measurement as indicated via *NR-DL-AoD-RequestLocationInformation* in the measurement request, the requirements in clause 9.9A.5.8 shall apply.

9.9A.5.2 Requirements Applicability

The requirements in clause 9.9A.5 apply for periodic and triggered PRS-RSRPP measurements, provided:

- PRS-RSRPP related side conditions given in clause 10.1A.19.2 are met for a corresponding band.

9.9A.5.3 Measurement Capability

UE PRS-RSRPP measurement capability is as indicated by the UE in *NR-DL-AoD-ProvideCapabilities* according to TS 37.355 [34].

9.9A.5.4 Measurement Reporting Requirements

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes the delay uncertainty caused by inserting the measurement report into the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The reported PRS-RSRPP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1A.19.3.

The PRS-RSRPP measurement accuracy for all measured PRS resources shall be fulfilled according to the accuracy requriements specified in the clause 10.1A.19.2.

9.9A.5.5 Measurement Period Requirements without FH with MG

For PRS measurement within MG configured to UE, measurement period requirements for PRS-RSRP defined in clause 9.9A.3.5.1 is re-used for PRS-RSRPP.

9.9A.5.6 Measurement Period Requirements without FH without MG

For PRS measurement without MG configured to UE, measurement period requirements for PRS-RSRP defined in clause 9.9A.3.5.2 is re-used for PRS-RSRPP.

The PRS-RSRPP measurement requirements in this clause apply for the first path PRS-RSRP measurement.

9.9A.5.7 Measurements Period Requirements without FH with both MG and PPW

If the UE is configured with both MG applicable to positioning measurement and PPW, the measurement period requirements for PRS-RSRP defined in clause 9.9A.3.5.3 is re-used for PRS-RSRPP.

9.9A.5.8 Measurements Period Requirements with FH

The measurement period requirements for PRS-RSRP defined in clause 9.9A.3.6 are re-used for PRS-RSRPP.

9.9C NR measurements for positioning in Satellite Access

9.9C.1 Introduction

This clause contains requirements for UE capable of performing NR positioning measurements defined in TS 38.215 [4], including UE Rx-Tx time difference , when the PCell is served by a Satellite Access Node (SAN).

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.9C.1.1 General Aspects of Gap-based Measurement

For gap-based UE Rx-Tx time difference, the requirements in clauses 9.9C.4.5 apply provided:

- the UE is configured with measurement gaps or configured with concurrent measurement gaps
  - all positioning frequency layers are measured or associated with only one measurement gap, or
- No active BWP switching occurs during the measurement gaps for PRS measurement, and

All measurement requirements specified in clause 9.9C.4.5 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

UE is only required to measure PRS resources that are fully or partially overlapped with measurement gaps, and the requirements in clause 9.9C.4.5 and are applicable to PRS resources that are fully or partially overlapped with measurement gaps.

A PRS resource is considered to be fully (partially) overlapped with measurement gaps if all (some) of its instances are overlapped with a measurement gap occasion. A PRS resource instance is considered to be overlapped with measurement gap occasion if the minimum number of unmuted repetitions of the instance taking into account *nr-DL-PRS-ExpectedRSTD-Uncertainty* and *nr-DL-PRS-ExpectedRSTD* is fully covered by the MGL excluding RF switching time, where the minimum number is given in the accuracy requirements in clause 10.1.25C, for UE Rx-Tx time difference .

When UE is configured with measurement for more than one positioning requests, the measurement period for each request may be longer than measurement period when UE is configured with measurement for single positioning request.

If a positioning measurement gap is configured via *PosGapConfig* and activated by MAC CE, the measurement requirements in clause 9.9.4C.5 apply provided that no other MGs are configured, and only one measurement gap configured via *PosGapConfig* is activated.

9.9C.1.2 General Aspects of Gapless Measurement

The requirements for UE Rx-Tx time difference measurement without measurement gaps specified in clause 9.9C.4.6 shall apply provided that:

Positioning frequency layer to be measured is within an active BWP,

UE is configured with PPW, and the PPW for the active BWP containing the positioning frequency layer to be measured is activated,

No active BWP switching occurs during the measurement period specified in clauses 9.9.2.7, 9.9.3.6, 9.9.4.6, and 9.9.6.6,

PRS is within PPW and does not overlap with other signals/channels of higher priority,

- for PPW type 1A/1B, the PPW does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,
- for PPW type 2, PRS does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,

SCS of PRS within PPW and SCS of DL active BWP are the same.

All measurement requirements specified in clause 9.9C.4.6 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

The UE is not required to perform additional SSB measurement for the SSB configured as QCL source of PRS resources.

The UE is only required to measure PRS resources that are unmuted and fully or partially overlapped with PPW, and the requirements in clause 9.9C.4.6 are applicable to PRS resources that are unmuted and fully or partially overlapped with PPW.

A PRS resource is considered to be fully (partially) overlapped with PPW if all (some) of its instances are overlapped with a PPW occasion. A PRS resource instance is considered to be overlapped with PPW occasion if the minimum number of unmuted repetitions of the instance taking into account Rx time difference between serving and non-serving cell is fully covered by the PPW, where the minimum number is given in the accuracy requirements in clause 10.1.25C for UE Rx-Tx time difference.

When UE is configured with measurement for more than one positioning requests, the measurement period for each request may be longer than measurement period when UE is configured with measurement for single positioning request.

9.9C.1.3 Scheduling Availability of UE during PRS Measurement without Measurement Gaps

The requirements in clause 9.9.1.3 apply for UE performing UE Rx-Tx time difference measurement without measurement gaps according to clause 9.9C.4.6.

9.9C.2 Void

9.9C.3 Void

9.9C.4 UE Rx-Tx time difference measurements

9.9C.4.1 Introduction

The requirements in this clause shall apply, provided the UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to measure and report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4].

9.9C.4.2 Requirements Applicability

The requirements in clause 9.9C.4 apply for periodic and triggered UE Rx-Tx time difference measurements, provided:

- UE Rx-Tx time difference measurement related side conditions given in clause 10.1.25C are met for a corresponding band.
- SRS is configured on the PCell.
- The UE transmits SRS within the range from -160 ms to 160 ms of the DL PRS resource of the TRP corresponding to the PCell in the assistance data.

9.9C.4.3 Measurement Capability

UE Rx-Tx time difference measurement capability is as indicated by the UE in *NR-Multi-RTT-ProvideCapabilities*, according to TS 37.355 [34].

9.9C.4.4 Measurement Reporting Requirements

This requirement assumes that the measurement report is not delayed by other LPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The UE Rx-Tx time difference measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.25C.

The UE Rx-Tx time difference measurement accuracy for all measured DL PRS resources shall be fulfilled according to the accuracy requirements specified in clause 10.1.25C.

9.9C.4.5 Measurement Period Requirements

When physical layer receives last of *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34], UE shall be able to measure multiple (up to the UE capability specified in clause 9.9C.4.3) UE Rx-Tx time difference measurements as defined in TS 38.215 [4] from its PCell in a single configured positioning frequency layer *i* within the measurement period $T_{UERxTx,i}$ ms.

Measurement period $T_{UERxTx,i}$ is defined as

$$T_{UERxTx,i} = \left(CSSF_i * \text{ceil}\left(K_{p,PRS,i}\right) * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1 \right) * T_{effect,i} + T_{last,i}$$

Where

$CSSF_i$ is the carrier-specific scaling factor for NR PRS-based measurement in the positioning frequency layer *i* as defined in clause 9.1.5.2,

$K_{p,PRS,i}$ is a scaling factor for a positioning frequency layer to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap, and $K_{p,PRS,i} = 1$ for UE not configured with concurrent measurement gap.

For a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE MG and per-FR MG within the same FR as the positioning frequency layer, and starting at the beginning of any associated gap occasions covering the PRS occasion:

N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and

$N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for MG collisions by applying the selected gap collision rule

Requirements do not apply if $N_{available}$ =0.

$L_{available_PRS,i}$ is the time duration of available PRS resources in the positioning frequency layer *i*, to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only the PRS resources unmuted and fully or partially overlapped with MG are considered.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSysmbols* in TS 37.355 [34] processed every T ms corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in clause 4.2.7.2 of TS 37.355 [34],

N' is UE capability for number of DL PRS resources that it can process in a slot corresponding to *maxNumOfDL-PRS-ResProcessedPerSlot* as specified in clause 6.4.3 of TS 37.355 [34],

N_{sample} is the number of UE Rx-Tx time difference measurement samples and $N_{sample} = 1$.

$T_{last,i}$ is the measurement duration for the last UE Rx-Tx time difference measurement sample in the positioning layer i, including the sampling time and processing time, $T_{last,i} = T_i + T_{available_PRS,i}$,

$T_{effect,i}$ is periodicity of UE Rx-Tx time difference measurement in positioning frequency layer *i*:

$$T_{\text{effect,i}} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil * T_{available_PRS,i}$$

where

T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34],

$T_{available_PRS,i} = LCM(T_{PRS,i}, MGRP_i)$, the least common multiple between $T_{PRS,i}$ and $MGRP_i$

$MGRP_i$ is the measurement gap repetition periodicity in positioning frequency layer *i*.

$T_{PRS,i}$ is the PRS resource periodicity in positioning frequency layer *i*. If the positioning frequency layer *i* has more than one DL PRS resource sets with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among DL PRS resource sets is used to derive $T_{PRS,i}$, where

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources fully or partially covered by the MG are considered.

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{UERxTx,Total}$ starts from the first MG instance aligned with DL PRS resources in the assistance data after both the *NR-Multi-RTT-RequestLocationInformation* message and *NR-Multi-RTT-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

For deferred MT-LR with other event than “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{UERxTx,Total}$ starts from the first MG instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event “Periodic Location” as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the PRS-RSRP measurement in each reporting period and activate the location report at the time when the periodic timer expires.

When HO occurs during the measurement period, UE shall stop PRS measurement for the source cell after HO occurs, and shall start PRS measurement for the target cell after SRS reconfiguration on the target cell is complete.

When satellite switch with re-sync occurs during the measurement period, UE shall stop PRS measurement at *t-Service* if hard switching is applicable, or at *t-ServiceStart* if soft switching is applicable, and shall start PRS measurement after the switch is complete.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or
- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

If during the measurement period, the MG pattern is reconfigured either per UE request or not per UE request, the measurement period can be longer.

The requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{UERxTx,Total}$ within measurement gaps due to collisions with other signals; otherwise, a longer measurement period may be used.

When PRS-RSRP is configured for multi-RTT, the UE Rx-Tx time difference measurements and PRS-RSRP measurements are performed over the same measurement period.

The requirements in clause 9.9C.4 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-*

Multi-RTT-ProvideCapabilities, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

When SRS is reconfigured without serving cell change during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration is complete.

If UE uplink transmission timing changes due to the network-configured Timing Advance command during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the change in the N_{TA_offset} defined in table 7.1.2-2 during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the UE autonomous timing adjustment defined in clause 7.1C.2 during the UE Rx-Tx time difference measurement period, then:

- UE Rx-Tx time difference measurement period requirements in this clause shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1C.1) for SRS transmission.

9.9C.4.6 Measurement Period Requirements without Measurement Gaps

When physical layer receives last of *NR-Multi-RTT-ProvideAssistanceData* message and *NR-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34], UE shall be able to measure multiple (up to the UE capability specified in clause 9.9C.4.3) UE Rx-Tx time difference measurements as defined in TS 38.215 [4] from its Pcell in a single configured positioning frequency layer *i* within the measurement period $T_{UERxTx_wo_gap,i}$ ms.

In the following requirements, a positioning frequency layer *i* is in Case 1 if UE reports *ppw-durationOfPRS-Processing1-r17* for the band containing the positioning frequency layer, and a positioning frequency layer is in Case 2 if UE reports *ppw-durationOfPRS-Processing2-r17* for the band containing the positioning frequency layer.

Measurement period $T_{UERxTx_wo_gap,i}$ is defined as

$$T_{UERxTx_wo_gap,i} = \left(\left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil * N_{sample} - 1 \right) * T_{effect,i} + T_{last,i}$$

Where

$T_{effect,i}$ is the periodicity of the UE Rx-Tx time difference measurement in positioning frequency layer i as defined further in this clause.

$L_{available_PRS,i}$ is the time duration of available PRS resources in the positioning frequency layer *i*, to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$,

only the unmuted PRS resources that meet the applicability conditions and fully or partially overlapped with PRS processing window are considered, if positioning frequency layer i is in Case 1, or

only the PRS resources unmuted and fully or partially overlapped with the first (PPWL-T2) ms of PPW are considered, if positioning frequency layer i is in Case 2, where PPWL is the PPW length and T2 corresponds to *ppw-durationOfPRS-ProcessingSymbolsT2*.

$N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources of positioning frequency layer i configured in a slot,

{N, T} is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *ppw-durationOfPRS-ProcessingSymbolsN* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponding to *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

N′ is UE capability for number of DL PRS resources that it can process in a slot corresponding to *ppw-maxNumOfDL-PRS-ResProcessedPerSlot* as specified in clause 6.4.3 of TS 37.355 [34],

N_{sample} is the number of UE Rx-Tx time difference measurement samples, and $N_{sample} = 1$

$T_{last,i}$ is the measurement duration for the last UE Rx-Tx time difference measurement sample in the positioning layer i, including the sampling time and processing time.

If positioning frequency layer *i* is in Case 1 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i} = T_i$ +PPWL, else

if positioning frequency layer *i* is in Case 2 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i}$ = PPWL;

otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$.

$T_{effect,i}$ is periodicity of UE Rx-Tx time difference measurement in positioning frequency layer *i*:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_{PRS},i}} \right\rceil * T_{available_{PRS},i}$$

where

T_i corresponds to *ppw-durationOfPRS-ProcessingSymbolsT* in TS 37.355 [34] if positioning frequency layer *i* is in Case 1, or corresponds to the sum of *ppw-durationOfPRS-ProcessingSymbolsT2* and *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if positioning frequency layer *i* is in Case 2,

$T_{available_PRS,i} = LCM(T_{PRS,i}, PPWRP_i)$, the least common multiple between $T_{PRS,i}$ and $PPWRP_i$

$PPWRP_i$ is the PRS processing window repetition periodicity in positioning frequency layer *i*.

$T_{PRS,i}$ is the PRS resource periodicity in positioning frequency layer *i*. If the positioning frequency layer *i* has more than one DL PRS resource sets with different PRS periodicities with muting, $T_{per}^{PRS\ with\ muting} = N_{muting} * T_{per}^{PRS}$, the least common multiple of $T_{per}^{PRS\ with\ muting}$ among DL PRS resource sets is used to derive $T_{PRS,i}$, where

T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} * L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources that meet the applicability conditions and fully or partially covered by the PRS processing window are considered.

The time $T_{UERxTx_wo_gap,i}$ starts from the first PRS processing window instance aligned with DL PRS resources in the assistance data after both the *NR-Multi-RTT-RequestLocationInformation* message and *NR-Multi-RTT-ProvideAssistanceData* message from LMF via LPP [34] are delivered to the physical layer of UE.

When HO occurs during the measurement period, UE shall stop PRS measurement for the source cell after HO occurs, and shall start PRS measurement for the target cell after SRS reconfiguration on the target cell is complete.

When satellite switch with re-sync occurs during the measurement period, UE shall stop PRS measurement at *t-Service* if hard switching is applicable, or at *t-ServiceStart* if soft switching is applicable, and shall start PRS measurement after the switch is complete.

The measurement requirements do not apply for a PRS resource:

- if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$ or
- if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

If during the measurement period, the PRS processing window is reconfigured or reactivated either per UE request or not per UE request, the measurement period can be longer.

The requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{UERxTx_wo_gap,i}$ within PRS processing window due to collisions with other signals; otherwise, a longer measurement period may be used.

When PRS-RSRP is configured for multi-RTT, the UE Rx-Tx time difference measurements and PRS-RSRP measurements are performed over the same measurement period.

The requirements in clause 9.9C.4.6 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-Multi-RTT-ProvideCapabilities*, and it is up to UE implementation which PRS resources are measured, subject to UE measurement capabilities.

When SRS is reconfigured without cell change during the measurement period, UE shall restart the UE Rx-Tx time difference measurement after the SRS reconfiguration on the target cell is complete.

If UE uplink transmission timing changes due to the network-configured Timing Advance command during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the change in the N_{TA_offset} defined in table 7.1C.2-2 during the UE Rx-Tx time difference measurement period, then the UE Rx-Tx time difference measurement period is restarted after uplink transmission timing changes, and the UE Rx-Tx time difference measurement period requirements in this clause shall not apply.

If UE uplink transmission timing changes due to the UE autonomous timing adjustment defined in clause 7.1C.2 during the UE Rx-Tx time difference measurement period, then:

- UE Rx-Tx time difference measurement period requirements in this clause shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1C.1) for SRS transmission.

If any positioning frequency layer is in Case 2, the requirements in this clause apply provided that the PPWL corresponding to the positioning frequency layer is larger than (T2+X) ms.

The requirements in this clause apply provided that a single positioning frequency layer is configured for measurement in each PPW.

9.9D NR measurements for positioning for RedCap in Satellite Access

9.9D.1 Introduction

This clause contains requirements for RedCap UE capable of performing NR positioning measurements defined in TS 38.215 [4], including UE Rx-Tx time difference, when the PCell is served by a Satellite Access Node (SAN).

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.9D.1.1 General Aspects of Gap-based Measurement

The requirements in clause 9.9C.1.1shall apply.

9.9D.1.2 General Aspects of Gapless Measurement

The requirements in clause 9.9C.1.2 shall apply.

9.9D.1.3 Scheduling Availability of UE during PRS Measurement without Measurement Gaps

The requirements in clause 9.9C.1.3 shall apply.

9.9D.2 Void

9.9D.3 Void

9.9D.4 UE Rx-Tx time difference measurements

9.9D.4.1 Introduction

The requirements in this clause shall apply for RedCap UE, when the UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to measure and report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4].

9.9D.4.2 Requirements Applicability

For RedCap UE not in HD-FDD mode, the requirements in clause 9.9D.4 apply for periodic and triggered RedCap UE Rx-Tx time difference measurements, provided:

- RedCap UE Rx-Tx time difference measurement related side conditions given in clause 10.1.25D are met for a corresponding band.
- SRS is configured on the PCell.
- The RedCap UE transmits SRS within [-160, 160] msec of the DL PRS resource of the TRP corresponding to the PCell in the assistance data.

For RedCap UE in HD-FDD mode, the requirements in clause 9.9D.4 apply for periodic and triggered RedCap UE Rx-Tx time difference measurements, provided:

- RedCap UE Rx-Tx time difference measurement related side conditions given in clause 10.1.25D are met for a corresponding band.
- SRS is configured on the PCell.
- The RedCap UE transmits SRS within [-160, 160] msec of the DL PRS resource of the TRP corresponding to the PCell in the assistance data.
- For UE supporting Handling collision Case 3 and collision Case 4 for half-duplex FDD operation for (e)RedCap UE, when *ntn-PrioritizeUl-semiStatichalfDuplexRedCapcollision* is enabled, no collision occurs between PRS and UL transmission.

9.9D.4.3 Measurement Capability

RedCap UE Rx-Tx time difference measurement capability is as indicated by the UE in *NR-Multi-RTT-ProvideCapabilities*, according to TS 37.355 [34].

9.9D.4.4 Measurement Reporting Requirements

The requirements in clause 9.9C.4.4 shall apply except that:

- the RedCap UE Rx-Tx time difference measurement accuracy for all measured DL PRS resources shall be fulfilled according to the accuracy requirements specified in clause 10.1.25D.2, and
- the RedCap UE Rx-Tx time difference measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.1.25D.3.

9.9D.4.5 Measurement Period Requirements

The requirements in clause 9.9C.4.5 shall apply except that:

- clause identifier 9.1.5.2 is replaced with 9.1A.5.2

- clause identifier 9.9C.4 is replaced with 9.9D.4

9.9D.4.6 Measurement Period Requirements without Measurement Gaps

The requirements in clause 9.9C.4.6 shall apply.

clause identifier 9.9C.4.6 is replaced with 9.9D.4.6.

9.9E Reporting Delay Requirements for DL AI/ML Positioning

9.9E.1 Introduction

The reporting delay requirements in Clause 9.9E shall apply provided the UE supports DL AI/ML positioning specified in TS 38.305 [22] as indicated in *NR-DL-AIML-ProvideCapabilities*, and has received *NR-DL-AIML-RequestLocationInformation* message from LMF via LPP requesting UE to report its location based on DL AI/ML positioning [34].

The position reporting delay is the sum of measurement delay, inference delay, and the time needed until the UE is ready to send the position report to LMF and is defined as the time between the moment when the position report is triggered and the moment when the UE is ready to start to transmit the position report over the air interface. This requirement assumes that the position report is not delayed by other LPP signalling on the DCCH. This position reporting delay excludes a delay uncertainty resulted when inserting the position report to the TTI of the uplink DCCH. The delay uncertainty is $2\times TTI_{DCCH}$ where TTI_{DCCH} is the duration of subframe or slot or subslot when the position report is transmitted on the PUSCH with subframe or slot or subslot duration. This position reporting delay excludes any delay caused by no UL resources for UE to send the report and is specified as:

$$T_{position_reporting_delay} = T_{measurement_delay} + T_{inference_delay}$$

Measurement delay, $T_{measurement_delay}$, for PRS measurement within measurement gap is defined in Clause 9.9E.5. Measurement delay, $T_{measurement_delay}$, for PRS measurement outside of measurement gap and within PPW is defined in Clause 9.9E.6. Measurement delay, $T_{measurement_delay}$, for PRS measurement by aggregating resources from multiple PFLs within measurement gap is defined in Clause 9.9E.7. Inference delay, $T_{inference_delay}$, is the sum of inference delays across the number of configured PFLs where inference delay per PFL is reported by UE for FG 59-3 and indicated to LMF. For bandwidth aggregation, the inference delay $T_{inference_delay}$ is the sum of inference delays across all effective PFLs where the UE performs aggregated measurements, with inference delay per effective PFL is equal to each per-PFL inference delay reported by the UE for FG 59-3 and indicated to the LMF.

The measurement delay requirements in Clauses 9.9E.5, 9.9E.6, and 9.9E.7 apply for periodic and triggered UE location reporting.

9.9E.2 General Aspects Relating to Gap-based Measurement

The requirements for gap-based measurement specified in Clauses 9.9E.5, and 9.9E.7 apply provided:

- the UE is configured or pre-configured with measurement gaps or configured with concurrent measurement gaps
    - all PFLs are measured or associated with only one per-UE measurement gap, or
    - for the UE supporting *independentGapConfigPRS-r17*, all PFLs in the same FR are measured or associated with only one per-FR measurement gap in the corresponding FR.
- if the measurement gap is pre-configured, the gap must be activated throughout the measurement period, and
- if concurrent measurement gaps are configured, one of the gap combinations specified in clause 9.1.8.2 is configured, and
- if the UE does not support *independentGapConfigPRS-r17*, the configured or pre-configured gap used to perform the PRS measurements must be of per-UE type, and

- No active BWP switching occurs during the measurement gaps for PRS measurement.

The requirements specified in Clauses 9.9E.5, and 9.9E.7 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

UE is only required to measure PRS resources that are fully or particaly overlapped with measurement gaps. A PRS resources is considered to be fully (partially) overlapped with measurement gap if all (some) of its instances are overlapped with a measurement gap occasion.

If a positioning measurement gap is configured via *PosGapConfig* and activated by MAC CE, the requirements in Clauses 9.9E.5, and 9.9E.7 apply provided that no other measurement gaps are configured, and only one measurement gap configured via *PosGapConfig* is activated.

When UE supports *musim-GapPreference-r17* and if the configured aperiodic MUSIM gap collides with the measurement gap associated with PRS measurement, where MUSIM gap collision rule in clause 9.1.10.4 is applied, longer measurement period for the PRS measurement is expected than the requirements as defined in Clauses 9.9E.5, and 9.9E.7.

9.9E.3 General Aspects Relating to Gapless Measurement

The requirements for gapless measurement specified in Clauses 9.9E.6 apply provided:

- PFL to be measured is within an active BWP,
- UE is configured with PPW, and the PPW for the active BWP containing the PFL to be measured is activated,
- No active BWP switching occurs during the measurement period specified in Clauses 9.9E.6,
- PRS is within PPW and does not overlap with other signals/channels of higher priority,
    - for PPW type 1A/1B, the PPW does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,
    - for PPW type 2, PRS does not overlap with any symbol for SSB-based RLM/BFD/CBD/L1-RSRP/L1-SINR measurement on any CC or for SSB based RRM measurement on any MOs that are measured outside measurement gaps,
- $\max|\Delta T| \leq THR$, where
    - ΔT is the time difference between the start of a slot containing PRS from the neighbor cell/TRP and the start of the closest slot from the serving cell;
    - the range of ΔT is determined by the expected RSTD and expected RSTD uncertainty in the assistance data;
    - THR is the threshold as reported in UE capability *prs-MeasurementWithoutMG-r17*.
- SCS of PRS within PPW and SCS of DL active BWP are the same.

Measurement delay requirement specified in Clause 9.9E.6 shall apply without DRX as well as for any DRX configuration specified in TS 38.331 [2].

The UE is not required to perform additional SSB measurement for the SSB configured as QCL source of PRS resources.

The UE is only required to measure PRS resources that are unmuted and fully or partially overlap with PPW.

A PRS resource is considered to be fully (partially) overlapped with PPW if all (some) of its instances overlap with a PPW occasion.

When UE supports *MUSIM-GapConfig-17* and the PPW occasion of the target PFL is overlapping with the configured aperiodic MUSIM gap, longer period for the PRS measurement is expected than the requirements as defined in Clauses 9.9E.6.

9.9E.4 Scheduling Availability Relating to Gapless Measurement

Scheduling availability specified in Clause 9.9.1.3 for gapless NR positioning measurements apply to UE performing gapless measurement for UE based DL AI/ML positioning.

9.9E.5 Measurement Delay Requirement with Measurement Gaps

When physical layer receives last of *NR-DL-AIML-ProvideAssistanceData* message and *NR-DL-AIML-RequestLocationInformation* message from LMF via LPP [34], the UE shall be able to measure PRS resources within the measurement period $T_{measurement_delay}$ to produce inputs for its AI/ML model to infer its location for reporting. The measurement delay when UE performs PRS measurement within the measurement gap is defined as:

$$T_{measurement_delay} = \sum_{i=1}^{L} T_{measure,i} + (L-1) * \max\left(T_{effect,i}\right),$$

where

- i is the index of PFL,
- L is total number of PFLs,
- $T_{effect,i}$ is the periodicity of the PRS measurement in PFL i
- $T_{measure,i}$ is the PRS measurement period for PFL i as specified below:

$$T_{measure,i} = \left(k_{multiTEG,i} \times CSSF_{PRS,i} \times \text{ceil}(K_{p,PRS,i}) \times N_{RxBeam,i} * \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil \times N_{sample} - 1 \right) \times T_{effect,i} + T_{last,i},$$

where

- $k_{multiTEG,i}$ is the scaling factor for PRS measurement with multiple Rx TEGs.
    - $k_{multiTEG,i} = N_{TEG,i}$, where $N_{TEG,i}$ is the number of Rx TEGs configured by LMF for PRS measurement depending on the UE capability regarding the number of UE-RxTEG(s) that is supported by UE reported for FG 59-6.
- $CSSF_{PRS,i}$ is the carrier-specific scaling factor for PRS measurements in PFL i as defined in clause 9.1.5.2.
- $K_{p,PRS,i}$ is a scaling factor for a PFL to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS,i} = N_{total}/N_{available}$ for UE configured with concurrent measurement gap or MUSIM gap or both concurrent measurement gap and MUSIM gap. $K_{p,PRS,i} = 1$ for UE not configured with concurrent measurement gap and not configured with MUSIM gaps.
    - For a window W of duration max($T_{PRS,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gap and per-FR measurement gap within the same FR as the PFL and periodic MUSIM gaps, and starting at the beginning of any associated gap occasions covering the PRS occasion:
        - N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and

- $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for measurement gap and MUSIM gaps collisions by applying the selected gap collision rule

- Requirements do not apply if $N_{available} = 0$.

- $N_{RxBeam,i} = 1$ in FR1. $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-AIML-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.

- $N_{sample} = 1$ if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.

- $N_{sample} = 2$ if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.

- $N_{sample} = 4$ otherwise.

- $N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources in PFL i configured in a slot.

- $L_{available_PRS,i}$ is the time duration of available PRS in the PFL i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$, only the PRS resources unmuted and fully or partially overlapped with measurement gap are considered.

- $T_{last,i}$ is the measurement duration for the last PRS measurement sample in PFL i, including the sampling time and processing time. If all of the PRS resources to be measured are available in the same measurement gap occasion during $T_{availabe}$, $T_{last,i} = T_i$ +MGL. Otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$,

- $T_{effect,i}$ is the periodicity of the PRS measurement in PFL i defined as:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil \times T_{available_PRS,i},$$

where

- T_i corresponds to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34],

- $T_{available_PRS,i} = LCM(T_{PRS,i}, MGRP_i)$, the least common multiple between $T_{PRS,i}$ and $MGRP_i$.

- $MGRP_i$ is the repetition periodicity of the measurement gap applicable for measurement in the PRS frequency layer i.

- $T_{PRS,i}$ is the periodicity of DL PRS resource with muting on PFL i.

- If more than one PRS periodicities are configured in PFL i, the least common multiple of PRS periodicities $T_{per}^{PRS\ with\ muting}$ among all DL PRS resource sets in the PFL is used to derive $T_{PRS,i}$, where

  - $T_{per}^{PRS\ with\ muting} = N_{muting} \times T_{per}^{PRS}$, is the PRS periodicity with muting per PRS resource.

- T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

- N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} \times L_{muting}$.

  - T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$ which is given by the higher-layer parameter *NR-MutingPattern-r16* included in *DL-PRS-MutingOption1-r16*.

- For the purpose of calculating $T_{PRS,i}$, only the PRS resources fully or partially covered by the measurement gap are considered.

- $\{N, T\}$ is UE capability combination per band where N is a duration of DL PRS symbols in ms corresponding to *durationOfPRS-ProcessingSysmbols* in TS 37.355 [34] processed every T corresponding to *durationOfPRS-ProcessingSymbolsInEveryTms* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *supportedBandwidthPRS* in TS 37.355 [34].

- N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfDL-PRS-ResProcessedPerSlot* specified in TS 37.355 [34].

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{meaurement_delay}$ starts from the first measurement gap instance aligned with a DL PRS resource(s) in the assistance data after both the *NR-DL-AIML-ProvideAssistanceData* message and *NR-DL-AIML-RequestLocationInformation* message are delivered from LMF to the physical layer of UE via LPP [34].

For deferred MT-LR with other event than "*Periodic Location*" as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{measurement_delay}$ starts from the first measurement gap instance aligned with a DL PRS resource(s) in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event "*Periodic Location*" as defined in clause 4.1a.5.1 TS 23.273 [44], the UE shall perform the PRS measurement in each reporting period and activate the position report at the time when the periodic timer expires.

9.9E.6 Measurement Delay Requirement without Measurement Gaps

When physical layer receives last of *NR-DL-AIML-ProvideAssistanceData* message and *NR-DL-AIML-RequestLocationInformation* message from LMF via LPP [34], the UE shall be able to measure PRS resources within the measurement period $T_{measurement_delay}$ to produce inputs for its AI/ML model to infer its location for reporting. The measurement delay when UE performs PRS measurement outside of the measurement gap and within PPW is defined as:

$T_{measurement_delay} = \sum_{i=1}^{L} T_{measurement_delay_wo_gap,i} + (L-1) * \max(T_{effect,i})$, if any of the PFLs are in Case 1, or

$T_{measurement_delay} = \max(T_{measurement_delay_wo_gap,i} + T_{uncertainty,i})$, if all the PFLs are in Case 2,

where,

- i is the index of PFL,

- L is total number of PFLs,

- $T_{effect,i}$ is the periodicity of the PRS measurement in PFL i, and

- $T_{uncertainty,i}$ is the time from the start of the first PPW occasion for PFL i to the start of measurement period $T_{measurement_delay}$.

A PFL is in Case 1 if UE reports *ppw-durationOfPRS-Processing1-r17* for the band containing the PFL, and a PFL is in Case 2 if UE reports *ppw-durationOfPRS-Processing2-r17* for the band containing the PFL.

$T_{measurement_delay_wo_gap,i}$ is the measurement period for PRS measurement in PFL *i* as specified below.

$$T_{measurement_delay_wo_gap,i} = \left(k_{multiTEG,i} \times N_{RxBeam,i} \times \left\lceil \frac{N_{PRS,i}^{slot}}{N'} \right\rceil \left\lceil \frac{L_{available_PRS,i}}{N} \right\rceil \times N_{sample} - 1\right) \times T_{effect,i} + T_{last,i},$$

where:

- $k_{multiTEG,i}$ is the scaling factor for PRS measurement with multiple Rx TEGs.
  - $k_{multiTEG,i} = N_{TEG,i}$, where $N_{TEG,i}$ is the number of Rx TEGs configured by LMF for PRS measurement depending on the UE capability regarding the number of UE-RxTEG(s) that is supported by UE reported for FG 59-6.
- $N_{RxBeam,i}$ = 1 in FR1. $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-AIML-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.
- $N_{PRS,i}^{slot}$ is the maximum number of DL PRS resources in PFL i configured in a slot.
- $L_{available_PRS,i}$ is the time duration of available PRS in the PFL i to be measured during $T_{available_PRS,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS,i}$,
  - only the PRS resources unmuted and fully or partially overlapped with PPW are considered, if PFL i is in Case 1, or
  - only the PRS resources unmuted and fully or partially overlapped with the first (PPWL-T2) ms of PPW are considered, if PFL i is in Case 2, where PPWL is the PPW length and T2 corresponds to *ppw-durationOfPRS-ProcessingSymbolsT2*.
- N_{sample}= 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample}= 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample}= 4 otherwise.
- $T_{last,i}$ is the measurement duration for the last PRS measurement sample in PFL i, including the sampling time and processing time.
  - If PFL *i* is in Case 1 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i} = T_i$ +PPWL, else
  - if PFL *i* is in Case 2 and all of the PRS resources to be measured are available in the same PPW occasion during $T_{available}$, then $T_{last,i}$ = PPWL;
  - otherwise, $T_{last,i} = T_i + T_{available_PRS,i}$.
- $T_{effect,i}$ is the periodicity of the PRS measurement in PFL i defined as:

$$T_{effect,i} = \left\lceil \frac{T_i}{T_{available_PRS,i}} \right\rceil \times T_{available_PRS,i}$$

Where,

- T_i corresponds to *ppw-durationOfPRS-ProcessingSymbolsT* in TS 37.355 [34] if PFL *i* is in Case 1 or corresponds to the sum of *ppw-durationOfPRS-ProcessingSymbolsT2* and *ppw*-durationOfPRS-*ProcessingSymbolsN2* in TS 37.355 [34] if PFL *i* is in Case 2,

- $T_{available_PRS,i} = LCM(T_{PRS,i}, PPWRP_i)$, the least common multiple between $T_{PRS,i}$ and $PPWRP_i$.

- $PPWRP_i$ is the repetition periodicity of the PRS processing window applicable for measurements in the PFL *i*.

- $T_{PRS,i}$ is the periodicity of DL PRS resource with muting on PFL *i*.

If more than one PRS periodicities are configured in PFL *i*, the least common multiple of PRS periodicities $T_{per}^{PRS\ with\ muting}$ among all DL PRS resource sets in the PFL is used to derive $T_{PRS,i}$, where,

- $T_{per}^{\text{PRS with muting}} = N_{muting} \times T_{per}^{PRS}$, is the PRS periodicity with muting per PRS resource,

- T_{per}^{PRS} is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*,

- N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS} \times L_{muting}$, where T_{muting}^{PRS} is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

NOTE: For the purpose of calculating $T_{PRS,i}$, only the PRS resources that meet the conditions for PRS measurement outside measurement gaps as defined in clause 9.9E.2 are considered.

N is a duration of DL PRS symbols in ms corresponding to *ppw-durationOfPRS-ProcessingSymbolsN* in TS 37.355 [34] if PFL *i* is in Case 1 or corresponding to *ppw-durationOfPRS-ProcessingSymbolsN2* in TS 37.355 [34] if PFL *i* is in Case 2.

N' is UE capability for number of DL PRS resources that it can process in a slot as indicated by *ppw-maxNumOfDL-PRS-ResProcessedPerSlot* specified in TS 37.355 [34].

The time $T_{measurement_delay_wo_gap,i}$ starts from the first instance of the activated PPW for measurement of PFL *i* aligned with a DL PRS resource(s) in the assistance data after both the *NR-DL-AIML-ProvideAssistanceData* message and *NR-DL-AIML-RequestLocationInformation*message are delivered from LMF to the physical layer of UE via LPP [34].

If during the measurement period of one or more PFLs, the PPW is re-configured or reactivated, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{measurement_delay_wo_gap,i}$ within PPW due to collisions with other signals; otherwise, the measurement period can be longer.

The measurement requirements do not apply for a PRS resource, if the PRS resource is across two sampling duration of N within duration $L_{available_PRS,i}$.

The measurement requirements do not apply for a PRS resource, if time span of the PRS resource instance (including at least the minimum number of repetitions specified in the accuracy requirements) is greater than UE reported capability N.

The requirements in Clause 9.9E.6 do not apply if the PRS configuration given by higher layer paramters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-AIML-ProvideCapabilities.*

If any PFL is in Case 2, the requirements in this clause apply provided that the PPWL corresponding to the PFL is larger than (T2+X) ms.

9.9E.7 Measurement Delay Requirement with Bandwidth Aggregation

When UE physical layer receives last of *NR-DL-AIML-ProvideAssistanceData* message, *NR-DL-AIML-RequestLocationInformation* message from LMF via LPP [34] with an indication of PRS resources in multiple PFLs that can be aggregated in *nr-DL-PRS-AggregationInfo,* the UE shall be able to measure PRS resources within the measurement period $T_{measurement_delay}$ to produce inputs for its AI/ML model to infer its location for reporting. The measurement delay when UE performs PRS measurement by aggregating PRS resources in multiple PFLs within the measurement gap is defined as:

$$T_{measurement_delay} = T_{measurement_delay_without_aggregation} + T_{measurement_delay_with_aggregation} + T_{margin},$$

where,

- $T_{measurement_delay_without_aggregation}$ is the total measurement period for PRS resources on PFLs that do not contain PRS resources for aggregation.
    - Calculation of $T_{measurement_delay_without_aggregation}$ is based on Clause 9.9E.5 with the following exceptions,
        - only PFLs containing resource set(s) not linked to any other resource set(s) are considered in L
        - on each PFL i, only resource set(s) not linked to any other resource set(s) are considered in $T_{available_PRS,i}$, $N_{PRS,i}^{slot}$ and $L_{available_PRS,i}$
        - $(L-1) * \max(T_{effect,i})$ is replace by $(L-1) * T'_{margin}$.
- $T_{measurement_delay_without_aggregation}$ is equal to zero if UE is not provisioned with information on PRS resources that can be aggregated for measurement by the LMF.
- If UE performs measurements on PFLs that contain PRS resources for aggregation and on PFLs that do not contain PRS resources for aggregation, $T_{margin} = T'_{margin}$ is delay margin to account for delay between PRS measurement performed by UE on PFLs that contain PRS resources for aggregation and PRS measurement performed by UE on PFLs that do not contain PRS resources for aggregation.
- If UE performs measurements on PFLs that contain PRS resources for aggregation or if UE performs measurements on PFLs that do not contain PRS resources for aggregation, then $T_{margin} = 0$.
- $T'_{margin} = \max(Teffect, i)$, when both aggregated PFLs and non-aggregated PFLs are measured by UE.

$T_{measurement_delay_with_aggregation}$, is the measurement period for PRS measurements performed by UE by aggregating PRS resources from multiple PFLs and is defined as:

$$T_{measurement_delay_with_aggregation} = \sum_{i=1}^{G} T_{PRS_aggregate,i} + (G-1) * T'_{margin},$$

where

- i is the index of effective PFL, corresponding to the group of PFLs containing linked PRS resource sets that can be aggregated,
- G denotes the number of effective PFLs to perform aggregated measurements on. G is provisioned to UE by LMF in *nr-DL-PRS-AggregationInfo.*
- $T_{PRS_aggregate,i}$ is the measurement period for PRS measurement in the effective PFL *i* as specified below:

$$T_{PRS_aggregate,i} = \left(k_{multiTEG_agg,i} \times CSSF_{PRS_agg,i} \times ceil(K_{p,PRS_agg,i}) \times N_{RxBeam,i} \times \left\lceil \frac{N_{PRS_agg,i}^{slot}}{N'_{agg}} \right\rceil \left\lceil \frac{L_{available_PRS_agg,i}}{N_{agg}} \right\rceil \times N_{sample} - 1\right) \times T_{effect_agg,i} + T_{last_agg,i},$$

where

- $k_{multiTEG_agg,i}$ is the scaling factor for PRS measurement with multiple Rx TEGs.
  - $k_{multiTEG_agg,i} = N_{TEG,i}$, where $N_{TEG,i}$ is the number of Rx TEGs configured by LMF for PRS measurement depending on the UE capability regarding the number of UE-RxTEG(s) that is supported by UE reported for FG 59-6.
- $CSSF_{PRS_agg,i}$ is the carrier-specific scaling factor for NR PRS-based positioning measurements in effective PFL i as defined in clause 9.1.5.2.
- $K_{p,PRS_agg,i}$ is a scaling factor for effective PFL i to be measured within the associated measurement gap pattern, which is defined as $K_{p,PRS_agg,i} = N_{total} / N_{available}$ for UE configured with concurrent measurement gap, and $K_{p,PRS_agg,i} = 1$ for UE not configured with concurrent measurement gap.
  - For a window W of duration max($T_{PRS_agg,i}$, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE measurement gap and per-FR measurement gap within the same FR as the effective PFL, and starting at the beginning of any associated gap occasions covering the PRS occasion:
    - N_{total} is the total number of associated gap occasions covering PRS occasions within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and
    - $N_{available}$ is the number of non-dropped associated gap occasions covering PRS occasions within the window W, after further accounting for measurement gap collisions by applying the selected gap collision rule
    - Requirements do not apply if $N_{available} = 0$.
- $N_{RxBeam,i} = 1$ in FR1. $N_{RxBeam,i}$ is equal to the value reported by the UE in *supportedLowerRxBeamSweepingFactor-FR2* if the UE supports the capability for the band containing positioning frequency layer i, and the LMF indicates *lowerRxBeamSweepingFactor-FR2* in *NR-DL-AIML-RequestLocationInformation*. $N_{RxBeam,i}$ is equal to 8, otherwise.
- $N_{PRS_agg,i}^{slot}$ is the maximum number of DL PRS resources in effective PFL i configured in a slot.
- $L_{available_PRS_agg,i}$ is the time duration of available PRS in the effective PFL i to be measured during $T_{available_PRS_agg,i}$, and is calculated in the same way as PRS duration K defined in clause 5.1.6.5 of TS 38.214 [26]. For calculation of $L_{available_PRS_agg,i}$, only the PRS resources unmuted and fully or partially overlapped with measurement gap and satisfying the conditions for PRS BW aggregation are considered.
- N_{sample}= 1 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and meets the following conditions:
  - PRS bandwidth is within the active BWP and
  - Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.
- N_{sample}= 2 if the UE supports *supportedDL-PRS-ProcessingSamples-RRC-CONNECTED* [34], and the LMF requests the UE to perform positioning measurements with reduced number of samples, and does not meet the following conditions:
  - PRS bandwidth is within the active BWP and

- Magnitude of difference between the serving cell's SS-RSRP and the neighbor cell's PRS-RSRP is within 6 dB.

- N_{sample} = 4 otherwise.

$T_{last_agg,i}$ is the measurement duration for the last PRS measurement sample in the effective PFL i, including the sampling time and processing time. If all of the PRS resources to be measured are available in the same measurement gap occasion during $T_{availabe_agg}$, $T_{last_agg,i} = T_{agg,i}$ + MGL. Otherwise, $T_{last_agg,i} = T_{agg,i} + T_{available_PRS_agg,i}$,

$T_{effect_agg,i}$ is the periodicity of the PRS measurement in the effective PFL i defined as:

$$T_{effect_agg,i} = \left\lceil \frac{T_{agg,i}}{T_{available_PRS_agg,i}} \right\rceil \times T_{available_PRS_agg,i}$$

where

- $T_{available_PRS_agg,i} = LCM(T_{PRS_agg,i}, MGRP_i)$, the least common multiple between $T_{PRS_agg,i}$ and $MGRP_i$. $MGRP_i$ is the repetition periodicity of the measurement gap applicable for measurement in the effective PFL i.

- $T_{PRS_agg,i}$ is the periodicity of DL PRS resources meeting the bandwidth aggregation conditions with muting on effective PFL i. If more than one PRS periodicities are configured in effective PFL i, the least common multiple of PRS periodicities $T_{per_agg}^{PRS\ with\ muting}$ among all DL PRS resource sets in the effective PFL is used to derive $T_{PRS_agg,i}$, where,

- $T_{per_agg}^{PRS\ with\ muting} = N_{muting} \times T_{per_agg}^{PRS}$, is the PRS periodicity with muting per PRS resource configured for aggregation,

- $T_{per_agg}^{PRS}$ is the periodicity of PRS resource sets given by the higher-layer parameter *DL-PRS-Periodicity*.

- N_{muting} is the scaling factor considering PRS resource muting. $N_{muting} = T_{muting}^{PRS_agg} \times L_{muting}$, where $T_{muting}^{PRS_agg}$ is the muting repetition factor given by the higher-layer parameter *DL-PRS-MutingBitRepetitionFactor*, and L_{muting} is the size of the bitmap $\{b^1\}$.

Note: For the purpose of calculating $T_{PRS_agg,i}$, only the PRS resources fully or partially covered by the measurement gap and PRS resources that satisfy the conditions for PRS BW aggregation are considered.

$\{N_{agg}, T_{agg,i}\}$ is UE capability combination per band to aggregate PRS resources from multiple PFLs within an effective PFL where N_{agg} is a duration of DL PRS symbols in ms corresponding to *prs-durationOfTwoPRS-BWA-ProcessingSymbolsN-r18* or *prs-durationOfThreePRS-BWA-ProcessingSymbolsN-r18* in TS 37.355 [34] processed every $T_{agg,i}$ ms corresponding to *prs-durationOfTwoPRS-BWA-ProcessingSymbolsT-r18* or *prs-durationOfThreePRS-BWA-ProcessingSymbolsT* in TS 37.355 [34] for a given maximum bandwidth supported by UE corresponding to *maximumOfTwoAggregatedDL-PRS-Bandwidth* or *maximumOfThreeAggregatedDL-PRS-Bandwidth* in TS 37.355 [34].

N'_{agg} is UE capability for number of DL PRS resources that it can process in a slot as indicated by *maxNumOfAggregatedDL-PRS-ResourcePerSlot-FR1-r18* for FR1 and *maxNumOfAggregatedDL-PRS-ResourcePerSlot-FR2-r18* for FR2 specified in TS 37.355 [34].

The requirements in this clause for aggregated measurements apply provided that the linked PRS resource sets on multiple PFLs for aggregated measurements satisfy all the conditions specified in clause 5.1.6.5.3 in TS 38.214 [26].

Except for deferred MT-LR as defined in clause 4.1a.5 TS 23.273 [44], the time $T_{measurement_delay}$ starts from the first measurement gap instance aligned with DL PRS resources in the assistance data for aggregation after both the *NR-DL-AIML-ProvideAssistanceData* message and *NR-DL-AIML-RequestLocationInformation* message are delivered from LMF to the physical layer of UE via LPP [34] including a request to perform measurement by aggregating PRS resources from multiple PFLs via *nr-DL-PRS-JointMeasurementRequestedPFL-List*.

For deferred MT-LR with other event than "*Periodic Location*" as defined in clause 4.1a.5.1 TS 23.273 [44], the time $T_{measurement_delay}$ starts from the first measurement gap instance aligned with DL PRS resources in the assistance data after the associated event(s) occurs.

For deferred MT-LR with event "*Periodic Location*" as defined in clause 4.1a.5.1 TS 23.27] [44], the UE shall perform the aggregated PRS measurement in each reporting period and activate the location report at the time when the periodic timer expires.

If during the measurement period of one or more effective PFLs, the measurement gap pattern is reconfigured, the measurement period can be longer.

The measurement requirements in this clause apply, provided no PRS symbols are dropped during the measurement period $T_{measurement_delay}$ within measurement gaps due to collisions with other signals; otherwise, the measurement period can be longer.

If CSSF changes during the measurement period, the measurement period could be longer.

The requirements in this Clause 9.9E.7 do not apply if the PRS configuration given by higher layer parameters *NR-DL-PRS-AssistanceData* exceeds any of the UE measurement capabilities given by *NR-DL-PRS-ResourcesCapability* in *NR-DL-AIML-ProvideCapabilities*.

9.10 CSI-RS based L3 measurements

9.10.1 Introduction

This clause contains general requirements on the UE regarding CSI-RS based measurement reporting in RRC_CONNECTED state. The requirements are split in intra-frequency and inter-frequency measurements requirements.

The requirements in this clause apply, provided:

- Only one MO is configured per CSI-RS frequency layer, and
- all CSI-RS resources in the same MO are configured with the same *csi-rs-MeasurementBW*, and
- *associatedSSB* is configured in *CSI-RS-Resource-Mobility* and detectable, and
- all CSI-RS resources in the same MO are configured with the same periodicity, and
- the associated SSB is QCLed with the corresponding CSI-RS resources in FR2, and
- the number of CSI-RS resources in any duration that equals to the length of a slot is no larger than UE capability *maxNumberCSI-RS-RRM-RS-SINR*.
- When there are mixed numerologies, the length of a slot is defined based on the smallest SCS
- For a UE capable of supporting *supportSBFD*,
  - Measurement requirements are applicable provided that all CSI-RS resources configured for measurement are available in one DL subband of SBFD symbols and/or on non-SBFD DL symbols of the cell transmitting the CSI-RS.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.10.2 CSI-RS based intra-frequency measurements

9.10.2.1 Introduction

A measurement is defined as a CSI-RS based intra-frequency measurement provided that:

- the SCS of the CSI-RS resource of the neighbour cell configured for measurement is the same as the SCS of the CSI-RS resource on the serving cell indicated for measurement, and
- the CP type of the CSI-RS resource of neighbour cell configured for measurement is the same as the CP type of the CSI-RS resource of the serving cell indicated for measurement, and

- It is applied for SCS = 60KHz

- the centre frequency of the CSI-RS resource of the neighbour cell configured for measurement is the same as the centre frequency of the CSI-RS resource of the serving cell indicated for measurement

The UE shall be able to identify new intra-frequency cells and perform CSI-RSRP, CSI-RSRQ and CSI-SINR measurements of identified intra-frequency cells if carrier frequency information is provided by PCell or the PSCell.

No measurement gap is needed for intra-frequency CSI-RS resources measurements.

For intra-frequency CSI-RS based measurements, UE may cause scheduling restriction as specified in clause 9.10.2.6.

Note: Extended CP for CSI-RS based measurement is not supported in this release.

9.10.2.2 Requirements applicability

The measurement of the associated SSB follows the same requirements as SSB based measurements defined in clause 9.2.

The requirements in clause 9.10.2 apply, provided:

- Only one intra-frequency CSI-RS layer per serving cell is configured, and

- The BW of the CSI-RS on the intra-frequency neighbor cell is within the active BWP of the UE, and

- The associated SSB of the CSI-RS resources being identified or measured are detectable, and the CSI-RS resources configured for CSI-RS based L3 measurements are measurable, and

- The bandwidth of CSI-RS resources of intra-MO is the same as that of the CSI-RS resources configured for the serving cell, and

- All CSI-RS resources on one intra-frequency layer are configured within up to two separate windows where each window is up to 5 ms, and

- for the case of single window further provided

  - The periodicity of the configured CSI-RS resources is 10 ms, 20 ms or 40 ms

- for the case of two separate windows further provided

  - The two windows are either both fully non-overlapped with MG or both partially overlapped with MG

    - The periodicity of the configured CSI-RS resources is 20 ms or 40 ms

  - The starting point of the first window is the slot boundary of the serving cell, where the corresponding slot contains the configured L3 CSI-RS resource of the serving cell in the servingCellMO with the smallest offset, and

  - The starting point of the second window if configured is determined by an offset of half of the CSI-RS periodicity in slots with regards to the starting point of the first window, and

- Numerology for intra-frequency CSI-RS and data of serving cell are the same.

An intra-frequency cell shall be considered detectable when for each relevant associated SSB:

- SS-RSRP related side conditions given in clauses 10.1.2.1 and 10.1.3.1 for FR1 and FR2, respectively, for a corresponding band,

- SS-RSRQ related side conditions given in clauses 10.1.7.1 and 10.1.8.1 for FR1 and FR2, respectively, for a corresponding band,

- SS-SINR related side conditions given in clauses 10.1.12.1 and 10.1.13.1 for FR1 and FR2, respectively, for a corresponding band,

- SSB_RP and SSB Ês/Iot according to Annex B.2.2 for a corresponding band.

A CSI-RS resource shall be considered measurable when for each relevant CSI-RS resource:

- CSI-RSRP related side conditions given in clauses 10.1.2.3 and 10.1.3.3 for FR1 and FR2, respectively, for a corresponding band,
- CSI-RSRQ related side conditions given in clauses 10.1.7.2 and 10.1.8.2 for FR1 and FR2, respectively, for a corresponding band,
- CSI-SINR related side conditions given in clauses 10.1.12.2 and 10.1.13.2 for FR1 and FR2, respectively, for a corresponding band,
- CSI_RP and CSI-RS Ês/Iot according to Annex B.2.12 for a corresponding band.

9.10.2.3 Number of cells and number of CSI-RS

9.10.2.3.1 Requirements for FR1

For each intra-frequency CSI-RS layer, during each layer 1 measurement period, the UE shall be capable of performing CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements for at least:

- 32 CSI-RSs with different CSI-RS index and/or PCI on the intra-frequency layer, and
- the cells to be monitored based on CSI-RS are the same set or a subset of the cells monitored based on the layer of the associated SSB

9.10.2.3.2 Requirements for FR2

For one single intra-frequency CSI-RS layer in a band, during each layer 1 measurement period, the UE shall be capable of performing CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements for at least:

- 32 CSI-RSs with different CSI-RS index and/or PCI, and
- the cells to be monitored based on CSI-RS are the same set or a subset of the cells monitored based on the layer of the associated SSB.

where this single intra-frequency layer shall be:

- PCC on which UE is configured to report CSI-RS measurement when UE is configured with SA NR operation mode with PCC in the band; or
- PSCC on which UE is configured to report CSI-RS measurement when UE is configured with EN-DC with PSCC in the band; or
- One of the SCCs on which UE is configured to report CSI-RS based measurements when neither PCC nor PSCC is in the same band, so that the selected SCC shall be an SCC where the UE is configured with CSI-RSRP measurement reporting if such SCC exists, otherwise the selected SCC is determined by UE implementation.

The UE shall also be capable of performing CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements for at least 2 CSI-RSs on serving cell for each of the other intra-frequency layer(s) in the same band.

For each FR2 band, UE is only required to measure neighbour cell CSI-RS on the CSI-RS layer, whose associated SSB is on the same SSB layer as the one where UE is required to measure neighbour cell SSB.

9.10.2.4 Measurement Reporting Requirements

Note: The UE is not required to report CSI-RS based L3 measurements when the timing offset between the reference measurement timing and the target CSI-RS in one layer is larger than one CP. If the UE reports CSI-RS based L3 measurements when the timing offset exceeds one CP, the UE is not required to meet the CSI-RS based L3 measurement accuracy requirements for CSI-RSRP, CSI-RSRQ and CSI-SINR in TS 38.133 [2] clause 10.1, which apply only when the timing offset is no larger than one CP.

9.10.2.4.1 Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodic measurement reports shall meet the requirements in clauses 10.1.2.3, 10.1.3.3, 10.1.7.2, 10.1.8.2, 10.1.12.2 and 10.1.13.2.

9.10.2.4.2 Event-triggered Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.1.2.3, 10.1.3.3, 10.1.7.2, 10.1.8.2, 10.1.12.2 and 10.1.13.2.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.10.2.4.3.

9.10.2.4.3 Event Triggered Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI- SINR measurements contained in event triggered measurement reports shall meet the requirements in clauses 10.1.2.3, 10.1.3.3, 10.1.7.2, 10.1.8.2, 10.1.12.2 and 10.1.13.2.

The UE shall not send any event triggered measurement reports as long as no reporting criterion is fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH}. This measurement reporting delay excludes a delay which caused by no UL resources being available for UE to send the measurement report on.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than the CSI-RS based measurement defined in clause 9.10.2.5. When L3 filtering is used an additional delay can be expected.

9.10.2.5 Intra-frequency measurements without measurement gaps

If a UE is configured with the higher layer parameters *CSI-RS-Resource-Mobility* and *associatedSSB*, the CSI-RS based measurement shall include PSS/SSS detection time of associatedSSB, the time period used to acquire the SFN information and CSI-RS based measurement period without gap.

- PSS/SSS detection time of associatedSSB is the intra-frequency T_{PSS/SSS_sync_intra} in clause 9.2.5.1.
- The time period used to acquire the SFN information is equal to 0 if the UE is indicated that the neighbour cell is synchronous with the serving cell (*deriveSSB-IndexFromCell* is enabled). Otherwise, the time period used to acquire the SFN information is $T_{CSI\text{-}RS_SFN_intra}$ as shown in table 9.10.2.5-3 for FR1. It is assumed that *deriveSSB-IndexFromCell* is always enabled for FR1 TDD and FR2.
- If the associatedSSB, which has been detectable at least for the time period $T_{identify_intra_with_index}$ defined in clause 9.2.5.1, becomes undetectable for a period ≤ 5 seconds and then the associatedSSB becomes detectable again with the same spatial reception parameter provided the timing to that cell has not changed more than $\pm 3200/2^{\mu} T_c$, where μ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3], PSS/SSS detection time and time period used to acquire the SFN information are equal to 0.

The measurement period for CSI- RS based intra-frequency measurements without gaps is as shown in table 9.10.2.5-1and table 9.10.2.5-2.

Additionally, for a given CSI-RS resource, if the associated SS/PBCH block is configured but not detected by the UE, or if CSI-RS is configured with associated SSB but not QCL-ed to the associated SSB, the UE is not required to monitor the corresponding CSI-RS resource.

Table 9.10.2.5-1: Measurement period for intra-frequency CSI-RS based measurements without gaps(FR1)

DRX cycle	$T_{CSI\text{-}RS_measurement_period_intra}$
No DRX	max(200 ms, ceil(5 x $K_{p_CSI\text{-}RS}$) x CSI-RS period) x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(200 ms, ceil(1.5x 5 x $K_{p_CSI\text{-}RS}$) x max(CSI-RS period, DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	ceil(5 x $K_{p_CSI\text{-}RS}$) x DRX cycle x $CSSF_{intra}$
NOTE 1: The requirements apply assuming CSI-RS configuration with {D=3 with PRBs ≥ 48}. D is frequency domain density for the 1-port CSI-RS for L3 mobility defined in clause 7.4.1 of TS 38.211 [6].	

Table 9.10.2.5-2: Measurement period for intra-frequency CSI-RS based measurements without gaps(FR2)

DRX cycle	$T_{CSI\text{-}RS_measurement_period_intra}$
No DRX	max(400 ms, ceil($M_{meas_period_w/o_gaps}$ x $K_{p_CSI\text{-}RS}$) x CSI-RS period) x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(400 ms, ceil(1.5x $M_{meas_period_w/o_gaps}$ x $K_{p_CSI\text{-}RS}$) x max(CSI-RS period,DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	$M_{meas_period_w/o_gaps}$ x DRX cycle x $CSSF_{intra}$
NOTE 1: The requirements apply assuming CSI-RS configuration with {D=3 with PRBs ≥ 48}. D is frequency domain density for the 1-port CSI-RS for L3 mobility defined in clause 7.4.1 of TS 38.211 [6].	

$M_{meas_period_w/o_gaps}$: For a UE supporting power class 1, $M_{meas_period_w/o_gaps}$ =40. For a UE supporting FR2 power class 2, $M_{meas_period_w/o_gaps}$ =24. For a UE supporting power class 3, $M_{meas_period_w/o_gaps}$ =24. For a UE supporting power class 4, $M_{meas_period_w/o_gaps}$ =24.

$CSSF_{intra}$: it is a carrier specific scaling factor and is determined according to $CSSF_{outside_gap,i}$ in clause 9.1.5.

For a UE not supporting *concurrentMeasGap-r17* or for a UE is supporting *concurrentMeasGap-r17* but not configured with concurrent measurement gaps, and the UE does not support [*musim-GapPreference-r17]* or is supporting [*musim-GapPreference-r17]* but not configured with periodic MUSIM gaps,

- if the intra-frequency CSI-RS resource does not overlap with any measurement gaps, $K_{p_CSI\text{-}RS}$=1;
- if some occasions of the intra-frequency CSI-RS resource is overlapped with any measurement gaps, $K_{p_CSI\text{-}RS}$ = 1/(1- (CSI-RS resource period /MGRP)) , where CSI-RS resource period < MGRP, and the MGRP is the periodicity of the measurement gap.
- Otherwise, when UE supports concurrent measurement gaps or [*musim-GapPreference-r17]* or both concurrent measurement gaps and *[musim-GapPreference-r17]*, and concurrent measurement gaps or periodic MUSIM gaps or both concurrent gaps and periodic MUSIM gaps are configured, $K_{p_CSI\text{-}RS}$ is the scaling factor for a CSI-RS frequency layer to be measured outside gap which is defined as $K_{p_CSI\text{-}RS} = N_{total} / N_{available}$

  For a window W of duration max(CSI-RS period, MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE MG, periodic MUSIM gaps, and per-FR MG within the same FR as the CSI-RS frequency layer, and starting at the beginning of any gap occasions covering the CSI-RS resources:

  N_{total} is the total number of CSI-RS resource occasions within the window, including those overlapped with other MG and MUSIM gap occasions within the window, and

  $N_{available}$ is the number of CSI-RS resource occasions that are not overlapped with any other non-dropped MG or non-dropped MUSIM gap occasions within the window W, after accounting for MG and MUSIM gap collisions by applying the collision rules for the measurement gap and MUSIM gap in clauses 9.1.8.3, 9.1.10.4 and 9.1.10.5, respectively.

  $K_{p_CSI\text{-}RS}$ = 1 when $N_{available}$ = 0

  Requirements in this clause do not apply when $N_{available}$ = 0 due to fully overlapping between CSI-RS occasions and MUSIM gap occasions within the window W.

When UE supports [*MUSIM-GapConfig-17]* and the CSI-RS occasions of the target frequency layer is overlapping with the configured aperiodic MUSIM gap, longer cell identification period for the target frequency layer is expected.

Table 9.10.2.5-3: Time period for SFN acquisition for intra-frequency CSI-RS based measurements without gaps(FR1)

DRX cycle	$T_{CSI\text{-}RS_SFN_intra}$
No DRX	max(200 ms, ceil(5 x $K_{p_CSI\text{-}RS}$) x SMTC period)[Note 1] x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(2000 ms, ceil (1.5 x 5 x $K_{p_CSI\text{-}RS}$) x max(SMTC period,DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	Ceil(5 x $K_{p_CSI\text{-}RS}$) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified NOTE 2: $K_{p_CSI\text{-}RS}$ is applicable for a UE supporting concurrent gaps and/or MUSIM gaps.	

9.10.2.6 Scheduling availability of UE during CSI-RS based intra-frequency measurements

UE is required to be capable of measuring without measurement gaps when CSI-RS resources are completely contained in the active BWP of the UE. Note the configured CSI-RS symbol is indicated in *firstOFDMSymbolInTimeDomain* included in *CSI-RS-ResourceConfigMobility* for RRM. When UE is required to perform CSI-RS based RRM measurements, and any of the conditions in the following clauses is met, there are restrictions on the scheduling availability; otherwise, there is no scheduling restriction. Note same numerology for intra-frequency CSI-RS and data of serving cell is considered in this release.

9.10.2.6.1 Scheduling availability of UE performing CSI-RS based measurements in TDD bands

When UE performs CSI-RS intra-frequency measurements in a TDD band,

- UE is not expected to transmit PUCCH/PUSCH/SRS on configured CSI-RS resource symbols, and on 1 OFDM symbol before and after each consecutively configured CSI-RS symbols.

When TDD intra-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) configured on the non-contiguous CC(s) in the same band. Ohterwise, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

For UE indicating *intraBandNR-CA-non-collocated-r19*,

1> when UE is configured with maxMIMO-Layers with value equal to 4 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 4"*

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 1"*

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

2> else if *nonCollocatedTypeNR-CA-v1900* is not provided

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

1> when UE is configured with maxMIMO-Layers with value equal to 2 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-r18* is not provided

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2>else

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

9.10.2.6.2 Scheduling availability of UE performing CSI-RS based measurements in FR2

When the UE performs CSI-RS based intra-frequency measurements for L3 mobility management in FR2, the following restrictions apply.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on the configured CSI-RS symbol within the configured slot as indicated in *slotConfig* of the corresponding CSI-RS resource to be measured for mobility.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with aforementioned restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to CSI-RSRP, CSI-RSRQ or CSI-SINR measurement on an FR2 intra-frequency cell in different bands, provided that UE is capable of independent beam management on this FR2 band pair.

9.10.3 CSI-RS based Inter-frequency measurements

9.10.3.1 Introduction

A measurement is defined as a CSI-RS based inter-frequency measurement provided it is not defined as an intra-frequency measurement according to clause 9.10.2.

If a UE is configured with the higher layer parameter *CSI-RS-Resource-Mobility* and the higher layer parameter *associatedSSB* is configured, the UE shall be able to identify inter-frequency cells indicated for measurement and perform CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements of identified inter-frequency cells.

When measurement gaps are needed, the UE is not expected to detect the associated SSB nor perform measurement of the CSI-RS resource configured in *CSI-RS-Resource-Mobility* on an inter-frequency measurement object which start earlier than the gap starting time + switching time, and ends later than the gap end – switching time. When the inter-frequency cells are in FR2 and the per-FR gap is configured to the UE in EN-DC, SA NR, NE-DC and NR-DC, or the serving cells are in FR2, the inter-frequency cells are in FR2 and the per-UE gap is configured to the UE in SA NR and NR-DC, the switching time is 0.25 ms. Otherwise the switching time is 0.5 ms.

If a UE is configured with multiple concurrent gaps, the requirements in this clause shall apply when the measurement gap pattern is configured to be associated to the CSI-RS resources of the inter-frequency layer.

9.10.3.2 Requirements applicability

The associated SSB layer of the CSI-RS follows the same requirements as SSB based measurements defined in clause 9.3.

The requirements in clause 9.10.3 apply, provided:

- The associated SSB of the cell being identified or measured is detectable, and
- All CSI-RS resources on one inter-frequency layer are configured within a window of up to 5 ms, and
- The periodicity of the configured CSI-RS resources is 10 ms, 20 ms or 40 ms, and
- CSI-RS resources for measurements and the associated SSB for cell identification are configured within measurement gap.

An inter-frequency cell shall be considered detectable when for each relevant associated SSB:

- SS-RSRP related side conditions given in clauses 10.1.4.1 and 10.1.5.1 for FR1 and FR2, respectively, for a corresponding band,
- SS-RSRQ related side conditions given in clauses 10.1.9.1 and 10.1.10.1 for FR1 and FR2, respectively, for a corresponding band,
- SS-SINR related side conditions given in clauses 10.1.14.1 and 10.1.15.1 for FR1 and FR2, respectively, for a corresponding band,

- SSB_RP and SSB Ês/Iot according to Annex B.2.3 for a corresponding band.

A CSI-RS resource shall be considered measurable when for each relevant CSI-RS resource:

- CSI-RSRP related side conditions given in clauses 10.1.4.3 and 10.1.5.3 for FR1 and FR2, respectively, for a corresponding band,
- CSI-RSRQ related side conditions given in clauses 10.1.9.2 and 10.1.10.2 for FR1 and FR2, respectively, for a corresponding band,
- CSI-SINR related side conditions given in clauses 10.1.14.2 and 10.1.15.2 for FR1 and FR2, respectively, for a corresponding band,
- CSI _RP and CSI-RS Ês/Iot according to Annex B.2.13 for a corresponding band.

9.10.3.3 Number of cells and number of CSI-RS resources

9.10.3.3.1 Requirements for FR1

For each inter-frequency CSI-RS layer, during each layer 1 measurement period, the UE shall be capable of performing CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements for at least:

- 14 CSI-RSs with different CSI-RS index and/or PCI , and
- The cells to be monitored based on CSI-RS are the same set or a subset of the cells monitored based on the layer of the associated SSB.

9.10.3.3.2 Requirements for FR2

For each inter-frequency CSI-RS layer, during each layer 1 measurement period, the UE shall be capable of performing CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements for at least:

- 24 CSI-RSs with different CSI-RS index and/or PCI, and
- The cells to be monitored based on CSI-RS are the same set or a subset of the cells monitored based on the layer the associated SSB.

9.10.3.4 Measurements reporting requirements

Note: The UE is not required to report CSI-RS based L3 measurements when the timing offset between the reference measurement timing and the target CSI-RS in one layer is larger than one CP. If the UE reports CSI-RS based L3 measurements when the timing offset exceeds one CP, the UE is not required to meet the CSI-RS based L3 measurement accuracy requirements for CSI-RSRP, CSI-RSRQ and CSI-SINR in TS 38.133 [2] clause 10.1, which apply only when the timing offset is no larger than one CP.

9.10.3.4.1 Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.4.2, 10.1.5.2, 10.1.9.2, 10.1.10.2, 10.1.14.2 and 10.1.15.2.

9.10.3.4.2 Event-triggered Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.4.2, 10.1.5.2, 10.1.9.2, 10.1.10.2, 10.1.14.2 and 10.1.15.2.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.10.3.4.3.

9.10.3.4.3 Event-triggered Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.4.2, 10.1.5.2, 10.1.9.2, 10.1.10.2, 10.1.14.2 and 10.1.15.2.

The UE shall not send any event triggered measurement reports, as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: $2 \times TTI_{DCCH}$. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be within CSI-RS based measurement defined in clause 9.10.3.5. When L3 filtering is used an additional delay can be expected.

9.10.3.5 Inter-frequency measurements with measurement gaps

When measurement gaps are provided, if configured with the higher layer parameters *CSI-RS-Resource-Mobility* and *associatedSSB*, the UE shall be able to identify a new detectable CSI-RS based inter-frequency cell within $T_{CSI-RS_identify_inter}$,

$$T_{CSI-RS_identify_inter} = (T_{PSS/SSS_sync} + T_{CSI-RS_measurement_period_inter} + T_{CSI-RS_SFN_inter})\ ms$$

Where:

T_{PSS/SSS_sync} is the time period used in PSS/SSS detection which is determined according to T_{PSS/SSS_sync_inter} in clause 9.3.4,

TCSI-RS_SFN_inter is the time period used to acquire the SFN information of the cell being measured, which is shown in table 9.10.3.5-3 for FR1 and equals inter-frequency TSSB_time_index_inter in clause 9.3.4 for FR2,

$T_{CSI-RS_measurement_period_inter}$: equal to a measurement period of CSI-RS based measurement given in table 9.10.3.5-1 and table 9.10.3.5-2.

$M_{meas_period_inter}$: For a UE supporting FR2 power class 1 or 5, $M_{meas_period_inter}$ =8×N samples. For a UE supporting FR2 power class 2, $M_{meas_period_inter}$=5×N samples. For a UE supporting FR2 power class 3, $M_{meas_period_inter}$ =5×N samples. For a UE supporting FR2 power class 4, $M_{meas_period_inter}$ = 5×N samples. Note that scaling factor N = [8].

$CSSF_{inter}$: it is a carrier specific scaling factor and is determined according to $CSSF_{within_gap,i}$ in clause 9.1.5 for measurement conducted within measurement gaps.

When UE supports concurrent measurement gaps or [*musim-GapPreference-r17]* or both concurrent measurement gap and [*musim-GapPreference-r17]*, and concurrent measurement gaps or periodic MUSIM gaps or both concurrent gaps and periodic MUSIM gaps are configured, K_{p_CSI-RS} is the scaling factor for a CSI-RS frequency layer to be measured within the associated measurement gap which is defined as $K_{p_CSI-RS} = N_{total} / N_{available}$. $K_{p_CSI-RS} = 1$ for UE not configured with concurrent measurement gaps and MUSIM gaps.

- For a window W of duration max(CSI-RS period, MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE MG, periodic MUSIM gaps, and per-FR MG within the same FR as the CSI-RS frequency layer, and starting at the beginning of any gap occasions covering the CSI-RS resources.
  - N_{total} is the total number of associated gap occasions covering CSI-RS resources within the window, including those overlapped with other measurement gap and MUSIM gap instances within the window, and
  - $N_{available}$ is the number of non-dropped associated gap occasions covering CSI-RS resources within the window W, after accounting for MG and MUSIM gap collisions by applying the collision rules for the measurement gap and MUSIM gap in clause 9.1.8.3 and 9.1.10.5, respectively.
  - Requirements do not apply if $N_{available} = 0$

When UE supports [*musim-GapPreference-r17*] and if the configured aperiodic MUSIM gap collides with the measurement gap associated with the target frequency layer, where MUSIM gap collision rule in clause 9.1.10.4 is applied, longer cell identification period for the target inter-frequency is expected.

Additionally, for a given CSI-RS resource, if the associated SSB is configured but not detected by the UE, or if CSI-RS configured with associated SSB but not QCL-ed to the associated SSB, the UE is not required to monitor the corresponding CSI-RS resource.

Table 9.10.3.5-1: Measurement period for CSI-RS based inter-frequency measurements with gaps (FR1)

Condition NOTE1,2	$T_{CSI\text{-}RS_measurement_period_inter}$
No DRX	$\text{Max}(200\text{ ms}, \text{ceil}(8 \times K_{p_CSI\text{-}RS}) \times \text{Max}(\text{MGRP}, \text{CSI-RS period})) \times \text{CSSF}_{inter}$
DRX cycle ≤ 320 ms	$\text{Max}(200\text{ ms}, \text{Ceil}(8 \times 1.5 \times K_{p_CSI\text{-}RS})) \times \text{Max}(\text{MGRP}, \text{CSI-RS period}, \text{DRX cycle})) \times \text{CSSF}_{inter}$
DRX cycle > 320 ms	$\text{Ceil}(8 \times K_{p_CSI\text{-}RS}) \times \text{DRX cycle} \times \text{CSSF}_{inter}$
NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1 NOTE 2: In EN-DC operation, the parameters, timers and scheduling requests referred to in clause 3.6.1 are for the secondary cell group. The DRX cycle is the DRX cycle of the secondary cell group. NOTE 3: If UE support concurrent gaps and multiple concurrent gaps are configured, the MGRP is the periodicity of the MG pattern associated to the CSI-RS resources of the inter-frequency layer. NOTE 4: $K_{p_CSI\text{-}RS}$ is applicable for a UE supporting concurrent gaps and/or MUSIM gaps.	

Table 9.10.3.5-2: Measurement period for CSI-RS based inter-frequency measurements with gaps (FR2)

Condition NOTE1,2	$T_{CSI\text{-}RS_measurement_period_inter}$
No DRX	$\text{Max}(400\text{ ms}, \text{ceil}(M_{meas_period_inter} \times K_{p_CSI\text{-}RS}) \times \text{Max}(\text{MGRP}, \text{CSI-RS period})) \times \text{CSSF}_{inter}$
DRX cycle ≤ 320 ms	$\text{Max}(400\text{ ms}, \text{ceil}(1.5 \times M_{meas_period_inter} \times K_{p_CSI\text{-}RS}) \times \text{Max}(\text{MGRP}, \text{CSI-RS period}, \text{DRX cycle})) \times \text{CSSF}_{inter}$
DRX cycle > 320 ms	$\text{Ceil}(M_{meas_period_inter} \times K_{p_CSI\text{-}RS}) \times \text{DRX cycle} \times \text{CSSF}_{inter}$
NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1 NOTE 2: In EN-DC operation, the parameters, timers and scheduling requests referred to in clause 3.6.1 are for the secondary cell group. The DRX cycle is the DRX cycle of the secondary cell group. NOTE 3: If UE support concurrent gaps and multiple concurrent gaps are configured, the MGRP is the periodicity of the MG pattern associated to the CSI-RS resources of the inter-frequency layer. NOTE 4: $K_{p_CSI\text{-}RS}$ is applicable for a UE supporting concurrent gaps and/or MUSIM gaps.	

Table 9.10.3.5-3: Time period for SFN acquisition for interfrequency CSI-RS based measurements with gaps(FR1)

Condition NOTE1,2	$T_{CSI\text{-}RS_SFN_inter}$
No DRX	$\text{Max}(200\text{ ms}, \text{ceil}(5 \times K_{p_CSI\text{-}RS}) \times \text{Max}(\text{MGRP}, \text{SMTC period})) \times \text{CSSF}_{inter}$
DRX cycle ≤ 320 ms	$\text{Max}(200\text{ ms}, \text{Ceil}(5 \times 1.5 \times K_{p_CSI\text{-}RS}) \times \text{Max}(\text{MGRP}, \text{SMTC period}, \text{DRX cycle})) \times \text{CSSF}_{inter}$
DRX cycle > 320 ms	$\text{Ceil}(5 \times K_{p_CSI\text{-}RS}) \times \text{DRX cycle} \times \text{CSSF}_{inter}$
NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1 NOTE 2: In EN-DC operation, the parameters, timers and scheduling requests referred to in clause 3.6.1 are for the secondary cell group. The DRX cycle is the DRX cycle of the secondary cell group. NOTE 3: If UE support concurrent gaps and multiple concurrent gaps are configured, the MGRP is the periodicity of the MG pattern associated to *associatedSSB*. NOTE 4: $K_{p_CSI\text{-}RS}$ is applicable for a UE supporting concurrent gaps and/or MUSIM gaps.	

9.10D CSI-RS based L3 measurements for ATG

9.10D.1 Introduction

This clause contains general requirements on the ATG UE regarding CSI-RS based measurement reporting in RRC_CONNECTED state. The requirements are split in intra-frequency and inter-frequency measurements requirements.

The requirements in this clause apply, provided:

- Only one MO is configured per CSI-RS frequency layer, and
- all CSI-RS resources in the same MO are configured with the same csi-rs-MeasurementBW, and
- *associatedSSB* is configured in *CSI-RS-Resource-Mobility* and detectable, and
- all CSI-RS resources in the same MO are configured with the same periodicity, and
- the number of CSI-RS resources in any duration that equals to the length of a slot is no larger than UE capability *maxNumberCSI-RS-RRM-RS-SINR*.
- When there are mixed numerologies, the length of a slot is defined based on the smallest SCS

9.10D.2 CSI-RS based intra-frequency measurements

9.10D.2.1 Introduction

A measurement is defined as a CSI-RS based intra-frequency measurement provided that:

- the SCS of the CSI-RS resource of the neighbour cell configured for measurement is the same as the SCS of the CSI-RS resource on the serving cell indicated for measurement, and
- the CP type of the CSI-RS resource of neighbour cell configured for measurement is the same as the CP type of the CSI-RS resource of the serving cell indicated for measurement, and
  - It is applied for SCS = 60KHz
- the centre frequency of the CSI-RS resource of the neighbour cell configured for measurement is the same as the centre frequency of the CSI-RS resource of the serving cell indicated for measurement

The UE shall be able to identify new intra-frequency cells and perform CSI-RSRP, CSI-RSRQ and CSI-SINR measurements of identified intra-frequency cells if carrier frequency information is provided by PCell.

No measurement gap is needed for intra-frequency CSI-RS resources measurements.

For intra-frequency CSI-RS based measurements, UE may cause scheduling restriction as specified in clause 9.10D.2.6.

Note: Extended CP for CSI-RS based measurement is not supported in this release.

9.10D.2.2 Requirements applicability

The measurement of the associated SSB follows the same requirements as SSB based measurements defined in clause 9.2D.

The requirements in clause 9.10D.2 apply, provided:

- Only one intra-frequency CSI-RS layer per serving cell is configured, and
- The BW of the CSI-RS on the intra-frequency neighbor cell is within the active BWP of the UE, and
- The associated SSB of the CSI-RS resources being identified or measured are detectable, and the CSI-RS resources configured for CSI-RS based L3 measurements are measurable, and

- The bandwidth of CSI-RS resources of intra-MO is the same as that of the CSI-RS resources configured for the serving cell, and
- All CSI-RS resources on one intra-frequency layer are configured within up to two separate windows where each window is up to 5 ms, and
- for the case of single window further provided
- The periodicity of the configured CSI-RS resources is 10 ms, 20 ms or 40 ms
- for the case of two separate windows further provided
  - The two windows are either both fully non-overlapped with MG or both partially overlapped with MG
    - The periodicity of the configured CSI-RS resources is 20 ms or 40 ms
  - The starting point of the first window is the slot boundary of the serving cell, where the corresponding slot contains the configured L3 CSI-RS resource of the serving cell in the servingCellMO with the smallest offset, and
  - The starting point of the second window if configured is determined by an offset of half of the CSI-RS periodicity in slots with regards to the starting point of the first window, and
- Numerology for intra-frequency CSI-RS and data of serving cell are the same.

An intra-frequency cell shall be considered detectable when for each relevant associated SSB:

- SS-RSRP related side conditions given in clauses 10.1.2.1 for FR1, for a corresponding band,
- SS-RSRQ related side conditions given in clauses 10.1.7.1 for FR1, for a corresponding band,
- SS-SINR related side conditions given in clauses 10.1.12.1 for FR1, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.2 for a corresponding band.

A CSI-RS resource shall be considered measurable when for each relevant CSI-RS resource:

- CSI-RSRP related side conditions given in clauses 10.1.2.3 for FR1, for a corresponding band,
- CSI-RSRQ related side conditions given in clauses 10.1.7.2 for FR1, for a corresponding band,
- CSI-SINR related side conditions given in clauses 10.1.12.2 for FR1, for a corresponding band,
- CSI_RP and CSI-RS Ês/Iot according to Annex B.2.12 for a corresponding band.

9.10D.2.3 Number of cells and number of CSI-RS

9.10D.2.3.1 Requirements for FR1

For each intra-frequency CSI-RS layer, during each layer 1 measurement period, the UE shall be capable of performing CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements for at least:

- 32 CSI-RSs with different CSI-RS index and/or PCI on the intra-frequency layer, and
- the cells to be monitored based on CSI-RS are the same set or a subset of the cells monitored based on the layer of the associated SSB

9.10D.2.4 Measurement Reporting Requirements

Note: The UE is not required to report CSI-RS based L3 measurements when the timing offset between the reference measurement timing and the target CSI-RS in one layer is larger than one CP. If the UE reports CSI-RS based L3 measurements when the timing offset exceeds one CP, the UE may not meet the CSI-RS based L3 measurement accuracy requirements for CSI-RSRP, CSI-RSRQ and CSI-SINR in TS 38.133 [2] clause 10.1, which apply only when the timing offset is no larger than one CP.

9.10D.2.4.1 Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodic measurement reports shall meet the requirements in clauses 10.1.2.3, 10.1.7.2, and 10.1.12.2.

9.10D.2.4.2 Event-triggered Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.1.2.3, 10.1.7.2, and 10.1.12.2.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.10D.2.4.3.

9.10D.2.4.3 Event Triggered Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI- SINR measurements contained in event triggered measurement reports shall meet the requirements in clauses 10.1.2.3, 10.1.7.2, and 10.1.12.2.

The UE shall not send any event triggered measurement reports as long as no reporting criterion is fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH}. This measurement reporting delay excludes a delay which caused by no UL resources being available for UE to send the measurement report on.

The event triggered measurement reporting delay, measured without L3 filtering shall be less than the CSI-RS based measurement defined in clause 9.10D.2.5. When L3 filtering is used an additional delay can be expected.

9.10D.2.5 Intra-frequency measurements without measurement gaps

If a UE is configured with the higher layer parameters *CSI-RS-Resource-Mobility* and *associatedSSB*, the CSI-RS based measurement shall include PSS/SSS detection time of associatedSSB, the time period used to acquire the SFN information and CSI-RS based measurement period without gap.

- PSS/SSS detection time of associatedSSB is the intra-frequency T_{PSS/SSS_sync_intra} in clause 9.2D.5.1.
- The time period used to acquire the SFN information is equal to 0 if the UE is indicated that the neighbour cell is synchronous with the serving cell (*deriveSSB-IndexFromCell* is enabled). Otherwise, the time period used to acquire the SFN information is $T_{CSI\text{-}RS_SFN_intra}$ as shown in table 9.10D.2.5-3 for FR1.
- If the associatedSSB, which has been detectable at least for the time period $T_{identify_intra_with_index}$ defined in clause 9.2D.5.1, becomes undetectable for a period ≤ 5 seconds and then the associatedSSB becomes detectable again with the same spatial reception parameter provided the timing to that cell has not changed more than $\pm 3200/2^{\mu} T_c$, where μ is the SCS configuration as defined in clause 4.2 of TS 38.211 [3], PSS/SSS detection time and time period used to acquire the SFN information are equal to 0.

The measurement period for CSI-RS based intra-frequency measurements without gaps is as shown in table 9.10D.2.5-1.

Additionally, for a given CSI-RS resource, if the associated SS/PBCH block is configured but not detected by the UE, or if CSI-RS is configured with associated SSB but not QCL-ed to the associated SSB, the UE is not required to monitor the corresponding CSI-RS resource.

Table 9.10D.2.5-1: Measurement period for intra-frequency CSI-RS based measurements without gaps(FR1)

DRX cycle	$T_{CSI\text{-}RS_measurement_period_intra}$
No DRX	max(200 ms, ceil(5 x $K_{p_CSI\text{-}RS}$ x N1[Note 3] x $K_{layer1_measurement}$) x CSI-RS period) x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(200 ms, ceil(1.5x 5 x $K_{p_CSI\text{-}RS}$ x N1[Note 3] x $K_{layer1_measurement}$) x max(CSI-RS period, DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	ceil(5 x $K_{p_CSI\text{-}RS}$ x N1[Note 3] x $K_{layer1_measurement}$) x DRX cycle x $CSSF_{intra}$

NOTE 1: The requirements apply assuming CSI-RS configuration with {D=3 with PRBs ≥ 48}. D is frequency domain density for the 1-port CSI-RS for L3 mobility defined in clause 7.4.1 of TS 38.211 [6].
NOTE 2: $K_{p_CSI\text{-}RS}$ is applicable for a UE supporting concurrent gaps
NOTE 3: For ATG UE capable of *antennaArrayType-r18*, N1 = 3 when network assistance on ATG cells reference locations is provided, otherwise N1 = 4.
Otherwise, N1 = 1.
NOTE 4: For ATG UE capable of *antennaArrayType-r18*, for the SCC measurement, N1=1 when the network indication *neighSCellMeasSkipping* is set to 'enable' to UE and inter-band carrier aggregation within FR1 is configured and UE not capable of antennaArrayType-r18 on the other serving carrier or UE support two simultaneous separate Rx beams, or when the network indication *neighSCellMeasSkipping* is set to 'enable' to UE and SMTC occasion for PCC and SCC are not overlapped in the time domain and intra-band carrier aggregation within FR1 is configured or inter-band carrier aggregation within FR1 is configured and UE support one common Rx beam.
Otherwise, N1 = 3 when network assistance information on ATG cells reference locations is provided, N1 = 4 when network assistance information on ATG cells reference locations is not provided.

$CSSF_{intra}$: it is a carrier specific scaling factor and is determined according to $CSSF_{outside_gap,i}$ in clause 9.1D.5.

For a UE not supporting *concurrentMeasGap-r17* or for a UE is supporting *concurrentMeasGap-r17* but not configured with concurrent measurement gaps,

- if the intra-frequency CSI-RS resource does not overlap with any measurement gaps, $K_{p_CSI\text{-}RS}=1$;
- if some occasions of the intra-frequency CSI-RS resource is overlapped with measurement gaps, $K_{p_CSI\text{-}RS}$ = 1/(1-(CSI-RS resource period /MGRP)) , where CSI-RS resource period < MGRP, and the MGRP is the periodicity of the measurement gap.
- Otherwise, when UE supports concurrent measurement gaps, and concurrent measurement gaps are configured, $K_{p_CSI\text{-}RS}$ is the scaling factor for a CSI-RS frequency layer to be measured outside gap which is defined as $K_{p_CSI\text{-}RS} = N_{total} / N_{available}$

  For a window W of duration max(CSI-RS period, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG, and starting at the beginning of any gap occasions covering the CSI-RS resources:

  N_{total} is the total number of CSI-RS resources within the window, including those overlapped with other MG occasions within the window, and

  $N_{available}$ is the number of CSI-RS resources that are not overlapped with any other non-dropped MG occasion within the window W, after accounting for MG collisions by applying the selected gap collision rule.

  $K_{p_CSI\text{-}RS}$ = 1 when $N_{available}$ = 0

For UE supporting *antennaArrayType-r18* on the measured carrier,

$K_{layer1_measurement}=1$,

If inter-band carrier aggregation within FR1 is configured and UE not capable of *antennaArrayType-r18* on the other serving carrier, or UE support two simultaneous separate Rx beams

- if all of the reference signals configured for RLM, BFD, CBD or L1-RSRP for beam reporting on one serving cell outside measurement gap are not fully overlapped by intra-frequency SMTC occasions and CSI-RSs occasions of same serving cell, or
- if the measured carrier is the SCC with servingcellMO configured, and the network indication *neighSCellMeasSkipping* is set to 'enable' to UE

Otherwise,

If the measured carrier is the SCC with servingcellMO configured, and the network indication *neighSCellMeasSkipping* is set to 'enable' to UE

- If SMTC occasion and CSI-RSs occasions for PCC and SCC are not overlapped in the time domain, or

- If SMTC occasion and CSI-RSs occasions for PCC and SCC are overlapped in the time domain, and all of the reference signals configured for RLM, BFD, CBD or L1-RSRP for beam reporting on any serving frequency outside measurement gap are not fully overlapped by overlapped SMTC occasions and CSI-RSs occasions of serving cells

Otherwise

- if all of the reference signals configured for RLM, BFD, CBD or L1-RSRP for beam reporting on any serving frequency outside measurement gap are not fully overlapped by intra-frequency SMTC occasions and CSI-RSs occasions

$K_{layer1_measurement}$=1.5, otherwise.

If the above-mentioned reference signal configured for L1-RSRP measurement is aperiodic CSI-RS resource, longer cell identification delay would be expected.

For UE not supporting *antennaArrayType-r18* on the measured carrier, $K_{layer1_measurement}$=1.

Table 9.10D.2.5-2: Void

Table 9.10D.2.5-3: Time period for SFN acquisition for intra-frequency CSI-RS based measurements without gaps(FR1)

DRX cycle	$T_{CSI\text{-}RS_SFN_intra}$
No DRX	max(200 ms, ceil(5 x $K_{p_CSI\text{-}RS}$ x $N1^{Note\ 2}$ x $K_{layer1_measurement}$) x SMTC period)$^{Note\ 1}$ x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(2000 ms, ceil (1.5 x 5 x $K_{p_CSI\text{-}RS}$ x $N1^{Note\ 2}$ x $K_{layer1_measurement}$) x max(SMTC period,DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	Ceil(5 x $K_{p_CSI\text{-}RS}$ x $N1^{Note\ 2}$ x $K_{layer1_measurement}$) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified	
NOTE 2: For ATG UE capable of *antennaArrayType-r18*, N1 = 3 when network assistance on ATG cells reference locations is provided, otherwise N1 = 4. Otherwise, N1 = 1.	
NOTE 3: For ATG UE capable of *antennaArrayType-r18*, for the SCC measurement, N1=1 when the network indication *neighSCellMeasSkipping* is set to 'enable' to UE and inter-band carrier aggregation within FR1 is configured and UE not capable of antennaArrayType-r18 on the other serving carrier or UE support two simultaneous separate Rx beams, or when the network indication *neighSCellMeasSkipping* is set to 'enable' to UE and SMTC occasion for PCC and SCC are not overlapped in the time domain and intra-band carrier aggregation within FR1 is configured or inter-band carrier aggregation within FR1 is configured and UE support one common Rx beam. Otherwise, N1 = 3 when network assistance information on ATG cells reference locations is provided, N1 = 4 when network assistance information on ATG cells reference locations is not provided.	

9.10D.2.6 Scheduling availability of UE during CSI-RS based intra-frequency measurements

UE is required to be capable of measuring without measurement gaps when CSI-RS resources are completely contained in the active BWP of the UE. Note the configured CSI-RS symbol is indicated in *firstOFDMSymbolInTimeDomain* included in *CSI-RS-ResourceConfigMobility* for RRM. When UE is required to perform CSI-RS based RRM measurements, and any of the conditions in the following clauses is met, there are restrictions on the scheduling availability; otherwise, there is no scheduling restriction. Note same numerology for intra-frequency CSI-RS and data of serving cell is considered in this release.

9.10D.2.6.1 Scheduling availability of UE performing CSI-RS based measurements in TDD bands

When ATG UE performs CSI-RS intra-frequency measurements in a TDD band,

- The UE is not expected to transmit PUCCH/PUSCH/SRS on configured CSI-RS resource symbols, and on 1 OFDM symbol before and after each consecutively configured CSI-RS symbols.

When TDD intra-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When the ATG UE capable of *antennaArrayType-r18* performs intra-frequency neighbouring cell measurements in a TDD band,

- The UE is not expected to receive PDCCH/PDSCH/TRS/CSI-RS for CQI on configured CSI-RS resource symbols, and on 1 OFDM symbol before and after each consecutively configured CSI-RS symbols.

When intra-band carrier aggregation is performed and the ATG UE is capable of *antennaArrayType-r18*, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When inter-band carrier aggregation is performed and the ATG UE supporting one common Rx beam, the scheduling restrictions due to a given serving cell also apply to another serving cell in a different band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

9.10D.3 CSI-RS based Inter-frequency measurements

9.10D.3.1 Introduction

A measurement is defined as a CSI-RS based inter-frequency measurement provided it is not defined as an intra-frequency measurement according to clause 9.10D.2.

If a UE is configured with the higher layer parameter *CSI-RS-Resource-Mobility* and the higher layer parameter *associatedSSB* is configured, the UE shall be able to identify inter-frequency cells indicated for measurement and perform CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements of identified inter-frequency cells.

When measurement gaps are needed, the UE is not expected to detect the associated SSB nor perform measurement of the CSI-RS resource configured in *CSI-RS-Resource-Mobility* on an inter-frequency measurement object which start earlier than the gap starting time + switching time, and ends later than the gap end – switching time. The switching time is 0.5 ms.

9.10D.3.2 Requirements applicability

The associated SSB layer of the CSI-RS follows the same requirements as SSB based measurements defined in clause 9.3D.

The requirements in clause 9.10D.3 apply, provided:

- The associated SSB of the cell being identified or measured is detectable, and
- All CSI-RS resources on one inter-frequency layer are configured within a window of up to 5 ms, and
- The periodicity of the configured CSI-RS resources is 10 ms, 20 ms or 40 ms, and
- CSI-RS resources for measurements and the associated SSB for cell identification are configured within measurement gap.

An inter-frequency cell shall be considered detectable when for each relevant associated SSB:

- SS-RSRP related side conditions given in clauses 10.1.4.1 for FR1, for a corresponding band,
- SS-RSRQ related side conditions given in clauses 10.1.9.1 for FR1, for a corresponding band,
- SS-SINR related side conditions given in clauses 10.1.14.1 for FR1, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.3 for a corresponding band.

A CSI-RS resource shall be considered measurable when for each relevant CSI-RS resource:

- CSI-RSRP related side conditions given in clauses 10.1.4.3 for FR1, for a corresponding band,

- CSI-RSRQ related side conditions given in clauses 10.1.9.2 for FR1, for a corresponding band,
- CSI-SINR related side conditions given in clauses 10.1.14.2 for FR1, for a corresponding band,
- CSI _RP and CSI-RS Ês/Iot according to Annex B.2.13 for a corresponding band.

9.10D.3.3 Number of cells and number of CSI-RS resources

9.10D.3.3.1 Requirements for FR1

For each inter-frequency CSI-RS layer, during each layer 1 measurement period, the UE shall be capable of performing CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements for at least:

- 14 CSI-RSs with different CSI-RS index and/or PCI , and
- The cells to be monitored based on CSI-RS are the same set or a subset of the cells monitored based on the layer of the associated SSB.

9.10D.3.4 Measurements reporting requirements

NOTE: The UE is not required to report CSI-RS based L3 measurements when the timing offset between the reference measurement timing and the target CSI-RS in one layer is larger than one CP. If the UE reports CSI-RS based L3 measurements when the timing offset exceeds one CP, the UE may not meet the CSI-RS based L3 measurement accuracy requirements for CSI-RSRP, CSI-RSRQ and CSI-SINR in TS 38.133 [2] clause 10.1, which apply only when the timing offset is no larger than one CP.

9.10D.3.4.1 Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.4.3, 10.1.9.2 and 10.1.14.2.

9.10D.3.4.2 Event-triggered Periodic Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.4.3, 10.1.9.2, and 10.1.14.2.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.10D.3.4.3.

9.10D.3.4.3 Event-triggered Reporting

Reported CSI-RSRP, CSI-RSRQ, and CSI-SINR measurements contained in periodically triggered measurement reports shall meet the requirements in clauses 10.1.4.3, 10.1.9.2 and 10.1.14.2.

The UE shall not send any event triggered measurement reports, as long as no reporting criteria are fulfilled.

The measurement reporting delay is defined as the time between an event that will trigger a measurement report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: $2 \times TTI_{DCCH}$. This measurement reporting delay excludes a delay which caused by no UL resources for UE to send the measurement report.

The event triggered measurement reporting delay, measured without L3 filtering shall be within CSI-RS based measurement defined in clause. When L3 filtering is used an additional delay can be expected.

9.10D.3.5 Inter-frequency measurements with measurement gaps

When measurement gaps are provided, if configured with the higher layer parameters *CSI-RS-Resource-Mobility* and *associatedSSB*, the UE shall be able to identify a new detectable CSI-RS based inter-frequency cell within $T_{CSI-RS_identify_inter}$,

$$T_{CSI\text{-}RS_identify_inter} = (T_{PSS/SSS_sync} + T_{CSI\text{-}RS_measurement_period_inter} + T_{CSI\text{-}RS_SFN_inter})\ ms$$

Where:

T_{PSS/SSS_sync} is the time period used in PSS/SSS detection which is determined according to T_{PSS/SSS_sync_inter} in clause 9.3D.4,

$T_{CSI\text{-}RS_SFN_inter}$ is the time period used to acquire the SFN information of the cell being measured, which is shown in table 9.10D.3.5-3 for FR1,

$T_{CSI\text{-}RS_measurement_period_inter}$: equal to a measurement period of CSI-RS based measurement given in table 9.10D.3.5-1.

$CSSF_{inter}$: it is a carrier specific scaling factor and is determined according to $CSSF_{within_gap,i}$ in clause 9.1D.5 for measurement conducted within measurement gaps.

If a UE which supports concurrent measurement gaps has been configured with concurrent measurement gaps, $K_{p_CSI\text{-}RS}$ is the scaling factor for a CSI-RS frequency layer to be measured within the associated measurement gap which is defined as $K_{p_CSI\text{-}RS} = N_{total} / N_{available}$. $K_{p_CSI\text{-}RS} = 1$ for for UE not configured with concurrent measurement gaps.

- For a window W of duration max(CSI-RS period, MGRP_max), where MGRP_max is the maximum MGRP across all configured per-UE MG and per-FR1 MG within the same FR as the CSI-RS frequency layer, and starting at the beginning of any gap occasions covering the CSI-RS resources.:
  - N_{total} is the total number of associated gap occasions covering CSI-RS resources within the window, including both dropped and non-dropped instances of the associated measurement gap within the window, and
  - $N_{available}$ is the number of non-dropped associated gap occasions covering CSI-RS resources within the window W, after accounting for MG collisions by applying the selected gap collision rule.
  - Requirements do not apply if $N_{available} = 0$

Additionally, for a given CSI-RS resource, if the associated SSB is configured but not detected by the UE, or if CSI-RS configured with associated SSB but not QCL-ed to the associated SSB, the UE is not required to monitor the corresponding CSI-RS resource.

Table 9.10D.3.5-1: Measurement period for CSI-RS based inter-frequency measurements with gaps (FR1)

Condition NOTE1	$T_{CSI\text{-}RS_measurement_period_inter}$
No DRX	$Max(200\ ms, ceil(8 \times K_{p_CSI\text{-}RS} \times N1^{Note\ 3}) \times Max(MGRP, CSI\text{-}RS\ period)) \times CSSF_{inter}$
DRX cycle ≤ 320 ms	$Max(200\ ms, Ceil(8 \times 1.5 \times K_{p_CSI\text{-}RS} \times N1^{Note\ 3}) \times Max(MGRP, CSI\text{-}RS\ period, DRX\ cycle)) \times CSSF_{inter}$
DRX cycle > 320 ms	$Ceil(8 \times K_{p_CSI\text{-}RS} \times N1^{Note\ 3}) \times DRX\ cycle \times CSSF_{inter}$
NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1 NOTE 2: $K_{p_CSI\text{-}RS}$ is applicable for a UE supporting concurrent gaps NOTE 3: For ATG UE capable of *antennaArrayType-r18*, N1 = 3 when network assistance on ATG cells reference locations is provided, otherwise N1 = 4. Otherwise, N1 = 1.	

Table 9.10D.3.5-2: Void

Table 9.10D.3.5-3: Time period for SFN acquisition for inter-frequency CSI-RS based measurements with gaps(FR1)

Condition NOTE1	$T_{CSI\text{-}RS_SFN_inter}$
No DRX	$Max(200\ ms, ceil(5 \times K_{p_CSI\text{-}RS} \times N1^{Note\ 3}) \times Max(MGRP, SMTC\ period)) \times CSSF_{inter}$

DRX cycle ≤ 320 ms	Max(200 ms, Ceil($5 \times 1.5 \times K_{p_CSI\text{-}RS}$ x N1[Note 3]) × Max(MGRP, SMTC period, DRX cycle)) × $CSSF_{inter}$
DRX cycle > 320 ms	Ceil($5 \times K_{p_CSI\text{-}RS}$ x N1[Note 3])× DRX cycle × $CSSF_{inter}$
NOTE 1: DRX or non DRX requirements apply according to the conditions described in clause 3.6.1 NOTE 2: $K_{p_CSI\text{-}RS}$ is applicable for a UE supporting concurrent gaps NOTE 3: For ATG UE capable of *antennaArrayType-r18*, N1 = 3 when network assistance on ATG cells reference locations is provided, otherwise N1 = 4. Otherwise, N1 = 1.	

9.11 NR measurements with autonomous gaps

9.11.1 Introduction

The requirements in this clause are applicable for CGI identification of an intra frequency and inter-frequency NR target cell.

The requirements in this clause are specified for CGI identification of an NR target cell and are applicable for a UE:

- in RRC_CONNECTED state, and
- configured with SA or NR-DC or NE-DC operation mode, or with EN-DC operation mode for CGI identification requested by NR PSCell.

The overall CGI reporting delay is defined in clause 9.11.3.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.11.2 CGI identification of an NR cell with autonomous gaps

The UE shall identify and report the CGI of a known NR target cell when requested by the network for the purpose of reportCGI. Only one cell is provided to the UE with *cellForWhichToReportCGI* for identifying the CGI.The UE may make autonomous gaps in both downlink reception and uplink transmission for receiving MIB and SIB1 message according to clause 5.5.3 of TS 38.331 [2]. Note that a UE is not required to use autonomous gap if *useAutonomousGaps* is set to false. If autonomous gaps are used for measurement with the purpose of reportCGI, regardless of whether DRX is used or not, or whether SCell(s) are configured or not, the UE shall be able to identify a new CGI of NR cell within:

$$T_{identify_CGI} = (T_{MIB} + T_{SIB1})\ ms$$

Where:

T_{MIB} is the time period used to acquire MIB message. $T_{MIB} = 6 * T_{SMTC}$ ms for target cell carrier frequency on FR1 and $T_{MIB} = 25 * T_{SMTC}$ ms for target cell carrier frequency on FR2.

T_{SIB1} is the time period used to acquire SIB1 message. $T_{SIB1} = 6 * T_{RMSI\text{-}scheduling}$ ms.

Where T_{SMTC} is the SMTC periodicity configured for the target cell measurement, and $T_{RMSI\text{-}scheduling}$ is

- the maximum between the periodicity with which the SIB1 is actually transmitted by the NR target cell and 20 ms when SSB and RMSI CORESET multiplexing pattern is 1
- the maximum between the periodicity with which the SIB1 is actually transmitted by the NR target cell and T_{SMTC} when SSB and RMSI CORESET multiplexing pattern is 2 or 3.

The requirement for identifying the CGI of an NR cell within $T_{identify_CGI}$ is applicable when no DRX is used as well as when any of the DRX cycles specified in TS 38.331 [2] is used.

Within the time $T_{identify_CGI}$, over which the UE identifies the CGI of an NR cell, the UE shall fulfil interruption requirements specified in,

- clause 8.2.1.2.16 for NR serving cells and clause 7.32.2.15 in TS 36.133 [15] for E-UTRA serving cells if the UE is configured with EN-DC operation mode,
- clause 8.2.2.2.14 if the UE is configured with SA operation mode,
- clause 8.2.3.2.14 for NR serving cells and clause 7.36.2.14 in TS 36.133 [15] for E-UTRA serving cells if the UE is configured with NE-DC operation mode,
- clause 8.2.4.2.11 if the UE is configured with NR-DC operation mode.

In the requirement a cell is known if,

- During the last 5 seconds for FR1 or 3 seconds for FR2 before the reception of the report CGI command:
  - The UE has sent a valid L3-RSRP measurement report with SSB index for the target cell and
- During MIB decoding at least reported SSBs remains detectable according to the cell identification conditions specified in clauses 9.2 or 9.3 of TS 38.133, and
- During SIB1 decoding the SSB used for MIB decoding remains detectable according to the cell identification conditions specified in clauses 9.2 or 9.3 of TS 38.133, and
- During MIB decoding, the SSB for MIB decoding remains detectable with SNR $\geqslant$-3 dB
- During SIB1 decoding, the PDSCH for SIB1 decoding remains detectable with SNR $\geqslant$-3 dB

9.11.3 CGI reporting delay

The CGI reporting delay is defined as the time between a command that will trigger a CGI report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty of 2 x TTI_{DCCH} resulting when inserting the measurement report to the TTI of the uplink DCCH. This measurement reporting delay excludes any delay caused by lack of UL resources for UE to send the measurement report.

The CGI reporting delay shall be less than $T_{identify_CGI}$ defined in clause 9.11.2 plus RRC procedure delay defined in clause 12 in TS 38.331 [2], and additional 20 ms margin if target cell is on FR2.

9.11A NR measurements with autonomous gaps for RedCap

9.11A.1 Introduction

The requirements in this clause are applicable for CGI identification of an intra frequency and inter-frequency NR target cell.

The requirements in this clause are specified for CGI identification of an NR target cell and are applicable for a UE:

- in RRC_CONNECTED state, and
- configured with SA operation mode.

The overall CGI reporting delay is defined in clause 9.11A.3.

9.11A.2 CGI identification of an NR cell with autonomous gaps

The UE shall identify and report the CGI of a known NR target cell when requested by the network for the purpose of reportCGI. Only one cell is provided to the UE with *cellForWhichToReportCGI* for identifying the CGI.The UE may make autonomous gaps in both downlink reception and uplink transmission for receiving MIB and SIB1 message according to clause 5.5.3 of TS 38.331 [2]. Note that a UE is not required to use autonomous gap if *useAutonomousGaps* is set to false. If autonomous gaps are used for measurement with the purpose of reportCGI, regardless of whether DRX is used or not, the UE shall be able to identify a new CGI of NR cell within:

$$T_{identify_CGI_redcap} = (T_{MIB_redcap} + T_{SIB1_redcap})\ ms$$

Where:

For 2 Rx RedCap UE:

T_{MIB_redcap} is the time period used to acquire MIB message. $T_{MIB_redcap} = 6 * T_{SMTC}$ ms for target cell carrier frequency on FR1 and $T_{MIB_redcap} = 25 * T_{SMTC}$ ms for target cell carrier frequency on FR2.

T_{SIB1_redcap} is the time period used to acquire SIB1 message. $T_{SIB1_redcap} = 6 * T_{RMSI\text{-}scheduling}$ ms.

For 1 Rx RedCap UE:

T_{MIB_redcap} is the time period used to acquire MIB message. $T_{MIB_redcap} = 6 * T_{SMTC}$ ms for target cell carrier frequency on FR1.

T_{SIB1_redcap} is the time period used to acquire SIB1 message. $T_{SIB1_redcap} = 12 * T_{RMSI\text{-}scheduling}$ ms.

Where T_{SMTC} is the SMTC periodicity configured for the target cell measurement, and $T_{RMSI\text{-}scheduling}$ is

- the periodicity with which the SIB1 is actually transmitted by the NR target cell when SSB and RMSI CORESET multiplexing pattern is 1
- the maximum between the periodicity with which the SIB1 is actually transmitted by the NR target cell and T_{SMTC} when SSB and RMSI CORESET multiplexing pattern is 2 or 3.

The requirement for identifying the CGI of an NR cell within $T_{identify_CGI_redcap}$ is applicable when no DRX is used as well as when any of the DRX cycles specified in TS 38.331 [2] is used.

Within the time $T_{identify_CGI_redcap}$, over which the UE identifies the CGI of an NR cell, the UE shall fulfil interruption requirements specified in,

- clause 9.11A.4if the UE is configured with SA operation mode.

In the requirement a cell is known if,

- During the last 5 seconds for FR1 or 3 seconds for FR2 before the reception of the report CGI command:
  - The UE has sent a valid L3-RSRP measurement report with SSB index for the target cell and
- During MIB decoding at least reported SSBs remains detectable according to the cell identification conditions specified in clauses 9.2B or 9.3B of TS 38.133, and
- During SIB1 decoding the SSB used for MIB decoding remains detectable according to the cell identification conditions specified in clauses 9.2B or 9.3B of TS 38.133, and
- During MIB decoding, the SSB for MIB decoding remains detectable with SNR $\geqslant$-3 dB
- During SIB1 decoding, the PDSCH for SIB1 decoding remains detectable with SNR $\geqslant$-3 dB

9.11A.3 CGI reporting delay

The CGI reporting delay is defined as the time between a command that will trigger a CGI report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty of 2 x TTI_{DCCH} resulting when inserting the measurement report to the TTI of the uplink DCCH. This measurement reporting delay excludes any delay caused by lack of UL resources for UE to send the measurement report.

The CGI reporting delay shall be less than $T_{identify_CGI_redcap}$ defined in clause 9.11A.2 plus RRC procedure delay defined in clause 12 in TS 38.331 [2], and additional 20 ms margin if target cell is on FR2.

9.11A.4 CGI reporting scheduling restriction

When a RedCap UE is identifying CGI of an NR cell with autonomous gaps, the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on PCell for the following slots:

- with up to K1 interruptions with interrupted slots up to X1 specified in table 9.11A.4-1 for each interruption during MIB decoding time period T_{MIB_redcap} (ms) specified in clause 9.11A.2.
- with up to L1 interruptions with interrupted slots up to Y1 specified in table 9.11A.4-1 during SIB1 decoding time period T_{SIB1_redcap} (ms) specified in clause 9.11A.2 for SSB and CORESET for RMSI scheduling multiplexing patterns 1.
- with up to L2 interruptions with interrupted slots up to interruption length Y2 specified in table 9.11A.4-1 during SIB1 decoding time period T_{SIB1_redcap} (ms) specified in clause 9.11A.2 for SSB and CORESET for RMSI scheduling multiplexing patterns 2 and 3.

Where:

- K1 = 6 for the target cell carrier frequency on FR1 and K1 = 25 for the target cell carrier frequency on FR2, and
- L1 = T_{SIB1_redcap} /20 and
- L2 = T_{SIB1_redcap} /T_{SMTC}, where T_{SMTC} is the periodicity of the SMTC occasion configured for the target cell carrier.

Table 9.11A.4-1: Interruption length X1, Y1 and Y2 during measurements with autonomous gaps

μ	NR Slot length (ms) of victim cell	Interruption length X1 (slots)	Interruption length Y1 (slots)	Interruption length Y2 (slots)
0	1	6	7	6
1	0.5	12	13	10
2	0.25	24	25	19
3	0.125	48	49	37

9.11D NR measurements with autonomous gaps for ATG

The requirements in clause 9.11 shall apply only for FR1 without considering CA/DC and inter-RAT measurement.

9.11D.1 Introduction

The requirements in this clause are applicable for CGI identification of an intra frequency and inter-frequency NR target cell.

The requirements in this clause are specified for CGI identification of an NR target cell and are applicable for a UE:

- in RRC_CONNECTED state, and
- configured with SA for CGI identification requested by NR PSCell.

The overall CGI reporting delay is defined in clause 9.11D.3.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.11D.2 CGI identification of an NR cell with autonomous gaps

The UE shall identify and report the CGI of a known NR target cell when requested by the network for the purpose of reportCGI. Only one cell is provided to the UE with *cellForWhichToReportCGI* for identifying the CGI.The UE may make autonomous gaps in both downlink reception and uplink transmission for receiving MIB and SIB1 message according to clause 5.5.3 of TS 38.331 [2]. Note that a UE is not required to use autonomous gap if *useAutonomousGaps* is set to false. If autonomous gaps are used for measurement with the purpose of reportCGI,

regardless of whether DRX is used or not, or whether SCell(s) are configured or not, the UE shall be able to identify a new CGI of NR cell within:

$$T_{identify_CGI} = (T_{MIB} + T_{SIB1})\ ms$$

Where:

T_{MIB} is the time period used to acquire MIB message. $T_{MIB} = 6 * T_{SMTC}$ ms for target cell carrier frequency on FR1.

T_{SIB1} is the time period used to acquire SIB1 message. $T_{SIB1} = 6 * T_{RMSI\text{-}scheduling}$ ms.

Where T_{SMTC} is the SMTC periodicity configured for the target cell measurement, and $T_{RMSI\text{-}scheduling}$ is

- the maximum between the periodicity with which the SIB1 is actually transmitted by the NR target cell and 20 ms when SSB and RMSI CORESET multiplexing pattern is 1.

The requirement for identifying the CGI of an NR cell within $T_{identify_CGI}$ is applicable when no DRX is used as well as when any of the DRX cycles specified in TS 38.331 [2] is used.

Within the time $T_{identify_CGI}$, over which the UE identifies the CGI of an NR cell, the UE shall fulfil interruption requirements specified in clause 8.2.2.2.14.

In the requirement a cell is known if,

- During the last 5 seconds for FR1 before the reception of the report CGI command:
  - The UE has sent a valid L3-RSRP measurement report with SSB index for the target cell and
- During MIB decoding at least reported SSBs remains detectable according to the cell identification conditions specified in clauses 9.2D or 9.3D of TS 38.133, and
- During SIB1 decoding the SSB used for MIB decoding remains detectable according to the cell identification conditions specified in clauses 9.2D or 9.3D of TS 38.133, and
- During MIB decoding, the SSB for MIB decoding remains detectable with SNR $\geqslant$-3 dB
- During SIB1 decoding, the PDSCH for SIB1 decoding remains detectable with SNR $\geqslant$-3 dB

9.11D.3 CGI reporting delay

The CGI reporting delay is defined as the time between a command that will trigger a CGI report and the point when the UE starts to transmit the measurement report over the air interface. This requirement assumes that the measurement report is not delayed by other RRC signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty of 2 x TTI_{DCCH} resulting when inserting the measurement report to the TTI of the uplink DCCH. This measurement reporting delay excludes any delay caused by lack of UL resources for UE to send the measurement report.

The CGI reporting delay shall be less than $T_{identify_CGI}$ defined in clause 9.11.2 plus RRC procedure delay defined in clause 12 in TS 38.331 [2].

9.12 Measurement for Propagation Delay Compensation

9.12.1 Introduction

The requirements in this clause are applicable for UE capable of RTT-based propagation delay compensation based on PRS/TRS and SRS, where the UE is configured with *measObjectRxTxDiff* in *MeasObjectToAddModList* defined in TS 38.331 [2].

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.12.2 Requirements Applicability

The requirements in clause 9.12 apply for periodic triggered UE Rx-Tx time difference measurements, provided:

- If UE Rx-Tx time difference measurement is based on PRS, the related side conditions given in clause 10.1.39.2 are met for a corresponding band.
- If UE Rx-Tx time difference measurement is based on TRS, the related side conditions given in clause 10.1.39.3 are met for a corresponding band.
- SRS is configured on at least one of the PCell.

All measurement requirements specified in clause 9.12.4 shall apply when no DRX is in use as well as for when DRX is in use (clause 3.6.1) for any DRX configuration specified in TS 38.331 [2].

9.12.3 Measurement Capability

If UE Rx-Tx time difference measurement is based on PRS, the capability is as indicated by the UE in *rtt-BasedPDC-PRS-r17* in TS 38.331 [2].

If UE Rx-Tx time difference measurement is based on TRS, the capability is as indicated by the UE in *rtt-BasedPDC-CSI-RS-ForTracking-r17* in TS 38.331 [2].

9.12.4 Measurement period requirements

9.12.4.1 PRS Measurement Period

When UE is configured with *prs-Ref-r17* in *MeasObjectRxTxDiff*-r17 defined in TS 38.331 [2] and provided with PRS resource configuration, the UE shall be able to measure UE Rx-Tx time difference on PCell within the measurement period $T_{UERx-Tx_PRS}$, where:

$$T_{UERxTx,PRS} = \left\lceil \frac{N_{PRS}^{slot}}{N'} \right\rceil * N_{sample} * K_{layer3} * LCM(T_{PRS}, T_{DRX})$$

Where:

N_{PRS}^{slot} is the maximum number of DL PRS resources configured in a slot,

N′ is UE capability for number of DL PRS resources that it can process in a slot corresponding to *maxNumberPRS-ResourceProcessedPerSlot-r17* as specified in TS 38.331 [2],

N_{sample} is the number of UE Rx-Tx time difference measurement samples and N_{sample} = 4,

T_{PRS} is the PRS resource periodicity specific for RTT-based propagation delay compensation,

T_{DRX} is the DRX cycle length when DRX is in use, 1 ms otherwise.

K_{layer3} is

N_{total} / $N_{available}$, when $N_{available}$>0

Where,

- For a window W of duration LCM(T_{PRS}, MGRP_max, T_{SMTC}) and starting at the beginning of any PRS resource occasion, where T_{SMTC} is the periodicity of SMTC for intra-frequency measurement without gap and MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as PCell for a UE that support *concurrentMeasGap-r17* and is configured with concurrent measurement gaps, otherwise MGRP_max is the MGRP of configured per-UE measurement gap or per-FR measurement gap within the same FR as PCell:
  - N_{total} is the total number of PRS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{available}$ is the number of PRS resource occasions that are not overlapped with:

- For FR1: any measurement gap occasions within window W. And for a UE supporting *concurrentMeasGap-r17* after accounting for measurement gap collisions by applying the measurement gap collision rule in clause 9.1.8.3 within the window W
- For FR2: any measurement gap occasions nor any SMTC occasions within window W. And for a UE supporting *concurrentMeasGap-r17* after accounting for measurement gap collisions by applying the measurement gap collision rule in clause 9.1.8.3 nor any SMTC occasions within the window W.

No requirements shall apply if $N_{available}$=0.

UE is only required to perform UE Rx-Tx time difference on PRS within the active DL BWP.

When UE is configured to perform UE Rx-Tx time difference measurement based on PRS, the requirements apply provided that the SCS of the PRS is same as that of the active BWP on PCell.

For FR2, the requirements apply if QCL information is provided for all the PRS resources in the resource set and for each resource one RS has QCL-TypeD.

If PRS resources overlap with Type 1A/1B/2 PPW, the UE is allowed longer measurement period to measure UE Rx-Tx time difference on PCell.

9.12.4.2 TRS Measurement Period

When UE is configured with *csi-RS-Ref-r17* in *MeasObjectRxTxDiff*-r17 defined in TS 38.331 [2] and provided with TRS resource configuration, the UE shall be able to measure UE Rx-Tx time difference on PCell within the measurement period $T_{UERx-Tx_TRS}$, where:

$$T_{UERxTx,TRS} = N_{sample} * K_{layer3} * LCM(T_{TRS}, T_{DRX})$$

Where

N_{sample} is the number of UE Rx-Tx time difference measurement samples and N_{sample} is [4],

T_{TRS} is the TRS resource periodicity specific for RTT-based propagation delay compensation,

T_{DRX} is the DRX cycle length when DRX is in use, 1 ms otherwise.

K_{layer3} is

N_{total} / $N_{available}$ when $N_{available}$>0

Where,

- For a window W of duration LCM(T_{TRS}, MGRP_max, T_{SMTC}) and starting at the beginning of any TRS resource occasion, where T_{SMTC} is the periodicity of SMTC for intra-frequency measurement without gap and MGRP_max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as PCell for a UE that support *concurrentMeasGap-r17* and is configured with concurrent measurement gaps, otherwise MGRP_max is the MGRP of configured per-UE measurement gap or per-FR measurement gap within the same FR as PCell:
  - N_{total} is the total number of TRS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{available}$ is the number of TRS resource occasions that are not overlapped with
    - For FR1: any measurement gap occasions within window W. And for a UE supporting *concurrentMeasGap-r17* after accounting for measurement gap collisions by applying the measurement gap collision rule in clause 9.1.8.3 within the window W
    - For FR2: any measurement gap occasions nor any SMTC occasions within window W. And for a UE supporting *concurrentMeasGap-r17* after accounting for measurement gap collisions by applying the measurement gap collision rule in clause 9.1.8.3 nor any SMTC occasions within the window W.

No requirements shall apply if $N_{available}$=0.

UE is only required to perform UE Rx-Tx time difference on TRS within the active DL BWP. When UE is configured to perform UE Rx-Tx time difference measurement based on TRS, the requirements apply provided that the SCS of the TRS is same as that of the active BWP on PCell.

For FR2, the requirements apply if QCL information is provided for all the TRS resources in the resource set and for each resource one RS has QCL-TypeD.

If TRS resources overlap with Type 1A/1B/2 PPW, the UE is allowed longer measurement period to measure UE Rx-Tx time difference on PCell.

9.12.5 Measurement Reporting Requirements

The UE shall report UE Rx-Tx time difference measurement results if UE supports *gNB-SideRTT-BasedPDC-r17*.

The measurement reporting delay excludes the delay uncertainty caused by inserting the measurement report into the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration. This measurement reporting delay excludes any delay caused by no UL resources for UE to send the measurement report.

The UE Rx-Tx time difference measurement values contained in measurement report shall be based on the measurement report mapping requirements specified in clause 10.1.25.3, with k = 5.

The UE Rx-Tx time difference measurement accuracy shall be fulfilled according to the accuracy requirements specified in clause 10.1.39.2 and 10.1.39.3 for PRS and TRS, respectively.

9.12.6 Scheduling availability during measurement for Propagation Delay Compensation

During measurement for Propagation Delay Compensation in an FR2 cell,

- For the case where the PRS or TRS for PDC measurement is QCLed with active TCI state for PDCCH/PDSCH, there are no scheduling restrictions due to PDC measurement performed based on PRS or TRS.
- Otherwise, the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the PRS or TRS resource configured for PDC measurement.

9.12.7 Measurement restriction for measurement for Propagation Delay Compensation

During measurement for Propagation Delay Compensation in an FR2 cell, when the PRS or TRS for PDC measurement on one CC is in the same OFDM symbol as SSB or CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both PRS or TRS for PDC measurement and the other RS if they are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE. Longer measurement period for PRS or TRS for PDC measurement is expected.

9.12.8 Measurement requirement for Propagation Delay Compensation with MUSIM gaps

The measurement requirement defined for measurement for Propagation Delay Compensation in this clause 9.12 applies, if there is no overlap between MUSIM gaps and PRS or TRS for propagation delay compensation measurements.

9.13 L1-RSRP measurements for a cell with different PCI from serving cell

9.13.1 Introduction

When configured by the network, the UE shall be able to perform L1-RSRP measurements of configured measurement resources from a cell with different PCI in addition to serving cell (PCI indicated in *additionalPCI-r17*), with the measurement resources configured as SSBs of the cell with different PCI.

The UE shall be able to measure all SSB resources of the cell with different PCI in *csi-SSB-ResourceSet* within the CSI-Resource*Config* settings for the active BWP, while the *additionalPCI-r17* of the SSB resources are different from serving cell PCI. The number of resources, including the number of resources configured for serving cell L1-RSRP measurement in clause 9.5, does not exceed the UE capability indicated by *beamManagementSSB-CSI-RS*.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the higher layer parameter *reportConfigType* of each reporting setting *CSI-ReportConfig* for the active BWP.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.13.2 Requirements Applicability

The requirements in the clause 9.13 are applicable to inter-cell beam management and inter-cell multi-TRP scenarios.

The requirements in clause 9.13 apply, provided the SSB from cell with PCI different from serving cell configured for L1-RSRP if the following conditions are met:

- the number of cells with PCI different from seving cells N_{max} = 1 for FR2 and N_{max} = maxNrofAdditionalPCI for FR1. Where, maxNrofAdditionalPCI is defined in TS 38.331 [2].
- The SSB from the cell with different PCI completely contained in the active BWP or associated with initial downlink BWP of the UE
- The SSB of the cell with different PCI from serving cell has the same SCS, SFN offset and center frequency as the SSB of the serving cell
- For a UE that supports both *multiDCI-IntraCellMultiTRP-TwoTA-r18* or *multiDCI-InterCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*, the requirements apply when RX timing difference is up to MRTD as specified in clause 7.6.8.
- For a UE which does not support *rxTimingDiff-r18*, the requirements apply when RX timing difference is less than CP
- The cell with different PCI from serving cell is known
- The SSB resources configured for L1-RSRP measurements are measurable

An SSB resource configured for L1-RSRP for cell with different PCI from serving cell shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clauses 10.1.19.1 and 10.1.20.1 for FR1 and FR2, respectively, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to Annex B.2.4.1 for a corresponding band.

The cell with different PCI from serving cell is considered as known if the following conditions are met in this requirement:

- The UE has sent a valid L3 measurement report during the last 5 seconds, and
- The SSB from the cell with different PCI remains detectable according to the cell identification requirements specified in clause 9.2.

Otherwise, the cell is unknown.

In case the SSB resources configured for L1-RSRP measurements outside SMTCs are overlapped with PDSCH/PDCCH that is associated to serving cell, L1-RSRP measurement performance degradation is expected.

9.13.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports only for report configurations configured for the active BWP.

The UE shall report the L1-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1dB step size according to clauses 10.1.19 for FR1 and 10.1.20 for FR2 if *nrofReportedRS* is configured to one. If *nrofReportedRS* is configured to be larger than one, or if *groupBasedBeamReporting-r17* is enabled, the UE shall use differential L1-RSRP based reporting as defined in clauses 10.1.19 for FR1 and 10.1.20 for FR2. The differential L1-RSRP is quantized to a 4-bit value with 2dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6.

In EN-DC and NE-DC operation, when the UE is configured to perform E-UTRA SRS carrier-based switching an additional delay can be expected in FR1 if the UE is capable of per-FR gap, or an additional delay can be expected in both FR1 and FR2 if the UE is not capable of per-FR gap.

9.13.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively.

The UE shall only send periodic L1-RSRP measurement reports for an active BWP.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.13.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.13.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2, respectively.

The UE shall only send aperiodic L1-RSRP measurement report if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.13.3.4 Event triggered reporting for UE initiated beam management

For a UE configured with a *CSI-ReportConfig* with *csi-ReportUE-IBR-r19* and with *dl-OrJointTCI-StateList,* with or without *eventCountWindow-r19* configuration the reported L1-RSRP measurements contained in an event triggered L1-RSRP measurement report shall meet the requirements in clauses 10.1.19 for FR1 and 10.1.20 for FR2.

The UE shall not send any event triggered measurement reports if no reporting criteria is fulfilled.

The event triggered L1-RSRP measurement reporting delay is defined as the time between an event that will trigger a measurement report after condition is met over the air and the point when the UE transmits first PUCCH over the air interface.

When *eventCountWindow-r19* is not configured,

The event triggered measurement reporting delay shall be no larger than $T_{L1\text{-}meas_basic} + T_{first_UL_channel}$.

$T_{L1\text{-}meas_basic}$ is the maximum of L1-RSRP measurement periods of the reference signals of beams corresponding to the event

For a UE configured with a *CSI-ReportConfig* with the higher layer parameter *eventTypeUE-IBR-r19* set to '*event2-r19*', UE shall perform L1-RSRP measurement based on the L1-RSRP measurement period of current beam and new beam(s) respectively.

For a UE configured with a *CSI-ReportConfig* with the higher layer parameter *eventTypeUE-IBR-r19* set to '*event1-r19*', UE shall perform L1-RSRP measurement based on the L1-RSRP measurement period of current beam.

If the SS/PBCH block is QCLed with the reference signal in the indicated TCI state, the L1-RSRP measurement period of the current beam refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ in Table 9.13.4.1-1 or 9.13.4.1-2 where $T_{Report.} = 0$, and T_{SSB_CDP} is the periodicity of the SS/PBCH block which is QCLed with the reference signal in the indicated TCI state for the current beam

If the reference signals in *newBeamResourceSet-r19* are based on SSB for a cell with additional PCI, the L1-RSRP measurement period of the new beam refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ in Table 9.13.4.1-1 or 9.13.4.1-2 where $T_{Report.} = 0$, and T_{SSB_CDP} is the periodicity of the *SSB-Index* of the reference signal configured by the *newBeamResourceSet-r19*.

For a UE configured with a CSI-ReportConfig with the higher layer parameter *eventTypeUE-IBR-r19* set to '*event7-r19*', UE shall perform L1-RSRP measurement based on L1-RSRP measurement period of current beam and new beam respectively.

If the SS/PBCH block is QCLed with the reference signal corresponding to the activated TCI states with the highest *valueOfQ-r19* the L1-RSRP measurement period of the beam refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ as specified in table 9.13.4.1-1 or 9.13.4.1-2 where $T_{Report.} = 0$, and T_{SSB} is the periodicity of the *SSB-Index* of the reference signal corresponding to the activated TCI states with the highest *valueOfQ-r19*

If the reference signals in *newBeamResourceSet-r19* are based on SSB for a cell with additional PCI, the L1-RSRP measurement period of the new beam refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ in Table 9.13.4.1-1 or 9.13.4.1-2 where $T_{Report.} = 0$, and T_{SSB_CDP} is the periodicity of the *SSB-Index* of the reference signal configured by the *newBeamResourceSet-r19*.

$T_{first\ UL\ channel}$ is the time to first PUCCH after L1 reporting condition is triggered

Otherwise, if *eventCountWindow-r19* is provided, the event triggered measurement reporting delay shall be no larger than (*eventInstanceCount-r19* + L) * $T_{L1\text{-}meas_basic} + T_{first\ UL\ channel,}$ where

- *eventInstanceCount-r19* is configured by the network

- $T_{L1\text{-}meas_basic}$ is the measurement period above based on the configuration

- L is the number of measurement instances ($T_{L1\text{-}meas_basic}$) that do not satisfy the event condition, counted after the event counter is started for the window that will trigger the measurement report and before the required number of events (eventInstanceCount-r19) are detected within the specified time window (*eventDetectionTimeWindow-r19*).

- The above requriement is applicable when *eventDetectionTimeWindow-r19* is not less than (*eventInstanceCount-r19* + L-1) * $T_{L1\text{-}meas_basic}$. The requirement does not apply when *eventDetectionTimeWindow-r19* is less than (*eventInstanceCount-r19* + L-1) * $T_{L1\text{-}meas_basic}$.

9.13.4 L1-RSRP measurement requirements

9.13.4.1 Inter-cell SSB based L1-RSRP Reporting

If a cell with PCI different from serving cell is known according to clause 9.13.2, the UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$. The requirements specified in this clause are only applicable when

- *highSpeedMeasFlag-r16* is not configured, and
- *highSpeedMeasFlagFR2-r17* is not configured, and
- *highSpeedMeasCA-Scell-r17* is not configured, and
- SSBs of CDP outside SMTCs for L1-RSRP measurement are not overlapped with concurrent gaps.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ is defined in table 9.13.4.1-1 for FR1, The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ is defined in table 9.13.4.1-2 for FR2 when *highSpeedMeasFlagFR2-r17* is not configured, where

- M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise
- N= 8.

When UE supports *musim-GapPreference-r17*, and periodic MUSIM gaps are configured,

- an SSB or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to 9.1.10,
- P value for SSB resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
  - $P = P_{L1_sharing\ factor} * P_{sharing\ factor} * N_{total} / N_{outside_MG}$ in FR2, if $N_{available} = 0$
  - P is defined as below based on P_2, where $P_2 = N_{total} / N_{available}$ in FR2, if $N_{available} > 0$
- For a window W of duration max($T_{L1,}$ MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE measurement gaps, MUSIM gap(s) and/or per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window, including those overlapped with measurement gap occasions, MUSIM gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any non-dropped measurement gap occasion nor non-dropped MUSIM gap occasion within the window W, and
  - $N_{available}$ is the number of SSB resource occasions that are not overlapped with any non-dropped measurement gap occasion, non-dropped MUSIM gap occasion nor any SMTC occasion within the window W.
  - an SSB or an SMTC occasion is considered to be overlapped with the MUSIM gap if it overlaps a MUSIM gap occasion.
  - T_{L1} is periodicity of the target SSB.

Otherwise, when UE does not support *musim-GapPreference-r17* or when no MUSIM gaps are configured,

For FR1,

- $P=\frac{1}{1-\frac{T_{SSB_CDP}}{MRGP}}$, when in the monitored cell there are measurement gaps configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the SSB; and
- P=1 when in the monitored cell there are no measurement gaps overlapping with any occasion of the SSB.

For FR2,

- P is $P_{L1_sharing}$*$P_{sharing\ factor,\ CDP}$, when SSB is not overlapped with measurement gap and SSB is fully overlapped with SMTC period (T_{SSB_CDP} = $T_{SMTCperiod}$), and T_{SSB_SC} = $T_{SMTCperiod}$.

- P is $P_{L1_sharing} * \frac{P_{\text{sharing factor}}}{1-\frac{T_{SSB_CDP}}{MGRP}}$, when SSB is partially overlapped with measurement gap and SSB is fully overlapped with SMTC occasion (T_{SSB_CDP} = $T_{SMTCperiod}$) and SMTC occasion is partially overlapped with GAP ($T_{SMTCperiod}$ < MGRP).

- $P_2=\frac{1}{1-\frac{T_{SSB_CDP}}{T_{SMTCperiod}}}$, when SSB is not overlapped with measurement gap and SSB is partially overlapped with SMTC occasion (T_{SSB_CDP} < $T_{SMTCperiod}$).

- $P_2= \frac{1}{1-\frac{T_{SSB_CDP}}{MGRP}-\frac{T_{SSB_CDP}}{T_{SMTCperiod}}}$, when SSB is partially overlapped with measurement gap and SSB is partially overlapped with SMTC occasion (T_{SSB_CDP} < $T_{SMTCperiod}$) and SMTC occasion is not overlapped with measurement gap and

  - $T_{SMTCperiod} \neq$ MGRP or

  - $T_{SMTCperiod}$ = MGRP and T_{SSB_CDP} < 0.5*$T_{SMTCperiod}$

- P_2 is $\frac{P_{\text{sharing factor}}}{1-\frac{T_{SSB_CDP}}{MGRP}}$, when SSB is partially overlapped with GAP and SSB is partially overlapped with SMTC occasion (T_{SSB_CDP} < $T_{SMTCperiod}$) and SMTC occasion is not overlapped with GAP and $T_{SMTCperiod}$ = MGRP and T_{SSB_CDP} = 0.5*$T_{SMTCperiod}$

- $P_2= \frac{1}{1-\frac{T_{SSB_CDP}}{min(T_{SMTCperiod},MGRP)}}$,when SSB is partially overlapped with measurement gap (T_{SSB_CDP} <MGRP) and SSB is partially overlapped with SMTC occasion (T_{SSB_CDP} < $T_{SMTCperiod}$) and SMTC occasion is partially or fully overlapped with measurement gap.

- If SSB resource from serving cell is configured for L1-RSRP measurements, and P_1 is valid accoding to 9.5.4.1, and any symbol of the SSBs from serving cell and cell with different PCI are overlapping or adjacent (in time domain)

  - $P = \frac{P_2}{1-\frac{P_2*T_{SSB_CDP}}{P_1*T_{SSB_SC}}}$, if P_2*T_{SSB_CDP} < P_1*T_{SSB_SC}.

  - P = P_2, if P_2*T_{SSB_CDP}> P_1*T_{SSB_SC}.

  - P = 2*P_2, if P_1*T_{SSB_SC} = P_2*T_{SSB_CDP}.

- Otherwise, P = P_2

- T_{SSB_CDP} = SSB periodicity of the cell with PCI different from serving cell

- $T_{SMTCperiod}$ = the configured SMTC period

- T_{SSB_SC} = ssb-periodicityServingCell of the serving cell

$P_{sharing\ factor}$ = 1, if the SSB configured for L1-RSRP measurement outside measurement gap is

- not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

- not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,

$P_{sharing\ factor}$ = 3, otherwise.

$P_{L1_sharing}$ = 2, if SSB resource from serving cell is configured for L1-RSRP measurements, and $P_{sharing_factor}$ is used in clause 9.5.4.1, and any symbol of the SSBs from serving cell and cell with different PCI are overlapping or adjacent (in time domain). $P_{L1_sharing}$ = 1, otherwise.

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Longer evaluation period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 cell with PCI different from serving cell, longer evaluation period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

When UE is configured with aperiodic MUSIM gap and the aperiodic MUSIM gap is overlapping with SSB resource occasion for inter-cell L1-RSRP, longer evaluation period would be expected.

When UE is configured with MUSIM gap(s), and SSB resource occasions for inter-cell L1-RSRP are fully overlapped with MUSIM gap(s) or fully overlapped with the union of MUSIM gap(s) and GAPs, no requirement applies for the SSB based inter-cell L1-RSRP measurement.

For either an FR1 or FR2 cell with PCI different from serving cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

Table 9.13.4.1-1: Inter-cell L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ for known cells with different PCIs in FR1

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB_CDP})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(K*M*P)*\max(T_{DRX},T_{SSB_CDP}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE 1: T_{SSB_CDP} is the periodicity of the SSB-Index configured for inter-cell L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: K = 1.5.	

Table 9.13.4.1-2: Inter-cell L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ for known cells with different PCIs in FR2

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_CDP}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P*N)*T_{SSB_CDP})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P*N)*\max(T_{DRX},T_{SSB_CDP}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*M*P*N)*T_{DRX}$
NOTE: T_{SSB_CDP} is the periodicity of the SSB-Index configured for inter-cell L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	

9.13.5 Measurement restriction for L1-RSRP measurement

The UE is required to be capable of measuring SSB for L1-RSRP without measurement gaps. The UE is required to perform the SSB measurements with measurement restrictions as described in the following clauses.

Unless explicitly stated, the SSB to be measured for L1-RSRP measurement is transmitted from cell(s) with PCI different from serving cell(s).

9.13.5.1 Measurement restriction for SSB based L1-RSRP

For FR1,

If UE does not support [*multiDCI-InterCellMultiTRP-TwoTA-r18* or *multiDCI-IntraCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*],

when the SSB for L1-RSRP measurement is in the same OFDM symbol as SSB transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement,

- UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;

when the SSB for L1-RSRP measurement is in the same OFDM symbol as CSI-RS transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

If UE supports [*multiDCI-InterCellMultiTRP-TwoTA-r18* or *multiDCI-IntraCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*],

when the SSB for L1-RSRP measurement and SSB transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement are overlapping or partially overlapping in OFDM symbols,

- UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;

when the SSB for L1-RSRP measurement and CSI-RS transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement are overlapping or partially overlapping in OFDM symbols,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2,

when the SSB for L1-RSRP measurement on one CC is in the same OFDM symbol as SSB transmitted from serving cell(s) for RLM, BFD, or CBD measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both the two SSBs. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

when the SSB for L1-RSRP measurement on one CC is in the same OFDM symbol as SSB for L1-RSRP measurement on the different CCs in the same band, UE is required to measure one of but not both the two SSBs. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

when the SSB for L1-RSRP measurement on one CC is in the same OFDM symbol as CSI-RS transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, if the network configures same or mixed numerology between SSB for L1-RSRP measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions in the other band, provided that UE is capable of independent beam management on this FR2 band pair.

9.13.6 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions described in the following clauses apply when UE is performing L1-RSRP measurement on cell(s) with PCI different from serving cell, and UE is receiving PDCCH/PDSCH from serving cell and/or cell(s) with different PCI.

9.13.6.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

9.13.6.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

If UE does not support [*multiDCI-InterCellMultiTRP-TwoTA-r18* or *multiDCI-IntraCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*],

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

If UE supports [*multiDCI-InterCellMultiTRP-TwoTA-r18* or *multiDCI-IntraCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*],

- For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols which are overlapped or partially overlapped with SSB symbols configured for L1-RSRP measurement

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions apply to cell(s) in the same band on the symbols that fully or partially overlap with restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions apply to cell(s) in the same band on the symbols that fully or partially overlap with restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

For UE indicating *intraBandNR-CA-non-collocated-r19*,

1> when UE is configured with maxMIMO-Layers with value equal to 4 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 4"*

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2> if *nonCollocatedTypeNR-CA-v1900* is *"type 1"*

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

2> else if *nonCollocatedTypeNR-CA-v1900* is not provided

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

1> when UE is configured with maxMIMO-Layers with value equal to 2 for the configured FR1 intra-band non-contiguous CA

2> if *nonCollocatedTypeNR-CA-r18* is not provided

3> there is no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band.

2>else

3> the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 cells configured in other bands than the bands in which the cell where L1-RSRP measurement is performed is configured.

9.13.6.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions is performed apply to cell(s) in the band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 cells in the bands due to L1-RSRP measurement performed on FR2 cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

If following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE’s reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for L1-RSRP measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for L1-RSRP measurement.

9.13.6.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 cell(s) due to L1-RSRP measurement performed on FR2 cell(s).

There are no scheduling restrictions on FR2 cell(s) due to L1-RSRP measurement performed on FR1 cell(s).

9.13.6.5 Scheduling availability of UE performing L1-RSRP measurement in TDD bands on FR1

When UE performs L1-RSRP measurement on cell with different PCI from serving cell in a TDD band, the following restrictions apply due to L1-RSRP measurement

If UE does not support [*multiDCI-InterCellMultiTRP-TwoTA-r18* or *multiDCI-IntraCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*],

- The UE is not expected to transmit PUCCH/PUSCH/SRS on symbols corresponding to the SSB indexes configured for L1-RSRP measurement, where the transmission of PUCCH/PUSCH/SRS may be on serving cell(s) and cell(s) with PCI different from serving cell(s), and restricted symbols may partially or fully overlap with UL symbols

If UE supports [*multiDCI-InterCellMultiTRP-TwoTA-r18* or *multiDCI-IntraCellMultiTRP-TwoTA-r18* and *rxTimingDiff-r18*],

- The UE is not expected to transmit PUCCH/PUSCH/SRS on the symbols configured for L1-RSRP measurement which are overlapped or partially overlapped with SSB symbols configured for L1-RSRP measurement

9.14 NR intra-frequency L1-RSRP measurements for neighbor cell

9.14.1 Introduction

A measurement is defined as an SSB based intra-frequency L1-RSRP measurement provided the centre frequency of the SSB of the serving cell and the centre frequency of the SSB of the neighbour cell are the same, and the subcarrier spacing of the two SSBs are also the same.

When configured with *LTM-CSI-ResourceConfig-r18* by the network, the UE shall be able to perform L1-RSRP measurements of configured measurement resources from a neighbor cell, with the measurement resources configured as SSBs of the neighbor cell.

If the number of resources/cells, including the number of resources/cells configured for L1-RSRP measurement in clause 9.14 exceeds the UE capability specified in clause 9.14.4, it is up to UE implementation on how to choose cells/SSB to measure, and the cells which have TCI state(s) in the LTM candidate cell active TCI state list shall be prioritized.

The UE shall report the measurement quantity and send periodic, semi-persistent or aperiodic reports, according to the higher layer parameter *reportConfigType-r18* of each reporting setting *LTM-CSI-ReportConfig-r18*.

9.14.2 Requirements Applicability

The requirements in the clause 9.14 are applicable to FR1 and FR2-1 for LTM.

The requirements in clause 9.14 apply, provided for the SSB from the neighbor cell configured for intra-frequency L1-RSRP measurement, the following conditions are met:

- The cell is known

- The SSB configured for intra-frequency L1-RSRP measurement is on the same carrier frequency of SSB configured for L3 intra-frequency measurement.

- The SSB resources configured for L1-RSRP measurements are measurable.

An SSB resource configured for L1-RSRP for neighbor cell shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clause 10.1.19D for FR1 and 10.1.20A for FR2-1, respectively, for a corresponding band,

- SSB_RP and SSB Ês/Iot according to annex B.2.4.1 for a corresponding band.

The cell is considered as known if the following conditions are met in this requirement:

- The UE has performed L3 measurement on the target cell during the last 5 seconds, and

- The SSB from the target cell configured for L1 measurement remains detectable according to the cell identification requirements specified in clause 9.2.

Otherwise, the cell is unknown.

9.14.3 Measurement Reporting Requirements

The UE shall report the L1-RSRP value as a 7-bit value in the range -140, -44 dBm with 1 dB step size according to clauses 10.1.19D for FR1 and 10.1.20A for FR2 if *noOfReportedRS-PerCell-r18* and *noOfReportedCells-r18* are both configured to one. If *noOfReportedRS-PerCell-r18* and/or *noOfReportedCells-r18* are configured to be larger than one, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1.19D for FR1 and 10.1.20A for FR2. The differential L1-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6, where the reported differential value for unmeasured LTM L1-RSRP resources is DIFFRSRP_15 in table 10.1.6.1.

9.14.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clauses 10.1.19D for FR1 and 10.1.20A for FR2, respectively. The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.14.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19D for FR1 and 10.1.20A for FR2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.14.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clauses 10.1.19D for FR1 and 10.1.20A for FR2, respectively.

The UE shall only send aperiodic L1-RSRP measurement report if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.14.3.4 Event Triggered Reporting

Reported L1-RSRP measurements contained in an event triggered L1-RSRP measurement report shall meet the requirements in clauses 10.1.19/10.1.19D for FR1 and 10.1.20/10.1.20A for FR2, respectively. This requirement applies for event triggered L1-RSRP reports sent on PUSCH using the MAC CE specified in clause 6.1.3.84 of TS 38.321 [7].

The UE shall not send any event triggered measurement reports if no reporting criteria is fulfilled.

The event triggered measurement reporting delay is defined as the time between an event that will trigger an event triggered measurement report and the point when the UE starts to transmit the first UL transmission to report the measurement results over the air interface. This measurement reporting delay excludes a delay which is caused by no UL resources being available for UE to send the measurement report on.

The event triggered measurement reporting delay shall be no larger than the maximum L1-RSRP measurement period of the cells corresponding to the event.

If serving cell is involved in event evaluation, L1-RSRP measurement period of serving cell refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ as defined in 9.5, assuming T_{Report} = 0 and T_{SSB} is the periodicity of the serving cell SSB-Index configured for event triggered L1-RSRP measurement report, which is indicated by the *ssb-periodicityServingCell*

If neighbor cell is involved in event evaluation, L1-RSRP measurement period of neighbor cell refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ for SSB based intra-frequency measurement, as defined in 9.14, assuming T_{Report} = 0 and T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for intra-frequency event-triggered L1-RSRP measurement report.

9.14.3.5 Event-triggered Periodic Reporting

Reported L1-RSRP measurements contained in an event triggered L1-RSRP measurement report shall meet the requirements in clauses 10.1.19/10.1.19D for FR1 and 10.1.20/10.1.20A for FR2, respectively. This requirement applies for event triggered L1-RSRP reports sent on PUSCH using the MAC CE specified in clause 6.1.3.84 of TS 38.321 [7].

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.14.3.4. For the subsequent reports in the event triggered periodic report, UE follows the reportInterval-r19 and reportAmount-r19 as specified in TS 38.331.

9.14.4 Number of SSB frequency layers, number of cells and number of SSBs

The number of intra-frequency layers, number of cells and number of SSBs that UE shall be capable of performing L1-RSRP measurements on are reported by the capabilities *supportedMaxIntraInterFreqLayersWithoutGaps-r18, supportedMaxNeighCellsPerFreqLayersWithoutGaps-r18, supportedMaxSSB-PerFreqLayersWithoutGaps-r18, supportedMaxCellsWithoutGapsL1-Meas-r18, supportedMaxSSB-L1-Meas-r18, and supportedMaxSSB-WithinSlotL1-Meas-r18.*

For L1-RSRP measurement on neighbour cell, UE measures only one intra-frequency layer on each FR2 band in CA scenario, where this single intra-frequency layer shall be the same frequency layer that UE performs L3 intra-frequency layer measurement in that FR2 band.

9.14.5 L1-RSRP intra-frequency measurement requirements without measurement gaps

9.14.5.1 SSB based L1-RSRP reporting

The requirements specified in this clause are only applicable when

- *highSpeedMeasFlag-r16* is not configured, and
- *highSpeedMeasFlagFR2-r17* is not configured, and
- *highSpeedMeasCA-Scell-r17* is not configured.
- The SSB from the neighbor cell is completely contained in the active BWP of the UE

If a neighbor cell is known according to clause 9.14.2, the UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ if *deriveSSB-IndexFromCell* is enabled or UE has reported SSB index in L3 measurement report of the same cell. Otherwise, UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}+T_{SSB_time_index_intra}$, where $T_{SSB_time_index_intra}$ is the time period used to acquire the index of the SSB being measured given in table 9.2.5.1-3.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ is defined for FR1 in table 9.14.5.1-1 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and in table 9.14.5.1-2 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*. The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ is defined for FR2 in table 9.14.5.1-3 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and in table 9.14.5.1-4 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*, where

- M=1.
- N= 8.
- P value for SSB resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ in FR2 with $N_{available}$ = 0
  - N_{total} / $N_{available}$ in FR2 with $N_{available}$ > 0

  For a window W of duration max ($T_{L1,\ MGRP_max}$), where MGRP max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
  - T_{L1} is periodicity of the target SSB.
- $P_{sharing\ factor}$ = 1, if the SSB configured for L1-RSRP measurement outside measurement gap is
  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
  - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,
- $P_{sharing\ factor}$ = 3, otherwise.
- $P_{L1_sharing}$ is defined as
  - When number of neighboring cells configured with SSB based L1-RSRP measurement is 1
    - $P_{L1_sharing}$ = 2, if any symbol of the SSBs from serving cell and neighbor cell are overlapping or adjacent (in time domain)
    - $P_{L1_sharing}$ = 1, otherwise
  - When number of neighboring cells configured with SSB based L1-RSRP measurement is more than 1
    - When none of TCI state(s) of the intra-frequency neighbor cells or inter-frequency neighbor cells without gap are in the LTM candidate cell active TCI state list
      - $P_{L1_sharing}$ = 3*$N_{Neighbor_Cell}$, where $N_{Neighbor_Cell}$ is the number of neighbor cells to measure on intra-frequency and inter-frequency without gap
    - Otherwise
      - $P_{L1_sharing}$ = 3*$N_{Neighbor_Cell_in_list}$, where $N_{Neighbor_Cell_in_list}$ is the number of neigbour cells including intra-frequency neighbor cell(s) and inter-frequency neighbor cell(s) without gap which have TCI state(s) in the LTM candidate cell active TCI state list. No requirements are defined for the cell(s) which do not have TCI state(s) in the LTM candidate cell active TCI state list

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the

shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Longer measurement period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 cell, longer measurement period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

Table 9.14.5.1-1: Intra-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ in FR1 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(K*M*P)*\max(T_{DRX},T_{SSB_NBC}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE 1: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for intra-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is the configured periodicity for reporting. NOTE 2: K = 1.5. NOTE 3: The requirements apply when the max RTD between the serving cell and any candidate cell on which UE is required to perform L1-RSRP measurement on the same frequency layer is not larger than CP length of the cell on the frequency layer.	

Table 9.14.5.1-2: Intra-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ in FR1 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB_NBC}*N_{Layer})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(K*M*P)*\max(T_{DRX},T_{SSB_NBC})*N_{Layer})$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}*N_{Layer}$
NOTE 1: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for intra-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is the configured periodicity for reporting. N_{Layer} = the number of intra-frequency layers configured for L1-RSRP measurement with *LTM-CSI-ResourceConfig-r18* + the number of inter-frequency layers without measurement gaps which are configured for L1-RSRP measurement with *LTM-CSI-ResourceConfig-r18*. NOTE 2: K = 1.5. NOTE 3: UE shall at least measure neighbour cells which have at least one TCI state on the LTM candidate cell active TCI state list within UE capability and additional cells to measure is up to UE implementation.	

Table 9.14.5.1-3: Intra-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ in FR2 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P*P_{L1_sharing}*N)*T_{SSB_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P*P_{L1_sharing}*N)*\max(T_{DRX},T_{SSB_NBC}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*M*P*P_{L1_sharing}*N)*T_{DRX}$
NOTE 1: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for intra-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: The requirements apply when the max RTD between the serving cell and any candidate cell on which UE is required to perform L1-RSRP measurement on the same frequency layer is not larger than CP length of the cell on the frequency layer.	

NOTE:	When the number of neighbor cells to be measured on intra-frequency and inter-frequency without gap is more than 1 and TCI state(s) of at least one of these neighbor cells is in the active TCI state list, the requirements apply only to the cell(s) that have TCI state(s) is in the active TCI state list.

Table 9.14.5.1-4: Intra-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ in FR2 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_intra}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P*P_{L1_sharing}*N)*T_{SSB_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P*P_{L1_sharing}*N)*\max(T_{DRX},T_{SSB_NBC}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*M*P*P_{L1_sharing}*N)*T_{DRX}$
NOTE 1:	T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for intra-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.
NOTE 2:	When the number of neighbor cells to be measured on intra-frequency and inter-frequency without gap is more than 1 and TCI state(s) of at least one of these neighbor cells is in the active TCI state list, the requirements apply only to the cell(s) that have TCI state(s) is in the active TCI state list.

9.14.6 Measurement restriction for L1-RSRP measurement

Measurement restrictions described in the following clauses apply when UE is performing L1-RSRP measurement on neighbor cell(s) without measurement gap.

Unless explicitly stated, the SSB to be measured for L1-RSRP measurement is transmitted from neighbor cell(s).

9.14.6.1 Measurement restriction for SSB based L1-RSRP

For FR1,

when the SSB for L1-RSRP measurement fully or partially overlaps with the OFDM symbol as SSB transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement,

- UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;

when the SSB for L1-RSRP measurement is in the same OFDM symbol as CSI-RS transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*,

when the SSB for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as SSB transmitted from serving cell(s) for RLM, BFD, or CBD measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs. Longer measurement period for SSB based L1-RSRP is expected, and no requirements are defined.

when the SSB for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as CSI-RS transmitted from serving cell(s) for RLM, BFD, or CBD measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the SSB for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as CSI-RS from candidate LTM neighbour cell for intra-frequency L1-RSRP measurement, UE is required to measure one of but not both SSB and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, if the network configures same or mixed numerology between SSB for L1-RSRP measurement on one FR2 band and CSI-RS from serving cell(s) for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions in the other band, provided that UE is capable of independent beam management on this FR2 band pair.

9.14.7 Scheduling availability of UE during L1-RSRP measurement

Scheduling availability restrictions described in the following clauses apply when UE is performing L1-RSRP measurement on neighbor cell(s) without measurement gap.

Unless explicitly stated, the SSB to be measured for L1-RSRP measurement is transmitted from neigbor cell(s).

9.14.7.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

9.14.7.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the concerned OFDM symbols, where the concerned OFDM symbols are
  - the same and 1 OFDM symbol before or after the OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, if UE supports *multiCellL1-measRTD-greaterThan-CP-r18*,
  - the same OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, if UE does not support *multiCellL1-measRTD-greaterThan-CP-r18*,

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions apply to cell(s) in the same band on the symbols that fully or partially overlap with restricted symbols. When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 cells configured in other bands than the bands in which the cell where L1-RSRP measurement is performed.

9.14.7.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the concerned OFDM symbols, where the concerned OFDM symbols are
  - the same and 1 OFDM symbol before or after the OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, if UE supports *multiCellL1-measRTD-greaterThan-CP-r18*,
  - the same OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, if UE does not support *multiCellL1-measRTD-greaterThan-CP-r18*,

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions apply to cell(s) in the band on the symbols that fully or partially overlap with restricted symbols..

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 cells in the bands due to L1-RSRP measurement performed on FR2 cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

If following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for L1-RSRP measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for L1-RSRP measurement.

9.14.7.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 cell(s) due to L1-RSRP measurement performed on FR2 cell(s).

There are no scheduling restrictions on FR2 cell(s) due to L1-RSRP measurement performed on FR1 cell(s).

9.14.7.5 Scheduling availability of UE performing L1-RSRP measurement in TDD bands on FR1

When UE performs L1-RSRP measurement on neighbor cell in a TDD band, the following restrictions apply due to L1-RSRP measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on the concerned OFDM symbols and restricted symbols may partially or fully overlap with UL symbols, where the concerned OFDM symbols are
  - the same and 1 OFDM symbol before or after the OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, if UE supports *multiCellL1-measRTD-greaterThan-CP-r18*,
  - the same OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, if UE does not support *multiCellL1-measRTD-greaterThan-CP-r18*.

When TDD intra-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When TDD inter-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to another serving cell in a different band on the symbols that fully or partially overlap with the aforementioned restricted symbols, if UE does not have the capability of supporting *simultaneousRxTxInterBandCA* for this band pair.

When inter-band FR1+FR1 NR-DC is performed, the scheduling restrictions due to a given serving cell also apply to another serving cell in a different band on the symbols that fully or partially overlap with the aforementioned restricted symbols, if UE does not have the capability of supporting *simultaneousRxTxInterBandCA* for this band pair.

9.14a CSI-RS based Intra-frequency L1-RSRP measurements for neighbour cell

9.14a.1 Introduction

A measurement is defined as a CSI-RS based intra-frequency L1-RSRP measurement provided that:

- the SCS of the CSI-RS resource of LTM candidate cell(s) configured for L1 measurement is the same as the SCS of active DL BWP, and
- for SCS of 60KHz, the CP type of the CSI-RS resource of LTM candidate cell(s) configured for L1 measurement is the same as the CP type of active DL BWP, and
- at least 48 RBs of the CSI-RS resource of LTM candidate cell(s) configured for L1 measurement is included within the active DL BWP.

Otherwise, a measurement is defined as a CSI-RS based inter-frequency L1 measurement.

When configured by the network, the UE shall be able to perform CSI-RS based L1-RSRP measurements for neighbour cell, on the intra-frequency CSI-RS resources configured for L1-RSRP measurements.

The UE shall report the measurement quantity and send periodic, semi-persistent or aperiodic reports, according to the higher layer parameter ltm-ReportConfigType of each reporting setting LTM-CSI-ReportConfig.

9.14a.2 Requirements Applicability

The requirements in the clause 9.14a are applicable to FR1 and FR2-1 for LTM.

The requirements in clause 9.14a apply for CSI-RS L1-RSRP measurements for configured LTM candidate cell, provided the following conditions are met:

- The cell is known,
- The CSI-RS L1-RSRP measurement is configured as periodic CSI-RS or semi-persistent CSI-RS measurement, and
- at least 48 RBs of the CSI-RS configured for measurement is within the active BWP, and
- repetition is set to “OFF” or not configured.
- UE observed RTD <= CP
- All CSI-RS resources are configured within up to two separate windows where each window is up to 5 ms
- When the configured CSI-RS based L1 RSRP measurement for LTM candidate cell does not exceed UE measurement capability.
- For FR1 and FR2-1 when there are scheduling restrictions according to 9.14a.7, the requirements apply provided all CSI-RS resources within a 40 ms window on one intra-frequency layer are configured within up to two separate windows, each lasting up to 5 ms. The separation of the two 5ms windows is at least 4ms.

9.14a.3 Measurement Reporting Requirements

The UE shall report the L1-RSRP value as a 7-bit value in the range -140, -44 dBm with 1 dB step size according to clauses 10.1.19D.2 for FR1 and 10.1.20A.2 for FR2 if *noOfReportedRS-PerCell-r18* and *noOfReportedCells-r18* are both configured to one. If *noOfReportedRS-PerCell-r18* and/or *noOfReportedCells-r18* are configured to be larger than one, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1.19D.2 for FR1 and 10.1.20A.2 for FR2. The differential L1-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-

RSRP value and the measured quantity is described in clause 10.1.6, where the reported differential value for unmeasured LTM L1-RSRP resources is DIFFRSRP_15 in table 10.1.6.1.

9.14a.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clauses 10.1.19D.2 for FR1 and 10.1.20A.2 for FR2, respectively. The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.14a.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19D.2 for FR1 and 10.1.20A.2 for FR2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.14a.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in aperiodic triggered, aperiodic triggered periodic and aperiodic triggered semi-persistent L1-RSRP reports shall meet the requirements in clauses 10.1.19D.2 for FR1 and 10.1.20A.2 for FR2, respectively.

The UE shall only send aperiodic L1-RSRP measurement report if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.14a.3.4 Event-triggered Periodic Reporting

Reported CSI-RS based L1-RSRP measurements contained in event-triggered periodic measurement reports shall meet the requirements in clauses 10.x1.y1.z1 for FR1 and 10.x2.y2.z2 for FR2.

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.14a.3.5.

9.14a.3.5 Event Triggered Reporting

Reported CSI-RS based L1-RSRP measurements contained in event triggered measurement reports shall meet the requirements in clauses clauses 10.x1.y1.z1 for FR1 and 10.x2.y2.z2 for FR2.

The UE shall not send any event triggered measurement reports as long as no reporting criteria is fulfilled.

The event triggered measurement reporting delay is defined as the time between an event that will trigger an event triggered measurement report and the point when the UE starts to transmit the first UL transmission to report the measurement results over the air interface. This measurement reporting delay excludes a delay which is caused by no UL resources being available for UE to send the measurement report on.

The event triggered measurement reporting delay shall be no larger than the maximum L1-RSRP measurement period of the cells corresponding to the event.

If serving cell is involved in event evaluation, L1-RSRP measurement period of serving cell refers to $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ as defined in 9.5, assuming $T_{Report} = 0$ and $T_{CSI\text{-}RS}$ is the periodicity of the serving cell CSI-RS configured for event triggered L1-RSRP measurement report.

If neighbor cell is involved in event evaluation, L1-RSRP measurement period of neighbor cell refers to $T_{L1\text{-}RSRP_Measurement_Period_CSI_intra}$ defined in 9.14a.5, assuming $T_{Report} = 0$, and $T_{CSI\text{-}RS}$ is the periodicity of the neighbor cell CSI-RS configured for intra-frequency event-triggered L1-RSRP measurement report.

9.14a.4 Number of CSI-RS resources, number of cells

The number of cells and number of CSI-RS resources that UE shall be capable of performing L1-RSRP measurements on are reported by the capabilities.

9.14a.5 CSI-RS based L1-RSRP measurement requirements without measurement gaps

The requirements specified in this clause are only applicable when

- maximum RTD between cells are within CP.
- *highSpeedMeasFlag-r16* is not configured, and
- *highSpeedMeasFlagFR2-r17* is not configured, and
- *highSpeedMeasCA-Scell-r17* is not configured.
- At least 48 RBs of the CSI-RS configured for measurement is confined within the active BWP of the UE.

If a neighbor cell is known according to 9.14a.2, the UE shall be capable of performing L1-RSRP measurements based on the configured CSI-RS resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_intra}$.

The value of $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_intra}$ is defined in table 9.14a.5-1 for FR1 and in table 9.14a.5-2 for FR2, where

- For periodic and semi-persistent CSI-RS resources in a resource set configured with higher layer parameter *repetition* set to OFF or repetition RRC object is not configured,
  - N=8 if UE is capable of *skippingSSBbasedL1mesurement-R19 and* the CSI-RS resources shall be Type-D QCL'ed with the associated SSB for L3 measurement and the CSI-RS resource is configured with *LTM-CSI-ResourceConfig*; Otherwise,
  - N=1 if *qcl-InfoPeriodicCSI-RS* is configured for all the resources in the resource set and for each resource one RS has QCL-TypeD with SSB for L1-RSRP measurement.
- P value for CSI-RS resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ in FR2 with $N_{available}$ = 0
  - N_{total} / $N_{available}$ in FR2 with $N_{available}$ > 0

  For a window W of duration max ($T_{L1,}$ MGRP_max), where MGRP max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any CSI-RS resource occasion:
  - N_{total} is the total number of CSI-RS resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is the number of CSI-RS resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
  - T_{L1} is periodicity of the target CSI-RS resource.
- $P_{sharing\ factor}$ = 1, if the CSI-RS configured for L1-RSRP measurement outside measurement gap is
  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure*

is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,

- not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,

- $P_{sharing\ factor} = 3$, otherwise.

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*. $T_{SMTCperiod}$ is the shortest SMTC period among all CCs in the same FR2 band, provided the SMTC offset of all CCs in FR2 have the same offset.

Longer measurement period would be expected if the combination of CSI-RS, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 cell, longer measurement period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E\text{-}UTRAN}$ when the UE is requested to decode an LTE CGI.

Table 9.14a.5-1: Intra-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_intra}$ in FR1

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ (ms)
non-DRX	$\max(T_{Report}, ceil(P)*T_{CSI\text{-}RS_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, ceil(K*P)*\max(T_{DRX},T_{CSI\text{-}RS_NBC}))$
DRX cycle > 320 ms	$ceil(P)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS_NBC}$ is the periodicity of neighbor cell CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3. NOTE 3: K = 1.5.	

Table 9.14a.5-2: Intra-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS_intra}$ in FR2

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ (ms)
non-DRX	$\max(T_{Report}, ceil(P*N)*T_{CSI\text{-}RS_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, ceil(1.5*P*N)*\max(T_{DRX},T_{CSI\text{-}RS_NBC}))$
DRX cycle > 320 ms	$ceil(M*P*N)*T_{DRX}$
NOTE 1: $T_{CSI\text{-}RS_NBC}$ is the periodicity of neighbor cell CSI-RS configured for L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: The requirements are applicable provided that the CSI-RS resource configured for L1-RSRP measurement is transmitted with Density = 3.	

9.14a.6 Measurement restriction for CSI-RS based L1-RSRP measurement

Measurement restrictions described in the following clauses apply when UE is performing L1-RSRP measurement on neighbor cell(s) without measurement gap.

Unless explicitly stated, the CSI-RS to be measured for L1-RSRP measurement is transmitted from neighbor cell(s).

9.14a.6.1 Measurement restriction for CSI-RS based L1-RSRP measurement

The SSB mentioned in this clause can be associated with either the serving cell PCI or a PCI different from serving cell PCI or intra-frequency neighbor cell(s) configured with L1-RSRP measurement or inter-frequency neighbor cell(s) configured with L1-RSRP measurement without gap.

For both FR1 and FR2, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as SSB for RLM, BFD, CBD or L1-RSRP measurement, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has same SCS as the CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement is within the active BWP and has different SCS than CSI-RS for L1-RSRP measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.

- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR1, when the CSI-RS for L1-RSRP measurement is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

For FR2, when the CSI-RS for L1-RSRP measurement on one CC is in the same OFDM symbol as SSB for RLM, BFD or L1-RSRP measurement on the same CC or different CCs in the same band, or in the same symbol as SSB for CBD measurement on the same CC or different CCs in the same band when beam failure is detected, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, when the CSI-RS for L1-RSRP measurement on one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD, CBD or L1-RSRP measurement on the same CC or different CCs in the same band,

- In the following cases, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and the other CSI-RS. Longer measurement period for CSI-RS based L1-RSRP measurement is expected, and no requirements are defined.

  - The CSI-RS for L1-RSRP measurement or the other CSI-RS in a resource set configured with repetition ON, or

  - The other CSI-RS is configured in q1 and beam failure is detected, or

  - The two CSI-RS-es are not QCL-ed w.r.t. QCL-TypeD, or the QCL information is not known to UE,

- Otherwise, UE shall be able to measure the CSI-RS for L1-RSRP measurement without any restriction.

For UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18* and for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*,

- For both FR1 and FR2, when the CSI-RS for L1-RSRP measurement fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap, UE is not required to receive CSI-RS for L1-RSRP measurement in the PRBs that overlap with an SSB.

- For FR1, when the CSI-RS for L1-RSRP measurement fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap, if CSI-RS and SSB have different SCS and UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP is expected, and no requirements are defined.

- For FR2, when the CSI-RS for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as SSB from candidate LTM neighbor cell for intra-frequency L1-RSRP measurement or inter-frequency L1-RSRP measurement without gap in the same band, UE is required to measure one of but not both CSI-RS for L1-RSRP measurement and SSB. Longer measurement period for CSI-RS based L1-RSRP is expected, and no requirements are defined.

For FR2-1, when the CSI-RS for L1-RSRP measurement on the one CC is in the same OFDM symbol as another CSI-RS for RLM, BFD or L1-RSRP measurement on the same CC, UE supporting *schedulingMeasurementRelaxation-r18* according to the conditions described in clause 3.6.19 shall be able to measure the CSI-RS for L1-RSRP measurement without restriction when the following conditions are met:

- Both CSI-RSs are not in any CSI-RS resource set with repetition ON, and
- One CSI-RS has same QCL source as either
  - the active TCI state of a PDSCH scheduled in the same OFDM symbol or
  - the QCL source based on the default QCL assumption to be applied in the same OFDM symbol according to TS 38.214 clause 5.1.5, and
  - the other CSI-RS has same QCL source as either
  - the active TCI state of a PDSCH scheduled in the same OFDM symbol or
  - the QCL source based on the default QCL assumption to be applied in the same OFDM symbol according to TS 38.214 clause 5.1.5, and
- Resources of the active TCI states of the two PDSCHs, or QCL sources of the default QCL assumption, or the active TCI state of PDSCH and QCL source of the default QCL assumption have been reported as a resource group in Rel-17 group-based RSRP report.

9.14a.7 Scheduling availability of UE during CSI-RS based L1-RSRP measurement

Scheduling availability restrictions described in the following clauses apply when UE is performing CSI-based L1-RSRP measurement on neighbor cell(s) without measurement gap.

Unless explicitly stated, the CSI-RS resource to be measured for L1-RSRP measurement is transmitted from neigbor cell(s).

9.14a.7.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on CSI-RS as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

9.14a.7.2 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to CSI-RS based L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the concerned OFDM symbols, where the concern OFDM symbols are
  - the same OFDM symbols corresponding to the CSI-RS resources configured for L1-RSRP measurement.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions is performed apply to cell(s) in the band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 cells in the bands due to L1-RSRP measurement performed on FR2 cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between CSI-RS resources on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

9.14a.7.3 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 cell(s) due to CSI-RS based L1-RSRP measurement performed on FR2 cell(s).

There are no scheduling restrictions on FR2 cell(s) due to CSI-RS based L1-RSRP measurement performed on FR1 cell(s).

9.14a.7.4 Scheduling availability of UE performing L1-RSRP measurement in TDD bands on FR1

When UE performs CSI-RS based L1-RSRP measurement on neighbor cell in a TDD band, the following restrictions apply due to L1-RSRP measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on the concerned OFDM symbols and restricted symbols may partially or fully overlap with UL symbols, where the concern OFDM symbols are the same OFDM symbols corresponding to the CSI-RS resources configured for L1-RSRP measurement.

When TDD intra-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

9.15 NR inter-frequency L1-RSRP measurements for neighbor cell

9.15.1 Introduction

A L1-RSRP measurement is defined as an inter-frequency L1-RSRP measurement provided it is not defined as an intra-frequency L1-RSRP measurement according to clause 9.14.

For UE supporting *ltm-InterFreqMeasGap-r18*, when measurement gaps are configured, the UE shall be able to perform inter-frequency L1-RSRP measurements of SSBs from inter-frequency neighbor cells. For UE supporting *interFreqSSB-L1-MeasWithoutGaps-r18*, the UE shall perform inter-frequency L1-RSRP measurements of SSBs from inter-frequency neighbor cells without gaps if SSBs are within active BWPs.

The UE shall measure SSB resources within the *LTM-CSI-ResourceConfig-r18* settings configured for L1-RSRP measurement on inter-frequency neighbor cells with measurement gaps according to UE capability specified in clause 9.15.4. If the number of resources configured exceeds the UE capability specified in clause 9.15.4, it is up to UE implementation on how to choose resources to measure, and the cell(s) which have TCI state(s) in the LTM candidate cell active TCI state list shall be prioritized.

The UE shall report the measurement quantity (*reportQuantity*) and send periodic, semi-persistent or aperiodic reports, according to the higher layer parameter *reportConfigType-r18*of each reporting setting *LTM-CSI-ReportConfig-r18*.

For UE supporting *interFreqL1-OnlyInBC-r18,* for each BC in which the UE indicates in *interFreqL1-MeasConfig-r18* capability, the UE is only required to measure and report L1-RSRP SSB measurements configured for the indicated BC.

9.15.2 Requirements Applicability

The requirements in clause 9.15 apply if the following conditions are met:

- The SSB configured for inter-frequency L1-RSRP measurement is on the same carrier frequency of SSB configured for RRM measurement in one of the measurement objects configured in the measObjectNR.
- The inter-frequency neighbor cell is known.
- The SSB resources configured for inter-frequency L1-RSRP measurements are measurable.

An SSB resource configured for inter-frequency L1-RSRP shall be considered measurable when for each relevant SSB the following conditions are met:

- L1-RSRP related side conditions given in clauses 10.1.19E.1 and 10.1.20B.1 for FR1 and FR2, respectively, for a corresponding band,
- SSB_RP and SSB Ês/Iot according to annex B.2.4.1 for a corresponding band.

The inter-frequency neighbor cell is considered as known if the following conditions are met in this requirement:

- The UE has performed L3 measurement on the target cell during the last 5 seconds, and
- The SSB from the target cell configured for L1 measurement remains detectable according to the cell identification requirements specified in clause 9.3.

Otherwise, the cell is unknown.

9.15.3 Measurement Reporting Requirements

The UE shall send L1-RSRP reports for report configurations configured for the inter-frequency L1 measurement on neighbor cell.

The UE shall report the L1-RSRP value as a 7-bit value in the range -140, -44 dBm with 1dB step size according to clause 10.1.19E for FR1 and 10.1.20B for FR2 if *noOfReportedRS-PerCell-r18* and *noOfReportedCells-r18* are both configured to one. If *noOfReportedRS-PerCell-r18* and/or *noOfReportedCells-r18* is configured to be larger than one, the UE shall use differential L1-RSRP based reporting as defined in clause 10.1.19E for FR1 and 10.1.20B for FR2. The differential L1-RSRP is quantized to a 4-bit value with 2dB step size. The mapping between the reported L1-RSRP value and the measured quantity is described in clause 10.1.6, where the reported differential value for unmeasured LTM L1-RSRP resources is DIFFRSRP_15 in table 10.1.6.1.

In EN-DC and NE-DC operation, when the UE is configured to perform E-UTRA SRS carrier-based switching an additional delay can be expected in FR1 if the UE is capable of per-FR gap, or an additional delay can be expected in both FR1 and FR2 if the UE is not capable of per-FR gap.

9.15.3.1 Periodic Reporting

Reported L1-RSRP measurements contained in periodic L1-RSRP measurement reports shall meet the requirements in clauses 10.1.19E for FR1 and 10.1.20B for FR2, respectively.

The UE shall transmit the periodic L1-RSRP reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.15.3.2 Semi-Persistent Reporting

Reported L1-RSRP measurements contained in a Semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19E for FR1 and 10.1.20B for FR2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUSCH, if a DCI request has been received.

The UE shall only send semi-persistent L1-RSRP measurement reports on PUCCH, if an activation command [7] has been received.

The UE shall transmit the semi-persistent L1-RSRP reporting on PUSCH or PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.15.3.3 Aperiodic Reporting

Reported L1-RSRP measurements contained in a semi-Persistent L1-RSRP measurement report shall meet the requirements in clauses 10.1.19E for FR1 and 10.1.20B for FR2, respectively. This requirement applies for semi-persistent L1-RSRP reports send on PUSCH or PUCCH.

The UE shall only send aperiodic L1-RSRP measurement report if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.15.3.4 Event Triggered Reporting

Reported L1-RSRP measurements contained in an event triggered L1-RSRP measurement report shall meet the requirements in clauses 10.1.19/10.1.19E for FR1 and 10.1.20/10.1.20B for FR2, respectively. This requirement applies for event triggered L1-RSRP reports sent on PUSCH using the MAC CE specified in clause 6.1.3.84 of TS 38.321 [7].

The UE shall not send any event triggered measurement reports if no reporting criteria is fulfilled.

The event triggered measurement reporting delay is defined as the time between an event that will trigger an event triggered measurement report and the point when the UE starts to transmit the first UL transmission to report measurement result over the air interfac. This measurement reporting delay excludes a delay which is caused by no UL resources being available for UE to send the measurement report on.

The event triggered measurement reporting delay shall be no larger than the maximum L1-RSRP measurement period of the cells corresponding to the event.

If serving cell is involved in event evaluation, L1-RSRP measurement period of the serving cell refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ as defined in clause 9.5, where $T_{Report} = 0$ and T_{SSB} is the periodicity of the serving cell SSB-Index configured for event triggered L1-RSRP measurement report, which is indicated by the *ssb-periodicityServingCell*.

If an inter-frequency neighbor cell is involved in event evaluation, L1-RSRP measurement period of the neighbor cell refers to $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter}$ as defined in clause 9.15, where $T_{Report} = 0$ and T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for inter-frequency event-triggered L1-RSRP measurement report.

9.15.3.5 Event Triggered Periodic Reporting

Reported L1-RSRP measurements contained in an event triggered L1-RSRP measurement report shall meet the requirements in clauses 10.1.19/10.1.19E for FR1 and 10.1.20/10.1.20B for FR2, respectively. This requirement applies for event triggered L1-RSRP reports sent on PUSCH using the MAC CE specified in clause 6.1.3.84 of TS 38.321 [7].

The first report in event triggered periodic measurement reporting shall meet the requirements specified in clause 9.15.3.4. For the subsequent reports in the event triggered periodic report, UE follows the *reportInterval-r19* and reportAmount-r19 as specified in TS 38.331.

9.15.4 Number of SSB frequency layers, number of cells and number of SSBs

The number of inter-frequency layers, number of cells and number of SSBs that UE shall be capable of performing L1-RSRP measurements on are reported in *maxFreqLayersL1-Meas-r18, maxNeighCellsPerFreqLayerL1-Meas-r18, maxSSB-PerFreqLayerL1-Meas-r18, supportedMaxCellsWithoutGapsL1-Meas-r18, supportedMaxSSB-L1-Meas-r18,* and *supportedMaxSSB-WithinSlotL1-Meas-r18*.

9.15.5 L1-RSRP inter-frequency measurement requirements with measurement gaps

9.15.5.1 Inter-frequency SSB based L1-RSRP reporting

The requirements specified in this clause are only applicable when

- *highSpeedMeasFlag-r16* is not configured, and
- *highSpeedMeasFlagFR2-r17* is not configured, and
- highSpeedMeasCA-Scell-r17 is not configured, and
- Concurrent gaps are not configured, and
- SSBs of the neighbor cell configured for inter-frequency L1-RSRP measurement are fully or partially overlapped with measurement gaps.

If an inter-frequency neighbor cell is known according to clause 9.15.2, the UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$ if *deriveSSB-IndexFromCellInter-r17* is enabled on target frequency layers or UE is indicated to report SSB based RRM measurement result with the associated SSB index (*reportQuantityRsIndexes* or *maxNrofRSIndexesToReport* is not configured) of the same cell. Otherwise, UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter}+T_{SSB_time_index_inter}$, where $T_{SSB_time_index_inter}$ is the time period used to acquire the index of the SSB being measured given in table 9.3.4.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$ is defined in table 9.15.5.1-1 for FR1 and in table 9.15.5.1-3 for FR1 for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3. The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$ is defined in table 9.15.5.1-2 for FR2 and in table 9.15.5.1-4 for FR2 for the UE configured with measurement gap cancellation according to clause 9.1.14 and meeting all conditions in clause 9.1.14.3, where

- M= 2
- N = 8.
- $CSSF_{inter}$: it is a carrier specific scaling factor and is determined according to $CSSF_{within_gap,i}$ in clause 9.1.5.2 for L1-RSRP measurement conducted within measurement gaps.

Table 9.15.5.1-1: Inter-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$ with measurement gapsin FR1

Condition	$T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$
No DRX	$Max(T_{report}, Ceil(M * K_{gap}) \times Max(MGRP, T_{SSB_NBC}) \times CSSF_{inter})$
DRX cycle ≤ 320 ms	$Max(T_{report}, Ceil(M \times 1.5 * K_{gap}) \times Max(MGRP, T_{SSB_NBC}, T_{DRX}) \times CSSF_{inter})$
DRX cycle > 320 ms	$Ceil(M * K_{gap}) \times T_{DRX} \times CSSF_{inter}$
NOTE 1: The definition of K_{gap} is the same as L3 measurement which is a scaling factor for a SSB frequency layer to be measured within an associated measurement gap pattern. NOTE 2: If the UE is incapable of *multiCellL1-measRTD-greaterThan-CP-r18*, the requirements apply for the the cells configured by *LTM-CSI-ResourceConfig-r18* on which UE is required to perform L1 measurements, when the max RTD among the cells on the same inter-frequency layer is not larger than CP length. NOTE 3: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for inter-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is the configured periodicity for reporting.	

Table 9.15.5.1-2: Inter-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$ with measurement gaps in FR2

Condition	$T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$
No DRX	$Max(T_{report}, Ceil(K_{gap} \times M*N) \times Max(MGRP, T_{SSB_NBC}) \times CSSF_{inter})$
DRX cycle ≤ 320 ms	$Max(T_{report}, Ceil(1.5 * K_{gap} \times M*N) \times Max(MGRP, T_{SSB_NBC}, T_{DRX}) CSSF_{inter})$
DRX cycle > 320 ms	$Ceil(K_{gap} \times M*N) \times T_{DRX} \times CSSF_{inter}$
NOTE 1: The definition of K_{gap} is the same as L3 measurement which is a scaling factor for a SSB frequency layer to be measured within an associated measurement gap pattern. NOTE 2: If the UE is incapable of *multiCellL1-measRTD-greaterThan-CP-r18*, the requirements apply for the the cells configured by *LTM-CSI-ResourceConfig-r18* on which UE is required to perform L1 measurements, when the max RTD among the cells on the same inter-frequency layer is not larger than CP length. NOTE 3: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for inter-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is the configured periodicity for reporting.	

Table 9.15.5.1-3: Inter-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$ for known cells in FR1 with measurement gap cancellation

Condition	$T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$
No DRX	$Max(T_{report}, Ceil((M+L_{cancel}) * K_{gap}) \times Max(MGRP, SSB\ period) \times CSSF_{inter})$
DRX cycle ≤ 320 ms	$Max(T_{report}, Ceil((M+L_{cancel}) \times 1.5 * K_{gap}) \times Max(MGRP, SSB\ period, DRX\ cycle) \times CSSF_{inter})$
DRX cycle > 320 ms	$Ceil((M+L_{cancel}) * K_{gap}) \times DRX\ cycle \times CSSF_{inter}$
NOTE 1: The definition of K_{gap} is the same as L3 measurement which is a scaling factor for a SSB frequency layer to be measured within an associated measurement gap pattern. NOTE 2: If the UE is incapable of *multiCellL1-measRTD-greaterThan-CP-r18*, the requirements apply for the cells configured by *LTM-CSI-ResourceConfig-r18* on which UE is required to perform L1 measurements, when the max RTD among the cells on the same inter-frequency layer is not larger than CP length. NOTE 3: L_{cancel} is the number of gap occasions cancelled during measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$.	

Table 9.15.5.1-4: Inter-frequency L1-RSRP measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$ for known cells in FR2 with measurement gap cancellation

Condition	$T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$
No DRX	$Max(T_{report}, Ceil(K_{gap} \times (M+L_{cancel})*N) \times Max(MGRP, SSB\ period) \times CSSF_{inter})$
DRX cycle ≤ 320 ms	$Max(T_{report}, Ceil(1.5 * K_{gap} \times (M+L_{cancel})*N) \times Max(MGRP, SSB\ period, DRX\ cycle) \times CSSF_{inter})$
DRX cycle > 320 ms	$Ceil(K_{gap} \times (M+L_{cancel})*N) \times DRX\ cycle \times CSSF_{inter}$
NOTE 1: The definition of K_{gap} is the same as L3 measurement which is a scaling factor for a SSB frequency layer to be measured within an associated measurement gap pattern. NOTE 2: If the UE is incapable of *multiCellL1-measRTD-greaterThan-CP-r18*, the requirements apply for the cells configured by *LTM-CSI-ResourceConfig-r18* on which UE is required to perform L1 measurements, when the max RTD among the cells on the same inter-frequency layer is not larger than CP length. NOTE 3: L_{cancel} is the number of gap occasions cancelled during measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_Inter}$.	

9.15.6 L1-RSRP inter-frequency L1-RSRP measurement requirements without measurement gaps

9.15.6.1 Inter-frequency L1-RSRP measurement requirements

9.15.6.1.1 Inter-frequency SSB based L1-RSRP measurement

When configured by the network and the inter-frequency cell's SSB is completely contained in the DL active BWP, the UE shall be able to perform L1-RSRP measurements without gaps and without interruptions based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$.

If a neighbor cell is known according to clause 9.15.2, the UE shall be capable of performing L1-RSRP measurements based on the configured SSB resource for L1-RSRP computation, and the UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ if *deriveSSB-IndexFromCellInter-r17* is enabled or UE has reported SSB index in L3 measurement report of the same cell. Otherwise, UE physical layer shall be capable of reporting L1-RSRP measured over the measurement period of $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}+T_{SSB_time_index_inter}$, where $T_{SSB_time_index_inter}$ is the time period used to acquire the index of the SSB being measured given in table 9.3.9.1-3 for FR1 and in table 9.3.9.1-4 for FR2.

The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ is defined for FR1 in table 9.15.6.1.1-1. The value of $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ is defined for FR2 in table 9.15.6.1.1-2, where

- M=1
- N= 8.
- P value for SSB resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
  - $P_{sharing\ factor}$ * N_{total} / $N_{outside_MG}$ in FR2 with $N_{available}$ = 0
  - N_{total} / $N_{available}$ in FR2 with $N_{available}$ > 0

  For a window W of duration max($T_{L1,\ MGRP_max}$), where MGRP max is the maximum MGRP across all configured per-UE measurement gaps and per-FR measurement gaps within the same FR as serving cell, and starting at the beginning of any SSB resource occasion:
  - N_{total} is the total number of SSB resource occasions within the window, including those overlapped with measurement gap occasions or SMTC occasions within the window, and
  - $N_{outside_MG}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion within the window W
  - $N_{available}$ is the number of SSB resource occasions that are not overlapped with any measurement gap occasion nor any SMTC occasion within the window W
  - T_{L1} is periodicity of the target SSB.
- $P_{sharing\ factor}$ = 1, if the SSB configured for L1-RSRP measurement outside measurement gap is
  - not overlapped with the SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol before each consecutive SSB symbols indicated by *SSB-ToMeasure* and 1 data symbol after each consecutive SSB symbols indicated by *SSB-ToMeasure*, given that *SSB-ToMeasure* is configured, where the *SSB-ToMeasure* is the union set of *SSB-ToMeasure* from all the configured measurement objects merged on the same serving carrier, and,
  - not overlapped with the RSSI symbols indicated by *ss-RSSI-Measurement* and 1data symbol before each RSSI symbol indicated by *ss-RSSI-Measurement* and 1 data symbol after each RSSI symbol indicated by *ss-RSSI-Measurement*, given that *ss-RSSI-Measurement* is configured,
- $P_{sharing\ factor}$ = 3, otherwise.
- $P_{L1_sharing}$ is defined as
  - When number of neighboring cells to be measured is 1
    - $P_{L1_sharing}$ = 2, if any symbol of the SSBs from serving cell and neighbor cell are overlapping or adjacent (in time domain)
    - $P_{L1_sharing}$ = 1, otherwise
  - When number of neighboring cells to be measured is more than 1
  - When none of the TCI state(s) of the intra-frequency neighbor cells or inter-frequency neighbor cells without gap are in the LTM candidate cell active TCI state list
    - $P_{L1_sharing}$ = 3*$N_{Neighbor_Cell}$, where $N_{Neighbor_Cell}$ is the number of neighbor cells to measure on intra-frequency and inter-frequency without gap
  - Otherwise
    - $P_{L1_sharing}$ = 3*$N_{Neighbor_Cell_in_list}$, where $N_{Neighbor_Cell_in_list}$ is the number of neigbour cells (including intra-frequency neighbour cell(s) and inter-frequency neighbor cell(s) without gap) which have TCI state(s) in the LTM candidate cell active TCI state list. No requirements are defined for the neighbor cell(s) which do not have TCI state(s) in the LTM candidate cell active TCI state list.

If the high layer in TS 38.331 [2] signaling of *smtc2* is configured, for cells indicated in the *pci-List* parameter in *smtc2*, $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc2*; Otherwise $T_{SMTCperiod}$ corresponds to the value of higher layer parameter *smtc1*.

Longer measurement period would be expected if the combination of SSB, SMTC occasion and measurement gap configurations does not meet previous conditions.

For either an FR1 or FR2 cell, longer measurement period would be expected during the period $T_{identify_CGI}$ when the UE is requested to decode an NR CGI.

For either an FR1 or FR2 cell, longer L1 RSRP measurement period would be expected during the period $T_{identify_CGI,E-UTRAN}$ when the UE is requested to decode an LTE CGI.

Table 9.15.6.1.1-1: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ for inter-frequency L1-RSRP measurement without measurement gaps in FR1 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB_NBC}*N_{Layer})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(K*M*P)*\max(T_{DRX},T_{SSB_NBC})*N_{Layer})$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}*N_{Layer}$
NOTE 1: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for inter-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is the configured periodicity for reporting. N_{Layer} = the number of inter-frequency layers which are configured for L1-RSRP measurement with *LTM-CSI-ResourceConfig-r18* and measured without measurement gaps + the number of intra-frequency layers configured for L1-RSRP measurement with *LTM-CSI-ResourceConfig-r18*.	
NOTE 2: K = 1.5.	
NOTE 3: Void.	

Table 9.15.6.1.1-2: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ for inter-frequency L1-RSRP measurement without measurement gaps in FR2 for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P*P_{L1_sharing}*N)*T_{SSB_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P*P_{L1_sharing}*N)*\max(T_{DRX},T_{SSB_NBC}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*M*P*P_{L1_sharing}*N)*T_{DRX}$
NOTE 1: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for inter-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: void.	
NOTE 3: When the number of neighbor cells to be measured on intra-frequency and inter-frequency without gap is more than 1 and TCI state(s) of at least one of the neighbor cells is in the LTM candidate cell active TCI state list, the requirements apply only to the intra-frequency cells and inter-frequency neighbor cells without gap whose TCI state(s) are in the LTM candidate cell active TCI state list.	

Table 9.15.6.1.1-3: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ for inter-frequency L1-RSRP measurement without measurement gaps in FR1 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P)*T_{SSB_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(K*M*P)*\max(T_{DRX},T_{SSB_NBC}))$
DRX cycle > 320 ms	$\text{ceil}(M*P)*T_{DRX}$
NOTE 1: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for inter-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting.	
NOTE 2: K = 1.5	

NOTE 3: The requirements apply for the cells configured by LTM-CSI-ResourceConfig-r18 on which UE is required to perform L1 measurements, when the max RTD between the serving cell and the inter-frequency cell whose SSB are completely contained in the DL active BWP is not larger than CP length

Table 9.15.6.1.1-4: Measurement period $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ for inter-frequency L1-RSRP measurement without measurement gaps in FR2 for UE incapable of *multiCellL1-measRTD-greaterThan-CP-r18*

Configuration	$T_{L1\text{-}RSRP_Measurement_Period_SSB_inter_withoutGap}$ (ms)
non-DRX	$\max(T_{Report}, \text{ceil}(M*P*P_{L1_sharing}*N)*T_{SSB_NBC})$
DRX cycle ≤ 320 ms	$\max(T_{Report}, \text{ceil}(1.5*M*P*P_{L1_sharing}*N)*\max(T_{DRX},T_{SSB_NBC}))$
DRX cycle > 320 ms	$\text{ceil}(1.5*M*P*P_{L1_sharing}*N)*T_{DRX}$
NOTE 1: T_{SSB_NBC} is the periodicity of the neighbor cell SSB-Index configured for intra-frequency L1-RSRP measurement. T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: The requirements apply for the cells configured by LTM-CSI-ResourceConfig-r18 on which UE is required to perform L1 measurements, when the max RTD between the serving cell and the inter-frequency cell whose SSB are completely contained in the DL active BWP is not larger than CP length NOTE 3: When the number of neighbor cells to be measured on intra-frequency and inter-frequency without gap is more than 1 and TCI state(s) of at least one of the neighbor cells is in the LTM candidate cell active TCI state list, the requirements only apply to intra-frequency cells and inter-frequency neighbor cells without gap whose TCI state(s) are in the LTM candidate cell active TCI state list.]	

9.15.6.2 Measurement restriction for inter-frequency L1-RSRP measurement

Measurement restrictions described in the following clauses apply when UE is performing L1-RSRP measurement on neighbor cell(s) without measurement gap.

Unless explicitly stated, the SSB to be measured for L1-RSRP measurement is transmitted from neigbor cell(s).

9.15.6.2.1 Measurement restriction for SSB based L1-RSRP

For FR1,

when the SSB for L1-RSRP measurement fully or partially overlaps with the OFDM symbol as SSB transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement,

- UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;

when the SSB for L1-RSRP measurement fully or partially overlaps with the OFDM symbol of CSI-RS transmitted from serving cell(s) for RLM, BFD, CBD or L1-RSRP measurement,

- If SSB and CSI-RS have same SCS, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
- If SSB and CSI-RS have different SCS,
  - If UE supports *simultaneousRxDataSSB-DiffNumerology*, UE shall be able to measure the SSB for L1-RSRP measurement without any restriction;
  - If UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, for UE incapable of *multiCellL1-measRTD-greaterThan-CP*-r18 and for UE capable of *multiCellL1-measRTD-greaterThan-CP-r18*,

when the SSB for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as SSB transmitted from serving cell(s) for RLM, BFD, or CBD measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSBs. Longer measurement period for SSB based L1-RSRP is expected, and no requirements are defined.

when the SSB for L1-RSRP measurement on one CC fully or partially overlaps with the OFDM symbol as CSI-RS transmitted from serving cell(s) for RLM, BFD, or CBD measurement on the same CC or different CCs in the same band, UE is required to measure one of but not both SSB for L1-RSRP measurement and CSI-RS. Longer measurement period for SSB based L1-RSRP measurement is expected, and no requirements are defined.

For FR2, if the network configures same or mixed numerology between SSB for L1-RSRP measurement on one FR2 band and CSI-RS for RLM, BFD, CBD, L1-RSRP or L1-SINR measurement on the other FR2 band, UE shall be able to perform the related SSB based measurements in one band without any measurement restrictions in the other band, provided that UE is capable of independent beam management on this FR2 band pair.

9.15.6.3 Scheduling availability of UE during inter-frequency L1-RSRP measurements

Scheduling availability restrictions described in the following clauses apply when UE is performing L1-RSRP measurement on inter-frequency cell(s), and UE is receiving PDCCH/PDSCH from serving cell.

Unless explicitly stated, the SSB to be measured for L1-RSRP measurement is transmitted from neighbor cell(s).

9.15.6.3.1 Scheduling availability of UE performing L1-RSRP measurement with a same subcarrier spacing as PDSCH/PDCCH on FR1

There are no scheduling restrictions due to L1-RSRP measurement performed on SSB as RS for L1-RSRP measurement with the same SCS as PDSCH/PDCCH in FR1.

9.15.6.3.2 Scheduling availability of UE performing L1-RSRP measurement with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to L1-RSRP measurement based on SSB as RS for L1-RSRP measurement. For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to L1-RSRP measurement based on SSB configured for L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the concerned OFDM symbols, where the concerned OFDM symbols are
  - the same OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and
  - If UE supports *multiCellL1-measRTD-greaterThan-CP-r18* capability, 1 OFDM symbol before or after the OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

When intra-band carrier aggregation in FR1 is configured, the scheduling restrictions apply to cell(s) in the same band on the symbols that fully or partially overlap with restricted symbols. When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 cells configured in other bands than the bands in which the cell where L1-RSRP measurement is performed is configured.

9.15.6.3.3 Scheduling availability of UE performing L1-RSRP measurement on FR2

The following scheduling restriction applies due to L1-RSRP measurement.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the concerned OFDM symbols, where the concerned OFDM symbols are:
  - the same OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and
  - if UE supports *multiCellL1-measRTD-greaterThan-CP-r18* capability, 1 OFDM symbol before or after the OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions is performed apply to cell(s) in the band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 cells in the bands due to L1-RSRP measurement performed on FR2 cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

If following conditions are met,

- UE has been notified about system information update through paging,
- The gap between UE's reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set and that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots,

For the SSB and CORESET for RMSI scheduling multiplexing patterns 3, UE shall receive the PDCCH that UE monitors in the Type0-PDCCH CSS set, and the corresponding PDSCH, on SSB symbols to be measured for L1-RSRP measurement; and

For the SSB and CORESET for RMSI scheduling multiplexing patterns 2, UE shall receive PDSCH that corresponds to the PDCCH that UE monitors in the Type0-PDCCH CSS set, on SSB symbols to be measured for L1-RSRP measurement.

9.15.6.3.4 Scheduling availability of UE performing L1-RSRP measurement on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 cell(s) due to L1-RSRP measurement performed on FR2 cell(s).

There are no scheduling restrictions on FR2 cell(s) due to L1-RSRP measurement performed on FR1 cell(s).

9.15.6.3.5 Scheduling availability of UE performing L1-RSRP measurement in TDD bands on FR1

When UE performs L1-RSRP measurement on neighbor cell in a TDD band, the following restrictions apply due to L1-RSRP measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on the concerned OFDM symbols and restricted symbols may partially or fully overlap with UL symbols, where the concerned OFDM symbols are:
  - the same OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement, and- if UE supports *multiCellL1-measRTD-greaterThan-CP-r18* capability, 1 OFDM symbol before or after the OFDM symbols corresponding to the SSB indexes configured for L1-RSRP measurement

9.16 CJT calibration reporting for Delay offset and Frequency offset

9.16.1 Introduction

When configured with a CSI-ReportConfig where reportQuantity is set to 'CJTC-Dd', or ' CJTC -F', the UE shall perform CJT calibration measurements for delay offset, and frequency offset, respectively, on the configured CSI-RS resources. The UE shall measure all CSI-RS resources indicated by the higher layer parameter resourcesForChannelMeasurement.

For CJT reporting types (CJTC-Dd, CJTC-F), the UE shall be capable of measuring $\mathbf{N_{TRP} \in \{2, 3, 4\}}$ CSI-RS Resource Sets within a single CSI Resource Setting, all of which shall be associated with the higher layer parameter trs-Info.

The UE shall report the configured measurement quantity and transmit aperiodic CSI reports according to the CSI-ReportConfig for the active BWP.

9.16.2 Requirements applicability

The requirements in clause 9.16 apply, provided:

- The CSI-RS resources configured for CJTC measurements are measurable.

A CSI-RS resource configured for CJTC report shall be considered measurable when for each relevant CSI-RS the following conditions are met:

- CJTC reporting related side conditions given in clauses B,
- CSI-RS Ês/Iot is greater than or equal to the level described in clause B.

CJTC requirements are defined for periodic measurement resources and aperiodic reporting resources.

9.16.3 Measurement Reporting Requirements

The UE shall send CJTC reports only for report configurations configured for the active BWP.

The UE shall report the quantised CJTC value as a n-bit value ranging from 0 to $2^n - 1$ with the step size as described in clause 10; where the n is determined based on higher layer parameter.

9.16.3.1 Aperiodic Reporting

Reported CJTC measurements contained in aperiodic triggered but measured over periodic resources shall meet the accuracy requirements specified in clause 10.

The UE shall only send aperiodic CJTC measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI with (*reportQuantity* set to 'cjtc-Dd', 'cjtc-F'), the UE shall transmit the aperiodic CJTC reporting on PUSCH over the air interface at the time specified according to relevant clause in [26].9.16.4 Measurement Requirements

9.16.4.1 CSI -RS based delay and frequency offset reporting

UE shall be capable of performing CJT calibration reporting measurements based on the configured CSI-RS resource for inter-TRP delay and frequency misalignment computation, and the UE physical layer shall be capable of reporting CJT calibration measured over the measurement period of $T_{CJTC_Measurement_Period_CSI-RS}$.

The value of $T_{CJTC_Measurement_Period_CSI-RS}$ is defined in table 9.16.4.1-1 for FR1, where

- For periodic, aperiodic and semi-persistent CSI-RS resources M=1

For a UE supporting *support for Case 1 requirements* and when concurrent measurement gap(s) with Pre-MG(s) are configured, or a UE supporting *support for Case 2 requirements* and when concurrent measurement gap(s) with NCSG measurement gap(s) are configured, or a UE supporting *concurrentMeasGap-r17* or *musim-GapPreference-r17* or both concurrent measurement gap and *musim-GapPreference-r17* and when concurrent gaps or periodic MUSIM gaps or both concurrent gaps and periodic MUSIM gaps are configured,

- A CSI-RS or an SMTC occasion is not considered to be overlapped by a gap occasion if the gap occasion is dropped according to clauses 9.1.8 and 9.1.10,
- P value for a CSI-RS resource to be measured is defined as
  - N_{total} / $N_{outside_MG}$ in FR1
- For a window W of duration max($T_{L1,}$ xRP_max), where xRP_max is the maximum xRP across all configured per-UE measurement gaps or NCSGs, MUSIM gap(s)and per-FR measurement gaps or NCSGs, and, in case of Pre-MG, all activated per-UE measurement gaps and per-FR measurement gaps, within the same FR as serving cell, and starting at the beginning of any CSI-RS resource occasion:

- N_{total} is the total number of CSI-RS resource occasions within the window W, including those overlapped with measurement gap occasions, MUSIM gap occasions or SMTC occasions within the window W, and

- $N_{outside_MG}$ is the number of CSI-RS resource occasions that are not overlapped with any non-dropped GAP occasions nor non-dropped MUSIM gap occasion within the window W, and

- $N_{available}$ is the number of CSI-RS resource occasions that are not overlapped with any non-dropped GAP occasions, non-dropped MUSIM gap occasion nor any SMTC occasion within the window W.

- a CSI-RS or an SMTC occasion is considered to be overlapped with the MUSIM gap if it overlaps a MUSIM gap occasion.

- xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG.

T_{L1} is periodicity of the target CSI-RS.

Otherwise, for a UE neither supporting *concurrentMeasGap-r17* nor *support for Case 1 requirements* nor *support for Case 2 requirements* or when neither of the above configurations applies, i.e. concurrent measurement gaps, concurrent measurement gap(s) with Pre-MG(s) and concurrent measurement gap(s) with NCSG measurement gap(s), and UE does not support *musim-GapPreference-r17* or when no MUSIM gaps are configured.

For FR1,

- $P=\frac{1}{1-\frac{T_{CSI-RS}}{xRP}}$, when in the monitored cell there are GAPs configured for intra-frequency, inter-frequency or inter-RAT measurements, which are overlapping with some but not all occasions of the CSI-RS; and

- P=1 when in the monitored cell there are no GAPs overlapping with any occasion of the CSI-RS.

Where:

T_{CSI-RS} = the periodicity of CSI-RS configured for CJTC measurement

- When a measurement gap is configured and the measurement gap is not NCSG,

  - a CSI-RS or an SMTC occasion is considered to be as overlapped with the GAP if it overlaps a measurement gap occasion, and

  - xRP = MGRP

- If the UE is configured with Pre-MG, a CSI-RS or an SMTC occasion is only considered to be overlapped by the Pre-MG if the Pre-MG is activated.

- Otherwise, when NCSG measurement gap only is configured,

  - a CSI-RS or an SMTC occasion is considered to be as overlapped with the GAP if

    - it overlaps the VIL1 or VIL2 of NCSG, or

    - it overlaps the ML of NCSG in FR2, and there exists a target carrier to be measured within NCSG that is intra-frequency carrier or inter-frequency carrier in the same band as the serving cell, or inter-frequency carrier in different band as the serving cell and UE does not support IBM between the target carrier and the serving cell,

  - and

    - xRP = VIRP

  When UE is configured with aperiodic MUSIM gap and the aperiodic MUSIM gap is overlapping with CSI-RS resource occasion for CJTC, longer evaluation period would be expected.

  When UE is configured with MUSIM gap(s), and CSI-RS resource occasions for CJTC are fully overlapped with MUSIM gap(s) or fully overlapped with the union of MUSIM gap(s) and GAPs, no requirement applies for the CSI-RS based CJTC measurement.

Table 9.16.4.1-1: Measurement period $T_{CJTC_Measurement_Period_CSI\text{-}RS}$ for FR1

Configuration	$T_{CJTC_Measurement_Period_CSI\text{-}RS}$ (ms)
non-DRX	ceil(M*P)*$T_{CSI\text{-}RS}$
DRX cycle ≤ 320 ms	ceil(M*P)*max(T_{DRX},$T_{CSI\text{-}RS}$)
DRX cycle > 320 ms	ceil(M*P)*T_{DRX}
NOTE 1: $T_{CSI\text{-}RS}$ is the periodicity of CSI-RS configured for CJTC measurement. T_{DRX} is the DRX cycle length.	
NOTE 2: the requirements are applicable provided that the CSI-RS resource configured for CJTC measurement is transmitted with Density = 3.	

9.16.5 Measurement restriction for UE during CJT calibration reporting

9.16.5.1 Measurement restriction for CJT calibration reporting

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement has same SCS than CSI-RS for CJTC-Dd or CJTC-F measurement, the UE shall be able to perform CSI-RS measurement without restrictions.

For FR1, when the SSB for RLM, BFD, CBD or L1-RSRP measurement has different SCS than CSI-RS for CJTC-Dd or CJTC-F measurement, the UE shall be able to perform CSI-RS measurement with restrictions according to its capabilities:

- If the UE supports *simultaneousRxDataSSB-DiffNumerology* the UE shall be able to perform CSI-RS measurement without restrictions.
- If the UE does not support *simultaneousRxDataSSB-DiffNumerology*, UE is required to measure one of but not both CSI-RS for CJTC-Dd or CJTC-F measurement and SSB. Longer measurement period for CSI-RS based CJTC-Dd or CJTC-F measurement is expected, and no requirements are defined.

9.16.6 Scheduling availability of UE during CJT calibration reporting

Scheduling availability restrictions described in the following clauses apply when the UE is performing CJTC calibration of delay offset, CJT calibration of frequency offset by measuring different CSI-RS Resource Sets.

9.16.6.1 Scheduling availability of UE performing measurement for CJT calibration reporting on FR1

There are no scheduling restrictions due to delay and frequency offset measurement performed on CSI-RS with the same SCS as PDSCH/PDCCH in FR1.

For UEs which support *simultaneousRxDataSSB-DiffNumerology* [14] there are no restrictions on scheduling availability due to delay and frequency offset measurement based on CSI-RS.

For UEs which do not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to delay and frequency offset measurement based on CSI-RS.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on symbols corresponding to the CSI-RS indexes configured for delay and frequency offset measurement.

9.17 OD-SSB based L3 measurement for an SCell

9.17.1 Introduction

A UE can be indicated, by *od-ssb-config* TS 38.331[2] or by a MAC CE TS 38.321[7], activation of transmission for OD-SSB in a configured DL BWP of an SCell TS 38.300[10] if UE supports *On-demand SSB operation*.

The requirements in clause 9.17 apply, provided the following conditions are met:

- an OD-SSB transmission is activated in a configured DL BWP where a first SSB transmission is not configured, or

- an OD-SSB transmission is activated in a configured DL BWP where a first SSB transmission is configured which cannot be used to obtain SIB1.

Where the first SSB transmission is specified as in TS 38.213[3] have the following relations:

- are with the same Cell ID, and
- are in the same frequency location, and
- are with same sub-carrier spacing, and
- are with the same downlink transmit power, and
- are quasi co-located with respect to Doppler shift, Doppler spread, average gain, average delay, delay spread and, when applicable, spatial RX parameters, when they have a same SSB index.

For UE supporting *On-demand SSB operation* and when OD- SSB transmission is indicated, the EMP for OD-SSB based intra-frequency measurement are

- the periodicity of OD-SSBs in the configured DL BWP if no first SSB transmission is configured or if UE supports *timec1nc2* and OD-SSB transmission is indicated with first SSB transmission and the union of the first SSB transmission and OD-SSB transmission has a non-periodic time domain pattern, or

- the periodicity of the union of OD-SSBs and first SSBs if first SSBs are transmitted and the OD-SSB activation is indicated and the union of OD-SSBs and first SSBs has a periodic time domain pattern.

For UE supports OD-SSB operation capability and when OD-SSB activation is indicated,

- the SMTC for OD-SSB based intra-frequency measurement for serving cell is OD-SMTC;
- the SMTC for OD-SSB based intra-frequency measurement for neighbor cell is the first SMTC.

Otherwise, the SMTC for OD-SSB based intra-frequency measurement is the first SMTC.

9.17.2 Requirements Applicability

The accuracy requirements in clause 9.2.2 shall be applied to OD-SSB based intra-frequency measurement.

9.17.3 Number of cells and number of SSB

The requirements of number of cells and number of SSB in clause 9.2.3 shall be applied to OD-SSB based intra-frequency measurement.

9.17.4 Measurement Reporting Requirements

The measurement reporting requirements in clause 9.2.4 shall be applied to OD-SSB based intra-frequency measurement.

9.17.5 OD-SSB based Intra-frequency measurements without measurement gaps

9.17.5.1 Intra-frequency cell identification for active SCell

The UE shall be able to identify a new detectable intra-frequency cell within $T_{identify_intra_without_index_ODSSB}$ if the UE is not indicated to report SSB based RRM measurement result with the associated SSB index(*reportQuantityRsIndexes* or *maxNrofRSIndexesToReport* is not configured), or the UE is indicated that the neighbour cell is synchronous with the serving cell (*deriveSSB-IndexFromCell* is enabled). Otherwise the UE shall be able to identify a new detectable intra frequency cell within $T_{identify_intra_with_index_ODSSB}$. The UE shall be able to identify a new detectable intra frequency SS

block of an already detected cell within $T_{identify_intra_without_index_ODSSB}$. It is assumed that *deriveSSB-IndexFromCell* is always enabled for FR1 TDD and FR2 with SCS smaller or equal to 480 kHz.

$$T_{identify_intra_without_index_ODSSB} = (T_{PSS/SSS_sync_intra_ODSSB} + T_{SSB_measurement_period_intra_ODSSB})\ ms$$

$$T_{identify_intra_with_index_ODSSB} = (T_{PSS/SSS_sync_intra_ODSSB} + T_{SSB_measurement_period_intra_ODSSB} + T_{SSB_time_index_intra_ODSSB})\ ms$$

Where:

$T_{PSS/SSS_sync_intra_ODSSB}$: it is the time period used in PSS/SSS detection

- For UE supporting power class 6 with *highSpeedMeasFlagFR2-r17* configured, if SMTC ≤ 40ms, $T_{PSS/SSS_sync_intra_ODSSB}$ is given in table 9.17.5.1-4; otherwise, $T_{PSS/SSS_sync_intra_ODSSB}$ is given in table 9.17.5.1-2.
- For UE indicating *no-gap-no-interruption* via *NeedForInterruptionInfoNR-r18*, $T_{PSS/SSS_sync_intra_ODSSB}$ is given in table 9.2.5.1-1 for FR1 and table 9.2.5.1-2 for FR2. For UE indicating *no-gap-with-interruption* via *NeedForInterruptionInfoNR-r18*, $T_{PSS/SSS_sync_intra_ODSSB}$ is given in table 9.17.5.1-5 for FR1 and table 9.17.5.1-6 for FR2.
- Otherwise, $T_{PSS/SSS_sync_intra_ODSSB}$ is given in tables 9.17.5.1-1, 9. x.5.1-2, or 9.17.5.1-3.

$T_{SSB_time_index_intra_ODSSB}$: it is the time period used to acquire the index of the SSB being measured

- For UE indicating *no-gap-no-interruption* via *NeedForInterruptionInfoNR-r18*, $T_{SSB_time_index_intra_ODSSB}$ is given in table 9.2.17.1-3 for FR1. For UE indicating *no-gap-with-interruption* via *NeedForInterruptionInfoNR-r18*, $T_{SSB_time_index_intra_ODSSB}$ is given in table 9.17.5.1-7 for FR1.
- Otherwise, $T_{SSB_time_index_intra_ODSSB}$ is given in table 9.17.5.1-3.

$T_{SSB_measurement_period_intra_ODSSB}$: equal to a measurement period of SSB based measurement

- For UE supporting power class 6 with *highSpeedMeasFlagFR2-r17* configured, if SMTC ≤ 40ms, $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.17.5.2-4; otherwise, $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.17.5.2-2.
- For UE indicating *no-gap-no-interruption* via *NeedForInterruptionInfoNR-r18*, $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.17.5.2-1 for FR1 and table 9.17.5.2-2 for FR2. For UE indicating *no-gap-with-interruption* via *NeedForInterruptionInfoNR-r18*, $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.17.5.2-5 for FR1 and table 9.17.5.2-6 for FR2.
- For power class 6 UE supporting *measEnhCAInterFreqFR2-r18* when *highSpeedMeasFlagFR2* is configured, the $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.2-4 (if SMTC ≤ 40ms) and table 9.17.5.2-2 (if SMTC > 40ms) shall apply for SCC.
- Otherwise, $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.17.5.2-1, 9.17.5.2-2, 9.17.5.2-3 or 9.17.5.2-4.

$CSSF_{intra}$: it is a carrier specific scaling factor and is determined according to $CSSF_{outside_gap,i}$ in clause 9.1.5.1 for measurement conducted outside measurement gaps, i.e.

- when intra-frequency SMTC is fully non overlapping or partially overlapping with GAP, or
- when intra-frequency SMTC is fully non overlapping with GAP for UE indicating *no-gap-with-interruption*, or
- when intra-frequency SMTC is fully non overlapping or partially overlapping with GAP for UE indicating *no-gap-no-interruption*

$M_{pss/sss_sync_w/o_gaps}$: For a UE supporting FR2-1 power class 1 or 5, $M_{pss/sss_sync_w/o_gaps}$ =40. For a UE supporting power class 2, $M_{pss/sss_sync_w/o_gaps}$ =24. For a UE supporting FR2-1 power class 3, $M_{pss/sss_sync_w/o_gaps}$ =24. For a UE supporting FR2-1 power class 4, $M_{pss/sss_sync_w/o_gaps}$ =24. For a UE supporting FR2-1 power class 6, $M_{pss/sss_sync_w/o_gaps}$ =24.

$M_{meas_period_w/o_gaps}$: For a UE supporting FR2-1 power class 1 or 5, $M_{meas_period_w/o_gaps}$ =40. For a UE supporting FR2-1 power class 2, $M_{meas_period_w/o_gaps}$ =24. For a UE supporting FR2-1 power class 3, $M_{meas_period_w/o_gaps}$ =24. For a UE supporting power class 4, $M_{meas_period_w/o_gaps}$ =24. For a UE supporting power class 6, $M_{meas_period_w/o_gaps}$ =24.

For a UE that supports Pre-MG, an SMTC occasion is only considered to be overlapped by Pre-MG if the Pre-MG is activated.

When UE supports concurrent GAPs and UE concurrent GAPs, i.e., supports the following capability or capabilities' combination:

- concurrentMeasGap-r17, or
- concurrentMeasGapsPreMG-r18, or
- concurrentMeasGapsNCSG-r18,

Or when UE supports *musim-GapPreference-r17* or both concurrent measurement GAPs and *musim-GapPreference-r17* and UE concurrent GAPs or periodic MUSIM gaps or both concurrent gaps and periodic MUSIM gaps are configured,

K_p is the scaling factor for an SSB frequency layer to be measured without GAP. $K_p = N_{total} / N_{available}$, where $N_{available}$ and N_{total} are calculated as follows:

- For a window W of duration max(SMTC period, xRP_max), where xRP_max is the maximum xRP across all configured per-UE GAPs, periodic MUSIM gaps, and/or per-FR GAPs within the same FR as the SSB frequency layer, and starting from the beginning of any SMTC occasion:
  - N_{total} is the total number of SMTC occasions within the window, including those overlapped with GAP and MUSIM gap occasions within the window, and
  - $N_{available}$ is the number of SMTC occasions that are not overlapped with any non-dropped GAP or non-dropped MUSIM gap occasions within the window W, after accounting for measurement GAP and MUSIM gap collisions by applying the collision rules for GAP and MUSIM gap in clauses 9.1.8.3, 9.1.10.4, 9.1.10.5, 9.1.12.3, and 9.1.13.3, respectively.

    $K_p = 1$ when $N_{available} = 0$.
  - xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG, also xRP = MGRP for periodic MUSIM gap.

    Requirements in this clause do not apply when $N_{available} = 0$ due to fully overlapping between SMTC occasions and MUSIM gap occasions within the window W.

Otherwise, when the UE is not configured with or UE does not support concurrent GAPs and the UE is not configured with periodic MUSIM gaps or UE does not support MUSIM gaps:

When intra-frequency SMTC is fully non overlapping with measurement gaps or NCSG, or intra-frequency SMTC is fully overlapping with MGs or NCSG, Kp=1

When intra-frequency SMTC is partially overlapping with measurement gaps, $K_p = 1/(1- (\text{SMTC period} /\text{MGRP}))$, where SMTC period < MGRP. When intra-frequency SMTC is partially overlapping with NCSG, $K_p = 1/(1- (\text{SMTC period} /\text{VIRP}))$, where SMTC period < VIRP. For calculation of K_p, if the high layer signalling (TS 38.331 [2]) of *smtc2* is configured, for cells indicated in the *pci-List* parameter in *smtc2*, the SMTC periodicity corresponds to the value of higher layer parameter *smtc2*; for the other cells, the SMTC periodicity corresponds to the value of higher layer parameter *smtc1*.

For FR2,

$K_{layer1_measurement} = 1$,

- if all of the reference signals configured for RLM, BFD, CBD or L1-RSRP for beam reporting on any FR2 serving frequency in the same band outside measurement gap are not fully overlapped by intra-frequency SMTC occasions, or
- if all of the reference signal configured for RLM, BFD, CBD or L1-RSRP for beam reporting on any FR2 serving frequency in the same band outside measurement gap and fully-overlapped by intra-frequency SMTC occasions are not overlapped with any of the SSB symbols and the RSSI symbols, and 1 symbol before each consecutive SSB symbols and the RSSI symbols, and 1 symbol after each consecutive SSB symbols and the RSSI symbols, given that *SSB-ToMeasure* and *SS-RSSI-Measurement* are configured, where SSB symbols are

indicated by the union set of SSB-ToMeasure from all the configured measurement objects on the same serving carrier which can be merged. and RSSI symbols are indicated by *SS-RSSI-Measurement*;

$K_{layer1_measurement}$ =1.5, otherwise.

If the above-mentioned reference signal configured for L1-RSRP measurement is aperiodic CSI-RS resource, longer cell identification delay would be expected.

When UE supports *MUSIM-GapConfig-17* and the SMTC occasion of the target frequency layer is overlapping with the configured aperiodic MUSIM gap, longer cell identification period for the target frequency layer is expected.

If the high layer in TS 38.331 [2] signalling of *smtc2* is configured, the assumed periodicity of intra-frequency SMTC occasions corresponds to the value of higher layer parameter *smtc2*; Otherwise the assumed periodicity of intra-frequency SMTC occasions corresponds to the value of higher layer parameter *smtc1*.

If the higher layer signaling in TS 38.331 [2] signalling of *smtc2* is present and *smtc1* is fully overlapping with measurement gaps and *smtc2* is partially overlapping with measurement gaps, requirements are not specified for $T_{identify_intra_without_index_ODSSB}$ or $T_{identify_intra_with_index_ODSSB}$.

If MCG DRX is in use, cell identification requirements for intra-frequency measurement in MCG specified in Table 9.17.5.1-1, Table 9.17.5.1-2, Table 9.17.5.1-3, and Table 9.17.5.1-4 shall depend on the MCG DRX cycle. If SCG DRX is in use, cell identification requirements for intra-frequency measurement in SCG specified in Table 9.17.5.1-1, Table 9.17.5.1-2, Table 9.17.5.1-3 and Table 9.17.5.1-4 shall depend on the SCG DRX cycle. Otherwise, the requirements for when DRX is not in use shall apply.

When the target SSB is completely contained in active BWP of UE or the active downlink BWP is initial BWP, the intra-frequency measurement shall be conducted without gap and without interruption regardless of the NeedForGaps' status reporting.

Table 9.17.5.1-1: Time period for OD-SSB based PSS/SSS detection (Frequency range FR1)

DRX cycle	$T_{PSS/SSS_sync_intra_ODSSB}$
No DRX	max(600 ms, ceil(5 x K_p) x SMTC period)[Note 1] x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(600 ms, ceil(M2 [Note 2]x 5 x K_p) x max(SMTC period, DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	ceil(5 x K_p) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified NOTE 2: When *highSpeedMeasFlag-r16* is not configured, M2 = 1.5; When *highSpeedMeasFlag-r16* is configured, M2 = 1.5 if SMTC periodicity > 40 ms, otherwise M2=1. NOTE 3: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *intraNR-MeasurementEnhancement-r16* on measurements of the primary component carrier and do not apply to measurements of a secondary component carrier with active SCell. NOTE 4: When *highSpeedMeasCA-Scell-r17* is configured and UE supports *measurementEnhancementCA-r17*, M2 = 1.5 if SMTC periodicity > 40 ms; otherwise M2=1.	

Table 9.17.5.1-2: Time period for OD-SSB based PSS/SSS detection (Frequency range FR2)

DRX cycle	$T_{PSS/SSS_sync_intra_ODSSB}$
No DRX	max(600 ms, ceil($M_{pss/sss_sync_w/o_gaps}$ x K_p x $K_{layer1_measurement}$) x SMTC period)[Note 1] x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(600 ms, ceil(1.5 x $M_{pss/sss_sync_w/o_gaps}$ x K_p x $K_{layer1_measurement}$) x max(SMTC period, DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	ceil($M_{pss/sss_sync_w/o_gaps}$ x K_p x $K_{layer1_measurement}$) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified

DRX cycle>320 ms	3 x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified	
NOTE 2: When *highSpeedMeasFlag-r16* is not configured, M2 = 1.5; When *highSpeedMeasFlag-r16* is configured, M2 = 1.5 if SMTC periodicity > 40 ms;otherwise M2=1.	
NOTE 3: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *intraNR-MeasurementEnhancement-r16* on measurements of the primary component carrier and do not apply to measurements of a secondary component carrier with active SCell.	
NOTE 4: When *highSpeedMeasCA-Scell-r17* is configured and UE supports *measurementEnhancementCA-r17*, M2 = 1.5 if SMTC periodicity > 40 ms; otherwise M2=1	
NOTE 5: Requirements only apply when measurement gap is not configured, or measurement gap is fully non-overlapped with SMTC on any carrier on which UE indicates *no-gap-with-interruption*.	

Table 9.17.5.1-8: Time period for time index detection for a UE operating on a target cell with 12 PRB SSB (Frequency range FR1)

DRX cycle	$T_{SSB_time_index_intra_less_than_5Mhz}$
No DRX	max(120ms, ceil(7 x Kp) x SMTC period) x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(120ms, ceil(M2 x 7 x Kp) x max(SMTC period, DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	ceil(7 x Kp) x DRX cycle x $CSSF_{intra}$
NOTE 1: When *highSpeedMeasFlag-r16* is not configured, M2 = 1.5; When *highSpeedMeasFlag-r16* is configured, M2 = 1.5 if SMTC periodicity > 40 ms; otherwise M2=1.	
NOTE 2: When *highSpeedMeasFlag-r16* is configured, the requirements apply only to UE supporting either *measurementEnhancement-r16* or *intraNR-MeasurementEnhancement-r16*.	

9.17.5.2 Measurement period for active SCell

The measurement period for intra-frequency measurements without gaps is as shown in table 9.17.5.2-1, 9.17.5.2-2, 9.17.5.2-3, 9.17.5.2-4.

When UE *highSpeedMeasFlagFR2-r17* is configured, if SMTC $\leq$ 40ms, $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.17.5.2-3; otherwise, $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.17.5.2-2. For power class 6 UE supporting *measEnhCAInterFreqFR2-r18* when *highSpeedMeasFlagFR2-r17* is configured, the $T_{SSB_measurement_period_intra_ODSSB}$ is given in table 9.2.5.2-3 (if SMTC $\leq$ 40ms) and table 9.2.5.2-2 (if SMTC > 40ms) shall apply for SCC.

If the high layer in TS 38.331 [2] signalling of *smtc2* is configured, the assumed periodicity of intra-frequency SMTC occasions corresponds to the value of higher layer parameter *smtc2*; Otherwise the assumed periodicity of intra-frequency SMTC occasions corresponds to the value of higher layer parameter *smtc1*.

For a UE that supports Pre-MG, an SMTC occasion is only considered to be overlapped by Pre-MG if the Pre-MG is activated.

If MCG DRX is in use, measurement period requirements for intra-frequency measurement in MCG specified in table 9.17.5.2-1, table 9.17.5.2-2, table 9.17.5.2-3 and table 9.17.5.2-4 shall depend on the MCG DRX cycle. If SCG DRX is in use, measurement period requirements for intra-frequency measurement in SCG specified in table 9.17.5.2-1, table 9.17.5.2-2, table 9.17.5.2-3 and table 9.17.5.2-4, shall depend on the SCG DRX cycle. Otherwise, the requirements for when DRX is not in use shall apply.

For FR2, a longer measurement period is allowed, if aperiodic CSI-RS resource is measured for L1-RSRP measurement on any FR2 serving frequency in the same band, and the CSI-RS resource is outside measurement gap and overlapped with any of the SSB symbols and the RSSI symbols, and 1 symbol before each consecutive SSB symbols and the RSSI symbols, and 1 symbol after each consecutive SSB symbols and the RSSI symbols. If *SSB-ToMeasure* or *SS-RSSI-Measurement* is configured, the SSB symbols are indicated by the union set of *SSB-ToMeasure* from all the configured measurement objects on the same band which can be merged and the RSSI symbols are indicated by *SS-RSSI-Measurement*.

Table 9.17.5.2-1: Measurement period for OD-SSB based intra-frequency measurements without gaps (FR1)

DRX cycle	$T_{SSB_measurement_period_intra_ODSSB}$
No DRX	max(200 ms, ceil(5 x K_p) x SMTC period)$^{Note\ 1}$ x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(200 ms, ceil(1.5x 5 x K_p) x max(SMTC period, DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	ceil(5 x K_p) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified	

Table 9.17.5.2-2: Measurement period for OD-SSB based intra-frequency measurements without gaps (FR2)

DRX cycle	$T_{SSB_measurement_period_intra_ODSSB}$
No DRX	max(400 ms, ceil($M_{meas_period_w/o_gaps}$ x K_p x $K_{layer1_measurement}$) x SMTC period)$^{Note\ 1}$ x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(400 ms, ceil(1.5x $M_{meas_period_w/o_gaps}$ x K_p x $K_{layer1_measurement}$) x max(SMTC period, DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	ceil($M_{meas_period_w/o_gaps}$ xK_p x $K_{layer1_measurement}$) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified	

Table 9.17.5.2-3: $T_{SSB_measurement_period_intra_ODSSB}$ when highSpeedMeasCA-Scell-r17 is configured (Frequency range FR1)

DRX cycle	$T_{SSB_measurement_period_intra_ODSSB}$
No DRX $^{Note\ 2}$	max(200 ms, ceil(5 x K_p) x SMTC period)$^{Note\ 1}$ x $CSSF_{intra}$
DRX cycle≤ 160 ms	max(200 ms, ceil(5 x M2 $^{Note\ 2}$ x K_p) x max(SMTC period, DRX cycle)) x $CSSF_{intra}$
160 ms < DRX cycle≤ 320 ms	ceil(4 x M2 $^{Note\ 2}$ x K_p) x DRX cycle x $CSSF_{intra}$
DRX cycle>320 ms	ceil(Y $^{Note\ 3}$ x K_p) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified	
NOTE 2: M2 = 1.5 if SMTC period > 40 ms, otherwise M2=1	
NOTE 3: Y=3 when SMTC period ≤ 40ms, Y=5 when SMTC period > 40ms	
NOTE 4: When highSpeedMeasCA-Scell-r17 is configured, the requirements apply to measurements of secondary component carrier with active SCell.	

Table 9.17.5.2-4: Measurement period for OD-SSB based intra-frequency measurements without gaps when *highSpeedMeasFlagFR2-r17* is configured (FR2) when SMTC period <= 40 ms

DRX cycle	$T_{SSB_measurement_period_intra_ODSSB}$

DRX cycle>320 ms	ceil($M_{meas_period_w/o_gaps}$ x $K_{layer1_measurement}$) x DRX cycle x $CSSF_{intra}$
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified	
NOTE 2: Requirements only apply when measurement gap is not configured, or measurement gap is fully non-overlapped with SMTC on any carrier on which UE indicates *no-gap-with-interruption* via *NeedForInterruptionInfoNR-r18*.	

9.17.5.3 Intra-frequency cell identification for deactivated SCell

When UE is indicated the activation of OD-SSB transmission in slot *n* in a configured DL BWP of an SCell without a first SSB transmission before SCell activation command,

- After slot $n+\frac{T_{HARQ}+3ms+T_{processing}}{NR\ slot\ length}$, UE shall perform the deactivated SCell measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-1, 9.17.5.3-2 and 9.17.5.4-1 regardless of configured DRX and *measCycleSCell* till slot $n+\frac{T_{HARQ}+3ms+T_{processing}+T_{FMW}}{NR\ slot\ length}$, where:

- T_{FMW} equals $\min(T_{report}, T_{First,OD-SSB} + T_{identify_intra})$, which is the duration of the fast measurement window(FMW).

- $T_{First,OD-SSB}$ is the time to the end of the first complete transmitted SSB burst after slot n + $\frac{T_{HARQ}+3ms+T_{processing}}{NR\ slot\ length}$.

- $T_{identify_intra}$ equals $T_{identify_intra_without_index_ODSSB}$ or $T_{identify_intra_with_index_ODSSB}$ if the cell is a newly detectable cell or $T_{SSB_measurement_period_intra_ODSSB}$ if the cell has been detected for a period less than 5 seconds.

- $T_{processing}$ is the additional processing time as 2ms or 5ms depending on *OD-SSB post processing time*.

- T_{report} is the duration after slot $n+\frac{T_{HARQ}+3ms+T_{processing}}{NR\ slot\ length}$ to the earliest OD-SSB based L3 measurement reporting.

- $CSSF_{intra}$: it is a carrier specific scaling factor and is determined according to $CSSF_{outside_gap,i}$ in clause 9.1.5.1 for measurement conducted outside measurement gaps. When single OD-SSB carrier is configured with multiple SCCs without OD-SSB, $CSSF_{intra}$ equals 1 for OD-SSB carrier during the FMW.

- K_{p_OD-SSB} is the scaling factor for an OD-SSB based deactivated SCell to be measured. $K_{p_OD-SSB} = N_{total} / N_{available}$, where $N_{available}$ and N_{total} are calculated as follows:

  - For a window W of duration max(SMTC period, xRP_max), where xRP_max is the maximum xRP across all configured per-UE GAPs, periodic MUSIM gaps, and/or per-FR GAPs within the same FR as the OD-SSB frequency layer, and starting from the beginning of any OD-SSB occasion:

    - N_{total} is the total number of OD-SSB occasions within the window, including those overlapped with GAP and MUSIM gap occasions within the window, and

    - $N_{available}$ is the number of OD-SSB occasions that are not overlapped with any non-dropped GAP or non-dropped MUSIM gap occasions within the window W, after accounting for measurement GAP and

MUSIM gap collisions by applying the collision rules for GAP and MUSIM gap in clauses 9.1.8.3, 9.1.10.4, 9.1.10.5, 9.1.12.3, and 9.1.13.3, respectively.

$K_{p_OD\text{-}SSB}$ = 1 when $N_{available}$ = 0.

- xRP = MGRP when configured GAP is activated Pre-MG or MG, and xRP = VIRP when configured GAP is NCSG, also xRP = MGRP for periodic MUSIM gap.

  Requirements in this clause do not apply when $N_{available}$ = 0 due to fully overlapping between SMTC occasions and MUSIM gap occasions within the window W.

Otherwise, when the UE is not configured with or UE does not support concurrent GAPs and the UE is not configured with periodic MUSIM gaps or UE does not support MUSIM gaps:

When OD-SSB is fully non overlapping with measurement gaps or NCSG, $K_{p_OD\text{-}SSB}$ =1;

When OD-SSB is partially overlapping with measurement gaps, $K_{p_OD\text{-}SSB}$ = 1/(1- (OD-SSB period /MGRP)), where OD-SSB period < MGRP. When OD-SSB is partially overlapping with NCSG, $K_{p_OD\text{-}SSB}$ = 1/(1- (OD-SSB period /VIRP)), where OD-SSB period < VIRP.

- When UE is indicated the activation of another OD-SSB transmission in a configured DL BWP of an SCell within the T2 after the previous OD-SSB deactivation and before the SCell activation command, the UE shall perform the deactivated SCell measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-3, 9.17.5.3-4, 9.17.5.3-5, 9.17.5.4-2 and 9.17.5.4-3 if OD-SSB is transmitted, where T2 is 5*max (measCycleSCell, DRX cycles) in FR1 and 4s for power class 1/5 and 3s for power class 2/3/4 in FR2.
- When UE is indicated the activation of another OD-SSB transmission in a configured DL BWP of an SCell after previous OD-SSB deactivation plus T2 and before the SCell activation command, UE shall perform the deactivated SCell measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-1, 9.17.5.3-2 and 9.17.5.4-1 regardless of configured DRX and *measCycleSCell* till slot $n+\frac{T_{HARQ}+3ms+T_{processing}+T_{FMW}}{NR\ slot\ length}$.

- When UE is indicated the activation of another OD-SSB transmission with the same spatial reception parameter and same frequency as the previously deactivated OD-SSB in a configured DL BWP of an SCell, and the indication occurs within 5 seconds after the previous OD-SSB deactivation before the SCell activation command, and the SCell remains detectable during the time period $T_{identify_intra_without_index_ODSSB}$ or $T_{identify_intra_with_index_ODSSB}$ measured from previously transmitted OD-SSB, the UE shall skip the OD-SSB identification provided that the SCell is detectable and the timing that the cell has not been changed more than $\pm 3200/2^{\mu} T_c$.

- After the FMW, UE shall follow the legacy deactivated SCC measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-3, 9.17.5.3-4, 9.17.5.3-5 9.17.5.4-2 and 9.17.5.4-3 if the OD-SSB transmission is not deactivated.

No OD-SSB based deactivated SCell requirement applies if NW deactivates the OD-SSB earlier than the time slot $n+\frac{T_{HARQ}+3ms+T_{processing}+\min(T_{report},T_{identify_intra})}{NR\ slot\ length}$.

When UE is indicated the activation of OD-SSB transmission in slot *n* in a configured DL BWP of an SCell with a first SSB transmission before SCell activation command, after slot $n+\frac{T_{HARQ}+3ms+T_{processing}}{NR\ slot\ length}$,

- UE shall perform the deactivated SCC measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-3, 9.17.5.3-4, 9.17.5.3-5, 9.17.5.4-2 and 9.17.5.4-3 if UE has sent a valid measurement report before receiving the activation of OD-SSB transmission during the period equal to max(5*measCycleSCell, 5*DRX cycles) in FR1 or 4s for UE supporting power class1 and 3s for UE supporting power class 2/3/4 in FR2.
- Otherwise, UE shall perform the deactivated SCell measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-1, 9.17.5.3-2 and 9.17.5.4-1 regardless of configured DRX and *measCycleSCell* till slot $n+\frac{T_{HARQ}+3ms+T_{processing}+T_{FMW}}{NR\ slot\ length}$..
- Before UE receiving the activation of OD-SSB transmission or after OD-SSB deactivation in a deactivated SCell, UE shall perform deactivated SCC measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-3, 9.17.5.3-4, 9.17.5.3-5, 9.17.5.4-2 and 9.17.5.4-3 if OD-SSB is transmitted.

- Before UE receiving the activation of OD-SSB transmission or after OD-SSB deactivation in a deactivated SCell, for UE indicating *support3MHz-ChannelBW-Symmetric-r18* and configured to perform measurements on a deactivated SCell with 12PRB SSB in FR1, $T_{SSB_time_index_intra_less_than_5MHz_ODSSB}$ is given in table 9.17.5.3-6.

UE shall perform the deactivated SCC neighbour cell measurement with $T_{PSS/SSS_sync_intra_ODSSB}$, $T_{SSB_time_index_intra_ODSSB}$, $T_{SSB_measurement_period_intra_ODSSB}$ given in table 9.17.5.3-3, 9.17.5.3-4, 9.17.5.3-5, 9.17.5.3-6, 9.17.5.4-2 and 9.17.5.4-3 regardless of OD-SSB activation/deactivation.

If MCG DRX is in use, cell identification requirements for intra-frequency measurement in MCG specified in Table 9.17.5.3-2, Table 9.17.5.3-3, Table 9.17.5.3-4, 9.17.5.3-5 and Table 9.17.5.3-6 shall depend on the MCG DRX cycle. If SCG DRX is in use, cell identification requirements for intra-frequency measurement in SCG specified in Table 9.17.5.3-2, Table 9.17.5.3-3, Table 9.17.5.3-4, 9.17.5.3-5 and Table 9.17.5.3-6 shall depend on the SCG DRX cycle. Otherwise, the requirements for when DRX is not in use shall apply.

When NW indicates OD-SSB transmission in one of the deactivated SCell, the longer cell identification or measurement delay for other frequency layers being measured would be expected during the T_{FMW}.

When more than one deactivated SCells are configured with OD-SSB transmission, the requirements in this clause shall be also applied provided that the time periods between OD-SSB activation and OD-SSB deactivation among multiple OD-SSBs' frequency layers are non-overlapping.

Table 9.17.5.3-1: Time period for OD-SSB based PSS/SSS detection in FMW, deactivated SCell

Frequency range	$T_{PSS/SSS_sync_intra_ODSSB}$
FR1	$ceil(M^{Note\ 2} \times K_{p_OD\text{-}SSB}) \times \max(T_{lower}^{Note\ 1}, EMP) \times CSSF_{intra}$
FR2	$ceil(M^{Note\ 2} \times K_{FR} \times K_{p_OD\text{-}SSB} \times K_{layer1_measurement}) \times \max(T_{lower}^{Note\ 1}, EMP) \times CSSF_{intra}$
NOTE 1: When UE reports not supporting *lower bound capability*, the T_{lower} equals 10ms; Otherwise, T_{lower} equals 0ms.	
NOTE 2: When multiple frequency layers are configured, M equals 6 in FR1 and $M_{pss/sss_sync_w/o_gaps}$+1 in FR2. Otherwise, M equals 5 in FR1 and $M_{pss/sss_sync_w/o_gaps}$ in FR2.	

Table 9.17.5.3-2: Time period for OD-SSB based time index detection in FMW, deactivated SCell (FR1)

FR	$T_{SSB_time_index_intra_ODSSB}$
FR1	$ceil(3 \times K_{p_OD\text{-}SSB}) \times \max(T_{lower}^{Note\ 1}, EMP) \times CSSF_{intra}$
NOTE 1: When UE reports not supporting *lower bound capability*, the T_{lower} equals 10ms; Otherwise, T_{lower} equals 0ms.	

Table 9.17.5.3-3: Time period for OD-SSB based PSS/SSS detection, deactivated SCC (FR1)

DRX cycle	$T_{PSS/SSS_sync_intra_ODSSB}$
No DRX	$Ceil(5 \times K_{p_OD\text{-}SSB}) \times measCycleSCell \times CSSF_{intra}$
DRX cycle≤ 320 ms	$Ceil(5 \times K_{p_OD\text{-}SSB}) \times \max(measCycleSCell, 1.5 \times DRX\ cycle) \times CSSF_{intra}$
DRX cycle> 320 ms	$Ceil(5 \times K_{p_OD\text{-}SSB}) \times \max(measCycleSCell, DRX\ cycle) \times CSSF_{intra}$
NOTE 1: The requirements also apply to CC with deactivated SCell in SCG.	

Table 9.17.5.3-4: Time period for OD-SSB based PSS/SSS detection, deactivated SCC (FR2)

DRX cycle	$T_{PSS/SSS_sync_intra_ODSSB}$
No DRX	$Ceil(M_{pss/sss_sync_w/o_gaps} \times K_{p_OD\text{-}SSB}) \times measCycleSCell \times CSSF_{intra}$
DRX cycle≤ 320 ms	$Ceil(M_{pss/sss_sync_w/o_gaps} \times K_{p_OD\text{-}SSB}) \times \max(measCycleSCell, 1.5 \times DRX\ cycle) \times CSSF_{intra}$
DRX cycle> 320 ms	$Ceil(M_{pss/sss_sync_w/o_gaps} \times K_{p_OD\text{-}SSB}) \times \max(measCycleSCell, DRX\ cycle) \times CSSF_{intra}$
NOTE 1: The requirements also apply to CC with deactivated SCell in SCG.	

Table 9.17.5.3-5: Time period for OD-SSB based time index detection, deactivated SCC (FR1)

DRX cycle	$T_{SSB_time_index_intra_ODSSB}$
No DRX	$Ceil(3 \times K_{p_OD\text{-}SSB}) \times measCycleSCell \times CSSF_{intra}$

DRX cycle≤ 320 ms	Ceil(3 x $K_{p_OD\text{-}SSB}$) x max(measCycleSCell, 1.5xDRX cycle) x $CSSF_{intra}$
DRX cycle> 320 ms	Ceil(3 x $K_{p_OD\text{-}SSB}$) x max(measCycleSCell, DRX cycle) x $CSSF_{intra}$
NOTE 1: The requirements also apply to CC with deactivated SCell in SCG.	

Table 9.17.5.3-6: Time period for time index detection for a UE operating on a target cell with 12PRB SSB, deactivated SCC (FR1)

DRX cycle	$T_{SSB_time_index_intra_less_than_5MHz}$
No DRX	Ceil(7 x $K_{p_OD\text{-}SSB}$) x measCycleSCell x $CSSF_{intra}$
DRX cycle≤ 320ms	Ceil(7 x $K_{p_OD\text{-}SSB}$) x max(measCycleSCell, 1.5xDRX cycle) x $CSSF_{intra}$
DRX cycle> 320ms	Ceil(7 x $K_{p_OD\text{-}SSB}$) x max(measCycleSCell, DRX cycle) x $CSSF_{intra}$
NOTE 1: The requirements apply to CC with deactivated SCG SCell.	

9.17.5.4 Measurement period for deactivated SCell

The measurement period for deactivated SCell measurements is as shown in table 9.17.5.4-1, 9.17.5.4-2, 9.17.5.4-3.

If MCG DRX is in use, measurement period requirements for intra-frequency measurement in MCG specified in Table 9.17.5.4-2, and Table 9.17.5.4-3 shall depend on the MCG DRX cycle. If SCG DRX is in use, measurement period requirements for intra-frequency measurement in SCG specified in 9.17.5.4-2, and Table 9.17.5.4-3, shall depend on the SCG DRX cycle. Otherwise, the requirements for when DRX is not in use shall apply.

For FR2, a longer measurement period is allowed, if aperiodic CSI-RS resource is measured for L1-RSRP measurement on any FR2 serving frequency in the same band, and the CSI-RS resource is outside measurement gap and overlapped with any of the SSB symbols and the RSSI symbols, and 1 symbol before each consecutive SSB symbols and the RSSI symbols, and 1 symbol after each consecutive SSB symbols and the RSSI symbols. If *SSB-ToMeasure* or *SS-RSSI-Measurement* is configured, the SSB symbols are indicated by the union set of *SSB-ToMeasure* from all the configured measurement objects on the same band which can be merged and the RSSI symbols are indicated by *SS-RSSI-Measurement*.

When NW indicates OD-SSB transmission in one of the deactivated SCell, the longer cell identification or measurement delay for other frequency layers being measured would be expected during the T_{FMW}.

Table 9.17.5.4-1: Measurement period for OD-SSB based intra-frequency measurements without gaps (deactivated SCC)

FR	$T_{SSB_measurement_period_intra_ODSSB}$
FR1	ceil($M^{Note\ 2}$ x K_p) x max($T_{lower}^{Note\ 1}$, EMP) x $CSSF_{intra}$
FR2	ceil($M^{Note\ 2}$ x K_{FR} x K_p x $K_{layer1_measurement}$) x max($T_{lower}^{Note\ 1}$, EMP) x $CSSF_{intra}$
NOTE 1: When UE reports not supporting *lower bound capability*, the T_{lower} equals 10ms; Otherwise, T_{lower} equals 0ms.	
NOTE 2: When multiple frequency layers are configured, M equals 6 in FR1 and $M_{pss/sss_sync_w/o_gaps}$+1 in FR2 if the deactivated SCell is a detected Scell. Otherwise, M equals 5 in FR1 and $M_{pss/sss_sync_w/o_gaps}$ in FR2.	

Table 9.17.5.4-2: Measurement period for OD-SSB based intra-frequency measurements without gaps (deactivated SCC) (FR1)

DRX cycle	$T_{SSB_measurement_period_intra_ODSSB}$
No DRX	Ceil(5 x K_p) x measCycleSCell x $CSSF_{intra}$
DRX cycle≤ 320 ms	Ceil(5 x K_p) x max(measCycleSCell, 1.5xDRX cycle) x $CSSF_{intra}$
DRX cycle> 320 ms	Ceil(5 x K_p) x max(measCycleSCell, DRX cycle) x $CSSF_{intra}$
NOTE 1: The requirements also apply to CC with deactivated SCell in SCG	

Table 9.17.5.4-3: Measurement period for OD-SSB based intra-frequency measurements without gaps (deactivated SCC) (FR2)

DRX cycle	$T_{SSB_measurement_period_intra_ODSSB}$

No DRX	Ceil($M_{meas_period_w/o_gaps}$ x K_p) x measCycleSCell x $CSSF_{intra}$
DRX cycle≤ 320 ms	Ceil($M_{meas_period_w/o_gaps}$ x K_p) x max(measCycleSCell, 1.5xDRX cycle) x $CSSF_{intra}$
DRX cycle> 320 ms	Ceil($M_{meas_period_w/o_gaps}$ x K_p) x max(measCycleSCell, DRX cycle) x $CSSF_{intra}$
NOTE 1: The requirements also apply to CC with deactivated SCell in SCG.	

9.17.5.5 Scheduling availability of UE during intra-frequency measurements based on On-demand SSB

UE shall be capable of measuring without measurement gaps when the OD-SSB is completely contained in the active bandwidth part of the UE. When any of the conditions in the following clauses is met, there are restrictions on the scheduling availability; otherwise, there is no scheduling restriction. Note that all the configured OD-SSB symbols on the target carrier are referred to in this clause.

9.17.5.5.1 Scheduling availability of UE performing measurements in TDD bands on FR1

When the UE performs intra-frequency measurements in a TDD band, the following restrictions apply due to SS-RSRP or SS-SINR measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OD-SSB symbols to be measured, and on 1 data symbol before each consecutive OD-SSB symbols to be measured and 1 data symbol after each consecutive OD-SSB symbols to be measured within the Fast Measurement window duration.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OD-SSB symbols to be measured, and on 1 data symbol before each consecutive OD-SSB symbols to be measured and 1 data symbol after each consecutive OD-SSB symbols to be measured within SMTC window duration outside the Fast Measurement window duration. If the high layer in TS 38.331 [2] signalling of *smtc2* is configured, the SMTC periodicity follows *smtc2*; Otherwise SMTC periodicity follows *smtc1*.

When the UE performs intra-frequency measurements in a TDD band, the following restrictions apply due to SS-RSRQ measurement

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OD-SSB symbols to be measured, RSSI measurement symbols, and on 1 data symbol before each consecutive OD-SSB to be measured/RSSI symbols and 1 data symbol after each consecutive OD-SSB to be measured/RSSI symbols within the Fast Measurement window duration.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OD-SSB symbols to be measured, RSSI measurement symbols, and on 1 data symbol before each consecutive OD-SSB to be measured/RSSI symbols and 1 data symbol after each consecutive OD-SSB to be measured/RSSI symbols within SMTC window duration outside Fast measurement window duration. If the high layer signalling of *smtc2* is configured in TS 38.331 [2], the SMTC periodicity follows *smtc2*; Otherwise the SMTC periodicity follows *smtc1*.

When TDD intra-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

When TDD inter-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to another serving cell in a different band on the symbols that fully or partially overlap with the aforementioned restricted symbols, if UE does not have the capability of supporting *simultaneousRxTxInterBandCA* for this band pair.

When inter-band FR1+FR1 NR-DC is performed, the scheduling restrictions due to a given serving cell also apply to another serving cell in a different band on the symbols that fully or partially overlap with the aforementioned restricted symbols, if UE does not have the capability of supporting *simultaneousRxTxInterBandCA* for this band pair.

9.17.5.5.2 Scheduling availability of UE performing measurements with a different subcarrier spacing than PDSCH/PDCCH on FR1

For UE which does not support *simultaneousRxDataSSB-DiffNumerology* [14] the following restrictions apply due to SS-RSRP/RSRQ/SINR measurement

- If *deriveSSB_IndexFromCell* is enabled the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on OD-SSB symbols to be measured, and on 1 data symbol before each consecutive OD-SSB symbols to be measured and 1 data symbol after each consecutive OD-SSB symbols to be measured within the Fast Measurement window duration.

- If *deriveSSB_IndexFromCell* is enabled the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on OD-SSB symbols to be measured, and on 1 data symbol before each consecutive OD-SSB symbols to be measured and 1 data symbol after each consecutive OD-SSB symbols to be measured within SMTC window duration outside the Fast Measurement window duration. If the high layer signalling of *smtc2* is configured (in TS 38.331 [2]), the SMTC periodicity follows *smtc2*; Otherwise the SMTC periodicity follows *smtc1*.

- If *deriveSSB_IndexFromCell* is not enabled the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on all symbols within Fast Measurement window duration.

- If *deriveSSB_IndexFromCell* is not enabled the UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on all symbols within SMTC window duration outside Fast Measurement window duration. If the high layer signalling of *smtc2* is configured in TS 38.331 [2], the SMTC periodicity follows *smtc2*; Otherwise the SMTC periodicity follows *smtc1*.

If the following conditions are met:

- The UE has been notified about system information update through paging,

- The gap between the UE's reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots

The UE shall receive the PDCCH that the UE monitors in the Type0-PDCCH CSS set, and/or the corresponding PDSCH, on SSB symbols to be measured.

When intra-band carrier aggregation is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with the aforementioned restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

9.17.5.5.3 Scheduling availability of UE performing measurements on FR2-1

The following scheduling restriction applies due to SS-RSRP or SS-SINR measurement on an FR2 intra-frequency cell

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on OD-SSB symbols to be measured, and on 1 data symbol(s) before each consecutive OD-SSB symbols to be measured and 1 data symbol(s) after each consecutive OD-SSB symbols to be measured within Fast Measurement window duration.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on OD-SSB symbols to be measured, and on 1 data symbol(s) before each consecutive OD-SSB symbols to be measured and 1 data symbol(s) after each consecutive OD-SSB symbols to be measured within SMTC window duration outside Fast Measurement window duration.

The following scheduling restriction applies to SS-RSRQ measurement on an FR2 intra-frequency cell

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on OD-SSB symbols to be measured, RSSI measurement symbols, and on 1 data symbol(s) before each consecutive OD-SSB to be measured/RSSI symbols and 1 data symbol(s) after each consecutive OD-SSB to be measured/RSSI symbols within Fast Measurement window duration.

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/TRS/CSI-RS for CQI on OD-SSB symbols to be measured, RSSI measurement symbols, and on 1 data symbol(s) before each consecutive OD-SSB to be measured/RSSI symbols and 1 data symbol(s) after each consecutive OD-SSB to be measured/RSSI symbols within SMTC window duration outside Fast Measurement window duration.

where

- If the high layer signalling of *smtc2* is configured in TS 38.331 [2], the SMTC periodicity follows *smtc2*; Otherwise the SMTC periodicity follows *smtc1*.

- The signaling *deriveSSB-IndexFromCell* is always enabled.

When intra-band carrier aggregation in FR2 is performed, the scheduling restrictions due to a given serving cell also apply to all other serving cells in the same band on the symbols that fully or partially overlap with aforementioned restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to SS-RSRP, SS-RSRQ or SS-SINR measurement on an FR2 intra-frequency cell in different bands, provided that UE is capable of independent beam management on this FR2 band pair. Additionally, there is no scheduling restriction if the UE is configured with different numerology between SSB on one FR2 band and data on the other FR2 band provided the UE is configured for IBM operation for the band pair.

NOTE: When inter-band carrier aggregation in FR2 is performed, the scheduling restrictions as defined in clause 9.2.5.17.1 due to a given serving cell also apply to another serving cell in a different FR2 band on the symbols that fully or partially overlap with the aforementioned restricted symbols, if UE does not have the capability of supporting *simultaneousRxTxInterBandCA* for this FR2 band pair.

If following conditions are met:

- The UE has been notified about system information update through paging,

- The gap between the UE’s reception of PDCCH that UE monitors in the Type 2-PDCCH CSS set that notifies system information update, and the PDCCH that UE monitors in the Type0-PDCCH CSS set, is greater than 2 slots

9.17.5.5.4 Scheduling availability of UE performing measurements on FR1 or FR2 in case of FR1-FR2 inter-band CA

There are no scheduling restrictions on FR1 serving cell(s) due to measurements performed on FR2 serving cell frequency layer. However, the scheduling restrictions as defined in clause 9.2.5.17.1 due to a given serving cell in FR2 also apply to another serving cell in an FR1 band on the symbols that fully or partially overlap with the aforementioned restricted symbols, if UE does not have the capability of supporting *simultaneousRxTxInterBandCA* for this FR1-FR2 band pair.

There are no scheduling restrictions on FR2 serving cell(s) due to measurements performed on FR1 serving cell frequency layer. However, the scheduling restrictions as defined in clause 9.2.5.17.1 due to a given serving cell in FR1 also apply to another serving cell in an FR2 band on the symbols that fully or partially overlap with the aforementioned restricted symbols, if UE does not have the capability of supporting *simultaneousRxTxInterBandCA* for this FR1-FR2 band pair.

9.18 L1 Cross Link Interference measurements

9.18.1 Introduction

The UE capable of performing L1 CLI measurements shall be able to measure L1-SRS-RSRP and L1-CLI-RSSI which are defined in TS 38.215 [4] within the active DL BWP. The measurements requirements in this clause apply for TDD mode only.

The L1 CLI measurement requirements specified in this clause are applicable only for RRC_CONNECTED intra-frequency:

- when L1-SRS-RSRP measurement resource is configured within active DL BWP
- when L1-CLI-RSSI measurement resource is configured within active DL BWP

The measurements shall be performed for a serving cell, including PCell, PSCell, or SCell, on the resources configured for L1-SRS-RSRP and L1-CLI-RSSI measurements within the active BWP.

For performing CLI measurements in FR2, UE can optionally be configured with CLI measurement resources containing an explicit indication of a TCI state providing a TypeD QCL source [26, TS 38.214]. If the TCI state is not configured, UE can assume the configured CLI measurement resources are QCL-ed with TypeD to one of the latest received PDSCH and the latest monitored CORESET.

The UE does not expect to be configured with L1-CLI-RSSI measurement resources and L1-SRS-RSRP measurement resources on the same symbol.

The measurement reporting delay can be longer for the measurement reporting requirements in this clause when IDC autonomous denial is configured.

9.18.2 L1-SRS-RSRP measurements

9.18.2.1 Introduction

When configured by the network, the UE shall be able to perform L1-SRS-RSRP measurements on the *SRS-RSRP-MeasurementResourceSet* configured in a *CSI-ResourceConfig*.

The requirements apply when the subcarrier spacing for SRS-RSRP measurement resource configuration is the same as the subcarrier spacing of the active DL BWP of serving cell. The UE is not required to measure SRS using different SCS compared to the downlink active BWP SCS of the same carrier.

When the UE measures L1-SRS-RSRP, a constant offset relative to the downlink reference timing in the serving cell shall be applied. The constant offset value is derived by UE implementation and shall be at least $Tc*N_{TA_offset}$.

9.18.2.2 Requirements applicability

The requirements in clause 9.18.2 apply, provided:

- SRS resources configured for L1-SRS-RSRP measurements are measurable.

An SRS resource configured for L1-SRS-RSRP shall be considered measurable when for each relevant SRS the following conditions are met:

- L1-SRS-RSRP related side conditions given in clauses 10.1.22.1 for FR1 and FR2 for a corresponding band,
- SRS_RP and SRS Ês/Iot according to Annex B.2.7 for a corresponding band.

9.18.2.3 Measurement Reporting Requirements

The UE shall send L1-SRS-RSRP reports only for report configurations configured for aperiodic report when *cli-SRS-RSRP* is configured.

The UE shall report the L1-SRS-RSRP value as a 7-bit value in the range [-140, -44] dBm with 1 dB step size according to clause 10, if *nrofReportedCLImeasureResource* is configured to one. If *nrofReportedCLImeasureResource* is configured to be larger than one, the UE shall use differential L1-SRS-RSRP based reporting as defined in clause 10. The differential L1-SRS-RSRP is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-SRS-RSRP value and the measured quantity is described in clause 10.

9.18.2.3.1 Aperiodic Reporting

Reported L1-SRS-RSRP measurements contained in aperiodic triggered L1-SRS-RSRP reports shall meet the requirements in clauses 10 for FR1 and 10 for FR2, respectively.

The UE shall only send aperiodic L1-SRS-RSRP measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-SRS-RSRP reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.18.2.4 Measurement capability

The UE shall be capable of performing L1-SRS-RSRP measurements on the SRS resources configured for measurement, provided that the total number of L1-SRS-RSRP measurement resources for the UE does not exceed *maxNrofSRS-RSRP-MeasurementResources*.

9.18.2.5 L1-SRS-RSRP measurement period

The UE shall be capable of performing L1-SRS-RSRP measurement based on the configured SRS resource. For periodic and semi-persistent SRS resource, the UE shall be capable of reporting L1-SRS-RSRP measured over measurement period of $T_{L1_SRS_RSRP_measurement_period}$ for FR1 and FR2.

For the value of L1,

1> If UE does not support *supportSBFD* or SBFD is not configured by the network

2> L1 is not applicable

1> else if UE supports *supportSBFD* and SBFD is configured by the network

2> if UE is configured to report L1-SRS-RSRP for SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the L1-SRS-RSRP resource that are overlapping with non-SBFD symbols during $T_{L1\text{-}SRS\text{-}RSRP_measurement_period}$

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the L1-SRS-RSRP resource are overlapping with non-SBFD symbols during $T_{L1\text{-}SRS\text{-}RSRP_measurement_period}$

2> if UE is configured to report L1-SRS-RSRP for non-SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the L1-SRS-RSRP resource that are overlapping with SBFD symbols, during $T_{L1\text{-}SRS\text{-}RSRP_measurement_period}$

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the L1-SRS-RSRP resource are overlapping with SBFD symbols, during $T_{L1\text{-}SRS\text{-}RSRP_measurement_period}$

Table 9.18.2.5-1 Measurement period $T_{L1_SRS_RSRP_measurement_period}$

Configuration	$T_{L1_SRS_measurement_period}$ (ms)
No DRX	$Max(T_{Report}, (M+L1) \times T_{SRS})$
DRX cycle ≤ 320 ms	$Max(T_{Report}, Ceil(1.5 \times (M+L1)) \times max(T_{SRS}, T_{DRX}))$
DRX cycle > 320 ms	$(M+L1) \times T_{DRX}$
NOTE 1: T_{SRS} is SRS measurement periodicity configured *SRS-PeriodicityAndOffset*, and T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise.	

If the SRS resources configured for measurement are partially or fully overlapping with SMTC window, SSB or CSI-RS configured for RLM, BFD, CBD or L1-RSRP measurement or measurement gaps, requirements are not specified for $T_{L1_SRS_RSRP_measurement_period}$.

9.18.2.6 Scheduling availability of UE during L1-CLI measurements

Scheduling availability when the UE is performing L1-CLI measurements which are L1-SRS-RSRP and L1-CLI-RSSI are described in the following clause.

9.18.2.6.1 Scheduling availability of UE performing L1-SRS-RSRP measurement on FR1

The following scheduling restriction applies due to L1-SRS-RSRP measurements.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs L1-SRS-RSRP measurements, and on 1 data symbol before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 15 kHz and 30 kHz subcarrier spacing.

- For the UE which does not support *L1-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbol(s) on which the UE performs L1-SRS-RSRP measurements, and on 1 data symbol before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 15 kHz and 30 kHz subcarrier spacing.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs L1-SRS-RSRP measurement, and on 2 data symbols before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 60 kHz subcarrier spacing.

- For the UE which does not support *L1-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs L1-SRS-RSRP measurement, and on 2 data symbols before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 60 kHz subcarrier spacing.

When TDD intra-band carrier aggregation is configured, the scheduling restrictions on serving cell where CLI measurements are performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions on serving cell where CLI measurements are performed apply to all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-SRS-RSRP measurement is performed is configured.

9.18.2.6.2 Scheduling availability of UE performing L1-SRS-RSRP measurement on FR2

The following scheduling restriction applies due to L1-SRS-RSRP measurements.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs L1-SRS-RSRP measurements, and on 1 data symbol before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 60 kHz subcarrier spacing.

- For the UE which does not support *L1-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the OFDM symbols on which the UE performs L1-SRS-RSRP measurements, and on 1 data symbol before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 60 kHz subcarrier spacing.

- For the UE which supports *L1-SRS-RSRP-FDM_DL* but the SRS resources are not TypeD QCL-ed with PDCCH/PDSCH, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs L1-SRS-RSRP measurements, and on 1 data symbol before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 60 kHz subcarrier spacing.

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs L1-SRS-RSRP measurements, and on 2 data symbols before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 120 kHz subcarrier spacing.

- For the UE which does not support *L1-SRS-RSRP-FDM_DL*, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the OFDM symbol(s) on which the UE performs L1-SRS-RSRP measurements, and on 2 data symbols before the OFDM symbol(s) used for L1-SRS-RSRP measurements for 120 kHz subcarrier spacing.

- For the UE which supports *L1-SRS-RSRP-FDM_DL* but the SRS resources are not TypeD QCL-ed with PDCCH/PDSCH, the UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on the OFDM symbols on which the UE performs L1-SRS-RSRP measurements, and on 2 data symbols before the OFDM symbol(s) used for SRS-RSRP measurements for 120 kHz subcarrier spacing.

When TDD intra-band carrier aggregation is configured, the scheduling restrictions on serving cell where L1-SRS-RSRP measurements are performed apply on all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to L1-SRS-RSRP measurement performed on FR2 serving cell(s) in different band(s), provided that UE is capable of independent beam management on this FR2 band pair.

9.18.3 L1-CLI-RSSI measurements

9.18.3.1 Introduction

When configured by the network, the UE shall be able to perform L1-CLI-RSSI measurement of configured *CLI-RSSI-MeasurementResourceSet*, and:

- UE measures L1-CLI-RSSI within one DL subband if one L1-CLI-RSSI measurement resource is configured within a DL subband or UE measures L1-CLI-RSSI within two DL subbands if one L1-CLI-RSSI measurement resource is configured across two DL subbands,

- UE measures L1-CLI-RSSI within UL subband if one L1-CLI-RSSI measurement resource is configured within a UL subband.

When the UE measures L1-CLI-RSSI, the downlink reference timing in the serving cell shall be applied.

9.18.3.2 Requirements applicability

The requirements in clause 9.18.3 apply, provided:

- The measurement resources configured for L1-CLI-RSSI measurements are measurable.

A measurement resource configured for L1-CLI-RSSI shall be considered measurable when for each relevant L1-CLI-RSSI resource the following conditions are met:

- L1-CLI-RSSI related side conditions given in clauses 10 for FR1 and FR2 for a corresponding band.

9.18.3.3 Measurement Reporting Requirements

The UE shall send L1-CLI-RSSI reports only for report configurations for periodical and aperiodic report when *cli-RSSI* is configured.

The UE shall report the L1-CLI-RSSI value as a 7-bit value in the range [-100, -25] dBm with 1 dB step size according to clause 10 if *nrofReportedCLIMeasureResources* is configured to one. If *nrofReportedCLIMeasureResources* is configured to be larger than one, the UE shall use differential L1-CLI-RSSI based reporting as defined in clause 10. The differential L1-CLI-RSSI is quantized to a 4-bit value with 2 dB step size. The mapping between the reported L1-CLI-RSSI value and the measured quantity is described in clause 10.

9.18.3.3.1 Periodic Reporting

Reported L1-CLI-RSSI measurements contained in periodically triggered measurement reports shall meet the requirements in clause 10.

The UE shall transmit the periodic L1-CLI-RSSI reporting on PUCCH over the air interface according to the periodicity defined in clause 5.2.1.4 in TS 38.214 [26].

9.18.3.3.2 Aperiodic Reporting

Reported L1-CLI-RSSI measurements contained in aperiodically triggered L1-CLI-RSSI measurement reports shall meet the requirements in clauses 10.

The UE shall only send aperiodic L1-CLI-RSSI measurement reports, if a DCI trigger has been received.

After the UE receives CSI request in DCI, the UE shall transmit the aperiodic L1-CLI-RSSI reporting on PUSCH over the air interface at the time specified according to clause 6.1.2.1 in TS 38.214 [26].

9.18.3.4 Measurement capability

The UE shall be capable of performing L1-CLI-RSSI measurement based on the configured resource, provided that the maximum number of L1-CLI-RSSI measurement resources for the UE does not exceed *maxNrofCLI-RSSI-MeasurementResources*.

9.18.3.5 L1-CLI-RSSI measurement period

The UE capable of *supportL1-CLI-RSSI-Measurement* shall perform L1-CLI-RSSI measurement based on the configured L1-CLI-RSSI measurement resource. For periodic and semi-persistent L1-CLI-RSSI resource, the UE shall be capable of reporting L1-CLI-RSSI measured over measurement period of $T_{L1\text{-}CLI_RSSI_measurement_period}$ for FR1 and FR2.

For the value of L1,

1> If UE does not support *supportSBFD* or SBFD is not configured by the network

2> L1 is not applicable

1> else if UE supports *supportSBFD* and SBFD is configured by the network

2> if UE is configured to report L1- CLI-RSSI for SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the L1- CLI-RSSI resource that are overlapping with non-SBFD symbols during $T_{L1\text{-}CLI_RSSI_measurement_period}$

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the L1- CLI-RSSI resource are overlapping with non-SBFD symbols during $T_{L1\text{-}CLI_RSSI_measurement_period}$

2> if UE is configured to report L1- CLI-RSSI for non-SBFD symbols

3> When DRX is not configured, L1 is the number of occasions of the L1- CLI-RSSI resource that are overlapping with SBFD symbols, during $T_{L1\text{-}CLI_RSSI_measurement_period}$

3> When DRX is configured, L1 is the number of DRX cycles in which all occasions of the L1- CLI-RSSI resource are overlapping with SBFD symbols, during $T_{L1\text{-}CLI_RSSI_measurement_period}$

Table 9.18.3.5-1 Measurement period $T_{L1\text{-}CLI_RSSI_measurement_period}$

Configuration	$T_{L1\text{-}CLI_RSSI\ measurement_period}$ (ms)
No DRX	$Max(T_{Report}, (M+L1)\ X\ T_{CLI\text{-}RSSI})$
DRX cycle ≤ 320ms	$Max(T_{Report}, Ceil(1.5\ X\ (M+L1))\ X\ max(T_{CLI\text{-}RSSI}, T_{DRX}))$
DRX cycle > 320ms	$(M+L1)\ X\ T_{DRX}$
NOTE 1: $T_{CLI\text{-}RSSI}$ is L1-CLI-RSSI measurement periodicity configured *RSSI-PeriodicityAndOffset*, and T_{DRX} is the DRX cycle length. T_{Report} is configured periodicity for reporting. NOTE 2: M=1 if higher layer parameter *timeRestrictionForChannelMeasurement* is configured, and M=3 otherwise.	

If the configured L1-CLI-RSSI measurement resources are partially or fully overlapping with SMTC window, SSB or CSI-RS configured for RLM, BFD, CBD or L1-RSRP measurement or measurement gaps, requirements are not specified for $T_{L1\text{-}CLI_RSSI_measurement_period}$.

9.18.3.6 Scheduling availability of UE during L1-CLI-RSSI measurements

Scheduling availability restrictions when the UE is performing L1-CLI-RSSI are described in the following clause.

9.18.3.6.1 Scheduling availability of UE performing L1-CLI-RSSI measurement on FR1

The following scheduling restriction applies due to the L1-CLI-RSSI measurement:

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs L1-CLI-RSSI measurements.

When TDD intra-band carrier aggregation is configured, the scheduling restrictions on serving cell where CLI measurements are performed apply on all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When intra-band non-contiguous carrier aggregation is configured for a UE indicating *intraBandNR-CA-non-collocated-r18* and if *nonCollocatedTypeNR-CA-r18* is not provided, there are no scheduling restrictions on FR1 serving cell(s) to be measured and configured on the non-contiguous CC(s) in the same band. Otherwise, the scheduling restrictions on serving cell where CLI measurements are performed apply on all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols if *nonCollocatedTypeNR-CA-r18* is provided.

When inter-band carrier aggregation within FR1 is configured, there are no scheduling restrictions on FR1 serving cell(s) configured in other bands than the bands in which the serving cell where L1-CLI-RSSI measurement is performed is configured.

9.18.3.6.2 Scheduling availability of UE performing L1-CLI-RSSI measurement on FR2

The following scheduling restriction applies due to the L1-CLI-RSSI measurement:

- The UE is not expected to transmit PUCCH/PUSCH/SRS on OFDM symbols on which the UE performs L1-CLI-RSSI measurements.

- The UE is not expected to receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on OFDM symbols on which the UE performs L1-CLI-RSSI measurements when RSSI resources are not TypeD QCL-ed with PDCCH/PDSCH/CSI-RS.

When TDD intra-band carrier aggregation is configured, the scheduling restrictions on serving cell where CLI measurements are performed apply on all serving cells in the same band on the symbols that fully or partially overlap with restricted symbols.

When inter-band carrier aggregation in FR2 is performed, there are no scheduling restrictions on FR2 serving cells in the bands due to L1-CLI-RSSI measurement performed on FR2 serving cell(s) in different band(s).

10 Measurement Performance requirements

10.1 NR measurements

10.1.1 Introduction

The requirements in clause 10.1 apply as follows:

- intra-frequency requirements apply for PCell measurements in SA, NR-DC, or NE-DC operation mode,
- intra-frequency requirements apply for PSCell measurements in NR-DC or EN-DC operation mode,
- intra-frequency requirements apply for SCell measurements in SA operation mode with NR CA or any MR-DC operation mode with NR CA,
- inter-frequency requirements apply for non-serving cell measurements on NR carrier frequencies.
- inter-frequency requirements apply for measurements from one cell on a frequency compared to the measurement from another cell on a different frequency.

In the requirements of clause 10.1, the exceptions for side conditions apply as follows:

- for the UE capable of CA but not configured with any SCell, the applicable exceptions for side conditions are specified in annex B, clause B.3.2.1 for UE supporting CA in FR1, and clause B.3.2.3 for UE supporting CA in FR2, respectively;
- for the UE capable of CA and configured with at least one SCell, the applicable exceptions for side conditions are specified in Annex B, clause B.3.2.2 for UE configured with CA in FR1, and clause B.3.2.4 for UE supporting CA in FR2, respectively;
- for the UE capable of SUL but not configured with SUL, the applicable exceptions for side conditions are specified in annex B, clause B.3.4.1 for UE supporting SUL in FR1;
- for the UE capable of SUL and configured with at least one SUL, the applicable exceptions for side conditions are specified in annex B, clause B.3.4.2 for UE configured with SUL in FR1.

10.1.2 Intra-frequency RSRP accuracy requirements for FR1

10.1.2.1 Intra-frequency SS-RSRP accuracy requirements

10.1.2.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the accuracy requirements for absolute SS-RSRP in this clause apply to a cell on the same frequency as that of the serving cell in FR1. The accuracy requirements in this clause are also applicable when *highSpeedMeasFlag-r16* or *highSpeedMeasCA-Scell-r17* is configured.

The accuracy requirements in table 10.1.2.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each relevant SSB.

Table 10.1.2.1.1-1: SS-RSRP Intra-frequency absolute accuracy in FR1

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range		
			NR operating band groups [Note 2]	Minimum Io	Maximum Io

dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±9	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±8	±11	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1.2.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy is defined as the SS-RSRP measured from one cell compared to the SS-RSRP measured from another cell on the same frequency, or between any two SS-RSRP levels measured on the same cell in FR1. The accuracy requirements in this clause are also applicable when *highSpeedMeasFlag-r16* or *highSpeedMeasCA-Scell-r17* is configured.

The accuracy requirements in table 10.1.2.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each relevant SSB.

Table 10.1.2.1.2-1: SS-RSRP Intra-frequency relative accuracy in FR1

Accuracy		Conditions			
Normal condition	Extreme condition	SSB $\hat{E}s/Iot$ Note 2	Io Note 1 range		
			NR operating band groups Note 4	Minimum Io	Maximum Io
dB	dB	dB		dBm / SCS_{SSB} dBm/$BW_{Channel}$	dBm/$BW_{Channel}$

				SCS_{SSB} = 15 kHz	**SCS_{SSB} = 30 kHz**		
±2	±3	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±3	±3	≥-6	Note 3	Note 3	Note 3	N/A	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.2.2 Void

10.1.2.3 Intra-frequency CSI-RSRP accuracy requirements

10.1.2.3.1 Absolute CSI-RSRP Accuracy

Unless otherwise specified, the requirements for absolute CSI-RSRP accuracy in this clause apply to a cell where the CSI-RS resources to be measured have the same center frequency as the CSI-RS resources indicated for measurement in the serving cell in FR1.

The accuracy requirements in table 10.1.2.3.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each associated SSB.
- Conditions for intra-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band for each relevant CSI-RS to be measured.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.2.3.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for intra-frequency measurement is serving cell timing.

Table 10.1.2.3.1-1: CSI-RSRP Intra-frequency absolute accuracy in FR1

Accuracy		**Conditions**			
			Io [Note 1] range		
Normal condition	**Extreme condition**	**CSI-RS Ês/Iot**	**NR operating band groups [Note 2]**	**Minimum Io**	**Maximum Io**

dB	dB	dB		dBm / SCS_{CSI-RS}			dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±4.5	±9	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-70
±8	±11	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	N/A	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.2.3.2 Relative CSI-RSRP Accuracy

The relative CSI-RSRP accuracy is defined as the CSI-RSRP measured from one cell compared to the CSI-RSRP measured from another cell on the same center frequency, or between any two CSI-RSRP levels measured on the same cell in FR1.

The accuracy requirements in table 10.1.2.3.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each associated SSB.
- Conditions for intra-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band for each relevant CSI-RS to be measured.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.2.3.2-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for intra-frequency measurement is serving cell timing.

Table 10.1.2.3.2-1: CSI-RSRP Intra-frequency relative accuracy in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS Ês/Iot Note 2	Io Note 1 range					
			NR operating band groups Note 4	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±2	±3	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50

			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50
±3	±3	≥-6	Note 3	Note 3	Note 3	Note 3	N/A	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.2B Intra-frequency RSRP accuracy requirements for FR1 for CA/DC Idle Mode Measurements

10.1.2B.1 Intra-frequency SS-RSRP accuracy requirements

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRP accuracy.

10.1.2B.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to the serving cell in FR1.

The accuracy requirements in table 10.1.2B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.1.2 for a corresponding Band for each relevant SSB.

Table 10.1.2B.1.1-1: SS-RSRP Intra-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±6	±10.5	≥-4	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±9.5	±12.5	≥-4	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.2C Intra-frequency RSRP accuracy requirements for FR1 SAN

10.1.2C.1 Intra-frequency SS-RSRP accuracy requirements

10.1.2C.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR1.

The accuracy requirements in table 10.1.2C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band for each relevant SSB.

- Valid information for the SAN serving the target cell has been provided.

Table 10.1.2C.1.1-1: SS-RSRP Intra-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±9	≥-6	NR_FDD_SAB_FR1_A	-121	-118	N/A	-70
±8	±11	≥-6	NR_FDD_SAB_FR1_A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2A.							

10.1.2C.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy is defined as the SS-RSRP measured from one cell compared to the SS-RSRP measured from another cell on the same frequency, or between any two SS-RSRP levels measured on the same cell in FR1.

The accuracy requirements in table 10.1.2C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band for each relevant SSB.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.2C.1.2-1: SS-RSRP Intra-frequency relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$ [Note 2]	Io [Note 1] range				
			NR operating band groups [Note 4]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2	±3	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
±3	±3	≥-6	Note 3	Note 3	Note 3	N/A	Note 3
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB $\hat{E}_s/I_{ot}$ is the minimum SSB $\hat{E}_s/I_{ot}$ of the pair of cells to which the requirement applies. NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement. NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2A.							

10.1.3 Intra-frequency RSRP accuracy requirements for FR2

10.1.3.1 Intra-frequency SS-RSRP accuracy requirements

10.1.3.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR2.

The accuracy requirements in table 10.1.3.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.3.1.1-1: SS-RSRP Intra-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]		$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz	
±6	±9	≥-6	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival		N/A	-70
±8	±11		N/A		-70	-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.3.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy is defined as the SS-RSRP measured from one cell compared to the SS-RSRP measured from another cell on the same frequency, or between any two SS-RSRP levels measured on the same cell in FR2.

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.3.1.2-1: SS-RSRP Intra-frequency relative accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]		$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz	
±6	±9	≥-6	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival		-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.

10.1.3.2 Void

10.1.3.3 Intra-frequency CSI-RSRP accuracy requirements

10.1.3.3.1 Absolute CSI-RSRP Accuracy

Unless otherwise specified, the requirements for absolute CSI-RSRP accuracy in this clause apply to a cell where the CSI-RS resources to be measured have the same center frequency as the CSI-RS resources indicated for measurement in the serving cell in FR2.

The accuracy requirements in table 10.1.3.3.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each associated SSB(s).
- Conditions for intra-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band for each relevant CSI-RS to be measured.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.3.3.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for intra-frequency measurement is serving cell timing.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.3.3.1-1: CSI-RSRP Intra-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 1		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz	SCS_{CSI-RS} = 120 kHz		
±6	±9	≥-6	Same value as CSI-RS_RP in Table B.2.8-2, according to UE Power class, operating band and angle of arrival		N/A	-70
±8	±11		N/A		-70	-50
NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival. NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth. NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.						

10.1.3.3.2 Relative CSI-RSRP Accuracy

The relative CSI-RSRP accuracy is defined as the CSI-RSRP measured from one cell compared to the CSI-RSRP measured from another cell on the same center frequency, or between any two CSI-RSRP levels measured on the same cell in FR2.

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each associated SSB(s).

- Conditions for intra-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band for each CSI-RS to be measured.

- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.3.3.2-1.

- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for intra-frequency measurement is serving cell timing.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.3.3.2-1: CSI-RSRP Intra-frequency relative accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS CSI-RS Note 1		dBm/BW Channel
			SCS CSI-RS = 60 kHz	SCS CSI-RS = 120 kHz	
±6	±9	≥-6	Same value as CSI-RS_RP in Table B.2.8-2, according to UE Power class, operating band and angle of arrival		-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of cells to which the requirement applies.

10.1.3B Intra-frequency RSRP accuracy requirements for FR2 for CA/DC Idle Mode Measurements

10.1.3B.1 Intra-frequency SS-RSRP accuracy requirements

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE

- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRP accuracy.

10.1.3B.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to the serving cell in FR2.

The accuracy requirements in table 10.1.3B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

- Conditions for intra-frequency measurements are fulfilled according to annex B.1.2 for a corresponding Band for each relevant SSB.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.3B.1.1-1: SS-RSRP Intra-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz		
±7.5	±10.5	≥-4	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	N/A	-70
±9.5	±12.5		N/A	-70	-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.3C Intra-frequency RSRP accuracy requirements for FR2-NTN

10.1.3C.1 Intra-frequency SS-RSRP accuracy requirements

10.1.3C.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR2-NTN.

The accuracy requirements in table 10.1.3C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.3C.1.1-1: SS-RSRP Intra-frequency absolute accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz		
±7	±10	≥-6	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type	N/A	-70
±9	±12		N/A	-70	-50

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.3C.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy is defined as the SS-RSRP measured from one cell compared to the SS-RSRP measured from another cell on the same frequency, or between any two SS-RSRP levels measured on the same cell in FR2-NTN.

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.3C.1.2-1: SS-RSRP Intra-frequency relative accuracy in FR2-NTN

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±3	±6	≥-6	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type	-50

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.

10.1.4 Inter-frequency RSRP accuracy requirements for FR1

10.1.4.1 Inter-frequency SS-RSRP accuracy requirements

10.1.4.1.1 Absolute SS-RSRP Accuracy in FR1

The requirements for absolute SS-RSRP accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell. The accuracy requirements in this clause are also applicable when *highSpeedMeasInterFreq-r17* is configured.

The accuracy requirements in table 10.1.4.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.

Table 10.1.4.1.1-1: SS-RSRP Inter-frequency Absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
			NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B,	-120.5	-117.5	N/A	-70

±4.5	±9	≥-6	NR_TDD_FR1_B				
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±8	±11	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: Void
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.4.1.2 Relative SS-RSRP Accuracy in FR1

The relative SS-RSRP accuracy in inter-frequency case is defined as the RSRP measured from one cell on a frequency in FR1compared to the RSRP measured from another cell on a different frequency in FR1. The accuracy requirements in this clause are also applicable when *highSpeedMeasInterFreq-r17* is configured.

The accuracy requirements in Table 10.1.4.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] Clause 7.3 for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.3 for a corresponding Band for each relevant SSB.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1.4.1.2-1: SS-RSRP Inter-frequency relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
			NR_FDD_FR1_A, NR_TDD_FR1_A,	-121	-118	N/A	-50

±4.5	±6	≥-6	NR_SDL_FR1_A				
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies. NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1.4.2 Void

10.1.4.3 Inter-frequency CSI-RSRP accuracy requirements

10.1.4.3.1 Absolute CSI-RSRP Accuracy in FR1

The requirements for absolute CSI-RSRP accuracy in this clause apply to a cell where the CSI-RS resources to be measured have the different center frequency as the CSI-RS resources indicated for measurement in the serving cell in FR1.

The accuracy requirements in table 10.1.4.3.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS to be measured.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.4.3.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

Table 10.1.4.3.1-1: CSI-RSRP Inter-frequency Absolute accuracy in FR1

Accuracy		**Conditions**					
Normal condition	**Extreme condition**	**CSI-RS Ês/Iot**	**Io [Note 1] range**				
			NR operating band groups [Note 2]	**Minimum Io**			**Maximum Io**
dB	**dB**	**dB**		**dBm / SCS_{CSI-RS}**			**dBm/$BW_{Channel}$**	**dBm/$BW_{Channel}$**
				SCS_{CSI-RS} = 15 kHz	**SCS_{CSI-RS} = 30 kHz**	**SCS_{CSI-RS} = 60 kHz**		
			NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-70

±4.5	±9	≥-6	NR_FDD_FR1_B, NR_TDD_FR1_B,	-120.5	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-70
±8	±11	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.								

10.1.4.3.2 Relative CSI-RSRP Accuracy in FR1

The relative CSI-RSRP accuracy in inter-frequency case is defined as the CSI-RSRP measured from one cell on a frequency in FR1compared to the CSI-RSRP measured from another cell on a different frequency in FR1.

The accuracy requirements in table 10.1.4.3.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] clause 7.3 for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS to be measured.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.4.3.2-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.
  - NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.
- $|CSI_RP1_{dBm} - CSI_RP2_{dBm}| \leq 27$ dB
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1.4.3.2-1: CSI-RSRP Inter-frequency relative accuracy in FR1

Accuracy	Conditions

Normal condition	Extreme condition	CSI-RS Ês/Iot Note 2	Io Note 1 range					
			NR operating band groups Note 4	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±4.5	±6	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-113.5	-111.5	-108.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Void
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.4B Inter-frequency RSRP accuracy requirements for FR1 for CA/DC Idle Mode Measurements

10.1.4B.1 Inter-frequency SS-RSRP accuracy requirements

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRP accuracy.

10.1.4B.1.1 Absolute SS-RSRP Accuracy in FR1

The requirements for absolute SS-RSRP accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.4B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.1.3 for a corresponding Band for each relevant SSB.

Table 10.1.4B.1.1-1: SS-RSRP Inter-frequency Absolute accuracy in FR1

Accuracy		Conditions	
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range

			NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±6	±10.5	≥-4	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±9.5	±12.5	≥-4	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: Void
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.4C Inter-frequency RSRP accuracy requirements for FR1 SAN

10.1.4C.1 Inter-frequency SS-RSRP accuracy requirements

10.1.4C.1.1 Absolute SS-RSRP Accuracy in FR1

The requirements for absolute SS-RSRP accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.4C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band for each relevant SSB.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.4C.1.1-1: SS-RSRP Inter-frequency Absolute accuracy in FR1

Accuracy	Conditions

Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±9	≥-6	NR_FDD_SAB_FR1_A	-121	-118	N/A	-70
±8	±11	≥-6	NR_FDD_SAB_FR1_A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: Void NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2A.							

10.1.4C.1.2 Relative SS-RSRP Accuracy in FR1

The relative SS-RSRP accuracy in inter-frequency case is defined as the RSRP measured from one cell on a frequency in FR1compared to the RSRP measured from another cell on a different frequency in FR1.

The accuracy requirements in Table 10.1.4C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] Clause 7.3 for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.18 for a corresponding Band for each relevant SSB.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1.4C.1.2-1: SS-RSRP Inter-frequency relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±6	≥-6	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies. NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2A							

10.1.5 Inter-frequency RSRP accuracy requirements for FR2

10.1.5.1 Inter-frequency SS-RSRP accuracy requirements

10.1.5.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to a cell on a frequency in FR2 that is on a different frequency than the serving cell.

The accuracy requirements in table 10.1.5.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.5.1.1-1: SS-RSRP Inter-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1		$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz	
±6	±9	≥-4	Same value as SSB_RP in Table B.2.3-2, according to UE Power class, operating band and angle of arrival		N/A	-70
±8	±11		N/A		-70	-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.5.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy is defined as the SS-RSRP measured from one cell on a frequency in FR2 compared to the SS-RSRP measured from another cell on another frequency in FR2.

The accuracy requirements in table 10.1.5.1.2-1 are valid under the following conditions:

- Conditions defined in TS 38.101-2 [19] clause 7.3 for reference sensitivity are fulfilled.

- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.

-- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27dB$

- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.5.1.2-1: SS-RSRP Inter-frequency relative accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz	
±6	±9	≥-4	Same value as SSB_RP in Table B.2.3-2, according to UE Power class, operating band and angle of arrival	-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.

10.1.5.2 Void

10.1.5.3 Inter-frequency CSI-RSRP accuracy requirements

10.1.5.3.1 Absolute CSI-RSRP Accuracy

Unless otherwise specified, the requirements for absolute CSI-RSRP accuracy in this clause apply to a cell on a frequency in FR2 where the CSI-RS resources to be measured have the different center frequency as the CSI-RS resources indicated for measurement in the serving cell.

The accuracy requirements in table 10.1.5.3.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant associated SSB.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS to be measured.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.5.3.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.5.3.1-1: CSI-RSRP Inter-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 2] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} [Note 1]	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±6	±9	≥-4	Same value as CSI_RP in Table B.2.9-2, according to UE Power class, operating band and angle of arrival	N/A	-70
±8	±11		N/A	-70	-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.5.3.2 Relative CSI-RSRP Accuracy

The relative CSI-RSRP accuracy in inter-frequency case is defined as the CSI-RSRP measured from one cell on a frequency in FR2 compared to the CSI-RSRP measured from another cell on another frequency in FR2.

The accuracy requirements in table 10.1.5.3.2-1 are valid under the following conditions:

- Conditions defined in TS 38.101-2 [19] clause 7.3 for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant associated SSB.

- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS to be measured.

- The bandwidth of CSI-RS is 48 PRBs and the density is 3. The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.5.3.2-1.

- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

- $|CSI_RP1_{dBm} - CSI_RP2_{dBm}| \leq 27dB$

- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.5.3.2-1: CSI-RSRP Inter-frequency relative accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 1		$dBm/BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz	SCS_{CSI-RS} = 120 kHz	
±6	±9	≥-4	Same value as CSI_RP in Table B.2.9-2, according to UE Power class, operating band and angle of arrival		-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of cells to which the requirement applies.

10.1.5B Inter-frequency RSRP accuracy requirements for FR2 for CA/DC Idle Mode Measurements

10.1.5B.1 Inter-frequency SS-RSRP accuracy requirements

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE

- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRP accuracy.

10.1.5B.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to a cell on a frequency in FR2 that is on a different frequency than the serving cell.

The accuracy requirements in table 10.1.5B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

- Conditions for inter-frequency measurements are fulfilled according to annex B.1.3 for a corresponding Band for each relevant SSB.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.5B.1.1-1: SS-RSRP Inter-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz		
±7.5	±10.5	≥-4	Same value as SSB_RP in Table B.2.3-2, according to UE Power class, operating band and angle of arrival	N/A	-70
±9.5	±12.5		N/A	-70	-50

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.5C Inter-frequency RSRP accuracy requirements for FR2-NTN

10.1.5C.1 Inter-frequency SS-RSRP accuracy requirements

10.1.5C.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to a cell on a frequency in FR2-NTN that is on a different frequency than the serving cell.

The accuracy requirements in table 10.1.5C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.5C.1.1-1: SS-RSRP Inter-frequency absolute accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz		
±7	±10	≥-4	Same value as SSB_RP derived from annex B.2.18, according to UE VSAT type	N/A	-70
±9	±12		N/A	-70	-50

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.5C.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy is defined as the SS-RSRP measured from one cell on a frequency in FR2-NTN compared to the SS-RSRP measured from another cell on another frequency in FR2-NTN.

The accuracy requirements in table 10.1.5C.1.2-1 are valid under the following conditions:

- Conditions defined in 38.101-5 [19] clause 10.3 for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band for each relevant SSB.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27dB$
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.5C.1.2-1: SS-RSRP Inter-frequency relative accuracy in FR2-NTN

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz | SCS_{SSB} = 240 kHz	
±7	±10	≥-4	Same value as SSB_RP derived from annex B.2.18, according to UE VSAT type	-50

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.

10.1.6 RSRP Measurement Report Mapping

The reporting range of SS-RSRP and CSI-RSRP for L3 reporting is defined from -156 dBm to -31 dBm with 1 dB resolution. The reporting range of SS-RSRP and CSI-RSRP for L1 reporting is defined from -140 to -44 dBm with 1 dB resolution.

The mapping of measured quantity is defined in table 10.1.6.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

The reporting range of differential SS-RSRP and CSI-RSRP for L1 reporting is defined from 0 dB to -30 dB with 2 dB resolution.

The mapping of measured quantity is defined in table 10.1.6.1-2. The range in the signalling may be larger than the guaranteed accuracy range.

Table 10.1.6.1-1: SS-RSRP and CSI-RSRP measurement report mapping

Reported value	Measured quantity value (L3 SS-RSRP) and CSI-RSRP	Measured quantity value (L1 SS-RSRP and CSI-RSRP)	Unit
RSRP_0	SS-RSRP<-156	Not valid	dBm
RSRP_1	-156≤ SS-RSRP<-155	Not valid	dBm
RSRP_2	-155≤ SS-RSRP<-154	Not valid	dBm
RSRP_3	-154≤ SS-RSRP<-153	Not valid	dBm
RSRP_4	-153≤ SS-RSRP<-152	Not valid	dBm
RSRP_5	-152≤ SS-RSRP<-151	Not valid	dBm
RSRP_6	-151≤ SS-RSRP<-150	Not valid	dBm
RSRP_7	-150≤ SS-RSRP<-149	Not valid	dBm
RSRP_8	-149≤ SS-RSRP<-148	Not valid	dBm

RSRP_9	-148≤ SS-RSRP<-147	Not valid	dBm
RSRP_10	-147≤ SS-RSRP<-146	Not valid	dBm
RSRP_11	-146≤ SS-RSRP<-145	Not valid	dBm
RSRP_12	-145≤ SS-RSRP<-144	Not valid	dBm
RSRP_13	-144≤ SS-RSRP<-143	Not valid	dBm
RSRP_14	-143≤ SS-RSRP<-142	Not valid	dBm
RSRP_15	-142≤ SS-RSRP<-141	Not valid	dBm
RSRP_16	-141≤ SS-RSRP<-140	RSRP<-140	dBm
RSRP_17	-140≤ SS-RSRP<-139	-140≤RSRP<-139	dBm
RSRP_18	-139≤ SS-RSRP<-138	-139≤ RSRP<-138	dBm
…	…		…
RSRP_111	-46≤≤ SS-RSRP<-45	-46≤ RSRP<-45	dBm
RSRP_112	-45≤ SS-RSRP<-44	-45≤ RSRP<-44	dBm
RSRP_113	-44≤ SS-RSRP<-43	-44≤ RSRP	dBm
RSRP_114	-43≤ SS-RSRP<-42	Not valid	dBm
RSRP_115	-42≤ SS-RSRP<-41	Not valid	dBm
RSRP_116	-41≤ SS-RSRP<-40	Not valid	dBm
RSRP_117	-40≤ SS-RSRP<-39	Not valid	dBm
RSRP_118	-39≤ SS-RSRP<-38	Not valid	dBm
RSRP_119	-38≤ SS-RSRP<-37	Not valid	dBm
RSRP_120	-37≤ SS-RSRP<-36	Not valid	dBm
RSRP_121	-36≤ SS-RSRP<-35	Not valid	dBm
RSRP_122	-35≤ SS-RSRP<-34	Not valid	dBm
RSRP_123	-34≤ SS-RSRP<-33	Not valid	dBm
RSRP_124	-33≤ SS-RSRP<-32	Not valid	dBm
RSRP_125	-32≤ SS-RSRP<-31	Not valid	dBm
RSRP_126	-31≤ SS-RSRP	Not valid	dBm
RSRP_127 (Note)	Infinity	Infinity	dBm
NOTE: The value of RSRP_127 is applicable for RSRP threshold configured by the network as defined in TS 38.331 [2], but not for the purpose of measurement reporting.			

Table 10.1.6.1-2: Differential SS-RSRP and CSI-RSRP measurement (for L1 reporting) report mapping

Reported value	Measured quantity value (difference in measured RSRP from strongest RSRP)	Unit
DIFFRSRP_0	0≥ΔRSRP>-2	dB
DIFFRSRP_1	-2≥ΔRSRP>-4	dB
DIFFRSRP_2	-4≥ΔRSRP>-6	dB
DIFFRSRP_3	-6≥ΔRSRP>-8	dB
DIFFRSRP_4	-8≥ΔRSRP>-10	dB
DIFFRSRP_5	-10≥ΔRSRP>-12	dB
DIFFRSRP_6	-12≥ΔRSRP>-14	dB
DIFFRSRP_7	-14≥ΔRSRP>-16	dB

10.1.7 Intra-frequency RSRQ accuracy requirements for FR1

10.1.7.1 Intra-frequency SS-RSRQ accuracy requirements in FR1

10.1.7.1.1 Absolute SS-RSRQ Accuracy in FR1

Unless otherwise specified, the requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR1. The accuracy requirements in this clause are also applicable when *highSpeedMeasFlag-r16* or *highSpeedMeasCA-Scell-r17* is configured.

The accuracy requirements in table 10.1.7.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each relevant SSB.

Table 10.1.7.1.1-1: SS-RSRQ Intra-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2.5	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.7.2 Intra-frequency CSI-RSRQ accuracy requirements

10.1.7.2.1 Absolute CSI-RSRQ Accuracy

Unless otherwise specified, the requirements for absolute CSI-RSRQ accuracy in this clause apply to the intra-frequency measurement defined in clause 9.10.2.1 in FR1.

The accuracy requirements in table 10.1.7.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for associated SSB.
- Conditions for intra-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.7.2.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for intra-frequency measurement is serving cell timing.

Table 10.1.7.2.1-1: CSI-RSRQ Intra-frequency absolute accuracy in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 1 range					
			NR operating band groups Note 3	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±2.5	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.7B Intra-frequency RSRQ accuracy requirements for FR1 for CA/DC Idle Mode Measurements

10.1.7B.1 Intra-frequency SS-RSRQ accuracy requirements in FR1

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRQ accuracy.

10.1.7B.1.1 Absolute SS-RSRQ Accuracy in FR1

Unless otherwise specified, the requirements for absolute SS-RSRQ accuracy in this clause apply to the serving cell in FR1.

The accuracy requirements in table 10.1.7B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.1.2 for a corresponding Band for each relevant SSB.

Table 10.1.7B.1.1-1: SS-RSRQ Intra-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4	±5.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±5	±5.5	≥-4	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.7C Intra-frequency RSRQ accuracy requirements for FR1 SAN

10.1.7C.1 Intra-frequency SS-RSRQ accuracy requirements in FR1

10.1.7C.1.1 Absolute SS-RSRQ Accuracy in FR1

Unless otherwise specified, the requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR1.

The accuracy requirements in table 10.1.7C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band for each relevant SSB.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.7C.1.1-1: SS-RSRQ Intra-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2.5	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2A

10.1.8 Intra-frequency RSRQ accuracy requirements for FR2

10.1.8.1 Intra-frequency SS-RSRQ accuracy requirements in FR2

10.1.8.1.1 Absolute SS-RSRQ Accuracy in FR2

Unless otherwise specified, the requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR2.

The accuracy requirements in table 10.1.8.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.8.1.1-1: SS-RSRQ Intra-frequency absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz | SCS_{SSB} = 240 kHz	
±2.5	±4	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50
±3.5	±4	≥-6		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.8.2 Intra-frequency CSI-RSRQ accuracy requirements

10.1.8.2.1 Absolute CSI-RSRQ Accuracy

Unless otherwise specified, the requirements for absolute CSI-RSRQ accuracy in this clause apply to the intra-frequency measurement defined in clause 9.10.2.1 in FR2.

The accuracy requirements in table 10.1.8.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band for each relevant SSB.
- Conditions for intra-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.8.2.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for intra-frequency measurement is serving cell timing.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.8.2.1-1: CSI-RSRQ Intra-frequency absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 1	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz	
±2.5	±4	≥-3	Same value as CSI_RP in Table B.2.8-2, according to UE Power class, operating band and angle of arrival	-50
±3.5	±4	≥-6		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.8B Intra-frequency RSRQ accuracy requirements for FR2 for CA/DC Idle Mode Measurements

10.1.8B.1 Intra-frequency SS-RSRQ accuracy requirements in FR2

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRQ accuracy.

10.1.8B.1.1 Absolute SS-RSRQ Accuracy in FR2

Unless otherwise specified, the requirements for absolute SS-RSRQ accuracy in this clause apply to the serving cell in FR2.

The accuracy requirements in table 10.1.8B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

- Conditions for intra-frequency measurements are fulfilled according to annex B.1.2 for a corresponding Band for each relevant SSB.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.8B.1.1-1: SS-RSRQ Intra-frequency absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±4	±5.5	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50
±5	±5.5	≥-4		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.8C Intra-frequency RSRQ accuracy requirements for FR2-NTN

10.1.8C.1 Intra-frequency SS-RSRQ accuracy requirements in FR2-NTN

10.1.8C.1.1 Absolute SS-RSRQ Accuracy in FR2-NTN

Unless otherwise specified, the requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR2-NTN.

The accuracy requirements in table 10.1.8C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.

- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band for each relevant SSB.

- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.8C.1.1-1: SS-RSRQ Intra-frequency absolute accuracy in FR2-NTN

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±3.5	±5	≥-3	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type	-50
±4.5	±5	≥-6		

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.9 Inter-frequency RSRQ accuracy requirements for FR1

10.1.9.1 Inter-frequency SS-RSRQ accuracy requirements in FR1

10.1.9.1.1 Absolute SS-RSRQ Accuracy in FR1

The requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell. The accuracy requirements in this clause are also applicable when *highSpeedMeasInterFreq-r17* is configured.

The accuracy requirements in table 10.1.9.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.

Table 10.1.9.1.1-1: SS-RSRQ Inter-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2.5	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.9.1.2 Relative SS-RSRQ Accuracy in FR1

The relative SS-RSRQ accuracy in inter-frequency case is defined as the RSRQ measured from one cell on a frequency in FR1 compared to the RSRP measured from another cell on a different frequency in FR1. The accuracy requirements in this clause are also applicable when *highSpeedMeasInterFreq-r17* is configured.

The accuracy requirements in table 10.1.9.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.

- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1.9.1.2-1: SS-RSRQ Inter-frequency relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±4	±4	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.9.2 Inter-frequency CSI-RSRQ accuracy requirements

10.1.9.2.1 Absolute CSI-RSRQ Accuracy

Unless otherwise specified, the requirements for absolute CSI-RSRQ accuracy in this clause apply to the inter-frequency measurement defined in clause 9.10.3.1 in FR1.

The accuracy requirements in table 10.1.9.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for associated SSB.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
    - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.9.2.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

Table 10.1.9.2.1-1: CSI-RSRQ Inter-frequency absolute accuracy in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 1] range					
			NR operating band groups [Note 3]	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±2.5	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.9.2.2 Relative CSI-RSRQ Accuracy

The relative CSI-RSRQ accuracy is defined as the CSI-RSRQ measured from one cell compared to the CSI-RSRQ measured from another cell with the same center frequency, or between any two CSI-RSRQ levels measured on the same cell in FR1.

The accuracy requirements in table 10.1.9.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for the associated SSB.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.9.2.2-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

Table 10.1.9.2.2-1: CSI-RSRQ Inter-frequency relative accuracy in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS Ês/Iot Note 2	Io Note 1 range					
			NR operating band groups Note 4	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±3	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50
±4	±4	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.9B Inter-frequency RSRQ accuracy requirements for FR1 for CA/DC Idle Mode Measurements

10.1.9B.1 Inter-frequency SS-RSRQ accuracy requirements in FR1

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRQ accuracy.

10.1.9B.1.1 Absolute SS-RSRQ Accuracy in FR1

The requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.9B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.1.3 for a corresponding Band for each relevant SSB.

Table 10.1.9B.1.1-1: SS-RSRQ Inter-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4	±5.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±5	±5.5	≥-4	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2A.

10.1.9C Inter-frequency RSRQ accuracy requirements for FR1 SAN

10.1.9C.1 Inter-frequency SS-RSRQ accuracy requirements in FR1

10.1.9C.1.1 Absolute SS-RSRQ Accuracy in FR1

The requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.9C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band for each relevant SSB.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.9C.1.1-1: SS-RSRQ Inter-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2.5	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.9C.1.2 Relative SS-RSRQ Accuracy in FR1

The relative SS-RSRQ accuracy in inter-frequency case is defined as the RSRQ measured from one cell on a frequency in FR1 compared to the RSRP measured from another cell on a different frequency in FR1.

The accuracy requirements in table 10.1.9C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band for each relevant SSB.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB
- $|Channel\ 1_Io - Channel\ 2_Io| \leq 20$ dB
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.9C.1.2-1: SS-RSRQ Inter-frequency relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
±4	±4	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2A.

10.1.10 Inter-frequency RSRQ accuracy requirements for FR2

10.1.10.1 Inter-frequency SS-RSRQ accuracy requirements in FR2

10.1.10.1.1 Absolute SS-RSRQ Accuracy in FR2

The requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on a frequency in FR2 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.10.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.10.1.1-1: SS-RSRQ Inter-frequency absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±2.5	±4	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50
±3.5	±4	≥-4		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.10.1.2 Relative SS-RSRQ Accuracy in FR2

The relative SS-RSRQ accuracy in inter-frequency case is defined as the RSRQ measured from one cell on a frequency in FR2 compared to the RSRP measured from another cell on a different frequency in FR2.

The accuracy requirements in table 10.1.10.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for each relevant SSB.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|$ Channel 1_Io -Channel 2_Io $| \leq 20$ dB
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.10.1.2-1: SS-RSRQ Inter-frequency relative accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±3	±4	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50
±4	±4	≥-4		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.10.2 Inter-frequency CSI-RSRQ accuracy requirements

10.1.10.2.1 Absolute CSI-RSRQ Accuracy

Unless otherwise specified, the requirements for absolute CSI-RSRQ accuracy in this clause apply the inter-frequency measurement defined in clause 9.10.3.1 in FR2.

The accuracy requirements in table 10.1.10.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for associated SSB.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.10.2.1-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

Table 10.1.10.2.1-1: CSI-RSRQ Inter-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 1		$dBm/BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz	SCS_{CSI-RS} = 120 kHz	
±2.5	±4	≥-3	Same value as CSI_RP in Table B.2.9-2, according to UE Power class, operating band and angle of arrival		-50
±3.5	±4	≥-4			

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.10.2.2 Relative CSI-RSRQ Accuracy

The relative CSI-RSRQ accuracy is defined as the CSI-RSRQ measured from one cell compared to the CSI-RSRQ measured from another cell with the same center frequency, or between any two CSI-RSRQ levels measured on the same cell in FR2.

The accuracy requirements in table 10.1.10.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band for the associated SSB.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.10.2.2-1.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for one layer for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

Table 10.1.10.2.2-1: CSI-RSRQ Inter-frequency relative accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 2] range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} [Note 1]	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz	
±3	±4	≥-3	Same value as CSI_RP in Table B.2.9-2, according to UE Power class, operating band and angle of arrival	-50
±4	±4	≥-4		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of cells to which the requirement applies.
NOTE 4: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.10B Inter-frequency RSRQ accuracy requirements for FR2 for CA/DC Idle Mode Measurements

10.1.10B.1 Inter-frequency SS-RSRQ accuracy requirements in FR2

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute SS-RSRQ accuracy.

10.1.10B.1.1 Absolute SS-RSRQ Accuracy in FR2

The requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on a frequency in FR2 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.10B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.1.3 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.10B.1.1-1: SS-RSRQ Inter-frequency absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±4	±5.5	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50

±5	±5.5	≥-4		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.10C Inter-frequency RSRQ accuracy requirements for FR2-NTN

10.1.10C.1 Inter-frequency SS-RSRQ accuracy requirements in FR2-NTN

10.1.10C.1.1 Absolute SS-RSRQ Accuracy in FR2-NTN

The requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on a frequency in FR2-NTN that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.10C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.10C.1.1-1: SS-RSRQ Inter-frequency absolute accuracy in FR2-NTN

Accuracy		**Conditions**		
Normal condition	**Extreme condition**	**SSB Ês/Iot**	**Io [Note 2] range**	
			Minimum Io	**Maximum Io**
dB	**dB**	**dB**	**dBm / SCS_{SSB} [Note 1]**	**dBm/$BW_{Channel}$**
			SCS_{SSB} = 120 kHz / **SCS_{SSB} = 240 kHz**	
±3.5	±5	≥-3	Same value as SSB_RP derived from annex B.2.18, according to UE VSAT type	-50
±4.5	±5	≥-4		

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.10C.1.2 Relative SS-RSRQ Accuracy in FR2-NTN

The relative SS-RSRQ accuracy in inter-frequency case is defined as the RSRQ measured from one cell on a frequency in FR2-NTN compared to the RSRP measured from another cell on a different frequency in FR2-NTN.

The accuracy requirements in table 10.1.10C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band for each relevant SSB.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|$ Channel 1_Io -Channel 2_Io $| \leq 20$ dB
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.10C.1.2-1: SS-RSRQ Inter-frequency relative accuracy in FR2-NTN

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±4	±5	≥-3	Same value as SSB_RP derived from annex B.2.18, according to UE VSAT type	-50
±5	±5	≥-4		

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.11 RSRQ report mapping

10.1.11.1 SS-RSRQ and CSI-RSRQ measurement report mapping

The reporting range of SS-RSRQ and CSI-RSRQ measurement is defined from -43 dB to 20 dB with 0.5 dB resolution. The mapping of measured quantity is defined in table 10.1.11.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

Table 10.1.11.1-1: SS-RSRQ and CSI-RSRQ measurement report mapping

Reported value	Measured quantity value	Unit
SS-RSRQ_0	SS-RSRQ<-43	dB
SS-RSRQ_1	-43≤ SS-RSRQ<-42.5	dB
SS-RSRQ_2	-42.5≤ SS-RSRQ<-42	dB
SS-RSRQ_3	-42≤ SS-RSRQ<-41.5	dB
SS-RSRQ_4	-41.5≤ SS-RSRQ<-41	dB
..	..	…
SS-RSRQ_122	17.5≤ SS-RSRQ<18	dB
SS-RSRQ_123	18≤ SS-RSRQ<18.5	dB
SS-RSRQ_124	18.5≤ SS-RSRQ<19	dB
SS-RSRQ_125	19≤ SS-RSRQ<19.5	dB
SS-RSRQ_126	19.5≤ SS-RSRQ<20	dB
SS-RSRQ_127	20 ≤ SS-RSRQ	dB

10.1.12 Intra-frequency SINR accuracy requirements for FR1

10.1.12.1 Intra-frequency SS-SINR accuracy requirements in FR1

10.1.12.1.1 Absolute SS-SINR Accuracy in FR1

Unless otherwise specified, the requirements for absolute SS-SINR accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR1.

The accuracy requirements in table 10.1.12.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band.

Table 10.1.12.1.1-1: SS-SINR Intra-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3.0	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: The requirements apply for SSB Ês/Iot ≤ 25 dB under non-HST scenarios.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 5: The requirements apply for SSB Ês/Iot ≤5 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

10.1.12.2 Intra-frequency CSI-SINR accuracy requirements in FR1

10.1.12.2.1 Absolute CSI-SINR Accuracy in FR1

Unless otherwise specified, the requirements for absolute CSI-SINR accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR1.

The accuracy requirements in table 10.1.12.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.
  - NOTE: The reference measurement timing for intra-frequency measurement is serving cell timing.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.12.2.1-1.

Table 10.1.12.2.1-1: CSI-SINR Intra-frequency absolute accuracy in FR1

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 1 range		
			NR operating band groups	Minimum Io	Maximum Io

dB	dB	dB		dBm / SCS SCS (kHz)			dBm/BW Channel	dBm/BW Channel
				15	30	60		
±3	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-70
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	N/A	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: The requirements apply for CSI-RS Ês/Iot ≤XdB. X=15 if timing offset between the reference measurement timing and the target CSI-RS is no larger than 0.5*CP, and X=4 if timing offset between the reference measurement timing and the target CSI-RS is larger than 0.5*CP but no larger than CP.

10.1.12C Intra-frequency SINR accuracy requirements for FR1 SAN

10.1.12C.1 Intra-frequency SS-SINR accuracy requirements in FR1

10.1.12C.1.1 Absolute SS-SINR Accuracy in FR1

Unless otherwise specified, the requirements for absolute SS-SINR accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR1.

The accuracy requirements in table 10.1.12C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.12C.1.1-1: SS-SINR Intra-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: The requirements apply for SSB Ês/Iot ≤ 25 dB under non-HST scenarios.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2A.

NOTE 5: The requirements apply for SSB Ês/Iot ≤5 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

10.1.13 Intra-frequency SINR accuracy requirements for FR2

10.1.13.1 Intra-frequency SS-SINR accuracy requirements in FR2

10.1.13.1.1 Absolute SS-SINR Accuracy in FR2

Unless otherwise specified, the requirements for absolute SS-SINR accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR2.

The accuracy requirements in table 10.1.13.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.2 for a corresponding Band.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.13.1.1-1: SS-SINR Intra-frequency absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±3	±4	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50
±3.5	±4	≥-6		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The requirements apply for SSB Ês/Iot ≤ 25 dB.

10.1.13.2 Intra-frequency CSI-SINR accuracy requirements in FR2

10.1.13.2.1 Absolute CSI-SINR Accuracy in FR2

Unless otherwise specified, the requirements for absolute CSI-SINR accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR2.

The accuracy requirements in table 10.1.13.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.12 for a corresponding Band.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.
  - NOTE: The reference measurement timing for intra-frequency measurement is serving cell timing.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

- The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.13.2.1-1.

Table 10.1.13.2.1-1: CSI-SINR Intra-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 2] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} [Note 1]		$dBm/BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz	SCS_{CSI-RS} = 120 kHz	
±3	±4	≥-3	Same value as CSI_RP in Table B.2.8-2, according to UE Power class, operating band and angle of arrival		-50
±3.5	±4	≥-6			

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The requirements apply for CSI-RS Ês/Iot ≤XdB. X=15 if timing offset between the reference measurement timing and the target CSI-RS is no larger than 0.5*CP, and X=4 if timing offset between the reference measurement timing and the target CSI-RS is larger than 0.5*CP but no larger than CP.

10.1.13C Intra-frequency SINR accuracy requirements for FR2-NTN

10.1.13C.1 Intra-frequency SS-SINR accuracy requirements in FR2-NTN

10.1.13C.1.1 Absolute SS-SINR Accuracy in FR2-NTN

Unless otherwise specified, the requirements for absolute SS-SINR accuracy in this clause apply to a cell on the same frequency as that of the serving cell in FR2-NTN.

The accuracy requirements in table 10.1.13C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.17 for a corresponding Band.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.13C.1.1-1: SS-SINR Intra-frequency absolute accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 2] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 1]		$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz	
±4	±5	≥-3	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type		-50
±4.5	±5	≥-6			

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The requirements apply for SSB Ês/Iot ≤ 25 dB

10.1.14 Inter-frequency SINR accuracy requirements for FR1

10.1.14.1 Inter-frequency SS-SINR accuracy requirements in FR1

10.1.14.1.1 Absolute SS-SINR Accuracy in FR1

The requirements for absolute SS-SINR accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.14.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band.

Table 10.1.14.1.1-1: SS-SINR Inter-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3.0	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: The requirements apply for SSB Ês/Iot ≤ 25 dB.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 5: The requirements apply for SSB Ês/Iot ≤ 5 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

10.1.14.1.2 Relative SS-SINR Accuracy in FR1

The relative SS-SINR accuracy in inter-frequency case is defined as the SS-SINR measured from one cell on a frequency in FR1 compared to the SS-SINR measured from another cell on a different frequency in FR1.

The accuracy requirements in table 10.1.14.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB

- | Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1.14.1.2-1: SS-SINR Inter-frequency relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2,4	Io Note 1 range				
			NR operating band groups Note 5	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz		
±3.5	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±4	±4	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: The requirements apply for SSB Ês/Iot ≤ 25 dB.
NOTE 5: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 6: The requirements apply for SSB Ês/Iot ≤ 5 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

10.1.14.2 Inter-frequency CSI-SINR accuracy requirements in FR1

10.1.14.2.1 Absolute CSI-SINR Accuracy in FR1

The requirements for absolute CSI-SINR accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.14.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band.
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

  Note: The reference measurement timing for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.14.2.1-1.

Table 10.1.14.2.1-1: CSI-SINR Inter-frequency absolute accuracy in FR1

Accuracy		Conditions						
			Io [Note 1] range					
Normal condition	Extreme condition	CSI-RS Ês/Iot	NR operating band groups	Minimum Io				Maximum Io
				dBm / SCS			dBm/BW Channel	dBm/BW Channel
				SCS (kHz)				
dB	dB	dB		15	30	60		
±3	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-70
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	N/A	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: The requirements apply for CSI-RS Ês/Iot ≤XdB. X=15 if timing offset between the reference measurement timing and the target CSI-RS is no larger than 0.5*CP, and X=4 if timing offset between the reference measurement timing and the target CSI-RS is larger than 0.5*CP but no larger than CP.

10.1.14.2.2 Relative CSI-SINR Accuracy in FR1

The relative CSI-SINR accuracy in inter-frequency case is defined as the CSI-SINR measured from one cell on a frequency in FR1 compared to the CSI-SINR measured from another cell on a different frequency in FR1.

The accuracy requirements in table 10.1.14.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band.
- $|CSI_RP1_{dBm} - CSI_RP2_{dBm}| \leq 27$ dB
- | Channel 1_Io -Channel 2_Io | ≤ 20 dB
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

NOTE: The reference measurement timing for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.14.2.2-1.

Table 10.1.14.2.2-1: CSI-SINR Inter-frequency relative accuracy in FR1

Accuracy	Conditions

Normal condition	Extreme condition	CSI-RS Ês/Iot Note 3	Io Note 1 range					
			NR operating band groups	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS SCS (kHz)			dBm/BW Channel	dBm/BW Channel
				15	30	60		
±3.5	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-70
±4	±4	≥-6	Note 2	Note 2	Note 2	Note 2	N/A	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of cells to which the requirement applies.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 5: The requirements apply for CSI-RS Ês/Iot ≤ XdB. X=15 if timing offset between the reference measurement timing and the target CSI-RS is no larger than 0.5*CP, and X=4 if timing offset between the reference measurement timing and the target CSI-RS is larger than 0.5*CP but no larger than CP.

10.1.14C Inter-frequency SINR accuracy requirements for FR1 SAN

10.1.14C.1 Inter-frequency SS-SINR accuracy requirements in FR1

10.1.14C.1.1 Absolute SS-SINR Accuracy in FR1

The requirements for absolute SS-SINR accuracy in this clause apply to a cell on a frequency in FR1 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.14C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.14C.1.1-1: SS-SINR Inter-frequency absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.

NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: The requirements apply for SSB Ês/Iot ≤ 25 dB.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2A.

10.1.14C.1.2 Relative SS-SINR Accuracy in FR1

The relative SS-SINR accuracy in inter-frequency case is defined as the SS-SINR measured from one cell on a frequency in FR1 compared to the SS-SINR measured from another cell on a different frequency in FR1.

The accuracy requirements in table 10.1.14C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB
- | Channel 1_Io -Channel 2_Io | ≤ 20 dB
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.14C.1.2-1: SS-SINR Inter-frequency relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2,4	Io Note 1 range				
			NR operating band groups Note 5	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz		
±3.5	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
±4	±4	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: The requirements apply for SSB Ês/Iot ≤ [25] dB.
NOTE 5: NR operating band groups in FR1 are as defined in clause 3.5.2A.

10.1.15 Inter-frequency SINR accuracy requirements for FR2

10.1.15.1 Inter-frequency SS-SINR accuracy requirements in FR2

10.1.15.1.1 Absolute SS-SINR Accuracy in FR2

The requirements for absolute SS-SINR accuracy in this clause apply to a cell on a frequency in FR2 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.15.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.15.1.1-1: SS-SINR Inter-frequency absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±3	±4	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50
±3.5	±4	≥-4		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The requirements apply for SSB Ês/Iot ≤ 25 dB.

10.1.15.1.2 Relative SS-SINR Accuracy in FR2

The relative SS-SINR accuracy in inter-frequency case is defined as the SS-SINR measured from one cell on a frequency in FR2 compared to the SS-SINR measured from another cell on a different frequency in FR2.

The accuracy requirements in table 10.1.15.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.3 for a corresponding Band.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|$ Channel 1_Io -Channel 2_Io $| \leq 20$ dB
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.15.1.2-1: SS-SINR Inter-frequency relative accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±3.5	±4	≥-3	Same value as SSB_RP in Table B.2.2-2, according to UE Power class, operating band and angle of arrival	-50
±4	±4	≥-6		

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 5: The requirements apply for SSB Ês/Iot ≤ 25 dB.

10.1.15.2 Inter-frequency CSI-SINR accuracy requirements in FR2

10.1.15.2.1 Absolute CSI-SINR Accuracy in FR2

The requirements for absolute CSI-SINR accuracy in this clause apply to a cell on a frequency in FR2 that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.15.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.
  - NOTE: The reference measurement timing for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.15.2.1-1.

Table 10.1.15.2.1-1: CSI-SINR Inter-frequency absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 1		$dBm/BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz	SCS_{CSI-RS} = 120 kHz	
±3	±4	≥-3	Same value as CSI_RP in Table B.2.9-2, according to UE Power class, operating band and angle of arrival		-50
3.5	±4	≥-4			

NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The requirements apply for CSI-RS Ês/Iot ≤XdB. X=15 if timing offset between the reference measurement timing and the target CSI-RS is no larger than 0.5*CP, and X=4 if timing offset between the reference measurement timing and the target CSI-RS is larger than 0.5*CP but no larger than CP.

10.1.15.2.2 Relative CSI-SINR Accuracy in FR2

The relative CSI-SINR accuracy in inter-frequency case is defined as the CSI-SINR measured from one cell on a frequency in FR2 compared to the CSI-SINR measured from another cell on a different frequency in FR2.

The accuracy requirements in table 10.1.15.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to Annex B.2.13 for a corresponding Band.
- $|CSI_RP1\ dB_m - CSI_RP2\ dB_m| \leq 27$ dB
- $|$ Channel 1_Io -Channel 2_Io $| \leq 20$ dB
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

- The timing offset between the reference measurement timing and the target CSI-RS in one layer is no larger than CP.

  Note: The reference measurement timing for inter-frequency measurement is up to UE implementation and shall be based on the timing of one of the target cells.

- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

  - The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.15.2.2-1.

Table 10.1.15.2.2-1: CSI-SINR Inter-frequency relative accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 1		$dBm/BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz	SCS_{CSI-RS} = 120 kHz	
±3.5	±4	≥-3	Same value as CSI_RP in Table B.2.9-2, according to UE Power class, operating band and angle of arrival		-50
±4	±4	≥-6			
NOTE 1: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.					
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.					
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.					
NOTE 4: The requirements apply for CSI-RS Ês/Iot ≤XdB. X=15 if timing offset between the reference measurement timing and the target CSI-RS is no larger than 0.5*CP, and X=4 if timing offset between the reference measurement timing and the target CSI-RS is larger than 0.5*CP but no larger than CP.					

10.1.15C Inter-frequency SINR accuracy requirements for FR2-NTN

10.1.15C.1 Inter-frequency SS-SINR accuracy requirements in FR2-NTN

10.1.15C.1.1 Absolute SS-SINR Accuracy in FR2-NTN

The requirements for absolute SS-SINR accuracy in this clause apply to a cell on a frequency in FR2-NTN that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.15C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.15C.1.1-1: SS-SINR Inter-frequency absolute accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1		$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz	
±4	±5	≥-3	Same value as SSB_RP derived from annex B.2.18, according to UE VSAT type		-50
±4.5	±5	≥-4			
NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.					

NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The requirements apply for SSB Ês/Iot ≤ 25 dB.

10.1.15C.1.2 Relative SS-SINR Accuracy in FR2-NTN

The relative SS-SINR accuracy in inter-frequency case is defined as the SS-SINR measured from one cell on a frequency in FR2-NTN compared to the SS-SINR measured from another cell on a different frequency in FR2-NTN.

The accuracy requirements in table 10.1.15C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.18 for a corresponding Band.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|$ Channel 1_Io -Channel 2_Io $| \leq 20$ dB
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.15C.1.2-1: SS-SINR Inter-frequency relative accuracy in FR2-NTN

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 2 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 1	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±4.5	±5	≥-3	Same value as SSB_RP derived from annex B.2.18, according to UE VSAT type	-50
±5	±5	≥-6		

NOTE 1: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 2: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 3: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE ba The requirements apply for SSB Ês/Iot ≤ 25 dB.seband is above the value defined in this table.
NOTE 5: The requirements apply for SSB Ês/Iot ≤ 25 dB.

10.1.16 SINR report mapping

10.1.16.1 SS-SINR and CSI-SINR measurement report mapping

The reporting range of SS-SINR and CSI-SINR for L3 reporting and L1 reporing is defined from -23 dB to 40 dB with 0.5 dB resolution. The mapping of measured quantity is defined in table 10.1.16.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

The reporting range of differential SS-SINR and CSI-SINR for L1 reporting is defined from -15 dB to 0 dB with 1 dB resolution.

The mapping of measured quantity is defined in table 10.1.16.1-2. The range in the signalling may be larger than the guaranteed accuracy range.

Table 10.1.16.1-1: SS-SINR and CSI-SINR measurement report mapping

Reported value	Measured quantity value (L3 SS-SINR and L3 CSI-SINR)	Measured quantity value (L1 SS-SINR and L1 CSI-SINR)	Unit
SINR_0	SINR<-23	SINR<-23	dB
SINR_1	-23≤ SINR<-22.5	-23≤SINR<-22.5	dB

SINR_2	-22.5≤ SINR<-22	-22.5≤SINR<-22	dB
SINR_3	-22≤ SINR<-21.5	-22≤SINR<-21.5	dB
SINR_4	-21.5≤ SINR<-21	-21.5≤SINR<-21	dB
..	..	..	…
SINR_123	38≤ SINR<38.5	38≤SINR<38.5	dB
SINR_124	38.5≤ SINR<39	38.5≤SINR<39	dB
SINR_125	39≤ SINR<39.5	39≤SINR<39.5	dB
SINR_126	39.5≤ SINR<40	39.5≤SINR<40	dB
SINR_127	40≤ SINR	40≤SINR	dB

Table 10.1.16.1-2: Differential SS-SINR and CSI-SINR measurement (for L1 reporting) report mapping

Reported value	Measured quantity value (difference in measured SINR from largest SINR)	Unit
DIFFSINR_0	0≥ΔSINR>-1	dB
DIFFSINR_1	-1≥ΔSINR>-2	dB
DIFFSINR_2	-2≥ΔSINR>-3	dB
DIFFSINR_3	-3≥ΔSINR>-4	dB
DIFFSINR_4	-4≥ΔSINR>-5	dB
DIFFSINR_5	-5≥ΔSINR>-6	dB
DIFFSINR_6	-6≥ΔSINR>-7	dB

10.1.17 Power Headroom

10.1.17.1 Power Headroom Report

10.1.17.1.1 Power Headroom Report Mapping

The power headroom reporting range is from -32 ...+38 dB. table 10.1.17.1-1 defines the report mapping.

Table 10.1.17.1-1: Power headroom report mapping

Reported value	Measured quantity value (dB)
POWER_HEADROOM_0	PH < -32
POWER_HEADROOM_1	-32 ≤ PH < -31
POWER_HEADROOM_2	-31 ≤ PH < -30
POWER_HEADROOM_3	-30 ≤ PH < -29
…	…
POWER_HEADROOM_53	20 ≤ PH < 21
POWER_HEADROOM_54	21 ≤ PH < 22
POWER_HEADROOM_55	22 ≤ PH < 24
POWER_HEADROOM_56	24 ≤ PH < 26
POWER_HEADROOM_57	26 ≤ PH < 28
POWER_HEADROOM_58	28 ≤ PH < 30
POWER_HEADROOM_59	30 ≤ PH < 32
POWER_HEADROOM_60	32 ≤ PH < 34
POWER_HEADROOM_61	34 ≤ PH < 36
POWER_HEADROOM_62	36 ≤ PH < 38
POWER_HEADROOM_63	PH ≥ 38

10.1.18 $P_{CMAX,c,f}$

The UE is required to report the UE configured maximum output power ($P_{CMAX,c,f}$) together with the power headroom. This clause defines the requirements for the $P_{CMAX,c,f}$ reporting.

10.1.18.1 Report Mapping

The $P_{CMAX,c,f}$ reporting range is defined from -29 dBm to 33 dBm with 1 dB resolution. table 10.1.18.1-1 defines the reporting mapping.

Table 10.1.18.1-1 Mapping of $P_{CMAX,c,f}$

Reported value	Measured quantity value	Unit
PCMAX_C_00	$P_{CMAX,c,f} < -29$	dBm
PCMAX_C_01	$-29 \le P_{CMAX,c,f} < -28$	dBm
PCMAX_C_02	$-28 \le P_{CMAX,c,f} < -27$	dBm
…	…	…
PCMAX_C_61	$31 \le P_{CMAX,c,f} < 32$	dBm
PCMAX_C_62	$32 \le P_{CMAX,c,f} < 33$	dBm
PCMAX_C_63	$33 \le P_{CMAX,c,f}$	dBm

10.1.19 L1-RSRP accuracy requirements for FR1

10.1.19.1 SSB based L1-RSRP accuracy requirements

Unless otherwise specified, the requirements for absolute and relative SSB based L1-RSRP accuracy in this clause apply to all SSBs of the serving cell configured for L1-RSRP measurement and all SSBs of cell(s) with different PCI from serving cell configured for L1-RSRP measurement in FR1.

10.1.19.1.1 Absolute Accuracy

The accuracy requirements in table 10.1.19.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.

Table 10.1.19.1.1-1: SSB based L1-RSRP absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±5.0	±9.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70

			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±8.5	±11.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1.19.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured from one SSB compared to the largest measured value of L1-RSRP among all SSBs of the cell (serving cell or cell with different PCI from serving cell) on which UE performs L1-RSRP measurements.

The accuracy requirements in table 10.1.19.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.

Table 10.1.19.1.2-1: SSB based L1-RSRP relative accuracy in FR1

Accuracy		**Conditions**					
Normal condition	**Extreme condition**	**SSB Ês/Iot Note 2**	**Io Note 1 range**				
			NR operating band groups Note 4	**Minimum Io**			**Maximum Io**
dB	**dB**	**dB**		**dBm / SCS_{SSB}**		**dBm/$BW_{Channel}$**	**dBm/$BW_{Channel}$**
				SCS_{SSB} = 15 kHz	**SCS_{SSB} = 30 kHz**		
±3	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50

			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Void
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.19.2 CSI-RS based L1-RSRP accuracy requirements

10.1.19.2.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute CSI-RS based L1-RSRP accuracy in this clause apply to all CSI-RS resources of the serving cell configured for L1-RSRP measurement.

The accuracy requirements in table 10.1.19.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.2 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.19.2.1-1.

Table 10.1.19.2.1-1: CSI-RS based L1-RSRP absolute accuracy in FR1

Accuracy		**Conditions**						
Normal condition	**Extreme condition**	**CSI-RS Ês/Iot**	**Io [Note 1] range**					
			NR operating band groups [Note 2]	**Minimum Io**				**Maximum Io**

			NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N					
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.								

10.1.19.2.2 Relative Accuracy

The relative CSI-RS based L1-RSRP accuracy is defined as the L1-RSRP measured from one CSI-RS compared to the largest measured value of L1-RSRP among all CSI-RS resources of the serving cell.

The accuracy requirements in table 10.1.19.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.2 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.19.2.2-1.

Table 10.1.19.2.2-1: CSI-RS based L1-RSRP relative accuracy in FR1

Accuracy		**Conditions**						
Normal condition	**Extreme condition**	**CSI-RS Ês/Iot** Note 2	**Io** Note 1 **range**					
			NR operating band groups Note 4	**Minimum Io**				**Maximum Io**
dB	**dB**	**dB**		**dBm / SCS_{CSI-RS}**			**dBm/$BW_{Channel}$**	**dBm/$BW_{Channel}$**
				SCS_{CSI-RS} = 15 kHz	**SCS_{CSI-RS} = 30 kHz**	**SCS_{CSI-RS} = 60 kHz**		
±3	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of CSI-RS resources to which the requirement applies. NOTE 3: Void NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.								

10.1.19C L1-RSRP accuracy requirements for FR1 SAN

10.1.19C.1 SSB based L1-RSRP accuracy requirements

10.1.19C.1.1 Absolute Accuracy

Unless otherwise specified, the accuracy requirements for absolute SSB based L1-RSRP in this clause apply to all SSBs of the serving cell configured for L1-RSRP measurement.

The accuracy requirements in table 10.1.19C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.19.1 for a corresponding Band for each relevant SSB.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.19C.1.1-1: SSB based L1-RSRP absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}s/Iot$	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±5	±9.5	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-70
±8.5	±11.5	≥-3	NR_FDD_SAB_FR1_A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2A.							

10.1.19C.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured from one SSB compared to the largest measured value of L1-RSRP among all SSBs of the serving cell.

The accuracy requirements in table 10.1.19C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [43] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.19.1 for a corresponding Band for each relevant SSB.
- Valid information for the SAN serving the target cell has been provided.

Table 10.1.19C.1.2-1: SSB based L1-RSRP relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}s/Iot$ [Note 2]	Io [Note 1] range				
			NR operating band groups [Note 4]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB $\hat{E}s/Iot$ is the minimum SSB $\hat{E}s/Iot$ of the pair of SSBs to which the requirement applies. NOTE 3: Void NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2A.							

10.1.19C.2 CSI-RS based L1-RSRP accuracy requirements

10.1.19C.2.1 Absolute Accuracy

Unless otherwise specified, the accuracy requirements for absolute CSI-RS based L1-RSRP in this clause apply to all CSI-RS resources of the serving cell configured for L1-RSRP measurement.

The accuracy requirements in table 10.1.19C.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.19.2 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
- Valid information for the SAN serving the target cell has been provided.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.19C.2.1-1.

Table 10.1.19C.2.1-1: CSI-RS based L1-RSRP absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	CSI-RS $\hat{E}_s/I_{ot}$	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz		
±5	±9.5	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-70
±8.5	±11.5	≥-3	NR_FDD_SAB_FR1_A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2A.							

10.1.19C.2.2 Relative Accuracy

The relative CSI-RS based L1-RSRP accuracy is defined as the L1-RSRP measured from one CSI-RS compared to the largest measured value of L1-RSRP among all CSI-RS resources of the serving cell.

The accuracy requirements in table 10.1.19C.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.19.2 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
- Valid information for the SAN serving the target cell has been provided.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.19C.2.2-1.

Table 10.1.19C.2.2-1: CSI-RS based L1-RSRP relative accuracy in FR1

Accuracy		Conditions	
Normal condition	Extreme condition	CSI-RS $\hat{E}_s/I_{ot}$ [Note 2]	Io [Note 1] range

			NR operating band groups [Note 4]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz		
±3	±4	≥-3	NR_FDD_SAB_FR1_A	-121	-118	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Void
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2A.

10.1.19D LTM Intra-frequency L1-RSRP accuracy requirements for FR1

10.1.19D.1 SSB based intra-frequency L1-RSRP accuracy requirements

10.1.19D.1.1 Absolute Accuracy

Unless otherwise specified, the accuracy requirements for SSB based intra-frequency L1-RSRP in this clause apply to all SSBs of candidate neighbour cell(s) on the same frequency as that of the serving cell in FR1.

The accuracy requirements in table 10.1.19D.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.

Table 10.1.19D.1.1-1: SSB based L1-RSRP absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±5.0	±9.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±8.5	±11.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D,	N/A	N/A	-70	-50

			NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N				
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1.19D.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured on one SSB configured in *LTM-CSI-ResourceConfig* compared to the L1-RSRP measured on another SSB configured in *LTM-CSI-ResourceConfig* for the cell(s) on the same frequency in FR1.The accuracy requirements in Table 10.1.19D.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.

Table 10.1.19D.1.2-1: SSB based L1-RSRP relative accuracy in FR1

Accuracy		**Conditions**					
Normal condition	**Extreme condition**	**SSB Ês/Iot** Note 2	**Io** Note 1 **range**				
			NR operating band groups Note 4	**Minimum Io**			**Maximum Io**
dB	**dB**	**dB**		**dBm / SCS_{SSB}**		**dBm/$BW_{Channel}$**	**dBm/$BW_{Channel}$**
				SCS_{SSB} = 15 kHz	**SCS_{SSB} = 30 kHz**		
±3	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies. NOTE 3: Void NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1.19E LTM Inter-frequency L1-RSRP accuracy requirements for FR1

10.1.19E.1 SSB based Inter-frequency L1-RSRP accuracy requirements

10.1.19E.1.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute SSB based L1-RSRP accuracy in this clause apply to all SSBs of candidate neighbour cell(s) on a frequency in FR1 that is on a different frequency than the serving cell.

The accuracy requirements in table 10.1.19E.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.

Table 10.1.19E.1.1-1: Inter-frequency L1-RSRP absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±5.0	±9.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70

			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±8.5	±11.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1.19E.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured on one SSB configured in *LTM-CSI-ResourceConfig* from one cell on a frequency in FR1 compared to another SSB configured in *LTM-CSI-ResourceConfig* from any other cell on another frequency in FR1.

The accuracy requirements in table 10.1.19E.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|Channel\ 1_Io - Channel\ 2_Io| \leq 20$ dB

Table 10.1.19E.1.2-1: Inter-frequency L1-RSRP relative accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±5.0	±9.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1.20 L1-RSRP accuracy requirements for FR2

10.1.20.1 SSB based L1-RSRP accuracy requirements

Unless otherwise specified, the accuracy requirements for absolute and relative SSB based L1-RSRP in this clause apply to all SSBs of the serving cell configured for L1-RSRP measurement, all the SSBs of the serving cell configured for L1-RSRP measurement when the UE is configured with *groupBasedBeamReporting-r17* set to 'enabled' and all SSBs of cell(s) with different PCI from serving cell configured for L1-RSRP measurement in FR2.

10.1.20.1.1 Absolute Accuracy

The accuracy requirements in table 10.1.20.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.20.1.1-1: SSB based L1-RSRP absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 2	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz		
±6.5	±9.5	≥-3	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	N/A	-70
±8.5	±11.5	≥-3	N/A	-70	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured from one SSB compared to the largest measured value of L1-RSRP among all SSBs of the cell (serving cell or cell with different PCI from serving cell) on which UE performs L1-RSRP measurements.

When the UE is configured with *groupBasedBeamReporting-r17* set to 'enabled', the relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured from one SSB compared to the largest measured value of L1-RSRP among all SSBs of the serving cell on which UE performs L1-RSRP measurements with different Rx beams, the all SSBs are in the same or different resource set (s) in one CSI resource setting.

The accuracy requirements in table 10.1.20.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.20.1.2-1: SSB based L1-RSRP relative accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 1 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 3	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±6.5	±9.5	≥-3	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20.2 CSI-RS based L1-RSRP accuracy requirements

10.1.20.2.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute CSI-RS based L1-RSRP accuracy in this clause apply to all CSI-RS resources of the serving cell configured for L1-RSRP measurement, and all the CSI-RSs of the serving cell configured for L1-RSRP measurement when the UE is configured with *groupBasedBeamReporting-r17* set to 'enabled'.

The accuracy requirements in table 10.1.20.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.2 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.20.2.1-1.

Table 10.1.20.2.1-1: CSI-RS based L1-RSRP absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 1] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} [Note 2]	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±6.5	±9.5	≥-3	Same value as CSI-RS_RP in Table B.2.4.2-2, according to UE Power class, operating band and angle of arrival	N/A	-70
±8.5	±11.5	≥-3	N/A	-70	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20.2.2 Relative Accuracy

The relative CSI-RS based L1-RSRP accuracy is defined as the L1-RSRP measured from one CSI-RS compared to the largest measured value of L1-RSRP among all CSI-RSs of the cell (serving cell or cell with different PCI from serving cell) on which UE performs L1-RSRP measurements.

For simultaneous reception from multiple directions, when the UE is configured with *groupBasedBeamReporting-r17* set to 'enabled', the relative CSI-RS based L1-RSRP accuracy is defined as the L1-RSRP measured from one CSI-RS compared to the largest measured value of L1-RSRP among all CSI-RSs of the serving cell on which UE performs L1-RSRP measurements with different Rx beams, the all CSI-RSs are in the same or different resource set (s) in one CSI resource setting. RSRP among all CSI-RS resources of the serving cell.

The accuracy requirements in table 10.1.20.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.2 for a corresponding Band for each relevant CSI-RS.

- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1.20.2.2-1.

Table 10.1.20.2.2-1: CSI-RS based L1-RSRP relative accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 1] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS}		$dBm/BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz	SCS_{CSI-RS} = 120 kHz	
±6.5	±9.5	≥-3	Same value as CSI-RS RP in Table B.2.4.2-2, according to UE Power class, operating band and angle of arrival		-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20A LTM Intra-frequency L1-RSRP accuracy requirements for FR2

10.1.20A.1 SSB based intra-frequency L1-RSRP accuracy requirements

10.1.20A.1.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute accuracy of SSB based intra-frequency L1-RSRP in this clause apply to all SSBs of candidate neighbour cell(s) on the same frequency as that of the serving cell in FR2.

The accuracy requirements in table 10.1.20A.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.20A.1.1-1: SSB based L1-RSRP absolute accuracy in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 2]	$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz		
±6.5	±9.5	≥-3	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	N/A	-70
±8.5	±11.5	≥-3	N/A	-70	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.

NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20A.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured on one SSB configured in *LTM-CSI-ResourceConfig* compared to the L1-RSRP measured from another SSB configured in *LTM-CSI-ResourceConfig* from the cell(s) on the same frequency in FR2.

The accuracy requirements in table 10.1.20A.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.20A.1.2-1: SSB based L1-RSRP relative accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} [Note 3]	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±6.5	±9.5	≥-3	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20B LTM Inter-frequency L1-RSRP accuracy requirements for FR2

10.1.20B.1 SSB based inter-frequency L1-RSRP accuracy requirements

10.1.20B.1.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute SSB based L1-RSRP accuracy in this clause apply to all SSBs of candidate neighbour cell(s) on a frequency in FR2 that is on a different frequency than the serving cell.

The accuracy requirements in table 10.1.20B.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.20B.1.1-1: SSB based L1-RSRP absolute accuracy in FR2

Accuracy	Conditions

Normal condition	Extreme condition	SSB Ês/Iot	Io Note 1 range			
			Minimum Io			Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 2		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz		
±6.5	±9.5	≥-3	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival		N/A	-70
±8.5	±11.5	≥-3	N/A		-70	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20B.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured on one SSB configured in *LTM-CSI-ResourceConfig* on one cell on a frequency in FR2 compared to the value of L1-RSRP measured from another SSB configured in *LTM-CSI-ResourceConfig* from any other cell on another frequency in FR2.

The accuracy requirements in table 10.1.20B.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.1 for a corresponding Band for each relevant SSB.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|Channel\ 1_Io - Channel\ 2_Io| \leq 20$ dB
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.20B.1.2-1: SSB based L1-RSRP relative accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 1 range	
			Minimum Io	Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 3	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz	
±6.5	±9.5	≥-3	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20C L1-RSRP accuracy requirements for FR2-NTN

10.1.20C.1 SSB based L1-RSRP accuracy requirements

Unless otherwise specified, the requirements for absolute accuracy and relative accuracy of SSB based L1-RSRP in this clause apply to all SSBs of the serving cell configured for L1-RSRP measurement in FR2-NTN.

10.1.20C.1.1 Absolute Accuracy

The accuracy requirements in Table 10.1.20C.1.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to Annex B.2.19 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.20C.1.1-1: SSB based L1-RSRP absolute accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 2		$dBm/BW_{Channel}$
			SCS_{SSB} = 120kHz	SCS_{SSB} = 240kHz	
±7.5	±10.5	≥-3	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type		N/A	-70
±9.5	±12.5	≥-3	N/A		-70	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20C.1.2 Relative Accuracy

The relative accuracy of SSB based L1-RSRP is defined as the L1-RSRP measured from one SSB compared to the largest measured value of L1-RSRP among all SSBs of the serving cell on which UE performs L1-RSRP measurements.

The accuracy requirements in Table 10.1.20C.1.2-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to Annex B.2.19 for a corresponding Band for each relevant SSB.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.

Table 10.1.20C.1.2-1: SSB based L1-RSRP relative accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 3		$dBm/BW_{Channel}$
			SCS_{SSB} = 120kHz	SCS_{SSB} = 240kHz	
±3.5	±6.5	≥-3	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type		-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.

NOTE 4: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20C.2 CSI-RS based L1-RSRP accuracy requirements

10.1.20C.2.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute accuracy of CSI-RS based L1-RSRP in this clause apply to all CSI-RS resources of the serving cell configured for L1-RSRP measurement.

The accuracy requirements in Table 10.1.20C.2.1-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to Annex B.2.19 for a corresponding Band for each relevant CSI-RS.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.20C.2.1-1.

Table 10.1.20C.2.1-1: CSI-RS based L1-RSRP absolute accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 2	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60kHz / SCS_{CSI-RS} = 120kHz		
±7.5	±10.5	≥-3	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type	N/A	-70
±9.5	±12.5	≥-3	N/A	-70	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.20C.2.2 Relative Accuracy

The relative accuracy of CSI-RS based L1-RSRP is defined as the L1-RSRP measured from one CSI-RS compared to the largest measured value of L1-RSRP among all CSI-RS resources of the serving cell.

The accuracy requirements in Table 10.1.20C.2.2-1 are valid under the following conditions:

- Conditions defined in clause 10.3 of TS 38.101-5 [42] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to Annex B.2.19 for a corresponding Band for each relevant CSI-RS.
- The measured signals are in the directions within the declared minimum elevation angle supported for receiving.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in Table 10.1.20C.2.2-1.

Table 10.1.20C.2.2-1: CSI-RS based L1-RSRP relative accuracy in FR2-NTN

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 1] range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS}		$dBm/BW_{Channel}$
			SCS_{CSI-RS} = 60kHz	SCS_{CSI-RS} = 120kHz	
±3.5	±6.5	≥-3	Same value as SSB_RP derived from annex B.2.17, according to UE VSAT type		-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Values based on EIS as defined in clause 10.3 of TS 38.101-5 [42]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.21 SFTD accuracy requirements

10.1.21.1 SFTD acuracy requirements for NE-DC

The SFN and frame timing difference (SFTD) is measured between PCell and E-UTRAN PSCell under NE-DC.

The accuracy requirements in table 10.1.21.1-4 are appilicable under the following conditions:

For FR1 PCell SFN and frame timing measurement:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Io range defined in Table 10.1.21.1-1.

Table 10.1.21.1-1: PCell Io range conditions in FR1

Parameter	Io [Note 1] range			
	NR operating band groups [Note 4, 5]	Minimum Io [Note 2, 3]		Maximum Io
		dBm/ SCS_{SSB}		$dBm/BW_{Channel}$
		SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz	
Conditions	NR_FDD_FR1_A, NR_TDD_FR1_A	-121	-118	-50
	NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-50
	NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-50
	NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-50
	NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-50
	NR_FDD_FR1_F	-118.5	-115.5	-50
	NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-50
	NR_FDD_FR1_H	-117.5	-114.5	-50
	NR_FDD_FR1_N	-114.5	-111.5	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The condition level is increased by $\Delta R_{IB,c}$ as defined in clause 7.3B in TS 38.101-3 [20], depending on E-UTRA – NR band combination.
NOTE 3: The condition level is increased by MSD as defined in clause 7.3B in TS 38.101-3 [20], if applicable depending on E-UTRA – NR band combination.
NOTE 4: NR operating band groups are as defined in clause 3.5.
NOTE 5: Only NR bands within EN-DC band combinations as specified in clause 5.5B in TS 38.101-3 [20] are applicable.

For FR2 PCell SFN and frame timing measurement:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Io range defined in Table 10.1.21.1-2.

Table 10.1.21.1-2: PCell Io range conditions in FR2

Parameter	Io Note 1 range		
	Minimum Io Note 2, 3		Maximum Io
	dBm/ SCS_{SSB}		dBm/$BW_{Channel}$
	SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz	
Conditions	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth and specified at the Reference point. NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival. NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.			

For E-UTRA PSCell SFN and frame timing measurement:

- Cell specific reference signals are transmitted either from one, two or four antenna ports.
- Conditions defined in TS 36.101 [25] clause 7.3 for reference sensitivity are fulfilled.
- No changes to the uplink transmission timing are applied during the measurement period.
- $RSRP|_{dBm}$ according to annex B.3.5 in TS 36.101 [25] for a corresponding Band.
- Io range defined in Table 10.1.21.1-3.

Table 10.1.21.1-3: E-UTRA PSCell Io range conditions

Parameter	Io Note 1 range		
	E-UTRA operating band groups Note 3	Minimum Io	Maximum Io
Conditions		dBm/15 kHz Note 2	dBm/$BW_{Channel}$
	FDD_A, TDD_A	-121	-50
	FDD_C, TDD_C	-120	-50
	FDD_D	-119.5	-50
	FDD_E, TDD_E	-119	-50
	FDD_F	-118.5	-50
	FDD_G	-118	-50
	FDD_H	-117.5	-50
	FDD_N	-114.5	-50
NOTE 1: When in dBm/15 kHz, the minimum Io condition is expressed as the average Io per RE over all REs in that symbol. Io may be different in different symbols within a subframe. NOTE 2: The condition level is increased by $\Delta>0$, when applicable, as described in clauses B.4.2 and B.4.3 in TS 36.133 [15]. NOTE 3: E-UTRA operating band groups are as defined in clause 3.5 in TS 36.133 [15].			

Table 10.1.21.1-4: SFTD measurement accuracy

Accuracy	Conditions	
	Ês/Iot Note 2	Frequency range
Ts Note 1	dB	
40*64*Tc	≥-3	FR1
40*64*Tc		FR2
NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6]. NOTE 2: The parameter Ês/Iot is the minimum Ês/Iot of the pair of cells to which the requirement applies.		

10.1.21.2 SFTD acuracy requirements for NR-DC

The SFN and frame timing difference (SFTD) is measured between PCell in FR1 and PSCell in FR2 under NR dual connectivity.

The accuracy requirements in table 10.1.21.2-3 are appilicable under the following conditions:

For FR1 PCell SFN and frame timing measurement:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Io range defined in Table 10.1.21.2-1.

Table 10.1.21.2-1: PCell Io range conditions in FR1

Parameter	Io [Note 1] range			
	NR operating band groups [Note 2]	Minimum Io		Maximum Io
		dBm/ SCS_{SSB}		$dBm/BW_{Channel}$
		SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz	
Conditions	NR_FDD_FR1_A, NR_TDD_FR1_A	-121	-118	-50
	NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-50
	NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-50
	NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-50
	NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-50
	NR_FDD_FR1_F	-118.5	-115.5	-50
	NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-50
	NR_FDD_FR1_H	-117.5	-114.5	-50
	NR_FDD_FR1_N	-114.5	-111.5	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups are as defined in clause 3.5.2.				

For FR2 PSCell SFN and frame timing measurement:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Io range defined in Table 10.1.21.2-2.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.21.2-2: PSCell Io range conditions in FR2

Parameter	Io [Note 1] range		
	Minimum Io [Note 2, 3]		Maximum Io
	dBm/ SCS_{SSB}		$dBm/BW_{Channel}$
	SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz	
Conditions	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth and specified at the Reference point. NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival. NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.			

Table 10.1.21.2-3: SFTD measurement accuracy

Accuracy	Conditions	
	Ês/Iot [Note 2]	Frequency range
Ts [Note 1]	dB	
40*64*Tc	≥ -3	Between FR1 and FR2

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: The parameter Ês/Iot is the minimum Ês/Iot of the pair of cells to which the requirement applies.

10.1.21.3 Inter-frequency SFTD acuracy requirements

The SFN and frame timing difference (SFTD) is measured between PCell and inter-frequency neighbour cell.

The accuracy requirements in table 10.1.21.3-3 are appilicable under the following conditions:

For FR1 PCell, inter-frequency neighbour cell SFN and frame timing measurement:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Io range defined in Table 10.1.21.3-1.

Table 10.1.21.3-1: PCell, inter-frequency neighbour cell Io range conditions in FR1

Parameter	Io Note 1 range			
	NR operating band groups Note 2	Minimum Io		Maximum Io
		dBm/ SCS_{SSB}		dBm/$BW_{Channel}$
		SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz	
Conditions	NR_FDD_FR1_A, NR_TDD_FR1_A	-121	-118	-50
	NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-50
	NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-50
	NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-50
	NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-50
	NR_FDD_FR1_F	-118.5	-115.5	-50
	NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-50
	NR_FDD_FR1_H	-117.5	-114.5	-50
	NR_FDD_FR1_N	-114.5	-111.5	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups are as defined in clause 3.5.2.				

For FR2 PCell, inter-frequency neighbour cell SFN and frame timing measurement:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Io range defined in Table 10.1.21.3-2.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].

Table 10.1.21.3-2: PCell, inter-frequency neighbour cell Io range conditions in FR2

Parameter	Io Note 1 range		
	Minimum Io Note 2, 3		Maximum Io
	dBm/ SCS_{SSB}		dBm/$BW_{Channel}$
	SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz	
Conditions	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	Same value as SSB_RP in Table B.2.4.1-2, according to UE Power class, operating band and angle of arrival	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth and specified at the Reference point. NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival. NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.			

Table 10.1.21.3-3: Inter-frequency SFTD measurement accuracy

Accuracy	Conditions

Ts Note 1	dB	
40*64*Tc	≥ -3	FR1, FR2
NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6]. NOTE 2: The parameter Ês/Iot is the minimum Ês/Iot of the pair of cells to which the requirement applies.		

10.1.22 CLI measurement accuracy requirements

10.1.22.1 SRS-RSRP

10.1.22.1.1 SRS-RSRP Accuracy

The SRS-RSRP measurement reported by the UE shall fulfil the accuracy requirements defined in table 10.1.22.1.1-1 for FR1 and table 10.1.22.1.1-2 for FR2, provided that the following conditions are met. The accuracy requirements in this clause are derived based on AWGN radio propagation conditions.

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for SRS-RSRP measurements are fulfilled according to annex B.2.7 for a corresponding Band for each relevant SRS resource configured for measurement.
- The time difference between UE's DL reference timing in the serving cell and SRS arrival time is no larger than $T_{error_SRS_RSRP}$, where
  - $T_{error_SRS_RSRP} = T_C \times N_{TA_offset} + 4.67\mu s$ for FR1
  - $T_{error_SRS_RSRP} = T_C \times N_{TA_offset} + 3.67\mu s$ for FR2
  - N_{TA_offset} is defined in table 7.1.2-2
  - T_C is 0.509 ns
- The number of SRS ports in the SRS resource configured for measurement is 1,
- The number of symbols in the SRS resource configured for measurement is 1,
- The number of repetitions in the SRS resource configured for measurement is 1,
- Frequency hopping, sequence group hopping or sequence hopping is disabled in the SRS resource configured for measurement,
- The bandwidth of the SRS resource is 48 PRBs.
- One of the following conditions is met
  - There is no other SRS resource with the same root sequence and on the same symbol and with same comb as the relevant SRS resource.
  - If multiple SRS resources are on the same symbol and with same comb, the distance between cyclic shifts of any two resources is no less than 6 if transmissionComb = n4, and no less than 4 if transmissionComb = n2.

Table 10.1.22.1.1-1: SRS-RSRP absolute accuracy in FR1

Accuracy		Conditions			
Normal condition	Extreme condition	SRS Ês/Iot	Io Note 1 range		
			NR operating band groups Note 2	Minimum Io	Maximum Io

dB						dB		dBm / SCS_{SRS}			dBm/BW Channel	dBm/BW Channel
SCS_{SRS} (kHz)			SCS_{SRS} (kHz)									
15	30	60	15	30	60			SCS_{SRS} = 15 kHz	SCS_{SRS} = 30 kHz	SCS_{SRS} = 60 kHz		
±3	±3.5	±5	±7.5	±8	±9.5	≥1	NR_TDD_FR1_A,	-120	-117	-114	N/A	-70
							NR_TDD_FR1_C	-119	-116	-113	N/A	-70
							NR_TDD_FR1_D	-118.5	-115.5	-112.5	N/A	-70
							NR_TDD_FR1_E	-118	-115	-112	N/A	-70
±6.5	±7	±8.5	±9.5	±10	±11.5	≥1	NR_TDD_FR1_A, NR_TDD_FR1_C, NR_TDD_FR1_D, NR_TDD_FR1_E	N/A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.												

Table 10.1.22.1.1-2: SRS-RSRP absolute accuracy in FR2

Accuracy				Conditions				
Normal condition		Extreme condition		SRS Ês/Iot	Io [Note 1] range			
					Minimum Io			Maximum Io
dB				dB	dBm / SCS_{SRS} [Note 2]		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
SCS_{SRS} (kHz)		SCS_{SRS} (kHz)			SCS_{SRS} = 60 kHz	SCS_{SRS} = 120 kHz		
60	120	60	120					
±6	±8.5	±9	±11.5	≥1	Same value as SRS_RP in Table B.2.7-2, according to UE Power class, operating band and angle of arrival		N/A	-70
±9	±11.5	±11	±13.5	≥1	N/A		-70	-50
NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth. NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival. NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.								

10.1.22.1.2 SRS-RSRP report mapping

The reporting range of SRS-RSRP is defined from -140 dBm to -44 dBm with 1 dB resolution. The mapping of measured quantity is defined in table 10.1.22.1.2-1. The range in the signalling may be larger than the guaranteed accuracy range.

Table 10.1.22.1.2-1: SRS-RSRP measurement report mapping

Reported value	Measured quantity value	Unit
SRS-RSRP_0	SRS-RSRP<-140	dBm
SRS-RSRP_1	-140≤ SRS-RSRP<-139	dBm
SRS-RSRP_2	-139≤ SRS-RSRP<-138	dBm
SRS-RSRP_3	-138≤ SRS-RSRP<-137	dBm
SRS-RSRP_4	-137≤ SRS-RSRP<-136	dBm
..	..	…
SRS-RSRP_95	-46≤ SRS-RSRP<-45	dBm
SRS-RSRP_96	-45≤ SRS-RSRP<-44	dBm
SRS-RSRP_97	-44≤ SRS-RSRP	dBm
SRS-RSRP_98	Infinity	
NOTE: 'Infinity' means that UE cannot detect SRS due to too strong signal to measure.		

10.1.22.2 CLI-RSSI

10.1.22.2.1 CLI-RSSI Accuracy

The CLI-RSSI measurement reported by the UE shall fulfil the accuracy requirements defined in table 10.1.22.2.1-1 for FR1 and table 10.1.22.2.1-2 for FR2, provided that the following conditions are met.

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

Table 10.1.22.2.1-1: CLI-RSSI absolute accuracy in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	Io [Note 1] range					
		NR operating band groups [Note 2]	Minimum Io				Maximum Io
dB	dB		dBm / SCS_{SRS}			$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
			SCS_{SRS} = 15 kHz	SCS_{SRS} = 30 kHz	SCS_{SRS} = 60 kHz		
±3.5	±6.5	NR_TDD_FR1_A,	-120	-117	-114	N/A	-70
		NR_TDD_FR1_C	-119	-116	-113	N/A	-70
		NR_TDD_FR1_D	-118.5	-115.5	-112.5	N/A	-70
		NR_TDD_FR1_E	-118	-115	-112	N/A	-70
±5.5	±8.5	Note 3	Note 3	Note 3	Note 3	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.

Table 10.1.22.2.1-2: CLI-RSSI absolute accuracy in FR2

Accuracy		Conditions		
Normal condition	Extreme condition	Io [Note 1] range		
		Minimum Io		Maximum Io
dB	dB	dBm / SCS_{SRS} [Note 2]	$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
		SCS_{SRS} = 60 kHz / SCS_{SRS} = 120 kHz		
±5	±8	Same value as SRS_RP in Table B.2.7-2, according to UE Power class, operating band and angle of arrival	N/A	-70
±7	±10	Note 4	-70	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the SSB Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.
NOTE 4: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.

10.1.22.2.2 CLI-RSSI report mapping

The reporting range of CLI-RSSI is defined from -100 dBm to -25 dBm with 1 dB resolution. The mapping of measured quantity is defined in table 10.1.22.2.2-1. The range in the signalling may be larger than the guaranteed accuracy range. UE shall scale the measured CLI-RSSI to report a nominal RSSI equivalent to 6RB measurement with 15 kHz SCS.

Table 10.1.22.2.2-1: CLI-RSSI measurement report mapping

Reported value	Measured quantity value	Unit
CLI-RSSI_00	CLI-RSSI < -100	dBm
CLI-RSSI_01	-100 ≤ CLI-RSSI < -99	dBm

CLI-RSSI_02	-99 ≤ CLI-RSSI < -98	dBm
…	…	…
CLI-RSSI_74	-27 ≤ CLI-RSSI < -26	dBm
CLI-RSSI_75	-26 ≤ CLI-RSSI < -25	dBm
CLI-RSSI_76	-25 ≤ CLI-RSSI	dBm

10.1.23 RSTD Measurements

10.1.23.1 Introduction

The requirements in clause 10.1.23 shall apply, provided the UE has received *nr-DL-TDOA-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to report one or more DL RSTD measurements defined in TS 38.215 [4]. The requirements in clause 10.1.23 shall apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG or without MG,
- when UE is in RRC_INACTIVE state.
- when UE is in RRC_IDLE state.

10.1.23.2 Measurement Accuracy Requirements

The accuracy requirements for RSTD measurement shall be within $\pm(X+Y+Z+\Delta)\ T_c$.

X is defined in table 10.1.23.2-1 for AWGN channel and table 10.1.23.2-3 for fading channel for FR1, provided that the following conditions are met.

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE does not perform positioning measurement with reduced number of samples.

X is defined in table 10.1.23.2-2 for AWGN channel and table 10.1.23.2-4 for fading channel for FR2, provided that the following conditions are met.

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE does not perform positioning measurement with reduced number of samples.

X is defined in table 10.1.23.2-7 for AWGN channel in FR1 provided that the following conditions are met.

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE supports positioning measurement with reduced number of sample and is indicated by LMF to perform positioning measurement with reduced number of samples.

X is defined in table 10.1.23.2-8 for AWGN channel in FR2 provided that the following conditions are met.

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE supports positioning measurement with reduced number of sample and is indicated by LMF to perform positioning measurement with reduced number of samples.

NOTE: The requirements for fading channel in this clause are derived based on TDL-A (30 ns delay spread, 5 Hz) and TDL-C (60 ns delay spread, 300 Hz) channel models for FR1 and FR2 respectively.

When UE measures RSTD on PRS resources belonging to different PFLs, then the RSTD accuracy is defined as the accuracy corresponding to the largest accuracy value among different PFLs.

If the UE doesn't support Rx TEG reporting for RSTD measurement or when the measurements of reference cell and neighbour cell belong to different Rx TEGs, Y, Z and Δ are defined as follows:

- When UE measures RSTD on PRS resources belonging to same PFL, Y=32 Tc, provided that the time offset between the two PRS resource instances from the reference cell and the neighbor cell, which are used for a single RSTD estimate, is no greater than 160 ms.
- When UE measures RSTD on PRS resources belonging different PFLs, Y=256 Tc, provided that the time offset between the two PRS resource instances from the reference cell and the neighbor cell, which are used for a single RSTD estimate, is no greater than 1280 ms.
- Z is defined in table 10.1.23.2-5 for FR1 and table 10.1.23.2-6 for FR2, respectively.
- Δ is zero for single PFL, and is defined in table 10.1.23.2-5a for FR1 and table 10.1.23.2-6a for FR2, respectively, for dual PFL.

If the measurements of reference cell and neighbour cell belong to the same Rx TEG, i.e. associated and reported with a common Rx TEG ID, then the sum of Y+Z+Δ is equal to the timing error margin of the Rx TEG reported in *nr-UE-RxTEG-TimingErrorMargin*. The timing error margin reported via *nr-UE-RxTEG-TimingErrorMargin* cannot be larger than the value of (Y+Z+Δ) defined when the UE does not associate the measurements with the same Rx TEG.

Table 10.1.23.2-1: RSTD absolute accuracy in FR1 for AWGN channel

Accuracy	Conditions

10.1.23.3 Report mapping

10.1.23.3.1 Absolute DL RSTD Measurement Reporting

The reporting range for the DL RSTD measurement is defined from -985024×T_c to 985024×T_c with the resolution step of 2^k×T_c, where

T_c is defined in TS 38.211 [6],

$k_{min} \leq k \leq k_{max}$,

k_{min} = -6 and k_{max} = 5,

$k \geq$ *timingReportingGranularityFactor* [34] configured by LMF via LPP for the RSTD measurement.

The measurement report mapping for different *k* values are specified in tables 10.1.23.3.1-1 – 10.1.23.3.1-12.

Table 10.1.23.3.1-1: Report mapping for *k*=0

Reported Quantity Value, RSTD_i	Measured Quantity Value, RSTD	Unit
RSTD_0000000	RSTD < -985024	T_c
RSTD_0000001	-985024 ≤ RSTD < -985023	T_c
RSTD_0000002	-985023 ≤ RSTD < -985022	T_c
…	…	…
RSTD_0985024	-1 ≤ RSTD < 0	T_c
RSTD_0985025	0 ≤ RSTD < 1	T_c
…	…	…
RSTD_1970047	985022 ≤ RSTD < 985023	T_c
RSTD_1970048	985023 ≤ RSTD < 985024	T_c
RSTD_1970049	985024 ≤ RSTD	T_c

Table 10.1.23.3.1-2: Report mapping for *k*=1

Reported Quantity Value, RSTD_i	Measured Quantity Value, RSTD	Unit
RSTD_000000	RSTD < -985024	T_c

RSTD_000001	-985024 ≤ RSTD < -985022	T_c

10.1.23.3.2 Differential Reporting for DL RSTD Measurement

A first DL RSTD measurement is reported by means of differential reporting, i.e. as ΔRSTD, relative to a second DL RSTD measurement (RSTD2), provided that:

- the absolute measured quantity value of the second DL RSTD measurement (RSTD2) is not larger than the absolute measured quantity value of the first DL RSTD measurement (RSTD1), i.e., ΔRSTD=RSTD1-RSTD2≥0, and

- the absolute value of the second DL RSTD measurement (RSTD2) is reported together with ΔRSTD for the first DL RSTD measurement.

The reporting range for differential reporting ΔRSTD of the first DL RSTD measurement is defined from 0 up to $8191 \times T_c$ with the resolution step of $2^k \times T_c$, where

T_c is defined in TS 38.211 [6],

$k_{min} \leq k \leq k_{max}$,

k_{min} = -6 and k_{max} = 5,

$k \geq$ *timingReportingGranularityFactor* [34] configured by LMF via LPP for the RSTD measurement.

The measurement report mapping for different *k* values are specified in tables 10.1.23.3.2-1 – 10.1.23.3.2-12.

Table 10.1.23.3.2-1: Report mapping for *k*=0

10.1.23.3.3 Additional Path Report Mapping for DL RSTD

The reporting range for the additional path reporting for an RSTD measurement is defined up to the range from $-8175\times T_c$ to $8175\times T_c$ with the resolution step of $2^k\times T_c$, where

T_c is defined in TS 38.211 [6],

$k_{min}\leq k\leq k_{max}$,

k_{min} = -6 and k_{max} = 5,

$k\geq$ *timingReportingGranularityFactor* [34] configured by LMF via LPP for the RSTD measurement.

The UE can report the timing of up to two additional paths with respect to the path timing determining the RSTD measurement.

A UE capable of *additionalPathsExtSupport-r17* can report the timing for a number additional paths, up to its capability, with respect to the path timing determining the RSTD measurement.

The report mappings for different *k* values are specified in tables 10.1.23.3.3-1 – 10.1.23.3.3-12.

Table 10.1.23.3.3-1: Report mapping for *k*=0

Reported Quantity Value, path_i	Measured Quantity Value, Δpath	Unit
path_00000	Δpath < -8175	T_c

10.1.23ARSTD Measurements Based on PRS Aggregation

10.1.23A.1 Introduction

The requirements in clause 10.1.23A shall apply, provided the UE has received *nr-DL-TDOA-RequestLocationInformation* message with *nr-DL-PRS-JointMeasurementRequestedPFL-List* from LMF via LPP TS 37.355 [34] requesting the UE to report one or more DL RSTD measurements defined in TS 38.215 [4] with aggregated measurement. The requirements in clause 10.1.23A shall apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG or without MG,
- when UE is in RRC_INACTIVE state,
- when UE is in RRC_IDLE state.

10.1.23A.2 Measurement Accuracy Requirements

When UE measures RSTD on PRS resources belonging to different PFLs or different PFL combinations, then the RSTD accuracy is defined as the accuracy corresponding to the largest accuracy value among different PFLs or different PFL combinations.

The requirements in this clause for 3-PFL and 2-PFL apply provided that:

- PRS resources linked for aggregation saftisfy all the conditions specified in TS 38.214 [26] clause 5.1.6.5.3.
- The spacing between the center frequencies of adjacent PFLs containing PRS resources linked for aggregation does not exceed the nominal channel spacing for intra-band contiguous CA defined in TS 38.101-1 [18], clause 5.4A.1 for FR1, and in TS 38.101-2, [19] clause 5.4A.1 for FR2-1.

The accuracy requirements for RSTD measurement based on PRS Aggregation shall be within $\pm(X+Y+Z+\Delta)\ T_c$.

X is defined in table 10.1.23A.2-1 for AWGN channel and table 10.1.23A.2-3 for fading channel for FR1, provided that the following conditions are met:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE does not perform positioning measurement with reduced number of samples.

X is defined in table 10.1.23A.2-2 for AWGN channel and table 10.1.23A.2-4 for fading channel for FR2, provided that the following conditions are met:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE does not perform positioning measurement with reduced number of samples.

X is defined in table 10.1.23A.2-5 for AWGN channel in FR1, provided that the following conditions are met:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE supports positioning measurement with reduced number of sample and is indicated by LMF to perform positioning measurement with reduced number of samples.

X is defined in table 10.1.23A.2-6 for AWGN channel in FR2, provided that the following conditions are met:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for RSTD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- UE supports positioning measurement with reduced number of sample and is indicated by LMF to perform positioning measurement with reduced number of samples.

NOTE: The requriements for fading channel in this clause are derived based on TDL-A (30 ns delay spread, 5Hz) and TDL-C (60 ns delay spread, 300 Hz) channel models for FR1 and FR2 respectively.

If the UE doesn't support Rx TEG reporting for RSTD measurement or when the measurements of reference cell and neighbour cell belong to different Rx TEGs, Y, Z and Δ are defined as follows:

- When UE measures RSTD on PRS resources belonging to same PFL or same PFL combination, Y=32 Tc, provided that the time offset between the two PRS resource instances from the reference cell and the neighbor cell, which are used for a single RSTD estimate, is no greater than 160 ms.
- When UE measures RSTD on PRS resources belonging different PFLs or different PFL combinations, Y=256 Tc, provided that the time offset between the two PRS resource instances from the reference cell and the neighbor cell, which are used for a single RSTD estimate, is no greater than 1280 ms.
- Z is defined in table 10.1.23A.2-7 for FR1 and table 10.1.23A.2-9 for FR2, respectively, where the PRS BW refers to the sum of the PRS PRB numbers across the aggregated PFLs.
- Δ is zero when UE measures RSTD on PRS resources belonging to same PFL or same PFL combination and is defined in table 10.1.23A.2-8 for FR1 and table 10.1.23A.2-10 for FR2, respectively, when UE measures RSTD on PRS resources belonging different PFLs or different PFL combinations, where the PRS BW refers to the sum of the PRS PRB numbers across the aggregated PFLs.

If the measurements of reference cell and neighbour cell belong to the same Rx TEG, i.e. associated and reported with a common Rx TEG ID, then the sum of Y+Z+Δ is equal to the timing error margin of the Rx TEG reported in *nr-UE-RxTEG-TimingErrorMargin*. The timing error margin reported via *nr-UE-RxTEG-TimingErrorMargin* cannot be larger than the value of (Y+Z+Δ) defined when the UE does not associate the measurements with the same Rx TEG.

NOTE 1: Minimum PRS bandwidth per PFL, which is minimum of the PRS bandwidths of the reference resource and the measured neighbour resource i among all the aggregated PFLs.
NOTE 2: Minimum number of PRS resource repetitions among the reference resource and the measured neighbour resource i. $T_{\text{rep}}^{\text{PRS}}$, L_{PRS}, $K_{\text{comb}}^{\text{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols* and *dl-PRS-CombSizeN* defined in TS 37.355 [34], respectively.
NOTE 3: Io is assumed to have constant EPRE across the bandwidth.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.

10.1.23A.3 Report Mapping

10.1.23A.3.1 Absolute DL RSTD Measurement Reporting

The report mapping as defined in clause 10.1.23.3.1 shall apply.

10.1.23A.3.2 Differential Reporting for DL RSTD Measurement

The report mapping as defined in clause 10.1.23.3.2 shall apply.

10.1.23A.3.3 Additional Path Report Mapping for DL RSTD

The report mapping as defined in clause 10.1.23.3.3 shall apply.

10.1.24 PRS-RSRP Measurements

10.1.24.1 Introduction

The requirements in clause 10.1.24 shall apply, provided the UE has received *nr-DL-TDOA-RequestLocationInformation* or *nr-Multi-RTT-RequestLocationInformation* or *nr-DL-AoD-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to report one or more DL PRS-RSRP measurements defined in TS 38.215 [4].

The requirements in clause 10.1.24 apply for UE in RRC_CONNECTED, including PRS-RSRP measurement with MG and outside MG, as well as for UE in RRC_INACTIVE and RRC_IDLE state. For PRS-RSRP measurement in FR2, the requirements apply with and without reduced Rx beam sweeping factor.

10.1.24.2 Measurement Accuracy Requirements

10.1.24.2.1 Absolute PRS-RSRP accuracy

The absolute accuracy requirements for PRS-RSRP measurement for FR1 defined in table 10.1.24.2.1-1 are valid under the following conditions:

- Conditions defined in 38.101-1 clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band
- UE does not support positioning measurements with reduced number of samples, or LMF does not indicate UE to perform positioning measurements with reduced number of samples

The absolute accuracy requirements for PRS-RSRP measurement for FR2 defined in table 10.1.24.2.1-2 are valid under the following conditions:

- Conditions defined in 38.101-2 [19] clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band
- UE does not support positioning measurements with reduced number of samples, or LMF does not indicate UE to perform positioning measurements with reduced number of samples

Table 10.1.24.2.1-1: PRS-RSRP absolute accuracy for FR1

Accuracy		Conditions						
					Io Note 7 range			
Normal condition	Extreme condition	PRS Ês/Iot	PRS BW	Repetition factor ($T_{rep}^{PRS} * L_{PRS} / K_{comb}^{PRS}$)	NR operating band groups Note 8	Minimum Io Note 1 dBm / SCS_{PRS}		Maximum Io

NOTE 3: PRS bandwidth is as indicated in *prs-Bandwidth* in the OTDOA or DL-AoD assistance data defined in [34].
NOTE 4: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth ≥ 24 PRB.
NOTE 5: The serving cell, the reference cell, and the measured neighbour cell i are on the same carrier frequency.
NOTE 6: The condition level is increased by Δ>0, when applicable, as described in clauses B.3.2 and B.3.3.
NOTE 7: The Io is defined in PRS positioning subframes. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same subframe.
NOTE 8: NR operating band groups are as defined in clause 3.5.2.

The absolute accuracy requirements for PRS-RSRP measurement for FR1 defined in table 10.1.24.2.1-3 are valid under the following conditions:

- Conditions defined in 38.101-1 clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band

- UE supports positioning measurements with reduced number of samples, and LMF indicates UE to perform positioning measurements with reduced number of samples
- AWGN channel

The absolute accuracy requirements for PRS-RSRP measurement for FR2 defined in table 10.1.24.2.1-4 are valid under the following conditions:

- Conditions defined in 38.101-2 [19] clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band
- UE supports positioning measurements with reduced number of samples, and LMF indicates UE to perform positioning measurements with reduced number of samples
- AWGN channel

NOTE 2: PRS bandwidth is as indicated in *prs-Bandwidth* in the OTDOA or DL-AoD assistance data defined in [34].
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth ≥ 48 PRB.
NOTE 4: The serving cell, the reference cell, and the measured neighbour cell i are on the same carrier frequency.
NOTE 5: The condition level is increased by Δ>0, when applicable, as described in clauses B.3.2 and B.3.3.
NOTE 6: The Io is defined in PRS positioning subframes. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same subframe.
NOTE 7: NR operating band groups are as defined in clause 3.5.2.

10.1.24.2.2 Relative PRS RSRP accuracy

The relative PRS-RSRP accuracy is defined as accuracy of the difference between two PRS-RSRP measurements.

The relative PRS-RSRP accuracy requirements apply for the cases when PRS-RSRP is measured from PRS resources in the same PRS resource set in FR1 or FR2, and measured with same Rx beam in case of FR2.

The accuracy requirements for PRS-RSRP measurement for FR1 defined in table 10.1.24.2.2-1 are valid under the following conditions:

- Conditions defined in 38.101-1 clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band
- UE does not support positioning measurements with reduced number of samples, or LMF does not indicate UE to perform positioning measurements with reduced number of samples

The accuracy requirements for PRS-RSRP measurement for FR2 defined in table 10.1.24.2.2-2 are valid under the following conditions:

- Conditions defined in 38.101-2 clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band
- UE does not support positioning measurements with reduced number of samples, or LMF does not indicate UE to perform positioning measurements with reduced number of samples

Table 10.1.24.2.2-1: PRS-RSRP relative accuracy for FR1

10.1.24.3 Report mapping

10.1.24.3.1 Absolute PRS-RSRP Measurement Report Mapping

The reporting range of absolute PRS-RSRP measurement is defined from -156 dBm to -31 dBm with 1 dB resolution.

The mapping of measured quantity is defined in table 10.1.24.3.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

Table 10.1.24.3.1-1: Measurement report mapping for PRS-RSRP

Reported value	Measured quantity value	Unit
PRS_RSRP_0	PRS-RSRP<-156	dBm
PRS_RSRP_1	-156≤PRS-RSRP<-155	dBm
PRS_RSRP_2	-155≤PRS-RSRP<-154	dBm

10.1.24.3.2 Differential Report Mapping for PRS-RSRP Measurement

The reporting range of differential PRS-RSRP is defined from -30 dB to 0 dB with 1 dB resolution when *nr-DL-AoD-RequestLocationInformation* message is received.

The mapping of measured quantity is defined in table 10.1.24.3.2-1. The range in the signalling may be larger than the guaranteed accuracy range.

The reporting range of differential PRS-RSRP is defined from -30 dB to 30 dB with 1 dB resolution when *nr-DL-TDOA-RequestLocationInformation* or *nr-Multi-RTT-RequestLocationInformation* is received.

The mapping of measured quantity is defined in Table 10.1.24.3.2-2. The range in the signalling may be larger than the guaranteed accuracy range or the range supported by the UE receiver for differential RSRP measured on different PRS resources in frequency domain at the same time.

Table 10.1.24.3.2-1: Measurement report mapping for differential PRS-RSRP

Reported value	Measured quantity value	Unit
DIFFRSRP_0	-30≥ΔRSRP	dB
DIFFRSRP_1	-29≥ΔRSRP>-30	dB
DIFFRSRP_2	-28≥ΔRSRP>-29	dB

10.1.24APRS-RSRP Measurements Based on PRS Aggregation

10.1.24A.1 Introduction

The requirements in clause 10.1.24A shall apply, provided that the UE has received *nr-DL-TDOA-RequestLocationInformation* or *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP TS 37.355 [34] requesting the UE to report one or more DL PRS-RSRP measurements defined in TS 38.215 [4] performed by aggregating PRS resources from multiple PFLs via *nr-DL-PRS-JointMeasurementRequested* TS 37.355 [34].

The requirements in clause 10.1.24A shall apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG,
- when UE is in RRC_INACTIVE state,
- when UE is in RRC_IDLE state.

10.1.24A.2 Measurement Accuracy Requirements

10.1.24A.2.1 Absolute PRS RSRP Accuracy Requirement

The accuracy requirements in clause 10.1.24.2.1 corresponding to the total aggregated PRS bandwidth shall apply.

10.1.24A.2.2 Relative PRS RSRP Accuracy Requirement

The accuracy requirements in clause 10.1.24.2.2 corresponding to the total aggregated PRS bandwidth shall apply.

10.1.24A.3 Report Mapping

10.1.24A.3.1 Absolute PRS-RSRP Measurement Report Mapping

The absolute report mapping for PRS-RSRP measurement in clause 10.1.24.3.1 shall apply.

10.1.24A.3.2 Differential Report Mapping for PRS-RSRP Measurement

The differential report mapping for PRS-RSRP measurement in clause 10.1.24.3.2 shall apply.

10.1.25 UE Rx-Tx Time Difference Measurements

10.1.25.1 Introduction

The requirements in clause 10.1.25 shall apply, provided the UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP [31] requesting the UE to report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4]. The requirements in clause 10.1.25 shall apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG or without MG,
- when UE is in RRC_INACTIVE state.

10.1.25.2 Measurement Accuracy Requirements

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall not apply, if:

N_{TA_offset} defined in table 7.1.2-2 changes during the UE Rx-Tx measurement period or

if the uplink transmission timing changes during the UE Rx-Tx measurement period due to the network-configured Timing Advance.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that:

- The UE transmits SRS within the range from -160 ms to 160 ms of at least one DL PRS resource of each of the TRPs in the assistance data.

If the uplink transmission timing changes during the UE Rx-Tx measurement period due to the autonomous timing adjustment defined in clause 7.1.2 then:

- UE Rx-Tx measurement accuracy requirements shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1.1) for SRS transmission even if the uplink transmission timing changes during the UE Rx-Tx measurement period due to autonomous adjustment.

- UE Rx-Tx measurement accuracy requirements shall not apply for a cell, which is not the downlink reference cell (defined in clause 7.1.1) for SRS transmission, if the uplink transmission timing changes during the UE Rx-Tx measurement period due to autonomous adjustment.

When a serving cell change occurs during the UE Rx-Tx measurement period, the UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that the serving cell change does not impact SRS configuration for the UE Rx-Tx measurement.

The relative UE Rx-Tx measurement accuracy in this clause is defined as accuracy of the difference between two UE Rx-Tx measurements.

The accuracy requirements in table 10.1.25.2-1 for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

AWGN propagation condition.

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in clause 3.5.
NOTE 3: T_{rep}^{PRS}, L_{PRS}, K_{comb}^{PRS} are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols and dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from Table 10.1.25.2-5.

The accuracy requirements in table 10.1.25.2-1a for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

Number of measurement samples is less than 4

AWGN propagation condition.

10 + Δ			≥ 132	≥ 1	Note 6	Note 6	Note 6

NOTE 1: Minimum PRS bandwidth, which is minimum of the PRS bandwidths of resource j and resource i.
NOTE 2: Minimum number of PRS resource repetitions among resource j and resource i. T_{rep}^{PRS}, L_{PRS}, K_{comb}^{PRS} are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols and dl-PRS-CombSizeN* defined in TS 37.355 [34], respectively.
NOTE 3: Io is assumed to have constant EPRE across the bandwidth.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: Δis the value of the timing error margin for the RxTx TEG, reported via *nr-UE-RxTxTEG-TimingErrorMargin*. Δ cannot be larger than the sum of the margins in table 10.1.25.2-5 (dependent on PRS/SRS BW) for any pair of individual UE Rx-Tx time difference measurements associated with the RxTx TEG. .

The accuracy requirements in table 10.1.25.2-2 for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

Fading propagation condition.

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in clause 3.5.
NOTE 3: T_{rep}^{PRS}, L_{PRS}, K_{comb}^{PRS} are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols and dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from Table 10.1.25.2-5.

The accuracy requirements in table 10.1.25.2-3 for FR2 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

AWGN propagation condition.

Table 10.1.25.2-3: UE Rx-Tx time difference measurement accuracy in FR2 in AWGN

13 + Δ			≥ 64	≥ 1	Note 5	Note 5
6 + Δ			≥ 128	≥ 1	Note 5	Note 5

NOTE 1: Minimum PRS bandwidth, which is minimum of the PRS bandwidths of resource j and resource i.
NOTE 2: Minimum number of PRS resource repetitions among resource j and resource i. T_{rep}^{PRS}, L_{PRS}, K_{comb}^{PRS} are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols and dl-PRS-CombSizeN* defined in TS 37.355 [34], respectively.
NOTE 3: Io is assumed to have constant EPRE across the bandwidth.
NOTE 4: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 5: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 6: Δis the value of the timing error margin for the RxTx TEG, reported via *nr-UE-RxTxTEG-TimingErrorMargin*. Δ cannot be larger than the sum of the margins in table 10.1.25.2-6 (dependent on PRS/SRS BW) for any pair of individual UE Rx-Tx time difference measurements associated with the RxTx TEG.

The accuracy requirements in table 10.1.25.2-4 for FR2 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

Fading propagation condition.

Table 10.1.25.2-4: UE Rx-Tx time difference measurement accuracy in FR2 in fading

Accuracy	Conditions					
	PRS Ês/Iot	Minimum PRS bandwidth	PRS SCS	PRS resource repetition($T_{rep}^{PRS} * L_{PRS}/K_{comb}^{PRS}$ Note 3	Io Note 4 range	
					Minimum Io Note 1	Maximum Io
Tc Note 5	dB	PRB	kHz		dBm / SCS_{PRS}	$dBm/BW_{Channel}$
± 75+δ	-3	≥24	60	≥4	Same value as PRP in Table B.2.14-2, according to UE Power class, operating band and angle of arrival	-50

± 60+δ		≥32	120	≥4	NOTE 6	NOTE 6
± 66+δ		≥64		≥1	NOTE 6	NOTE 6
± 62+δ		≥128		≥1	NOTE 6	NOTE 6

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in clause 3.5.
NOTE 3: $T_{\mathrm{rep}}^{\mathrm{PRS}}$, L_{PRS}, $K_{\mathrm{comb}}^{\mathrm{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols and dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from Table 10.1.25.2-6.

Table 10.1.25.2-5: Margin for UE Rx-Tx time difference measurement accuracy in FR1

Min(PRS BW, SRS BW) (PRB)			Margin (Tc [Note 1])
SCS = 15 kHz	SCS = 30 kHz	SCS = 60 kHz	
≥ 24	N/A	N/A	160
≥ 52	≥ 24	N/A	80
≥ 104	≥ 48	≥ 24	56
N/A	≥ 132	≥ 64	24
N/A	N/A	≥ 132	24

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.

Table 10.1.25.2-6: Margin for UE Rx-Tx time difference measurement accuracy in FR2

Min(PRS BW, SRS BW) (PRB)		Margin (Tc [Note 1])
SCS = 60 kHz	SCS = 120 kHz	
≥ 24	N/A	76
≥ 64	≥ 32	32
≥ 132	≥ 64	24
N/A	≥ 128	20

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.

10.1.25.3 Report mapping

Absolute UE Rx-Tx measurement reporting in clause 10.1.25.3.1, differential reporting for UE Rx-Tx measurement in clause 10.1.25.3.2, and additional path report mapping for UE Rx-Tx measurement in clause 10.1.25.3.3 applies, regardless of number of samples used to measure PRS, to report:

- TEG based measurement corresponding to UE reported Rx TEG in *nr-UE-Rx-TEG-ID-r17* [34],
- gap-based UE Rx-Tx measurement,
- gapless UE Rx-Tx measurement,
- UE Rx-Tx in RRC_INACTIVE state.

10.1.25.3.1 Absolute UE Rx-Tx Measurement Report Mapping

The reporting range for the absolute UE Rx-Tx time difference measurement ($T_{\text{UE Rx-Tx}}$) is defined from $-985024 \times T_c$ to $985024 \times T_c$ with the resolution step of $2^k \times T_c$, where:

T_c is defined in TS 38.211 [6],

$k_{min} \leq k \leq k_{max}$,

k_{min} = -6 and k_{max} = 5,

$k \geq$ *timingReportingGranularityFactor* TS 34.355 [34] configured by LMF via LPP for the UE Rx-Tx time difference measurement.

The $T_{UE\ Rx\text{-}Tx}$ report mapping for k = {0, 1, 2, 3, 4, 5, -1, -2, -3, -4, -5, -6} are specified in tables 10.1.25.3.1-1, 10.1.25.3.1-2, 10.1.25.3.1-3, 10.1.25.3.1-4, 10.1.25.3.1-5, 10.1.25.3.1-6, 10.1.25.3.1-7, 10.1.25.3.1-8, 10.1.25.3.1-9, 10.1.25.3.1-10, 10.1.25.3.1-11, and 10.1.25.3.1-12, respectively.

Table 10.1.25.3.1-1: Absolute UE Rx-Tx time difference measurement report mapping for *k*=0

Reported Quantity Value	Measured Quantity Value	Unit

10.1.25.3.2 Differential UE Rx-Tx Measurement Report Mapping

The reporting range for differential UE Rx-Tx time difference measurement ($\Delta T_{UE\ Rx\text{-}Tx}$) is defined from 0 up to $8191 \times T_c$ where:

$\Delta T_{UE\ Rx\text{-}Tx} = T_{UE\ Rx\text{-}Tx1} - T_{UE\ Rx\text{-}Tx2;}$ where:

$T_{UE\ Rx\text{-}Tx1} > T_{UE\ Rx\text{-}Tx2}$,

$T_{UE\ Rx\text{-}Tx1}$ is the first absolute UE Rx-Tx time difference measurement,

$T_{UE\ Rx\text{-}Tx1}$ is the second absolute UE Rx-Tx time difference measurement,

T_c is defined in TS 38.211 [6],

$k_{min} \leq k \leq k_{max}$,

$k_{min} = -6$ and $k_{max} = 5$,

$k \geq$ *timingReportingGranularityFactor* [34] configured by LMF via LPP for the UE Rx-Tx time difference measurement.

The $\Delta T_{UE\ Rx\text{-}Tx}$ report mapping for $k = \{0, 1, 2, 3, 4, 5, -1, -2, -3, -4, -5, -6\}$ are specified in tables 10.1.25.3.2-1, 10.1.25.3.2-2, 10.1.25.3.2-3, 10.1.25.3.2-4, 10.1.25.3.2-5, 10.1.25.3.2-6, 10.1.25.3.2-7, 10.1.25.3.2-8, 10.1.25.3.2-9, 10.1.25.3.2-10, 10.1.25.3.2-11, and 10.1.25.3.2-12, respectively.

10.1.25.3.3 Additional Path Report Mapping for UE Rx-Tx Time Difference

The reporting range for the additional path reporting for an UE Rx-Tx time difference measurement is defined up to the range from $-8175 \times T_c$ to $8175 \times T_c$ with the resolution step of $2^k \times T_c$, where

T_c is defined in TS 38.211 [6],

$k_{min} \le k \le k_{max}$,

$k_{min} = -6$ and $k_{max} = 5$,

$k \ge$ *timingReportingGranularityFactor* [34] configured by LMF via LPP for the UE Rx-Tx time difference measurement.

The UE can report the timing of up to two additional paths with respect to the path timing determining the UE Rx-Tx time difference measurement.

The UE capable of *additionalPathsExtSupport-r17* can report the timing of up to its supported number of additional paths with respect to the path timing determining the UE Rx-Tx measurement.

The report mappings for different *k* values are specified in tables 10.1.25.3.3-1 – 10.1.25.3.3-12.

Table 10.1.25.3.3-1: Report mapping for *k*=0

Reported Quantity Value, path_i	Measured Quantity Value, Δpath	Unit
path_00000	Δpath < -8175	T_c
path_00001	-8175 ≤ Δpath < -8174	T_c

10.1.25AUE Rx-Tx Time Difference Measurement Based on PRS Aggregation

10.1.25A.1 Introduction

The requirements in clause 10.1.25A apply provided the UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP TS 37.355 [34] requesting the UE to report one or more UE Rx-Tx time difference measurements, defined in TS 38.215 [4], performed by aggregating PRS resources on multiple PFLs. The requirements in clause 10.1.25A apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG,
- when UE is in RRC_INACTIVE state.

10.1.25A.2 Measurement Accuracy Requirements

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall not apply, if:

N_{TA_offset} defined in table 7.1.2-2 changes during the UE Rx-Tx measurement period or

if the uplink transmission timing changes during the UE Rx-Tx measurement period due to the network-configured Timing Advance.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that:

- The UE transmits SRS within the range from -160 ms to 160 ms of at least one DL PRS resource of each of the TRPs in the assistance data.
- PRS resources linked for aggregation saftisfy all the conditions specified in TS 38.214 [26] clause 5.1.6.5.3.
- the spacing between the center frequencies of adjacent PFLs containing PRS resources linked for aggregation does not exceed the nominal channel spacing for intra-band contiguous CA defined in TS 38.101-1 [18], clause 5.4A.1 for FR1 and in TS 38.101-2 [19], clause 5.4A.1 for FR2-1.

If the uplink transmission timing changes during the UE Rx-Tx measurement period due to the autonomous timing adjustment defined in clause 7.1.2 then:

- UE Rx-Tx measurement accuracy requirements shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1.1) for SRS transmission even if the uplink transmission timing changes during the UE Rx-Tx measurement period due to autonomous adjustment.
- UE Rx-Tx measurement accuracy requirements shall not apply for a cell, which is not the downlink reference cell (defined in clause 7.1.1) for SRS transmission, if the uplink transmission timing changes during the UE Rx-Tx measurement period due to autonomous adjustment.

When a serving cell change occurs during the UE Rx-Tx measurement period, the UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that the serving cell change does not impact SRS configuration for the UE Rx-Tx measurement.

The accuracy requirements in table 10.1.25A.2-1 for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

AWGN propagation condition.

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in Section 3.5.
NOTE 3: $T_{\text{rep}}^{\text{PRS}}$, L_{PRS}, $K_{\text{comb}}^{\text{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols* and *dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from table 10.1.25A.2-5, where the PRS BW refers to the sum of the PRS PRB numbers across the aggregated PFLs.

The accuracy requirements in table 10.1.25A.2-1a for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$\text{PRP}|_{\text{dBm}}$ according to annex B.2.14 for a corresponding Band.

Number of measurement samples is less than 4.

AWGN propagation condition.

NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from table 10.1.25A.2-6, where the PRS BW refers to the sum of the PRS PRB numbers across the aggregated PFLs.

The accuracy requirements in table 10.1.25A.2-3a for FR2 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

Number of measurement samples is less than 4.

AWGN propagation condition.

Table 10.1.25A.2-3a: UE Rx-Tx time difference measurement accuracy in FR2 in AWGN with reduced measurement samples

Accuracy for 2 PFLs	Accuracy for 3 PFLs	Conditions					
		PRS Ês/Iot	PRS bandwidth per PFL	PRS SCS	PRS resource repetition ($T_{rep}^{PRS} * L_{PRS} / K_{comb}^{PRS}$ Note 3	Io Note 4 range

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in Section 3.5.
NOTE 3: $T_{\text{rep}}^{\text{PRS}}$, L_{PRS} , $K_{\text{comb}}^{\text{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols* and *dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from table 10.1.25A.2-6, where the PRS BW refers to the sum of the PRS PRB numbers across the aggregated PFLs.

Table 10.1.25A.2-5: Margin for UE Rx-Tx time difference measurement accuracy in FR1

Min(PRS BW, SRS BW) (PRB)			Margin (Tc [Note 1])
SCS = 15 kHz	SCS = 30 kHz	SCS = 60 kHz	
≥ 104	N/A	N/A	56
N/A	≥ 132	≥ 64	24
N/A	N/A	≥ 132	24

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.

Table 10.1.25A.2-6: Margin for UE Rx-Tx time difference measurement accuracy in FR2

Min(PRS BW, SRS BW) (PRB)		Margin (Tc [Note 1])
SCS = 60 kHz	SCS = 120 kHz	
≥ 64	N/A	32
≥ 132	≥ 64	24
N/A	≥ 128	20

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.

The relative accuracy of UE Rx-Tx measurement in this clause is defined as accuracy of the difference between two UE Rx-Tx measurements.

The relative accuracy requirements in table 10.1.25A.2-7 for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$\text{PRP}|_{\text{dBm}}$ according to annex B.2.14 for a corresponding Band.

AWGN propagation condition.

The two UE Rx-Tx time difference measurements are associated with the same RxTx TEG.

NOTE 1: Minimum PRS bandwidth per PFL, which is minimum of the PRS bandwidths of resource j and resource i.
NOTE 2: Minimum number of PRS resource repetitions among resource j and resource i. T_{rep}^{PRS}, L_{PRS}, K_{comb}^{PRS} are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols* and *dl-PRS-CombSizeN* defined in TS 37.355 [34], respectively.
NOTE 3: Io is assumed to have constant EPRE across the bandwidth.
NOTE 4: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 5: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 6: Δ is the value of the timing error margin for the RxTx TEG, reported via *nr-UE-RxTxTEG-TimingErrorMargin*. Δ cannot be larger than the sum of the margins in table 10.1.25A.2-6 (dependent on PRS/SRS BW) for any pair of individual UE Rx-Tx time difference measurements associated with the RxTx TEG.

10.1.25A.3 Report mapping

Applicable measurement report mappings are defined in clause 10.1.25.3.

10.1.25C UE Rx-Tx Time Difference Measurements in Satellite Accesss

10.1.25C.1 Introduction

The requirements in clause 10.1.25C shall apply, provided the UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP [31] requesting the UE to report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4]. The requirements in clause 10.1.25C shall apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG or without MG.

10.1.25C.2 Measurement Accuracy Requirements

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall not apply, if:

- N_{TA_offset} defined in table 7.1.2-2 changes during the UE Rx-Tx measurement period or
- if the uplink transmission timing changes during the UE Rx-Tx measurement period due to the network-configured Timing Advance.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that:

- The UE transmits SRS within -160, 160 msec of at least one DL PRS resource of each of the TRPs corresponding to the serving cell in the assistance data.

If the uplink transmission timing changes during the UE Rx-Tx measurement period due to the autonomous timing adjustment defined in clause 7.1C.2 then:

- UE Rx-Tx measurement accuracy requirements shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1C.1) for SRS transmission even if the uplink transmission timing changes during the UE Rx-Tx measurement period due to autonomous adjustment.

The accuracy requirements in table 10.1.25C.2-1 for FR1-NTN are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-5 [18] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- AWGN propagation condition.

Table 10.1.25C.2-1: UE Rx-Tx time difference measurement accuracy in FR1 in AWGN with reduced measurement samples

Accuracy	Conditions						
	PRS Ês/Iot	Minimum PRS bandwidth	PRS SCS	PRS resource repetition ($T_{rep}^{PRS} * L_{PRS}/K_{comb}^{PRS}$ Note 3	NR operating band groups Note 2	Io Note 4 range	
						Minimum Io Note 1	Maximum Io

± 16+δ		≥64	60	≥1	NOTE 6	NOTE 6	NOTE 6
± 8+δ		≥132		≥1	NOTE 6	NOTE 6	NOTE 6
NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol. NOTE 2: NR operating band groups are as defined in clause 3.5.							

NOTE 3: $T_{\mathrm{rep}}^{\mathrm{PRS}}$, L_{PRS}, $K_{\mathrm{comb}}^{\mathrm{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols and dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from Table 10.1.25C.2-2.

Table 10.1.25C.2-2: Margin for UE Rx-Tx time difference measurement accuracy in FR1-NTN

Min(PRS BW, SRS BW) (PRB)			Margin (Tc [Note 1])
SCS = 15 kHz	SCS = 30 kHz	SCS = 60 kHz	
≥ 24	N/A	N/A	160
≥ 52	≥ 24	N/A	80
≥ 104	≥ 48	≥ 24	56
N/A	≥ 132	≥ 64	24
N/A	N/A	≥ 132	24
NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6]. NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.			

10.1.25C.3 Report mapping

The report mapping provided in clause 10.1.25.3 is applicable for NTN.

10.1.26 FR2 P-MPR report

The FR2 P-MPR report mapping is defined by this clause.

10.1.26.1 Report mapping

table 10.1.26.1-1 defines the FR2 P-MPR report mapping.

Table 10.1.26.1-1 Mapping of FR2 P-MPR

Reported value	Measured quantity value	Unit
P-MPR_00	3 ≤ P-MP < 6	dB
P-MPR_01	6 ≤ P-MP < 9	dB
P-MPR_02	9 ≤ P-MP < 12	dB
P-MPR_03	P-MP ≥ 12	dB

10.1.27 L1-SINR accuracy requirements for FR1

10.1.27.1 L1-SINR accuracy requirements with CSI-RS based CMR and no dedicated IMR configured

10.1.27.1.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute CSI-RS based L1-SINR accuracy in this clause apply to all CSI-RS resources configured as CMR and no dedicated resource configured as IMR of the serving cell configured for L1-SINR measurement.

The accuracy requirements in table 10.1.27.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.1 for a corresponding Band for each relevant CSI-RS based CMR.
- The bandwidth of CSI-RS as CMR is 48 PRBs and the density is 3.
- AWGN radio propagation conditions.

The performance with larger bandwidth of CSI-RS as CMR is equal to or better than the accuracy requirements in table 10.1.27.1.1-1.

Table 10.1.27.1.1-1: L1-SINR absolute accuracy for CSI-RS based CMR only in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS CMR Ês/Iot	Io [Note 1] range					
			NR operating band groups [Note 2]	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±5.5	±6.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 3: The requirements apply for CSI-RS CMR Ês/Iot ≤ 6 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

10.1.27.1.2 Relative Accuracy

The relative CSI-RS based L1-SINR accuracy is defined as the L1-SINR measured from one CSI-RS compared to the largest measured value of L1-SINR among all CSI-RS resources of the serving cell.

The accuracy requirements in table 10.1.27.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.1 for a corresponding Band for each relevant CSI-RS based CMR.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.
- AWGN radio propagation conditions.

The performance with larger bandwidth of CSI-RS as CMR is equal to or better than the accuracy requirements in table 10.1.27.1.2-1.

Table 10.1.27.1.2-1: L1-SINR relative accuracy for CSI-RS based CMR only in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS CMR Ês/Iot Note 2	Io Note 1 range					
			NR operating band groups Note 3	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±[4.5]	±[5.5]	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS CMR Ês/Iot is the minimum CMR Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: The requirements apply for CSI-RS CMR Ês/Iot ≤ 6 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

10.1.27.2 L1-SINR accuracy requirements with SSB based CMR and dedicated IMR configured

10.1.27.2.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute SSB based L1-SINR accuracy in this clause apply to all SSBs configured as CMR and dedicated resources configured as IMR of the serving cell configured for L1-SINR measurement.

The accuracy requirements are defined in table 10.1.27.2.1-1 for SSB based CMR and NZP-IMR and in table 10.1.27.2.1-2 for SSB based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.27.2.1-1 and 10.1.27.2.1-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.2 for a corresponding Band for each relevant SSB based CMR and IMR.
- The bandwidth of NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- AWGN radio propagation conditions.

The performance with larger bandwidth of NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.27.2.1-1 and 10.1.27.2.1-2.

Table 10.1.27.2.1-1: L1-SINR absolute accuracy for SSB based CMR and NZP-IMR in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	SSB-CMR Ês/Iot	NZP-IMR Ês/Iot	Io [Note 1] range				
				NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
					SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.0	±5.0	≥0	≥0	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
				NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
				NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
				NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
				NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
				NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
				NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
				NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
				NR_FDD_FR1_N	-114.5	-111.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 3: The requirements apply for SSB-CMR Ês/Iot ≤ [6] dB with SCS 15 kHz or 30 kHz under NR high speed scenarios.

Table 10.1.27.2.1-2: L1-SINR absolute accuracy for SSB based CMR and ZP-IMR in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB-CMR Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±5.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 3: The requirements apply for SSB Ês/Iot ≤ [6] dB with SCS 15 kHz or 30 kHz under NR high speed scenarios.

10.1.27.2.2 Relative Accuracy

The relative SSB based L1-SINR accuracy is defined as the L1-SINR measured from one SSB configured as CMR and one IMR configured as IMR compared to the largest measured value of L1-SINR among all SSBs and IMRs of the serving cell.

The accuracy requirements are defined in table 10.1.27.2.2-1 for SSB based CMR and NZP-IMR and in table 10.1.27.2.2-2 for SSB based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.27.2.2-1 and 10.1.27.2.2-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.2 for a corresponding Band for each relevant SSB based CMR and IMR.
- The bandwidth of NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- AWGN radio propagation conditions.

The performance with larger bandwidth of NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.27.2.2-1 and 10.1.27.2.2-2.

Table 10.1.27.2.2-1: L1-SINR relative accuracy for SSB based CMR and NZP-IMR in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	SSB-CMR Ês/Iot Note 2	NZP-IMR Ês/Iot	Io Note 1 range				
				NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
					SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3.0	±4.0	≥0	≥0	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
				NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
				NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
				NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
				NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
				NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
				NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
				NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
				NR_FDD_FR1_N	-114.5	-111.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB CMR Ês/Iot is the minimum SSB CMR Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: The requirements apply for SSB-CMR Ês/Iot ≤ 6 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

Table 10.1.27.2.2-2: L1-SINR relative accuracy for SSB based CMR and ZP-IMR in FR1

Accuracy	Conditions

Normal condition	Extreme condition	SSB-CMR Ês/Iot Note 2	Io Note 1 range			
			NR operating band groups Note 3	Minimum Io		Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3.5	±4.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB CMR Ês/Iot is the minimum SSB CMR Ês/Iot of the pair of SSBs to which the requirement applies. NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2. NOTE 4: he requirements apply for SSB Ês/Iot ≤ 6 dB with SCS 15kHz or 30kHz under NR high speed scenarios.							

10.1.27.3 L1-SINR accuracy requirements with CSI-RS based CMR and dedicated IMR configured

10.1.27.3.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute CSI-RS based L1-SINR accuracy in this clause apply to all CSI-RS resources configured as CMR and dedicated resources configured as IMR of the serving cell configured for L1-SINR measurement.

The accuracy requirements are defined in table 10.1.27.3.1-1 for CSI-RS based CMR and NZP-IMR and in table 10.1.27.3.1-2 for CSI-RS based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.27.3.1-1 and 10.1.27.3.1-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.3 for a corresponding Band for each relevant CSI-RS based CMR and IMR.
- The bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- AWGN radio propagation conditions.

The performance with larger bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.27.3.1-1 and 10.1.27.3.1-2.

Table 10.1.27.3.1-1: L1-SINR absolute accuracy for CSI-RS based CMR and NZP-IMR in FR1

Accuracy		Conditions		
Normal condition	Extreme condition	CSI-RS	NZP-IMR	Io Note 1 range

		CMR Ês/Iot	Ês/Iot						
				NR operating band groups [Note 2]	Minimum Io				Maximum Io
dB	dB	dB	dB		dBm / SCS_{CSI-RS}			$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
					SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±4.0	±5.0	≥0	≥0	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
				NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
				NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
				NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50

			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2. NOTE 3: The requirements apply for CSI-RS CMR Ês/Iot ≤ 6 dB with SCS 15kHz or 30kHz under NR high speed scenarios.								

10.1.27.3.2 Relative Accuracy

The relative CSI-RS based L1-SINR accuracy is defined as the L1-SINR measured from one CSI-RS configured as CMR and one IMR configured as IMR compared to the largest measured value of L1-SINR among all CSI-RS and IMR resources of the serving cell.

The accuracy requirements are defined in table 10.1.27.3.2-1 for CSI-RS based CMR and NZP-IMR and in table 10.1.27.3.2-2 for CSI-RS based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.27.3.2-1 and 10.1.27.3.2-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.3 for a corresponding Band for each relevant CSI-RS based CMR and IMR.
- The bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- AWGN radio propagation conditions.

The performance with larger bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.27.3.2-1 and 10.1.27.3.2-2.

Table 10.1.27.3.2-1: L1-SINR relative accuracy for CSI-RS based CMR and NZP-IMR in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS CMR Ês/Iot Note 2	NZP-IMR Ês/Iot	Io Note 1 range				
				NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB	dB		dBm / SCS_{CSI-RS}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
					SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz	
±3.0	±4.0	≥0	≥0	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
				NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
				NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
				NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
				NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
				NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
				NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
				NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50

				NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS CMR Ês/Iot is the minimum CMR Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: The requirements apply for CSI-RS CMR Ês/Iot ≤ 6 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

Table 10.1.27.3.2-2: L1-SINR relative accuracy for CSI-RS based CMR and ZP-IMR in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS CMR Ês/Iot Note 2	Io Note 1 range					
			NR operating band groups Note 3	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±[3.5]	±[4.5]	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS CMR Ês/Iot is the minimum CMR Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: The requirements apply for CSI-RS CMR Ês/Iot ≤ 6 dB with SCS 15kHz or 30kHz under NR high speed scenarios.

10.1.28 L1-SINR accuracy requirements for FR2

10.1.28.1 L1-SINR accuracy requirements with CSI-RS based CMR and no dedicated IMR configured

10.1.28.1.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute CSI-RS based L1-SINR accuracy in this clause apply to all CSI-RS resources configured as CMR and no dedicated resource configured as IMR of the serving cell configured for L1-SINR measurement.

The accuracy requirements in table 10.1.28.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.1 for a corresponding Band for each relevant CSI-RS based CMR.
- The bandwidth of CSI-RS as CMR is 48 PRBs and the density is 3.

- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- AWGN radio propagation conditions.

The performance with larger bandwidth of CSI-RS as CMR is equal to or better than the accuracy requirements in table 10.1.28.1.1-1.

Table 10.1.28.1.1-1: L1-SINR absolute accuracy for CSI-RS based CMR only in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS CMR $\hat{E}s/Iot$ Note 3	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 2	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±5.5	±6.5	≥-3	Same value as CSI-RS_RP in clause B.2.8.1, according to UE Power class, operating band and angle of arrival	N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the CSI-RS CMR $\hat{E}s/Iot$ and related parameters may need to be adjusted to ensure $\hat{E}s/Iot$ at UE baseband is above the value defined in this table.

10.1.28.1.2 Relative Accuracy

The relative CSI-RS based L1-SINR accuracy is defined as the L1-SINR measured from one CSI-RS compared to the largest measured value of L1-SINR among all CSI-RS resources of the serving cell.

The accuracy requirements in table 10.1.28.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.1 for a corresponding Band for each relevant CSI-RS based CMR.
- The bandwidth of CSI-RS as CMR is 48 PRBs and the density is 3.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- AWGN radio propagation conditions.

The performance with larger bandwidth of CSI-RS as CMR is equal to or better than the accuracy requirements in table 10.1.28.1.2-1.

Table 10.1.28.1.2-1: L1-SINR relative accuracy for CSI-RS based CMR only in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS CMR $\hat{E}s/Iot$ Note 2, Note 4	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 3	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±4.5	±5.5	≥-3	Same value as CSI-RS_RP in clause B.2.8.1, according to UE Power class, operating band and angle of arrival	N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.

NOTE 2: The parameter CSI-RS CMR Ês/Iot is the minimum CSI-RS CMR Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Values based on Refsens and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the te Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.st cases, the CSI-RS CMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.28.2 L1-SINR accuracy requirements with SSB based CMR and dedicated IMR configured

10.1.28.2.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute SSB based L1-SINR accuracy in this clause apply to all SSBs configured as CMR and dedicated resources configured as IMR of the serving cell configured for L1-SINR measurement.

The accuracy requirements are defined in table 10.1.28.2.1-1 for SSB based CMR and NZP-IMR and in table 10.1.28.2.1-2 for SSB based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.28.2.1-1 and 10.1.28.2.1-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.2 for a corresponding Band for each relevant SSB based CMR and IMR.
- The bandwidth of NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- AWGN radio propagation conditions.
- SSB based CMR and IMR in the test come from the same direction.

The performance with larger bandwidth of NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.28.2.1-1 and 10.1.28.2.1-2.

Table 10.1.28.2.1-1: L1-SINR absolute accuracy for SSB based CMR and NZP-IMR in FR2

Accuracy		Conditions				
Normal condition	Extreme condition	SSB CMR Ês/Iot Note 3	NZP-IMR Ês/Iot Note 3	Io Note 1 range		
				Minimum Io		Maximum Io
dB	dB	dB	dB	dBm / SCS_{SSB} Note 2	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz	
±4.0	±5.0	≥0	≥0	Same value as SSB_RP in clause B.2.8.2, according to UE Power class, operating band and angle of arrival	N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the SSB Ês/Iot, NZP-IMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

Table 10.1.28.2.1-2: L1-SINR absolute accuracy for SSB based CMR and ZP-IMR in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB CMR Ês/Iot Note 3	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 2	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz		
±4.5	±5.5	≥-3	Same value as SSB_RP in clause B.2.8.2, according to UE Power class, operating band and angle of arrival	N/A	-50
NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth. NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival. NOTE 3: In the test cases, the SSB CMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.					

10.1.28.2.2 Relative Accuracy

The relative SSB based L1-SINR accuracy is defined as the L1-SINR measured from one SSB configured as CMR and one IMR configured as IMR compared to the largest measured value of L1-SINR among all SSB based CMRs and IMRs of the serving cell.

The accuracy requirements are defined in table 10.1.28.2.2-1 for SSB based CMR and NZP-IMR and in table 10.1.28.2.2-2 for SSB based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.28.2.2-1 and 10.1.28.2.2-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.2 for a corresponding Band for each relevant SSB based CMR and IMR.
- The bandwidth of NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- AWGN radio propagation conditions.
- SSB based CMR and IMR in the test come from the same direction.

The performance with larger bandwidth of NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.28.2.2-1 and 10.1.28.2.2-2.

Table 10.1.28.2.2-1: L1-SINR relative accuracy for SSB based CMR and NZP-IMR in FR2

Accuracy		Conditions				
Normal condition	Extreme condition	SSB CMR Ês/Iot Note 2, Note 4	NZP-IMR Ês/Iot Note 4	Io Note 1 range		
				Minimum Io		Maximum Io
dB	dB	dB	dB	dBm / SCS_{SSB} Note 3	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 120 kHz / SCS_{SSB} = 240 kHz		
±3.0	±4.0	≥0	≥0	Same value as SSB_RP in clause B.2.8.2, according to UE Power class, operating band and angle of arrival	N/A	-50
NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.						

NOTE 2: The parameter SSB CMR Ês/Iot is the minimum SSB CMR Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the SSB CMR Ês/Iot, NZP-IMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

Table 10.1.28.2.2-2: L1-SINR relative accuracy for SSB based CMR and ZP-IMR in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	SSB CMR Ês/Iot Note 2, Note 4	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{SSB} Note 3		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
			SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz		
±3.5	±4.5	≥-3	Same value as SSB_RP in clause B.2.8.2, according to UE Power class, operating band and angle of arrival		N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB CMR Ês/Iot is the minimum SSB CMR Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the SSB CMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.28.3 L1-SINR accuracy requirements with CSI-RS based CMR and dedicated IMR configured

10.1.28.3.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute CSI-RS based L1-SINR accuracy in this clause apply to all CSI-RS resources as CMR and dedicated resources configured as IMR of the serving cell configured for L1-SINR measurement.

The accuracy requirements are defined in table 10.1.28.3.1-1 for CSI-RS based CMR and NZP-IMR and in table 10.1.28.3.1-2 for CSI-RS based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.28.3.1-1 and 10.1.28.3.1-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.3 for a corresponding Band for each relevant CSI-RS based CMR and IMR.
- The bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- AWGN radio propagation conditions.
- CSI-RS based CMR and IMR in the test come from the same direction.

The performance with larger bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.28.3.1-1 and 10.1.28.3.1-2.

Table 10.1.28.3.1-1: L1-SINR absolute accuracy for CSI-RS based CMR and NZP-IMR in FR2

Accuracy	Conditions

Normal condition	Extreme condition	CSI-RS CMR Ês/Iot Note 3	NZP-IMR Ês/Iot Note 3	Io Note 1 range		
				Minimum Io		Maximum Io
dB	dB	dB	dB	dBm / SCS_{CSI-RS} Note 2	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±4.0	±5.0	≥0	≥0	Same value as CSI-RS_RP in clause B.2.8.3, according to UE Power class, operating band and angle of arrival	N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the CSI-RS Ês/Iot, NZP-IMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

Table 10.1.28.3.1-2: L1-SINR absolute accuracy for CSI-RS based CMR and ZP-IMR in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS CMR Ês/Iot Note 3	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 2	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±4.5	±5.5	≥-3	Same value as CSI-RS_RP in clause B.2.8.3, according to UE Power class, operating band and angle of arrival	N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 3: In the test cases, the CSI-RS Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.28.3.2 Relative Accuracy

The relative CSI-RS based L1-SINR accuracy is defined as the L1-SINR measured from one CSI-RS configured as CMR and one IMR configured as IMR compared to the largest measured value of L1-SINR among all CSI-RS based CMRs and IMRs of the serving cell.

The accuracy requirements are defined in table 10.1.28.3.2-1 for CSI-RS based CMR and NZP-IMR and in table 10.1.28.3.2-2 for CSI-RS based CMR and ZP-IMR.

The accuracy requirements in tables 10.1.28.3.2-1 and 10.1.28.3.2-2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- Conditions for L1-SINR measurements are fulfilled according to annex B.2.8.3 for a corresponding Band for each relevant CSI-RS based CMR and IMR.
- The bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is 48 PRBs and the density is 3.
- The measured signals are in the directions covered by the percentile EIS spherical coverage of the UE, defined in clause 7.3.4 of TS 38.101-2 [19].
- AWGN radio propagation conditions.
- CSI-RS based CMR and IMR in the test come from the same direction.

The performance with larger bandwidth of CSI-RS as CMR, NZP-IMR and ZP-IMR is equal to or better than the accuracy requirements in tables 10.1.28.3.2-1 and 10.1.28.3.2-2.

Table 10.1.28.3.2-1: L1-SINR relative accuracy for CSI-RS based CMR and NZP-IMR in FR2

Accuracy		Conditions				
Normal condition	Extreme condition	CSI-RS CMR Ês/Iot Note 2, Note 4	NZP-IMR Ês/Iot Note 4	Io Note 1 range		
				Minimum Io		Maximum Io
dB	dB	dB	dB	dBm / SCS_{CSI-RS} Note 3	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±3.0	±4.0	≥0	≥0	Same value as CSI-RS_RP in clause B.2.8.3, according to UE Power class, operating band and angle of arrival	N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS CMR Ês/Iot is the minimum CSI-RS CMR Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the CSI-RS CMR Ês/Iot, NZP-IMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

Table 10.1.28.3.2-2: L1-SINR relative accuracy for CSI-RS based CMR and ZP-IMR in FR2

Accuracy		Conditions			
Normal condition	Extreme condition	CSI-RS CMR Ês/Iot Note 2, Note 4	Io Note 1 range		
			Minimum Io		Maximum Io
dB	dB	dB	dBm / SCS_{CSI-RS} Note 3	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
			SCS_{CSI-RS} = 60 kHz / SCS_{CSI-RS} = 120 kHz		
±3.5	±4.5	≥-3	Same value as CSI-RS_RP in clause B.2.8.3, according to UE Power class, operating band and angle of arrival	N/A	-50

NOTE 1: Io specified at the Reference point, and assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS CMR Ês/Iot is the minimum CSI-RS CMR Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Values based on REFSENS and EIS spherical coverage as defined in clauses 7.3.2 and 7.3.4 of TS 38.101-2 [19]. Applicable side condition selected depending on angle of arrival.
NOTE 4: In the test cases, the CSI-RS CMR Ês/Iot and related parameters may need to be adjusted to ensure Ês/Iot at UE baseband is above the value defined in this table.

10.1.29 Intra-frequency RSRQ accuracy requirements under CCA

10.1.29.1 Intra-frequency SS-RSRQ accuracy requirements in FR1

10.1.29.1.1 Absolute SS-RSRQ Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on the same frequency as that of the serving cell under CCA.

The accuracy requirements in table 10.1.29.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.

- Conditions for intra-frequency measurements are fulfilled according to annex B.2.9 for a corresponding Band for each relevant SSB.

Table 10.1.29.1.1-1: SS-RSRQ intra-frequency absolute accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2.5	±4	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement. NOTE 3: NR operating band groups are as defined in clause 3.5.2.							

10.1.30 Inter-frequency RSRQ accuracy requirements under CCA

10.1.30.1 Inter-frequency SS-RSRQ accuracy requirements in FR1

10.1.30.1.1 Absolute SS-RSRQ Accuracy

The requirements for absolute SS-RSRQ accuracy in this clause apply to a cell on a frequency under CCA that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.30.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.

- Conditions for inter-frequency measurements are fulfilled according to annex B.2.10 for a corresponding Band for each relevant SSB.

Table 10.1.30.1.1-1: SS-RSRQ inter-frequency absolute accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2.5	±4	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement. NOTE 3: NR operating band groups are as defined in clause 3.5.2.							

10.1.30.1.2 Relative SS-RSRQ Accuracy

The relative SS-RSRQ accuracy in inter-frequency case is defined as the RSRQ measured from one cell on a frequency compared to the RSRP measured from another cell on a different frequency, with at least one of the two frequencies being under CCA.

The accuracy requirements in table 10.1.30.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.10 for a corresponding Band for each relevant SSB.
- |SSB_RP1 dB_m - SSB_RP2 dB_m| ≤ 27 dB
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1.30.1.2-1: SS-RSRQ inter-frequency relative accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3	±4	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
±4	±4	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups are as defined in clause 3.5.2.

10.1.31 Intra-frequency SINR accuracy requirements under CCA

10.1.31.1 Intra-frequency SS-SINR accuracy requirements in FR1

10.1.31.1.1 Absolute SS-SINR Accuracy

Unless otherwise specified, the requirements for absolute SS-SINR accuracy in this clause apply to a cell on the same frequency as that of the serving cell under CCA.

The accuracy requirements in table 10.1.31.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.9 for a corresponding Band.

Table 10.1.31.1.1-1: SS-SINR intra-frequency absolute accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3.0	±4	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: The requirements apply for SSB Ês/Iot ≤ 25 dB.
NOTE 4: NR operating band groups are as defined in clause 3.5.2.

10.1.32 Inter-frequency SINR accuracy requirements under CCA

10.1.32.1 Inter-frequency SS-SINR accuracy requirements in FR1

10.1.32.1.1 Absolute SS-SINR Accuracy

The requirements for absolute SS-SINR accuracy in this clause apply to a cell on a frequency under CCA that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.32.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.10 for a corresponding Band.

Table 10.1.32.1.1-1: SS-SINR inter-frequency absolute accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}s/Iot$ Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3.0	±4	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	116.5	-113.5		
±3.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement. NOTE 3: The requirements apply for SSB $\hat{E}s/Iot \leq 25$ dB. NOTE 4: NR operating band groups are as defined in clause 3.5.2.							

10.1.32.1.2 Relative SS-SINR Accuracy

The relative SS-SINR accuracy in inter-frequency case is defined as the SS-SINR measured from one cell on a frequency compared to the SS-SINR measured from another cell on a different frequency, with at least one of the two frequencies being under CCA.

The accuracy requirements in table 10.1.32.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.10 for a corresponding Band.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|Channel\ 1_Io - Channel\ 2_Io| \leq 20$ dB

Table 10.1.32.1.2-1: SS-SINR inter-frequency relative accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}s/Iot$ Note 2,4	Io Note 1 range				
			NR operating band groups Note 5	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 120 kHz	SCS_{SSB} = 240 kHz		

±3.5	±4	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
±4	±4	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies. NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement. NOTE 4: The requirements apply for SSB Ês/Iot ≤ 25 dB. NOTE 5: NR operating band groups are as defined in clause 3.5.2.							

10.1.33 L1-RSRP accuracy requirements under CCA

10.1.33.1 SSB based L1-RSRP accuracy requirements in FR1

10.1.33.1.1 Absolute Accuracy

Unless otherwise specified, the requirements for absolute SSB based L1-RSRP accuracy in this clause apply to all SSBs of the serving cell configured for L1-RSRP measurement under CCA.

The accuracy requirements in table 10.1.33.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.10.1 for a corresponding Band for each relevant SSB.

Table 10.1.33.1.1-1: SSB based L1-RSRP absolute accuracy under CCA

Accuracy		**Conditions**					
Normal condition	**Extreme condition**	**SSB Ês/Iot**	**Io [Note 1] range**				
			NR operating band groups [Note 2]	**Minimum Io**			**Maximum Io**
dB	**dB**	**dB**		**dBm / SCS_{SSB}**		**dBm/$BW_{Channel}$**	**dBm/$BW_{Channel}$**
				SCS_{SSB} = 15 kHz	**SCS_{SSB} = 30 kHz**		
±5.0	±9.5	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-70
			NR_CCA_FR1_J	-116.5	-113.5		
±8.5	±11.5	≥-3	NR_CCA_FR1_I	N/A	N/A	-70	-50
			NR_CCA_FR1_J				
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups are as defined in clause 3.5.2.							

10.1.33.1.2 Relative Accuracy

The relative SSB based L1-RSRP accuracy is defined as the L1-RSRP measured from one SSB compared to the largest measured value of L1-RSRP among all SSBs of the serving cell under CCA.

The accuracy requirements in table 10.1.33.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.10.1 for a corresponding Band for each relevant SSB.

Table 10.1.33.1.2-1: SSB based L1-RSRP relative accuracy under CCA

Accuracy		**Conditions**	
Normal condition	**Extreme condition**	**SSB Ês/Iot [Note 2]**	**Io [Note 1] range**

			NR operating band groups [Note 3]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±3	±4	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies. NOTE 3: NR operating band groups are as defined in clause 3.5.2.							

10.1.34 RSSI measurements under CCA

10.1.34.1 Intra-frequency absolute RSSI measurement accuracy requirements in FR1

The accuracy requirements for intra-frequency RSSI measurements on a carrier frequency under CCA are specified in table 10.1.34.1-1. The requirements apply for any configured RSSI *measDuration* [2], provided that:

- All symbols during each RSSI measurement duration are available for RSSI sampling within the same reporting interval.

The intra-frequency RSSI measurement bandwidth is the channel bandwidth defined in clause 4 of TS 37.213 [33], where the channel has the center frequency configured by *ARFCN-valueNR*.

Table 10.1.34.1-1: Intra-frequency RSSI accuracy under CCA

Accuracy		Conditions				
Normal condition	Extreme condition	Io [Note 1] range				
		NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
			SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
[±3.5]	[±6.5]	NR_CCA_FR1_I	-117	-114	N/A	-70
		NR_CCA_FR1_J	-116.5	-113.5		
[±5.5]	[±8.5]	NR_CCA_FR1_I	N/A	N/A	-70	-50
		NR_CCA_FR1_J				
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups are as defined in clause 3.5.2.						

10.1.34.2 Inter-frequency absolute RSSI measurement accuracy requirements in FR1

The accuracy requirements for inter-frequency RSSI measurements on a carrier frequency under CCA are the same as specified in clause 10.1.34.1.

The inter-frequency RSSI measurement bandwidth is the channel bandwidth defined in clause 4 of TS 37.213 [33], where the channel has the center frequency configured by *ARFCN-valueNR*.

10.1.34.3 RSSI measurement report mapping

The reporting range of RSSI measurement is defined from -100 dBm to -25 dBm with 1 dBm resolution.

The mapping of the measured quantity is defined in table 10.1.34.3-1. The range in the signalling may be larger than the guaranteed accuracy range, provided that the following condition is met:

the RSSI measurement bandwidth is the channel bandwidth defined in clause 4 of TS 37.213 [33], where the channel has the center frequency configured by *ARFCN-valueNR*.

Table 10.1.34.3-1: RSSI measurement report mapping

Reported value	Measured quantity value	Unit

RSSI_00	RSSI < -100	dBm
RSSI_01	-100 ≤ RSSI < -99	dBm
RSSI_02	-99 ≤ RSSI < -98	dBm
…	…	…
RSSI_74	-27 ≤ RSSI < -26	dBm
RSSI_75	-26 ≤ RSSI < -25	dBm
RSSI_76	-25 ≤ RSSI	dBm

10.1.35 Channel occupancy measurements under CCA

10.1.35.1 Intra-frequency channel occupancy measurement accuracy requirements in FR1

The UE shall be able to correctly evaluate the intra-frequency channel occupancy configured according to TS 38.331 [2], provided that the following conditions are met:

- All symbols during each RSSI measurement duration are available for RSSI sampling within the same reporting interval,
- RSSI at the UE receiver meets the following condition with respect to the configured *channelOccupancyThreshold* [2]:
  - RSSI at the UE receiver is below *channelOccupancyThreshold*- Δ_{RSSI}, or
  - RSSI at the UE receiver is above *channelOccupancyThreshold*+ Δ_{RSSI},
- where Δ_{RSSI} is the applicable RSSI measurement accuracy value from the RSSI measurement accuracy requirements specified in clause 10.1.34.1.

The channel occupancy measurement bandwidth is the same as the RSSI measurement bandwidth in clause 10.1.34.1.

10.1.35.2 Inter-frequency channel occupancy measurement accuracy requirements in FR1

The UE shall be able to correctly evaluate the inter-frequency channel occupancy configured according to TS 38.331 [2], provided that the following conditions are met:

- All symbols during each RSSI measurement duration are available for RSSI sampling within the same reporting interval,
- RSSI at the UE receiver meets the following condition with respect to the configured *channelOccupancyThreshold* [2]:
  - RSSI at the UE receiver is below *channelOccupancyThreshold*- Δ_{RSSI}, or
  - RSSI at the UE receiver is above *channelOccupancyThreshold*+ Δ_{RSSI},
- where Δ_{RSSI} is the applicable RSSI measurement accuracy value from the RSSI measurement accuracy requirements specified in clause 10.1.34.2.

The channel occupancy measurement bandwidth is the same as the RSSI measurement bandwidth in clause 10.1.34.2.

10.1.36 Intra-frequency RSRP accuracy requirements under CCA

10.1.36.1 Intra-frequency SS-RSRP accuracy requirements in FR1

10.1.36.1.1 Absolute SS-RSRP Accuracy

Unless otherwise specified, the requirements for absolute SS-RSRP accuracy in this clause apply to a cell on the same frequency as that of the serving cell under CCA.

The accuracy requirements in table 10.1.36.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.8 for a corresponding Band for each relevant SSB.

Table 10.1.36.1.1-1: SS-RSRP intra-frequency absolute accuracy

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±9	≥-6	NR_CCA_FR1_I	-117	-114	N/A	-70
			NR_CCA_FR1_J	-116.5	-113.5		
±8	±11	≥-6	NR_CCA_FR1_I	N/A	N/A	-70	-50
			NR_CCA_FR1_J				
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR operating band groups are as defined in clause 3.5.2.							

10.1.36.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy is defined as the SS-RSRP measured from one cell compared to the SS-RSRP measured from another cell on the same frequency, or between any two SS-RSRP levels measured on the same cell under CCA.

The accuracy requirements in table 10.1.36.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.8 for a corresponding Band for each relevant SSB.

Table 10.1.36.1.2-1: SS-RSRP intra-frequency relative accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot [Note 2]	Io [Note 1] range				
			NR operating band groups [Note 4]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±2	±3	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
±3	±3	≥-6	Note 3	Note 3	Note 3	N/A	Note 3
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.							

NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups are as defined in clause 3.5.2.

10.1.37 Inter-frequency RSRP accuracy requirements under CCA

10.1.37.1 Inter-frequency SS-RSRP accuracy requirements in FR1

10.1.37.1.1 Absolute SS-RSRP

The requirements for absolute SS-RSRP in this clause apply to a cell on a frequency under CCA that has different carrier frequency from the serving cell.

The accuracy requirements in table 10.1.37.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.9 for a corresponding Band for each relevant SSB.

Table 10.1.37.1.1-1: SS-RSRP inter-frequency absolute accuracy under CCA

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$	Io [Note 1] range				
			NR operating band groups [Note 2]	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±9	≥-6	NR_CCA_FR1_I	-117	-114	N/A	-70
			NR_CCA_FR1_J	-116.5	-113.5		
±8	±11	≥-6	NR_CCA_FR1_I	N/A	N/A	-70	-50
			NR_CCA_FR1_J				

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups are as defined in clause 3.5.2.

10.1.37.1.2 Relative SS-RSRP Accuracy

The relative SS-RSRP accuracy in inter-frequency case is defined as the RSRP measured from one cell on a frequency compared to the RSRP measured from another cell on a different frequency, with at least one of the two frequencies being under CCA.

The accuracy requirements in table 10.1.37.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.9 for a corresponding Band for each relevant SSB.
- $|SSB_RP1\ dB_m - SSB_RP2\ dB_m| \leq 27$ dB
- $|Channel\ 1_Io - Channel\ 2_Io| \leq 20$ dB

Table 10.1.37.1.2-1: SS-RSRP inter-frequency relative accuracy under CCA

Accuracy		Conditions	
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$ Note 2	Io [Note 1] range

			NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.5	±6	≥-6	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5		
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies. NOTE 3: NR operating band groups are as defined in clause 3.5.2.							

10.1.38 PRS-RSRPP Measurements

10.1.38.1 Introduction

The requirements in clause 10.1.38.2 shall apply, provided the UE has received *nr-DL-AoD-RequestLocationInformation* message from LMF via LPP [34] requesting the UE to report one or more DL PRS-RSRPP measurements defined in TS 38.215 [4]. The requirements in clause 10.1.38 shall apply:

- when UE is in RRC_CONNECTED state,
- when UE is in RRC_INACTIVE state,
- when UE is in RRC_IDLE state.

The requirements in clause 10.1.38.2 apply for the first path PRS-RSRP measurement.

10.1.38.2 Measurement Accuracy Requirements

10.1.38.2.1 Absolute PRS RSRPP accuracy

The absolute accuracy requirements for PRS-RSRPP measurement for FR1 defined in table 10.1.38.2.1-1 and table 10.1.38.2.1-3 are valid under the following conditions:

- Conditions defined in 38.101-1 clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band

The absolute accuracy requirements for PRS-RSRPP measurement for FR2 defined in table 10.1.38.2.1-2 and table 10.1.38.2.1-4 are valid under the following conditions:

- Conditions defined in 38.101-2 [19] clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.2.14 for a corresponding Band

The absolute accuracy requirements for PRS-RSRPP measurement defined in table 10.1.38.2.1-1 and table 10.1.38.2.1-2 apply for the UE not supporting *supportedDL-PRS-ProcessingSamples* [34] or LMF does not indicate UE to perform positioning measurements with reduced number of samples.

The absolute accuracy requirements for PRS-RSRPP measurement defined in table 10.1.38.2.1-3 and table 10.1.38.2.1-4 apply for the UE supporting *supportedDL-PRS-ProcessingSamples* [34].

NOTE: The requirements in this clause are derived based on two-tap channel defined in TS 38.101-4 [21] annex B.2.4 ($a = 1$, τ_d=0.45 μs and f_D=5 Hz).

NOTE: The requirements in this clause are derived based on the difference between the estimated PRS-RSRPP compared to the ideal PRS-RSRPP defined as

$$\mathrm{RSRPP}_p \propto \left| \sum_k H_k \exp\left(j 2\pi D_p \frac{k}{N_{\mathrm{IFFT}}} \right) \right|^2$$

Where:

H_k is the effective channel frequency response (over REs occupied by PRS) measured without receiver noise.

D_p is the exact delay of the p-th path in the channel model.

Table 10.1.38.2.1-1: PRS-RSRPP absolute accuracy for FR1

Accuracy		Conditions						
					Io [Note 7] range			
Normal condition	Extreme condition	PRS Ês/Iot	PRS BW	Repetition factor ($T_{rep}^{PRS} * L_{PRS} / K_{comb}^{PRS}$)	NR operating band groups [Note 8]	Minimum Io [Note 1] dBm / SCS_{PRS}		Maximum Io

10.1.38.3 Report mapping

10.1.38.3.1 Absolute PRS-RSRPP Measurement Report Mapping

The reporting range of absolute PRS-RSRPP measurement is defined from -156 dBm to -31 dBm with 1 dB resolution.

The mapping of measured quantity is defined in table 10.1.38.3.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

The UE capable of *additionalPathsExtSupport-r17* can report the PRS-RSRPP measurement of up to its supported number of additional paths.

Table 10.1.38.3.1-1: Measurement report mapping for PRS-RSRPP

Reported value	Measured quantity value	Unit
PRS_RSRPP_0	PRS-RSRPP<-156	dBm
PRS_RSRPP_1	-156≤PRS-RSRPP<-155	dBm
PRS_RSRPP_2	-155≤PRS-RSRPP<-154	dBm

10.1.38.3.2 Differential Report Mapping for PRS-RSRPP Measurement

The reporting range of differential PRS-RSRPP is defined from -30 dB to 30 dB with 1 dB resolution.

The mapping of measured quantity is defined in table 10.1.38.3.2-1. The range in the signalling may be larger than the guaranteed accuracy range.

For differential reporting, PRS-RSRPP is reported as the difference in dB with respect to the first reported PRS-RSRPP.

Table 10.1.38.3.2-1: Measurement report mapping for differential PRS-RSRPP

10.1.38APRS-RSRPP Measurements Based on PRS Aggregation

10.1. 38A.1 Introduction

The requirements in clause 10.1.38A.2 shall apply, provided the UE has received *nr-DL-TDOA-RequestLocationInformation* or *nr-Multi-RTT-RequestLocationInformation* or *nr-DL-AoD-RequestLocationInformation* message from LMF via LPP TS 37.355 [34] with a request to perform measurement by aggregating PRS resources from multiple PFLs via *nr-DL-PRS-JointMeasurementRequested* for UE to report one or more DL PRS-RSRPP measurements defined in TS 38.215 [4]. The requirements in clause 10.1.38A.2 shall apply:

- when UE is in RRC_CONNECTED state, and the measurement is performed with MG,
- when UE is in RRC_INACTIVE state.
- when UE is in RRC_IDLE state.

The requirements in clause 10.1.38A.2 apply for the first path PRS-RSRP measurement.

10.1.38A.2 Measurement Accuracy Requirements

10.1.38A.2.1 Absolute PRS RSRPP accuracy

The accuracy requirements in clause 10.1.38.2.1 corresponding to the total aggregated PRS bandwidth shall apply.

10.1.38A.3 Report mapping

10.1.38A.3.1 Absolute PRS-RSRPP Measurement Report Mapping

The absolute report mapping for PRS-RSRPP measurement in clause 10.1.38.3.1 shall apply.

10.1.38A.3.2 Differential Report Mapping for PRS-RSRPP Measurement

The differential report mapping for PRS-RSRPP measurement in clause 10.1.38.3.2 shall apply.

10.1.39 UE Rx-Tx time difference measurements for RTT-based PDC

10.1.39.1 *Void*

10.1.39.2 Measurement Accuracy Requirements for PRS

The error in the reported value of UE Rx-Tx time difference measurement, including both the measurement error and the reporting quantization error, shall be within the accuracy requirements specified in this clause.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall not apply, if:

- N_{TA_offset} defined in table 7.1.2-2 changes during the UE Rx-Tx measurement period or
- if the uplink transmission timing changes during the UE Rx-Tx measurement period due to the network-configured Timing Advance.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that:

- The UE transmits SRS within -160, 160 msec of at least one PDC DL PRS resource from the serving cell (PCell).

When a serving cell change occurs during the UE Rx-Tx measurement period, the UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that the serving cell change does not impact SRS configuration for the UE Rx-Tx measurement.

The accuracy requirements in table 10.1.39.2-1 for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to Annex B.2.14 for a corresponding Band.

AWGN propagation condition.

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in clause 3.5.
NOTE 3: T_{rep}^{PRS}, L_{PRS}, K_{comb}^{PRS} are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols and dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from Table 10.1.39.2-3.
NOTE 8: ε is the margin for reporting quantitization error and $\varepsilon = 16\ Tc$.

The accuracy requirements in table 10.1.39.2-2 for FR2 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.

AWGN propagation condition.

Table 10.1.39.2-2: UE Rx-Tx time difference measurement accuracy in FR2 in AWGN

N/A	N/A	≥ 132	24

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.

Table 10.1.39.2-4: Margin for UE Rx-Tx time difference measurement accuracy in FR2

Min(PRS BW, SRS BW) (MHz)		Margin (Tc [Note 1])
SCS = 60 kHz	SCS = 120 kHz	
≥ 24	N/A	76
≥ 64	≥ 32	32
≥ 132	≥ 64	24
N/A	≥ 128	20

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.

10.1.39.3 Measurement Accuracy Requirements for TRS

The error in the reported value of UE Rx-Tx time difference measurement, including both the measurement error and the reporting quantization error, shall be within the accuracy requirements specified in this clause.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall not apply, if:

- N_{TA_offset} defined in table 7.1.2-2 changes during the UE Rx-Tx measurement period or
- if the uplink transmission timing changes during the UE Rx-Tx measurement period due to the network-configured Timing Advance.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that:

- The UE transmits SRS within -160, 160 msec of at least one PDC TRS resource from the serving cell (PCell).

When a serving cell change occurs during the UE Rx-Tx measurement period, the UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that the serving cell change does not impact SRS configuration for the UE Rx-Tx measurement.

The accuracy requirements in table 10.1.39.3-1 for FR1 are valid under the following conditions:

Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.

$PRP|_{dBm}$ according to annex B.2.13 for a corresponding Band.

AWGN propagation condition.

10.1.43 DL-RSCPD Measurements

10.1.43.1 Introduction

The requirements in clause 10.1.43 shall apply, provided the UE has received *NR-DL-TDOA-RequestLocationInformation* message with *dl-PRS-RSCPD-Request-r18* from LMF via LPP TS 37.355 [34] requesting the UE to measure and report DL RSCPD measurement together with DL RSTD measurements defined in TS 38.215 [4]. The requirements in clause 10.1.43 shall apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG,
- when UE is in RRC_IDLE or RRC_INACTIVE state.

10.1.43.2.1 Measurement Accuracy Requirements

The accuracy requirements for DL RSCPD measurement are based on single measurement sample in single PFL and shall be within ±(X+Y) degree, provided that the following conditions are met:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled for FR1.
- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled for FR2.
- Conditions for DL RSCPD measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- The measurements to derive DL RSCPD are performed on PRS resources within same set of symbols.
- DL RSCPD measurements are based on PRS resources with comb size other than 12.

The requirements in this clause are derived based on AWGN channel and on two-tap channel defined in 38.101-4 [21] annex B.2.4 (a = 1, τ_d=0.45 μs and f_D=5 Hz).

X is defined in table 10.1.43.2-1 for AWGN channel and table 10.1.43.2-2 for two-tap channel for FR1 and is derived assuming no carrier frequency offset at TRP.

X is defined in table 10.1.43.2-3 for AWGN channel and table 10.1.43.2-4 for two-tap channel for FR2 and is derived assuming no carrier frequency offset at TRP.

Y is 14 degrees for FR1 and 28 degrees for FR2.

10.1.43.3 Report Mapping

10.1.43.3.1 Absolute DL RSCPD Measurement Reporting

The reporting range of DL RSCPD, as defined in clause 5.1.43 of TS 38.215 [4], is defined from -180 degree to +180 degree. The reporting resolution is 0.1 degree.

The mapping of DL RSCPD measured quantity is defined in table 10.1.43.3.1-1.

Table 10.1.43.3.1-1: DL RSCPD measurement report mapping

Reported value	Measured quantity value (DL RSCPD)	Unit
DL_RSCPD_0000	-180 ≤ DL RSCPD < -179.9	degree
DL_RSCPD_0001	-179.9 ≤ DL RSCPD < -179.8	degree
DL_RSCPD_0002	-179.8 ≤ DL RSCPD < -179.7	degree
…	…	…
DL_RSCPD_1798	-0.2 ≤ DL RSCPD < -0.1	degree
DL_RSCPD_1799	-0.1 ≤ DL RSCPD < 0	degree
DL_RSCPD_1800	0 ≤ DL RSCPD < 0.1	degree
DL_RSCPD_1801	0.1 ≤ DL RSCPD < 0.2	degree
DL_RSCPD_1802	0.2 ≤ DL RSCPD < 0.3	degree
…	…	…
DL_RSCPD_3598	179.8 ≤ DL RSCPD < 179.9	degree
DL_RSCPD_3599	179.9 ≤ DL RSCPD < 180	degree

10.1.44 DL-RSCP Measurements

10.1.44.1 Introduction

The requirements in clause 10.1.44 shall apply, provided the UE has received *NR-Multi-RTT-RequestLocationInformation* message with *dl-PRS-RSCP-Request-r18* from LMF via LPP TS 37.355 [34] requesting the UE to measure and report DL RSCP measurement together with UE Rx-Tx time difference measurements defined in TS 38.215 [4].

The requirements in clause 10.1.44 shall apply:

- when UE is in RRC_CONNECTED state and the measurement is performed with MG,
- when UE is in RRC_INACTIVE state.

10.1.44.2 Measurement Accuracy Requirements

The relative accuracy of DL RSCP measurement in this clause is defined as accuracy of the difference between two DL RSCP measurements, each based on single measurement sample in single PFL.

The requirements in this clause are derived based on AWGN channel and based on two-tap channel defined in 38.101-4 [21] annex B.2.4 (a = 1, τ_d=0.45 μs and f_D=5 Hz).

The DL RSCP relative measurement accuracy requirements in this clause shall not apply, if:

- N_{TA_offset} defined in table 7.1.2-2 changes during the DL RSCP with UE Rx-Tx measurement period, or
- if the uplink transmission timing changes during the DL RSCP with UE Rx-Tx measurement period due to the network-configured Timing Advance.

The DL RSCP relative measurement accuracy requirements in this clause shall apply provided that:

- The UE transmits SRS within the range from -160 ms to 160 ms of at least one DL PRS resource of each of the TRPs in the assistance data.

If the uplink transmission timing changes during the DL RSCP with UE Rx-Tx measurement period due to the autonomous timing adjustment defined in clause 7.1.2 then:

- DL RSCP and UE Rx-Tx measurement accuracy requirements shall apply for a cell, which is also the downlink reference cell (defined in section 7.1.1) for SRS transmission.
- UE Rx-Tx measurement accuracy requirements shall not apply for a cell, which is not the downlink reference cell (defined in section 7.1.1) for SRS transmission.

When a serving cell change occurs during the DL RSCP with UE Rx-Tx measurement period, UE Rx-Tx measurement accuracy requirements and DL RSCP measurement requirements do not apply.

The relative DL RSCP accuracy requirements defined in clause 10.1.44 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled for FR1.
- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled for FR2.
- Conditions for DL RSCP measurements are fulfilled according to annex B.2.14 for a corresponding Band for each relevant PRS resource configured for measurement.
- DL RSCP measurements to derive the relative accuracy are performed on PRS resources within the same set of symbols.
- DL RSCPD measurements are based on PRS resources with comb size other than 12.

The accuracy requirement for relative DL-RSCP shall be within ±(X+Y) degree.

The values of X for accuracy requirements for relative DL-RSCP measurement in FR1 are defined in table 10.1.44.2-1 for AWGN channel and in table 10.1.44.2-2 for two-tap channel and is derived assuming no carrier frequency offset at TRP.

The values of X for accuracy requirements for relative DL-RSCP measurement in FR2 are defined in table 10.1.44.2-3 for AWGN channel and in table 10.1.44.2-4 for two-tap channel and is derived assuming no carrier frequency offset at TRP.

Y is 14 degrees for FR1 and 28 degrees for FR2.

Table 10.1.44.2-1: DL RSCP relative accuracy in FR1 for AWGN channel

Accuracy ($\hat{E}s/Iot)_{ref}$ ≥ -3dB ($\hat{E}s/Iot)_i$ ≥ -13dB	Accuracy ($\hat{E}s/Iot)_{ref}$ ≥ 0dB ($\hat{E}s/Iot)_i$ ≥ -6dB	Conditions

NOTE 3: Io is assumed to have constant EPRE across the bandwidth.
NOTE 4: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.

10.1.44.3 Report Mapping

Relative DL RSCP measurement reporting in clause 10.1.44.3.1 applies to report:

- gap-based DL RSCP measurement, and
- DL RSCP in RRC_INACTIVE state.

10.1.44.3.1 Relative DL RSCP Measurement Reporting

The reporting range of relative DL RSCP, as defined in clause 5.1.42 of TS 38.215 [4], is defined from 0 degree to 360 degree. The reporting resolution is 0.1 degree.

The mapping of DL RSCP measured quantity is defined in table 10.1.44.3.1-1.

Table 10.1.44.3.1-1: DL RSCP measurement report mapping

Reported value	Measured quantity value (DL RSCP)	Unit
DL_RSCP_0000	0 ≤ DL RSCP < 0.1	degree
DL_RSCP_0001	0.1 ≤ DL RSCP < 0.2	degree
DL_RSCP_0002	0.2 ≤ DL RSCP < 0.3	degree
…	…	…
DL_RSCP_1798	179.8 ≤ DL RSCP < 179.9	degree
DL_RSCP_1799	179.9 ≤ DL RSCP < 180	degree
DL_RSCP_1800	180 ≤ DL RSCP < 180.1	degree
DL_RSCP_1801	180.1 ≤ DL RSCP < 180.2	degree
DL_RSCP_1802	180.2 ≤ DL RSCP < 180.3	degree
…	…	…
DL_RSCP_3598	359.8 ≤ DL RSCP < 359.9	degree
DL_RSCP_3599	359.9 ≤ DL RSCP < 360	degree

10.1A NR measurements for RedCap

10.1A.1 Introduction

The requirements in this clause are applicable for RedCap UE as follows:

- intra-frequency requirements apply for PCell measurements in SA,
- inter-frequency requirements apply for non-serving cell measurements on NR carrier frequencies.
- inter-frequency requirements apply for measurements from one cell on a frequency compared to the measurement from another cell on a different frequency.

The accuracy requirements in this clause are applicable for AWGN radio propagation conditions. The accuracy requirements of RSRP, RSRQ and SINR are applicable provided that reference SSB is not changed during measurement period.

10.1A.2 Intra-frequency RSRP accuracy requirements for FR1

10.1A.2.1 Intra-frequency SS-RSRP accuracy requirements

10.1A.2.1.1 Absolute SS-RSRP Accuracy

The accuracy requirements in clause 10.1.2.1.1 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.2.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.15 for a corresponding Band for each relevant SSB.

Table 10.1A.2.1.1-1: SS-RSRP Intra-frequency absolute accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions			
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range		
			NR operating band groups [Note 2]	Minimum Io	Maximum Io

dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±5.5	±10	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±9	±12	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1A.2.1.2 Relative SS-RSRP Accuracy

The accuracy requirements in clause 10.1.2.1.2 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.2.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.15 for a corresponding Band for each relevant SSB.

Table 10.1A.2.1.2-1: SS-RSRP Intra-frequency relative accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}s/Iot$ Note 2	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
			NR_FDD_FR1_A, NR_TDD_FR1_A,	-121	-118	N/A	-50

±3	±4	≥-3	NR_SDL_FR1_A				
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±4	±4	≥-6	Note 3	Note 3	Note 3	N/A	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1A.3 Intra-frequency RSRP accuracy requirements for FR2

10.1A.3.1 Intra-frequency SS-RSRP accuracy requirements

10.1A.3.1.1 Absolute SS-RSRP Accuracy

The accuracy requirements in clause 10.1.3.1.1 shall apply.

10.1A.3.1.2 Relative SS-RSRP Accuracy

The accuracy requirements in clause 10.1.3.1.2 shall apply.

10.1A.4 Inter-frequency RSRP accuracy requirements for FR1

10.1A.4.1 Inter-frequency SS-RSRP accuracy requirements

10.1A.4.1.1 Absolute SS-RSRP Accuracy in FR1

The accuracy requirements in clause 10.1.4.1.1 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.4.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.16 for a corresponding Band for each relevant SSB.

Table 10.1A.4.1.1-1: SS-RSRP Inter-frequency Absolute accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 3	Minimum Io			Maximum Io

				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		

±5.5	±10	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-70
±9	±12	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: Void NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1A.4.1.2 Relative SS-RSRP Accuracy in FR1

The accuracy requirements in clause 10.1.4.1.2 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.4.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] clause 7.3 for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.16 for a corresponding Band for each relevant SSB.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1A.4.1.2-1: SS-RSRP Inter-frequency relative accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 3	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		

±5.5	±7	≥-6	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies. NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1A.5 Inter-frequency RSRP accuracy requirements for FR2

10.1A.5.1 Inter-frequency SS-RSRP accuracy requirements

10.1A.5.1.1 Absolute SS-RSRP Accuracy

The accuracy requirements in clause 10.1.5.1.1 shall apply.

10.1A.5.1.2 Relative SS-RSRP Accuracy

The accuracy requirements in clause 10.1.5.1.2 shall apply.

10.1A.6 Intra-frequency RSRQ accuracy requirements for FR1

10.1A.6.1 Intra-frequency SS-RSRQ accuracy requirements in FR1

10.1A.6.1.1 Absolute SS-RSRQ Accuracy in FR1

The accuracy requirements in clause 10.1.7.1.1 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.6.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.15 for a corresponding Band for each relevant SSB.

Table 10.1A.6.1.1-1: SS-RSRQ Intra-frequency absolute accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions				
Normal condition	Extreme condition	SSB Ês/Iot	Io [Note 1] range

NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement. NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.							

10.1A.7 Intra-frequency RSRQ accuracy requirements for FR2

10.1A.7.1 Intra-frequency SS-RSRQ accuracy requirements in FR2

10.1A.7.1.1 Absolute SS-RSRQ Accuracy in FR2

The accuracy requirements in clause 10.1.8.1.1 shall apply.

10.1A.8 Inter-frequency RSRQ accuracy requirements for FR1

10.1A.8.1 Inter-frequency SS-RSRQ accuracy requirements in FR1

10.1A.8.1.1 Absolute SS-RSRQ in FR1

The accuracy requirements in clause 10.1.9.1.1 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.8.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.16 for a corresponding Band for each relevant SSB.

Table 10.1A.8.1.1-1: SS-RSRQ Inter-frequency absolute accuracy for 1Rx RedCap UE in FR1

Accuracy		**Conditions**					
Normal condition	**Extreme condition**	**SSB $\hat{E}_s/I_{ot}$**	**Io [Note 1] range**				
			NR operating band groups [Note 3]	**Minimum Io**			**Maximum Io**
dB	**dB**	**dB**		**dBm / SCS_{SSB}**		**$dBm/BW_{Channel}$**	**$dBm/BW_{Channel}$**
				SCS_{SSB} = 15 kHz	**SCS_{SSB} = 30 kHz**		
			NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50

±3.5	±5	≥-3	NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±4.5	±5	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1A.8.1.2 Relative SS-RSRQ Accuracy in FR1

The accuracy requirements in clause 10.1.9.1.2 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.8.1.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.16 for a corresponding Band for each relevant SSB.
- $|SSB_RP1_{dBm} - SSB_RP2_{dBm}| \leq 27$ dB
- |Channel 1_Io -Channel 2_Io | ≤ 20 dB

Table 10.1A.8.1.2-1: SS-RSRQ Inter-frequency relative accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 2	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4	±5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±5	±5	≥-6	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of cells to which the requirement applies.

NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1A.9 Inter-frequency RSRQ accuracy requirements for FR2

10.1A.9.1 Inter-frequency SS-RSRQ accuracy requirements in FR2

10.1A.9.1.1 Absolute SS-RSRQ Accuracy in FR2

The accuracy requirements in clause 10.1.10.1.1 shall apply.

10.1A.9.1.2 Relative SS-RSRQ Accuracy in FR2

The accuracy requirements in clause 10.1.10.1.2 shall apply.

10.1A.10 Intra-frequency SINR accuracy requirements for FR1

10.1A.10.1 Intra-frequency SS-SINR accuracy requirements in FR1

10.1A.10.1.1 Absolute SS-SINR Accuracy in FR1

The accuracy requirements in clause 10.1.12.1.1 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.10.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for intra-frequency measurements are fulfilled according to annex B.2.15 for a corresponding Band.

Table 10.1A.10.1.1-1: SS-SINR Intra-frequency absolute accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB $\hat{E}_s/I_{ot}$ Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io
dB	dB	dB		dBm / SCS_{SSB}		$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
				SCS_{SSB} = 15 kHz	SCS_{SSB} = 30 kHz		
±4.0	±4	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	N/A	-50
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	N/A	-50
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	N/A	-50
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	N/A	-50
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50
±4.5	±4	≥-6	Note 2	Note 2	Note 2	Note 2	Note 2

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.

NOTE 2: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.
NOTE 3: The requirements apply for SSB Ês/Iot ≤ 25 dB under non-HST scenarios.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 5: The requirements apply for SSB Ês/Iot ≤5 dB with SCS 15 kHz or 30 kHz under NR high speed scenarios.

10.1A.11 Intra-frequency SINR accuracy requirements for FR2

10.1A.11.1 Intra-frequency SS-SINR accuracy requirements in FR2

10.1A.11.1.1 Absolute SS-SINR Accuracy in FR2

The accuracy requirements in clause 10.1.13.1.1 shall apply.

10.1A.12 Inter-frequency SINR accuracy requirements for FR1

10.1A.12.1 Inter-frequency SS-SINR accuracy requirements in FR1

10.1A.12.1.1 Absolute SS-SINR Accuracy in FR1

The accuracy requirements in clause 10.1.14.1.1 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.12.1.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for inter-frequency measurements are fulfilled according to annex B.2.16 for a corresponding Band.

Table 10.1A.12.1.1-1: SS-SINR Inter-frequency absolute accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions					
Normal condition	Extreme condition	SSB Ês/Iot Note 3	Io Note 1 range				
			NR operating band groups Note 4	Minimum Io			Maximum Io

			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	N/A	-50
			NR_FDD_FR1_F	-118.5	-115.5	N/A	-50
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	N/A	-50
			NR_FDD_FR1_H	-117.5	-114.5	N/A	-50
			NR_FDD_FR1_N	-114.5	-111.5	N/A	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter SSB Ês/Iot is the minimum SSB Ês/Iot of the pair of SSBs to which the requirement applies.
NOTE 3: Void
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1A.14.2 CSI-RS based L1-RSRP accuracy requirements

10.1A.14.2.1 Absolute Accuracy

The accuracy requirements in clause 10.1.19.2.2 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.14.2.1-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.2 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1A.19.2.1-1.

Table 10.1A.14.2.1-1: CSI-RS based L1-RSRP absolute accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS Ês/Iot	Io [Note 1] range					
			NR operating band groups [Note 2]	Minimum Io				Maximum Io
dB	dB	dB		dBm / SCS_{CSI-RS}			dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
				SCS_{CSI-RS} = 15 kHz	SCS_{CSI-RS} = 30 kHz	SCS_{CSI-RS} = 60 kHz		
±8.0	±12.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A	-121	-118	-115	N/A	-70
			NR_FDD_FR1_B, NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_FDD_FR1_C, NR_TDD_FR1_C	-120	-117	-114	N/A	-70
			NR_FDD_FR1_D, NR_TDD_FR1_D	-119.5	-116.5	-113.5	N/A	-70
			NR_FDD_FR1_E, NR_TDD_FR1_E	-119	-116	-113	N/A	-70
			NR_FDD_FR1_F	-118.5	-115.5	-112.5	N/A	-70
			NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-118	-115	-112	N/A	-70
			NR_FDD_FR1_H	-117.5	-114.5	-111.5	N/A	-70
			NR_FDD_FR1_N	-114.5	-111.5	-108.5	N/A	-70
±11.5	±14.5	≥-3	NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A, NR_FDD_FR1_B, NR_TDD_FR1_B, NR_FDD_FR1_C, NR_TDD_FR1_C, NR_FDD_FR1_D, NR_TDD_FR1_D, NR_FDD_FR1_E, NR_TDD_FR1_E, NR_FDD_FR1_F, NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G, NR_FDD_FR1_H, NR_FDD_FR1_N	N/A	N/A	N/A	-70	-50

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1A.14.2.2 Relative Accuracy

The accuracy requirements in clause 10.1.19.2.2 shall apply when RedCap UE is capable of 2Rx. When UE is only required to support 1RX, the absolute accuracy requirements in table 10.1A.14.2.2-1 are valid under the following conditions:

- Conditions defined in clause 7.3I of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for L1-RSRP measurements are fulfilled according to annex B.2.4.2 for a corresponding Band for each relevant CSI-RS.
- The bandwidth of CSI-RS is 48 PRBs and the density is 3.

The performance with larger bandwidth of CSI-RS is equal to or better than the accuracy requirements in table 10.1A.14.2.2-1.

Table 10.1A.14.2.2-1: CSI-RS based L1-RSRP relative accuracy for 1Rx RedCap UE in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	CSI-RS Ês/Iot Note 2	Io Note 1 range

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: The parameter CSI-RS Ês/Iot is the minimum CSI-RS Ês/Iot of the pair of CSI-RS resources to which the requirement applies.
NOTE 3: Void
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.

10.1A.15 L1-RSRP accuracy requirements for FR2

10.1A.15.1 SSB based L1-RSRP accuracy requirements

10.1A.15.1.1 Absolute Accuracy

The accuracy requirements in clause 10.1.20.1.1 shall apply.

10.1A.15.1.2 Relative Accuracy

The accuracy requirements in clause 10.1.20.1.1 shall apply.

10.1A.15.2 CSI-RS based L1-RSRP accuracy requirements

10.1A.15.2.1 Absolute Accuracy

The accuracy requirements in clause 10.1.20.1.1 shall apply.

10.1A.15.2.2 Relative Accuracy

The accuracy requirements in clause 10.1.20.1.1 shall apply.

10.1A.16RSTD Measurements for RedCap Positioning

10.1A.16.1 Introduction

The requirements in clause 10.1A.16 shall apply, provided the UE has received *nr-DL-TDOA-RequestLocationInformation* message from LMF via LPP TS 37.355 [34] requesting the UE to report one or more DL RSTD measurements defined in TS 38.215 [4].

The requirements in clause 10.1A.16 shall apply,

- When the RedCap UE is in RRC_CONNECTED state and the RSTD measurement is performed with and without RX FH within measurement gap.
- When RedCap UE is in RRC_CONNECTED state and the RSTD measurement is performed without RX FH outside of the measurement gap.
- When RedCap UE is in RRC_CONNECTED state and the RSTD measurement is performed without RX FH when both PPW and measurement gap is configured.
- When RedCap UE is in RRC_INACTIVE state and the RSTD measurement is performed with and without RX FH.
- When RedCap UE is in RRC_IDLE state and the RSTD measurement is performed with and without RX FH.

The requirements defined in clause 10.1A.16 are valid under the conditions defined in clause 10.1.23.

10.1A.16.2 Measurement Accuracy Requirements

The accuracy requirements for RSTD measurement shall be within $\pm(X+Y+Z+\Delta)$ T_c. The values of Y, Z and Δ and Rx TEG based requirement are as defined in clause 10.1.23.2. For Rx FH, PRS BW in tables 10.1.23.2-5, 10.1.23.2-5a, 10.1.23.2-6, and 10.1.23.2-6a refer to per hop BW. The requirements for fading channel in this clause are derived based on TDL-A (30 ns delay spread, 5Hz) and TDL-C (60 ns delay spread, 300 Hz) channel models for FR1 and FR2, respectively.

10.1A.16.2.1 Accuracy requirement for RSTD measurement without RX FH

For 4 sample RSTD measurement performed by 2Rx RedCap UE without RX FH, the values of X, corresponding to the PRS bandwidth supported by the RedCap UE for PRS measurement without RX FH, in tables 10.1.23.2-1 in FR1 for AWGN, 10.1.23.2-2 in FR2 for AWGN, 10.1.23.2-3 in FR1 for fading channel, and 10.1.23.2-4 in FR2 for fading channel apply.

For reduced sample RSTD measurement performed by 2Rx RedCap UE without RX FH, the values of X, corresponding to the PRS bandwidth supported by the RedCap UE for PRS measurement without RX FH, in tables 10.1.23.2-7 in FR1 for AWGN, and 10.1.23.2-8 in FR2 for AWGN apply.

The value of X for 4 sample RSTD measurement performed by 1Rx RedCap UE without RX FH is defined in table 10.1A.16.2.1-1 in FR1 for AWGN, and in table 10.1A.16.2.1-2 in FR1 for fading channel.

The value of X for reduced sample RSTD measurement performed by 1Rx RedCap UE without RX FH is defined in table 10.1A.16.2.1-3 in FR1 for AWGN.

Table 10.1A.16.2.1-1: RSTD absolute accuracy for 1Rx RedCap UE in FR1 for AWGN channel (without RX FH)

10.1A.16.3 Report Mapping

10.1A.16.3.1 Absolute DL RSTD Measurement Reporting

Measurement reporting range and report mapping tables defined in clause 10.1.23.3.1 apply to DL RSTD measurement reporting for both 1Rx and 2Rx RedCap UEs and DL RSTD measurement performed with and without RX FH.

10.1A.16.3.2 Differential Reporting for DL RSTD Measurement

Measurement reporting range and report mapping tables defined in clause 10.1.23.3.2 apply to DL RSTD measurement reporting for both 1Rx and 2Rx RedCap UEs and DL RSTD measurement performed with and without RX FH.

10.1A.16.3.3 Additional Path Report Mapping for DL RSTD

Measurement reporting range and report mapping tables defined in clause 10.1.23.3.3 apply to DL RSTD measurement reporting for both 1Rx and 2Rx RedCap UEs and DL RSTD measurement performed with and without RX FH.

10.1A.17PRS-RSRP Measurements for RedCap positioning

10.1A.17.1 Introduction

The requirements in clause 10.1A.17 shall apply, provided the UE has received *nr-DL-TDOA-RequestLocationInformation* or *nr-Multi-RTT-RequestLocationInformation* or *nr-DL-AoD-RequestLocationInformation* message from LMF via LPP TS 37.355 [34] requesting the UE to report one or more DL PRS-RSRP measurements defined in TS 38.215 [4].

The requirements in clause 10.1A.17 shall apply,

- When the RedCap UE is in RRC_CONNECTED state and the PRS-RSRP measurement is performed with and without RX FH within measurement gap.
- When RedCap UE is in RRC_CONNECTED state and the PRS-RSRP measurement is performed without RX FH outside of the measurement gap.
- When RedCap UE is in RRC_CONNECTED state and the PRS-RSRP measurement is performed without RX FH when both PPW and measurement gap is configured.
- When RedCap UE is in RRC_INACTIVE state and the PRS-RSRP measurement is performed with and without RX FH.
- When RedCap UE is in RRC_IDLE state and the PRS-RSRP measurement is performed with and without RX FH.

The requirements defined in clause 10.1A.17 are valid under the conditions defined in clause 10.1.24.1.

10.1A.17.2 Measurement Accuracy Requirements

10.1A.17.2.1 Absolute PRS RSRP Accuracy Requirement

Accuracy requirement, corresponding to the PRS bandwidth supported by the RedCap UE for measurement without RX FH, defined in clause 10.1.24.2.1 apply to the PRS-RSRP measurement performed by 2Rx RedCap UE without RX FH.

Accuracy requirement in clause 10.1.24.2.1 apply to the PRS-RSRP measurement performed by 2Rx RedCap UE with RX FH, where the PRS bandwidth in clause 10.1.24.2.1 correspond to the PRS bandwidth measured by the RedCap UE per hop.

Accuracy requirement in table 10.1A.17.2.1-1 applies to the 4-sample PRS-RSRP measurement performed by 1Rx RedCap UE without RX FH.

Accuracy requirement in table 10.1A.17.2.1-2 applies to reduced sample PRS-RSRP measurement performed by 1Rx RedCap UE without RX FH

Accuracy requirement in table 10.1A.17.2.1-1 and table 10.1A.17.2.1-2 apply to the PRS-RSRP measurement performed by 1Rx RedCap UE with RX FH, where the PRS bandwidth in table 10.1A.17.2.1-1 and table 10.1A.17.2.1-2 correspond to the PRS bandwidth measured by the RedCap UE per hop.

Table 10.1A.17.2.1-1: PRS-RSRP absolute accuracy for 1Rx RedCap UE in FR1 (without RX FH)

Accuracy		Conditions							
					Io Note 5 range				
Normal condition	Extreme condition	PRS $\hat{E}s/Iot$	PRS BW Note 2	Repetition factor ($T_{rep}^{PRS} * L_{PRS} / K_{comb}^{PRS}$)	NR operating band groups Note 6	Minimum Io Note 1 dBm / SCS_{PRS}			Maximum Io
						dBm / SCS_{PRS}			$dBm/BW_{Channel}$
dB	dB	dB	PRB			dBm/15kHz Note 4	dBm/30kHz Note 4	dBm/60kHz Note 4	
±7	±11.5	≥-3dB	≥24	All	NR_FDD_FR1_A,	-127	-124	-121	-50

Accuracy		Conditions							
					Io Note 5 range				
Normal condition	Extreme condition	PRS Ês/Iot	PRS BW Note 2	Repetition factor ($T_{rep}^{PRS} * L_{PRS} / K_{comb}^{PRS}$)	NR operating band groups Note 6	Minimum Io Note 1 dBm / SCS_{PRS}			Maximum Io
						dBm / SCS_{PRS}			
dB	dB	dB	PRB			dBm/15kHz Note 4	dBm/30kHz Note 4	dBm/60kHz Note 4	dBm/$BW_{Channel}$
					NR_TDD_FR1_A, NR_SDL_FR1_A				
					NR_FDD_FR1_B, NR_TDD_FR1_B	-126.5	-123.5	-120.5	-50
					NR_FDD_FR1_C, NR_TDD_FR1_C	-126	-123	-120	-50
					NR_FDD_FR1_D, NR_TDD_FR1_D	-125.5	-122.5	-119.5	-50
					NR_FDD_FR1_E, NR_TDD_FR1_E	-125	-122	-119	-50
					NR_FDD_FR1_F	-124.5	-121.5	-118.5	-50
					NR_FDD_FR1_G, NR_TDD_FR1_G, NR_SDL_FR1_G	-124	-121	-118	-50
					NR_FDD_FR1_H	-123.5	-120.5	-117.5	-50
					NR_FDD_FR1_N	-120.5	-117.5	-114.5	-50
±7.5	±12	≥-10dB	24 ≤ BW ≤ 52	All	Note 3				
±6	±10.5		52< BW≤ 104	All	Note 3				
±5.5	±9.5		BW >104	All	Note 3				

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: PRS bandwidth is as indicated in *dl-PRS-ResourceBandwidth* in the DL-TDOA or DL-AoD or multi-RTT assistance data defined in TS 37.355 34].
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth ≥ 24 PRB.
NOTE 4: The condition level is increased by Δ>0, when applicable, as described in Sections B.3.2 and B.3.3.
NOTE 5: The Io is defined in PRS positioning subframes. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same subframe.
NOTE 6: NR operating band groups are as defined in Section 3.5.2.

Table 10.1A.17.2.1-2: PRS-RSRP absolute accuracy for 1Rx RedCap UE in FR1 with reduced sample number (without RX FH)

±3.5	±8		BW >104	All	Note 3				

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: PRS bandwidth is as indicated in *dl-PRS-ResourceBandwidth* in the DL-TDOA or DL-AoD or multi-RTT assistance data defined in TS 37.355 [34].
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth ≥ 48 PRB.
NOTE 4: The condition level is increased by Δ>0, when applicable, as described in Sections B.3.2 and B.3.3.
NOTE 5: NR operating band groups are as defined in Section 3.5.2.

10.1A.17.2.2 Relative PRS RSRP Accuracy Requirement

Relative accuracy requirement, corresponding to the PRS bandwidth supported by the RedCap UE for measurement without RX FH, defined in clause 10.1.24.2.2 apply to the PRS-RSRP measurement performed by 2Rx RedCap UE without RX FH.

Relative accuracy requirement in clause 10.1.24.2.2 apply to the PRS-RSRP measurement performed by 2Rx RedCap UE with RX FH, where the PRS bandwidth in clause 10.1.24.2.2 correspond to the PRS bandwidth measured by the RedCap UE per hop.

10.1A.17.3 Report Mapping

10.1A.17.3.1 Absolute PRS-RSRP Measurement Report Mapping

Measurement reporting range and report mapping tables defined in clause 10.1.24.3.1 apply to PRS-RSRP measurement reporting for both 1Rx and 2Rx RedCap UEs and PRS-RSRP measurement performed with and without RX FH.

10.1A.17.3.2 Differential Report Mapping for PRS-RSRP Measurement

Measurement reporting range and report mapping tables defined in clause 10.1.24.3.2 apply to PRS-RSRP measurement reporting for both 1Rx and 2Rx RedCap UEs and PRS-RSRP measurement performed with and without RX FH.

10.1A.18 UE Rx-Tx Time Difference Measurements for RedCap Positioning

10.1A.18.1 Introduction

The requirements in clause 10.1A.18 shall apply, provided the RedCap UE has received *nr-Multi-RTT-RequestLocationInformation* message from LMF via LPP TS 37.355 [34] requesting the UE to report one or more UE Rx-Tx time difference measurements defined in TS 38.215 [4]. The requirements in clause 10.1A.18 shall apply:

- When the RedCap UE is in RRC_CONNECTED state and the UE Rx-Tx time difference measurement is performed with and without RX FH within measurement gap.
- When RedCap UE is in RRC_CONNECTED state and the UE Rx-Tx time difference measurement is performed without RX FH outside of the measurement gap.
- When RedCap UE is in RRC_CONNECTED state and the UE Rx-Tx time difference measurement is performed without RX FH when both PPW and measurement gap is configured.
- When RedCap UE is in RRC_INACTIVE state and the UE Rx-Tx time difference measurement is performed with and without RX FH.

10.1A.18.2 Measurement Accuracy Requirements

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall not apply, if:

- N_{TA_offset} defined in table 7.1A.2-2 changes during the UE Rx-Tx measurement period or
- if the uplink transmission timing changes during the UE Rx-Tx measurement period due to the network-configured Timing Advance.

The UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that:

- The UE transmits SRS within the range from -160 ms to 160 ms of at least one DL PRS resource of each of the TRPs in the assistance data.

If the uplink transmission timing changes during the UE Rx-Tx measurement period due to the autonomous timing adjustment defined in clause 7.1A.2 then:

- UE Rx-Tx measurement accuracy requirements shall apply for a cell, which is also the downlink reference cell (defined in clause 7.1A.1) for SRS transmission even if the uplink transmission timing changes during the UE Rx-Tx measurement period due to autonomous adjustment.
- UE Rx-Tx measurement accuracy requirements shall not apply for a cell, which is not the downlink reference cell (defined in clause 7.1A.1) for SRS transmission, if the uplink transmission timing changes during the UE Rx-Tx measurement period due to autonomous adjustment.

When a serving cell change occurs during the UE Rx-Tx measurement period, the UE Rx-Tx time difference measurement accuracy requirements in this clause shall apply provided that the serving cell change does not impact SRS configuration for the UE Rx-Tx measurement.

The relative accuracy of UE Rx-Tx measurement in this clause is defined as accuracy of the difference between two UE Rx-Tx measurements.

10.1A.18.2.1 UE Rx-Tx Accuracy Requirement for 2RX RedCap UE without FH

For UE Rx-Tx time difference measurement performed by 2RX RedCap UE without RX FH, the accuracy requirements corresponding to the PRS bandwidth supported by the RedCap UE for PRS measurement without RX FH in clause 10.1.25.2 shall apply.

10.1A.18.2.2 UE Rx-Tx Accuracy Requirement for 1RX RedCap UE without FH

The accuracy requirements in table 10.1A.18.2.2-1 for FR1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- AWGN propagation condition.

Table 10.1A.18.2.2-1: UE Rx-Tx time difference measurement accuracy in FR1 in AWGN

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in Section 3.5.
NOTE 3: T_{rep}^{PRS}, L_{PRS}, K_{comb}^{PRS} are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols* and *dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 7: δ is the margin determined from table 10.1A.18.2.2-3.

The accuracy requirements in table 10.1A.18.2.2-1a for FR1 for are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- Number of measurement samples is less than 4.
- AWGN propagation condition.

Table 10.1A.18.2.2-1a: UE Rx-Tx time difference measurement accuracy in FR1 in AWGN with reduced measurement samplesAccuracy	Conditions						
	PRS Ês/Iot	Minimum PRS bandwidth	PRS SCS	PRS resource repetition ($T_{rep}^{PRS} * L_{PRS} / K_{comb}^{PRS}$ Note 3	NR operating band groups Note 2	Io Note 4 range	
						Minimum Io Note 1	Maximum Io

±40+δ		104		≥1	NOTE 6	NOTE 6	NOTE 6
±39+δ		48	30	≥1	NOTE 6	NOTE 6	NOTE 6

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in Section 3.5.
NOTE 3: $T_{\mathrm{rep}}^{\mathrm{PRS}}$, L_{PRS}, $K_{\mathrm{comb}}^{\mathrm{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols,* and *dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS as defined in table 10.1A.18.2.2-1.
NOTE 7: δ is the margin determined from table 10.1A.18.2.2-3.

The relative accuracy requirements in table 10.1A.18.2.2-1b for FR1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- AWGN propagation condition.
- the two UE Rx-Tx time difference measurements are associated with the same RxTx TEG.

Table 10.1A.18.2.2-1b: UE Rx-Tx time difference relative measurement accuracy in FR1 in AWGN with TEG reporting

Accuracy	Conditions						
	PRS Ês/Iot	PRS SCS	PRS bandwidth Note 1	PRS resource repetition ($T_{\mathrm{rep}}^{\mathrm{PRS}} * L_{\mathrm{PRS}} / K_{\mathrm{comb}}^{\mathrm{PRS}}$) Note 2	Io Note 3 range		
					NR operating band groups Note 4	Minimum Io	Maximum Io
Tc Note 5	dB	kHz	PRB			dBm/SCS	dBm/$BW_{Channel}$
137 + Δ	(PRS Ês/Iot)$_j$ ≥ -6dB	15	≥ 24	≥ 4	Note 6	Note 6	Note 6
79 + Δ			≥ 52	≥ 1	Note 6	Note 6	Note 6
45 + Δ			104	≥ 1	Note 6	Note 6	Note 6
81 + Δ	(PRS Ês/Iot)$_i$ ≥ -13dB	30	≥ 24	≥ 4	Note 6	Note 6	Note 6
46 + Δ			48	≥ 1	Note 6	Note 6	Note 6
52 + Δ		60	24	≥ 4	Note 6	Note 6	Note 6

NOTE 1: Minimum PRS bandwidth, which is minimum of the PRS bandwidths of resource j and resource i.
NOTE 2: Minimum number of PRS resource repetitions among resource j and resource i. $T_{\mathrm{rep}}^{\mathrm{PRS}}$, L_{PRS}, $K_{\mathrm{comb}}^{\mathrm{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols,* and *dl-PRS-CombSizeN* defined in TS 37.355 [34], respectively.
NOTE 3: Io is assumed to have constant EPRE across the bandwidth.
NOTE 4: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS as defined in table 10.1A.18.2.2-1.
NOTE 7: Δ is the value of the timing error margin for the RxTx TEG, reported via *nr-UE-RxTxTEG-TimingErrorMargin*. Δ cannot be larger than the sum of the margins in table 10.1A.18.2.2-3 (dependent on PRS/SRS BW) for any pair of individual UE Rx-Tx time difference measurements associated with the RxTx TEG.

The accuracy requirements in table 10.1A.18.2.2-2 for FR1 for are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- Fading propagation condition.

Table 10.1A.18.2.2-2: UE Rx-Tx time difference measurement accuracy in FR1 in fading

Accuracy	Conditions						
	PRS Ês/Iot	Minimum PRS bandwidth	PRS SCS	PRS resource repetition ($T_{\text{rep}}^{\text{PRS}} * L_{\text{PRS}}/K_{\text{comb}}^{\text{PRS}}$ Note 3	NR operating band groups Note 2	Io Note 4 range	
						Minimum Io Note 1	Maximum Io

±133+δ		48		≥1	NOTE 6	NOTE 6	NOTE 6
±72+δ		24	60	≥4	NOTE 6	NOTE 6	NOTE 6

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in Section 3.5.
NOTE 3: $T_{\text{rep}}^{\text{PRS}}$, L_{PRS} , $K_{\text{comb}}^{\text{PRS}}$ are configured by higher layer parameter *dl-PRS-ResourceRepetitionFactor, dl-PRS-NumSymbols*, and *dl-PRS-CombSizeN* defined in TS 37.355 [34].
NOTE 4: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 5: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 6: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS as defined in table 10.1A.18.2.2-1.
NOTE 7: δ is the margin determined from table 10.1A.18.2.2-3.

Table 10.1A.18.2.2-3: Margin for UE Rx-Tx time difference measurement accuracy in FR1

Min(PRS BW, SRS BW) (PRB)			Margin (Tc Note 1)
SCS = 15 kHz	SCS = 30 kHz	SCS = 60 kHz	
≥ 24	N/A	N/A	160
≥ 52	≥ 24	N/A	80
104	48	24	56

NOTE 1: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 2: If SRS and PRS have different SCS, the margin corresponding to the smallest RS BW in MHz applies.

10.1A.18.2.3 UE Rx-Tx Accuracy Requirement for 2RX RedCap UE with FH

The accuracy requirements in table 10.1A.18.2.3-1 for FR1 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- AWGN propagation condition.
- The BW_{total} as defined in clause 9.9A.4.8 for RRC_CONNECTED and in clause 5.6A.6.6 for RRC_INACTIVE is no less than the “Total PRS bandwidth after FH”.

Table 10.1A.18.2.3-1: UE Rx-Tx time difference measurement accuracy in FR1 in AWGN

NOTE 4: Tc is the basic timing unit defined in TS 38.211 [6].							
NOTE 5: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS as defined in table 10.1A.18.2.3-1.							
NOTE 6: δ is the margin determined from table 10.1A.18.2.3-5.							

The accuracy requirements in table 10.1A.18.2.3-2 for FR1 for are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- Fading propagation condition.
- The BW_{total} as defined in clause 9.9A.4.8 for RRC_CONNECTED and in clause 5.6A.6.6 for RRC_INACTIVE is no less than the "Total PRS bandwidth after FH".

Table 10.1A.18.2.3-2: UE Rx-Tx time difference measurement accuracy in FR1 in fading

Accuracy	Conditions						
	PRS Ês/Iot	PRS bandwidth per hop	PRS SCS	Total PRS bandwidth after FH	NR operating band groups[Note 2]	Io[Note 3] range	
						Minimum Io[Note 1]	Maximum Io
Tc[Note 4]	dB	PRB	kHz	PRB		dBm / SCS_{PRS}	dBm/BW

±52+δ		48	30	272	NOTE 5	NOTE 5	NOTE 5
±52+δ		24	60	132	NOTE 5	NOTE 5	NOTE 5
±99+δ	-13	≥52	15	268	NOTE 5	NOTE 5	NOTE 5
±53+δ		48	30	272	NOTE 5	NOTE 5	NOTE 5
±63+δ		24	60	132	NOTE 5	NOTE 5	NOTE 5

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in Section 3.5.
NOTE 3: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 4: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 5: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS as defined in table 10.1A.18.2.3-1.
NOTE 6: δ is the margin determined from table 10.1A.18.2.3-5.

The accuracy requirements in table 10.1A.18.2.3-3 for FR2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.
- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- AWGN propagation condition.
- The BW_{total} as defined in clause 9.9A.4.8 for RRC_CONNECTED and in clause 5.6A.6.6 for RRC_INACTIVE is no less than the "Total PRS bandwidth after FH".

Table 10.1A.18.2.3-3: UE Rx-Tx time difference measurement accuracy in FR2 in AWGN

Accuracy	Conditions					
	PRS Ês/Iot	Minimum PRS bandwidth per hop	PRS SCS	Total PRS bandwidth after FH	Io[Note 4] range	
					Minimum Io[Note 1]	Maximum Io
Tc[Note 5]	dB	PRB	kHz	PRB	dBm / SCS_{PRS}	$dBm/BW_{Channel}$
±11+δ	-3	≥64	60	264	Same value as PRP in table B.2.14-2, according to UE Power class, operating band and angle of arrival	-50
±7+δ		64	120	264	Same value as PRP in table B.2.14-2, according to UE Power class, operating band and angle of arrival	-50
±33+δ	-13	≥64	60	264	NOTE 5	NOTE 5
±27+δ		64	120	264	NOTE 5	NOTE 5

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: NR operating band groups are as defined in Section 3.5.
NOTE 3: The Io is defined in PRS slots. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same slot.
NOTE 4: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 5: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 6: δ is the margin determined from table 10.1A.18.2.3-6.

The accuracy requirements in table 10.1A.18.2.3.3-3a for FR2 are valid under the following conditions:

- Conditions defined in clause 7.3 of TS 38.101-2 [19] for reference sensitivity are fulfilled.

- $PRP|_{dBm}$ according to annex B.2.14 for a corresponding Band.
- Number of measurement samples is less than 4.
- AWGN propagation condition.
- The BW_{total} as defined in clause 9.9A.4.8 for RRC_CONNECTED and in clause 5.6A.6.6 for RRC_INACTIVE is no less than the "Total PRS bandwidth after FH".

Table 10.1A.18.2.3-3a: UE Rx-Tx time difference measurement accuracy in FR2 in AWGN with reduced measurement samples

Accuracy	Conditions					
	PRS Ês/Iot	Minimum PRS bandwidth per hop	PRS SCS	Total PRS bandwidth after FH	Io Note 4 range

10.1A.18.3 Report mapping

10.1A.18.3.1 Absolute UE Rx-Tx Measurement Report Mapping

The report mapping as defined in clause 10.1.25.3.1 shall apply.

10.1A.18.3.2 Differential UE Rx-Tx Measurement Report Mapping

The report mapping as defined in clause 10.1.25.3.2 shall apply.

10.1A.18.3.3 Additional Path Report Mapping for UE Rx-Tx Time Difference

The report mapping as defined in clause 10.1.25.3.3 shall apply.

10.1A.19PRS-RSRPP Measurements for RedCap Positioning

10.1A.19.1 Introduction

The requirements in clause 10.1A.19.2 shall apply, provided the RedCap UE has received *nr-DL-AoD-RequestLocationInformation* message from LMF via LPP 37.355 [34] requesting the RedCap UE to report one or more DL PRS-RSRPP measurements defined in TS 38.215 [4]. The requirements in clause 10.1A.19 shall apply:

- when RedCap UE is in RRC_CONNECTED state,
- when RedCap UE is in RRC_INACTIVE state,
- when RedCap UE is in RRC_IDLE state.

The requirements in clause 10.1A.19.2 apply for the first path PRS-RSRP measurement.

10.1A.19.2 Measurement Accuracy Requirements

10.1A.19.2.1 Absolute PRS RSRPP accuracy

The absolute accuracy requirements for PRS-RSRPP measurements for 1Rx RedCap UE for FR1 defined in table 10.1A.19.2.1-1 and table 10.1A.19.2.1-2 are valid under the following conditions:

- Conditions defined in TS 38.101-1 [18] clause 7.3 for reference sensitivity are fulfilled.
- PRP $1,2|_{\text{dBm}}$ according to annex B.2.14 for a corresponding Band.

The absolute accuracy requirements for PRS-RSRPP measurements defined in clause 10.1.38.2.1 are reused for 2Rx RedCap UE.

The absolute accuracy requirements for PRS-RSRPP measurement defined in table 10.1A.19.2.1-1 apply for the RedCap UE not supporting *supportedDL-PRS-ProcessingSamples* TS 37.355 [34] or LMF does not indicate RedCap UE to perform positioning measurements with reduced number of samples.

The absolute accuracy requirements for PRS-RSRPP measurement defined in table 10.1A.19.2.1-2 apply for the RedCap UE supporting *supportedDL-PRS-ProcessingSamples* TS 37.355 [34].

The absolute accuracy requirements for PRS-RSRPP measurement defined in this clause apply to the measurements with and without frequency hopping. For the measurements with frequency hopping, the accuracy requirements apply for the corresponding PRS bandwidth per hop.

NOTE 1: The requriements in this clause are derived based on two-tap channel defined in TS 38.101-4 [21] annex B.2.4 (a = 1, τ_d=0.45 μs and f_D=5 Hz).

NOTE 2: The requirements in this clause are derived based on the difference between the estimated PRS-RSRPP compared to the ideal PRS-RSRPP defined as

$$\text{RSRPP}_p \propto \left| \sum_k H_k \exp\left(j 2\pi D_p \frac{k}{N_{\text{IFFT}}} \right) \right|^2$$

Where:

H_k is the effective channel frequency response (over REs occupied by PRS) measured without receiver noise.

D_p is the exact delay of the p-th path in the channel model.

Table 10.1A.19.2.1-1: PRS-RSRPP absolute accuracy for 1Rx RedCap UE for FR1

Accuracy		Conditions							
					Io Note 6 range				
Normal condition	Extreme condition	PRS Ês/Iot	PRS BW	Repetition factor ($T_{rep}^{PRS} * L_{PRS} / K_{comb}^{PRS}$)	NR operating band groups Note 7	Minimum Io Note 1 dBm / SCS_{PRS}			Maximum Io

					NR_TDD_FR1_C	-126	-123	-120	-50
					NR_FDD_FR1_D, NR_TDD_FR1_D	-125.5	-122.5	-119.5	-50
					NR_FDD_FR1_E, NR_TDD_FR1_E	-125	-122	-119	-50
					NR_FDD_FR1_F	-124.5	-121.5	-118.5	-50
					NR_FDD_FR1_G	-124	-121	-118	-50
					NR_FDD_FR1_H	-123.5	-120.5	-117.5	-50
					NR_FDD_FR1_N	-120.5	-117.5	-114.5	-50
					Note 3				
					Note 3				
±4.5	±9	≥-10	24 ≤ BW ≤ 52	All	Note 3				
±4	±8.5		BW > 52	All	Note 3				

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: PRS bandwidth is as indicated in *prs-Bandwidth* in the DL-TDOA or DL-AoD assistance data defined in TS 37.355 [34].
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth ≥ 24 PRB.
NOTE 4: The serving cell, the reference cell, and the measured neighbour cell i are on the same carrier frequency.
NOTE 5: The condition level is increased by Δ>0, when applicable, as described in Sections B.3.2 and B.3.3.
NOTE 6: The Io is defined in PRS positioning subframes. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same subframe.
NOTE 7: NR operating band groups are as defined in Section 3.5.2.

Table 10.1A.19.2.1-2: PRS-RSRPP absolute accuracy for 1Rx RedCap UE for FR1 for reduced number of samples

NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the PRS bandwidth ≥ 48 PRB.
NOTE 4: The serving cell, the reference cell, and the measured neighbour cell i are on the same carrier frequency.
NOTE 5: The condition level is increased by Δ>0, when applicable, as described in Sections B.3.2 and B.3.3.
NOTE 6: The Io is defined in PRS positioning subframes. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same subframe.
NOTE 7: NR operating band groups are as defined in Section 3.5.2.

10.1A.19.3 Report mapping

10.1A.19.3.1 Absolute PRS-RSRPP Measurement Report Mapping

The absolute PRS-RSRPP measurement report mapping defined in clause 10.1.38.3.1 applies.

10.1A.19.3.2 Differential Report Mapping for PRS-RSRPP Measurement

The differential report mapping for PRS-RSRPP measurement defined in clause 10.1.38.3.2 applies.

10.2 E-UTRAN measurements

10.2.1 Introduction

Accuracy requirements for measurements on E-UTRAN carrier frequencies are specified in clause 10.2 and apply for UE in SA or NR-DC or NE-DC operation mode, unless otherwise specified.

Unless otherwise specified, the requirements in clause 10.2 are applicable for a UE:

- in RRC_CONNECTED state
- performing measurements with appropriate measurement gaps according to clause 9.1.2.
- that is synchronised to the cell that is measured.

The reported measurement result after layer 1 filtering shall be an estimate of the average value of the measured quantity over the measurement period. The reference point for the measurement result after layer 1 filtering is referred to as point B in the measurement model described in TS 36.300 [24].

The accuracy requirements of E-UTRA measurements in this clause are valid for the reported measurement result after layer 1 filtering. The accuracy requirements are verified from the measurement report at point D in the measurement model having the layer 3 filtering disabled.

If the UE needs measurement gaps to perform the inter-RAT NR ─ E-UTRAN FDD and NR ─ E-UTRAN TDD measurements, the relevant measurement procedure and measurement gap patterns stated in clause 9.1.2 shall apply.

10.2.2 E-UTRAN RSRP measurements

NOTE: This measurement is for handover between NR and E-UTRAN.

The measurement period of E-UTRA RSRP in RRC_CONNECTED state is specified in clauses 9.4.2 and 9.4.3.

The accuracy requirements of E-UTRA RSRP measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRP Accuracy Requirements in clause 9.1.3 of TS 36.133 [15].

The reporting range and mapping specified for RSRP measurements in clause 9.1.4 of TS 36.133 [15] shall apply.

10.2.3 E-UTRAN RSRQ measurements

NOTE: This measurement is for handover between NR and E-UTRAN.

The measurement period of E-UTRA RSRQ in RRC_CONNECTED state is specified in clauses 9.4.2 and 9.4.3.

The accuracy requirements of E-UTRA RSRQ measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRQ Accuracy Requirements in clause 9.1.6 of TS 36.133 [15].

The requirements for E-UTRA RSRQ measurements accuracy in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRQ Accuracy Requirements in clause 9.1.6 of TS 36.133 [15].

The reporting range and mapping specified for RSRQ measurements in clause 9.1.7 of TS 36.133 [15] shall apply.

10.2.4 E-UTRAN RSTD measurements

The requirements in this clause are valid for UE supporting this capability.

The measurement period is specified in clauses 9.4.4.1 and 9.4.4.2 for inter-RAT NR ─ E-UTRAN FDD and inter-RAT NR ─ E-UTRAN TDD RSTD measurements, respectively.

The accuracy requirements and the corresponding side conditions shall be the same as the inter-frequency measurement accuracy requirements for RSTD measurements in RRC_CONNECTED in clauses 9.1.10.2 of TS 36.133 [15].

If the UE needs measurement gaps to perform the inter-RAT NR ─ E-UTRAN FDD and NR ─ E-UTRAN TDD RSTD measurements, the relevant measurement procedure and measurement gap patterns stated in clause 9.1.2 shall apply.

The reporting range and mapping for the inter-RAT NR ─ E-UTRAN FDD and NR ─ E-UTRAN TDD RSTD measurements is the same as specified for RSTD measurements in TS 36.133 [15, clauses 9.1.10.3 and 9.1.10.4].

10.2.5 E-UTRAN RS-SINR measurements

NOTE: This measurement is for handover between NR and E-UTRAN.

The measurement period of E-UTRA RS-SINR in RRC_CONNECTED state is specified in clauses 9.4.2 and 9.4.3.

The accuracy requirements of E-UTRA RS-SINR measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RS-SINR Accuracy Requirements in clause 9.1.17.3 of TS 36.133 [15].

The reporting range and mapping for E-UTRA RS-SINR measurements shall be the same as specified for RS-SINR measurements in clause 9.1.17.1 of TS 36.133 [15].

10.2.6 E-UTRAN RSRP measurements for CA/DC Idle Mode Measurements

NOTE: This measurement is for CA/DC Idle Mode measurements between NR and E-UTRAN.

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute E-UTRA RSRP accuracy.

The measurement period of E-UTRA RSRP in RRC_IDLE and RRC_INACTIVE states are specified in clause 4.4.2.

The accuracy requirements of E-UTRA RSRP measurements in RRC_IDLE and RRC_INACTIVE states and the corresponding side conditions shall be as the inter-frequency RSRP Accuracy Requirements in clause 9.1.3B.2 of TS 36.133 [15].

The reporting range and mapping specified for RSRP measurements in clause 9.1.4 of TS 36.133 [15] shall apply.

10.2.7 E-UTRAN RSRQ measurements for CA/DC Idle Mode Measurements

NOTE: This measurement is for CA/DC Idle Mode measurements between NR and E-UTRAN.

The requirements in this clause are applicable for a UE:

- in state RRC_IDLE or RRC_INACTIVE
- that is synchronised to the cell that is measured.

The requirements are for absolute E-UTRA RSRQ accuracy.

The measurement period of E-UTRA RSRQ in RRC_IDLE and RRC_INACTIVE states are specified in clause 4.4.2.

The accuracy requirements of E-UTRA RSRQ measurements in RRC_IDLE and RRC_INACTIVE states and the corresponding side conditions shall be as the inter-frequency RSRQ Accuracy Requirements in clause 9.1.6B.2 of TS 36.133 [15].

The reporting range and mapping specified for RSRQ measurements in clause 9.1.7 of TS 36.133 [15] shall apply.

10.2A E-UTRAN measurements for RedCap

10.2A.1 Introduction

Accuracy requirements for measurements on E-UTRAN carrier frequencies are specified in clause 10.2A and apply for RedCap UE in SA operation mode, unless otherwise specified.

Unless otherwise specified, the requirements in clause 10.2A are applicable for a UE:

- in RRC_CONNECTED state
- performing measurements with appropriate measurement gaps according to clause 9.1A.2.
- that is synchronised to the cell that is measured.

The reported measurement result after layer 1 filtering shall be an estimate of the average value of the measured quantity over the measurement period. The reference point for the measurement result after layer 1 filtering is referred to as point B in the measurement model described in TS 36.300 [24].

The accuracy requirements of E-UTRA measurements in this clause are valid for the reported measurement result after layer 1 filtering. The accuracy requirements are verified from the measurement report at point D in the measurement model having the layer 3 filtering disabled.

If the UE needs measurement gaps to perform the inter-RAT NR ─ E-UTRAN FDD and NR ─ E-UTRAN TDD measurements, the relevant measurement procedure and measurement gap patterns stated in clause 9.1A.2 shall apply.

10.2A.2 E-UTRAN RSRP measurements

NOTE: This measurement is for handover between NR and E-UTRAN.

The measurement period of E-UTRA RSRP in RRC_CONNECTED state is specified in clauses 9.4A.2 and 9.4A.3.

For 2Rx RedCap,

- The accuracy requirements of E-UTRA RSRP measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRP accuracy requirements for UE other than Cat.1bis in clause 9.1.3 of TS 36.133 [15].

For 1Rx RedCap,

- The accuracy requirements of E-UTRA RSRP measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRP accuracy requirements for UE Cat.1bis in clause 9.1.3 of TS 36.133 [15].

The reporting range and mapping specified for RSRP measurements in clause 9.1.4 of TS 36.133 [15] shall apply.

10.2A.3 E-UTRAN RSRQ measurements

NOTE: This measurement is for handover between NR and E-UTRAN.

The measurement period of E-UTRA RSRQ in RRC_CONNECTED state is specified in clauses 9.4A.2 and 9.4A.3.

For 2Rx RedCap,

- The accuracy requirements of E-UTRA RSRQ measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRQ accuracy requirements for UE other than Cat.1bis in clause 9.1.6 of TS 36.133 [15].

For 1Rx RedCap,

- The accuracy requirements of E-UTRA RSRQ measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRQ accuracy requirements for UE Cat.1bis in clause 9.1.6 of TS 36.133 [15].

The requirements for accuracy of E-UTRA RSRQ measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RSRQ Accuracy Requirements in clause 9.1.6 of TS 36.133 [15].

The reporting range and mapping specified for RSRQ measurements in clause 9.1.7 of TS 36.133 [15] shall apply.

10.2A.4 E-UTRAN RS-SINR measurements

NOTE: This measurement is for handover between NR and E-UTRAN.

The measurement period of E-UTRA RS-SINR in RRC_CONNECTED state is specified in clauses 9.4A.2 and 9.4A.3.

For 2Rx RedCap,

- The accuracy requirements of E-UTRA RS-SINR measurements in RRC_CONNECTED state and the corresponding side conditions shall be the same as the inter-frequency RS-SINR accuracy requirements in clause 9.1.17.3 of TS 36.133 [15].

The reporting range and mapping for E-UTRA RS-SINR measurements shall be the same as specified for RS-SINR measurements in clause 9.1.17.1 of TS 36.133 [15].

10.3 UTRAN FDD Measurements

The requirements in this clause are applicable for a UE:

- in state RRC_CONNECTED
- performing measurements according to clause 9.4.6 with appropriate measurement gaps
- that is synchronised to the cell that is measured.

The reported measurement result after layer 1 filtering shall be an estimate of the average value of the measured quantity over the measurement period. The reference point for the measurement result after layer 1 filtering is referred to as point B in the measurement model described in TS 25.302 [30].

The accuracy requirements in this clause are valid for the reported measurement result after layer 1 filtering. The accuracy requirements are verified from the measurement report at point D in the measurement model having the layer 3 filtering disabled.

10.3.1 UTRAN FDD CPICH RSCP

NOTE: This measurement is for handover between E-UTRAN and UTRAN FDD.

The requirements in this clause are valid for terminals supporting this capability.

The measurement period for RRC_CONNECTED state is specified in clause 9.4.6.

In RRC_CONNECTED state the accuracy requirements shall meet the absolute accuracy requirements in table 10.3.1-1, under the following conditions:

- CPICH Ec/Io condition for a detectable cell is as specified in clause 9.4.6;
- SCH_Ec/Io condition for a detectable cell is as specified in clause 9.4.6.

Table 10.3.1-1: UTRAN FDD CPICH_RSCP absolute accuracy

Accuracy		Conditions
Normal condition	Extreme condition	Io range

		UTRA operating bands	Minimum Io	Maximum Io
dB	**dB**		**dBm/3.84 MHz**	**dBm/3.84 MHz**
±6	±9	Band I, IV, VI, X XI, XIX and XXI	-94	-70
		Band IX	-93	-70
		Band II, V and VII	-92	-70
		Band III, VIII, XII, XIII, XIV , XX and XXII	-91	-70
		Band XXV, XXVI Note 1	-90.5	-70
±8	±11	Note 2	-70	-50
NOTE 1: For Band XXVI, the condition has the minimum Io of -92 dBm/3.84 MHz when the carrier frequency of the assigned UTRA channel is within 869-894 MHz for the UE which supports both Band V and Band XXVI operating frequencies.				
NOTE 2: The same bands apply for this requirement as for the corresponding highest accuracy requirement.				

If the UE, in RRC_CONNECTED state, needs measurement gaps to perform UTRAN FDD measurements, the relevant UTRAN FDD measurement procedure and measurement gap pattern stated in clause 9.4.6 shall apply.

The reporting range and mapping specified for FDD CPICH RSCP in TS 25.133 [29] shall apply.

10.3.2 UTRAN FDD CPICH Ec/No

NOTE: This measurement is for handover between E-UTRAN and UTRAN FDD.

The requirements in this clause are valid for terminals supporting this capability.

The measurement period for RRC_CONNECTED state is specified in clause 9.4.6.

In RRC_CONNECTED state the accuracy requirements shall be the same as the inter-frequency measurement accuracy requirements for FDD CPICH Ec/No in TS 25.133 [29].

If the UE, in RRC_CONNECTED state, needs measurement gaps to perform UTRAN FDD measurements, the UTRAN FDD measurement procedure and measurement gap pattern stated in clause 9.4.6 shall apply.

The reporting range and mapping specified for FDD CPICH Ec/No in TS 25.133 [29] shall apply.

10.4 V2X measurements

10.4.1 Introduction

The requirements in this clause are applicable for a UE capable of V2X sidelink communication.

The accuracy requirements in this clause are:

- applicable for AWGN radio propagation conditions,
- assume independent interference (noise) at each receiver antenna port.

10.4.2 Intra-frequency PSBCH-RSRP accuracy requirements for FR1

10.4.2.1 PSBCH-RSRP Absolute Accuracy

The requirements for absolute PSBCH-RSRP accuracy in this clause apply to a V2X synchronization source on the same frequency as that of the own V2X UE performing the measurement in FR1.

The accuracy requirements in table 10.4.2.1-1 are valid under the following conditions:

- Demodulation reference signals are transmitted from one port.
- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for PSBCH-RSRP measurements are fulfilled according to annex B.4.2 for a corresponding Band for each relevant PSBCH-DMRS.

Table 10.4.2.1-1: Intra-frequency PSBCH-RSRP absolute accuracy in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	Ês/Iot Note 3	Io Note 1 range					
			NR V2X operating band groups Note 2	Minimum Io				Maximum Io
				dBm / SCS_{SL}				
dB	dB	dB		SCS_{SL} = 15 kHz	SCS_{SL} = 30 kHz	SCS_{SL} = 60 kHz	$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
±4.5	±9	≥-6	NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_TDD_FR1_J	-116.5	-113.5	-110.5	N/A	-70
±8	±11	≥-6	NR_TDD_FR1_B, NR_TDD_FR1_J	N/A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR V2X operating band groups in FR1 are as defined in clause 3.5.2. NOTE 3: Ês/Iot for a SyncRef UE is the Ês/Iot of PSBCH-DMRS.								

10.4.2.2 PSBCH-RSRP Relative Accuracy

The relative PSBCH-RSRP accuracy is defined as the PSBCH-RSRP measured from one V2X synchronization source compared to the PSBCH-RSRP measured from another V2X synchronization source on the same frequency in FR1.

The accuracy requirements in table 10.4.2.2-1 are valid under the following conditions:

- Demodulation reference signals are transmitted from one port.
- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for PSBCH-RSRP accuracy measurements are fulfilled according to annex B.4.2 for a corresponding Band for each relevant PSBCH-DMRS.

Table 10.4.2.2-1: Intra-frequency PSBCH-RSRP relative accuracy in FR1

Accuracy		Conditions						
Normal condition	Extreme condition	Ês/Iot Note 3	Io Note 1 range					
			NR V2X operating band groups Note 2	Minimum Io				Maximum Io
				dBm / SCS_{SL}				
dB	dB	dB		SCS_{SL} = 15 kHz	SCS_{SL} = 30 kHz	SCS_{SL} = 60 kHz	$dBm/BW_{Channel}$	$dBm/BW_{Channel}$
±2	±3	≥-3	NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-50
			NR_TDD_FR1_J	-116.5	-113.5	-110.5	N/A	-50
±3	±3	≥-6	Note 4	Note 4	Note 4	Note 4	N/A	Note 4
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR V2X operating band groups in FR1 are as defined in clause 3.5.2. NOTE 3: Ês/Iot for a SyncRef UE is the Ês/Iot of PSBCH-DMRS. NOTE 4: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.								

10.4.2A Intra-frequency PSBCH-RSRP accuracy requirements for FR1 under CCA

10.4.2A.1 PSBCH-RSRP Absolute Accuracy

The requirements for absolute PSBCH-RSRP accuracy in this clause apply to a sidelink synchronization source on the same frequency as that of the own sidelink UE performing the measurement in FR1 under CCA.

The accuracy requirements in table 10.4.2A.1-1 are valid under the following conditions:

- Demodulation reference signals are transmitted from one port.
- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for PSBCH-RSRP measurements are fulfilled according to annex B.4.2 for a corresponding Band for each relevant PSBCH-DMRS.

Table 10.4.2A.1-1: Intra-frequency PSBCH-RSRP absolute accuracy in FR1

Accuracy		Conditions					
			Io Note 1 range				
Normal condition	Extreme condition	Ês/Iot Note 3	NR sidelink operating band groups Note 2	Minimum Io			Maximum Io
				dBm / SCS_{SL}			
dB	dB	dB		SCS_{SL} = 15 kHz	SCS_{SL} = 30 kHz	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
±4.5	±9	≥-6	NR_CCA_FR1_I	-117	-114	N/A	-70
			NR_CCA_FR1_J	-116.5	-113.5	N/A	-70
±8	±11	≥-6	NR_CCA_FR1_I, NR_CCA_FR1_J	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR sidelink operating band groups in FR1 are as defined in clause 3.5.2. NOTE 3: Ês/Iot for a SyncRef UE is the Ês/Iot of PSBCH-DMRS.							

10.4.2A.2 PSBCH-RSRP Relative Accuracy

The relative PSBCH-RSRP accuracy is defined as the PSBCH-RSRP measured from one sidelink synchronization source compared to the PSBCH-RSRP measured from another sidelink synchronization source on the same frequency in FR1 under CCA.

The accuracy requirements in table 10.4.2A.2-1 are valid under the following conditions:

- Demodulation reference signals are transmitted from one port.
- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for PSBCH-RSRP accuracy measurements are fulfilled according to annex B.4.2 for a corresponding Band for each relevant PSBCH-DMRS.
- The same number of S-SSB repetitions on frequency domain is configured between two sidelink synchronization sources.

Table 10.4.2A.2-1: Intra-frequency PSBCH-RSRP relative accuracy in FR1

Accuracy		Conditions					
			Io Note 1 range				
Normal condition	Extreme condition	Ês/Iot Note 3	NR sidelink operating band groups Note 2	Minimum Io			Maximum Io
				dBm / SCS_{SL}			
dB	dB	dB		SCS_{SL} = 15 kHz	SCS_{SL} = 30 kHz	dBm/$BW_{Channel}$	dBm/$BW_{Channel}$
±2	±3	≥-3	NR_CCA_FR1_I	-117	-114	N/A	-50
			NR_CCA_FR1_J	-116.5	-113.5	N/A	-50
±3	±3	≥-6	Note 4	Note 4	Note 4	N/A	Note 4
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR sidelink operating band groups in FR1 are as defined in clause 3.5.2. NOTE 3: Ês/Iot for a SyncRef UE is the Ês/Iot of PSBCH-DMRS. NOTE 4: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.							

10.4.3 Intra-Frequency SL-RSSI Measurement Accuracy Requirements for FR1

10.4.3.1 Absolute SL-RSSI Accuracy

The intra-frequency SL-RSSI requirements are specified in table 10.4.3.1-1. The requirements apply for measurement period of 1 slot and for any configured measurement bandwidth larger than 10 PRBs, provided that:

- All symbols duing each RSSI measurement duration are available for RSSI sampling within the same measurement interval.

Table 10.4.3.1-1: Intra-frequency SL-RSSI absolute accuracy

Accuracy		Conditions				
		Io [Note 1] range				
Normal condition	Extreme condition	NR V2X operating band groups [Note 2]	Minimum Io			Maximum Io
			dBm/SCS_{SL}			
dB	dB		SCS_{SL} = 15 kHz	SCS_{SL} = 30 kHz	SCS_{SL} = 60 kHz	$dBm/BW_{Channel}$
±2.5	±5.5	NR_TDD_FR1_B	-120.5	-117.5	-114.5	-50
		NR_TDD_FR1_J	-116.5	-113.5	-110.5	-50
±4.5	±7.5	Note 3	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR V2X operating band groups are as defined in clause 3.5 for the corresponding NR operating bands.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.

10.4.3A Intra-Frequency SL-RSSI Measurement Accuracy Requirements for FR1 under CCA

10.4.3A.1 Absolute SL-RSSI Accuracy

The intra-frequency SL-RSSI requirements are specified in table 10.4.3A.1-1 under CCA. The requirements apply for measurement period of 1 slot and for any configured measurement bandwidth larger than 10 PRBs, provided that:

- All symbols during each RSSI measurement duration according to indication of first or second starting symbol within a slot are available for RSSI sampling within the same measurement interval.

Table 10.4.3A.1-1: Intra-frequency SL-RSSI absolute accuracy

Accuracy		Conditions			
		Io [Note 1] range			
Normal condition	Extreme condition	NR sidelink operating band groups [Note 2]	Minimum Io		Maximum Io
			dBm/SCS_{SL}		
dB	dB		SCS_{SL} = 15 kHz	SCS_{SL} = 30 kHz	$dBm/BW_{Channel}$
±2.5	±5.5	NR_CCA_FR1_I	-117	-114	-50
		NR_CCA_FR1_J	-116.5	-113.5	-50
±4.5	±7.5	Note 3	Note 3	Note 3	Note 3

NOTE 1: Io is assumed to have constant EPRE across the bandwidth.
NOTE 2: NR sidelink operating band groups are as defined in clause 3.5 for the corresponding NR operating bands.
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding highest accuracy requirement.

10.4.4 Intra-Frequency L1 SL-RSRP Measurement Accuracy Requirements for FR1

10.4.4.1 Absolute L1 SL-RSRP Accuracy

The requirements for absolute L1 SL-RSRP accuracy in this clause apply to a UE performing PSCCH-RSRP and/or PSSCH-RSRP measurements on the same frequency as used by operating V2X sidelink communication.

The accuracy requirements in table 10.4.4.1-1 are valid under the following conditions:

- Demodulation reference signals for PSCCH and/or PSSCH are transmitted from one port.
- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- PSCCH-RSRP|dBm and/or PSSCH-RSRP|dBm according to annex B.4.4 for a corresponding Band are fulfilled.

Table 10.4.4.1-1: Intra-frequency L1 SL-RSRP absolute accuracy for UE capable of V2X sidelink communication

Accuracy		Conditions						
			Io Note 1 range					
Normal condition	Extreme condition	Ês/Iot Note 3	NR V2X operating band groups Note 2	Minimum Io				Maximum Io
				dBm/SCS			dBm/BW$_{Channel}$	dBm/BW$_{Channel}$
dB	dB	dB		SCS = 15 kHz	SCS = 30 kHz	SCS = 60 kHz		
± 4.5	± 9	≥0 dB	NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_TDD_FR1_J	-116.5	-113.5	-110.5	N/A	-70
± 8	± 11	≥0 dB	NR_TDD_FR1_B NR_TDD_FR1_J	N/A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR V2X operating band groups are as defined in clause 3.5 for the corresponding NR operating bands. NOTE 3: The parameter Ês/Iot is the Ês/Iot of PSCCH-DMRS and/or PSSCH-DMRS.								

10.4.4A Intra-Frequency L1 SL-RSRP Measurement Accuracy Requirements for FR1 under CCA

10.4.4A.1 Absolute L1 SL-RSRP Accuracy

The requirements for absolute L1 SL-RSRP accuracy in this clause apply to a UE performing PSCCH-RSRP and/or PSSCH-RSRP measurements on the same frequency as used by operating sidelink communication under CCA.

The accuracy requirements in table 10.4.4A.1-1 are valid under the following conditions:

- Demodulation reference signals for PSCCH and/or PSSCH are transmitted from one port.
- Conditions defined in clause 7.3F of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- PSCCH-RSRP|dBm and/or PSSCH-RSRP|dBm according to annex B.4.4 for a corresponding Band are fulfilled.

Table 10.4.4A.1-1: Intra-frequency L1 SL-RSRP absolute accuracy for UE capable of sidelink communication

Accuracy		Conditions					
			Io Note 1 range				
Normal condition	Extreme condition	Ês/Iot Note 3	NR sidelink operating band groups Note 2	Minimum Io			Maximum Io
				dBm/SCS		dBm/BW$_{Channel}$	dBm/BW$_{Channel}$
dB	dB	dB		SCS = 15 kHz	SCS = 30 kHz		

± 4.5	± 9	≥0 dB	NR_CCA_FR1_I	-117	-114	N/A	-70
			NR_CCA_FR1_J	-116.5	-113.5	N/A	-70
± 8	± 11	≥0 dB	NR_CCA_FR1_I NR_CCA_FR1_J	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR sidelink operating band groups are as defined in clause 3.5 for the corresponding NR operating bands. NOTE 3: The parameter Ês/Iot is the Ês/Iot of PSCCH-DMRS and/or PSSCH-DMRS.							

10.4.5 Intra-Frequency Discovery Signal Measurement Accuracy Requirements

The requirements in this clause are applicable for a remote sidelink UE in U2N relay scenario provided that the remote UE:

- is out of coverage on the frequency used for sidelink, and
- that is synchronised to the sidelink relay UE that is measured.

The requirements in this clause are applicable for a remote sidelink UE in multipath relay scenario provided that the remote UE:

- is synchronised to the sidelink relay UE that is measured and
- is in coverage on the frequency used for sidelink if both the direct path and the sidelink on the indirect path are on the same frequency
- is out of coverage on the frequency used for sidelink if the direct path and the sidelink on the indirect path are on different frequencies.

10.4.5.1 Absolute Discovery Signal Measurement Accuracy

The accuracy requirements for absolute discovery signal measurement in this clause apply to a sidelink UE performing SL-RSRP measurements for direct to indirect path switch or SL-RSRP measurements for indirect to direct path switch on the same frequency as used by the sidelink relay UE transmitting the relay Discovery message.

The accuracy requirements in table 10.4.5.1-1 are valid under the following conditions:

- Demodulation reference signals for PSCCH and/or PSSCH are transmitted from one port.
- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- PSCCH-RSRP|dBm and/or PSSCH-RSRP|dBm according to annex B.4.4 for a corresponding Band are fulfilled.

Table 10.4.5.1-1: Intra-frequency discovery signal measurement absolute accuracy for a remote sidelink UE [2] capable of sidelink Communication and sidelink Discovery and configured by upper layers for relay operation.

Accuracy		**Conditions**						
Normal condition	**Extreme condition**	**Ês/Iot** Note 3	**Io** Note 1 **range**					
			NR V2X operating band groups Note 2	**Minimum Io**				**Maximum Io**
				dBm/SCS				
dB	**dB**	**dB**		**SCS = 15 kHz**	**SCS = 30 kHz**	**SCS = 60 kHz**	**dBm/BW$_{Channel}$**	**dBm/BW$_{Channel}$**
± 4.5	± 9	≥0 dB	NR_TDD_FR1_B	-120.5	-117.5	-114.5	N/A	-70
			NR_TDD_FR1_J	-116.5	-113.5	-110.5	N/A	-70
± 8	± 11	≥0 dB	NR_TDD_FR1_B NR_TDD_FR1_J	N/A	N/A	N/A	-70	-50
NOTE 1: Io is assumed to have constant EPRE across the bandwidth. NOTE 2: NR sidelink operating band groups are as defined in clause 3.5 for the corresponding NR operating bands. NOTE 3: The parameter Ês/Iot is the Ês/Iot of PSCCH-DMRS and/or PSSCH-DMRS.								

10.4A NR Sidelink Measurements for Positioning

10.4A.1 Introduction

The SL measurements for positioning are performed based on SL-PRS. The SL-PRS reception procedure is as described in TS 38.321 [7]. The UE shall monitor PSCCH to receive the associated SL-PRS in the same slot TS 38.214 [26].

10.4A.2 SL RSTD measurements

10.4A.2.1 Measurement Report Mapping

10.4A.2.1.1 Absolute SL RSTD Measurement Reporting

The reporting range for the SL RSTD measurement is defined from $-985024 \times T_c$ to $985024 \times T_c$ with the resolution step of $2^k \times T_c$, where

T_c is defined in TS 38.211 [6],

$k_{min} \leq k \leq k_{max}$,

k_{min}=2 and k_{max}=5, when configured SL-PRS resources of both of the reference UE and the second anchor UE measured for the SL RSTD measurement are in FR1.

The measurement report mapping for different k values are specified in tables 10.4A.2.1.1-1 – 10.4A.2.1.1-4.

Table 10.4A.2.1.1-1: Report mapping for *k*=2

Reported Quantity Value, SL_RSTD_i	Measured Quantity Value, SL_RSTD	Unit
SL_RSTD_000000	SL_RSTD < -985024	T_c
SL_RSTD_000001	-985024 ≤ SL_RSTD < -985020	T_c
SL_RSTD_000002	-985020 ≤ SL_RSTD < -985016	T_c
…	…	…
SL_RSTD_246256	-4 ≤ SL_RSTD < 0	T_c
SL_RSTD_246257	0 ≤ SL_RSTD < 4	T_c
…	…	…
SL_RSTD_492511	985016 ≤ SL_RSTD < 985020	T_c
SL_RSTD_492512	985020 ≤ SL_RSTD < 985024	T_c
SL_RSTD_492513	985024 ≤ SL_RSTD	T_c

Table 10.4A.2.1.1-2: Report mapping for *k*=3

Reported Quantity Value SL_RSTD_i	Measured Quantity Value, SL_RSTD	Unit
SL_RSTD_000000	SL_RSTD < -985024	T_c
SL_RSTD_000001	-985024 ≤ SL_RSTD < -985016	T_c

…	…	…
SL_RSTD_61563	984960 ≤ SL_RSTD < 984992	T_c
SL_RSTD_61564	984992 ≤ SL_RSTD < 985024	T_c
SL_RSTD_61565	985024 ≤ SL_RSTD	T_c

10.4A.2.2 Measurement Accuracy Requirements

The accuracy requirements for SL RSTD measurement shall be within ±(X+Y+Z) T_c, where X, Y, and Z are defined as follows.

X is defined in table 10.4A.2.2-1 for AWGN propagation condition and table 10.4A.2.2-2 for fading propagation condition in FR1, provided that the following conditions are met:

- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- Conditions for SL RSTD measurements are fulfilled according to annex B.4A.1 for a corresponding Band for each relevant SL-PRS resource configured for measurement.
- Y=32 Tc, provided that the time offset between the two SL-PRS resource instances from the reference UE and the second anchor UE, which are used for a single SL RSTD estimate, is no greater than 160 ms.
- Z is defined in table 10.4A.2.2-3 for FR1.

NOTE: The requriements for fading channel in this clause are derived based on TDL-A (30 ns delay spread, 5Hz) channel models for FR1.

Table 10.4A.2.2-1: SL RSTD absolute accuracy in FR1 for AWGN channel

Accuracy	Conditions						
	SL-PRS $\hat{E}_s/I_{ot}$	SL-PRS SCS	SL-PRS bandwidth Note 1	Number of samples, S	Io Note 2 range		
					NR operating band groups Note 3	Minimum Io	Maximum Io
Tc Note 4	dB	kHz	PRB			dBm/SCS	$dBm/BW_{Channel}$
±66	$(\hat{E}_s/I_{ot})_{ref}$ ≥ 0 dB	15	48	≥ 4	NR_TDD_FR1_B	-123.5	-50
					NR_TDD_FR1_C	-123	-50
					NR_FDD_FR1_G	-121	-50
					NR_TDD_FR1_J	-119.5	-50
±69			>48	≥ 1	Note 5	Note 5	Note 5

Accuracy	Conditions						
	SL-PRS Ês/Iot	SL-PRS SCS	SL-PRS bandwidth Note 1	Number of samples, S	Io Note 2 range		
					NR operating band groups Note 3	Minimum Io	Maximum Io
Tc Note 4	dB	kHz	PRB			dBm/SCS	dBm/BW$_{Channel}$
±40	(SL-PRS Ês/Iot)$_i$ ≥ -3 dB		≥ 96	≥ 1	Note 5	Note 5	Note 5
±73		30	≥ 24	≥ 4	NR_TDD_FR1_B	-120.5	-50
					NR_TDD_FR1_C	-120	-50
					NR_FDD_FR1_G	-118	-50
					NR_TDD_FR1_J	-116.5	-50
±39		>48	≥ 1	Note 5	Note 5	Note 5	
±40		60	≥ 24	≥ 4	NR_TDD_FR1_B	-117.5	-50
					NR_TDD_FR1_C	-117	-50
					NR_FDD_FR1_G	-115	-50
					NR_TDD_FR1_J	-113.5	-50

NOTE 1: Minimum SL-PRS bandwidth, which is the minimum of the SL-PRS bandwidths of the reference resource and the measured neighbour resource i.
NOTE 2: Io is assumed to have constant EPRE across the bandwidth.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 5: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the SL-PRS bandwidth of the smallest PRB number for the corresponding SCS.

Table 10.4A.2.2-2: SL RSTD absolute accuracy in FR1 for fading channel

Accuracy	Conditions						
	SL-PRS Ês/Iot	SL-PRS SCS	SL-PRS bandwidth Note 1	Number of samples, S	Io Note 2 range		
					NR operating band groups Note 3	Minimum Io	Maximum Io
Tc Note 4	dB	kHz	PRB			dBm/SCS	dBm/BW$_{Channel}$
±97	(SL-PRS Ês/Iot)$_{ref}$ ≥ 0 dB (SL-PRS Ês/Iot)$_i$ ≥ -3 dB	15	48	≥ 4	NR_TDD_FR1_B	-123.5	-50
					NR_TDD_FR1_C	-123	-50
					NR_FDD_FR1_G	-121	-50
					NR_TDD_FR1_J	-119.5	-50
±133			>48	≥ 1	Note 5	Note 5	Note 5
±91			≥ 96	≥ 1	Note 5	Note 5	Note 5
±138		30	≥ 24	≥ 4	NR_TDD_FR1_B	-120.5	-50
					NR_TDD_FR1_C	-120	-50
					NR_FDD_FR1_G	-118	-50
					NR_TDD_FR1_J	-116.5	-50
±99			>48	≥ 1	Note 5	Note 5	Note 5
±83		60	≥ 24	≥ 4	NR_TDD_FR1_B	-117.5	-50
					NR_TDD_FR1_C	-117	-50
					NR_FDD_FR1_G	-115	-50
					NR_TDD_FR1_J	-113.5	-50

NOTE 1: Minimum SL-PRS bandwidth, which is the minimum of the SL-PRS bandwidths of the reference resource and the measured neighbour resource i.
NOTE 2: Io is assumed to have constant EPRE across the bandwidth.
NOTE 3: NR operating band groups in FR1 are as defined in clause 3.5.2.
NOTE 4: Tc is the basic timing unit defined in TS 38.211 [6].
NOTE 5: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the SL-PRS bandwidth of the smallest PRB number for the corresponding SCS.

Table 10.4A.2.2-3: Margin for SL RSTD measurement accuracy in FR1

PRS BW (PRB number)			Margin Z (Tc)
SCS=15kHz	SCS=30kHz	SCS=60kHz	
≥ 48	≥ 24	N/A	72
≥ 96	≥ 48	≥ 24	36

10.4A.3 SL PRS-RSRP measurements

10.4A.3.1 Measurement Report Mapping

10.4A.3.1.1 Absolute SL PRS-RSRP Measurement Report Mapping

The reporting range of absolute SL PRS-RSRP measurement is defined from -156 dBm to -31 dBm with 1 dB resolution.

The mapping of measured quantity is defined in table 10.4A.3.1.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

Table 10.4A.3.1.1-1: Measurement report mapping for SL PRS-RSRP

Reported value	Measured quantity value	Unit
SL_PRS-RSRP_0	SL_PRS-RSRP<-156	dBm
SL_PRS-RSRP_1	-156≤SL_PRS-RSRP<-155	dBm
SL_PRS-RSRP_2	-155≤SL_PRS-RSRP<-154	dBm

SL_PRS-RSRP_121	-36≤SL_PRS-RSRP<-35	dBm
SL_PRS-RSRP_122	-35≤SL_PRS-RSRP<-34	dBm
SL_PRS-RSRP_123	-34≤SL_PRS-RSRP<-33	dBm

Reported value	Measured quantity value	Unit
SL_PRS-RSRP_124	-33≤SL_PRS-RSRP<-32	dBm
SL_PRS-RSRP_125	-32≤SL_PRS-RSRP<-31	dBm
SL_PRS-RSRP_126	-31≤SL_PRS-RSRP	dBm

10.4A.3.2 Measurement Accuracy Requirements

10.4A.3.2.1 Absolute SL PRS-RSRP accuracy

The absolute accuracy requirements for SL PRS-RSRP measurement for FR1 defined in table 10.4A.3.2.1-1 are valid under the following conditions:

- Conditions defined in 38.101-1 [18] clause 7.3E for reference sensitivity are fulfilled.
- PRP $1,2|_{dBm}$ according to annex B.4A.1 for a corresponding Band.

Table 10.4A.3.2.1-1: SL PRS-RSRP absolute accuracy for FR1

Accuracy		Conditions						
							Io Note 4 range	
Normal condition	Extreme condition	SL- PRS Ês/Iot	SL-PRS SCS	SL-PRS BW Note 2	Number of SL-PRS samples, S	NR operating band group Note 5	Minimum Io Note 1	Maximum Io
dB	dB	dB	kHz	PRB	-		dBm / SCS_{PRS}	dBm/ $BW_{Channel}$
±3.3	±7.9	≥-3 dB	15	48	≥4	NR_TDD_FR1_B	-123.5	-50
						NR_TDD_FR1_C	-123	-50
						NR_FDD_FR1_G	-121	-50
						NR_TDD_FR1_J	-119.5	-50
±5.3	±9.8			> 48	≥1	Note 3		
±4.7	±9.2			≥ 96	≥1	Note 3		
±4.5	±9.0		30	≥ 24	≥4	NR_TDD_FR1_B	-120.5	-50
						NR_TDD_FR1_C	-120	-50
						NR_FDD_FR1_G	-118	-50
						NR_TDD_FR1_J	-116.5	-50
±5.0	±9.5			> 48	≥1	Note 3		
±4.6	±9.1		60	≥ 24	≥4	NR_TDD_FR1_B	-117.5	-50
						NR_TDD_FR1_C	-117	-50
						NR_FDD_FR1_G	-115	-50
						NR_TDD_FR1_J	-113.5	-50

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: SL-PRS bandwidth is as indicated in *sl-PRS-BW* in the *SL-PRS-AssistanceData* defined in TS 38.355 [37].
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the SL-PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 4: The Io is defined in PRS positioning slots. The same Io range applies to SL-PRS and non-SL-PRS symbols. Io levels are different in SL-PRS and non-SL-PRS symbols within the same slot.
NOTE 5: NR operating band groups are as defined in Section 3.5.2.

10.4A.4 SL Rx-Tx measurements

10.4A.4.1 Measurement Report Mapping

10.4A.4.1.1 Absolute SL Rx-Tx Measurement Report Mapping

The reporting range for the absolute SL Rx-Tx time difference measurement ($T_{SL\ Rx\text{-}Tx}$) is defined from -985024´T_c to 985024´T_c with the resolution step of 2^{k}´T_c, where:

T_c is defined in TS 38.211 [6],

$k_{min} \leq k \leq k_{max}$,

k_{min}=2 and k_{max}=5, when both of the transmitted SL-PRS and the received SL-PRS resources configured for $T_{SL\ Rx\text{-}Tx}$ are in FR1.

The $T_{SL\ Rx\text{-}Tx}$ report mapping for k = 2, 3, 4, and 5 are specified in tables 10.4A.4.1.1-1, 10.4A.4.1.1-2, 10.4A.4.1.1-3, and 10.4A.4.1.1-4, respectively.

Table 10.4A.4.1.1-1: Absolute SL Rx-Tx time difference measurement report mapping for *k*=2

Reported Quantity Value	Measured Quantity Value	Unit
SL_RX-TX_TIME_DIFFERENCE_0000	$T_{SL\ Rx\text{-}Tx} < -985024$	T_c

SL_RX-TX_TIME_DIFFERENCE_61563	$984960 \leq T_{SL\ Rx\text{-}Tx} < 984992$	T_c
SL_RX-TX_TIME_DIFFERENCE_61564	$984992 \leq T_{SL\ Rx\text{-}Tx} < 985024$	T_c
SL_RX-TX_TIME_DIFFERENCE_61565	$985024 \leq T_{SL\ Rx\text{-}Tx}$	T_c

10.4A.4.2 Measurement Accuracy

The accuracy requirements for SL Rx-Tx time difference measurement shall be within $\pm(X+Y+\delta)\ T_c$, where X, Y, and δ are defined as follows.

X is defined in table 10.4A.4.2-1 for AWGN propagation condition and table 10.4A.4.2-2 for fading propagation condition in FR1, provided that the following conditions are met:

- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- SL $PRP|_{dBm}$ according to annex B.4A.1 for a corresponding Band.
- The UE transmits SL PRS within -160, 160 msec of at least one SL PRS resource of each of the anchor UEs in the assistance data.
- N_{TA_offset} defined in table 7.1.2-2 does not change during the UE Rx-Tx measurement period when the reference timing used for SL PRS transmissions is a NR serving cell.

If UE indicates *tx-TimeInfo* when reporting SL Rx-Tx time difference results, the frequency drift margin Y=32 Tc, provided that the time offset between the SL PRS transmission and reception, which are used for a single SL Rx-Tx estimate, is no greater than 160 ms. Otherwise, Y=0.

Margin δ are defined in table 10.4A.4.2-3.

Table 10.4A.4.2-1: SL Rx-Tx time difference measurement accuracy in FR1 for AWGN channel

Accuracy	Conditions						
	PRS $\hat{E}s/Iot$	Minimum PRS bandwidth	Number of samples, S	PRS SCS	NR operating band groups[Note 2]	Io[Note 3] range

10.4A.5 SL PRS-RSRPP measurements

10.4A.5.1 Measurement Report Mapping

10.4A.5.1.1 Absolute SL PRS-RSRPP Measurement Report Mapping

The reporting range of absolute SL PRS-RSRPP measurement is defined from -156 dBm to -31 dBm with 1 dB resolution.

The mapping of measured quantity is defined in table 10.4A.5.1.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

Table 10.4A.5.1.1-1: Measurement report mapping for SL PRS-RSRPP

Reported value	Measured quantity value	Unit
SL_PRS-RSRPP_0	SL_PRS-RSRPP<-156	dBm
SL_PRS-RSRPP_1	-156≤SL_PRS-RSRPP<-155	dBm

SL_PRS-RSRPP_125	-32≤SL_PRS-RSRPP<-31	dBm
SL_PRS-RSRPP_126	-31≤SL_PRS-RSRPP	dBm

10.4A.5.2 Measurement Accuracy

10.4A.5.2.1 Introduction

The requirements in clause 10.4A.5.2 shall apply provided the UE has received *SL-TDOA-RequestLocationInformation* or *SL-AOA-RequestLocationInformation* or *SL-TOA-RequestLocationInformation* or *SL-RTT-RequestLocationInformation* from LMF or another UE via SLPP requesting the UE to measure and report SL PRS-RSRPP measurements defined in TS 38.215 [4].

The requirements in clause 10.4A.5.2 apply for the first path SL PRSRSRPP measurement.

10.4A.5.2.2 Measurement Accuracy Requirements

10.4A.5.2.2.2 Absolute SL PRS-RSRPP accuracy

The absolute accuracy requirements for SL PRS-RSRPP measurement for FR1 defined in table 10.4A.5.2.2.2-1 are valid under the following conditions:

- Conditions defined in 38.101-1 [18] clause 7.3E for reference sensitivity are fulfilled.
- PRP $1,2|_{\mathrm{dBm}}$ according to annex B.4A.1 for a corresponding Band.

NOTE 1: The requriements in this clause are derived based on two-tap channel defined in TS 38.101-4 [21] annex B.2.4 (a = 1, τ_d=0.45 μs and f_D=5 Hz).

NOTE 2: The requirements in this clause are derived based on the difference between the estimated SL PRSRSRPP compared to the ideal SL PRSRSRPP defined as

$$\mathrm{RSRPP}_p \propto \left| \sum_k H_k \exp\left(j 2\pi D_p \frac{k}{N_{\mathrm{IFFT}}} \right) \right|^2$$

where:

H_k is the effective channel frequency response (over REs occupied by SL-PRS) measured without receiver noise.

D_p is the exact delay of the p-th path in the channel model.

Table 10.4A.5.2.2.2-1: SL PRS-RSRPP absolute accuracy for FR1

Accuracy		Conditions						
							Io Note 4 range	
Normal condition	Extreme condition	PRS Ês/Iot	PRS SCS	PRS BW Note 2	PRS sample	operating band group Note 5	Minimum Io Note 1	Maximum Io

±4.8	±9.3	≥-3	15	48	≥4	NR_TDD_FR1_B	-123.5	-50
						NR_TDD_FR1_C	-123	-50
						NR_FDD_FR1_G	-121	-50
						NR_TDD_FR1_J	-119.5	-50
±4.7	±9.2			> 48	≥1	Note 3		
±4.5	±9.0			≥ 96	≥1	Note 3		
±4.7	±9.2		30	≥ 24	≥4	NR_TDD_FR1_B	-120.5	-50
						NR_TDD_FR1_C	-120	-50
						NR_FDD_FR1_G	-118	-50
						NR_TDD_FR1_J	-116.5	-50
±4.8	±9.3			> 48	≥1	Note 3		
±4.8	±9.3		60	≥ 24	≥4	NR_TDD_FR1_B	-117.5	-50
						NR_TDD_FR1_C	-117	-50
						NR_FDD_FR1_G	-115	-50
						NR_TDD_FR1_J	-113.5	-50

NOTE 1: This minimum Io condition is expressed as the average Io per RE over all REs in an OFDM symbol.
NOTE 2: SL PRS bandwidth is as indicated in *sl-PRS-BW* in the SL-PRS-AssistanceData defined in TS 38.355 [37].
NOTE 3: The same bands and the same Io conditions for each band apply for this requirement as for the corresponding requirement with the SL PRS bandwidth of the smallest PRB number for the corresponding SCS.
NOTE 4: The Io is defined in PRS positioning subframes. The same Io range applies to PRS and non-PRS symbols. Io levels are different in PRS and non-PRS symbols within the same subframe.
NOTE 5: NR V2X operating band groups are as defined in Section 3.5.2.

10.4A.6 SL AoA measurements

10.4A.6.1 Measurement Report Mapping

10.4A.6.1.1 Absolute SL AoA Measurement Report Mapping

The UE shall report A-AoA measurement results based on measurement report mapping in this clause. The UE shall report Z-AoA measurement results based on measurement report mapping in this clause.

The reporting range of SL AoA, as defined in TS 38.215 [4], is defined from -180 degree to +180 degree for A-AoA. The reporting resolution is 0.1 degree. The mapping of A-AoA measured quantity is defined in table 10.4A.6.1.1-1.

Table 10.4A.6.1.1-1: A-AoA measurement report mapping

Reported value	Measured quantity value (A-AoA)	Unit
A-AoA_0	-180 ≤ A-AoA < -179.9	Degree
A-AoA_1	-179.9 ≤ A-AoA < -179.8	Degree
A-AoA_2	-179.8 ≤ A-AoA < -179.7	Degree
…	…	…
A-AoA_1798	-0.2 ≤ A-AoA < -0.1	Degree
A-AoA_1799	-0.1 ≤ A-AoA < 0	Degree
A-AoA_1800	0 ≤ A-AoA < 0.1	Degree
A-AoA_1801	0.1 ≤ A-AoA < 0.2	Degree
A-AoA_1802	0.2 ≤ A-AoA < 0.3	Degree
…	…	…
A-AoA_3598	179.8 ≤ A-AoA < 179.9	Degree
A-AoA_3599	179.9 ≤ A-AoA < 180	Degree

The reporting range of SL AoA, as defined in TS 38.215 [4], is defined from 0 degree to +180 degree for Z-AoA. The reporting resolution is 0.1 degree. The reporting resolution is 0.1 degree. The mapping of Z-AoA measured quantity is defined in table 10.4A.6.1.1-2.

Table 10.4A.6.1.1-2: Z-AoA measurement report mapping

Reported value	Measured quantity value (Z-AoA)	Unit
Z-AoA_0	0 ≤ Z-AoA < 0.1	degree
Z-AoA _1	0.1 ≤ Z-AoA < 0.2	degree
Z-AoA _2	0.2 ≤ Z-AoA < 0.3	degree
…	…	…
Z-AoA _1798	179.8 ≤ Z-AoA < 179.9	degree
Z-AoA _1799	179.9 ≤ Z-AoA ≤ 180	degree

10.4A.7 SL RTOA measurements

10.4A.7.1 Measurement Report Mapping

10.4A.7.1.1 Absolute SL RTOA Measurement Report Mapping

The reporting range of SL RTOA measurement, as defined in clause 5.2.2 of TS 38.215 [4], is defined from $-985024T_c$ to $+985024 \times T_c$. The reporting resolution is uniform across the reporting range and is defined as $T = T_c * 2^k$ where

k is selected from the set {02, 3, 4, 5},

T_c is defined in TS 38.211 [6].

The mapping of measured quantity for each reporting resolution (k) is defined in table 10.4A.7.1.1-1 to table 10.4A.7.1.1-4.

Table 10.4A.7.1.1-1: Absolute SL RTOA measurement report mapping for *k*=2

Reported Value	Measured Quantity Value	Unit
SL_RTOA_000000	-985024 > SL_RTOA	T_c

11 Void

12 V2X Requirements

12.1 Introduction

This clause contains the requirements for the UE capable of V2X sidelink communication when the UE is out of coverage on the carrier used for V2X sidelink operation, as defined in TS 38.304 [1]. The requirements apply when the UE is:

- in any cell selection state, or any of the below applies:
- configured for V2X SL operation on a V2X carrier which is dedicated to only V2X SL operation and configured with only a PCell on WAN carrier,
- configured for SL operation on a sidelink carrier with CCA and configured with only a PCell on WAN carrier,
- configured for inter-band con-current V2X operation,
- configured for intra-band con-current V2X operation with different carriers,
- configured in co-channel coexistence for LTE SL and NR SL operation with same carrier.

NOTE: Any cell selection state refers to a UE that is out of network coverage and is not associated with a serving cell on any carrier as defined in TS 38.304 [1].

NOTE: When a UE in RRC_CONNECTED state is performing transmissions and/or reception for V2X sidelink communication, the UE shall meet all the requirements specified in Clause 9 assuming that UE has a dedicated RX/TX chain for V2X sidelink communication. Otherwise, the UE may interrupt the V2X sidelink communication in order to meet the measurement requirements specified in Clause 9.

This clause also contains the requirements for the UE capable of V2X sidelink communication when the UE is in coverage on the carrier used for V2X sidelink operation, as defined in TS 38.304 [1]. The requirements apply when the UE is:

- configured for intra-band con-current NR V2X cooperation with same carrier.
- configured in co-channel coexistence for LTE SL and NR SL operation with same carrier，

For UE capable of Public Safety sidelink communication and/or other commercial sidelink communication, unless explicitly stated, V2X requirements apply.

For sidelink communication in unlicensed spectrum,

- the term SyncRef UE subject to CCA is not available at the UE refers to when all the candidate S-SSB positions monitored in every S-SSB period are not available during the last 1280 ms. Otherwise, the SyncRef UE subject to CCA is considered as available at the UE.
- the term S-SSB period subject to CCA is not available at the UE refers to the S-SSB period in which all the candidate S-SSB positions are not available. Otherwise, the S-SSB period subject to CCA is considered as available at the UE.

12.2 UE Transmit Timing

12.2.1 Introduction

This clause contains requirements of transmission timing for V2X sidelink communication when:

- GNSS is used as the synchronization reference source;
- NR Cell is used as the synchronization reference source;
- E-UTRAN Cell is used as the synchronization reference source;

- SyncRef UE is used as the synchronization reference source.

The requirements for 60 kHz SCS of sidelink signal defined in this clause do not apply to the sidelink communication in unlicensed spectrum.

12.2.2 GNSS as synchronization reference source

The requirements in this subclause are applicable when the reference timing used by the UE for V2X sidelink communication is derived from GNSS.

The sidelink transmissions takes place $(N_{TA,SL} + N_{TA\ offset}) \times T_c$ before the subframe starting boundary as defined in TS 38.331 [2], where $N_{TA\ offset}$ = 0 and $N_{TA,SL}$=0.

The transmission timing error for sidelink transmissions shall be less than or equal to $\pm T_e$ where the timing error limit value T_e is defined in table 12.2.2-1.

Table 12.2.2-1: T_e Timing Error Limit

Frequency Range of sidelink	T_e
FR1	$12*64*T_c$
NOTE 1: T_c is the basic timing unit defined in TS 38.211 [6].	

12.2.3 NR Cell as synchronization reference source

The requirements in this subclause are applicable when the reference timing used for sidelink transmissions is a NR serving cell on a non-V2X sidelink carrier or a V2X sidelink carrier.

The sidelink transmissions takes place $(N_{TA,SL} + N_{TA\ offset}) \times T_c$ before the reception of the first detected path (in time) of the corresponding downlink frame from the reference cell, where $N_{TA,SL}$ = 0. If uplink transmission and sidelink transmission are in the same band, $N_{TA\ offset}$ is defined in table 7.1.2-2, otherwise $N_{TA\ offset}$ is 0.

The transmission timing error for sidelink transmissions shall be less than or equal to $\pm T_e$ where the timing error limit value T_e is defined in table 12.2.3-1.

Table 12.2.3-1: T_e Timing Error Limit

Frequency Range of sidelink	SCS of SSB signals (kHz)	SCS of sidelink signals (kHz)	T_e
FR1	15	15	$14*64*T_c$
		30	$12*64*T_c$
		60	$12*64*T_c$
	30	15	$10*64*T_c$
		30	$10*64*T_c$
		60	$9*64*T_c$
NOTE 1: T_c is the basic timing unit defined in TS 38.211 [6].			

12.2.4 E-URTAN Cell as synchronization reference source

The requirements in this subclause are applicable when the reference timing used for sidelink transmissions is an E-UTRAN serving cell on a non-V2X sidelink carrier.

The sidelink transmissions takes place $(N_{TA,SL} + N_{TA\ offset}) \times T_c$ before the reception of the first detected path (in time) of the corresponding E-UTRAN downlink frame from the reference cell, where $N_{TA\ offset}$ = 0 and $N_{TA,SL}$=0.

The transmission timing error for sidelink transmissions shall be less than or equal to $\pm T_e$ where the timing error limit value T_e is defined in table 12.2.4-1.

Table 12.2.4-1: T_e Timing Error Limit

Frequency Range of sidelink	E-UTRAN downlink bandwidth (MHz)	$T_{e_}$
FR1	≥3	$14*64*T_c$
NOTE 1: T_c is the basic timing unit defined in TS 38.211 [6].		

12.2.5 SyncRef UE as synchronization reference source

The requirements in this subclause are applicable when the reference timing used for deriving sidelink transmission is from SyncRef UE transmitting sidelink synchronization signals.

The sidelink transmissions takes place $(N_{TA,SL} + N_{TA\ offset}) \times T_c$ before the reception of the first detected path (in time) of the corresponding timing reference frame from the SyncRef UE, where $N_{TA\ offset}$ = 0 and $N_{TA,SL}$=0.

The transmission timing error for sidelink transmissions shall be less than or equal to $\pm T_e$ where the timing error limit value T_e is defined in table 12.2.5-1.

Table 12.2.5-1: T_e Timing Error Limit

Frequency Range of sidelink	SCS of sidelink signals (kHz)	T_e
FR1	15	$12*64*T_c$
	30	$8*64*T_c$
	60	$5*64*T_c$
NOTE 1: T_c is the basic timing unit defined in TS 38.211 [6].		

If the UE uses SyncRefUE on a carrier frequency subject to CCA for deriving the UE transmit timing, then the UE shall meet all the transmit timing requirements defined in clause 12.2.5: The transmission timing error for sidelink transmissions shall be less than or equal to $\pm T_e$ where the timing error limit value T_e is defined in table 12.2.5-1 provided that at least one S-SSB is available at the UE during the last 160 ms.

12.3 Initiation/Cease of SLSS Transmissions

12.3.1 Introduction

The requirements in this subclause are applicable to the UE capable of V2X sidelink communication when:

- GNSS is used as the synchronization reference source;
- NR Cell is used as the synchronization reference source;
- EUTRAN Cell is used as the synchronization reference source;
- SyncRef UE is used as the synchronization reference source.

12.3.1.1 Initiation/Cease of SLSS transmissions with NR cell as synchronization reference source

The requirements apply when the NR Cell is used as synchronization reference source and when the UE is

- out of coverage on the V2X NR sidelink carrier and in coverage with a serving cell on a NR non-V2X sidelink carrier, or
- in coverage with a serving cell on a NR V2X sidelink carrier,

and when the conditions for SLSS transmissions specified in TS 38.331 [2] are met; *networkControlledSyncTx* is not configured; and *syncTxThreshIC* is included in *SystemInformationBlockType12*. The UE shall be capable of measuring the RSRP of the cell used as synchronization reference source to evaluate to initiate/cease SLSS transmissions within $T_{evaluate,SLSS}$

where,

- $T_{evaluate,SLSS}$ is as specified in table 12.3.1.1-1 when UE performs SSB based measurements without measurement gaps.
- $T_{evaluate,SLSS}$ is as specified in table 12.3.1.1-2 when UE performs SSB based measurements with measurement gaps.

Table 12.3.1.1-1: $T_{evaluate,SLSS}$ for measurements without measurement gaps when NR cell is used as synchronization reference source (FR1)

DRX cycle in NR cell	$T_{evaluate,SLSS}$
No DRX	max(400 ms, ceil(2 x 5 x K_p) x SMTC period)[Note 1]
DRX cycle≤ 320 ms	max(400 ms, ceil(1.5 x 2 x 5 x K_p) x max(SMTC period, DRX cycle))
DRX cycle>320 ms	ceil(7 x K_p) x DRX cycle
NOTE 1: If different SMTC periodicities are configured for different cells, the SMTC period in the requirement is the one used by the cell being identified	

Table 12.3.1.1-2: $T_{evaluate,SLSS}$ for measurements with measurement gaps when NR cell is used as synchronization reference source (FR1)

DRX cycle in NR cell	$T_{evaluate,SLSS}$
No DRX	max(400 ms, 2 x 5 x max(MGRP, SMTC period)) x $CSSF_{intra}$
DRX cycle≤ 320 ms	max(400 ms, ceil(2 x 1.5x 5) x max(MGRP, SMTC period,DRX cycle)) x $CSSF_{intra}$
DRX cycle>320 ms	7 x max(MGRP, DRX cycle) x $CSSF_{intra}$

If higher layer filtering is configured, an additional delay in evaluation to initiate/cease SLSS transmissions can be expected.

For the NR cell as synchronization reference source:

- SS-RSRP related side conditions given in clauses 10.1.2 for FR1, respectively, for a corresponding Band,
- SS-RSRQ related side conditions given in clauses 10.1.7 for FR1, respectively, for a corresponding Band,
- SS-SINR related side conditions given in clauses 10.1.12 for FR1, respectively, for a corresponding Band,
- SSB_RP and SSB Ês/Iot according to annex B.2.2 for a corresponding Band.

12.3.1.2 Initiation/Cease of SLSS transmissions with EUTRAN cell as synchronization reference source

The requirements apply when the EUTRAN Cell is used as synchronization reference source and when the UE is

- out of coverage on the V2X NR sidelink carrier and in coverage with a serving cell on a LTE non-V2X sidelink carrier,

and when the conditions for SLSS transmissions specified in TS 36.331 [16] are met; *networkControlledSyncTx* is not configured; and *syncTxThreshIC* is included in *SystemInformationBlockType28*. The UE shall be capable of measuring the RSRP of the cell used as synchronization reference source to evaluate to initiate/cease SLSS transmissions within $T_{evaluate,SLSS}$

where,

- $T_{evaluate,SLSS}$ = 0.4 seconds when UE is not configured with DRX.
- $T_{evaluate,SLSS}$ = as specified in table 12.3.1.2-1 when UE is configured with DRX.

Table 12.3.1.2-1: $T_{evaluate,SLSS}$ when EUTRAN cell is used as synchronization reference source

DRX cycle length in EUTRAN cell[s]	$T_{evaluate,SLSS}$ [s] (number of DRX cycles)
≤0.04	0.4 (Note 1)
0.04<DRX-cycle≤2.56	Note 2 (6)
NOTE 1: Number of DRX cycles depends upon the DRX cycle in use NOTE 2: Time depends upon the DRX cycles in use	

If higher layer filtering is configured, an additional delay in evaluation to initiate/cease SLSS transmissions can be expected.

For the cell as synchronization reference source:

- RSRP related side conditions given in TS 36.133[15] clauses 9.1.2.1 and 9.1.2.2 and RSRQ related side conditions given in TS 36.133[15] clause 9.1.5.1 for a corresponding Band are fulfilled,
- SCH_RP and SCH Ês/Iot according to TS 36.133[15] annex B.2.1 for a corresponding Band are fulfilled.

12.3.1.3 Initiation/Cease of SLSS transmissions with GNSS as synchronization reference source

The requirements apply when GNSS is used as synchronization reference source and when the UE is

- out of coverage on the V2X sidelink carrier and in coverage with a serving cell on a non-V2X sidelink carrier, or
- in coverage with a serving cell on a NR V2X sidelink carrier,

and when the conditions for SLSS transmissions specified in TS 38.331 [2] are met; *networkControlledSyncTx* is not configured; and *syncTxThreshIC* is included in *SystemInformationBlockType12* in a NR cell.

When the conditions for SLSS transmissions specified in TS 36.331 [16] are met; *networkControlledSyncTx* is not configured; and *syncTxThreshIC* is included in *SystemInformationBlockType28* in a EUTRAN cell.

The requirements in clause 12.3.1.1 shall apply if the serving cell is a NR cell.

The requirements in clause 12.3.1.2 shall apply if the serving cell is a EUTRAN cell.

12.3.1.4 Initiation/Cease of SLSS transmissions with SyncRef UE as synchronization reference source

The requirements apply when SyncRef UE is used as synchronization reference source and when the UE is

- in any cell selection state, or
- out of coverage on the V2X sidelink carrier and is associated with a serving cell on a non-V2X sidelink carrier, or
- in coverage with a serving cell on a NR V2X sidelink carrier,

and when the conditions for SLSS transmissions specified in TS 38.331 [2] are met and when SyncRef UE is used as synchronization reference source and if *syncTxThreshOoC* is included in the preconfigured V2X parameters.

The UE shall be capable of measuring the PSBCH-RSRP of the selected SyncRef UE used as synchronization reference source and evaluate it to initiate/cease SLSS transmissions within $T_{evaluate,SLSS}$, as shown in table 12.3.1.4-1.

Table 12.3.1.4-1: $T_{evaluate,SLSS}$ when SyncRef UE is used as synchronization reference source

SL-DRX cycle[Note 1] [ms]	$T_{evaluate,SLSS}$ [ms]
No SL-DRX	4 x S-SSB periods
SL-DRX cycle ≤ 160	4 x S-SSB periods
SL-DRX cycle > 160	4 x SL-DRX cycle

NOTE 1:	If multiple SL-DRX cycles are configured for SL UE, the SL-DRX cycle in the requirement is the shortest one. When the shortest SL-DRX cycle UE used changes, the requirements do not apply to the time of transition.

If higher layer filtering for PSBCH-RSRP measurements is pre-configured, an additional delay in evaluation to initiate/cease SLSS transmissions can be expected.

For the selected SyncRef UE as defined in TS 38.331 [2] used to derive transmission timing for V2X sidelink communication:

- PSBCH-RSRP related side conditions given in clause 12.4 for a corresponding Band are fulfilled,
- V2X S-SSB_RP and S-SSB Ês/Iot according to annex B. 4 for a corresponding Band are fulfilled.

12.3A Initiation/Cease of SLSS Transmissions with CCA

12.3A.1 Introduction

The requirements in this subclause are applicable to the UE capable of sidelink communication in unlicensed spectrum when:

- GNSS is used as the synchronization reference source;
- NR Cell is used as the synchronization reference source;
- EUTRAN Cell is used as the synchronization reference source;
- SyncRef UE is used as the synchronization reference source on a carrier frequency subject to CCA.

12.3A.1.1 Initiation/Cease of SLSS transmissions with NR cell as synchronization reference source

The requirements defined in subclause 12.3.1.1 apply when the NR Cell is used as synchronization reference source and when the UE is

- out of coverage on the NR sidelink carrier and in coverage with a serving cell on a NR non- sidelink carrier.

12.3A.1.2 Initiation/Cease of SLSS transmissions with EUTRAN cell as synchronization reference source

The requirements defined in subclause 12.3.1.2 apply when the EUTRAN Cell is used as synchronization reference source and when the UE is

- out of coverage on the NR sidelink carrier and in coverage with a serving cell on a LTE non-sidelink carrier.

12.3A.1.3 Initiation/Cease of SLSS transmissions with GNSS as synchronization reference source

The requirements defined in subclause 12.3.1.3 apply when GNSS is used as synchronization reference source and when the UE is

- out of coverage on the sidelink carrier and in coverage with a serving cell on a non-sidelink carrier.

12.3A.1.4 Initiation/Cease of SLSS transmissions with SyncRef UE as synchronization reference source

The requirements apply when SyncRef UE is used as synchronization reference source and when the UE is

- in any cell selection state, or

- out of coverage on the sidelink carrier and is associated with a serving cell on a non-sidelink carrier.

and when the conditions for SLSS transmissions specified in TS 38.331[2] are met and when SyncRef UE is used as synchronization reference source and if *syncTxThreshOoC* is included in the preconfigured sidelink parameters.

The UE shall be capable of measuring the PSBCH-RSRP of the selected SyncRef UE used as synchronization reference source and evaluate it to initiate/cease SLSS transmissions within $T_{evaluate,SLSS_CCA}$, as shown in table 12.3A.1.4-1 when the SyncRef UE is transmitting S-SSB on a carrier frequency subject to CCA.

Table 12.3A.1.4-1: $T_{evaluate,SLSS_CCA}$ when SyncRef UE is transmitting S-SSB on a carrier subject to CCA and is used as synchronization reference source

SL-DRX cycle[Note 1] [ms]	$T_{evaluate,SLSS_CCA}$ [ms]
No SL-DRX	(4 + L_{SLSS}) x S-SSB periods
SL-DRX cycle ≤ 160	(4 + L_{SLSS}) x S-SSB periods
SL-DRX cycle > 160	(4 + L_{SLSS}) x SL-DRX cycle
NOTE 1: If multiple SL-DRX cycles are configured for SL UE, the SL-DRX cycle in the requirement is the shortest of all the configured SL-DRX cycles. When the shortest SL-DRX cycle UE used changes, the requirements do not apply to the time of transition.	
NOTE 2: L_{SLSS} is the number of unavailable S-SSB period during $T_{evaluate,SLSS_CCA}$ due to the CCA failures; where $L_{SLSS} \leq L_{SLSS,\ max}$ and $L_{SLSS,\ max} = 4$.	

The UE shall initiate the procedure for selection/reselection of different synchronization reference source as defined in TS 38.331 [2] when the requirements cannot be met due to that L_{SLSS} exceeding $L_{SLSS,\ max}$ during $T_{evaluate,SLSS_CCA}$.

If higher layer filtering for PSBCH-RSRP measurements is pre-configured, an additional delay in evaluation to initiate/cease SLSS transmissions can be expected.

For the selected SyncRef UE as defined in TS 38.331 [2] used to derive transmission timing for sidelink communication:

- PSBCH-RSRP related side conditions given in clause 12.4 for a corresponding Band are fulfilled,
  - sidelink S-SSB_RP and S-SSB Ês/Iot according to annex B. 4 for a corresponding Band are fulfilled.

12.4 Selection / Reselection of V2X Synchronization Reference Source

The requirements defined in this clause do not apply to the UEs that do not support transmission and reception of SLSS.

A SyncRef UE is considered to be detectable when

- PSBCH-RSRP related side conditions given in clause 10 are fulfilled for a corresponding Band,
- S-SSB_RP and S-SSB Ês/Iot according to annex B.4.3 for a corresponding Band are fulfilled.

When GNSS synchronization reference source is configured as the highest priority and

- UE is synchronized to GNSS directly,
  - UE shall not drop any V2X SLSS and data transmission for the purpose of selection/reselection to the SyncRef UE.
- UE is synchronized to a SyncRef UE that is synchronized to GNSS directly or in-directly,
  - UE shall not drop any V2X data transmission for the purpose of selection/reselection to the SyncRef UE. The UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X}$ seconds if the SyncRef UE meets the selection / reselection criterion defined in TS 38.331 [2]. $T_{detect,SyncRef\ UE_V2X}$ is defined as 1.6 seconds at S-SSB Ês/Iot ≥ 0 dB, provided that the UE is allowed to drop a maximum of 30% of its SLSS transmissions during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.

- in other case
  - When UE is in non-SL-DRX
    - The UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X}$ seconds if the SyncRef UE meets the selection / reselection criterion defined in TS 38.331 [2]. $T_{detect,SyncRef\ UE_V2X}$ is defined as 8 seconds at S-SSB $\hat{E}s/Iot \geq 0$ dB, provided that the UE is allowed to drop a maximum of 6 % of its V2X data and SLSS transmissions during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.
    - UE is allowed to drop up to 2 slots of its V2X data reception per PSBCH monitoring occasion and overall drop rate shall not exceed 0.3% of its V2X data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.
  - When UE is in SL-DRX
    - UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X}$ seconds if the SyncRef UE meets the selection / reselection criterion defined in TS 38.331 [2]. $T_{detect,SyncRef\ UE_V2X}$ is defined as 8 seconds at S-SSB $\hat{E}s/Iot \geq 0$ dB, provided that the V2X UE is allowed to drop a maximum of 6 % of its V2X data and SLSS transmissions for the purpose of selection / reselection to the SyncRef UE.
    - UE is allowed to drop up to 2 slots of its V2X data reception per PSBCH monitoring occasion and UE is allowed to drop at most an aggregated window of 24 ms of its V2X data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.
    - The UE is allowed to extend $T_{detect,SyncRef\ UE_V2X}$ to max(4 x 50 SL-DRX cycle length, 8 s) when the following conditions are satisfied over an evaluation period $T_{evaluate,SLSS}$ in clause 12.3.1.1 if an NR cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.2 if an EUTRA cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.4 if an SLSS is used as synchronization reference source. If multiple SL-DRX cycles are configured, the SL-DRX cycle length is the longest one.
    - SS-RSRP is larger than *syncTxThreshOoC*.

When serving cell/PCell synchronization reference source is configured as the highest priority,

- When UE is in non-SL-DRX
  - UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X}$ seconds if the SyncRef UE meets the selection / reselection criterion defined in TS 38.331 [2]. $T_{detect,SyncRef\ UE_V2X}$ is defined as 8 seconds at SCH Es/Iot ≥ 0 dB, provided that the V2X UE is allowed to drop a maximum of 6 % of its V2X data and SLSS transmissions for the purpose of selection / reselection to the SyncRef UE.
  - UE is allowed to drop up to 2 slots of its V2X data reception per PSBCH monitoring occasion and overall drop rate shall not exceed 0.3% of its V2X data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.
- When UE is in SL-DRX
  - The UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X}$ seconds if the SyncRef UE meets the selection / reselection criterion defined in TS 38.331 [2]. $T_{detect,SyncRef\ UE_V2X}$ is defined as 8 seconds at SCH Es/Iot ≥ 0 dB, provided that the UE is allowed to drop its V2X data and SLSS transmissions at most in an aggregated window of 480ms during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.
  - UE is allowed to drop up to 2 slots of its V2X data reception per PSBCH monitoring occasion and UE is allowed to drop at most an aggregated window of 24 ms of its V2X data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.
  - The UE is allowed to extend $T_{detect,SyncRef\ UE_V2X}$ to max(4 x 50 SL-DRX cycle length, 8 s) when the following conditions are satisfied over an evaluation period $T_{evaluate,SLSS}$ in clause 12.3.1.1 if an NR cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.2 if an EUTRA cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.4 if an SLSS is used as synchronization reference source. If multiple SL-DRX cycles are configured, the SL-DRX cycle length is the longest one.

- SS-RSRP is larger than *syncTxThreshOoC*.

UE shall be capable of performing PSBCH-RSRP measurements for 3 identified intra-frequency SyncRef UE with the measurement period of $T_{measure,PSBCH-RSRP}$ in table 12.4-1. It is assumed that the SyncRef UE do not drop or delay any SLSS transmission within the measurement period. Otherwise, the measurement period may be extended.

Table 12.4-1: PSBCH-RSRP measurement period for intra-frequency SyncRef UE

SL-DRX cycle[Note 1] [ms]	$T_{measure,PSBCH-RSRP}$ [ms]
No SL-DRX	320
SL-DRX cycle ≤ 160 ms	320
SL-DRX cycle > 160 ms	2 x SL-DRX cycle
NOTE 1: If multiple SL-DRX cycles are configured, the SL-DRX cycle is the shortest one.	

When UE is synchronized to GNSS directly, before selection / reselection of the new synchronization reference source UE shall evaluate the GNSS synchronization source reliability for at least 20 seconds before changing the synchronization reference from GNSS to another synchronization reference source. UE shall be always synchronized to GNSS directly during the evaluation of GNSS synchronization source reliability.

12.4A Selection / Reselection of Sidelink Synchronization Reference Source with CCA

The requirements defined in this clause do not apply to the UEs that do not support transmission and reception of SLSS.

A SyncRef UE is considered to be detectable when

- PSBCH-RSRP related side conditions given in clause 10 are fulfilled for a corresponding Band,
- S-SSB_RP and S-SSB Ês/Iot according to annex B.4.3 for a corresponding Band are fulfilled.

When GNSS synchronization reference source is configured as the highest priority and

- UE is synchronized to GNSS directly,
  - UE shall not drop any sidelink SLSS and data transmission for the purpose of selection/reselection to the SyncRef UE.
- UE is synchronized to a SyncRef UE that is synchronized to GNSS directly or in-directly,
  - UE shall not drop any sidelink data transmission for the purpose of selection/reselection to the SyncRef UE. The UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds if the SyncRef UE meets the selection/reselection criterion defined in TS 38.331[2] and all S-SSB periods selected for SyncRefUE identification are available during the $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 1.6 seconds at S-SSB Ês/Iot ≥ 0 dB, provided that the UE is allowed to drop a maximum of 30% of its SLSS transmissions during $T_{detect,SyncRef\ UE_V2X_CCA}$ for the purpose of selection/reselection to the SyncRef UE.
- For other cases
  - When UE is in non-SL-DRX
    - The UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds if the SyncRef UE meets the selection/reselection criterion defined in TS 38.331[2] and all S-SSB periods selected for SyncRefUE identification are available during the $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 8 seconds at S-SSB Ês/Iot ≥ 0 dB, provided that the UE is allowed to drop its sidelink data and SLSS transmissions at most in an aggregated window of 480 ms during $T_{detect,SyncRef\ UE_V2X_CCA}$ for the purpose of selection/reselection to the SyncRef UE. Only if UE additionally drops a maximum of 30% of its SLSS transmission, the UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds, when all S-SSB periods selected for SyncRefUE identification are available during the $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T'_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 1.6 seconds at S-SSB Ês/Iot ≥ 0 dB.

- UE is allowed to drop up to 2 slots of its sidelink data reception per PSBCH monitoring occasion and overall drop rate shall not exceed 0.3% of its sidelink data reception during $T_{detect,SyncRef\ UE_V2X_CCA}$ for the purpose of selection/reselection to the SyncRef UE.

- When UE is in SL-DRX

  - UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds if the SyncRef UE meets the selection/reselection criterion defined in TS 38.331[2] and all S-SSB periods selected for SyncRefUE identification are available during the $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 8 seconds at S-SSB $\hat{E}s/Iot \geq 0$ dB, provided that the sidelink UE is allowed to drop a maximum of 6 % of its sidelink data and SLSS transmissions for the purpose of selection/reselection to the SyncRef UE. Only if UE additionally drops a maximum of 30% of its SLSS transmission, the UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds, when all S-SSB periods selected for SyncRefUE identification are available during the $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T'_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 1.6 seconds at S-SSB $\hat{E}s/Iot \geq 0$ dB.

  - UE is allowed to drop up to 2 slots of its sidelink data reception per PSBCH monitoring occasion and UE is allowed to drop at most an aggregated window of 24 ms of its sidelink data reception during $T_{detect,SyncRef\ UE_V2X_CCA}$ for the purpose of selection/reselection to the SyncRef UE.

  - The UE is allowed to extend $T_{detect,SyncRef\ UE_V2X_CCA}$ to max(4 x 50 SL-DRX cycle length, 8 s) when the following conditions are satisfied over an evaluation period $T_{evaluate,SLSS}$ in clause 12.3.1.1 if an NR cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.2 if an EUTRA cell is used as synchronization reference source, or $T_{evaluate,SLSS_CCA}$ in clause 12.3A.1.4 if an SLSS is used as synchronization reference source. If multiple SL-DRX cycles are configured, the SL-DRX cycle length is the longest one.

  - SS-RSRP is larger than *syncTxThreshOoC*.

When serving cell/PCell synchronization reference source is configured as the highest priority,

- When UE is in non-SL-DRX

  - UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds if the SyncRef UE meets the selection/reselection criterion defined in TS 38.331[2] and all S-SSB periods selected for SyncRefUE identification are available during the $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 8 seconds at SCH Es/Iot ≥ 0 dB, provided that the sidelink UE is allowed to drop a maximum of 6 % of its sidelink data and SLSS transmissions for the purpose of selection/reselection to the SyncRef UE. When GNSS is not available and only if UE additionally drops a maximum of 30% of its SLSS transmission, the UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds, when all S-SSB periods selected for SyncRefUE identification are available during the $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T'_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 1.6 seconds at S-SSB $\hat{E}s/Iot \geq 0$ dB.

  - UE is allowed to drop up to 2 slots of its sidelink data reception per PSBCH monitoring occasion and overall drop rate shall not exceed 0.3% of its sidelink data reception during $T_{detect,SyncRef\ UE_V2X_CCA}$ for the purpose of selection/reselection to the SyncRef UE.

- When UE is in SL-DRX

  - The UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds if the SyncRef UE meets the selection/reselection criterion defined in TS 38.331[2] and all S-SSB periods selected for SyncRefUE identification are available during the $T_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 8 seconds at SCH Es/Iot ≥ 0 dB, provided that the UE is allowed to drop its sidelink data and SLSS transmissions at most in an aggregated window of 480 ms during $T_{detect,SyncRef\ UE_V2X_CCA}$ for the purpose of selection/reselection to the SyncRef UE. When GNSS is not available and only if UE additionally drops a maximum of 30% of its SLSS transmission, the UE shall be able to identify newly detectable intra-frequency SyncRef UE within $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds, when all S-SSB periods selected for SyncRefUE identification are available during the $T'_{detect,SyncRef\ UE_V2X_CCA}$ seconds. $T'_{detect,SyncRef\ UE_V2X_CCA}$ is defined as 1.6 seconds at S-SSB $\hat{E}s/Iot \geq 0$ dB.

UE is allowed to drop up to 2 slots of its sidelink data reception per PSBCH monitoring occasion and UE is allowed to drop at most an aggregated window of 24 ms of its sidelink data reception during $T_{detect,SyncRef\ UE_V2X_CCA}$ for the purpose of selection/reselection to the SyncRef UE.

- The UE is allowed to extend $T_{detect,SyncRef\ UE_V2X_CCA}$ to max(4 x 50 SL-DRX cycle length, 8 s) when the following conditions are satisfied over an evaluation period $T_{evaluate,SLSS}$ in clause 12.3.1.1 if an NR cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.2 if an EUTRA cell is used as synchronization reference source, or $T_{evaluate,SLSS_CCA}$ in clause 12.3A.1.4 if an SLSS is used as synchronization reference source. If multiple SL-DRX cycles are configured, the SL-DRX cycle length is the longest one.

- SS-RSRP is larger than *syncTxThreshOoC*.

The UE shall be capable of performing PSBCH-RSRP measurements for 3 identified intra-frequency SyncRef UE with the measurement period of $T_{measure,PSBCH\text{-}RSRP_CCA}$ in table 12.4A-1. It is assumed that the SyncRef UE do not drop or delay any SLSS transmission within the measurement period. Otherwise, the measurement period may be extended.

Table 12.4A-1: PSBCH-RSRP measurement period for intra-frequency SyncRef UE

SL-DRX cycle[Note 1] [ms]	$T_{measure,PSBCH\text{-}RSRP_CCA}$[Note 3] [ms]
No SL-DRX	$(2 + L_{PSBCH})$*160
SL-DRX cycle ≤ 160	$(2 + L_{PSBCH})$*160
SL-DRX cycle > 160	$(2 + L_{PSBCH})$*SL-DRX cycle
NOTE 1: If multiple SL-DRX cycles are configured, the SL-DRX cycle is the shortest one.	
NOTE 2: L_{PSBCH} is the number of S-SSB periods in which the SLSS is not available due to CCA failures during $T_{measure,PSBCH\text{-}RSRP_CCA}$, where $L_{PSBCH} \leq L_{PSBCH,max}$ and $L_{PSBCH,max} = 2$.	
NOTE 3: Upon L_{PSBCH} exceeding $L_{PSBCH,max}$, the UE shall not reselect to the measured candidate SyncRef UE based on the measurement result.	

When UE is synchronized to GNSS directly, before selection/reselection of the new synchronization reference source UE shall evaluate the GNSS synchronization source reliability for at least 20 seconds before changing the synchronization reference from GNSS to another synchronization reference source. UE shall be always synchronized to GNSS directly during the evaluation of GNSS synchronization source reliability.

12.5 L1 SL-RSRP measurements

12.5.1 Introduction

This clause contains the measurement requirements related to resource reselection and resource pre-emption of the UE capable of V2X sidelink communication.

12.5.2 SL-RSRP measurements

The UE physical layer shall be capable of performing the L1 SL-RSRP measurements on the carrier operating V2X sidelink communication for determining the subset of resources to be excluded in PSSCH resource selection in sidelink transmission mode 2 based on network configuration or pre-configuration. The L1 SL-RSRP measurement period corresponds to one slot and the measurement shall meet the L1 SL-RSRP measurement accuracy requirement in Clause 10. After resource (re-)selection procedure, re-evaluation is performed on the reserved resources by L1 SL-RSRP measurements before transmission of SCI with reservation when the conditions specified in TS 38.214 [26] are satisfied.

When the pre-emption mechanism is enabled for the resource pool that UE is monitoring and selecting resource from, after UE selects from the resource not excluded based on L1 SL-RSRP measurement procedure, the UE shall be capable of triggering reselection of already signalled resource(s) as a resource reservation when the conditions specified in TS 38.214 [26] are satisfied.

When partial sensing mechanism is enabled for the resource pool that UE is monitoring and selecting resource from, the UE shall be capable of performing the L1 SL-RSRP measurements on the sensing periods specified in TS 38.214 [26].

When SL-DRX is enabled, the UE shall be capable of performing the L1 SL-RSRP measurements and select resource during SL-DRX active time as specified in TS 38.214 [26].

12.6 Congestion Control measurements

The UE shall be capable of estimating the channel busy ratio for one or more transmission pools indicated by higher layers in TS 38.331 [2], based on SL-RSSI measurements provided by the physical layer.

When no sidelink transmissions occur, the UE physical layer shall perform a single-shot SL-RSSI measurement for each sub-channel included in all the slots configured as transmission pools.

The SL-RSSI measurement performed according to this clause shall meet the SL-RSSI measurement accuracy requirements defined in clause 10.

The UE shall perform channel busy ratio (CBR) measurement based on SL-RSSI measurements as described in TS 38.215 [4].

12.7 Interruption

12.7.1 Interruptions to WAN due to V2X Sidelink Communication

This clause contains the requirements related to the interruptions on the PCell/serving cell due to V2X sidelink communication.

A UE capable of V2X sidelink communication may indicate its interest (initiation or termination) in V2X sidelink communication to the connected gNodeB using IE *SidelinkUEInformationNR* in TS 38.331 [2].

The UE is allowed an interruption of up to the duration shown in table 12.7.1-1 on the PCell/serving cell during the RRC reconfiguration procedure that includes the V2X sidelink communication configuration message *SL-ConfigDedicatedNR* in TS 38.331 [2] (setup and release). This interruption is for both uplink and downlink of the PCell/serving cell.

Table 12.7.1-1: Interruption length at V2X RRC reconfiguration

μ	NR Slot length (ms)	Interruption length (number of slots)
0	1	2
1	0.5	3
2	0.25	5
3	0.125	9

12.7.2 V2X Sidelink Communication Dropping due to synchronization source change

This clause contains the requirements related to the interruptions on the V2X sidelink communication due to synchronization source change.

For NR V2X UE not supporting gNB/eNB as synchronization reference source, UE is allowed to drop LTE and NR V2X SL transmission or reception for up to 1ms when synchronization source is changed, where the drop of LTE V2X SL transmission or reception applies only to in-device coexistence scenario in TS 38.213 [3]:

- From GNSS
  - to syncRef UE that is synchronized to GNSS directly/in-directly
  - to syncRef UE that has the lowest priority
- From syncRef UE that is synchronized to GNSS directly/in-directly
  - to GNSS

    - to syncRef UE that has the lowest priority
- From syncRef UE that has the lowest priority
    - to GNSS
    - to syncRef UE that is synchronized to GNSS directly/in-directly
    - to syncRef UE that has the lowest priority

For NR V2X UE supporting gNB/eNB as synchronization reference source, UE is allowed to drop LTE and NR V2X SL transmission or reception for up to 1 ms when synchronization source is changed, where the drop of LTE V2X SL transmission or reception applies only to in-device coexistence scenario in TS38.213 [3]:

- From GNSS
    - to syncRef UE that is synchronized to GNSS directly/in-directly
    - to gNB/eNB
    - to syncRef UE that is synchronized to gNB/eNB directly
    - to syncRef UE that is synchronized to gNB/eNB in-directly
    - to syncRef UE that has the lowest priority
- From syncRef UE that is synchronized to GNSS directly/in-directly
    - to GNSS
    - to gNB/eNB
    - to syncRef UE that is synchronized to gNB/eNB directly
    - to syncRef UE that is synchronized to gNB/eNB in-directly
    - to syncRef UE that has the lowest priority
- From gNB or eNB
    - to GNSS
    - to syncRef UE that is synchronized to GNSS directly/in-directly
    - to eNB or gNB
    - to syncRef UE that is synchronized to gNB or eNB directly
    - to syncRef UE that is synchronized to gNB or eNB in-directly
    - to syncRef UE that has the lowest priority
- From syncRef UE that is synchronized to gNB/eNB directly
    - to GNSS
    - to syncRef UE that is synchronized to GNSS directly/in-directly
    - to gNB/eNB
    - to syncRef UE that is synchronized to gNB/eNB directly
    - to syncRef UE that is synchronized to gNB/eNB in-directly
    - to syncRef UE that has the lowest priority
- From syncRef UE that is synchronized to gNB/eNB in-directly
    - to GNSS

- to syncRef UE that is synchronized to GNSS directly/in-directly
- to gNB/eNB
- to syncRef UE that is synchronized to gNB/eNB directly
- to syncRef UE that is synchronized to gNB/eNB in-directly
- to syncRef UE that has the lowest priority

- From syncRef UE that has the lowest priority
  - to GNSS
  - to syncRef UE that is synchronized to GNSS directly
  - to syncRef UE that is synchronized to GNSS in-directly
  - to gNB/eNB
  - to syncRef UE that is synchronized to gNB/eNB directly
  - to syncRef UE that is synchronized to gNB/eNB in-directly
  - to syncRef UE that has the lowest priority

UE is allowed to interruption any V2X sidelink signals including PSSCH, PSCCH, PSBCH, PSFCH and SLSS signals.

12.7.3 Interruptions to WAN due to switching between E-UTRA V2X Sidelink and NR V2X Sidelink

This sub-clause contains the requirements related to the interruptions on the PCell/serving cell due to switching between E-UTRA V2X sidelink and NR V2X sidelink transmissions on a dedicated carrier. It is applicable for UE capable of both NR V2X sidelink and E-UTRA V2X sidelink transmissions in TDM-ed manner.

When a UE capable of switching between E-UTRA V2X sidelink and NR V2X sidelink, the UE is allowed an interruption of up to the duration shown in table 12.7.3-1 on the PCell/serving cell during the E-UTRA V2X sidelink and NR V2X sidelink switch.

This interruption is for both uplink and downlink of the PCell/serving cell.

Table 12.7.3-1: Interruption length due to switching between E-UTRA V2X and NR V2X

μ	Slot length (ms)	Interruption length (number of slots)
0	1	2
1	0.5	2
2	0.25	2
3	0.125	3

12.7.4 Interruptions to WAN at transitions between active and non-active during SL-DRX

Interruption on PCell/serving cell if configured due to V2X transitions between active and non-active during SL-DRX are allowed with up to 1% probability of missed ACK/NACK when the configured SL-DRX cycle is less than 640 ms, and 0.625% probability of missed ACK/NACK is allowed when the configured SL-DRX cycle is 640 ms or longer. When multiple SL-DRX cycles are configured, the shortest SL-DRX cycle is applied. Each interruption shall not exceed X slot as defined in table 12.7.4-1.

Table 12.7.4-1: Interruption length X at transition between active and non-active during SL-DRX

μ	NR Slot length (ms)	Interruption length X (slots)	
		Sync	Async

0	1	1	2
1	0.5	1	2
2	0.25	3	

For SL-DRX active to inactive state transition, when the UE is in non-DRX or DRX on WAN and V2X is in sidelink resource allocation mode 2, the interruptions in this clause shall not apply when one of the following conditions is met:

- While receiving paging,
- While receiving system information.

In addition, for SL-DRX active to inactive state transition, when the UE is in non-DRX or DRX on WAN and V2X is in sidelink resource allocation mode 2 and SL DRX cycle is less than 320 ms, the interruptions in this clause shall not apply when one of the following conditions is met:

- T310 timer is running for RLF on PCell
- performing candidate beam detection on PCell/serving cell as specfied in section 8.5.5. and 8.5.6

During the U2N relay operation as defined in clause 5.8.14 of TS 38.331 [2], the interruption requirements defined in this clause apply only to the sidelink relay UE.

During the multipath relay operation [2], the interruption requirements defined in this clause apply to the SL remote UE or the SL relay UE.

12.7.5 Interruptions to V2X sidelink at transitions between active and non-active during DRX

Interruption on V2X sidelink if configured due to PCell transitions between active and non-active during DRX are allowed with up to 1% probability of missed ACK/NACK when the configured DRX cycle is less than 640 ms, and 0.625% probability of missed ACK/NACK is allowed when the configured DRX cycle is 640 ms or longer. It is only applied when HARQ process on V2X sidelink is supported. Each interruption shall not exceed X slot as defined in table 12.7.5-1.

Table 12.7.5-1: Interruption length X at transition between active and non-active during DRX

μ	NR V2X Slot length (ms)	Interruption length X (slots)	
		Sync	Async
0	1	1	2
1	0.5	1	2
2	0.25	3	

12.7.6 Interruptions to V2X sidelink due to Active BWP switching Requirement

This clause contains the requirements related to the interruptions on the V2X sidelink due to BWP switch in FDM based intra-band concurrent V2X operation.

The requirements in clause 8.2.2.2.5 shall apply. The interrupted X slot is defined in table 12.7.6-1.

Table 12.7.6-1: Interruption length X

μ	NR V2X Slot length (ms)	Interruption length X (slots)
0	1	1
1	0.5	1
2	0.25	3

NOTE: No sidelink communication happens during BWP switching delay period for TDM based intra-band concurrent operation.

12.7.7 Interruptions to WAN due to SyncRef UE detection and/or Sensing during SL DRX off duration

This sub-clause contains the requirements related to the interruptions on the PCell/serving cell due to SyncRef UE detection and/or Sensing during SL DRX off duration.

The requirements in clause 12.7.4 shall apply.

12.7.8 Interruptions at NR sidelink discovery configuration

This clause contains the requirements related to the interruptions on the PCell/serving cell due to NR sidelink discovery.

A UE capable of NR sidelink discovery may indicate its interest (initiation or termination) in NR sidelink discovery to the connected gNodeB using IE *SidelinkUEInformationNR* in TS 38.331 [2].

The UE is allowed an interruption of up to the duration shown in Table 12.7.8-1 on the PCell/serving cell during the RRC reconfiguration procedure that includes the NR sidelink discovery configuration message *sl-DiscConfig* in TS 38.331 [2] (setup and release). This interruption is for both uplink and downlink of the PCell/serving cell.

12.7.8-1: Interruption length at NR sidelink discovery configuration

μ	NR Slot length (ms)	Interruption length (number of slots)
0	1	2
1	0.5	3
2	0.25	5
3	0.125	9

12.7.9 Interruptions to WAN due to sidelink carrier addition/release

This sub-clause contains the requirements related to the interruptions on the PCell/serving cell due to sidelink component carrier addition/release. It is applicable for UE is in sidelink resource allocation mode 2.

A UE capable of V2X sidelink communication may indicate its interest (initiation or termination) in V2X sidelink communication to the connected gNodeB using IE *SidelinkUEInformationNR* in TS38.331[2].

The UE is allowed an interruption of up to the duration shown in table 12.7.9-1 on the PCell/serving cell when any number of sidelink component carriers is added or released. This interruption is for both uplink and downlink of the PCell/serving cell.

Table 12.7.9-1: Interruption length due to sidelink component carrier addition/release

μ	NR Slot length (ms)	Interruption length (number of slots)
0	1	2
1	0.5	3
2	0.25	5
3	0.125	9

For sidelink component carrier addition/release, when the UE is in RRC_IDLE/RRC_INACTIVE mode, the interruptions in this clause shall not apply when one of the following conditions is met:

- While the UE is receiving paging,
- While the UE is receiving system information.

12.8 Reliability of GNSS signal

This clause contains requirements regarding reliability of GNSS signal for the UE capable of V2X sidelink communication under the following additional condition:

- The UE is configured or pre-configured with parameters for enabling the UE to acquire the GNSS synchronization.

If UE considers GNSS is a reliable synchronization reference, the UE shall meet timing accuracy requirement as specified in clause 12.2 and frequency accuracy requirement as specified in clause 6.4E of TS 38.101-1 [18]. Otherwise, the UE shall be capable to select another synchronization reference source.

12.9 Scheduling availability

12.9.1 Scheduling availability of UE switching between E-UTRA sidelink and NR sidelink

This clause contains the restrictions on the scheduling availability for V2X sidelink due to switching between E-UTRA V2X sidelink and NR V2X sidelink transmission on a dedicated carrier. For the NR V2X sidelink, the assumed number of configured symbols in a slot is 14.

When switch from E-UTRA V2X sidelink to NR V2X sidelink occurs in NR slot ‘n’,

- UE is not expected to transmit or receive on NR V2X sidelink on the slot ‘n’.

When switch from NR V2X sidelink to E-UTRA V2X sidelink occurs in NR slot ‘n-1’,

- UE is not expected to transmit or receive on NR V2X sidelink on the slot ‘n-1’.

When switch from NR V2X sidelink to E-UTRA V2X sidelink occurs in E-UTRA subframe ‘n’,

- UE is not expected to transmit or receive on E-UTRA V2X sidelink on the subframe ‘n’.

When switch from E-UTRA V2X sidelink to NR V2X sidelink occurs in E-UTRA subframe ‘n-1’,

- UE is not expected to transmit or receive E-UTRA on V2X sidelink on the subframe ‘n-1’.

12.9.2 Scheduling availability of UE switching between Uu uplink and V2X sidelink

This clause contains the restrictions on the scheduling availability for V2X sidelink due to switching between Uu uplink and V2X sidelink. For NR V2X sidelink, the assumed number of configured symbols in a slot is 14.

When switch from Uu uplink slot to V2X sidelink slot occurs in sidelink slot ‘n’,

- UE is not expected to transmit or receive on V2X sidelink on the sidelink slot ‘n’.

When switch from V2X sidelink slot to Uu uplink slot occurs in sidelink slot ‘n-1’,

- UE is not expected to transmit or receive on V2X sidelink on the sidelink slot ‘n-1’.

When switch from V2X sidelink slot to Uu uplink slot occurs in Uu slot ‘n’,

- UE is not expected to transmit uplink or receive downlink on the Uu slot ‘n’.

When switch from Uu uplink slot to V2X sidelink slot occurs in Uu slot ‘n-1’,

- UE is not expected to transmit uplink or receive downlink on the Uu slot ‘n-1’.

- UE is not expected to transmit uplink or receive downlink on the Uu slot ‘n-1’.

12.10 Selection / Reselection of relay UE

12.10.1 Introduction

This section contains the requirements related to selection and reselection of relay UE.

The requirements apply for the selection and reselection of candidate relay UEs that are transmitting relay discovery signals within the resource pool as configured for the remote UE. The requirements are applicable to the following UE capabilities [2]:

- a remote UE that communicates with the network via a UE-to-network (U2N) relay UE or
- a remote UE that communicates with another via a UE-to-UE (U2U) relay UE.

12.10.2 Selection / Reselection of relay UE

For a remote UE configured by upper layer for relay operation, the remote UE shall search for candidate relay UEs for selection and/or reselection every discovery period which is determined by resource reservation period or SPS transmission periodicity configured by network.

If the remote UE has a selected sidelink relay UE, then the remote UE shall measure the SD-RSRP or SL-RSRP of the selected relay once in every four discovery periods and evaluate if it meets the relay selection criterion as defined in TS 38.331 [2] (clause 5.8.15.3 for U2N relay and clause 5.8.17.3 for U2U relay).

The remote UE shall measure SD-RSRP or SL-RSRP of the candidate relay UEs every $T_{measure, SL_Relay_Intra}$ for relay UEs that are detected and measured according to the measurement rules.

For intra-frequency relay UEs that are detected, but that has not been selected or reselected to, the remote UE shall be capable of evaluating that the intra-frequency relay UE has met selection or reselection criterion defined in TS 38.331 [2] (clause 5.8.15.3 for U2N relay and clause 5.8.17.3 for U2U relay) within $T_{evaluate, SL_Relay_Intra}$ as specified in table 12.10.2-1.

The minimum requirements are required to meet when the selected and candidate relay UEs are transmitting relay discovery message every discovery period.

Table 12.10.2-1: $T_{measure, SL_Relay_Intra}$ and $T_{evaluate, SL_Relay_Intra}$

Discovery Period [s]	$T_{measure,SL_Relay_Intra}$ [s] (number of discovery periods)	$T_{evaluate, SL_Relay_Intra}$ [s] (number of discovery periods)
0.04≤Discovery period≤10.24	Note 1 (4)	Note 1 (16)
NOTE 1: Time depends upon the discovery period which is resource reservation period (in mode 2) or SPS transmission periodicity (in mode 1). NOTE 2: SL-RSRP or SD-RSRP can be derived from PSCCH-DMRS and/or PSSCH-DMRS.		

12.11 Component Carrier Addition and Release Delay for Sidelink Carrier Aggregation

Requirements in this clause are applicable to UE supporting NR sidelink carrier aggregation.

For UE configured in sidelink resource allocation mode 2, the delay within which the UE shall accomplish the NR sidelink component carrier addition/release is up to UE implementation.

12.12 Selection / Reselection of Synchronization Reference Source for NR SL Carrier Aggregation

Requirements in this clause are applicable to UE supporting NR sidelink carrier aggregation.

When the UE is synchronized to a SyncRef UE in a carrier and required only to search other SyncRef UEs in the synchronized carrier, the UE shall be able to identify a newly detectable NR SL SyncRef UE within $T_{detect,SyncRef\ UE_V2X}$ if the SyncRef UE meets the selection/reselection criterion defined in TS 38.331 [2]. The UE shall be capable of performing PSBCH-RSRP measurements for 3 identified NR SL SyncRef UE with the measurement period of $T_{measure,PSBCH\text{-}RSRP}$ in table 12.4-1.

When the synchronization reference source for NR sidelink carrier aggregation is lost and UE has to search SyncRef UE on the aggregated carriers which are configured as synchronization carrier, the UE shall be able to identify a newly detectable NR SL SyncRef UE within $N \times T_{detect,SyncRef\ UE_V2X}$ if the SyncRef UE meets the selection/reselection criterion defined in TS 38.331 [2]. The UE shall be capable of performing PSBCH-RSRP measurements for 3 identified NR SL SyncRef UE per carrier with the measurement period of $N \times T_{measure,PSBCH\text{-}RSRP}$. N is the number of aggregated carriers configured as synchronization carrier.

It is assumed that the identified NR SL SyncRef UE does not drop or delay any SLSS transmission within the measurement period. Otherwise, the measurement period may be extended.

When GNSS synchronization reference source is configured as the highest priority and

- UE is synchronized to a SyncRef UE that is synchronized to GNSS directly or in-directly,
  - The value of $T_{detect,SyncRef\ UE_V2X}$ is as 1.6 seconds at S-SSB Es/Iot $\geq$0 dB, provided that the UE is allowed to drop a maximum of 30% of its SLSS transmissions on each carrier operating NR SL sidelink communication during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection / reselection to the SyncRef UE.
- in other case:
- When UE is in non-SL-DRX
  - The value of $T_{detect,SyncRef\ UE_V2X}$ is as 8 seconds at S-SSB Es/Iot $\geq$0 dB, provided that the UE is allowed to drop a maximum of 6% of its SLSS transmissions on each carrier operating SL sidelink communication during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.
  - UE is allowed to drop up to 2 slots of its SL data reception on each carrier operating SL sidelink communication per PSBCH monitoring occasion and overall drop rate shall not exceed 0.3% of its SL data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.
- When UE is in SL-DRX
  - The value of $T_{detect,SyncRef\ UE_V2X}$ is as 8 seconds at S-SSB Es/Iot $\geq$0 dB, provided that the UE is allowed to drop a maximum of 6% of its SLSS transmissions on each carrier operating SL sidelink communication during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.
  - UE is allowed to drop up to 2 slots of its SL data reception on each carrier operating SL sidelink communication per PSBCH monitoring occasion and UE is allowed to drop at most an aggregated window of 24 ms of its SL data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.
  - The UE is allowed to extend $T_{detect,SyncRef\ UE_V2X}$ to max(4×50 SL-DRX cycle length, 8 s) when the following conditions are satisfied over an evaluation period $T_{evaluate,SLSS}$ in clause 12.3.1.1 if an NR cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.2 if an EUTRA cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.4 if an SLSS is used as synchronization reference source. If multiple SL-DRX cycles are configured, the SL-DRX cycle length is the longest one.
  - SS-RSRP is larger than *syncTxThreshOoC*.

When serving cell/PCell synchronization reference source is configured as the highest priority,

- When UE is in non-SL-DRX
  - The value of $T_{detect,SyncRef\ UE_V2X}$ is as 8 seconds at S-SSB Es/Iot $\geq$0 dB, provided that the UE is allowed to drop a maximum of 6% of its SLSS transmissions on each carrier operating NR sidelink communication during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.
  - UE is allowed to drop up to 2 slots of its SL data reception on each carrier operating NR SL sidelink communication per PSBCH monitoring occasion and overall drop rate shall not exceed 0.3% of its SL data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.

- When UE is in SL-DRX

  - The value of $T_{detect,SyncRef\ UE_V2X}$ is as 8 seconds at S-SSB Es/Iot ≥0 dB, provided that the UE is allowed to drop a maximum of 6% of its SLSS transmissions on each carrier operating NR SL sidelink communication during $T_{detect,SyncRef\ UE_V2X}$ at most in an aggregated window of 480 ms during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.

  - UE is allowed to drop up to 2 slots of its SL data reception per PSBCH monitoring occasion and UE is allowed to drop at most an aggregated window of 24 ms of its SL data reception during $T_{detect,SyncRef\ UE_V2X}$ for the purpose of selection/reselection to the SyncRef UE.

  - The UE is allowed to extend $T_{detect,SyncRef\ UE_V2X}$ to max(4×50 SL-DRX cycle length, 8 s) when the following conditions are satisfied over an evaluation period $T_{evaluate,SLSS}$ in clause 12.3.1.1 if an NR cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.2 if an EUTRA cell is used as synchronization reference source, or $T_{evaluate,SLSS}$ in clause 12.3.1.4 if an SLSS is used as synchronization reference source. If multiple SL-DRX cycles are configured, the SL-DRX cycle length is the longest one.

  - SS-RSRP is larger than *syncTxThreshOoC*.

12A NR Sidelink Measurements for Positioning

12A.1 Introduction

Clause 12A contains requirements for UE capable of V2X sidelink or 5G ProSe operation, which is also capable of performing SL positioning measurements defined in TS 38.215 [4], including SL RSTD, SL PRS-RSRP, SL Rx-Tx time difference, SL PRS-RSRPP measurements, SL AoA, and SL RTOA, provided that:

- The SL-PRS are received on NR PC5 interface within a single sidelink BWP on a single carrier,
- The UE is in any cell selection state or the UE is inside NG-RAN coverage while configured for SL positioning operation on a sidelink carrier, which is dedicated to only sidelink operation, and configured with only a PCell on WAN carrier, and
- The measuring UE is the location target UE or an anchor UE, and
- The UE is not required to monitor PSCCH, which is associated with SL-PRS in the same slot, outside the SL-DRX active time.

NOTE 1: Any cell selection state refers to a UE that is out of network coverage and is not associated with a serving cell on any carrier as defined in TS 38.304 [1].

NOTE 2: When a UE in RRC_CONNECTED state is performing transmissions and/or reception for SL positioning operation, the UE shall meet all the requirements specified in clause 9 assuming that UE has a dedicated RX/TX chain for the sidelink operation. Otherwise, the UE may interrup the SL positioning measurements in order to meet the measurement requirements specified in clause 9.

NOTE 3: When a UE in RRC_CONNECTED state is performing transmissions and/or reception for SL positioning operation, the UE shall meet all relevant requirements related to its WAN operation, assuming that UE has a dedicated RX/TX chain for the sidelink operation. Otherwise, the UE may interrup the SL positioning measurements or SL-PRS transmissions in order to meet the measurement requirements related to its WAN operation.

Prior to performing SL-PRS based measurements, the target UE may need to perform the discovery procedure to discover anchor UEs according to TS 38.305 [22].

12A.2 SL RSTD measurements

12A.2.1 Introduction

The requirements in clause 12A.2 apply for SL RSTD measurements of the first and additional paths.

The requirements in clause 12A.2 shall apply provided the UE has received a *RequestLocationInformation* message from LMF or another UE via SLPP specified in TS 38.355 [37] requesting the UE to measure and report SL RSTD measurements defined in TS 38.215 [4] based on SL-PRS.

12A.2.2 Requirements Applicability

The requirements in clause 12A.2 apply for periodic, aperiodic, and triggered SL RSTD measurements, provided:

- SL RSTD related side conditions given in clause 10.4A.2.2 for FR1 are fulfilled, for a corresponding Band.

12A.2.3 Measurement Capability

UE SL RSTD measurement capability is as indicated by the UE in:

SL-TDOA-ProvideCapabilities, according to TS 38.355 [37].

12A.2.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface.

For UE reporting to LMF, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration.

For UE reporting to another UE, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the STCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the transmitted STCH. The delay uncertainty is: 2 x TTI_{STCH} where TTI_{STCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

This measurement reporting delay excludes any delay caused by no SL resources for UE to send the measurement report.

The reported SL RSTD measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.4A.2.1.

The SL RSTD measurements performed and reported according to this section shall meet the SL RSTD measurement accuracy requirements in clause 10.4A.2.2, for each measured SL-PRS resource.

12A.2.5 Measurements Period Requirements

When the UE physical layer receives the last of *SL-TDOA-ProvideAssistanceData* and *SL-TDOA-RequestLocationInformation* from LMF or another UE via SLPP specified in TS 38.355 [37], the UE shall be able to perform multiple SL RSTD measurements based on SL-PRS from one or more other SL UEs (up to the UE capability specified in clause 12A.2.3), with each SL RSTD measurement based on SL-PRS from the reference UE and SL-PRS from another anchor UE, as defined in TS 38.215 [4]. The SL RSTD measurement for each anchor UE shall be performed during the measurement period $T_{SL\,RSTD,total}$ defined as:

$$T_{\text{SL RSTD,total}} = \sum_{s=1}^{S} T_{SL\,RSTD,effect,s} \ ,$$

where

S is the number of samples for each measured anchor link, defined below:

S = 1 for SL-PRS bandwidth>48 PRBs,

S = 4 for SL-PRS bandwidth≤48 PRBs, and

for each SL-PRS sample *s* of the target measured link, which is received within a slot where the UE receives SCI and the associated SL-PRS within its capabilities reported by UE via *maxNumOfActiveSL-PRS-ResourcesInOneSlot* and *maxNumOfSlotsWIthActiveSL-PRS-Resources* specified in TS 38.355 [37], $T_{SL\ RSTD,effect,s}$ is defined as:

$T_{SL\ RSTD,effect,s} = t_{s+1} - t_s$, for *s*<*S*, where t_{s+1} and t_s are the beginning of the first slot of SL-PRS sample *s+1* and SL-PRS sample *s*, respectively,

$T_{SL\ RSTD,effect,s} = T_{dur,s} + \Delta_{SLproc}$, for *s*=*S*,

$T_{dur,s}$ is the duration of the slot carrying SL-PRS sample *s* of the SL RSTD measurement,

Δ_{SLproc} is the processing time reported by the UE via *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* specified in TS 38.355 [37].

the time $T_{SL\ RSTD,total}$ starts from the first slot where the UE receives SCI and the associated SL-PRS within its capabilities reported by UE via *maxNumOfActiveSL-PRS-ResourcesInOneSlot* and *maxNumOfSlotsWIthActiveSL-PRS-Resources* specified in TS 38.355 [37].

The SL RSTD measurement period ends after the UE has measured SL-PRS resources from multiple anchor UEs including reference UE and one or more other anchor UEs.

A UE may drop one or more SL-PRS measurement samples if the number of active slots or the number of active resources per slot for the ongoing SL-PRS measurement exceed the UE capabilities reported by UE via *sl-PRS-CommonProcCapabilityPerBand* specified in TS 38.355 [37]. For a single-sample measurement, the whole measurement may not be performed.

If the synchronization reference source changes during $T_{SL\ RSTD,total}$ at the measuring UE, while the UE is performing the SL RSTD measurement, then the UE shall restart the SL RSTD measurement after the synchronization reference source change and shall send the measurement report during a measurement period, which can be longer than $T_{SL\ RSTD,total}$.

The requirements in this clause do not apply, when the synchronization reference source changes during $T_{SL\ RSTD,total}$ at the UE transmitting SL-PRS for the SL RSTD measurement.

The requirements in this clause apply, provided that no SL-PRS symbols are dropped due to, e.g., selection or reselection of synchronization reference source according to clause 12.4 during the measurement period $T_{SL\ RSTD,total}$. Otherwise, the measurement period can be longer.

The requirements in this clause apply, provided that the reception of slots containing SL-PRS is not interrupted during the measurement period $T_{SL\ RSTD,total}$. Otherwise, if the reception of the slots containing SL-PRS is interrupted, the measurement period can be longer.

12A.3 SL PRS-RSRP measurements

12A.3.1 Introduction

The requirements in clause 12A.3 apply for SL PRS-RSRP measurements and for SL PRS-RSRP path measurements of the first and additional paths.

The requirements in clause 12A.3 shall apply provided the UE has received a *RequestLocationInformation* message from LMF or another UE via SLPP specified in TS 38.355 [37] requesting the UE to measure and report SL PRS-RSRP measurements defined in TS 38.215 [4] based on SL-PRS.

12A.3.2 Requirements Applicability

The requirements in clause 12A.3 apply for periodic, aperiodic, and triggered SL PRS-RSRP measurements, provided:

- SL PRS-RSRP related side conditions given in clause 10.4A.3.2 for FR1 are fulfilled, for a corresponding Band.

12A.3.3 Measurement Capability

UE SL PRS-RSRP measurement capability is as indicated by the UE in:

- SL-TDOA-ProvideCapabilities, SL-RTT-ProvideCapabilities, SL-AOA-ProvideCapabilities, or SL-TOA-ProvideCapabilities, according to TS 38.355 [37].

12A.3.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface.

For UE reporting to LMF, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration.

For UE reporting to another UE, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the STCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the transmitted STCH. The delay uncertainty is: 2 x TTI_{STCH} where TTI_{STCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

This measurement reporting delay excludes any delay caused by no SL resources for UE to send the measurement report.

The reported SL PRS-RSRP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.4A.3.1.

The SL PRS-RSRP measurements performed and reported according to this section shall meet the SL PRS-RSRP measurement accuracy requirements in clause 10.4A.3.2, for each measured SL-PRS resource.

12A.3.5 Measurements Period Requirements

When the physical layer receives the last of:

- SL-TDOA-ProvideAssistanceData and SL-TDOA-RequestLocationInformation, or
- SL-AOA-ProvideAssistanceData and SL-AOA-RequestLocationInformation, or
- SL-TOA-ProvideAssistanceData and SL-TOA-RequestLocationInformation, or
- SL-RTT-ProvideAssistanceData and SL-RTT-RequestLocationInformation,

from LMF or another UE via SLPP specified in TS 38.355 [37], and the UE is configured to perform SL PRS-RSRP measurement together with the corresponding mandatory measurement (SL RSTD, SL AoA/ZoA, SL RTOA, and SL Rx-Tx, respectively), the UE shall be able to perform multiple SL PRS-RSRP measurements based on SL-PRS from one or more other SL UEs (up to the UE capability specified in clause 12A.3.3), as defined in TS 38.215 [4].

The SL PRS-RSRP measurement for the measured anchor UE SL-PRS shall be performed during the measurement period of the corresponding mandatory measurement, with which the SL PRS-RSRP measurement is configured, i.e., during:

$T_{SL\ RSTD,total}$ defined in clause 12A.2.5, for SL PRS-RSRP configured together with SL RSTD,

$T_{SL\ Rx-Tx,total}$ defined in clause 12A.4.5, for SL PRS-RSRP configured together with SL Rx-Tx,

$T_{SL\ AoA,total}$ defined in clause 12A.6.5, for SL PRS-RSRP configured together with SL AoA/ZoA, or

$T_{SL\ RTOA,total}$ defined in clause 12A.7.5, for SL PRS-RSRP configured together with SL RTOA.

A UE may drop one or more SL-PRS measurement samples if the number of active slots or the number of active resources per slot for the ongoing SL-PRS measurement exceed the UE capabilities reported by UE via *sl-PRS-*

CommonProcCapabilityPerBand specified in TS 38.355 [37]. For a single-sample measurement, the whole measurement may not be performed.

12A.4 SL Rx-Tx measurements

12A.4.1 Introduction

The requirements in clause 12A.4 apply for SL Rx-Tx measurements of the first and additional paths.

The requirements in clause 12A.4 shall apply provided the UE has received *SL-RTT-RequestLocationInformation* from LMF or another UE via SLPP specified in TS 38.355 [37] requesting the UE to measure and report SL Rx-Tx time difference measurements defined in TS 38.215 [4] based on SL-PRS.

12A.4.2 Requirements Applicability

The requirements in clause 12A.4 apply for periodic, aperiodic, and triggered SL Rx-Tx time difference measurements, provided:

- SL Rx-Tx time difference related side conditions given in clause 10.4A.4.2 for FR1 are met for a corresponding Band.
- The actual time difference between the corresponding SL-PRS transmission and reception used to derive the measurement is no larger than 160 ms.

12A.4.3 Measurement Capability

SL Rx-Tx time difference measurement capability is as indicated by the UE in *SL-RTT-ProvideCapabilities* according to TS 38.355 [37].

12A.4.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface.

For UE report to LMF, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

For UE report to another UE, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the STCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the sidelink STCH. The delay uncertainty is: 2 x TTI_{STCH} where TTI_{STCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

The measurement reporting delay excludes any delay caused by no SL resources for UE to send the measurement report.

The reported SL Rx-Tx time difference measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clause 10.4A.4.1.

The SL Rx-Tx time difference measurements performed and reported according to this section shall meet the SL Rx-Tx time difference measurement accuracy requirements in clause 10.4A.4.2, for each measured SL-PRS resource.

12A.4.5 Measurement Period Requirements

When the UE physical layer receives *SL-RTT-ProvideAssistanceData* message and *SL-RTT-RequestLocationInformation* message from LMF or another UE via SLPP specified in TS 38.355 [37], the UE shall be able to perform multiple SL Rx-Tx time difference measurements based on SL-PRS from one or more other SL UEs (up

to the UE capability specified in clause 12A.4.3), as defined in TS 38.215 [4]. For each individual SL-PRS resource measured by a UE, the SL Rx-Tx time difference measurement is performed during $T_{SL\ Rx-Tx,total}$ defined as:

$$T_{SL\ Rx-Tx,total} = \sum_{s=1}^{S} T_{SL\ Rx-Tx,effect,s} + T_{uncertain},$$

where,

S is the number of samples for a single SL Rx-Tx measurement defined below:

S = 1 for SL-PRS bandwidth > 48 PRBs,

S = 4 for SL-PRS bandwidth≤48 PRBs, and

for SL-PRS sample s, which is received within a slot where the UE receives SCI and the associated SL-PRS is within its capabilities reported by UE via *maxNumOfActiveSL-PRS-ResourcesInOneSlot* and *maxNumOfSlotsWIthActiveSL-PRS-Resources* specified in TS 38.355 [37], $T_{SL\ Rx-Tx,effect,s}$ is defined as:

$T_{SL\ Rx-Tx,effect,s} = t_{s+1} - t_s$, for s<S, where t_s and t_{s+1} are the start of the *s*-th and *(s+1)*-th slot of SL-PRS samples *s* and SL-PRS samples *s*+1, respectively,

$T_{SL\ Rx-Tx,effect,s} = T_{dur,s} + \Delta_{SLproc}$, for *s* = *S*,

$T_{dur,s}$ is the duration of the slot carrying SL-PRS sample s of SL Rx-Tx measurement,

Δ_{SLproc} is the processing time indicated by UE via *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* specified in TS 38.355 [37] of the UE performing the SL Rx-Tx time difference measurement.

$T_{uncertain}$ is defined as below:

If the UE reports the transmission timestamp of a SL-PRS as defined in TS 38.215 [4], and the SL-PRS transmission occurs after the SL-PRS reception used to derive the measurement, $T_{uncertain}$ is the additional time delay from the SL PRS reception until the actual SL PRS transmission.

Otherwise, $T_{uncertain} = 0$.

A UE may drop one or more SL-PRS measurement samples if the number of active slots or the number of active resources per slot for the ongoing SL-PRS measurement exceed the UE capabilities reported by UE via *sl-PRS-CommonProcCapabilityPerBand* specified in TS 38.355 [37]. For a single-sample measurement, the whole measurement may not be performed.

If the synchronization reference source changes during $T_{SL\ Rx-Tx,total}$ at the measuring UE, while the measuring UE is performing the SL Rx-Tx time difference measurement, then the measuring UE shall restart the SL Rx-Tx time difference measurement and shall send the measurement report during a measurement period, which can be longer than $T_{SL\ Rx-Tx,total}$.

The requirements in this clause do not apply, when the synchronization reference source changes during $T_{SL\ Rx-Tx,total}$ at the UE transmitting SL-PRS for the SL Rx-Tx measurement.

The requirements in this clause apply, provided that no SL-PRS symbols are dropped due to, e.g., selection or reselection of synchronization reference source according to clause 12.4 during the measurement period $T_{SL\ Rx-Tx,total}$. Otherwise, the measurement period can be longer.

The requirements in this clause apply, provided that the reception of slots containing SL-PRS is not interrupted during the measurement period $T_{SL\ Rx-Tx,total}$. Otherwise, if the reception of the slots containing SL-PRS is interrupted, the measurement period can be longer.

12A.5 SL PRS-RSRPP measurements

12A.5.1 Introduction

The requirements in clause 12A.5 shall apply provided the UE has received *SL-TDOA-RequestLocationInformation* or *SL-AOA-RequestLocationInformation* or *SL-TOA-RequestLocationInformation* or *SL-RTT-RequestLocationInformation* from LMF or another UE via SLPP requesting the UE to measure and report SL PRS-RSRPP measurements defined in TS 38.215 [4].

12A.5.2 Requirements Applicability

The requirements in clause 12A.5 apply for periodic and triggered SL PRS-RSRPP measurements, provided:

- SL PRS-RSRPP related side conditions given in clause 10.4A.5.2 for FR1 are met for a corresponding Band.

12A.5.3 Measurement Capability

SL PRS-RSRPP measurement capability is as indicated by the UE in *SL-TDOA-ProvideCapabilities*, *SL-RTT-ProvideCapabilities*, *SL-AOA-ProvideCapabilities*, or *SL-TOA-ProvideCapabilities* according to TS 38.355 [37].

12A.5.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface.

For UE report to LMF, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

For UE report to another UE, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the STCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the sidelink STCH. The delay uncertainty is: 2 x TTI_{STCH} where TTI_{STCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

This measurement reporting delay excludes any delay caused by no SL resources-for UE to send the measurement report.

The reported SL PRS-RSRPP measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clauses 10.4A.5.1.

The SL PRS-RSRPP measurements performed and reported according to this section shall meet the SL PRS-RSRPP measurement accuracy requirements in clause 10.4A.5.2, for each measured SL-PRS resource.

12A.5.5 Measurement Period Requirements

When the physical layer receives

- *SL-TDOA-ProvideAssistanceData* message and *SL-TDOA-RequestLocationInformation* message, or
- *SL-AOA-ProvideAssistanceData* message and *SL-AOA-RequestLocationInformation* message, or
- *SL-TOA-ProvideAssistanceData* message and *SL-TOA-RequestLocationInformation* message, or
- *SL-RTT-ProvideAssistanceData* message and *SL-RTT-RequestLocationInformation* message,

from LMF or another UE via SLPP specified in TS 38.355 [37], and the UE is configured to perform SL PRS-RSRPP measurement together with the corresponding mandatory measurement (SL RSTD, SL AoA/ZoA, SL RTOA, and SL Rx-Tx, respectively), the UE shall be able to perform multiple SL PRS-RSRPP measurements based on SL-PRS from one or more other SL UEs (up to the UE capability specified in clause 12A.5.3), as defined in TS 38.215 [4].

The SL PRS-RSRPP measurement for the measured anchor UE SL-PRS shall be performed during the measurement period of the corresponding mandatory measurement, with which the SL PRS-RSRPP measurement is configured, i.e., during:

- $T_{SL\,RSTD,total}$ defined in clause 12A.2.5, for SL PRS-RSRPP configured together with SL RSTD,
- $T_{SL\,Rx-Tx,total}$ defined in clause 12A.4.5, for SL PRS-RSRPP configured together with SL Rx-Tx,
- $T_{SL\,AoA,total}$ defined in clause 12A.6.5, for SL PRS-RSRPP configured together with SL AoA/ZoA, or
- $T_{SL\,RTOA,total}$ defined in clause 12A.7.5, for SL PRS-RSRPP configured together with SL RTOA.

A UE may drop one or more SL-PRS measurement samples if the number of active slots or the number of active resources per slot for the ongoing SL-PRS measurement exceed the UE capabilities reported by UE via *sl-PRS-CommonProcCapabilityPerBand* specified in TS 38.355 [37]. For a single-sample measurement, the whole measurement may not be performed.

12A.6 SL AoA measurements

12A.6.1 Introduction

The requirements in clause 12A.6 apply for SL AoA measurements of the first and additional paths.

The requirements in clause 12A.6.5 shall apply for azimuth angle of arrival (A-AoA) and zenith angle of arrival (Z-AoA) first path measurement, provided the UE has received *SL-AoA-RequestLocationInformation* from LMF or another UE via SLPP specified in TS 38.355 [37] requesting the UE to measure and report SL AoA measurements defined in TS 38.215 [4] based on SL-PRS.

12A.6.2 Requirements Applicability

The requirements in clause 12A.6 apply for periodic, aperiodic, and triggered SL AoA measurements, provided:

- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- SL AoA related side conditions given in clause B.4A.1 for FR1 are met for a corresponding Band.

12A.6.3 Measurement Capability

SL AoA measurement capability is as indicated by the UE in:

SL-AoA-ProvideCapabilities according to TS 38.355 [37].

12A.6.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface.

For UE reporting to LMF, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration.

For UE reporting to another UE, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the STCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the sidelink STCH. The delay uncertainty is: 2 x TTI_{STCH} where TTI_{STCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

The measurement reporting delay excludes any delay caused by no SL resources or no SL-PRS resources for UE to send the measurement report.

The reported SL AoA measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clauses 10.4A.6.1.

12A.6.5 Measurement Period Requirements

When the UE physical layer receives the last of *SL-AoA-ProvideAssistanceData* message and *SL-AoA-RequestLocationInformation* message from LMF or another UE via SLPP specified in TS 38.355 [37], the UE shall be able to measure multiple SL AoA measurements based on SL-PRS from one or more other SL UEs (up to the UE capability specified in 12A.6.3), as defined in TS 38.215 [4]. The SL AoA measurement shall be performedduring the measurement period $T_{SL\ AoA,total}$ defined as:

$$T_{SL\ AoA,total} = \sum_{s=1}^{S} T_{SL\ AoA,effect,s}\ ,$$

where,

S is the number of samples for the SL AoA measurement, defined as below:

S = 1 for SL-PRS bandwidth > 48 PRBs,

S = 4 for SL-PRS bandwidth ≤ 48 PRBs, and

for each SL-PRS sample s, which is received within a slot where the UE receives SCI and the associated SL-PRS is within its capabilities reported by UE via *maxNumOfActiveSL-PRS-ResourcesInOneSlot* and *maxNumOfSlotsWIthActiveSL-PRS-Resources* specified in TS 38.355 [37]. $T_{SL\ AoA,effect,s}$ is defined as below,

$T_{SL\ AoA,effect,s} = t_{s+1} - t_s$ for *s* < *S*, where t_s and t_{s+1} are the beginning of the slots of SL-PRS sample s and SL-PRS sample s+1, respectively,

$T_{SL\ AoA,effect,s} = T_{dur,s} + \Delta_{SLproc}$ for *s* = *S*,

- $T_{dur,s}$ is the duration of slot carrying SL-PRS sample *s* of the SL AoA measurement,
- Δ_{SLproc} is the processing time indicated by UE *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* specified in TS 38.355 [37] of the UE performing SL AoA measurement.

A UE may drop one or more SL-PRS measurement samples if the number of active slots or the number of active resources per slot for the ongoing SL-PRS measurement exceed the UE capabilities reported by UE via *sl-PRS-CommonProcCapabilityPerBand* specified in TS 38.355 [37]. For a single-sample measurement, the whole measurement may not be performed.

If the synchronization reference source of the measuring UE changes during $T_{SL\ AoA,total}$, while the UE is performing the SL AoA measurements, then the measuring UE shall continue performing the SL AoA measurement after the synchronization reference source change, while meeting the requirements in this clause.

The requirements in this clause do not apply, when the synchronization reference source changes during $T_{SL\ AoA,total}$ at the UE transmitting SL-PRS for the SL AoA measurement.

The requirements in this clause apply provided that no SL-PRS symbols for the SL AoA measurement are dropped due to e.g., the selection or reselection of synchronization reference source according to clause 12.4 during the measurement period. Otherwise, the measurement period can be extended.

The requirements in this clause, apply provided that reception of slots containing SL-PRS for the SL AoA measurement is not interrupted e.g., due to network coverage change. Otherwise, if the reception of the slots containing SL-PRS is interrupted, the measurement period can be extended.

12A.7 SL RTOA measurements

12A.7.1 Introduction

The requirements in clause 12A.7 apply for SL RTOA measurements of the first and additional paths.

The requirements in clause 12A.7.5 shall apply provided the UE has received *SL-RTOA-RequestLocationInformation* from LMF or another UE via SLPP requesting the UE to measure and report SL RTOA measurements defined in TS 38.215 [4].

12A.7.2 Requirements Applicability

The requirements in clause 12A.7 apply for periodic, aperiodic, and triggered SL RTOA measurements, provided:

- Conditions defined in clause 7.3E of TS 38.101-1 [18] for reference sensitivity are fulfilled.
- SL RTOA related side conditions given in clause B.4A.1 for FR1 are met for a corresponding Band.

12A.7.3 Measurement Capability

SL RTOA measurement capability is as indicated by the UE in *SL-RTOA-ProvideCapabilities* according to TS 38.355 [37].

12A.7.4 Measurement Reporting Requirements

The measurement reporting delay is defined as the time between the moment when the measurement report is triggered and the moment when the UE starts to transmit the measurement report over the air interface.

For UE reporting to LMF, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the DCCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the uplink DCCH. The delay uncertainty is: 2 x TTI_{DCCH} where TTI_{DCCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PUSCH with subframe or slot or subslot duration.

For UE reporting to another UE, this requirement assumes that the measurement report is not delayed by other SLPP signalling on the STCH. This measurement reporting delay excludes a delay uncertainty resulted when inserting the measurement report to the TTI of the sidelink STCH. The delay uncertainty is: 2 x TTI_{STCH} where TTI_{STCH} is the duration of subframe or slot or subslot when the measurement report is transmitted on the PSSCH with subframe or slot or subslot duration.

The measurement reporting delay excludes any delay caused by no SL resources or no SL-PRS resources for UE to send the measurement report.

The reported SL RTOA measurement values contained in measurement reports shall be based on the measurement report mapping requirements specified in clauses 10.4A.7.1.

12A.7.5 Measurement Period Requirements

When the UE physical layer receives the last of *SL-RTOA-ProvideAssistanceData* message and *SL-RTOA-RequestLocationInformation* message from LMF or another UE via SLPP specified in TS 38.355 [37], the UE shall be able to measure multiple SL RTOA measurements based on SL-PRS from one or more other SL UEs (up to the UE capability specified in 12A.7.3), as defined in TS 38.215 [4]. The SL RTOA measurement shall be performed during $T_{SL\ RTOA,total}$ defined as:

$$T_{SL\ RTOA,total} = \sum_{s=1}^{S} T_{SL\ RTOA,effect,s} \ ,$$

where,

S is the number of samples for the SL RTOA measurement, defined as below:

S = 1 for SL-PRS bandwidth > 48 PRBs,

S = 4 for SL-PRS bandwidth ≤ 48 PRBs, and

for SL-PRS sample s, which is received within a slot where the UE receives SCI, provided that the associated SL-PRS is within its capabilities reported by UE via *maxNumOfActiveSL-PRS-ResourcesInOneSlot* and *maxNumOfSlotsWIthActiveSL-PRS-Resources* specified in TS 38.355 [37]. $T_{SL\ RTOA,effect,s}$ is defined as below,

$T_{SL\ RTOA,effect,s} = t_{s+1} - t_s$, for $s<S$, where t_s and t_{s+1} are the beginning of the slots of SL-PRS sample s and SL-PRS sample s+1, respectively,

$T_{SL\ RTOA,effect,s} = T_{dur,s} + \Delta_{SLproc}$ for $s = S$,

$T_{dur,s}$ is the duration of the slot carrying SL-PRS sample *s* of the SL RTOA measurement,

Δ_{SLproc} is the processing time indicated by UE via *minTimeAfterEndofSlotCarryActiveSL-PRS-Resources* specified in TS 38.355 [37] of the UE performing SL RTOA measurement.

A UE may drop one or more SL-PRS measurement samples if the number of active slots or the number of active resources per slot for the ongoing SL-PRS measurement exceed the UE capabilities reported by UE via *sl-PRS-CommonProcCapabilityPerBand* specified in TS 38.355 [37]. For a single-sample measurement, the whole measurement may not be performed.

If the synchronization reference source of the measuring UE changes during $T_{SL\ RTOA,total}$, while the UE is performing the SL RTOA measurements, then the measuring UE shall restart the SL RTOA measurement after the synchronization reference source change and shall send the measurement report during a measurement period, which can be longer than $T_{SL\ RTOA,total}$.

The requirements in this clause do not apply, when the synchronization reference source changes during $T_{SL\ RTOA,total}$ at the UE transmitting SL-PRS for the SL RTOA measurement.

The requirements in this clause apply provided that no SL-PRS symbols for the SL RTOA measurement that are dropped due to e.g., the selection or reselection of synchronization reference source according to clause 12.4 during the measurement period. Otherwise, the measurement period can be extended. The requirements in this clause apply, provided that reception of slots containing SL-PRS for the SL RTOA measurement is not interrupted due to network coverage change. Otherwise, if the reception of the slots containing SL-PRS is interrupted, the measurement period can be longer.

13 Measurement Performance Requirements for NR gNB

13.1 UL-RTOA

13.1.1 Report mapping

The reporting range of UL Relative Time of Arrival (UL-RTOA), as defined in Clause 5.2.2 of TS 38.215 [4], is defined from $-985024T_c$ to $+985024\times T_c$. The reporting resolution is uniform across the reporting range and is defined as $T = T_c\times 2^k$ where k is selected by gNB from the set {-6, -5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5}.

T_c is defined in TS 38.211 [6].

LMF provides a recommended resolution parameter, *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35]. gNB selects parameter k based on *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35] and informs the LMF.

The mapping of measured/inferred quantity for each reporting resolution (k) is defined in table 13.1.1-1 to table 13.1.1-12.

13.1.1A Additional Path Report Mapping for UL-RTOA

The reporting range of additional path reporting for UL Relative Time of Arrival (UL-RTOA), as defined in Clause 5.2.2 of TS 38.215 [4], is defined from $-8175 \times T_c$ to $+8175 \times T_c$. The reporting resolution is uniform across the reporting range and is defined as $T = T_c \times 2^k$ where k is selected by gNB from the set {-6, -5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5}.

T_c is defined in TS 38.211 [6].

LMF provides a recommended resolution parameter, *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35]. gNB selects parameter k based on *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35] and informs the LMF.

The mapping of measured/inferred quantity for each reporting resolution (k) is defined in Table 13.1.1A-1 to Table 13.1.1A-12.

13.2 gNB Rx-Tx time difference

13.2.1 Report mapping

The reporting range of gNB Rx-Tx time difference, as defined in Clause 5.2.3 of TS 38.215 [4], is defined from -985024T_c to +985024×T_c. The reporting resolution is uniform across the reporting range and is defined as $T = T_c \times 2^k$ where k is selected by gNB from the set {-6, -5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5}.

T_c is defined in TS 38.211 [6].

LMF provides a recommended resolution parameter, *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35]. gNB selects parameter k based on *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35] and informs the LMF.

The mapping of measured/inferred quantity for each reporting resolution (k) is defined in table 13.2.1-1 to table 13.2.1-12.

13.2.1A Additional Path Report Mapping for gNB Rx-Tx

The reporting range of additional path for gNB Rx-Tx time difference, as defined in Clause 5.2.3 of TS 38.215 [4], is defined from $-8175 \times T_c$ to $8175 \times T_c$. The reporting resolution is uniform across the reporting range and is defined as $T = T_c \times 2^k$ where k is selected by gNB from the set {-6, -5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5}.

T_c is defined in TS 38.211 [6].

LMF provides a recommended resolution parameter, *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35]. gNB selects parameter k based on *timingReportingGranularityFactor* or *timingReportingGranularityFactorExtended* [35] and informs the LMF.

The mapping of measured/inferred quantity for each reporting resolution (k) is defined in table 13.2.1A-1 to table 13.2.1A-12.

13.2.2 Measurement Accuracy Requirements

13.2.2.1 Introduction

This clause defines accuracy requirements for measured/inferred gNB Rx-Tx time difference measurement in FR1 and FR2. The requirements are applicable for gNB supporting gNB Rx-Tx time difference measurement. The gNB, which

declares the support for gNB Rx-Tx time difference measurement also declares that it meets gNB Rx-Tx time difference accuracy requirements at least for one side condition $\hat{E}s/Iot \geq +3$ dB or $\hat{E}s/Iot \geq -13$ dB.

13.2.2.2 Requirements

The accuracy requirements for measured/inferred gNB Rx-Tx time difference measurement shall be within $\pm(X+Y)\ T_c$ under the following conditions:

- AWGN propagation conditions.
- The measured signals are in the directions covered by RoAoA of OTA reference sensitivity requirements for gNB type 1-O and 2-O BS

where

- X is defined in table 13.2.2.2-1 for gNB types 1-C, 1-H and 1-O and in table 13.2.2.2-2 for gNB type 2-O.
- Y is declared by manufacturer and can be different for different gNB types 1-C, 1-H, 1-O and 2-O.

NOTE: The measurement accuracy requirements in table 13.2.2.2-1 and table 13.2.2.2-2 are defined under an assumption that gNB is not mandated to perform receive beam sweeping.

Table 13.2.2.2-1: gNB Rx-Tx time difference absolute accuracy in FR1 for gNB type 1-C, 1-H and 1-O

Accuracy	SRS $\hat{E}s/Iot$	SCS	SRS bandwidth range

13.3 UL SRS RSRP measurement

13.3.1 Report mapping

The reporting range of UL SRS RSRP, as defined in clause 5.2.5 of 38.215 [4], is defined from -156 dBm to -31 dBm with resolution 1 dB.

The mapping of measured quantity is defined in table 13.3.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

Table 13.3.1-1: UL SRS RSRP report mapping

Reported value	Measured quantity value	Unit
SRS_RSRP_0	SRS-RSRP<-156	dBm
SRS_RSRP_1	-156≤SRS-RSRP<-155	dBm
SRS_RSRP_2	-155≤SRS-RSRP<-154	dBm
SRS_RSRP_3	-154≤SRS-RSRP<-153	dBm
SRS_RSRP_4	-153≤SRS-RSRP<-152	dBm
SRS_RSRP_5	-152≤SRS-RSRP<-151	dBm
SRS_RSRP_6	-151≤SRS-RSRP<-150	dBm
SRS_RSRP_7	-150≤SRS-RSRP<-149	dBm

13.3.2 Measurement accuracy requirements

13.3.2.1 Introduction

This clause defines accuracy requirements for SRS-RSRP measurement in FR1 and FR2. The requirements are applicable for gNB supporting SRS-RSRP measurement. The gNB, which declares the support for SRS-RSRP measurement also declares that it meets SRS-RSRP accuracy requirements at least for one side condition $\hat{E}s/Iot \geq +3$ dB or $\hat{E}s/Iot \geq -13$ dB.

13.3.2.2 Requirements

The accuracy requirements in table 13.3.2.2-1, table 13.3.2.2-2 and table 13.3.2.2-3 are valid under the following conditions:

- AWGN propagation conditions.
- The measured signals are in the directions covered by RoAoA of OTA reference sensitivity requirements for gNB type 1-O and 2-O BS

NOTE: The measurement accuracy requirements in table 13.3.2.2-1, table 13.3.2.2-2 and table 13.3.2.2-3 are defined under an assumption that gNB is not mandated to perform receive beam sweeping.

Table 13.3.2.2-1 gNB SRS-RSRP absolute accuracy requirements in FR1 for gNB type 1-C

Accuracy	Conditions	
	SRS Ês/Iot	SRS bandwidth range
dB	dB	PRB
±4	Ês/Iot ≥ +3	24 ≤ BW < 48
±4		48 ≤ BW < 132

±7		132 ≤ BW

13.4 AoA/ZoA

13.4.1 Report mapping

The reporting range of UL Angle of Arrival (UL-AoA), as defined in clause 5.2.4 of TS 38.215 [4], is defined from -180 degree to +180 degree for azimuth angle of arrival (A-AoA). The reporting resolution is 0.1 degree.

The reporting range of UL Angle of Arrival, as defined in clause 5.2.4 of TS 38.215 [4], is defined from 0 degree to +180 degree for zenith angle of arrival (Z-AoA). The reporting resolution is 0.1 degree.

The mapping of A-AoA measured quantity is defined in table 13.4.1-1. The mapping of Z-AoA measured quantity is defined in table 13.4.1-2.

Table 13.4.1-1: Azimuth Angle of Arrival (A-AoA) measurement report mapping

Reported value	Measured quantity value (A-AoA)	Unit
A-AoA_0	-180 ≤ A-AoA < -179.9	degree
A-AoA_1	-179.9 ≤ A-AoA < -179.8	degree
A-AoA_2	-179.8 ≤ A-AoA < -179.7	degree
…	…	…
A-AoA_1798	-0.2 ≤ A-AoA < -0.1	degree
A-AoA_1799	-0.1 ≤ A-AoA < 0	degree
A-AoA_1800	0 ≤ A-AoA < 0.1	degree
A-AoA_1801	0.1 ≤ A-AoA < 0.2	degree
A-AoA_1802	0.2 ≤ A-AoA < 0.3	degree
…	…	…
A-AoA_3598	179.8 ≤ A-AoA < 179.9	degree
A-AoA_3599	179.9 ≤ A-AoA < 180	degree

Table 13.4.1-2: Zenith Angle of Arrival (Z-AoA) measurement report mapping

Reported value	Measured quantity value (Z-AoA)	Unit
Z-AoA_0	0 ≤ Z-AoA < 0.1	degree
Z-AoA _1	0.1 ≤ Z-AoA < 0.2	degree
Z-AoA _2	0.2 ≤ Z-AoA < 0.3	degree
…	…	…
Z-AoA _1798	179.8 ≤ Z-AoA < 179.9	degree
Z-AoA _1799	179.9 ≤ Z-AoA ≤ 180	degree

13.5 Timing advance (T_{ADV})

13.5.1 Report mapping

The reporting range of T_{ADV}, as defined in clause 5.2.7 of TS 38.215 [4], is defined from 0 to 3150848 T_c with 128 T_c resolution for timing advance less than 262144 T_c, and 512 T_c for timing advance greater than or equal to 262144 T_c.

T_c is defined in TS 38.211 [6].

The mapping of measured quantity is defined in table 13.5.1-1.

Table 13.5.1-1: T_{ADV} measurement report mapping

Reported value	Measured quantity value	Unit
TIME_ADVANCE_00	$T_{ADV} < 128$	T_c
TIME_ADVANCE_01	$128 \le T_{ADV} < 256$	T_c
TIME_ADVANCE_02	$256 \le T_{ADV} < 384$	T_c
…	…	…
TIME_ADVANCE_2046	$261888 \le T_{ADV} < 262016$	T_c
TIME_ADVANCE_2047	$262016 \le T_{ADV} < 262144$	T_c
TIME_ADVANCE_2048	$262144 \le T_{ADV} < 262656$	T_c
TIME_ADVANCE_2049	$262656 \le T_{ADV} < 263168$	T_c
…	…	…
TIME_ADVANCE_7688	$3149824 \le T_{ADV} < 3150336$	T_c
TIME_ADVANCE_7689	$3150336 \le T_{ADV} < 3150848$	T_c
TIME_ADVANCE_7690	$3150848 \le T_{ADV}$	T_c

NOTE: For report mapping, T_{ADV} is equal to (gNB Rx – Tx time difference) + N_{TA_offset}, where N_{TA_offset} is based on the information *n-TimingAdvanceOffset* as specified in TS 38.331 [2].

13.6 UL SRS RSRPP measurement

13.6.1 Report mapping

The reporting range of UL SRS RSRPP, as defined in clause 5.2.5 of 38.215 [4], is defined from -156 dBm to -31 dBm with resolution 1 dB.

The mapping of measured quantity is defined in table 13.6.1-1. The range in the signalling may be larger than the guaranteed accuracy range.

Table 13.6.1-1: UL SRS RSRPP report mapping

Reported value	Measured quantity value	Unit
SRS_RSRPP_0	SRS-RSRPP<-156	dBm
SRS_RSRPP_1	-156≤SRS-RSRPP<-155	dBm
SRS_RSRPP_2	-155≤SRS-RSRPP<-154	dBm
SRS_RSRPP_3	-154≤SRS-RSRPP<-153	dBm
SRS_RSRPP_4	-153≤SRS-RSRPP<-152	dBm
SRS_RSRPP_5	-152≤SRS-RSRPP<-151	dBm
SRS_RSRPP_6	-151≤SRS-RSRPP<-150	dBm
SRS_RSRPP_7	-150≤SRS-RSRPP<-149	dBm
SRS_RSRPP_8	-149≤SRS-RSRPP<-148	dBm
SRS_RSRPP_9	-148≤SRS-RSRPP<-147	dBm
SRS_RSRPP_10	-147≤SRS-RSRPP<-146	dBm
SRS_RSRPP_11	-146≤SRS-RSRPP<-145	dBm
SRS_RSRPP_12	-145≤SRS-RSRPP<-144	dBm
SRS_RSRPP_13	-144≤SRS-RSRPP<-143	dBm
SRS_RSRPP_14	-143≤SRS-RSRPP<-142	dBm
SRS_RSRPP_15	-142≤SRS-RSRPP<-141	dBm
SRS_RSRPP_16	-141≤SRS-RSRPP<-140	dBm
SRS_RSRPP_17	-140≤SRS-RSRPP<-139	dBm
SRS_RSRPP_18	-139≤SRS-RSRPP<-138	dBm
…	…	…
SRS_RSRPP_111	-46≤SRS-RSRPP<-45	dBm

13.7 gNB Rx-Tx time difference measurements for RTT-based PDC

13.7.1 Report mapping

The reporting range of gNB Rx-Tx time difference, as defined in clause 5.2.3 of TS 38.215 [4], is defined from -985024T_c to +985024×T_c. The reporting resolution is uniform across the reporting range and is defined as T_c*32.

T_c is defined in TS 38.211 [6].

The mapping of measured quantity is defined in table 13.7.1-1.

Table 13.7.1-1: gNB Rx-Tx time difference measurement report mapping

Reported Value	Measured Quantity Value	Unit
RX-TX_0000	-985024 > RX-TX	T_c
RX-TX_0001	-985024 ≤ RX-TX < -984992	T_c
RX-TX_0002	-984992 ≤ RX-TX < -984960	T_c
…	…	…
RX-TX_30781	-64 ≤ RX-TX < -32	T_c
RX-TX_30782	-32 ≤ RX-TX ≤ 0	T_c
RX-TX_30783	0 < RX-TX ≤ 32	T_c
RX-TX_30784	32 < RX-TX ≤ 64	T_c
RX-TX_30785	64 < RX-TX ≤ 96	T_c
…	…	…
RX-TX_61564	984992 < RX-TX ≤ 985024	T_c
RX-TX_61565	985024 < RX-TX	T_c

13.7.2 Measurement Accuracy Requirements

13.7.2.1 Introduction

This clause defines accuracy requirements for gNB Rx-Tx time difference measurement in FR1 and FR2. The requirements are applicable for gNB supporting gNB Rx-Tx time difference measurement for RTT-based PDC.

13.7.2.2 Requirements

The accuracy requirements for gNB Rx-Tx time difference measurement for RTT-based PDC shall be within ±(X+Y) T_c under the following conditions:

- AWGN propagation conditions.
- The measured signals are in the directions covered by RoAoA of OTA reference sensitivity requirements for gNB type 1-O and 2-O BS

where

- X is defined in table 13.7.2.2-1 for gNB types 1-C, 1-H and 1-O and in table 13.7.2.2-2 for gNB type 2-O.
- Y is declared by manufacturer and can be different for different gNB types 1-C, 1-H, 1-O and 2-O.

NOTE: The measurement accuracy requirements in table 13.7.2.2-1 and table 13.7.2.2-2 are defined under an assumption that gNB is not mandated to perform receive beam sweeping.

Table 13.7.2.2-1: gNB Rx-Tx time difference absolute accuracy in FR1 for gNB type 1-C, 1-H and 1-O

Accuracy	SRS Ês/Iot	SCS	SRS bandwidth range
Unit: Tc	Unit: dB	Unit: kHz	Unit: PRB
122	≥ +3	15	24 ≤ BW ≤ 40
62			44 ≤ BW ≤ 84
32			88 ≤ BW ≤ 168
16			176 ≤ BW
32		30	48 ≤ BW ≤ 84

9			176 ≤ BW
16		60	48 ≤ BW ≤ 84
9			88 ≤ BW

Table 13.7.2.2-2: gNB Rx-Tx time difference absolute accuracy in FR2 for gNB type 2-O

Accuracy	SRS Ês/Iot	SCS	SRS bandwidth range
Unit: Tc	Unit: dB	Unit: kHz	Unit: PRB
9	≥ +3	60	132 ≤ BW ≤ 168
8			176 ≤ BW
16		120	32 ≤ BW ≤ 40
9			44 ≤ BW ≤ 84
8			88 ≤ BW

13.8 UL-RSCP measurement

13.8.1 Report mapping

The reporting range of UL-RSCP, as defined in clause 5.2.8 of 38.215 [4], is defined from 0 degree to 360 degree. The reporting resolution is 0.1 degree.

The mapping of UL-RSCP measured quantity is defined in table 13.8.1-1.

Table 13.8.1-1: UL-RSCP report mapping

Reported value	Measured quantity value (UL-RSCP)	Unit
UL_RSCP_0000	0 ≤ UL-RSCP < 0.1	degree
UL_RSCP_0001	0.1 ≤ UL-RSCP < 0.2	degree
UL_RSCP_0002	0.2 ≤ UL-RSCP < 0.3	degree
…	…	…
UL_RSCP_1798	179.8 ≤ UL-RSCP < 179.9	degree
UL_RSCP_1799	179.9 ≤ UL-RSCP < 180	degree
UL_RSCP_1800	180 ≤ UL-RSCP < 180.1	degree
UL_RSCP_1801	180.1 ≤ UL-RSCP < 180.2	degree
UL_RSCP_1802	180.2 ≤ UL-RSCP < 180.3	degree
…	…	…
UL_RSCP_3598	359.8 ≤ UL-RSCP < 359.9	degree
UL_RSCP_3599	359.9 ≤ UL-RSCP < 360	degree

13.9 UL SRS-TDCT measurement

13.9.1 Report mapping

The reporting range of UL SRS-TDCT measurement, as defined in Clause 5.2.9 of TS 38.215 [4], is defined from -985024×T_c to +985024×T_c. The reporting resolution is uniform across the reporting range and is defined as $T = T_c \times 2^k$, where k is selected by gNB from the set {0, 1, 2, 3, 4, 5}.

T_c is defined in TS 38.211 [6].

LMF provides a recommended resolution parameter, *timingReportingGranularityFactor* [35]. gNB selects parameter k based on *timingReportingGranularityFactor* [35] and informs the LMF.

The mapping of measured quantity for each reporting resolution (k) is defined in table 13.9.1-1 to table 13.9.1-6.

Table 13.9.1-1: Measurement report mapping for k=0

Reported Value	Measured Quantity Value	Unit
SRS_TDCT_0000000	-985024 > SRS-TDCT	T_c
SRS_TDCT_0000001	-985024 ≤ SRS-TDCT < -985023	T_c
SRS_TDCT_0000002	-985023 ≤ SRS-TDCT < -985022	T_c
…	…	…
SRS_TDCT_0985023	-2 ≤ SRS-TDCT < -1	T_c
SRS_TDCT_0985024	-1 ≤ SRS-TDCT ≤ 0	T_c
SRS_TDCT_0985025	0 < SRS-TDCT ≤ 1	T_c
SRS_TDCT_0985026	1 < SRS-TDCT ≤ 2	T_c
SRS_TDCT_0985027	2 < SRS-TDCT ≤ 3	T_c
…	…	…
SRS_TDCT_1970048	985023 < SRS-TDCT ≤ 985024	T_c
SRS_TDCT_1970049	985024 < SRS-TDCT	T_c

Table 13.9.1-2: Measurement report mapping for k=1

Reported Value	Measured Quantity Value	Unit
SRS_TDCT_000000	-985024 > SRS-TDCT	T_c
SRS_TDCT_000001	-985024 ≤ SRS-TDCT < -985022	T_c
SRS_TDCT_000002	-985022 ≤ SRS-TDCT < -985020	T_c
…	…	…

13.10 UL SRS-TDCP measurement

13.10.1 Report mapping

The reporting range of UL SRS-TDCP measurement, as defined in clause 5.2.10 of 38.215 [4], is defined from -156 dBm to -31 dBm with resolution 1 dB.

The mapping of measured quantity is defined in table 13.10.1-1.

Table 13.10.1-1: UL SRS-TDCP report mapping

Reported value	Measured quantity value	Unit
SRS_TDCP_000	SRS-TDCP < -156	dBm
SRS_TDCP_001	-156 ≤ SRS-TDCP < -155	dBm
SRS_TDCP_002	-155 ≤ SRS-TDCP < -154	dBm
SRS_TDCP_003	-154 ≤ SRS-TDCP < -153	dBm
SRS_TDCP_004	-153 ≤ SRS-TDCP < -152	dBm
SRS_TDCP_005	-152 ≤ SRS-TDCP < -151	dBm
SRS_TDCP_006	-151 ≤ SRS-TDCP < -150	dBm
SRS_TDCP_007	-150 ≤ SRS-TDCP < -149	dBm
SRS_TDCP_008	-149 ≤ SRS-TDCP < -148	dBm
SRS_TDCP_009	-148 ≤ SRS-TDCP < -147	dBm

SRS_TDCP_010	-147 ≤ SRS-TDCP < -146	dBm
SRS_TDCP_011	-146 ≤ SRS-TDCP < -145	dBm
SRS_TDCP_012	-145 ≤ SRS-TDCP < -144	dBm

SRS_TDCP_123	-34 ≤ SRS-TDCP < -33	dBm
SRS_TDCP_124	-33 ≤ SRS-TDCP < -32	dBm
SRS_TDCP_125	-32 ≤ SRS-TDCP < -31	dBm
SRS_TDCP_126	-31 ≤ SRS-TDCP	dBm

Annex A (normative): Test Cases

A.1 Purpose of annex

The purpose of annex A is to define test cases and the relevant configurations for verifying various types of RRM requirements with NR cells, including SA NR, EN-DC, and NE-DC deployments as well as standalone E-UTRA deployments.

A.2 Requirement classification for statistical testing

Requirements in this specification are either expressed as absolute requirements with a single value stating the requirement or expressed as a success rate. There are no provisions for the statistical variations that will occur when the parameter is tested.

Annex A outlines the tests in more detail and lists the test parameters needed. The test will result in an outcome of a test variable value for the device under test (DUT) inside or outside the test limit. Overall, the probability of a "good" DUT being inside the test limit(s) and the probability of a "bad" DUT being outside the test limit(s) should be as high as possible. For this reason, when selecting the test variable and the test limit(s), the statistical nature of the test is accounted for.

The statistical nature depends on the type of requirement. Some have large statistical variations, while others are not statistical in nature at all. When testing a parameter with a statistical nature, a confidence level is set. This establishes the probability that a DUT passing the test actually meets the requirements and determines how many times a test has to be repeated and what the pass and fail criteria are. Those aspects are not covered by TS 38.133. The details of the tests on how many times to run it and how to establish confidence in the tests are described in TS 38.533 [5]. This annex establishes the variable to be used in the test and whether it can be viewed as statistical in nature or not.

A.2.1 Types of requirements in TS 38.133

A.2.1.1 Time and delay requirements on UE higher layer actions

A very large part of the RRM requirements are delay requirements:

- In RRC_IDLE state mobility (clause A.6.1 and A.7.1) there is cell re-selection delay.
- In RRC_CONNECTED state mobility (clauses A.4.3, A.4.6, A.5.3, A.5.6, A.6.3, A.6.6, A.7.3 and A.7.6) there is handover delay, cell search delay and measurement reporting delay.
- In RRC Connection Control (clauses A.4.3.2, A.5.3.2, A.6.3.2 and A.7.3.2) there is RRC re-establishment delay.

All have in common that the UE is required to perform an action observable in higher layers (e.g. camp on the correct cell) within a certain time after a specific event (e.g. when a new strong pilot or reference signal appears). The delay time is statistical in nature for several reasons, among others that several of the measurements are performed by the UE in a fading radio environment.

The variations make a strict limit unsuitable for a test. Instead there is a condition set for a correct action by the UE, e.g. that the UE shall camp on the correct cell within X seconds. Then the rate of correct events is observed during repeated tests and a limit is set on the rate of correct events, usually 90% correct events are required. How the limit is applied in the test depends on the confidence required, further detailed are in TS 38.533 [5].

A.2.1.2 Measurements of power levels, relative powers and time

A very large number of requirements are on measurements that the UE performs:

- In RRC_CONNECTED state mobility (clauses A.4.3, A.5.3, A.6.3 and A.7.3) there are measurement reports.
- In Measurement Performance Requirements (clauses A.4.7, A.5.7, A.6.7 and A.7.7) there are requirements for all type of measurements.

The accuracy requirements on measurements are expressed in this specification as a fixed limit (e.g. +/-X dB), but the measurement error will have a distribution that is not easily confined in fixed limits. Assuming a Gaussian distribution of the error, the limits will have to be set at +/-3.29σ if the probability of failing a "good DUT" in a single test is to be kept at 0.1%. It is more reasonable to set the limit tighter and test the DUT by counting the rate of measurements that are within the limits, in a way similar to the requirements on delay.

A.2.1.3 Implementation requirements

A few requirements are strict actions the UE should take or capabilities the UE should have, without any allowance for deviations. These requirements are absolute and should be tested as such. Examples are:

- "Event triggered report rate" in RRC_CONNECTED state mobility (clauses A.4.3, A.4.6, A.5.3, A.5.6, A.6.3, A.6.6, A.7.3 and A.7.6),
- "Correct behaviour at time-out" in RRC connection control (clauses A.4.3.2, A.5.3.2, A.6.3.2 and A.7.3.2).

A.2.1.4 Physical layer timing requirements

There are requirements on Timing (clauses A.4.4, A.5.4, A.6.4 and A.7.4). There are both absolute and relative limits on timing accuracy depending upon the type of requirement. Examples are:

- Initial Transmit Timing (clauses A.4.4.1, A.5.4.1, A.6.4.1 and A.7.4.1) has an absolute limit on timing accuracy.
- Timing Advance (clauses A.4.4.2, A.5.4.2, A.6.4.2 and A.7.4.2) has a relative limit on timing accuracy.

A.2.1.5 Requirements under CCA

A few requirements include CCA failures in DL and or UL. Considering that the CCA model is of statistical nature, requirements that include CCA failures are always considered of statistical nature.

A.3 RRM test configurations

A.3.1 Reference measurement channels

A.3.1.1 PDSCH

A.3.1.1.1 FDD

Table A.3.1.1.1-1: PDSCH Reference Measurement Channels for SCS=15 kHz

Parameter	Unit	Value						
Reference channel		SR.1.1 FDD	SR.1.2 FDD	SR.1.3 FDD				
Channel bandwidth	MHz	Defined in test case	Defined in test case by the parameter $N_{RB,c}$	Defined in test case by the parameter $N_{RB,c}$				

Number of transmitter antennas		1	1	1				
Allocated resource blocks for PDSCH Note 1		24	15	12				
Allocated slots per Radio Frame		10	10	10				
Radio frame containing SSB	slots	Note 5	Note 5	Note 5				
Radio frame not containing SSB	slots	10	10	10				
MCS index		4	4	4				
Modulation		QPSK	QPSK	QPSK				
Target Coding Rate		1/3	1/3	1/3				
Number of control symbols		2	2	2				
PDSCH mapping type		Type A	Type A	Type A				
Information Bit Payload								
For slots with RMSI Note 2	bits	1608	984	736				
For slots without RMSI	bits	1864	1128	888				
Number of Code Blocks per slot		1	1	1				
Binary Channel Bits Per slot								
For slots with RMSI Note 2, Note 4	bits	5184	3240	2592				
For slots without RMSI Note 6	bits	6048	3780	3024				

NOTE 1: Allocated outside the SMTC duration in time and in resource blocks which do not overlap with the resource blocks allocated for SS/PBCH block.
NOTE 2: PDSCH is scheduled on the slots with RMSI.
NOTE 3: If necessary the information bit payload size can be adjusted to facilitate the test implementation. The payload sizes are defined in TS 38.213 [3].
NOTE 4: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 2.
NOTE 5: PDSCH is not scheduled in slots containing SSB according to the SSB configuration used in the test. SSB configurations are defined in clause A.3.10.
NOTE 6: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 1.
NOTE 7: When DRX is configured, PDCCH can be scheduled both for downlink assignment and/or UL grant only during (10ms - drx-InactivityTimer) from timing when drx-onDurationTimer starts, unless otherwise specified in the test case.

A.3.1.1.2 TDD

Table A.3.1.1.2-1: PDSCH Reference Measurement Channels for SCS=15 kHz

Parameter	Unit	Value						
Reference channel		SR.1.1 TDD	SR.1.2 TDD					
Channel bandwidth	MHz	Defined in test case	Defined in test case					
Number of transmitter antennas		1	1					
Allocated resource blocks for PDSCH Note 1		24	24					
Allocated slots per Radio Frame								
Radio frame containing SSB	slots	Note 5	Note 5					
Radio frame not containing SSB	slots	4	6					
MCS table		64QAM	64QAM					
MCS index		4	4					

Modulation		QPSK	QPSK					
Target Coding Rate		1/3	1/3					
Number of control symbols		2	2					
PDSCH mapping type		Type A	Type A					
Information Bit Payload								
For slots with RMSI Note 2	bits	1608	1608					
For slots without RMSI	bits	1864	1864					
For special slots	bits	N/A	1128					
Number of Code Blocks per slot		1	1					
Binary Channel Bits Per slot								
For slots with RMSI Note 2, Note 4	bits	5184	5184					
For slots without RMSI Note 6	bits	6048	6048					
For special slots Note 6	bits	-	3744					

NOTE 1: Allocated outside the SMTC duration in time and in resource blocks which do not overlap with the resource blocks allocated for SS/PBCH block.
NOTE 2: PDSCH is scheduled on the slots with RMSI.
NOTE 3: If necessary the information bit payload size can be adjusted to facilitate the test implementation. The payload sizes are defined in TS 38.213 [3].
NOTE 4: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 2.
NOTE 5: PDSCH is not scheduled in slots containing SSB according to the SSB configuration used in the test. SSB configurations are defined in clause A.3.10.
NOTE 6: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 1.
NOTE 7: When DRX is configured, PDCCH can be scheduled both for downlink assignment and/or UL grant only during (10ms - drx-InactivityTimer) from timing when drx-onDurationTimer starts, unless otherwise specified in the test case.

Table A.3.1.1.2-2: PDSCH Reference Measurement Channels for SCS=30 kHz

Parameter	Unit	Value						
Reference channel		SR.2.1 TDD						
Channel bandwidth	MHz	Defined in test case						
Number of transmitter antennas		1						
Allocated resource blocks for PDSCH Note 1		24						
Allocated slots per Radio Frame

PDSCH mapping type		Type A	Type A	Type A				
Information Bit Payload								
For slots with RMSI	bits	1608	1608	3104				
For slots without RMSI	bits	1864	1864	3624				
Number of Code Blocks per slot		1	1	1				
Binary Channel Bits Per slot								
For slots with RMSI Note 4	bits	5184	5184	10368				
For slots without RMSI Note 6	bits	6048	6048	12096				

NOTE 1: Allocated in resource blocks which do not overlap with the resource blocks allocated for SS/PBCH block
NOTE 2: Void
NOTE 3: If necessary the information bit payload size can be adjusted to facilitate the test implementation. The payload sizes are defined in TS 38.213 [3].
NOTE 4: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 2.
NOTE 5: PDSCH is not scheduled in slots containing SSB according to the SSB configuration used in the test. SSB configurations are defined in clause A.3.10.
NOTE 6: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 1.
NOTE 7: Allocated in the same resource blocks as the CORESET.
NOTE 8: When DRX is configured, PDSCH is scheduled only while *drx-onDurationTimer* is running, unless otherwise specified in the test case.

A.3.1.2 CORESET for RMSI scheduling

A.3.1.2.1 FDD

Table A.3.1.2.1-1: RMSI CORESET Reference Channel for FDD with SCS=15KHz

Parameter	Unit	Value						
Reference channel		CR.1.1 FDD	CR.1.2 FDD	CR.1.3 FDD	CR.1.4 FDD			
Channel bandwidth	MHz	Defined in test case	Defined in test case	Defined in test case	Defined in test case			
Subcarrier spacing for RMSI CORESET	kHz	15	15	15	15			
Allocated resource blocks for RMSI CORESET		24 (Note 8)	12 (Note 9)	15 (Note 10)	20 (Note 11)			
Subcarrier spacing for SSB	kHz	15	15	15	15			
SSB and RMSI CORESET multiplexing configuration		Pattern 1	Pattern 1	Pattern 1	Pattern 1			
Offset between SSB and RMSI CORESET Note 3, 7	PRB	0 (Note 8)	0 (Note 9)	0 (Note 10)	0 (Note 11)			
Configuration of PDCCH monitoring occasions for RMSI CORESET Note 4		Index 4	Index 4	Index 4	Index 4			
Number of transmitter antennas		1	1	1	1			
Duration of RMSI CORESET	symbols	2 (Note 8)	2 (Note 9)	3 (Note 10)	3 (Note 11)			
DCI Format Note 1		Note 2	Note 2	Note 2	Note 2			
Aggregation level	CCE	8	4	8	8			
DMRS precoder granularity		6	Same as REG bundle size	Same as REG bundle size	Same as REG bundle size			
REG bundle size		6	6	6	6			
Mapping from REG to CCE		Distributed (Note 8)	Distributed (Note 9)	Non-Distributed (Note 10)	Distributed (Note 11)			
Cell ID		Note 5	Note 5	Note 5	Note 5			
Payload (without CRC)	bits	Note 6	Note 6	Note 6	Note 6			

NOTE 1: DCI formats are defined in TS 38.212 [8].
NOTE 2: DCI format shall depend upon the test configuration.
NOTE 3: The offset is defined with respect to the subcarrier spacing of the CORESET from the smallest PRB index of RMSI CORESET to the smallest PRB index of the common PRB overlapping with the first PRB of the SS/PBCH block.
NOTE 4: The configuration of PDCCH monitoring occasions for RMSI CORESET is defined in table 13-11 in TS 38.213 [3].
NOTE 5: Cell ID shall depend upon the test configuration.
NOTE 6: Payload size shall depend upon the test configuration.
NOTE 7: Other values can be used to align with GSCN [13] as long as SSB does not overlap the RMC.
NOTE 8: The configuration of set of resource blocks, slot symbols, RB offset and REG to CCE mapping of control resource set for Type0-PDCCH search space corresponds to index 0 in table 13-1 in TS 38.213 [3]
NOTE 9: The configuration of set of resource blocks, slot symbols, RB offset and REG to CCE mapping of control resource set for Type0-PDCCH search space corresponds to index 0 in table 13-0 in TS 38.213 [3]
NOTE 10: The configuration of set of resource blocks, slot symbols, RB offset and REG to CCE mapping of control resource set for Type0-PDCCH search space corresponds to index 8 in table 13-0 in TS 38.213 [3]
NOTE 11: The configuration of set of resource blocks, slot symbols, RB offset and REG to CCE mapping of control resource set for Type0-PDCCH search space corresponds to index 11 in table 13-0 in TS 38.213 [3]

A.3.1.2.2 TDD

Table A.3.1.2.2-1: RMSI CORESET Reference Channel for TDD with SCS=15kHz

Parameter	Unit	Value						
Reference channel		CR.1.1 TDD

NOTE 1: DCI formats are defined in TS 38.212 [8].
NOTE 2: DCI format shall depend upon the test configuration.
NOTE 3: The offset is defined with respect to the subcarrier spacing of the CORESET from the smallest PRB index of RMSI CORESET to the smallest PRB index of the common PRB overlapping with the first PRB of the SS/PBCH block.
NOTE 4: The configuration of PDCCH monitoring occasions for RMSI CORESET is defined in table 13-11 in TS 38.213 [3].
NOTE 5: Cell ID shall depend upon the test configuration.
NOTE 6: Payload size shall depend upon the test configuration.
NOTE 7: The configuration of set of resource blocks and slot symbols of control resource set for Type0-PDCCH search space corresponds to index 0 in table 13-1 in TS 38.213 [3].
NOTE 8: Other values can be used to align with GSCN [13] as long as SSB does not overlap the RMC.

Table A.3.1.2.2-2: RMSI CORESET Reference Channel for TDD with SCS=30kHz

Parameter	Unit	Value						
Reference channel		CR.2.1 TDD						
Channel bandwidth	MHz	Defined in test case						
Subcarrier spacing	kHz	30						
Allocated resource blocks for RMSI CORESET Note 7		24						
SSB and RMSI CORESET multiplexing configuration Note 7		Pattern 1						
Offset between SSB and RMSI CORESET Note 3, 7	PRB	0 (Note 8)						
Configuration of PDCCH monitoring occasions for RMSI CORESET Note 4		Index 4						

Number of transmitter antennas		1						
Duration of RMSI CORESET Note 7	symbols	2						
DCI Format Note 1		Note 2						
Aggregation level	CCE	8						
DMRS precoder granularity		6						
REG bundle size		6						
Mapping from REG to CCE		Distributed						
Cell ID		Note 5						
Payload (without CRC)	bits	Note 6						

NOTE 1: DCI formats are defined in TS 38.212 [8].
NOTE 2: DCI format shall depend upon the test configuration.
NOTE 3: The offset is defined with respect to the subcarrier spacing of the CORESET from the smallest PRB index of RMSI CORESET to the smallest PRB index of the common PRB overlapping with the first PRB of the SS/PBCH block.
NOTE 4: The configuration of PDCCH monitoring occasions for RMSI CORESET is defined in table 13-11 in TS 38.213 [3].
NOTE 5: Cell ID shall depend upon the test configuration.
NOTE 6: Payload size shall depend upon the test configuration.
NOTE 7: The configuration of set of resource blocks and slot symbols of control resource set for Type0-PDCCH search space corresponds to index 0 in table 13-6 in TS 38.213 [3].
NOTE 8: Other values can be used to align with GSCN [13] as long as SSB does not overlap the RMC.

Table A.3.1.2.2-3: RMSI CORESET Reference Channel for TDD with SCS=120kHz

Parameter	Unit	Value						
Reference channel		CR.3.1 TDD	CR.3.2 TDD					
Channel bandwidth	MHz	100	100					
Subcarrier spacing	kHz	120	120					
Allocated resource blocks for RMSI CORESET		24 Note 7	48 Note 9					
SSB and RMSI CORESET multiplexing configuration		Pattern 1 Note 7	Pattern 1 Note 9					
Offset between SSB and RMSI CORESET Note 3	PRB	0 (Note 8) Note 7	0 (Note 8) Note 9					
Configuration of PDCCH monitoring occasions for RMSI CORESET Note 4		Index 4	Index 4					
Number of transmitter antennas		1	1					
Duration of RMSI CORESET	symbols	2 Note 7	2 Note 9					
DCI Format Note 1		Note 2	Note 2					
Aggregation level	CCE	8	8					
DMRS precoder granularity		6	6					
REG bundle size		6	6					
Mapping from REG to CCE		Distributed	Distributed					
Cell ID		Note 5	Note 5					
Payload (without CRC)	bits	Note 6	Note 6					

NOTE 1: DCI formats are defined in TS 38.212 [8].
NOTE 2: DCI format shall depend upon the test configuration.
NOTE 3: The offset is defined with respect to the subcarrier spacing of the CORESET from the smallest PRB index of RMSI CORESET to the smallest PRB index of the common PRB overlapping with the first PRB of the SS/PBCH block.
NOTE 4: The configuration of PDCCH monitoring occasions for RMSI CORESET is defined in table 13-12 in TS 38.213 [3].
NOTE 5: Cell ID shall depend upon the test configuration.
NOTE 6: Payload size shall depend upon the test configuration.
NOTE 7: The configuration of set of resource blocks and slot symbols of control resource set for Type0-PDCCH search space corresponds to index 0 in table 13-8 in TS 38.213 [3].
NOTE 8: Other values can be used to align with GSCN [13] as long as SSB does not overlap the RMC.
NOTE 9: The configuration of set of resource blocks and slot symbols of control resource set for Type0-PDCCH search space corresponds to index 2 in table 13-10 in TS 38.213 [3].

A.3.1.3 CORESET for RMC scheduling

A.3.1.3.1 FDD

Table A.3.1.3.1-1: Control Channel RMC for FDD with SCS=15kHz

Parameter	Unit	Value									
Reference channel		CCR.1.1 FDD	CCR.1.2 FDD	CCR.1.3 FDD	CCR.1.4 FDD	CCR.1.5 FDD	CCR.1.6 FDD	CCR.1.7 FDD	CCR.1.8 FDD

A.3.1A Reference measurement channels under CCA

A.3.1A.1 PDSCH

A.3.1A.1.1 TDD

Table A.3.1A.1.1-1: PDSCH Reference Measurement Channels for SCS=30 kHz

Parameter	Unit	Value						
Reference channel		SR.1.1 CCA						
Channel bandwidth	MHz	40						
Number of transmitter antennas		1						
Allocated resource blocks for PDSCH Note 1		24						

Allocated slots per Radio Frame								
Radio frame containing SSB	slots	Note 5						
Radio frame not containing SSB	slots	Note 7						
MCS table		64QAM						
MCS index		4						
Modulation		QPSK						
Target Coding Rate		1/3						
Number of control symbols		2						
PDSCH mapping type		Type A						
Information Bit Payload								
For slots with RMSI Note 2	bits	1608						
For slots without RMSI	bits	1864						
Number of Code Blocks per slot		1						
Binary Channel Bits Per slot								
For slots with RMSI Note 2, Note 4	bits	5184						
For slots without RMSI Note 6	bits	6048						

NOTE 1: Allocated outside the discovery burst transmission window in time and in resource blocks which do not overlap with the resource blocks allocated for SS/PBCH block.
NOTE 2: PDSCH is scheduled on the slots with RMSI.
NOTE 3: If necessary the information bit payload size can be adjusted to facilitate the test implementation. The payload sizes are defined in TS 38.213 [3].
NOTE 4: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 2.
NOTE 5: PDSCH is not scheduled in slots containing SSB according to the SSB configuration used in the test. SSB configurations are defined in clause A.3.10A.
NOTE 6: Derived based on the PDSCH DMRS assumption: dmrs-TypeA-Position=2, dmrs-Type=1, dmrs-AdditonalPositions=2, maxLength=1, Antenna port index: 1000, and Number of PDSCH DMRS CDM group(s) without data: 1.
NOTE 7: PDSCH is transmitted during the RMC burst as specified in clause A.3.1A.5.

A.3.1A.2 CORESET for RMSI scheduling

A.3.1A.2.1 TDD

Table A.3.1A.2.1-1: RMSI CORESET Reference Channel for SCS=30KHz

Parameter	Unit	Value						
Reference channel		CR.1.1 CCA						
Channel bandwidth	MHz	40						
Subcarrier spacing	kHz	30						
Allocated resource blocks for RMSI CORESET Note 7		48						
SSB and RMSI CORESET multiplexing configuration Note 7		Pattern 1						
Offset between SSB and RMSI CORESET Note 3, 7	RB	0 (Note 8)						
Configuration of PDCCH monitoring occasions for RMSI CORESET Note 4		Index 0						
Number of transmitter antennas		1						
Duration of RMSI CORESET Note 7	symbols	2						

DCI Format Note 1		Note 2						
Aggregation level	CCE	8						
DMRS precoder granularity		6						
REG bundle size		6						
Mapping from REG to CCE		Distributed						
Cell ID		Note 5						
Payload (without CRC)	bits	Note 6						

NOTE 1: DCI formats are defined in TS 38.212 [8].
NOTE 2: DCI format shall depend upon the test configuration.
NOTE 3: The offset is defined with respect to the subcarrier spacing of the CORESET from the smallest PRB index of RMSI CORESET to the smallest PRB index of the common PRB overlapping with the first PRB of the SS/PBCH block.
NOTE 4: The configuration of PDCCH monitoring occasions for RMSI CORESET is defined in table 13-11 in TS 38.213 [3].
NOTE 5: Cell ID shall depend upon the test configuration.
NOTE 6: Payload size shall depend upon the test configuration.
NOTE 7: The configuration of set of resource blocks and slot symbols of control resource set for Type0-PDCCH search space corresponds to index 4 in table 13-4A in TS 38.213 [3].
NOTE 8: Other values can be used to align with GSCN [13] as long as SSB does not overlap the RMC.

A.3.1A.3 CORESET for RMC scheduling

A.3.1A.3.1 TDD

Table A.3.1A.3.1-1: Control Channel RMC with SCS=30KHz

Parameter	Unit	Value						
Reference channel		CCR.1.1 CCA	CCR.1.2 CCA	CCR.1.3 CCA				
Channel bandwidth	MHz	40	40	40				
Subcarrier spacing	kHz	30	30	30				
Allocated resource blocks for CORESET Note 3		24	24	18				
Number of transmitter antennas		1	1	1				
Duration of CORESET	symbols	2	2	2				
REG bundle size		6	6	6				
DMRS precoder granularity		Same as REG bundle size	Same as REG bundle size	Same as REG bundle size				
CCE to REG mapping		Interleaved	Interleaved	Interleaved				
Interleave n_shift		0	0	0				
Interleave size		2	2	2				
Beamforming Pre-Coder		N/A	N/A	N/A				
Aggregation level	CCE	4	8	4				
DCI formats		Note 1	Note 1	Note 1				
Payload size (without CRC)	bits	Note 2	Note 2	Note 2				

NOTE 1: DCI format shall depend upon the test configuration.
NOTE 2: Payload size shall depend upon the test configuration.
NOTE 3: Allocated in the same resource blocks where the associated RMC is scheduled.

A.3.1A.4 TDD UL/DL configuration

Table A.3.1A.4-1: TDD UL/DL configuration for SCS=30 kHz

Parameter	Unit	Value

Reference channel		TDDConf.1.1 CCA		
referenceSubcarrierSpacing	kHz	N/A

TDD UL/DL pattern 2 Note 2, Note 3		'DD'		
dl-UL-TransmissionPeriodicity	ms	N/A		
nrofDownlinkSlots		N/A		
nrofDownlinkSymbols		N/A		
nrofUplinkSlot		N/A		
nrofUplinkSymbols		N/A		
NOTE 1: As specified in TS 38.213 [3] and TS 38.331 [2]. NOTE 2: Do not configure *tdd-UL-DL-ConfigurationCommon* using RRC configuration NOTE 3: The UE will be scheduled via DCI according to the TDD pattern defined in the table.				

A.3.1A.5 RMC burst transmission model

RMC not conveying RMSI is scheduled during the RMC burst. The length of the transmission burst in slots is defined as N. The burst transmission format is determined according to the steps below:

1. Select N randomly from a given set of the number of slots $S_1 = \{1,3,5\}$ with equal probability as the total length of RMC burst transmission format.

2. A uniform random variable from 0 to 1 is generated. If the random variable is less than P_{CCA_DL}, a burst of N fully occupied slots is transmitted. Otherwise, the RMC burst transmission is muted and the muting duration is the same as the number N of slots for determined burst format.

RMC burst transmission is scheduled outside discovery burst transmission window. If transmission occurred in the previous slot, transmission is muted for a duration of one slot. Additionally, if the start time of the candidate RMC burst transmission is within 5 slots of the start of the discovery burst transmission window, RMC transmission is not performed.A.3.2 OFDMA channel noise generator (OCNG).

A.3.2.1 Generic OFDMA Channel Noise Generator (OCNG)

The OCNG pattern is used in a test for modelling allocations of unused resources in the channel bandwidth to virtual UEs (which are not under test). The OCNG pattern comprises PDCCH and PDSCH transmissions to the virtual UEs. For the cells operating under CCA, OCNG is transmitted only in slots with RMC burst transmission and is not transmitted during the slots for which CCA attempt is unsuccessful or during DBT windows.

A.3.2.1.1 OCNG pattern 1: Generic OCNG pattern for all unused REs

Table A.3.2.1.1-1: OP.1: Generic OCNG pattern for all unused REs

OCNG Parameters	Control Region	Data Region
Resource allocation	Unused REs (Note 1)	Unused REs (Note 2)
Channel	PDCCH	PDSCH
Contents	Virtual UE IDs	Uncorrelated pseudo random QPSK modulated data
Antenna transmission scheme	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Subcarrier spacing	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Aggregation level	Same as used in PDCCH RMC	N/A
Code rate	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Transmit Power	Same as used in PDCCH RMC	Same as used in PDSCH RMC

CP length	Same as used in PDCCH RMC	Same as used in PDSCH RMC
NOTE 1: REs not used in the active CORESETs where PDCCH is scheduled for the UE under test. NOTE 2: REs not allocated to any physical channels, CORESET, SSB or any other reference signal within the channel bandwidth of the cell, confined to $BW_{occupied}$ where specified in the test case.		

A.3.2.1.2 OCNG pattern 2: Generic OCNG pattern for all unused REs for 2AoA setup

Table A.3.2.1.2-2: OP.2: Generic OCNG pattern for all unused REs for 2AoA setup

OCNG Parameters	Control Region	Data Region
Probe	Transmitting the serving beam	
Resource allocation	Unused REs (Note 1) in the symbols where SSB/CSI-RS are not transmitted from both the serving beam probe and non-serving beam probe.	Unused REs (Note 2) in the symbols where SSB/CSI-RS are not transmitted from both the serving beam probe and non-serving beam probe.
Channel	PDCCH	PDSCH
Contents	Virtual UE IDs	Uncorrelated pseudo random QPSK modulated data
Antenna transmission scheme	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Subcarrier spacing	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Aggregation level	Same as used in PDCCH RMC	N/A
Code rate	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Transmit Power	Same as used in PDCCH RMC	Same as used in PDSCH RMC
CP length	Same as used in PDCCH RMC	Same as used in PDSCH RMC
NOTE 1: REs not used in the active CORESETs where PDCCH is scheduled for the UE under test. NOTE 2: REs not allocated to any physical channels, CORESET, SSB or any other reference signal within the channel bandwidth of the cell, confined to $BW_{occupied}$ where specified in the test case. NOTE 3: No OCNG is transmitted from the probe transmitting non-serving beam.		

A.3.2.1.3 OCNG pattern 3: Generic OCNG pattern for unused REs in the same bandwidth as CORESET

Table A.3.2.1.3-1: OP.3: Generic OCNG pattern for unused REs in the same BW as CORESET

OCNG Parameters	Control Region	Data Region
Resource allocation	Unused REs (Note 1)	Unused REs (Note 2)
Channel	PDCCH	PDSCH
Contents	Virtual UE IDs	Uncorrelated pseudo random QPSK modulated data
Antenna transmission scheme	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Subcarrier spacing	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Aggregation level	Same as used in PDCCH RMC	N/A
Code rate	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Transmit Power	Same as used in PDCCH RMC	Same as used in PDSCH RMC
CP length	Same as used in PDCCH RMC	Same as used in PDSCH RMC
NOTE 1: REs not used in the active CORESETs where PDCCH is scheduled for the UE under test. REs for OCNG shall not be allocated outside the allocated bandwidth of the CORESET of the serving cell. NOTE 2: REs not allocated to any physical channels, CORESET, SSB or any other reference signal within the allocated bandwidth of the CORESET of the serving cell. REs for OCNG shall not be allocated outside the allocated bandwidth of the CORESET of the serving cell.		

A.3.2.1.4 OCNG pattern 4: Generic OCNG pattern for all unused REs outside SSB slot(s)

Table A.3.2.1.4-1: OP.4: Generic OCNG pattern for all unused REs outside SSB slot(s)

OCNG Parameters	Control Region	Data Region

Resource allocation	Unused REs (Note 1)	Unused REs (Note 2)
Channel	PDCCH	PDSCH
Contents	Virtual UE IDs	Uncorrelated pseudo random QPSK modulated data
Antenna transmission scheme	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Subcarrier spacing	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Aggregation level	Same as used in PDCCH RMC	N/A
Code rate	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Transmit Power	Same as used in PDCCH RMC	Same as used in PDSCH RMC
CP length	Same as used in PDCCH RMC	Same as used in PDSCH RMC
NOTE 1: REs not used in the active CORESETs where PDCCH is scheduled for the UE under test. REs for OCNG shall not be allocated in the slot(s) containing SSB of the respective cell. NOTE 2: REs not allocated to any physical channels, CORESET, SSB or any other reference signal within the channel bandwidth of the cell. REs for OCNG shall not be allocated in the slot(s) containing SSB of the respective cell.		

A.3.2.1.5 OCNG pattern 5: Generic OCNG pattern for unused REs in the same bandwidth as CORESET for 2AoA setup

Table A.3.2.1.5-1: OP.5: Generic OCNG pattern for unused REs in the same BW as CORESET for 2AoA setup

OCNG Parameters	Control Region	Data Region
Probe	Transmitting the serving beam	
Resource allocation	Unused REs (Note 1) in the symbols where SSB/CSI-RS are not transmitted from both the serving beam probe and non-serving beam probe.	Unused REs (Note 2) in the symbols where SSB/CSI-RS are not transmitted from both the serving beam probe and non-serving beam probe.
Channel	PDCCH	PDSCH
Contents	Virtual UE IDs	Uncorrelated pseudo random QPSK modulated data
Antenna transmission scheme	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Subcarrier spacing	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Aggregation level	Same as used in PDCCH RMC	N/A
Code rate	Same as used in PDCCH RMC	Same as used in PDSCH RMC
Transmit Power	Same as used in PDCCH RMC	Same as used in PDSCH RMC
CP length	Same as used in PDCCH RMC	Same as used in PDSCH RMC
NOTE 1: REs not used in the active CORESETs where PDCCH is scheduled for the UE under test. REs for OCNG shall not be allocated outside the allocated bandwidth of the CORESET of the serving cell. NOTE 2: REs not allocated to any physical channels, CORESET, SSB or any other reference signal within the allocated bandwidth of the CORESET of the serving cell. REs for OCNG shall not be allocated outside the allocated bandwidth of the CORESET of the serving cell. NOTE 3: No OCNG is transmitted from the probe transmitting non-serving beam.		

A.3.2.2 Void

A.3.3 Reference DRX configurations

A.3.3.1 DRX Configuration 1: DRX cycle = 40 ms and TAT = 500 ms

Table A.3.3.1-1: DRX.1: DRX cycle = 40 ms and time alignment timer (TAT) = 500 ms

Field	Value
drx-onDurationTimer	1 ms
drx-InactivityTimer	1 ms

drx-RetransmissionTimerDL	1 slot
drx-RetransmissionTimerUL	1 slot
drx-LongCycleStartOffset	40 ms
shortDRX	disable
TimeAlignmentTimer	500 ms
NOTE: This DRX configuration is applicable for NR serving cell. The DRX cycle and time alignment timer parameters are specified in clause 6.3.2 in TS 38.331 [2]	

A.3.3.2 DRX Configuration 2: DRX cycle = 640 ms and TAT = 500 ms

Table A.3.3.2-1: DRX.2: DRX cycle = 640 ms and time alignment timer (TAT) = 500 ms

Field	Value
drx-onDurationTimer	1 ms
drx-InactivityTimer	1 ms
drx-RetransmissionTimerDL	1 slot
drx-RetransmissionTimerUL	1 slot
drx-LongCycleStartOffset	640 ms
shortDRX	disable
TimeAlignmentTimer	500 ms
NOTE: This DRX configuration is applicable for NR serving cell. The DRX cycle and time alignment timer parameters are specified in clause 6.3.2 in TS 38.331 [2]	

A.3.3.3 DRX Configuration 3: DRX cycle = 40 ms and TAT = Infinity

Table A.3.3.3-1: DRX.3: DRX cycle = 40 ms and time alignment timer (TAT) = Infinity

Field	Value
drx-onDurationTimer	6 ms
drx-InactivityTimer	1 ms
drx-RetransmissionTimerDL	1 slot
drx-RetransmissionTimerUL	1 slot
drx-LongCycleStartOffset	40 ms
shortDRX	disable
TimeAlignmentTimer	Infinity
NOTE: This DRX configuration is applicable for NR serving cell. The DRX cycle and time alignment timer parameters are specified in clause 6.3.2 in TS 38.331 [2]	

A.3.3.4 DRX Configuration 4: DRX cycle = 160 ms and TAT = Infinity

Table A.3.3.4-1: DRX.4: DRX cycle = 160 ms and time alignment timer (TAT) = Infinity

Field	Value
drx-onDurationTimer	psf2
drx-InactivityTimer	psf2
drx-RetransmissionTimer	Psf16
longDRX-CycleStartOffset	sf160, 0
shortDRX	disable
TimeAlignmentTimer	Infinity
NOTE: This DRX configuration is applicable for E-UTRA serving cell. For further information see clause 6.3.2 in TS 36.331 [16].	

A.3.3.5 DRX Configuration 5: DRX cycle = 320 ms and TAT = Infinity

Table A.3.3.5-1: DRX.5: DRX cycle = 320 ms and time alignment timer (TAT) = Infinity

Field	Value
drx-onDurationTimer	psf6
drx-InactivityTimer	psf1920
drx-RetransmissionTimer	psf16
longDRX-CycleStartOffset	sf320, 0
shortDRX	disable
TimeAlignmentTimer	Infinity
NOTE: This DRX configuration is applicable for E-UTRA serving cell. For further information see clause 6.3.2 in TS 36.331 [16].	

A.3.3.6 DRX Configuration 6: DRX cycle = 320 ms and TAT = 500 ms

Table A.3.3.6-1: DRX.6: DRX cycle = 320 ms and time alignment timer (TAT) = 500 ms

Field	Value
drx-onDurationTimer	1 ms
drx-InactivityTimer	1 ms
drx-RetransmissionTimerDL	1 slot

NOTE: This DRX configuration is applicable for NR serving cell. The DRX cycle and time alignment timer parameters are specified in clause 6.3.2 in TS 38.331 [2]	

A.3.4 Test Cases with Different Channel Bandwidths

A.3.4.1 Test Cases with Different E-UTRA Channel Bandwidths

A.3.4.1.1 Introduction

In annex A test cases involving E-UTRA cell(s) may be defined with different E-UTRA channel bandwidths to verify the same type of RRM requirement.

A.3.4.1.2 Principle of testing

If multiple test cases involving E-UTRA cell(s) are defined with different E-UTRA channel bandwidths to verify the same type of RRM requirement that is E-UTRA channel bandwidth independent, then the UE needs to be tested with only one channel bandwidth in each E-UTRA cell and with the same bandwidth in all the E-UTRA cells used in the test case.

A.3.5 Test Cases for Synchronous and Asynchronous DC Operations

A.3.5.1 EN-DC Test Cases for Synchronous and Asynchronous EN-DC Operations

A.3.5.1.1 Introduction

This clause defines a principle which is applicable to test cases verifying RRM requirements for EN-DC operation in synchronous and asynchronous scenarios.

In annex A test cases may be defined in both synchronous EN-DC and asynchronous EN-DC scenarios to verify the same type of RRM requirement.

A.3.5.1.2 Principle of Testing

If EN-DC test cases are defined in both synchronous and asynchronous EN-DC scenarios to verify the same type of RRM requirement then the UE capable of both synchronous and asynchronous EN-DC operations needs to be tested with one of the tests in either synchronous or asynchronous EN-DC scenarios.

A.3.6 Antenna configurations

A.3.6.1 Antenna configurations for FR1

Unless otherwise specified, NR FDD or NR TDD cells in all RRM Test cases in AWGN propagation condition are configured with Antenna Configuration 1x2.

A.3.6.1.1 Antenna connection for 4 Rx capable UEs

A.3.6.1.1.1 Introduction

All tests in clause A.4 and A.6 are specified for UEs supporting 2RX. In this clause, the antenna connection method for applying 2RX tests to UEs supporting 4RX antenna ports is specified. No tests are currently specified in clause A.4 or A.6 which are applicable only to 4RX antenna ports, so 4RX capable UEs are always tested by reusing tests which were originally specified for 2RX UEs.

A.3.6.1.1.2 Principle of testing

A.3.6.1.1.2.1 Single carrier tests

For 4RX capable UEs supporting at least one band where 2RX is supported and 4RX is not supported, the, all single carrier tests specified in clause A.4 and A.6 except those in clauses A.4.7 and A.6.7 shall be tested on any band where 2RX is supported and 4RX is not supported with the antenna connection specified in clause A.3.6.1.1.2.4. For single carrier tests specified in clause A.4.7 or A.6.7, all tests shall be tested with the antenna connection specified in clause A.3.6.1.1.2.4 for bands where 2RX is supported and 4RX is not supported, and the antenna connection specified in clause A.3.6.1.1.2.5 for bands where 4RX is supported.

For 4RX capable UEs which do not support any band where 2RX is supported and 4RX is not supported, all tests specified in clauses A.4 and A.6 shall be tested using the antenna connection specified in clause A.3.6.1.1.2.5. For radio link monitoring tests, the SNR levels are modified according to table A.3.6.1.1.2.1-1 and table A.3.6.1.1.2.1-2. For beam failure detection and link recovery tests, the SNR levels are modified according to table A.3.6.1.1.2.1-3.

Table A.3.6.1.1.2.1-1: Modified parameters for RLM out of sync testing with 4 RX antenna connection

A.3.6.1.1.2.2 Carrier aggregation tests

All carrier aggregation tests are performed using the antenna connection in clause A.3.6.1.1.2.4 for the PCell antenna connection if the PCell is on a band where 2RX is supported and 4RX is not supported, or using the antenna connection in clause A.3.6.1.1.2.5 for the PCell antenna connection if the PCell is on a band where 4RX is supported.

All carrier aggregation tests are performed using the antenna connection in clause A.3.6.1.1.2.4 for the SCell antenna connection if an SCell is on band where 2RX is supported and 4RX is not supported, or using the antenna connection in clause A.3.6.1.1.2.5 for the SCell antenna connection if an SCell is on a band where 4RX is supported.

A.3.6.1.1.2.3 EN-DC tests

All EN-DC tests are performed using the antenna connection in clause A.3.6.1.1.2.6 for the PCell antenna connection if the PCell is on a band where 2RX is supported and 4RX is not supported, or using the antenna connection in clause A.3.6.1.1.2.7 for the PCell antenna connection if the PCell is on a band where 4RX is supported.

All EN-DC tests are performed using the antenna connection in clause A.3.6.1.1.2.4 for the PSCell or SCell antenna connection if an SCell is on band where 2RX is supported and 4RX is not supported, or using antenna connection in clause A.3.6.1.1.2.5 for the SCell antenna connection if an SCell or PSCell is on a band where 4RX is supported.

A.3.6.1.1.2.4 Antenna connection for bands where 2RX is supported

For bands where 2RX is supported and 4RX is not supported, it is left to the UE declaration and antenna port configuration to decide which 2 of the 4 Rx ports are connected with data source from system simulator. The remaining 2 RX ports shall be connected with zero input**.** No test parameters or requirements are modified.

A.3.6.1.1.2.5 Antenna connection for bands where 4RX is supported

For bands where 4RX is supported, all 4 RX antennas are connected with data source from system simulator**.** The system simulator shall provide independent noise and fading (low correlation) for each antenna port. Except for the modifications to radio link monitoring thresholds and beam failure detection thresholds described in clauses A.3.6.1.1.2.1, no test parameters or requirements are modified.

A.3.6.1.1.2.6 EN-DC LTE Antenna connection for bands where 2RX is supported

For E-UTRAN bands where 2RX is supported and 4RX is not supported, it is left to the UE declaration and antenna port configuration to decide which 2 of the 4 Rx ports are connected with data source from system simulator. The remaining 2 RX ports shall be connected with zero input**.** No test parameters or requirements are modified.

A.3.6.1.1.2.7 EN-DC LTE Antenna connection for bands where 4RX is supported

For bands E-UTRAN where 4RX is supported, all 4 RX antennas are connected with data source from system simulator**.** The system simulator shall provide independent noise and fading (low correlation) for each antenna port. Except for the modifications to radio link monitoring thresholds described in clauses A.3.8.1.2.1 and A.3.8.1.2.2 of TS 36.133 [15], no test parameters or requirements are modified.

A.3.6.1.2 Antenna connection for 8 Rx capable UEs

A.3.6.1.2.1 Introduction

All tests in clause A.4 and A.6 are specified for UEs supporting 2RX. In this clause, the antenna connection method for applying 2RX tests or 4RX tests to UEs supporting 8RX antenna ports is specified. No tests are currently specified in

clause A.4 or A.6 which are applicable only to 8RX antenna ports, so 8RX capable UEs are always tested by reusing tests which were originally specified for 2RX UEs or 4Rx UEs.

A.3.6.1.2.2 Principle of testing

A.3.6.1.2.2.1 Single carrier tests

For 8RX capable UEs supporting at least one band where 2RX is supported and either 4RX, 6RX or 8RX is not supported, all single carrier tests specified in clauses A.4 and A.6 except those in clauses A.4.7 and A.6.7 shall be tested on any band where 2RX is supported and 8RX is not supported with the antenna connection specified in clause A.3.6.1.2.2.4. For single carrier tests specified in clauses A.4.7 or A.6.7, all tests shall be tested with the antenna connection specified in clause A.3.6.1.2.2.4 for bands where 2RX is supported and 8RX is not supported, and the antenna connection specified in clause A.3.6.1.2.2.6 for bands where 8RX is supported.

For 8RX capable UEs supporting at least one band where 4RX is supported and either 6RX or 8RX is not supported but without supporting any band where only 2RX is supported, all single carrier tests specified in clauses A.4 and A.6 except those in clauses A.4.7 and A.6.7 shall be tested on any band where 4RX is supported and 8RX is not supported with the antenna connection specified in clause A.3.6.1.2.2.5. For single carrier tests specified in clauses A.4.7 or A.6.7, all tests shall be tested with the antenna connection specified in clause A.3.6.1.2.2.5 for bands where 4RX is supported and 8RX is not supported, and the antenna connection specified in clause A.3.6.1.2.2.6 for bands where 8RX is supported. For radio link monitoring tests, the SNR levels are modified according to table A.3.6.1.1.2.1-1 and table A.3.6.1.1.2.1-2. For beam failure detection and link recovery tests, the SNR levels are modified according to table A.3.6.1.1.2.1-3.

For 8RX capable UEs supporting at least one band where 6RX is supported and 8RX is not supported but without supporting any band where only 2RX or only 4RX is supported, all single carrier tests specified in clauses A.4 and A.6 except those in clauses A.4.7 and A.6.7 shall be tested on any band where 6RX is supported and 8RX is not supported with the antenna connection specified in clause A.3.6.1.2.2.5A. For single carrier tests specified in clauses A.4.7 or A.6.7, all tests shall be tested with the antenna connection specified in clause A.3.6.1.2.2.5A for bands where 6RX is supported and 8RX is not supported, and the antenna connection specified in clause A.3.6.1.2.2.6 for bands where 8RX is supported. For radio link monitoring tests, the SNR levels are modified according to table A.3.6.1.1.2.1-1 and table A.3.6.1.1.2.1-2. For beam failure detection and link recovery tests, the SNR levels are modified according to table A.3.6.1.1.2.1-3.

For 8RX capable UEs which do not support any band where 8RX is not supported, all tests specified in clauses A.4 and A.6 shall be tested using the antenna connection specified in clause A.3.6.1.2.2.6. For radio link monitoring tests, the SNR levels are modified according to table A.3.6.1.1.2.1-1 and table A.3.6.1.1.2.1-2. For beam failure detection and link recovery tests, the SNR levels are modified according to table A.3.6.1.1.2.1-3.

A.3.6.1.2.2.2 Carrier aggregation tests

All carrier aggregation tests are performed using the antenna connection in clause A.3.6.1.2.2.4 for the PCell antenna connection if the PCell is on a band where 2RX is supported and either 4RX or 8RX is not supported, or using the antenna connection in clause A.3.6.1.2.2.5 for the PCell antenna connection if the PCell is on a band where 4RX is supported and 8RX is not supported, or using the antenna connection in clause A.3.6.1.2.2.6 for the PCell antenna connection if the PCell is on a band where 8RX is supported.

All carrier aggregation tests are performed using the antenna connection in clause A.3.6.1.2.2.4 for the SCell antenna connection if an SCell is on band where 2RX is supported and either 4RX or 8RX is not supported, or using the antenna connection in clause A.3.6.1.2.2.5 for the SCell antenna connection if an SCell is on a band where 4RX is supported and 8RX is not supported, or using the antenna connection in clause A.3.6.1.2.2.6 for the SCell antenna connection if an SCell is on a band where 8RX is supported.

A.3.6.1.2.2.3 EN-DC tests

All EN-DC tests are performed using the antenna connection in clause A.3.6.1.2.2.7 for the PCell antenna connection if the PCell is on a band where 2RX is supported and either 4RX or 8RX is not supported, or using the antenna connection in clause A.3.6.1.2.2.8 for the PCell antenna connection if the PCell is on a band where 4RX is supported and 8RX is not supported, or using the antenna connection in clause A.3.6.1.2.2.9 for the PCell antenna connection if the PCell is on a band where 8RX is supported.

All EN-DC tests are performed using the antenna connection in clause A.3.6.1.2.2.4 for the PSCell or SCell antenna connection if an SCell or PSCell is on band where 2RX is supported and either 4RX or 8RX is not supported, or using antenna connection in clause A.3.6.1.2.2.5 for the PSCell or SCell antenna connection if an SCell or PSCell is on a band where 4RX is supported and 8RX is not supported, or using antenna connection in clause A.3.6.1.2.2.6 for the PSCell or SCell antenna connection if an SCell or PSCell is on a band where 8RX is supported.

A.3.6.1.2.2.4 Antenna connection for bands where 2RX is supported

For bands where 2RX is supported and either 4RX, 6RX or 8RX is not supported, it is left to the UE declaration and antenna port configuration to decide which 2 of the 8 Rx ports are connected with data source from system simulator. The remaining 6 RX ports shall be connected with zero input**.** No test parameters or requirements are modified.

A.3.6.1.2.2.5 Antenna connection for bands where 4RX is supported

For bands where 4RX is supported and either 6RX or 8RX is not supported, it is left to the UE declaration and antenna port configuration to decide which 4 of the 8 Rx ports are connected with data source from system simulator. The remaining 4 RX ports shall be connected with zero input. Except for the modifications to radio link monitoring thresholds and beam failure detection thresholds described in clause A.3.6.1.1.2.1, no test parameters or requirements are modified.

A.3.6.1.2.2.5A Antenna connection for bands where 6RX is supported

For bands where 6RX is supported and 8RX is not supported, it is left to the UE declaration and antenna port configuration to decide which 6 of the 8 Rx ports are connected with data source from system simulator. The remaining 2 RX ports shall be connected with zero input. Except for the modifications to radio link monitoring thresholds and beam failure detection thresholds described in clause A.3.6.1.1.2.1, no test parameters or requirements are modified.

A.3.6.1.2.2.6 Antenna connection for bands where 8RX is supported

For bands where 8RX is supported, all 8 RX antennas are connected with data source from system simulator. The system simulator shall provide independent noise and fading (low correlation) for each antenna port. Except for the modifications to radio link monitoring thresholds described in clause A.3.6.1.1.2.1, no test parameters or requirements are modified.

A.3.6.1.2.2.7 EN-DC LTE Antenna connection for bands where 2RX is supported

For E-UTRAN bands where 2RX is supported and 4RX or 8RX is not supported, it is left to the UE declaration and antenna port configuration to decide which 2 of the 8 Rx ports are connected with data source from system simulator. The remaining 6 RX ports shall be connected with zero input. No test parameters or requirements are modified.

A.3.6.1.2.2.8 EN-DC LTE Antenna connection for bands where 4RX is supported

For bands E-UTRAN where 4RX is supported and 8RX is not supported, it is left to the UE declaration and antenna port configuration to decide which 4 of the 8 Rx ports are connected with data source from system simulator. The remaining 4 RX ports shall be connected with zero input. Except for the modifications to radio link monitoring thresholds described in clauses A.3.8.1.2.1 and A.3.8.1.2.2 of TS 36.133 [15], no test parameters or requirements are modified.

A.3.6.1.2.2.9 EN-DC LTE Antenna connection for bands where 8RX is supported

For bands E-UTRAN where 8RX is supported, all 8 RX antennas are connected with data source from system simulator. The system simulator shall provide independent noise and fading (low correlation) for each antenna port. Except for the modifications to radio link monitoring thresholds described in clauses A.3.8.1.2.1 and A.3.8.1.2.2 of TS 36.133 [15], no test parameters or requirements are modified.

A.3.6.1.3 Antenna connection for 6 Rx capable UEs

A.3.6.1.3.1 Introduction

All tests in clause A.4 and A.6 are specified for UEs supporting 2RX. In this clause, the antenna connection method for applying 2RX tests or 4RX tests to UEs supporting 6Rx antenna ports is specified. No tests are currently specified in clause A.4 or A.6 which are applicable only to 6Rx antenna ports, so 6Rx capable UEs are always tested by reusing tests which were originally specified for 2RX UEs or 4Rx UEs.

A.3.6.1.3.2 Principle of testing

A.3.6.1.3.2.1 Single carrier tests

For 6Rx capable UEs supporting at least one band where 2RX is supported and either 4RX or 6Rx is not supported, all single carrier tests specified in clauses A.4 and A.6 except those in clauses A.4.7 and A.6.7 shall be tested on any band where 2RX is supported and 6Rx is not supported with the antenna connection specified in clause A.3.6.1.3.2.2. For single carrier tests specified in clauses A.4.7 or A.6.7, all tests shall be tested with the antenna connection specified in clause A.3.6.1.3.2.2 for bands where 2RX is supported and 6Rx is not supported, and the antenna connection specified in clause A.3.6.1.3.2.4 for bands where 6Rx is supported.

For 6Rx capable UEs supporting at least one band where 4RX is supported and 6Rx is not supported but without supporting any band where only 2RX is supported, all single carrier tests specified in clauses A.4 and A.6 except those in clauses A.4.7 and A.6.7 shall be tested on any band where 4RX is supported and 6Rx is not supported with the antenna connection specified in clause A.3.6.1.3.2.3. For single carrier tests specified in clauses A.4.7 or A.6.7, all tests shall be tested with the antenna connection specified in clause A.3.6.1.3.2.3 for bands where 4RX is supported and 6Rx is not supported, and the antenna connection specified in clause A.3.6.1.3.2.4 for bands where 6Rx is supported. For radio link monitoring tests, the SNR levels are modified according to table A.3.6.1.1.2.1-1 and table A.3.6.1.1.2.1-2. For beam failure detection and link recovery tests, the SNR levels are modified according to table A.3.6.1.1.2.1-3.

For 6Rx capable UEs which do not support any band where 6Rx is not supported, all tests specified in clauses A.4 and A.6 shall be tested using the antenna connection specified in clause A.3.6.1.3.2.4. For radio link monitoring tests, the SNR levels are modified according to table A.3.6.1.1.2.1-1 and table A.3.6.1.1.2.1-2. For beam failure detection and link recovery tests, the SNR levels are modified according to table A.3.6.1.1.2.1-3.

A.3.6.1.3.2.2 Antenna connection for bands where 2RX is supported

For bands where 2RX is supported and either 4RX or 6Rx is not supported, it is left to the UE declaration and antenna port configuration to decide which 2 of the 6 Rx ports are connected with data source from system simulator. The remaining 6 RX ports shall be connected with zero input**.** No test parameters or requirements are modified.

A.3.6.1.3.2.3 Antenna connection for bands where 4RX is supported

For bands where 4RX is supported and 6Rx is not supported, it is left to the UE declaration and antenna port configuration to decide which 4 of the 6 Rx ports are connected with data source from system simulator. The remaining 4 RX ports shall be connected with zero input. Except for the modifications to radio link monitoring thresholds and beam failure detection thresholds described in clause A.3.6.1.1.2.1, no test parameters or requirements are modified.

A.3.6.1.3.2.4 Antenna connection for bands where 6Rx is supported

For bands where 6Rx is supported, all 6 RX antennas are connected with data source from system simulator. The system simulator shall provide independent noise and fading (low correlation) for each antenna port. Except for the modifications to radio link monitoring thresholds described in clause A.3.6.1.1.2.1, no test parameters or requirements are modified.

A.3.6.2 Antenna configurations for FR2

Unless otherwise specified, the default Downlink Antenna Configuration for NR FR2 cells is 1x2.

In case of Downlink Antenna Configuration 2x2 for NR FR2 cells, unless otherwise specified, the downlink signal is transmitted over the two polarizations (V and H) of the dual polarized antenna of the test equipment.

In both cases, the downlink signal is received assuming 2 UE baseband receivers. As the UE is tested following the Blackbox Approach with regard to the UE Rx antennas, the exact UE Rx antenna configuration is not relevant for the test configuration and has no impact on the test implementation.

A.3.6A Antenna configurations with unlicensed bands

A.3.6A.1 Antenna configurations for FR1

Unless otherwise specified, NR unlicensed cells in all RRM Test cases in AWGN propagation condition are configured with Antenna Configuration 1x2.

A.3.6A.1.1 Antenna connection for 4 Rx capable UEs

A.3.6A.1.1.1 Introduction

All tests in clause A.13, A.10, A.11, and A.12 are specified for UEs supporting 2RX. In this clause, the antenna connection method for applying 2RX tests to UEs supporting 4RX antenna ports is specified. No tests are currently specified in clause A.13, A.10, A.11 or A.12 which are applicable only to 4RX antenna ports, so 4RX capable UEs are always tested by reusing tests which were originally specified for 2RX UEs.

A.3.6A.1.1.2 Principle of testing

A.3.6A.1.1.2.1 Single carrier tests

For 4RX capable UEs supporting at least one 2RX band, the, all single carrier tests specified in clause A.13. A.10, A.11 and A.12 except those in clauses A.13.4, A.10.5, A.11.6 and A.12.5 shall be tested on any band where 2RX is supported with the antenna connection specified in clause A.3.6A.1.1.2.4. For single carrier tests specified in clauses A.13.4, A.10.5, A.11.6 or A.12.5, all tests shall be tested with the antenna connection specified in clause A.3.6A.1.1.2.4 for bands where 2RX is supported, and the antenna connection specified in clause A.3.6A.1.1.2.5 for bands where 4RX is supported.

For 4RX capable UEs which do not support any 2RX band, all tests specified in clauses A.13, A.10, A.11 and A.12 shall be tested using the antenna connection specified in clause A.3.6A.1.1.2.5. For radio link monitoring tests, the SNR levels are modified according to table A.3.6A.1.1.2.1-1 and table A.3.6A.1.1.2.1-2.

Table A.3.6A.1.1.2.1-1: Modified parameters for RLM out of sync testing with 4 RX antenna connection

Test case	SNR during T3 (dB)			
	Test 1	Test 2	Test 3	Test 4
A.10.3.1.2	-18	N/A	N/A	N/A
A.11.4.1.2	-18	N/A	N/A	N/A

Table A.3.6A.1.1.2.1-2: Modified parameters for RLM in sync single carrier testing with 4 RX antenna connection

Test case	SNR during T3 (dB)		SNR during T4 (dB)	
	Test 1	Test 2	Test 1	Test 2
A.10.3.1.3	-18	N/A	-8	N/A
A.11.4.1.3	-18	N/A	-8	N/A

Table A.3.6A.1.1.2.1-3: Modified parameters for Beam Failure Detection and Link Recovery testing with 4 RX antenna connection

Test case	SNR for RS in set q_0 during T3, T4 and T5 (dB)

	Test 1	Test 2
A.10.3.4.1	-15	N/A
A.10.3.4.2	-15	N/A
A.11.4.4.1	-15	N/A
A.11.4.4.2	-15	N/A

A.3.6A.1.1.2.2 Carrier aggregation tests

All carrier aggregation tests are performed using the antenna connection in clause A.3.6A.1.1.2.4 for the PCell antenna connection if the PCell is on a band where 2RX is supported or the antenna connection in clause A.3.6A.1.1.2.5 for the PCell antenna connection if the PCell is on a band where 4RX is supported.

All carrier aggregation tests are performed using the antenna connection in clause A.3.6A.1.1.2.4 for the SCell antenna connection if an SCell is on band where 2RX is supported or the testing procedure in clause A.3.6A.1.1.2.5 for the SCell antenna connection if an SCell is on a band where 4RX is supported.

A.3.6A.1.1.2.3 EN-DC tests

All carrier aggregation tests are performed using the antenna connection in clause A.3.6A.1.1.2.6 for the PCell antenna connection if the PCell is on a band where 2RX is supported or the antenna connection in clause A.3.6A.1.1.2.7 for the PCell antenna connection if the PCell is on a band where 4RX is supported.

All carrier aggregation tests are performed using the antenna connection in clause A.3.6A.1.1.2.4 for the PSCell or SCell antenna connection if an SCell is on band where 2RX is supported or the testing procedure in clause A.3.6A.1.1.2.5 for the SCell antenna connection if an SCell or PSCell is on a band where 4RX is supported.

A.3.6A.1.1.2.4 Antenna connection for bands where 2RX is supported

For bands where 2RX is supported, it is left to the UE declaration and AP configuration to decide which 2 of the 4 Rx ports are connected with data source from system simulator. The remaining 2 Rx ports shall be connected with zero input**.** No test parameters or requirements are modified.

A.3.6A.1.1.2.5 Antenna connection for bands where 4RX is supported

For bands where 4RX is supported, all 4 RX antennas are connected with data source from system simulator**.** The system simulator shall provide independent noise and fading (low correlation) for each antenna port. Except for the modifications to radio link monitoring thresholds described in clauses A.3.6A.1.1.2.1 and A.3.6A.1.1.2.2, no test parameters or requirements are modified.

A.3.6A.1.1.2.6 EN-DC LTE Antenna connection for bands where 2RX is supported

For bands where LTE 2RX is supported, it is left to the UE declaration and AP configuration to decide which 2 of the 4 Rx ports are connected with data source from system simulator. The remaining 2 Rx ports shall be connected with zero input**.** No test parameters or requirements are modified.

A.3.6A.1.1.2.7 EN-DC LTE Antenna connection for bands where 4RX is supported

For bands where LTE 4RX is supported, all 4 RX antennas are connected with data source from system simulator**.** The system simulator shall provide independent noise and fading (low correlation) for each antenna port. Except for the modifications to radio link monitoring thresholds described in clauses A.3.8.1.2.1 and A.3.8.1.2.2 of TS 36.133 [15], no test parameters or requirements are modified.

A.3.7 EN-DC test setup

A.3.7.1 Introduction

A.3.7.2 E-UTRAN Serving Cell Parameters

A.3.7.2.1 E-UTRAN Serving Cell Parameters for Tests with NR Cell(s) in FR1

table A.3.7.2.1-1 defines cell specific test parameters for E-UTRAN cell which can be used in EN-DC test cases or in any test case comprising at least one E-UTRA serving cell with all NR cells in FR1. Unless otherwise stated within the test, all measurements in annex A.4 and A.5 are performed only on the NR carrier. The E-UTRA serving cell shall configured to not interfere with NR operation and the E-UTRA serving cell signal power shall not be critical to the test purpose.

Table A.3.7.2.1-1: E-UTRAN cell specific test parameters for tests with all NR cells in FR1

Parameter	Unit	E-UTRAN Cell
Duplex mode		FDD or TDD
TDD special subframe configuration[Note1]		6
TDD uplink-downlink configuration[Note1]		1
$BW_{channel}$		5 MHz: $N_{RB,c}$ = 25 10 MHz: $N_{RB,c}$ = 50 20 MHz: $N_{RB,c}$ = 100
PDSCH parameters: DL Reference Measurement Channel[Note2]		5 MHz: R.7 FDD 10 MHz: R.3 FDD 20 MHz: R.6 FDD 5 MHz: R.4 TDD 10 MHz: R.0 TDD 20 MHz: R.3 TDD
PCFICH/PDCCH/PHICH parameters: DL Reference Measurement Channel[Note2]		5 MHz: R.11 FDD 10 MHz: R.6 FDD 20 MHz: R.10 FDD 5 MHz: R.11 TDD 10 MHz: R.6 TDD 20 MHz: R.10 TDD
OCNG Patterns[Note2]		5 MHz: OP.20 FDD 10 MHz: OP.10 FDD 20 MHz: OP.17 FDD 5 MHz: OP.9 TDD 10 MHz: OP.1 TDD 20 MHz: OP.7 TDD
PBCH_RA	dB	0
PBCH_RB	dB

PHICH_RA	dB	
PHICH_RB	dB	
PDCCH_RA	dB	
PDCCH_RB	dB	
PDSCH_RA	dB	
PDSCH_RB	dB	
OCNG_RA[Note3]	dB	
OCNG_RB[Note3]	dB	
N_{oc}[Note4]	dBm/15 kHz	-104
$\hat{E}_s/N_{oc}$	dB	17
$\hat{E}_s/I_{ot}$	dB	17
RSRP [Note5]	dBm/15 kHz	-87
SCH_RP [Note5]	dBm/15 kHz	-87
Io [Note5]	dBm/Ch BW	$-59.13+10\log(N_{RB,c}/50)$
Propagation Condition		AWGN
Antenna Configuration		1x2

Parameter	Unit	E-UTRAN Cell
NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211.		
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 respectively.		
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.		
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.		
NOTE 5: E_s/I_{ot}, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.		

A.3.7.2.2 E-UTRAN Serving Cell Parameters for Tests with NR Cell(s) in FR2

table A.3.7.2.2-1 defines cell specific test parameters for E-UTRAN cell which can be used in EN-DC test cases or in any test case comprising at least one E-UTRA serving cell with one or more NR cells in FR2.

Table A.3.7.2.2-1: E-UTRAN cell specific test parameters for tests with one or more NR cells in FR2

Parameter	Unit	E-UTRAN Cell
Duplex mode		FDD or TDD
TDD special subframe configuration[Note1]		6
TDD uplink-downlink configuration[Note1]		1
$BW_{channel}$	MHz	5 MHz: $N_{RB,c}$ = 25 10 MHz: $N_{RB,c}$ = 50 20 MHz: $N_{RB,c}$ = 100

PDSCH_RA	dB	
PDSCH_RB	dB	
OCNG_RA[Note3]	dB	
OCNG_RB[Note3]	dB	

Parameter	Unit	E-UTRAN Cell
NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211. NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 respectively. NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. NOTE 4: The E-UTRA signal is required only to ensure the E-UTRA link to the DUT in the EN-DC operation. The Test System shall provide a stable and noise-free E-UTRA signal without need of precise propagation modelling, path loss and polarization control. Further details of the E-UTRA signal configuration are not defined as part of the cell specific test parameters, since the E-UTRA link is not under performance verification and shall not affect the test result unless otherwise specifically stated in the test case.		

A.3.7A NR FR1-FR2 test setup

Some Test cases in clause A.7 have NR cells in both FR1 and FR2. Unless otherwise stated within the test, the NR FR1 Cell signal is required only to provide a link to the UE under test. The Test System shall provide a stable and noise-free NR FR1 signal without need of precise propagation modelling, path loss and polarization control. Further details of the NR FR1 signal configuration are not defined as part of the cell specific test parameters, since the NR FR1 link is not under performance verification and shall not affect the test result unless otherwise specifically stated in the test case.

A.3.7B EN-DC test setup with unlicensed bands

A.3.7B.1 Introduction

A.3.7B.2 E-UTRAN Serving Cell Parameters

A.3.7B.2.1 E-UTRAN Serving Cell Parameters for Tests with NR Cell(s) under CCA in FR1

table A.3.7A.2.1-1 defines cell specific test parameters for E-UTRAN cell which can be used in EN-DC test cases or in any test case comprising at least one E-UTRA serving cell with all NR cells under CCA in FR1. Unless otherwise stated within the test, all measurements in annex A.4 and A.5 are performed only on the unlicensed NR carrier. The E-UTRA serving cell shall configured to not interfere with NR operation and the E-UTRA serving cell signal power shall not be critical to the test purpose.

Table A.3.7B.2.1-1: E-UTRAN cell specific test parameters for tests with all NR cells user CCA in FR1

Parameter	Unit	E-UTRAN Cell
Duplex mode		FDD or TDD
TDD special subframe configuration[Note1]		6
TDD uplink-downlink configuration[Note1]		1
$BW_{channel}$		5 MHz: $N_{RB,c}$ = 25 10 MHz: $N_{RB,c}$ = 50 20 MHz: $N_{RB,c}$ = 100
PDSCH parameters: DL Reference Measurement Channel[Note2]		5 MHz: R.7 FDD 10 MHz: R.3 FDD 20 MHz: R.6 FDD 5 MHz: R.4 TDD 10 MHz: R.0 TDD 20 MHz: R.3 TDD
PCFICH/PDCCH/PHICH parameters: DL Reference Measurement Channel[Note2]		5 MHz: R.11 FDD 10 MHz: R.6 FDD 20 MHz: R.10 FDD 5 MHz: R.11 TDD 10 MHz: R.6 TDD 20 MHz: R.10 TDD

Parameter	Unit	E-UTRAN Cell
OCNG Patterns[Note2]		5 MHz: OP.20 FDD 10 MHz: OP.10 FDD 20 MHz: OP.17 FDD 5 MHz: OP.9 TDD 10 MHz: OP.1 TDD 20 MHz: OP.7 TDD
PBCH_RA	dB	0
PBCH_RB	dB	
PSS_RA	dB	
SSS_RA	dB	
PCFICH_RB	dB	
PHICH_RA	dB	
PHICH_RB	dB	
PDCCH_RA	dB	
PDCCH_RB	dB	
PDSCH_RA	dB	
PDSCH_RB	dB	
OCNG_RA[Note3]	dB	
OCNG_RB[Note3]	dB	
N_{oc}[Note4]	dBm/15 kHz	-104
$\hat{E}_s/N_{oc}$	dB	17
$\hat{E}_s/I_{ot}$	dB	17
RSRP [Note5]	dBm/15 kHz	-87
SCH_RP [Note5]	dBm/15 kHz	-87
Io [Note5]	dBm/Ch BW	$-59.13+10\log(N_{RB,c}/50)$
Propagation Condition		AWGN
Antenna Configuration		1x2

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211.
NOTE 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 respectively.
NOTE 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N_{oc} to be fulfilled.
NOTE 5: E_s/I_{ot}, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

A.3.7C LTE-FR1/FR2 test setup

Some Test cases in clause A.5 have LTE and FR2 NR cells. Unless otherwise stated within the test, the LTE Cell signal is required only to provide a link to the UE under test. The Test System shall provide a stable and noise-free LTE signal without need of precise propagation modelling, path loss and polarization control. Further details of the LTE signal configuration are not defined as part of the cell specific test parameters, since the LTE link is not under performance verification and shall not affect the test result unless otherwise specifically stated in the test case.

A.3.7D NE-DC test setup

A.3.7D.1 Introduction

A.3.7D.2 E-UTRAN Serving Cell Parameters

A.3.7D.2.1 E-UTRAN Serving Cell Parameters for Tests with NR Cell(s) in FR1

The parameters are same as specified in clause A.3.7.2.1.

A.3.7D.2.2 E-UTRAN Serving Cell Parameters for Tests with NR Cell(s) in FR2

The parameters are same as specified in clause A.3.7.2.2.

A.3.8 PRACH configurations

A.3.8.1 Introduction

This clause provides the typical PRACH configurations used for RRM test cases defined in annex A. To note that for other parameters not listed in this clause, either it can be derived from the set up of each test or it is subjected to RAN5 specifications.

A.3.8.2 PRACH configurations in FR1

A.3.8.2.1 FR1 PRACH configuration 1

FR1 PRACH configuration 1 in this clause provides the typical PRACH configuration for SSB-based contention based random access in FR1.

Table A.3.8.2.1-1: Parameters for FR1 PRACH configuration 1

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-OccasionAndCB-PreamblesPerSSB	oneFourth, n48	OneFourth: 1 SSB associated with 4 RACH occasions n48: 48 contention based preambles per SSB
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
ra-ContentionResolutionTimer	sf48	48 sub-frames
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.2.2 FR1 PRACH configuration 2

FR1 PRACH configuration 2 in this clause provides the typical PRACH configuration for SSB based non-contention based random access in FR1.

Table A.3.8.2.2-1: Parameters for FR1 PRACH configuration 2

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.

ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
ssb-ResourceList	ra-PreambleIndex = 40	Associated with SSB index 0. UE doesn't use ssb-ResourceList and BFR-SSB-Resource IEs at the same time. UE doesn't use this field if is transmitting CFRA to convey BFR.
BFR-SSB-Resource	ra-PreambleIndex = 40	Associated with SSB index 0. UE doesn't use ssb-ResourceList and BFR-SSB-Resource IEs at the same time. UE uses this field only if is transmitting CFRA to convey BFR
ra-ssb-OccasionMaskIndex	1	PRACH occasion index 1 is allowed
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.2.3 FR1 PRACH configuration 3

FR1 PRACH configuration 3 in this clause provides the typical PRACH configuration for CSI-RS based non-contention based random access in FR1.

Table A.3.8.2.3-1: Parameters for FR1 PRACH configuration 3

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
csirs-ResourceList	ra-PreambleIndex = 40	Associated with CSI-RS configured
ra-OccasionList	1	RA occasions allowed corresponding to CSI-RS
rsrp-ThresholdCSI-RS	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.2.4 FR1 PRACH configuration 4

FR1 PRACH configuration 4 in this clause provides the PRACH configuration for CSI-RS based non-contention based random access in FR1 to convey BFR.

Table A.3.8.2.4-1: Parameters for FR1 PRACH configuration 4

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n200	Max number of RA preamble transmission performed before declaring a failure is 200
ra-ResponseWindow	sl1	1 slot
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 93
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
BFR-CSIRS-Resource	ra-PreambleIndex = 40	Associated with CSI-RS configured
ra-OccasionList	1	RA occasions allowed corresponding to CSI-RS
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.2.5 FR1 PRACH configuration 5

FR1 PRACH configuration 5 in this clause provides the typical PRACH configuration for LTM early UL synchronization on candidate cell in FR1.

Table A.3.8.2.5-1: Parameters for FR1 PRACH configuration 5

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
msg1-FrequencyStart	0	
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	
powerRampingStep	dB2	
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ltm-prach-SubcarrierSpacing	Same as UL carrier SCS	
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.2.6 FR1 PRACH configuration 6

FR1 PRACH configuration 6 in this clause provides the typical PRACH configuration for SSB-based contention free random access in FR1.

Table A.3.8.2.6-1: Parameters for FR1 PRACH configuration 6

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-OccasionAndCB-PreamblesPerSSB	oneFourth, n16	OneFourth: 1 SSB associated with 4 RACH occasions n16: 16 contention based preambles per SSB
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
ra-ContentionResolutionTimer	sf48	48 sub-frames
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.3 PRACH configurations in FR2

A.3.8.3.1 FR2 PRACH configuration 1

FR2 PRACH configuration 1 in this clause provides the typical PRACH configuration for SSB-based contention based random access in FR2.

Table A.3.8.3.1-1: Parameters for FR2 PRACH configuration 1

Field	Value	Comment
prach-ConfigurationIndex	190	Preamble Format C2, with 10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-4 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-OccasionAndCB-PreamblesPerSSB	oneFourth, n48	OneFourth: 1 SSB associated with 4 RACH occasions n48: 48 contention based preambles per SSB
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
ra-ContentionResolutionTimer	sf48	48 sub-frames
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	

preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.3.2 FR2 PRACH configuration 2

FR2 PRACH configuration 2 in this clause provides the typical PRACH configuration for SSB based non-contention based random access in FR2.

Table A.3.8.3.2-1: Parameters for FR2 PRACH configuration 2

Field	Value	Comment
prach-ConfigurationIndex	190	Preamble Format C2, with 10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-4 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
ssb-ResourceList	ra-PreambleIndex = 40	Associated with SSB index 0. UE doesn't use ssb-ResourceList and BFR-SSB-Resource IEs at the same time. UE doesn't use this field if is transmitting CFRA to convey BFR.
BFR-SSB-Resource	ra-PreambleIndex = 40	Associated with SSB index 0. UE doesn't use ssb-ResourceList and BFR-SSB-Resource IEs at the same time. UE uses this field only if is transmitting CFRA to convey BFR
ra-ssb-OccasionMaskIndex	1	PRACH occasion index 1 is allowed
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.3.3 FR2 PRACH configuration 3

FR2 PRACH configuration 3 in this clause provides the typical PRACH configuration for CSI-RS based non-contention based random access in FR2.

Table A.3.8.3.3-1: Parameters for FR2 PRACH configuration 3Field	**Value**	**Comment**
prach-ConfigurationIndex	190	Preamble Format C2, with 10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-4 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random acces
numberOfRA-PreamblesGroupA	48	No group B.

prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
csirs-ResourceList	ra-PreambleIndex = 40	Associated with CSI-RS configured
ra-OccasionList	1	RA occasions allowed corresponding to CSI-RS
rsrp-ThresholdCSI-RS	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.3.4 FR2 PRACH configuration 4

FR2 PRACH configuration 4 in this clause provides the PRACH configuration for CSI-RS based non-contention based random access in FR2 to convey BFR.

Table A.3.8.3.4-1: Parameters for FR2 PRACH configuration 4

Field	Value	Comment
prach-ConfigurationIndex	190	Preamble Format C2, with 10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-4 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n200	Max number of RA preamble transmission performed before declaring a failure is 200.
ra-ResponseWindow	sl40	40 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
BFR-CSIRS-Resource	ra-PreambleIndex = 40	Associated with CSI-RS configured
ra-OccasionList	1	RA occasions allowed corresponding to CSI-RS
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.3.5 FR2 PRACH configuration 5

FR2 PRACH configuration 5 in this clause provides the typical PRACH configuration for LTM early UL synchronization on candidate cell in FR2.

Table A.3.8.3.5-1: Parameters for FR2 PRACH configuration 5

Field	Value	Comment
prach-ConfigurationIndex	190	Preamble Format C2, with 10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-4 in TS 38.211 [6]
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
msg1-FrequencyStart	0	
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	
powerRampingStep	dB2	
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ltm-prach-SubcarrierSpacing	Same as UL carrier SCS	
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8.3.6 FR2 PRACH configuration 6

FR2 PRACH configuration 6 in this clause provides the typical PRACH configuration for SSB-based contention free random access in FR2.

Table A.3.8.3.6-1: Parameters for FR2 PRACH configuration 6

Field	Value	Comment
prach-ConfigurationIndex	190	Preamble Format C2, with 10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-4 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-OccasionAndCB-PreamblesPerSSB	oneFourth, n16	OneFourth: 1 SSB associated with 4 RACH occasions n16: 16 contention based preambles per SSB
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
ra-ContentionResolutionTimer	sf48	48 sub-frames
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-120	
preambleTransMax	n6	Max number of RA preamble transmission performed before declaring a failure is 6
ra-ResponseWindow	sl10	10 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8A PRACH configurations under CCA

A.3.8A.1 Introduction

This clause provides the typical PRACH configurations used for RRM test cases defined in annex A. To note that for other parameters not listed in this clause, either it can be derived from the set up of each test or it is subjected to RAN5 specifications.

A.3.8A.2 PRACH configurations in FR1

A.3.8A.2.1 FR1 PRACH configuration 1 under CCA

FR1 PRACH configuration 1 under CCA in this clause provides the typical PRACH configuration for SSB-based contention based random access in FR1.

Table A.3.8A.2.1-1: Parameters for FR1 PRACH configuration 1 under CCA

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.
ssb-perRACH-OccasionAndCB-PreamblesPerSSB	oneFourth, n48	OneFourth: 1 SSB associated with 4 RACH occasions n48: 48 contention based preambles per SSB
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
ra-ContentionResolutionTimer	sf48	48 sub-frames
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-114	Increased by 6 dB compared with FR1 PRACH configuration 1 for random access test with UL CCA failures.
preambleTransMax	n20	Max number of RA preamble transmission performed before declaring a failure is 20 to account for CCA failures
ra-ResponseWindow	Sl20	20 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.8A.2.2 FR1 PRACH configuration 2 under CCA

FR1 PRACH configuration 2 under CCA in this clause provides the typical PRACH configuration for SSB based non-contention based random access in FR1.

Table A.3.8A.2.2-1: Parameters for FR1 PRACH configuration 2 under CCA

Field	Value	Comment
prach-ConfigurationIndex	102	10 ms PRACH periodicity, and other detailed configuration defined in table 6.3.3.2-2 and table 6.3.3.2-3 in TS 38.211 [6].
msg1-SubcarrierSpacing	Same as UL carrier SCS	
totalNumberOfRA-Preambles	48	Total number of preambles used for contention based and contention free random access
numberOfRA-PreamblesGroupA	48	No group B.
prach-RootSequenceIndex	0	Logic sequence index = 0, resulting in root sequence = 1.

Field	Value	Comment
ssb-perRACH-Occasion	oneFourth	OneFourth: 1 SSB associated with 4 RACH occasions
msg1-FDM	One	One PRACH transmission occasions FDMed in one time instance.
powerRampingStep	dB2	
preambleReceivedTargetPower	dBm-114	Increased by 6 dB compared with FR1 PRACH configuration 2 for random access test with UL CCA failures.
preambleTransMax	n20	Max number of RA preamble transmission performed before declaring a failure is 20 to account for CCA failures
ra-ResponseWindow	sl20	20 slots
zeroCorrelationZoneConfig	11	N-CS configuration, N_{CS} = 23
Backoff Parameter Index	2	20 ms, as defined in table 7.2-1 in TS 38.321 [7].
ssb-ResourceList	ra-PreambleIndex = 50	Associated with SSB index 0. UE doesn't use ssb-ResourceList and BFR-SSB-Resource IEs at the same time. UE doesn't use this field if is transmitting CFRA to convey BFR.
BFR-SSB-Resource	ra-PreambleIndex = 50	Associated with SSB index 0. UE doesn't use ssb-ResourceList and BFR-SSB-Resource IEs at the same time. UE uses this field only if is transmitting CFRA to convey BFR
ra-ssb-OccasionMaskIndex	1	PRACH occasion index 1 is allowed
rsrp-ThresholdSSB	RSRP_51	The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2].
NOTE: For further information see clause 6.3.2 in TS 38.331 [2].		

A.3.9 BWP configurations

A.3.9.1 Introduction

This clause provides the typical BWP configurations used for RRM test cases defined in annex A. For downlink BWP, both initial BWP and dedicated BWP configurations are specified in clause A.3.9.2 and for uplink BWP, both initial BWP and dedicated BWP configurations are specified in clause A.3.9.3. To note that for other parameters not listed in this clause, either it can be derived from the set up of each test or it is subjected to RAN5 specifications.

A.3.9.2 Downlink BWP configurations

A.3.9.2.1 Initial BWP

Table A.3.9.2.1-1: Downlink BWP patterns for initial BWP configuration

BWP Parameters	Unit	Values		
Reference BWP		DLBWP.0.1	DLBWP.0.2	
Starting PRB index		0	RB_c Note 1	
Bandwidth	PRB	Same as RF channel defined in each test	same as RMSI CORESET (CORESET #0) defined in each test Note 2	
NOTE 1: RB_c is the lowest PRB index to guarantee the BWP including CORESET #0 which is defined in clause A.3.1.2. Note 2: In case CORESET#0 and SSBs defined in the test do not completely fit into the bandwidth of the reference BWP bandwidth, the latter one is extended to the next smallest size which can fully accommodate the respective CORESET#0 and SSBs..				

A.3.9.2.2 Dedicated BWP

Table A.3.9.2.2-1: Downlink BWP patterns for dedicated BWP configuration

BWP Parameters	Unit	Values						
Reference BWP		DLBWP.1.1	DLBWP.1.2	DLBWP.1.3	DLBWP.1.4	DLBWP.1.5	DLBWP.1.6	DLBWP.1.7
Starting PRB index		0	RB_b Note 1	RB_a Note 2	0	RB_b Note 1	RB_a Note 2	RB_c Note 3
Bandwidth	PRB	Same as RF channel defined in each test	25 for SSB SCS = 15kHz, 51 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 48 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 51 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 48 for SSB SCS = 240kHz	24 for SSB SCS = 120kHz 24 for SSB SCS = 240kHz	24 for SSB SCS = 120kHz 24 for SSB SCS = 240kHz	24 for SSB SCS = 120kHz 24 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 51 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 48 for SSB SCS = 240kHz

NOTE 1: RB_b is the lowest PRB index to guarantee the BWP not fully overlapped with SSB PRB index (RB_J, PRB_{J+1},…., PRB_{J+19}) which is defined in clause A.3.10.
NOTE 2: RB_a is the lowest PRB index to guarantee the BWP including SSB PRB index (RB_J, PRB_{J+1},…., PRB_{J+19}) which is defined in clause A.3.10.
NOTE 3: RB_c is the PRB index having an offset of 6 PRBs with respect to the start of SSB PRB index (RB_J, PRB_{J+1},…., PRB_{J+19}) which is defined in clause A.3.10.

A.3.9.3 Uplink BWP configurations

A.3.9.3.1 Initial BWP

Table A.3.9.3.1-1: Uplink BWP patterns for initial BWP configuration

BWP Parameters	Unit	Values		
Reference BWP		ULBWP.0.1	ULBWP.0.2	
Starting PRB index		0	RB_c Note 1	
Bandwidth	PRB	Same as RF channel defined in each test	same as RMSI CORESET (CORESET #0) defined in each test Note 2	

NOTE 1: RB_c is same as PRB_c for DLBWP.0.2 as defined in table A.3.9.2.1-1.
Note 2: In case CORESET#0 and SSBs defined in the test do not completely fit into the bandwidth of the reference BWP bandwidth, the latter one is extended to the next smallest size which can fully accommodate the respective CORESET#0 and SSBs.

A.3.9.3.2 Dedicated BWP

Table A.3.9.3.2-1: Uplink BWP patterns for dedicated BWP configuration

BWP Parameters	Unit	Values						
Reference BWP		ULBWP.1.1	ULBWP.1.2	ULBWP.1.3	ULBWP.1.4	ULBWP.1.5	ULBWP.1.6	ULBWP.1.7
Starting PRB index		0	RB_b Note 1	RB_a Note 2	0	RB_b Note 1	RB_a Note 2	RB_c Note 3

Bandwidth	PRB	Same as RF channel defined in each test	25 for SSB SCS = 15kHz, 51 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 48 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 51 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 48 for SSB SCS = 240kHz	24 for SSB SCS = 120kHz 24 for SSB SCS = 240kHz	24 for SSB SCS = 120kHz 24 for SSB SCS = 240kHz	24 for SSB SCS = 120kHz 24 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 51 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 48 for SSB SCS = 240kHz
NOTE 1: RB_b is same as PRB_b for DLBWP.1.2 as defined in table A.3.9.2.2-1.								
NOTE 2: RB_a is same as PRB_a for DLBWP.1.3 as defined in table A.3.9.2.2-1.								
NOTE 3: RB_c is same as PRB_c for DLBWP.1.7 as defined in table A.3.9.2.2-1								

A.3.9A BWP configurations for RedCap

A.3.9A.1 Introduction

This clause provides the typical BWP configurations used for RedCap RRM test cases defined in annex A. For downlink BWP, RedCap dedicated BWP configurations are specified in clause A.3.9A.2 and for uplink BWP, RedCap dedicated BWP configurations are specified in clause A.3.9A.3. To note that for other parameters not listed in this clause, either it can be derived from the set up of each test or it is subjected to RAN5 specifications.

A.3.9A.2 Downlink BWP configurations

A.3.9A.2.1 Dedicated BWP

Table A.3.9A.2.2-1: Downlink BWP patterns for RedCap dedicated BWP configuration

BWP Parameters	Unit	Values		
Reference BWP		**DLBWP.1.1 RedCap**	**DLBWP.1.2 RedCap**	**DLBWP.1.3 RedCap**
Starting PRB index		RB_a Note 1	RB_b Note 2	RB_c Note 3
Bandwidth	PRB	25 for SSB SCS = 15kHz, 25 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 16 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 25 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 16 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 25 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 16 for SSB SCS = 240kHz
NOTE 1: RB_a is the lowest PRB index to guarantee the BWP including SSB PRB index (RB_J, PRB_{J+1},…., PRB_{J+19}) which is defined in clause A.3.10.				
NOTE 2: RB_b is the lowest PRB index to guarantee the BWP not fully overlapped with SSB PRB index (RB_J, PRB_{J+1},…., PRB_{J+19}) which is defined in clause A.3.10.				
NOTE 3: RB_c is the lowest PRB index to guarantee the BWP including SSB PRB index (RB_J, PRB_{J+1},…., PRB_{J+19}) which is defined in clause A.3.10.				

A.3.9A.3 Uplink BWP configurations

A.3.9A.3.1 Dedicated BWP

Table A.3.9A.3.1-1: Uplink BWP patterns for RedCap dedicated BWP configuration

BWP Parameters	Unit	Values		
Reference BWP		**ULBWP.1.1 RedCap**	**ULBWP.1.2 RedCap**	**ULBWP.1.3 RedCap**

Starting PRB index		RB_a Note 1	RB_b Note 2	RB_c Note 3
Bandwidth	PRB	25 for SSB SCS = 15kHz, 25 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 16 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 25 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 16 for SSB SCS = 240kHz	25 for SSB SCS = 15kHz, 25 for SSB SCS = 30kHz, 32 for SSB SCS = 120kHz 16 for SSB SCS = 240kHz
NOTE 1: RB_a is the same as PRB_a for DLBWP.1.1 RedCap. NOTE 2: RB_b is the same as PRB_b for DLBWP.1.2 RedCap. NOTE 3: RB_c is the same as PRB_c for DLBWP.1.3 RedCap.				

A.3.10 SSB Configurations

A.3.10.1 SSB Configurations for FR1

A.3.10.1.1 SSB pattern 1 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz

Table A.3.10.1.1-1: SSB.1 FR1: SSB Pattern 1 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values
Channel bandwidth	10 MHz
SSB SCS	15 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 2	2-5
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.1.2 SSB pattern 2 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10.1.2-1: SSB.2 FR1: SSB Pattern 2 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values
Channel bandwidth	40 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2
Slot numbers containing SSB Note 3	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen. NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves	

A.3.10.1.3 SSB pattern 3 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz

Table A.3.10.1.3-1: SSB.3 FR1: SSB Pattern 3 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values	
Channel bandwidth	10 MHz	
SSB SCS	15 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSB Note 2	2-5	8-11
Slot numbers containing SSB Note 2	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.1.4 SSB pattern 4 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10.1.4-1: SSB.4 FR1: SSB Pattern 4 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values	
Channel bandwidth	40 MHz	
SSB SCS	30 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2	8-11
Slot numbers containing SSB Note 3	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen. NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.1.5 SSB pattern 5 in FR1: SSB allocation for SSB SCS=15 kHz starting from odd SFN in 10 MHz

Table A.3.10.1.5-1: SSB.5 FR1: SSB Pattern 5 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values
Channel bandwidth	10 MHz
SSB SCS	15 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 2	2-5
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 1
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.1.6 SSB pattern 6 in FR1: SSB allocation for SSB SCS=30 kHz starting from odd SFN in 40 MHz

Table A.3.10.1.6-1: SSB.6 FR1: SSB Pattern 6 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values
Channel bandwidth	40 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2
Slot numbers containing SSB Note 3	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 1
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen. NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.1.7 SSB pattern 7 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz

Table A.3.10.1.7-1: SSB.7 FR1: SSB Pattern 7 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values	
Channel bandwidth	10 MHz	
SSB SCS	15 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3
Symbol numbers containing SSB Note 2	2-5	8-11
Slot numbers containing SSB Note 2	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.1.8 SSB pattern 8 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10.1.8-1: SSB.8 FR1: SSB Pattern 8 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values	
Channel bandwidth	40 MHz	
SSB SCS	30 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2	8-11
Slot numbers containing SSB Note 3	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen. NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.1.9 SSB pattern 9 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz

Table A.3.10.1.9-1: SSB.9 FR1: SSB Pattern 9 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values
Channel bandwidth	10 MHz
SSB SCS	15 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 2	2-5
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.1.10 SSB pattern 10 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10.1.10-1: SSB.10 FR1: SSB Pattern 10 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values
Channel bandwidth	40 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2
Slot numbers containing SSB Note 3	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen. NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves	

A.3.10.1.11 SSB pattern 11 in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz

Table A.3.10.1.11-1: SSB.11 FR1: SSB Pattern 11 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values	
Channel bandwidth	10 MHz	
SSB SCS	15 kHz	
SSB periodicity (T_{SSB})	80 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSB Note 2	2-5	8-11
Slot numbers containing SSB Note 2	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.1.12 SSB pattern 12 in FR1: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10.1.12-1: SSB.12 FR1: SSB Pattern 12 for SSB SCS=30 kHz in 20 MHz channel

SSB Parameters	Values	
Channel bandwidth	20 MHz	
SSB SCS	30 kHz	
SSB periodicity (T_{SSB})	80 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2	8-11
Slot numbers containing SSB Note 3	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen. NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.1.13 SSB pattern 13 in FR1: SSB allocation for SSB SCS=15 kHz in 3 MHz

Table A.3.10.1.13-1: SSB.13 FR1: SSB Pattern 1 for SSB SCS=15 kHz in 3 MHz channel

SSB Parameters	Values
Channel bandwidth	3 MHz
SSB SCS	15 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 2	2-5
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+11})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2 SSB Configurations for FR2

A.3.10.2.1 SSB pattern 1 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.1-1: SSB.1 FR2: SSB Pattern 1 for SSB SCS = 120 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	120 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSBs Note 2	4-7	8-11
Slot numbers containing SSB Note 2	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13].		

NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.

A.3.10.2.2 SSB pattern 2 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.2-1: SSB.2 FR2: SSB Pattern 2 for SSB SCS = 240 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	240 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSBs Note 2	8-11	12-13, 0-1
Slot numbers containing SSB Note 2	0	0, 1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.3 SSB pattern 3 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.3-1: SSB.3 FR2: SSB Pattern 3 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	4-7
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.4 SSB pattern 4 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.4-1: SSB.4 FR2: SSB Pattern 4 for SSB SCS = 240 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	240 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	8-11
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13].	

NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.

A.3.10.2.5 SSB pattern 5 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.5-1: SSB.5 FR2: SSB Pattern 5 for SSB SCS = 120 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	120 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3
Symbol numbers containing SSBs Note 2	2-5	6-9
Slot numbers containing SSB Note 2	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.6 SSB pattern 6 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.6-1: SSB.6 FR2: SSB Pattern 6 for SSB SCS = 240 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	240 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3
Symbol numbers containing SSBs Note 2	2-5	6-9
Slot numbers containing SSB Note 2	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.7 SSB pattern 7 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.7-1: SSB.7 FR2: SSB Pattern 7 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	1
Symbol numbers containing SSBs Note 2	8-11
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13].	

NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.

A.3.10.2.8 SSB pattern 8 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.8-1: SSB.8 FR2: SSB Pattern 8 for SSB SCS = 240 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	240 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	1	
SS/PBCH block index	1	
Symbol numbers containing SSBs Note 2	12-13	0-1
Slot numbers containing SSB Note 2	0	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.9 SSB pattern 9 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.9-1: SSB.9 FR2: SSB Pattern 9 for SSB SCS = 120 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	120 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3
Symbol numbers containing SSBs Note 2	2-5	6-9
Slot numbers containing SSB Note 2	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.10 SSB pattern 10 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.10-1: SSB.10 FR2: SSB Pattern 10 for SSB SCS = 240 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	240 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3
Symbol numbers containing SSBs Note 2	4-7	8-11
Slot numbers containing SSB Note 2	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13].		

NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.

A.3.10.2.11 SSB pattern 11 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz

Table A.3.10.2.11-1: SSB.11 FR2: SSB Pattern 11 for SSB SCS = 480 kHz in 400 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	400 MHz	
SSB SCS	480 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSBs Note 2	2-5	9-12
Slot numbers containing SSB Note 2	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.12 SSB pattern 12 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz

Table A.3.10.2.12-1: SSB.12 FR2: SSB Pattern 12 for SSB SCS = 960 kHz in 400 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	400 MHz	
SSB SCS	960 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSBs Note 2	2-5	9-12
Slot numbers containing SSB Note 2	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.13 SSB pattern 13 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz

Table A.3.10.2.13-1: SSB.13 FR2: SSB Pattern 13 for SSB SCS = 480 kHz in 400 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	400 MHz
SSB SCS	480 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	2-5
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0

PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})[Note 1]
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.14 SSB pattern 14 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz

Table A.3.10.2.14-1: SSB.14 FR2: SSB Pattern 14 for SSB SCS = 960 kHz in 400 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	400 MHz
SSB SCS	960 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs [Note 2]	2-5
Slot numbers containing SSB [Note 2]	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})[Note 1]
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.15 SSB pattern 15 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz

Table A.3.10.2.15-1: SSB.15 FR2: SSB Pattern 15 for SSB SCS = 480 kHz in 400 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	400 MHz	
SSB SCS	480 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3
Symbol numbers containing SSBs [Note 2]	2-5	9-12
Slot numbers containing SSB [Note 2]	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})[Note 1]	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.16 SSB pattern 16 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz

Table A.3.10.2.16-1: SSB.16 FR2: SSB Pattern 16 for SSB SCS = 960 kHz in 400 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	400 MHz	
SSB SCS	960 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	2	3

Symbol numbers containing SSBs [Note 2]	2-5	9-12
Slot numbers containing SSB [Note 2]	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})[Note 1]	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.17 SSB pattern 17 in FR2: SSB allocation for SSB SCS=480 kHz in 400 MHz

Table A.3.10.2.17-1: SSB.17 FR2: SSB Pattern 17 for SSB SCS = 480 kHz in 400 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	400 MHz
SSB SCS	480 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	1
Symbol numbers containing SSBs [Note 2]	9-12
Slot numbers containing SSB [Note 2]	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})[Note 1]
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.18 SSB pattern 18 in FR2: SSB allocation for SSB SCS=960 kHz in 400 MHz

Table A.3.10.2.18-1: SSB.18 FR2: SSB Pattern 18 for SSB SCS = 960 kHz in 400 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	400 MHz
SSB SCS	960 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	1
Symbol numbers containing SSBs [Note 2]	9-12
Slot numbers containing SSB [Note 2]	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})[Note 1]
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.19 SSB pattern 19 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10B.2.2-1: SSB.19 FR2: SSB Pattern 17 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	40 ms

Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	4-7
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.20 SSB pattern 20 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.20-1: SSB.20 FR2: SSB Pattern 18 for SSB SCS = 240 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	240 kHz
SSB periodicity (T_{SSB})	40 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	8-11
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.21 SSB pattern 21 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.21-1: SSB.21 FR2: SSB Pattern 19 for SSB SCS = 120 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	120 kHz	
SSB periodicity (T_{SSB})	80 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSBs Note 2	4-7	8-11
Slot numbers containing SSB Note 2	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.22 SSB pattern 22 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.22-1: SSB.22 FR2: SSB Pattern 20 for SSB SCS = 240 kHz in 100 MHz channel with 2 SSBs per SS-burst

SSB Parameters	Values

Channel bandwidth	100 MHz	
SSB SCS	240 kHz	
SSB periodicity (T_{SSB})	80 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSBs Note 2	8-11	12-13, 0-1
Slot numbers containing SSB Note 2	0	0, 1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.23 SSB pattern 23 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.23-1: SSB.23 FR2: SSB Pattern 21 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	40 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	1
Symbol numbers containing SSBs Note 2	8-11
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.24 SSB pattern 24 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.24-1: SSB.24 FR2: SSB Pattern 22 for SSB SCS = 240 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values	
Channel bandwidth	100 MHz	
SSB SCS	240 kHz	
SSB periodicity (T_{SSB})	40 ms	
Number of SSBs per SS-burst	1	
SS/PBCH block index	1	
Symbol numbers containing SSBs Note 2	12-13	0-1
Slot numbers containing SSB Note 2	0	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+39})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10.2.25 SSB pattern 25 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.25-1: SSB.25 FR2: SSB Pattern 17 for SSB SCS = 120 kHz in 100 MHz channel with 3 SSBs per SS-burst

SSB Parameters	Values			
Channel bandwidth	100 MHz			
SSB SCS	120 kHz			
SSB periodicity (T_{SSB})	20 ms			
Number of SSBs per SS-burst	3			
SS/PBCH block index	0	1	2	3
Symbol numbers containing SSBs Note 2	4-7	8-11	2-5	6-9
Slot numbers containing SSB Note 2	0	0	1	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0			
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1			
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.				

A.3.10.2.26 SSB pattern 26 in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10.2.26-1: SSB.26 FR2: SSB Pattern 26 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	4-7
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10ms)/10ms) = 0
RB numbers containing SSBs within channel BW	(RB_J, RB_{J+1},…., RB_{J+19})Note 1
Note 1: RBs containing SSB can be configured in any frequency location within the associated bandwidth part except the RBs for allowed synchronization raster defined in TS 38.104 [13]. Note 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10.2.27 SSB pattern 27 in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10.2.27-1: SSB. 27 FR2: SSB Pattern 27 for SSB SCS = 240 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	240 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	8-11
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10ms)/10ms) = 0
RB numbers containing SSBs within channel BW	(RB_J, RB_{J+1},…., RB_{J+39})Note 1
Note 1: RBs containing SSB can be configured in any frequency location within the associated bandwidth part except the RBs for allowed synchronization raster defined in TS 38.104 [13]. Note 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10A SSB Configurations under CCA

A.3.10A.1 SSB Configurations under CCA for FR1

A.3.10A.1.1 SSB pattern 1 under CCA for semi-static channel access: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10A.1.1-1: SSB.1 CCA: SSB Pattern 1 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values
Channel bandwidth	40 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSB indexes per SS-burst (N_{SSB}^{QCL})	1
Number of SS/PBCH block candidates per SSB index	1
SS/PBCH block candidate position	0
SS/PBCH block index	0
Symbol numbers containing SSB Note 2	2-5
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves	

A.3.10A.1.2 SSB pattern 2 under CCA for dynamic channel access: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10A.1.2-1: SSB.2 CCA: SSB Pattern 2 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values	
Channel bandwidth	40 MHz	
SSB SCS	30 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSB indexes per SS-burst (N_{SSB}^{QCL})	1	
Number of SS/PBCH block candidates per SSB index	2	
SS/PBCH block candidate position	0	2
SS/PBCH block index	0	0
Symbol numbers containing SSB Note 2	2-5	2-5
Slot numbers containing SSB Note 2	0	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves		

A.3.10A.1.3 SSB pattern 3 under CCA for semi-static channel access: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10.1.3-1: SSB.3 CCA: SSB Pattern 3 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values
Channel bandwidth	40 MHz
SSB SCS	30 kHz

SSB periodicity (T_{SSB})	20 ms	
Number of SSB indexes per SS-burst (N_{SSB}^{QCL})	2	
Number of SS/PBCH block candidates per SSB index	1	
SS/PBCH block candidate position	0	1
SS/PBCH block index	0	1
Symbol numbers containing SSB Note 2	2-5	8-11
Slot numbers containing SSB Note 2	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10A.1.4 SSB pattern 4 under CCA for dynamic channel access: SSB allocation for SSB SCS=30 kHz in 40 MHz

Table A.3.10.1.4-1: SSB.4 CCA: SSB Pattern 4 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values			
Channel bandwidth	40 MHz			
SSB SCS	30 kHz			
SSB periodicity (T_{SSB})	20 ms			
Number of SSB indexes per SS-burst (N_{SSB}^{QCL})	2			
Number of SS/PBCH block candidates per SSB index	2			
SS/PBCH block candidate position	0	2	1	3
SS/PBCH block index	0	0	1	1
Symbol numbers containing SSB Note 2	2-5	2-5	8-11	8-11
Slot numbers containing SSB Note 2	0	1	0	1
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0			
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1			
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.				

A.3.10B SSB Configurations for RedCap

A.3.10B.1 SSB Configurations for FR1

A.3.10B.1.1 SSB pattern 1 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz

Table A.3.10B.1.1-1: SSB.1 RedCap FR1: SSB Pattern 1 for SSB SCS=30 kHz in 20 MHz channel

SSB Parameters	Values
Channel bandwidth	20 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2
Slot numbers containing SSB Note 3	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen.	

NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves

A.3.10B.1.2 SSB pattern 2 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz

Table A.3.10B.1.2-1: SSB.2 RedCap FR1: SSB Pattern 2 for SSB SCS=30 kHz in 20 MHz channel

SSB Parameters	Values	
Channel bandwidth	20 MHz	
SSB SCS	30 kHz	
SSB periodicity (T_{SSB})	20 ms	
Number of SSBs per SS-burst	2	
SS/PBCH block index	0	1
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2	8-11
Slot numbers containing SSB Note 3	0	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0	
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1	
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13].		
NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen.		
NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.		

A.3.10B.1.3 SSB pattern 3 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz starting from odd SFN in 20 MHz

Table A.3.10B.1.3-1: SSB.3 RedCap FR1: SSB Pattern 3 for SSB SCS=30 kHz in 20 MHz channel

SSB Parameters	Values
Channel bandwidth	20 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2
Slot numbers containing SSB Note 3	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 1
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13].	
NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen.	
NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10B.1.4 SSB pattern 4 for RedCap in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz

Table A.3.10B.1.4-1: SSB.4 RedCap FR1: SSB Pattern 4 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values
Channel bandwidth	10 MHz
SSB SCS	15 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB Note 2	2-5
Slot numbers containing SSB Note 2	0

SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})[Note 1]
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10B.1.5 SSB pattern 5 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz

Table A.3.10B.1.5-1: SSB.5 RedCap FR1: SSB Pattern 5 for SSB SCS=30 kHz in 20 MHz channel

SSB Parameters	Values
Channel bandwidth	20 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB [Note 3]	4-7 or 2-5 [Note 2]
Slot numbers containing SSB [Note 3]	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})[Note 1]
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen. NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves	

A.3.10B.1.6 SSB pattern 6 for RedCap in FR1: SSB allocation for SSB SCS=15 kHz in 10 MHz

Table A.3.10B.1.6-1: SSB.6 RedCap FR1: SSB Pattern 6 for SSB SCS=15 kHz in 10 MHz channel

SSB Parameters	Values
Channel bandwidth	10 MHz
SSB SCS	15 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSB [Note 2]	2-5
Slot numbers containing SSB [Note 2]	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})[Note 1]
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10B.1.7 SSB pattern 7 for RedCap in FR1: SSB allocation for SSB SCS=30 kHz in 20 MHz

Table A.3.10B.1.7-1: SSB.7 RedCap FR1: SSB Pattern 7 for SSB SCS=30 kHz in 40 MHz channel

SSB Parameters	Values
Channel bandwidth	20 MHz
SSB SCS	30 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0

Symbol numbers containing SSB Note 3	4-7 or 2-5 Note 2
Slot numbers containing SSB Note 3	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSB within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19}) Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13].	
NOTE 2: Symbols 4-7 is chosen, if the SSB pattern Case B should be used for the current band as indicated by table 5.4.3.3-1 of TS 38.104 [13]; Otherwise, symbol 2-5 is chosen.	
NOTE 3: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves	

A.3.10B.2 SSB Configurations for FR2

A.3.10B.2.1 SSB pattern 1 for RedCap in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10B.2.1-1: SSB.1 RedCap FR2: SSB Pattern 1 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	20 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	4-7
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19}) Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the allowed synchronization raster defined in TS 38.104 [13].	
NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10B.2.2 SSB pattern 2 for RedCap in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10B.2.2-1: SSB.2 RedCap FR2: SSB Pattern 2 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	40 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	4-7
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19}) Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the PRBs for allowed synchronization raster defined in TS 38.104 [13].	
NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10B.2.3 SSB pattern 3 for RedCap in FR2: SSB allocation for SSB SCS=120 kHz in 100 MHz

Table A.3.10B.2.3-1: SSB.3 RedCap FR2: SSB Pattern 3 for SSB SCS = 120 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	120 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	4-7
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10B.2.4 SSB pattern 4 for RedCap in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10B.2.4-1: SSB.4 RedCap FR2: SSB Pattern 4 for SSB SCS = 240 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	240 kHz
SSB periodicity (T_{SSB})	40 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	8-11
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the cell bandwidth according to the PRBs for allowed synchronization raster defined in TS 38.104 [13]. NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.	

A.3.10B.2.5 SSB pattern 5 for RedCap in FR2: SSB allocation for SSB SCS=240 kHz in 100 MHz

Table A.3.10B.2.5-1: SSB.5 RedCap FR2: SSB Pattern 5 for SSB SCS = 240 kHz in 100 MHz channel with 1 SSB per SS-burst

SSB Parameters	Values
Channel bandwidth	100 MHz
SSB SCS	240 kHz
SSB periodicity (T_{SSB})	80 ms
Number of SSBs per SS-burst	1
SS/PBCH block index	0
Symbol numbers containing SSBs Note 2	8-11
Slot numbers containing SSB Note 2	0
SFN containing SSB	SFN mod (max(T_{SSB},10 ms)/10 ms) = 0
PRB numbers containing SSBs within channel BW	(RB_J, PRB_{J+1},…., PRB_{J+19})Note 1
NOTE 1: PRBs containing SSB can be configured in any frequency location within the associated bandwidth part except the PRBs for allowed synchronization raster defined in TS 38.104 [13].	

NOTE 2: These values have been derived from other parameters for information purposes (as per TS 38.213 [3]). They are not settable parameters themselves.

A.3.11 SMTC Configurations

A.3.11.1 SMTC pattern 1: SMTC period = 20 ms with SMTC duration = 1 ms

Table A.3.11.1-1: SMTC.1: SMTC Pattern 1 for SMTC period = 20 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	0 ms
SMTC duration	1 ms

A.3.11.2 SMTC pattern 2: SMTC period = 20 ms with SMTC duration = 5 ms

Table A.3.11.2-1: SMTC.2: SMTC Pattern 2 for SMTC period = 20 ms and duration = 5 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	0 ms
SMTC duration	5 ms

A.3.11.3 SMTC pattern 3: SMTC period = 160 ms with SMTC duration = 1 ms

Table A.3.11.3-1: SMTC.3: SMTC Pattern 3 for SMTC period = 160 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	160 ms
SMTC offset	0 ms
SMTC duration	1 ms

A.3.11.4 SMTC pattern 4: SMTC period = 20 ms with SMTC duration = 1 ms

Table A.3.11.4-1: SMTC.4: SMTC Pattern 4 for SMTC period = 20 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	10 ms
SMTC duration	1 ms

A.3.11.5 SMTC pattern 5: SMTC period = 20 ms with SMTC duration = 5 ms

Table A.3.11.5-1: SMTC.5: SMTC Pattern 5 for SMTC period = 20 ms and duration = 5 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	10 ms
SMTC duration	5 ms

A.3.11.6 SMTC pattern 6: SMTC period = 20 ms with SMTC duration = 5 ms

Table A.3.11.6-1: SMTC.6: SMTC Pattern 6 for SMTC period = 20 ms and duration = 5 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	17 ms
SMTC duration	5 ms

A.3.11.7 SMTC pattern 7: SMTC period = 20 ms with SMTC duration = 5 ms

Table A.3.11.7-1: SMTC.7: SMTC Pattern 7 for SMTC period = 20 ms and duration = 5 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	5 ms
SMTC duration	5 ms

A.3.11.8 SMTC pattern 8: SMTC period = 10 ms with SMTC duration = 1 ms

Table A.3.11.8-1: SMTC.8: SMTC Pattern 8 for SMTC period = 10 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	10 ms
SMTC offset	0 ms
SMTC duration	1 ms

A.3.11.9 SMTC pattern 9: SMTC period = 20 ms with SMTC duration = 1 ms

Table A.3.11.9-1: SMTC.9: SMTC Pattern 6 for SMTC period = 20 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	13 ms
SMTC duration	1 ms

A.3.11.10 SMTC pattern 10: SMTC period = 80 ms with SMTC duration = 1 ms

Table A.3.11.10-1: SMTC.10: SMTC Pattern 10 for SMTC period = 80 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	80 ms
SMTC offset	0 ms
SMTC duration	1 ms

A.3.11.11 SMTC pattern 11: SMTC period = 80 ms with SMTC duration = 5 ms

Table A.3.11.11-1: SMTC.11: SMTC Pattern 11 for SMTC period = 80 ms and duration = 5 ms

SMTC Parameters	Values
SMTC periodicity	80 ms

SMTC offset	5 ms
SMTC duration	5 ms

A.3.11.12 SMTC pattern 12: SMTC period = 20 ms with SMTC duration = 5 ms

Table A.3.11.12-1: SMTC.12: SMTC Pattern 12 for SMTC period = 20 ms and duration = 4 ms

SMTC Parameters	Values
SMTC periodicity	20 ms
SMTC offset	4 ms
SMTC duration	5 ms

A.3.11A SMTC Configurations for RedCap

A.3.11A.0 Introduction

The SMTC configuration for RedCap can also be used in test case for non-RedCap.

A.3.11A.1 SMTC pattern 1 for RedCap: SMTC period = 40 ms with SMTC duration = 1 ms

Table A.3.11A.1-1: SMTC.1 RedCap: SMTC Pattern 1 for SMTC period = 40 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	40 ms
SMTC offset	0 ms
SMTC duration	1 ms

A.3.11A.2 SMTC pattern 2 for RedCap: SMTC period = 80 ms with SMTC duration = 1 ms

Table A.3.11A.2-1: SMTC.2 RedCap: SMTC Pattern 2 for SMTC period = 80 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	80 ms
SMTC offset	0 ms
SMTC duration	1 ms

A.3.11A.3 SMTC pattern 3 for RedCap: SMTC period = 40 ms with SMTC duration = 1 ms

Table A.3.11A.3-1: SMTC.3 RedCap: SMTC Pattern 3 for SMTC period = 40 ms and duration = 1 ms

SMTC Parameters	Values
SMTC periodicity	40 ms
SMTC offset	20 ms
SMTC duration	1 ms

A.3.11A.4 SMTC pattern 4 for RedCap: SMTC period = 80 ms with SMTC duration = 5 ms

Table A.3.11A.4-1: SMTC.4 RedCap: SMTC Pattern 4 for SMTC period = 80 ms and duration = 5 ms

SMTC Parameters	Values
SMTC periodicity	80 ms
SMTC offset	0 ms
SMTC duration	5 ms

A.3.12 Test Cases with Different CC Configurations

A.3.12.1 EN-DC Test Cases with Different EN-DC Configurations

A.3.12.1.1 Introduction

In annex A EN-DC test cases may be defined for two component carriers (CCs) as well as for more than two CCs to verify the same RRM requirement.

A.3.12.1.2 Principle of testing

If multiple EN-DC test cases are defined for two CCs as well as for more than two CCs to verify the same type of RRM requirement, which depends on the number of CCs, then from the UE performance point of view the test coverage can be considered fulfilled by executing only the EN-DC test cases with the maximum number of CCs in EN-DC supported by the UE. Otherwise, if the same type of RRM requirement is independent of the number of CCs then from the UE performance point of view the test coverage can be considered fulfilled by executing only the EN-DC test cases with two CCs in EN-DC supported by the UE.

NOTE: The maximum number of CCs that can be used in FR2 tests in EN-DC would depend on the test equipment capability.

A.3.12.2 Carrier Aggregation Test Cases with Different CA Configurations

A.3.12.2.1 Introduction

In annex A carrier aggregation test cases may be defined for two CCs as well as for more than two CCs to verify the same RRM requirement.

A.3.12.2.2 Principle of testing

If multiple carrier aggregation test cases are defined for two CCs as well as for more than two CCs to verify the same RRM requirement, which depends on the number of CCs, then from the UE performance point of view the test coverage can be considered fulfilled by executing only the CA test cases with the maximum number of CCs in CA supported by the UE. Otherwise if the same type of RRM requirement is independent of the number of CCs then from the UE performance point of view the test coverage can be considered fulfilled by executing only the CA test cases with at least two CCs in CA supported by the UE.

NOTE: The maximum number of CCs that can be used in FR2 tests in CA would depend on the test equipment capability.

A.3.13 Test Cases in SA and EN-DC Operations

A.3.13.1 Introduction

This clause defines a principle which is applicable to test cases verifying RRM requirements in standalone (SA) or EN-DC operations.

In annex A test cases may be defined in SA and EN-DC operations to verify the same RRM requirement.

A.3.13.2 Principle of Testing

If test cases are defined in both SA and EN-DC operations to verify the same RRM requirement then the UE capable of both SA and EN-DC operations needs to verify that RRM requirement by performing test case(s) in either SA operation or in EN-DC operation.

If test cases are defined in both SA and EN-DC operations to verify at least one common RRM requirement then the UE capable of both SA and EN-DC operations needs to verify RRM requirements by performing test case(s) in either SA operation or in EN-DC operation provided that the performed test case(s):

- verifies the largest number of RRM requirements and
- verifies at least all RRM requirements covered in the test case(s), which is not performed.

A.3.13B Test Cases for EN-DC and NE-DC Operations

A.3.13B.1 Active BWP switch Test Cases for EN-DC and NE-DC Operations

A.3.13B.1.1 Introduction

This clause defines a principle which is applicable to test cases verifying active BWP switch requirements for EN-DC operation and NE-DC operations.

In annex A test cases are defined for both EN-DC and NE-DC operations to verify the same type of RRM requirement.

A.3.13B.1.2 Principle of Testing

UE capable of both EN-DC and NE-DC operations needs to be tested with one of the tests in either EN-DC or NE-DC operations.

A.3.13B.2 SFTD accuracy Test Cases for EN-DC and NE-DC Operations

A.3.13B.2.1 Introduction

This clause defines a principle which is applicable to test cases verifying SFTD accuracy requirements for EN-DC operation and NE-DC operations.

In annex A test cases are defined for both EN-DC and NE-DC operations to verify the same type of RRM requirement.

A.3.13B.2.2 Principle of Testing

UE capable of both EN-DC and NE-DC operations needs to be tested with one of the tests in either EN-DC or NE-DC operations.

A.3.15 Angle of Arrival (AoA) for FR2 RRM test cases

This clause specifies the AoA setups for FR2 RRM test cases in clause A.5 and A.7. The applicable AoA setup is defined in each test case in clause A.5 and A.7.

A.3.15.1 Setup 1: Single AoA in Rx beam peak direction

There is only one active probe in the test. The DL signals, and noise if applicable, transmitted from the probe, are aligned to the UE Rx beam peak direction (as defined in TS 38.101-2 [19]).

A.3.15.2 Setup 2: Single AoA in non Rx beam peak direction

A.3.15.2.1 Setup 2a: Single AoA in non Rx beam peak direction without change in direction

There is only one active probe in the test. The DL signals, and noise if applicable, transmitted from the probe, align to a direction (AoA) which is from the set of directions corresponding to the EIS spherical coverage percentile of the DUT as defined in clause 7.3.4 of TS 38.101-2 [19] for each UE power class. The direction (AoA) of the signals shall not be changed between test iterations.

A.3.15.2.2 Setup 2b: Single AoA in non Rx beam peak direction with change in direction

There is only one active probe in the test. The DL signals, and noise if applicable, transmitted from the probe, align to a direction (AoA) which is from the set of directions corresponding to the EIS spherical coverage percentile of the DUT as defined in clause 7.3.4 of TS 38.101-2 [19] for each UE power class. For UE power class 3, the direction (AoA) of the signals shall be changed for each test iteration.

A.3.15.3 Setup 3: 2 AoAs

There are 2 active probes in the test. The DL signals, and noise if applicable, transmitted from the two active probes, align to directions (AoAs) which are from the set of directions corresponding to the EIS spherical coverage percentile of the DUT as defined in clause 7.3.4 of TS 38.101-2 [19] for each UE power class. The relative angular offset between the directions (AoAs) of the 2 active probes, shall be changed for each test iteration. The applicable set of relative angular offsets between the 2 active probes is given in table 3.15.3-1 for each UE power class.

Table A.3.15.3-1: Set of relative angular offsets between active probes for each power class

UE Power class	Relative angular offset between active probes
1	30°, 60°, 90° and 120°
2	FFS
3	30°, 60°, 90°, 120° and 150°
4	FFS
5	30°, 60°, 90° and 120°
6	30°, 60°, 90°, 120° and 150°
7	FFS

A.3.15.4 Setup 4: 2 AoAs, 1 AoA in Rx beam peak direction, 1 in non Rx beam peak

A.3.15.4.1 Setup 4a: 2 AoAs, 1 AoA in Rx beam peak direction, 1 in non Rx beam peak without change in direction

There are 2 active probes in the test. The DL signals, and noise if applicable, are transmitted from the two active probes. One probe is aligned to the UE Rx beam peak direction as defined in TS 38.101-2 [19]. The second is aligned to a direction (AoA) which is from the set of directions corresponding to the EIS spherical coverage percentile of the DUT as defined in clause 7.3.4 of TS 38.101-2 [19] for each UE power class. The direction (AoA) of the non Rx beam peak signal shall not be changed between test iterations.

A.3.15.4.2 Setup 4b: 2 AoAs, 1 AoA in Rx beam peak direction, 1 in non Rx beam peak with change in direction

There are 2 active probes in the test. The DL signals, and noise if applicable, are transmitted from the two active probes. One probe is aligned to the UE Rx beam peak direction as defined in TS 38.101-2 [19]. The second is aligned to a direction (AoA) which is from the set of directions corresponding to the EIS spherical coverage percentile of the DUT as defined in clause 7.3.4 of TS 38.101-2 [19] for each UE power class.

For UE power class 3, the relative angular offset between the directions (AoAs) of the 2 active probes shall be changed for each test iteration, within the probe alignment described above. The applicable set of relative angular offsets between the 2 active probes is given in table 3.15.3-1 for each UE power class.

A.3.15.4.3 Setup 4c: 2 AoAs, 1 AoA in Rx beam peak direction, 1 in non Rx beam peak for power class 6 UE supporting simultaneous reception from multiple directions

There are 2 active probes in the test. The DL signals, and noise if applicable, are transmitted from the two active probes. One probe is aligned to the UE Rx beam peak direction as defined in TS 38.101-2 [19]. The second is aligned to a direction (AoA) which is from the set of directions corresponding to the 2AoA spherical coverage requirement for simultaneous reception from multiple directions as defined in clause 7.3K.6 of TS 38.101-2 [19] for power class 6.

For power class 6 supporting simultaneous reception from multiple directions, the angular separation between the directions (AoAs) of the 2 active probes is 150°, and the direction (AoA) of the non Rx beam peak signal shall not be changed between test iterations.

A.3.15.5 Setup 5: 2 AoAs for simultaneous reception with QCL Type-D

There are 2 active probes in the test. The DL signals, and noise if applicable, are transmitted from the two active probes. The 2 AoAs (AoA1 and AoA2) for simultaneous reception with different QCL-typeD are from the set of AoA pairs, denoted by (AoA1, AoA2) that can support 2 AoA reception for UE declared AoA angular separation and declared orientation in the positioner of the test system according to the spherical coverage requirement for simultaneous reception from multiple directions as defined in clause 7.3K.3 of TS 38.101-2 [19] for UE power class 3 supporting simultaneous reception from multiple directions. The angular separation between the directions (AoA1 and AoA2) of the 2 active probes is declared from table 7.3K.3-1 in clause 7.3K.3 of TS 38.101-2 [19] and shall not be changed for each test iteration.

AoA1 needs to satisfy the spherical coverage requirement in table 7.3.4.3-1 of TS 38.101-2 [19].

NOTE: The chosen AoA pair (AoA1, AoA2) is up to RAN5.

A.3.15.6 Setup 6: 3 AoAs for simultaneous reception with different QCL Type-D

There are 3 active probes in the test and the DL signals and noise are transmitted from the three active probes.

Out of the three AoAs, one AoA (AoA1) is aligned to a direction which is from the set of directions corresponding to the EIS spherical coverage percentile of the DUT as defined in clause 7.3.4 of TS 38.101-2 [19] for UE power class 3 and other 2 AoAs (AoA2 and AoA3) are from the set of AoA pairs, denoted by (AoA2, AoA3) that can support 2 AoA reception for UE declared AoA angular separation and declared orientation in the positioner of the test system according to the spherical coverage requirement for simultaneous reception from multiple directions as defined in clause 7.3K.3 of TS 38.101-2 [19] for power class 3 supporting simultaneous reception from multiple directions. The UE positioning shall be such that the UE passes both spherical coverage requirements.

The angular offset between the directions of the AoA pair (AoA2, AoA3) is declared from table 7.3K.3-1 in clause 7.3K.3 of TS 38.101-2 [19] and shall not be changed for each test iteration.

NOTE: The chosen AoA pair (AoA2, AoA3) is up to RAN5.

A.3.15.7 Setup 7: 3 AoAs

There are 3 active probes in the test. The DL signals, and noise if applicable, transmitted from the three active probes, align to directions (AoAs) which are from the set of directions corresponding to the EIS spherical coverage percentile of the DUT as defined in clause 7.3.4 of TS 38.101-2 [19] for each UE power class. The relative angular offset between the directions (AoAs) of the 3 active probes, shall be changed for each test iteration. Any combinations of two relative angular offsets between 2 active probes specified in table A.3.15.3-1, is considered as a valid applicable relative angular offsets between 3 active probes for the respective power class.

A.3.15C Angle of Arrival (AoA) for FR2-NTN RRM test cases

This clause specifies the AoA setups for FR2-NTN RRM test cases in clause A.14. The applicable AoA setup is defined in each test case in clause A.14.

A.3.15C.1 Setup 1: Single AoA

There is only one active probe in the test. The DL signals, and noise if applicable, transmitted from the probe, are aligned with the satellite epherimis information used in the test case and within the declared minimum elevation angle supported for receiving.

A.3.15C.2 Setup 2: 2 AoAs

There are 2 active probes in the test. The DL signals, and noise if applicable, are transmitted from the two active probes. One probe is aligned with the first satellite epherimis information used in the test case. The second probe is aligned with the second satellite epherimis information used in the test case. Both AoAs are within the declared minimum elevation angle supported for receiving and the relative angular offset between the two AoAs is 30°. The directions (AoAs) of the signals shall not be changed between test iterations.

A.3.16 TCI State Configuration

A.3.16.1 Introduction

This clause provides the configurations for TCI states towards either SSB or CSI-RS. The TCI states defined in this clause are configured in each test when applicable to indicate that certain DL signals are QCL'ed with the referenceSignal configured in the TCI states.

A.3.16.2 TCI states

Table A.3.16.2-1: TCI States

Parameter	TCI.State.0	TCI.State.1	TCI.State.2	TCI.State.3
tci-StateId	Id0	Id1	Id2	Id3
qcl-Type1	typeC	typeC	typeA	typeA
qcl-Type2[Note1]	typeD	typeD	typeD	typeD
referenceSignal	SSB0	SSB1	Resource #4 in TRS resource set 1 [Note3]	Resource #4 in TRS resource set 2 [Note3]

NOTE 1: qcl-Type2 of typeD only where applicable. For RRM test cases, this will be only in FR2
NOTE 2: referenceSignal configurations towards which the TCI states are configured are defined in a test-specific manner.
NOTE 3: Reference TRS resource sets are defined in clause A.3.17, and the applicable TRS resource set(s) are specified in each test case. When a single TRS resource set is configured in a test case, it is considered as resource set 1.

Table A.3.16.2-2: Void

A.3.16A Unified TCI State Configuration

A.3.16A.1 Introduction

This clause provides the configurations for unified TCI states towards either SSB or CSI-RS. The DLorJoint TCI states defined in this clause are configured in each test when applicable to indicate that certain DL (and UL, if joint DL/UL operation is configured) signals are QCL'ed with the referenceSignal configured in the TCI states. The UL TCI states defined in this clause are configured in each test when applicable to indicate that certain UL signals are QCL'ed with the referenceSignal configured in the TCI states.

A.3.16A.2 DLorJoint TCI states

Table A.3.16A.2-1: DLorJoint TCI States

Parameter	DLorJoint TCI.State.0	DLorJoint TCI.State.1	DLorJoint TCI.State.2	DLorJoint TCI.State.3	DLorJoint TCI.State.4	DLorJoint TCI.State.5	DLorJoint TCI.State.6	DLorJoint TCI.State.7	DLorJoint TCI.State.8	DLorJoint TCI.State.9	DLorJoint TCI.State.10	DLorJoint TCI.State.11

additionalPCI	N/A	configured Note3	N/A	N/A	N/A	N/A

NOTE 1: referenceSignal configurations towards which the UL TCI states are configured are defined in a test-specific manner.
NOTE 2: Reference TRS resource sets are defined in clause A.3.17, and the applicable TRS resource set(s) are specified in each test case. When a single TRS resource set is configured in a test case, it is considered as resource set 1.
NOTE 3: Only one PCI than serving cell PCI is included in the additionalPCIList, and the additionalPCIIndex is configured as 0.

A.3.16B LTM Candidate TCI State Configuration

A.3.16B.1 Introduction

This clause provides the configurations for TCI states of LTM candidate cell(s) towards either SSB or TRS. The LTM candidate DLorJoint TCI states defined in this clause are configured in each test when applicable to indicate that certain DL (and UL, if joint DL/UL operation is configured) signals are QCL'ed with the referenceSignal configured in the TCI states. The UL TCI states defined in this clause are configured in each test when applicable to indicate that certain UL signals are QCL'ed with the referenceSignal configured in the TCI states.

A.3.16B.2 LTM candidate DLorJoint TCI states

Table A.3.16B.2-1: LTM candidate DLorJoint TCI States

Parameter	Candidate DLorJoint TCI.State.0	Candidate DLorJoint TCI.State.1	Candidate DLorJoint TCI.State.2	Candidate DLorJoint TCI.State.3

Reference channel		TRS.1.4 TDD
Bandwidth		BW of Active BWP Note 1
SCS	kHz	30
First subcarrier index in the PRB used for CSI-RS		k_0=0 for CSI-RS resource 1,2,3,4
First OFDM symbol in the slot used for CSI-RS		l_0 = 5 for CSI-RS resource 1 and 3 l_0 = 9 for CSI-RS resource 2 and 4
Number of CSI-RS ports (X)		1 for CSI-RS resource 1,2,3,4
CDM Type		'No CDM' for CSI-RS resource 1,2,3,4
Density (ρ)		3 for CSI-RS resource 1,2,3,4
aperiodicTriggeringOffsetL2	slots	2
Aperiodic CSI-RS offset	slots	2 for CSI-RS resource 1 and 2 3 for CSI-RS resource 3 and 4
EPRE ratio to SSS	dB	0 Note 2
TCI state		TCI.State.0
NOTE 1: BW of TRS is configured same as the BW size of UE active BWP in the RRM test cases. NOTE 2: Unless otherwise specified in the test case.		

Table A.3.17.1.2-5: CSI-RS for tracking for SCS=15 kHz Set 1

Parameter	Unit	Value
Reference channel		TRS.1.5 TDD
