NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.

### A.5.5.3.9.2 Test Requirements

During T2 the UE shall start sending CSI reports for PUCCH SCell with non-zero CQI index at latest in a slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+[X]+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, $T_{\text{activation_time}} = T_{\text{FirstSSB}} + 5$ ms, as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for PUCCH SCell at latest in a slot m + $\frac{T_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

All of the above test requirements shall be fulfilled in order for the observed PUCCH SCell activation delay and PUCCH SCell deactivation delay to be counted as correct. The rate of correct observed PUCCH SCell activation delay and PUCCH SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+[X]+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$ then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.5.5.3.10 PUCCH SCell Activation and deactivation of unknown SCell in FR2

### A.5.5.3.10.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell activation and deactivation times are within the requirements stated in clause 8.3, when the PUCCH SCell is in FR2.

The supported test configurations are shown in table A.5.5.3.10.1-1 below. The test parameters are the same as in clause A.4.5.3.3.1 except those described in the following clause. The listed parameter values in tables A.5.5.3.10.1-2 will replace the values of corresponding parameters in tables A.4.5.3.3.1-2. The listed parameter values in tables A.5.5.3.10.1-3 will replace the values of corresponding parameters in tables A.4.5.3.3.1-3. In this case, OTA related test parameters are shown in table A.5.5.3.10.1-4 below.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, E-UTRA has one cell (Cell 1), and NR has two cells, PSCell (Cell 2) in FR1 and PUCCH SCell (Cell 3) in FR2. Cell 1 and Cell 2 have constant signal levels throughout the test.

Cell 1, Cell2 are in primary Timing Advance Group (pTAG), and Cell3 is in secondary Timing Advance Group (sTAG). The TimeAlignmentTimer of sTAG expires before receiving the activation command.

Before the test starts the UE is connected to Cell 1 (PCell) on E-UTRAN and Cell 2 (PSCell) on NR, but is not aware of Cell 3 (PUCCH SCell) on NR. The UE is monitoring the PCell and PSCell. The UE shall be continuously scheduled in the PCell and PSCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 3) becomes configured on NR.

The point in time at which the MAC message is received at the UE antenna connector provided that the HARQ ACK of the MAC message is received by TE, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI on for the activated PUCCH SCell on PUCCH SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{delay_PUCCH_SCell}}{\text{NR slot length}}$, as defined in clause 8.3.

Time period T3 starts when a MAC message for deactivation of PUCCH SCell, sent from the test equipment to the UEin a slot # denoted m, is received at the UE antenna connector provided that the HARQ ACK of the MAC message is received by TE. The UE shall carry out deactivation of the PUCCH SCell in a slot m + $\frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PSCell during activation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the PUCCH SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the PUCCH SCell deactivation command is sent until CSI reporting for PUCCH SCell is discontinued.

### A.5.5.3.10.2 Test Requirements

During T2 the UE shall start sending CSI reports for PUCCH SCell with non-zero CQI index at latest in a slot n + $\frac{T_{\text{HARQ}}+T_{delay_PUCCH_SCell}}{\text{NR slot length}}$, as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for PUCCH SCell at latest in a slot m + $\frac{T_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

All of the above test requirements shall be fulfilled in order for the observed PUCCH SCell activation delay and PUCCH SCell deactivation delay to be counted as correct. The rate of correct observed PUCCH SCell activation delay and PUCCH SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in slot n + $\frac{T_{\text{HARQ}}+T_{delay_PUCCH_SCell}}{\text{NR slot length}}$ then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.5.5.3.11 Multiple SCell activation and deactivation of one known PUCCH SCell and one unknown SCell in FR2

### A.5.5.3.11.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell with multiple SCell activation and deactivation delay requirement defined in clause 8.3, and interruption requirement defined in clause 8.2, when one known PUCCH SCell and one unknown SCell to be activated are in FR2.

The supported test configurations are shown in table A.5.5.3.11.1-1 below. The general test parameters are given in table A.5.5.3.11.1-2 and cell-specific test parameters in table A.5.5.3.11.1-3 below. OTA related test parameters are shown in table A.5.5.3.11.1-4.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are four carriers, one E-UTRA cell, and three NR cells. Before the test starts the UE is connected to Cell 1 (PCell) on the E-UTRA carrier and Cell 2 (PSCell) on the NR carrier in FR2, but is not aware of Cell 3 (PUCCH SCell) or Cell 4 (SCell) on the NR carriers both in FR2. Cell 2 and Cell 4 are in the primary PUCCH group, and Cell 3 is in the secondary PUCCH group. In addition, Cell 2 and Cell 4 are in primary Timing Advance Group (pTAG), and Cell 3 is in the secondary Timing Advance Group (sTAG). Cell 1, Cell 2 and Cell 3 have constant signal levels throughout the test. The UE is monitoring the PCell and PSCell. The UE shall be continuously scheduled in the PCell and PSCell throughout the whole test.

There are two sub tests in this section.

- For Test 1 (valid TA case), UE is provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment for sTAG.
- For Test 2 (invalid TA case), TimeAlignmentTimer of sTAG expires before UE receives the activation command

At the beginning of T1 the UE receives an RRC message by which the Cell 3 (PUCCH SCell) and Cell 4 (SCell) are configured on NR. The test equipment sends a single MAC message for activation of both Cell 3 and Cell 4 within 3 s for UE power class 2/3/4 or 4 s for UE power class 1 after RRM reports is sent for Cell 3.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted m, defines the start of time period T2. In the same MAC PDU, the test equipment activates the TCI state of RMC CORESET. In slot #m, the test equipment also sends an RRC message to configure the CSI-RS resources for both Cell 3 and Cell 4.

During T2, the UE shall be able to report valid CSI on PUCCH SCell for the activated PUCCH SCell at latest in

- slot $m$+ $T_{activate_total_PUCCH_SCell}$ as defined in clause 8.3.13.

During T2, the UE shall be able to report valid CSI on PCell for the activated SCell at latest in

- slot $m$+ $T_{activate_total_other_SCell.}$ as defined in clause 8.3.13.

Any PCell and PSCell interruption due to activation of PUCCH SCell shall occur in the slot $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $m + 1 + T_{\text{activate_total_PUCCH_SCell}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Any PCell and PSCell interruption due to activation of SCell shall occur in the slot $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $m + 1 + T_{\text{activate_total_other_SCell}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of both Cell 3 and Cell 4, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector. The UE shall carry out deactivation of the PUCCH SCell in a slot m + $\frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and the starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\text{T}_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

**Table A.5.5.3.11.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.5.5.3.11.1-2: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2,3,4 | One E-UTRAN radio channel (1) and three NR radio channels (2,3,4) are used for this test |
| Active PCell | | Cell 1 | Primary cell on E-UTRAN RF channel number 1.<br>As specified in clause A.3.7.2.2 |
| Active PSCell | | Cell 2 | Primary secondary cell on NR RF channel number 2 in FR1. |
| Configured deactivated PUCCH SCell | | Cell 3 | Configured deactivated secondary cell with PUCCH on NR RF channel number 3 in FR2 |
| Configured deactivated SCells | | Cell 4 | Configured deactivated secondary cell on NR RF channel number 4 in FR2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| SCell measurement cycle (measCycleSCell) | ms | 160 | For both Cell 3 and Cell 4 |
| T1 | s | 7 | During this time the PSCell shall be known and the SCells configured, PUCCH SCell detected but SCell not detected. |
| T2 | s | 1 | During this time the UE shall activate both the SCells. |
| T3 | s | 1 | During this time the UE shall deactivate the SCells. |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by *dl-DataToUL-ACK* if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| k | slot | $k_1+3\cdot N_{\text{slot}}^{\text{subframe},\mu}+1$ | As specified in clause 4.3 of TS 38.213 [3] |

### A.5.5.3.11.2 Test Requirements

During T2 the UE shall start sending CSI reports for Cell 3 with non-zero CQI index in the configured slots for CSI reporting no later than slot $m$+ $T_{activate_total_PUCCH_SCell}$ , as defined in clause 8.3.

During T2 the UE shall start sending CSI reports for Cell 4 with non-zero CQI index in the configured slots for CSI reporting no later than slot $m$+ $T_{activate_total_other_SCell}$ , as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell and PSCell during PUCCH SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + T_{activate_total_PUCCH_SCell} + N_{interruption}$, as defined in clause 8.3.

During T2 interruption of PCell and PSCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + T_{activate_total_other_SCell} + N_{interruption}$, as defined in clause 8.3.

During T3 the starting point of interruption of PCell and PSCell during the deactivation of PUCCH SCell and SCell shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the summation of interruption length due to PUCCH SCell activation/ deactivation and interruption length due to SCell activation/ deactivation, the values of interruption length are specified for EN-DC in clause 8.2.

All of the above test requirements shall be fulfilled in order for the observed SCells activation delay to be counted as correct. The rate of correct observed SCells activation delay and SCells deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI for PUCCH SCell in a slot $m$+ $T_{activate_total_PUCCH_SCell}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI for SCell in a slot $m$+ $T_{activate_total_other_SCell}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.5.5.3.12 SCell Activation and deactivation of unknown PUCCH SCell and unknown DL SCell in FR2 in non-DRX

### A.5.5.3.12.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell and DL SCell activation and deactivation times are within the requirements stated in clause 8.3.13, when the PUCCH SCell in FR2 and DL SCell in FR2 is unknown to the UE at the time of activation.

The supported test configurations are shown in table A.5.5.3.12.1-1 below. The test parameters are given in tables A.5.5.3.12.1-2 and cell-specific parameters in A.5.5.3.12.1-3 below. OTA related test parameters are shown in table A.5.5.3.12.1-4.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are four carriers, each with one cell. Before the test starts the UE is connected to Cell 1(PCell) on the E-UTRA carrier and Cell 2 (PSCell) on the NR carrier in FR2, but is not aware of Cell3 (PUCCH SCell) and Cell4(DL SCell2) on the NR carriers both in FR2. The UE is monitoring the PCell and PSCell. The UE shall be continuously scheduled in the PCell and PSCell throughout the whole test. SCC of Cell 3 and SCC of Cell 4 are on a same band.

At the beginning of T1 the UE receives an RRC message by which the Cell 3 and Cell 4 becomes configured on NR. The test equipment sends a single MAC message for activation of both SCells.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted m, defines the start of time period T2. In the same MAC PDU, the test equipment activates the TCI state of RMC CORESET. In slot #m, the test equipment also sends an RRC message to configure the CSI-RS resources for Cell 3 and Cell 4.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

**Table A.5.5.3.12.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.5.5.3.12.1-2: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2,3,4 | One E-UTRAN radio channel (1) and three NR radio channels (2,3,4) are used for this test |
| Active PCell | | Cell 1 | Primary cell on E-UTRAN RF channel number 1.<br>As specified in clause A.3.7.2.2 |
| Active PSCell | | Cell 2 | Primary secondary cell on NR RF channel number 2 in FR1. |
| Configured deactivated SCells | | Cell 3 (PUCCH SCell 1), Cell 4(DL SCell 2) | Configured deactivated secondary cell on NR RF channel number 3 and RF channel number 4, both in FR2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| SCell measurement cycle (measCycleSCell) | ms | 160 | For both Cell 3 and Cell 4 |
| TimeAlignmentTimer | ms | 1280 | Cell 1 and Cell 2 in pTAG. |
| TimeAlignmentTimerSTAG | ms | 1280 | Cell 3 and Cell 4 in sTAG |
| T1 | s | 1 | During this time Cell 3 and Cell 4 is configured and undetected. |
| T2 | s | 2 | During this time the UE shall activate the SCell. |
| T3 | s | 1 | During this time the UE shall deactivate the SCell. |
| $T_{HARQ}$ | ms | $k_1$×NR slot length | $k_1$ is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by *dl-DataToUL-ACK* if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| k | slot | $k_1+3\cdot N_{\text{slot}}^{\text{subframe},\mu}+1$ | As specified in clause 4.3 of TS 38.213 [3] |

### A.5.5.3.12.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after slot (m+k). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PSCell in the slot.

During T2 the UE shall start sending CSI reports for SCell 1 with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{delay_multiple_SCells_PUCCH_SCell}}{NR\ slot\ length}$, where

$T_{HARQ}$ is defined in table A.5.5.3.12.1-2

$T_{delay_multiple_SCells_PUCCH_SCell}$ is defined in section 8.13.13.1. In this test case, both valid TA and invalid TA cases shall be tested.

Test for case when UE has valid TA: the *TimeAlignmentTimer* [2] associated with the TAG containing the PUCCH SCell is running, and $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + \max((T_{First_available_CSI} + T_{CSI_processing}), 3*T_{target_PL\text{-}RS}) + T_{CSI_reporting_after}$.

Test for case when UE do not have valid TA: $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + \max((T_{First_available_CSI} + T_{CSI_processing}), (T1+T2+T3), 3*T_{target_PL\text{-}RS}) + T_{CSI_reporting_after}$

$T_{activation_time_multiple_scells}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in section 8.3.7

$T_{CSI_Reporting}$ = 10 ms

- NR slot length is 0.125 ms.

During T2 the UE shall start sending CSI reports for SCell2 with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{delay_multiple_SCells_other_SCell}}{NR\ slot\ length}$where

$T_{HARQ}$ is defined in table A.5.5.3.12.1-2

$T_{delay_multiple_SCells_other_SCell} = T_{activation_time_multiple_scells} + T_{CSI_Reporting}$.

- $T_{activation_time_multiple_scells}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in section 8.3.7

$T_{CSI_Reporting}$ = 10 ms

NR slot length is 0.125 ms.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot m + $\frac{T_{HARQ}+T_{delay_\text{multiple}_SCells_PUCCH_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.13 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

### A.5.5.3.13 SCell Activation and deactivation of unknown SCell in FR2 for UE in DRX, capable of small beam sweeping factors and/or short measurement interval

#### A.5.5.3.13.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell is unknown in FR2 by the UE at the time of activation. The test will also verify that the SSB-based L1-RSRP measurement accuracy is within the specified limits as stated in clause 10.1.20.1.

The supported test configurations are shown in table A.5.5.3.13.1-1 below. The test parameters are the same as in clause A.4.5.3.3.1 except those described in the following clause. The general test parameters are given in table A.5.5.3.13.1-2 and cell-specific test parameters in table A.5.5.3.13.1-3 below. In this case, OTA related test parameters are shown in table A.5.5.3.13.1-4 below.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, E-UTRA has one cell (Cell 1), NR has two cells, PSCell (Cell 2) in FR1 and SCell (Cell 3) in FR2. Cell 1 and Cell 2 have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on E-UTRAN and Cell 2 (PSCell) on NR but is not aware of Cell 3 (SCell) on NR. The UE is monitoring the PCell and PSCell. The UE shall be continuously scheduled within on-duration based on DRX configuration in the PCell and PSCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 3) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100 ms after the RRC message, in a slot # denoted m. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2.

During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot $m+T_{L1\text{-}RSRP}$. In the next DL slot after slot $m+T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received. In this test the allowed time for SCell activation depends on the UE reported capabilities regarding small beam sweeping factors (i.e. X1/X2 as indicated in beamSweepingFactorReduction-r18) and short measurement intervals (shortMeasInterval-r18).

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

The test equipment verifies the absolute accuracy of SSB-based L1-RSRP measurements during T2 by using the parameters in table A.5.5.3.13.1-3 and table A.5.5.3.13.1-4.

**Table A.5.5.3.13.1-1: Supported test configurations for FR2 SCell activation case with FR1 PSCell**

| Configuration | Description |

NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.

### A.5.5.3.13.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after slot (m+k). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PSCell in the slot.

For UE capable of *beamSweepingFactorReduction-r18* and *shortMeasInterval-r18* capabilities:

During T2 the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than

- 3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.2.

- For this test case, $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ = $T_{SSB}$=20 ms; $T_{L1\text{-}RSRP,\ enhanced_measure}$= (X2/8)*480 ms and $T_{L1\text{-}RSRP,reprt}$=5 ms, which allows $T_{L1\text{-}RSRP}$ = 968 ms if X1 and X2 use the default value. Value of $T_{L1\text{-}RSRP}$ for various X1/X2 capabilities is obtained from table A.5.5.3.13.1-5.

During T2 the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in table A.4.5.3.1.1-2

- $T_{activation_time}$ = 3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max{($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)} which allows 1000 ms in case of no X1/X2 capability and a minimum of 380 ms for the case with X1=1, X2=0 (for other values of X1/X2 capability corresponding value of $T_{L1\text{-}RSRP}$ shall be adopted from table A.5.5.3.13.1-5).

$T_{L1\text{-}RSRP,\ enhanced_measure}$ is

  - SSB based L1-RSRP measurement delay $T_{L1\text{-}RSRP_Measurement_Period_SSB}$ ms based on applicability as defined in clause 9.5 assuming M=1 and $T_{Report}$=0; N is equal to the value reported by the UE in *reduceForSSB-L1-RSRP-Meas i.e. X2*. Otherwise, if *reduceForSSB-L1-RSRP-Meas* is absent, N= 8.

  - CSI-RS based L1-RSRP measurement delay $T_{L1\text{-}RSRP_Measurement_Period_CSI\text{-}RS}$ ms based on applicability as defined in clause 9.5 assuming M=1 and $T_{Report}$=0.

In case UE has signalled X1/X2 to be lower than 8 the following values are allowed for $T_{L1\text{-}RSRP}$:

**Table A.5.5.3.13.2-1: $T_{L1\text{-}RSRP}$ for different X1/X2 capabilities (ms)**

| | X1=1 | X1=2 | X1=4 | X1=6 |
|---|---|---|---|---|
| X2=0 | 348 | 368 | 408 | 448 |
| X2=1 | 408 | 428 | 468 | 508 |
| X2=2 | 468 | 488 | 528 | 568 |
| X2=3 | 528 | 548 | 588 | 628 |
| X2=4 | 588 | 608 | 648 | 688 |
| X2=5 | 648 | 668 | 708 | 748 |
| X2=6 | 708 | 728 | 768 | 808 |
| X2=7 | 768 | 788 | 828 | 868 |

For UE capable of *beamSweepingFactorReduction-r18* but not *shortMeasInterval-r18* capabilities, and the cell specific test parameters are described in table A.5.5.3.13.1-3 except that SMTC value is SMTC.1:

During T2 the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than:

- 3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.2.

- For this test case, considering DRX, $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ =20 ms; from table 9.5.4.1-2 $T_{L1\text{-}RSRP,\ enhanced_measure}$= (X2/8)*11520 ms and $T_{L1\text{-}RSRP,report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ = 12008 ms if X1 and X2 are absent. Value of $T_{L1\text{-}RSRP}$ for various X1/X2 capabilities is obtained from table A.5.5.3.13.1-6 assuming DRX cycle = 320 ms.

During T2 the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in table A.4.5.3.1.1-2
- $T_{activation_time}$ = 3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + X1*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max{($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)} which allows 12040 ms in case of no X1/X2 capability and a minimum of 380 ms for the case with X1=1, X2=0 (for other values of X1/X2 capability corresponding value of $T_{L1\text{-}RSRP}$ shall be adopted from table A.5.5.3.13.1-6).

**Table A.5.5.3.13.1-6: $T_{L1\text{-}RSRP}$ for different X1/X2 capabilities with 320 ms DRX cycle (ms)**

| | X1=1 | X1=2 | X1=4 | X1=6 |
|---|---|---|---|---|
| X2=0 | 348 | 368 | 408 | 448 |
| X2=1 | 1788 | 1808 | 1848 | 1888 |
| X2=2 | 3228 | 3248 | 3288 | 3328 |
| X2=3 | 4668 | 4688 | 4728 | 4768 |
| X2=4 | 6108 | 6128 | 6168 | 6208 |
| X2=5 | 7548 | 7568 | 7608 | 7648 |
| X2=6 | 8988 | 9008 | 9048 | 9088 |
| X2=7 | 10428 | 10448 | 10488 | 10528 |

For UE capable of *shortMeasInterval-r18* but not *beamSweepingFactorReduction-r18* capabilities, the general test parameters are described in table A.5.5.3.13.1-2 except that the default value for X1=X2=8 is chosen.

During T2 the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+$T_{L1\text{-}RSRP}$), where $T_{L1\text{-}RSRP}$ is no larger than:

- 3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + 8*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP,\ report}$ as defined in clause 8.3.2.
- For this test case, even with DRX, the UE treats the case as non-DRX, thus $T_{FirstSSB_MAX,\ enhanced}$ =$T_{SMTC_MAX,\ enhanced}$ =$T_{rs,\ enhanced}$ = $T_{SSB}$=20 ms; $T_{L1\text{-}RSRP,\ measure}$= 480 ms and $T_{L1\text{-}RSRP,report}$=5 ms, which allows $T_{L1\text{-}RSRP}$ = 968 ms.

During T2 the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot m + $\frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in table A.4.5.3.1.1-2
- $T_{activation_time}$ = 3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + 15*$T_{SMTC_MAX,\ enhanced}$ + 8*$T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ measure}$ + $T_{L1\text{-}RSRP,\ report}$ + max{($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$), ($T_{uncertainty_RRC}$ + $T_{RRC_delay}$)} which allows 1000 ms.
- $T_{CSI_Reporting}$ = 10 ms
- NR slot length is 0.125 ms for this test case.

The L1-RSRP measurement accuracy for SSB resource reported by UE in L1-RSRP report (SSB#0 or SSB#1) of Cell 3 shall fulfil the accuracy requirements in clauses 10.1.20.1 provided the side condition is -2 dB as defined in clause 8.3.2.

During T3 the UE shall stop sending CSI reports for the SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

## A.5.5.3.14 PUCCH SCell activation and deactivation with FR1 PSCell based on L3 reporting after SCell activation command

### A.5.5.3.14.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell activation and deactivation times are within the requirements stated in clause 8.3.12 for UE capable of l3-MeasUnknownSCellActivation-r18.

The supported test configurations are shown in table A.5.5.3.14.1-1 below. The test parameters are given in tables A.5.5.3.14.1-2 and cell-specific parameters in A.5.5.3.14.1-3 and A.5.5.3.14.1-4 below. The test consists of Three successive time periods, with duration of T1, T2 and T3 respectively. There are two NR carriers and one E-UTRA carrier, each with one cell. The E-UTRAN PCell setting refers to table A.3.7.2.1-1. Before the test starts the UE is connected to Cell 1 and Cell 2 but is not aware of Cell3, and UE is configured with MeasObjectNR on carriers of Cell2 and Cell3. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 3) becomes configured on radio channel 3, and one measID is associated with *reportOnActivation*. The UE now starts monitoring the Cell3. The test equipment sends a MAC message for activation of the PUCCH SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI for the activated PUCCH SCell at latest in slot $n+\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.12.

There are two sub-tests in the test. In sub-test 1, TE shall transmit DCI 0-1 to PSCell at slot $n+\frac{T_{\mathrm{HARQ}}+7\ ms}{\mathrm{NR\ slot\ length}}$, and the UE shall be able to send L3 measurements report of the SCell at slot $n+\frac{T_{\mathrm{HARQ}}+7\ ms+\mathrm{k2}}{\mathrm{NR\ slot\ length}}$, where k2 =1. In sub-test 2, TE shall transmit DCI 0-1 to PSCell at slot $n+\frac{T_{\mathrm{HARQ}}+7\ ms+\mathrm{M}-\mathrm{k2}}{\mathrm{NR\ slot\ length}}$, where k2=1 and M is defined in 8.3.12. The UE shall be able to send L3 measurements report of the SCell at$+\frac{T_{\mathrm{HARQ}}+7\ ms+\mathrm{M}}{\mathrm{NR\ slot\ length}}$.

Any PSCell interruption due to activation of PUCCH SCell shall occur in the slot $n+1+\frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n+1+\frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}}+N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2

Time period T3 starts when a MAC message for deactivation of PUCCH SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot $\mathrm{m}+\frac{\mathrm{T_{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3.14and the starting point of any PCell interruption due to the deactivation shall occur in the slot $\mathrm{m}+1+\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to $\mathrm{m}+1+\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.14.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PSCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.5.5.3.14.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | LTE FDD PCell, Cell 2 NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Cell 3 NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE FDD PCell, Cell 2 NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Cell 3 NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD PCell, Cell 2 NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Cell 3 NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

## A.5.5.3.14.2 Test Requirements

By end of T2 the UE shall finish the DL activation for the PUCCH SCell. Assuming the periodic CSI reporting is used and assuming periodic CSI activation and TCI state is sent along with SCell activation MAC CE, UE shall finish the DL activation by slot n+ $\frac{T_{HARQ}+T_{activation_time}}{NR\ slot\ length}$ as defined in clause 8.3.12.

During T2 the UE shall start sending PRACH preamble to TE and shall obtain the TA command from TE and shall be ready to send valid CSI report to the TE. CSI report shall be transmitted within $T_{activation_time}$ + Max(($T_{First_available_CSI}$ + $T_{CSI_processing}$), (T1+T2+T3)) + $T_{CSI_reporting_after}$ from the transmission of HARQ feedback of SCell activation command as specified in the 8.3.12.

In sub-test 1, $T_{activation_time}$ = 7 ms + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.12.

In sub-test 2, $T_{activation_time}$ = 7 ms + M+ max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.12.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot m + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 the starting point of interruption of PSCell during SCell deactivation shall not happen outside the slot m + $1 + \frac{T_{HARQ}}{NR\ slot\ length}$ to m + $1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption of PSCell due to activation of SCell shall not be more than the values specified for SA in clause 8.2.2.2.7.

### A.5.5.3.15 SCell Activation of unknown SCell in FR2 in non-DRX for 160 ms SCell measurement cycle with the L3 reporting during activation

#### A.5.5.3.15.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3.17, when the SCell in FR2 is unknown by the UE at the time of activation. In this test, UE shall perform two sub-tests where two different UL resource locations are configured.

The supported test configurations are shown in table A.5.5.3.15.1-1 below. The test parameters are given in tables A.5.5.3.15.1-2 and cell-specific parameters in A.5.5.3.15.1-3 and A.5.5.3.15.1-5 below. OTA related test parameters are shown in table A.5.5.3.15.1-4. The test consists of three successive time periods, with duration of T1, T2, and T3, respectively. There are three carriers and each with one cell. E-UTRA has one cell (Cell 1), NR has two cells, PSCell (Cell 2) in FR1 and SCell (Cell 3) in FR2. Cell 1 and Cell 2 have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on E-UTRAN and Cell 2 (PSCell) on NR but is not aware of Cell 3 (SCell) on NR. The UE is only monitoring the PCell and PSCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 3) becomes configured on radio channel 3. In the measurement control information for Cell 3, it is indicated to the UE that event-triggered reporting with Event A2 and reportOnActivation is used. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell activation.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PSCell for the activated SCell at latest in slot n + $\frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{\text{NR slot length}}$, as defined in clause 8.3.

In sub-test1, TE shall transmit DCI 0-1 to PSCell at slot $n + \frac{T_{HARQ}+7\ ms}{\text{NR slot length}}$. The UE shall be able to send L3 measurements report of the SCell at slot $n + \frac{T_{HARQ}+7\ ms+0.125\ \text{ms}}{\text{NR slot length}}$ for sub-test 1.
In sub-test2, TE shall transmit DCI 0-1 to PSCell at slot $n + \frac{T_{HARQ}+3\ ms+\text{M}-0.125\ \text{ms}}{\text{NR slot length}}$, The UE shall be able to send L3 measurements report of the SCell at slot $n + \frac{T_{HARQ}+7\ ms+\text{M}}{\text{NR slot length}}$ for sub-test 2. TE will send TCI activation command after receiving L3 measurement report of the SCell.

The UE shall start reporting CSI in PSCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{HARQ}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PSCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CSI reporting for SCell is discontinued.

**Table A.5.5.3.15.1-1: Supported test configurations for FR2 SCell activation case**

| Configuration | Description |
|---|---|
| 1 | LTE FDD PCell, Cell 2 NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Cell 3 NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.5.5.3.15.2 Test Requirements

During T2, the UE shall be able to send a valid L3-RSRP report for the SCell in the configured slots for CSI reporting at slot n + $\frac{T_{HARQ}+7ms+0.125ms}{NR\ slot\ length}$ for sub-test 1. For sub-test2, the UE shall be able to send a valid L3-RSRP for the SCell at slot n + $\frac{T_{HARQ}+7ms+M}{NR\ slot\ length}$ . The UE is not required to send L3-RSRP report after slot n + $\frac{T_{HARQ}+3ms+M}{NR\ slot\ length}$, where M is defined in 8.3.17.

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ and $T_{CSI_Reporting}$ are defined in table A.7.5.3.16.1-2.
- In this case, $T_{SSB}=T_{SMTC}$ = 20 ms and $T_{L1\text{-}RSRP,report}$ = 5 ms.
- For sub-test1, $T_{activation_time}$ = 7 ms + 0.125 ms + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$).
- For sub-test2, $T_{activation_time}$ = 3 ms + M + max ($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$)
- NR slot length is 0.125 ms for this test case.

During T3 the UE shall stop sending CSI reports for SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $m + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}}$, as defined in clause 8.3, where $T_X$ =20 ms.

During T3 interruption of PCell / PSCell during SCell activation shall not happen outside the slot n + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.5.5.4 Void

# A.5.5.5 Beam Failure Detection and Link recovery procedures

## A.5.5.5.1 EN-DC Beam Failure Detection and Link Recovery Test for FR2 PSCell configured with SSB-based BFD and LR in non-DRX mode

### A.5.5.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in tables A.5.5.5.1.1-1, A.5.5.5.1.1-2, A.5.5.5.1.1-3 and A.5.5.5.1.1-4 below. There are two cells, Cell 1 is the E-UTRAN PCell, and Cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.1.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set $q_0$ in the active PSCell to emulate SSB based beam failure. Figure A.5.5.5.1.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.5.5.5.1.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | LTE TDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.5.5.5.1.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband

**Table A.5.5.5.1.1-4: Void**

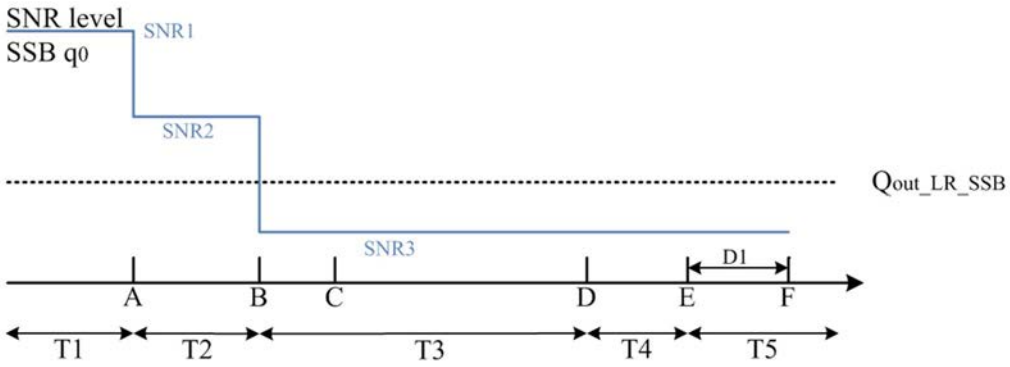

**Figure A.5.5.5.1.1-1: SNR variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

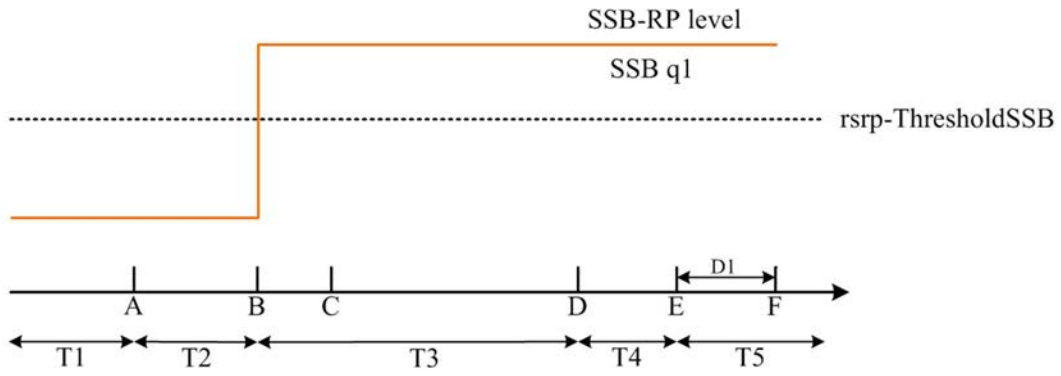

**Figure A.5.5.5.1.1-2: SSB_RP level variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.5.5.5.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 960+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.5.2 EN-DC Beam Failure Detection and Link Recovery Test for FR2 PSCell configured with SSB-based BFD and LR in DRX mode

### A.5.5.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in tables A.5.5.5.2.1-1, A.5.5.5.2.1-2, A.5.5.5.2.1-3, A.5.5.5.2.1-4 and A.5.5.5.2.1-5 below. There are two cells, Cell 1 is the E-UTRAN PCell, and Cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.2.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set $q_0$ in the active PSCell to emulate SSB based beam failure. Figure A.5.5.5.2.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCSell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.5.5.5.2.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | LTE TDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

### A.5.5.5.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 560+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.5.3 EN-DC Beam Failure Detection and Link Recovery Test for FR2 PSCell configured with CSI-RS-based BFD and LR in non-DRX mode

### A.5.5.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving PSCell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in tables A.5.5.5.3.1-1, A.5.5.5.3.1-2, and A.5.5.5.3.1-3 below. There are two cells, Cell 1 is the E-UTRAN PCell, and Cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.3.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the CSI-RS in set $q_0$ in the active PSCell to emulate CSI-RS based beam failure. Figure A.5.5.5.3.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

**Table A.5.5.5.3.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | LTE TDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

### A.5.5.5.3.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

### A.5.5.5.4 EN-DC Beam Failure Detection and Link Recovery Test for FR2 PSCell configured with CSI-RS-based BFD and LR in DRX mode

#### A.5.5.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving PSCell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in tables A.5.5.5.4.1-1, A.5.5.5.4.1-2, A.5.5.5.4.1-3, and A.5.5.5.4.1-4 below. There are two cells, Cell 1 is the E-UTRAN PCell, and Cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.4.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the CSI-RS in set $q_0$ in the active PSCell to emulate CSI-RS based beam failure. Figure A.5.5.5.4.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

### A.5.5.5.4.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.5.5 EN-DC scheduling availability restriction during Beam Failure Detection and Link Recovery for FR2 PSCell configured with SSB-based BFD and LR in non-DRX mode

### A.5.5.5.5.1 Test Purpose and Environment

The purpose is to test scheduling availability restrictions when the UE is performing beam failure detection or when the UE is performing L1-RSRP measurement for candidate beam detection, when no DRX is used. This test will verify the scheduling availability restriction requirements for SSB based beam failure detection and link recovery for an FR2 serving cell in clause 8.5.7 and 8.5.8.

The test parameters are given in tables A.5.5.5.5.1-1, A.5.5.5.5.1-2 and A.5.5.5.5.1-3 below. There are two cells, Cell 1 is the E-UTRAN PCell, and Cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.5.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB index 0 in the active PSCell to emulate SSB based beam failure. Figure A.5.5.5.5.1-2 shows the variation of the downlink L1-RSRP of the SSB index 1 used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. This test will focus on the scheduling availability during beam failure detection and candidate beam detection. In the test, DRX configuration is not enabled. Test is to test the scheduling availability restriction of UE performing beam failure detection and candidate beam detection when SSB RS configured for Beam failure detection and candidate beam detection. During the test the UE is scheduled to transmit continuously in UL.

**Table A.5.5.5.5.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.5.5.5.5.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband
NOTE 12: BFD RS ($q_0$) is configured as SSB index 0 at the start of T3, and it is reconfigured by RRC as SSB index 1 after the UE transmits the preamble on a beam associated with the candidate beam set $q_1$.

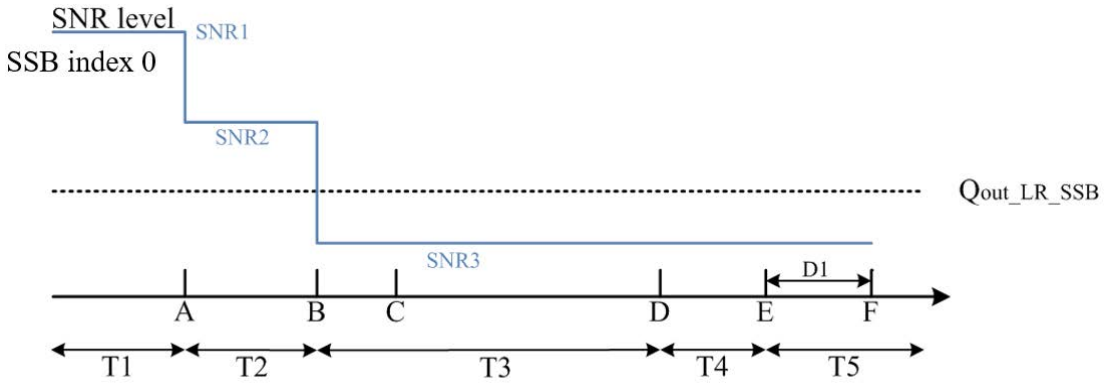

**Figure A.5.5.5.5.1-1: SNR variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

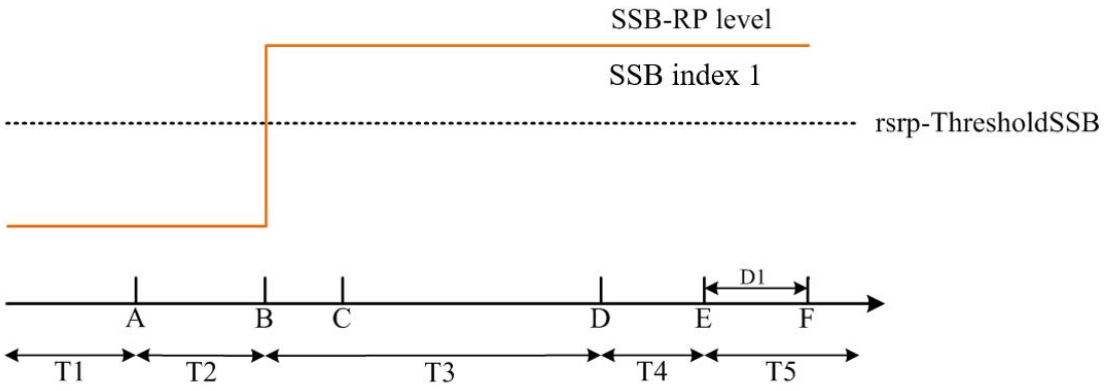

**Figure A.5.5.5.5.1-2: SSB_RP level variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.5.5.5.5.2 Test Requirements

The UE behaviour during time duration T3 follows the requirements defined in clause 8.5.7.3:

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on BFD-RS symbols to be measured for beam failure detection.

The UE behaviour during time durations T4 and T5 follows the requirements defined in clause 8.5.8.3:

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on reference symbols to be measured for candidate beam detection.

## A.5.5.5.6 EN-DC Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in non-DRX mode

### A.5.5.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in tables A.5.5.5.6.1-1, A.5.5.5.6.1-2 and A.5.5.5.6.1-3. There are three cells, Cell 1 is the E-UTRAN PCell, Cell 2 is the PSCell, and Cell 3 is the SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.6.1-1 shows the variation of the downlink SNR of the active SCell and the SNR of the CSI-RS in set $q_0$ in the active SCell to emulate CSI-RS based beam failure. Figure A.5.5.5.6.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1, Cell 2, and Cell 3. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

**Table A.5.5.5.6.1-1: Supported test configurations for FR2 PSCell and SCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | LTE TDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

### A.5.5.5.6.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.5.5.5.6.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 2.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 2 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 2.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.5.7 EN-DC Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in DRX mode

### A.5.5.5.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in tables A.5.5.5.7.1-1, A.5.5.5.7.1-2 and A.5.5.5.7.1-3. There are three cells, Cell 1 is the E-UTRAN PCell, Cell 2 is the PSCell, and Cell 3 is the SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.7.1-1 shows the variation of the downlink SNR of the active SCell and the SNR of the CSI-RS in set $q_0$ in the active SCell to emulate CSI-RS based beam failure. Figure A.5.5.5.7.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1, Cell 2, and Cell 3. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.5.5.5.7.1-1: Supported test configurations for FR2 PSCell and SCell**

### A.5.5.5.7.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.5.5.5.7.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 2.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 2.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.5.8 EN-DC TRP specific Beam Failure Detection and Link Recovery Test for FR2 PSCell configured with CSI-RS-based BFD and LR in DRX mode

### A.5.5.5.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the TRP specific CSI-RS-based beam failure in the set (q0,0), (q0,1) configured for a serving PSCell and a cell with PCID different from the serving cell, and that the UE performs correct CSI-RS-based link recovery based on beam candidate set (q1,0) and (q1,1). The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell with *schedulingRequestID-BFR-r17* configured, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in tables A.5.5.5.8.1-1, A.5.5.5.8.1-2, A.5.5.5.8.1-3, and A.5.5.5.8.1-4 below. There are three cells, Cell 1 is the E-UTRAN PCell, Cell 2 is the PSCell and Cell 3 is the cell with different PCID in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.8.1-1 shows the variation of the downlink SNR of the PSCell and the SNR of the CSI-RS in set $q_0$ in the active PSCell to emulate CSI-RS based beam failure. Figure A.5.5.5.8.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.5.5.5.4.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.
NOTE 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband

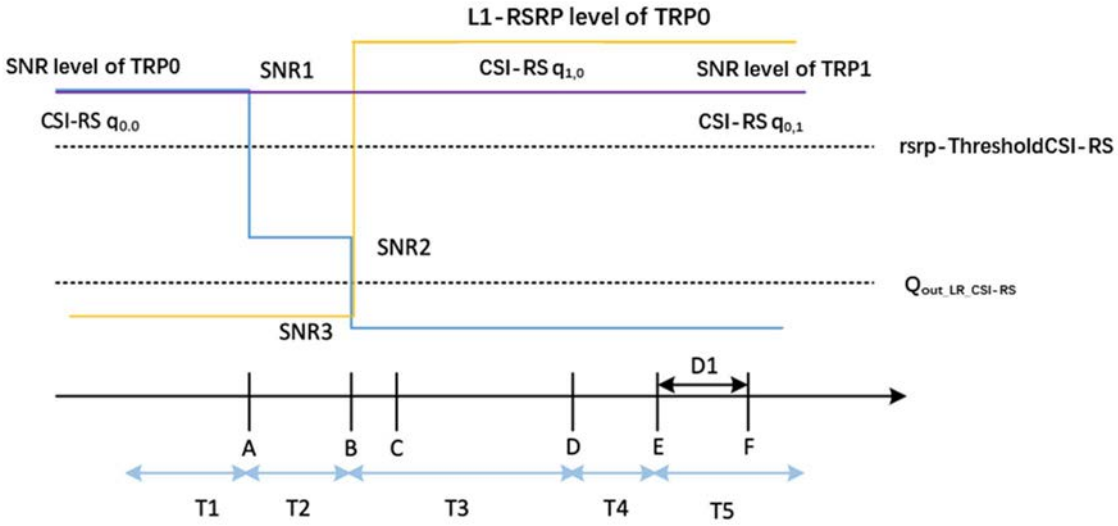

**Figure A.5.5.5.8.1-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode**

### A.5.5.5.8.2 Test Requirements

Test requirements are applied to TRP specific report respectively on (q0,0), (q0,1) for cell-2 and (q1,0), (q1,1) for cell-3 repectively as Figure A.5.5.5.8.1-1.

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 260+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_{1,0}$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_{1,0}$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.5.9 Beam Failure Detection and Link Recovery Test for FR2 PSCell configured with SSB-based BFD and LR in DRX mode for UE fulfilling relaxed measurement criterion

### A.5.5.5.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.2.4 for UE fulfilling good serving cell quality criterion, if configured. *goodServingCellEvaluationBFD* [2] criterion is configured according to the parameters listed in table A.5.5.5.9.1-2.

The test parameters are given in tables A.5.5.5.9.1-1, A.5.5.5.9.1-2 and A.5.5.5.9.1-3 below. There are two cells, Cell 1 is the E-UTRAN PCell, and Cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.9.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSBs in set $q_0$ in the active PSCell to emulate SSB based beam failure. Figure A.5.5.5.9.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PSCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.5.5.5.9.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2 | LTE TDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 3 | LTE FDD, TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth |
| 4 | LTE TDD, TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR2 | |

| NOTE 4: Void | | | | | | |
| NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1. | | | | | | |
| NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG. | | | | | | |
| NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs. | | | | | | |
| NOTE 8: The SNR for SSB0 in time periods T1, T2, T3, T4 and T5 is denoted as SNR0_1, SNR0_2 and SNR0_3 respectively in figure A.5.5.5.9.1-1. The SNR for SSB1 in time periods T1, T2, T3, T4 and T5 is denoted as SNR1_1, SNR1_2 and SNR1_3 respectively in figure A.5.5.5.9.1-1. | | | | | | |
| NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6. | | | | | | |
| NOTE 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |
| NOTE 11: This value allows up to 1 dB degradation from applied SNR to UE baseband | | | | | | |

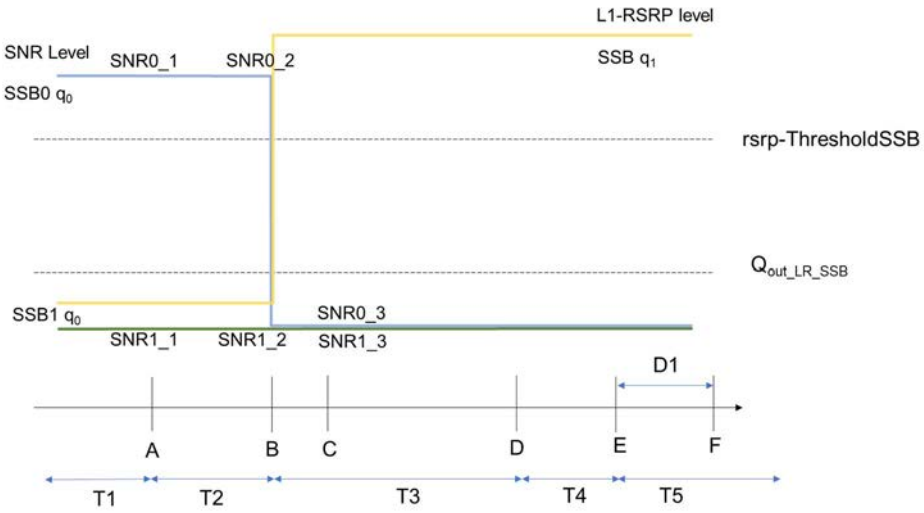

**Figure A.5.5.5.9.1-1: SNR and L1-RSRP variation for SSB-based beam failure detection and link recovery testing in DRX mode for UE fulfilling relaxed measurement criterion**

### A.5.5.5.9.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 560+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.6 Active BWP switch

## A.5.5.6.1 DCI-based and Timer-based Active BWP Switch

### A.5.5.6.1.1 E-UTRAN – NR PSCell FR2 DL active BWP switch with non-DRX in synchronous EN-DC

#### A.5.5.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6. Supported test configurations are shown in table A.5.5.6.1.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.5.5.6.1.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.5.5.6.1.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.5.5.6.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE should switch its bandwidth part from BWP-1 to BWP-2.
>
> The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}$).

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

> The time period T3 starts from the slot #*j*, where j is the beginning slot of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.
>
> The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}$).

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

**Table A.5.5.6.1.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|

| | |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: A UE which fulfils the requirements in test case A.5.5.2.2 can skip the test cases in A.5.5.2.1. | |

#### A.5.5.6.1.1.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after DL slot ($i+Y1$), ($j+Y2$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

### A.5.5.6.1.2 E-UTRAN – NR PSCell FR2 with FR2 SCell DL active BWP switch in non-DRX in synchronous EN-DC

#### A.5.5.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6.2, and interruption requirements for NR victim cell defined in clause 8.2.1.2.7. Supported test configurations are shown in table A.5.5.6.1.2.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in table A.5.5.6.1.2.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in table A.5.5.6.1.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) and SCell (Cell 3) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 3 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC) and Cell 3 (SCell) on radio channel 3 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 3 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PSCell, BWP-0 in Cell 2 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PSCell.
- UE is configured with a *bwp-InactivityTimer* timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.
>
> The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ($i+T_{BWPswitchDelay}$).
>
> PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.
>
> PSCell(Cell 2) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

> The time period T3 starts from the slot #*j*, where j is the first slot of the subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.
>
> The UE shall be able to receive PDSCH at the beginning of the DL slot right after SCell's DL slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PSCell at latest at the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 starting from the beginning of the DL slot right after slot ($j+T_{BWPswitchDelay}$).
>
> PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.
>
> PSCell(Cell 2) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to NR PSCell is carried out in the correct time span by monitoring ACK/NACK sent in PSCell during BWP switch of SCell.

**Table A.5.5.6.1.2.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|

### A.5.5.6.1.2.2 Test Requirements

During T1, the UE shall start to send the ACK for SCell from the first UL slot that occurs after the beginning of DL slot $(i+T_{BWPswitchDelay}+k1)$.

During T3, the UE shall start to send the ACK for SCell from the first UL slot that occurs after the beginning of DL slot $(j+T_{BWPswitchDelay}+k1)$.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in TS 36.133 [15] clause 7.32.2.7.

During T1, the start of the interruption of PSCell during SCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of PSCell during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PSCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.6.2.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after slot $(i+T_{BWPswitchDelay}+k1)$, $(j+T_{BWPswitchDelay}+k1)$, then the UE shall use the next available uplink resource for reporting the corresponding ACK.

## A.5.5.6.2 RRC-based Active BWP Switch

### A.5.5.6.2.1 E-UTRAN – NR PSCell FR2 DL active BWP switch with non-DRX in synchronous EN-DC

#### A.5.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in table A.5.5.6.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one PSCell (Cell 2) as given in table A.5.5.6.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of PSCell are specified in table A.5.5.6.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on E-UTRA PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2.

Before the test starts,

- UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC) and to Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 2 (PSCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PSCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

If the *RRCReconfiguration* is embedded in E-UTRA RRC message, time period T1 starts when a E-UTRA RRC message *RRCConnectionReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side from PCell in PSCell's slot # denoted *i*. Otherwise, i.e., if the *RRCReconfiguration* is not embedded in E-UTRA RRC message, time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in from PSCell in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to completely receive PDSCH on PSCell from the first DL slot occurs right after the beginningof PSCell's DL slot i + $\frac{T_{\mathrm{RRCprocessingDelay}}+T_{\mathrm{BWPswitchDelayRRC}}}{\mathrm{NR\ Slot\ length}}$ as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PSCell from the first UL slot that occurs after the beginning of DL slot i +

$\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1. The UE shall be continuously scheduled on PSCell's BWP-1 starting the first DL slot that occurs right after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$.

$T_{RRCprocessingDelay}$ and $T_{BWPswitchDelayRRC}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configurationis sent till the time when a vaild ACK/NACK is received.

**Table A.5.5.6.2.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

**Table A.5.5.6.2.1.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| E-UTRA RF Channel Number | | 1 | One E-UTRA radio channel is used for this test |
| NR RF Channel Number | | 2 | One NR radio channel is used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| Active PSCell | | Cell 2 | PSCell on RF channel number 2. |
| CP length | | Normal | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

A.5.5.6.2.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell from the first DL slot that occurs right after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for the PSCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

### A.5.5.6.3.1 E-UTRAN – NR PSCell FR2 and NR SCell FR2 DL active BWP switch on multiple CCs in synchronous EN-DC

#### A.5.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch on multiple CCs delay requirement defined in clause 8.6. Supported test configurations are shown in table A.5.5.6.3.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in table A.5.5.6.3.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and NR SCell is specified in table A.5.5.6.3.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.5.5.6.3.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) and SCell (Cell 3) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and Cell 3 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC) and Cell 3 (SCell) on radio channel 3 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell and SCell, BWP-1 and BWP-2, in Cell 2 and Cell 3 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell and SCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell and SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for PSCell DL BWP switch and a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE simultaneously, are received at the UE side in PSCell and SCell slot # denoted *i*. The UE should switch its bandwidth part from BWP-1 to BWP-2 in PSCell and SCell.
>
> The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+T_{MultipleBWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{MultipleBWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ($i+T_{MultipleBWPswitchDelay}$).

The UE shall be able to receive PDSCH at the beginning of the DL slot right after SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ($i+T_{MultipleBWPswitchDelay}+k1$). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ($i+T_{MultipleBWPswitchDelay}$).

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell (Cell 2) and SCell (Cell 3).

During T3,

The time period T3 starts from the slot #*j*, where j is the beginning slot of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires in PSCell and SCell. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1 in both PSCell and SCell.

The UE shall be able to receive PDSCH on PSCell at the beginning of the DL slot right after PSCell's DL slot ($j+ T_{MultipleBWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after slot ($j+ T_{MultipleBWPswitchDelay} +k1$). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ($j+ T_{MultipleBWPswitchDelay}$).

The UE shall be able to receive PDSCH on SCell at the beginning of the DL slot right after SCell's DL slot ($j+ T_{MultipleBWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell at latest at the beginning of the DL slot right after slot ($j+ T_{MultipleBWPswitchDelay} +k1$). The UE shall be continuously scheduled on SCell's BWP-1 starting from the beginning of the DL slot right after slot ($j+ T_{MultipleBWPswitchDelay}$).

The test equipment verifies the DL BWP switch time in PSCell and SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

**Table A.5.5.6.3.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

#### A.5.5.6.3.1.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell and SCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{MultipleBWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK for PSCell and SCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{MultipleBWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* and *bwp-SwitchingMultiCCs-r16* [2], UE shall finish BWP switch within the time duration $T_{MultipleBWPswitchDelay}$ defined in TS 38.133 caluse 8.6.2A and 8.6.2B

All of the above test requirements shall be fulfilled in order for the observed PSCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after DL slot ($i+Y1$), ($j+Y2$), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

### A.5.5.6.4 SCell dormancy switch

#### A.5.5.6.4.1 E-UTRAN – NR FR2 PSCell SCell dormancy switch of single FR2 SCell inside active time

#### A.5.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify

1) the interruption due to RRM and CSI measurement during SCell dormancy on spCell is within the limits 1) the interruption due to RRM and CSI measurement during SCell dormancy on spCell is within the limits specified in clause 8.2.1.2.15.2 and 8.2.1.2.15.3 for NR victim cell, and

2) the SCell dormancy switch delay is within the requirement defined in clause 8.6.2, and the SCell dormancy switch interruption is within the limits defined in clause 8.2.1.2.15.1 for NR victim cell.

Supported test configurations are shown in table A.5.5.6.4.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in table A.5.5.6.4.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in table A.5.5.6.4.1.1-3 below.

The tests consist of three consecutive time periods T1, T2, and T3, respectively. All cells have constant signal levels throughout the test. The UE is continuously scheduled in PCell and PSCell throughout the test

Before the test starts,

- UE is connected to Cell 1 (PCell), Cell 2 (PSCell) and Cell 3 (SCell).
- UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 2. BWP-0 includes the bandwidth of the initial DL BWP and SSB.

- UE is configured with one non-dormant and one dormant UE-specific downlink bandwidth part, BWP-0 and BWP-1, respectively, for Cell 3. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 3 is BWP-0.
- UE is indicated that firstOutsideActiveTimeBWP-Id that the active DL BWP after when switching from dormant BWP in Cell 3 is BWP-0

T1 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PSCell at the antenna connector, in a slot # denoted *m*, pertaining to dormancy indication for switching SCell from non-dormancy to dormancy. The UE shall complete switching of the SCells to dormancy by the end of slot *m* + ceil($T_{BWPswitchDelay}$/NR slot length) + 1 in Test1, and slot *m* + ceil($T_{BWPswitchDelay}$/NR slot length) + 2 in Test2, as specified in clause 8.6.2. Any PSCell interruptions due to the switching between non-dormant and dormant BWPs shall fulfill requirements in clause 8.2.1.2.15.1 for NR victim cell. The test equipment verifies that interruptions due to switching from non-dormancy to dormancy are within the requirements by analysing HARQ feedback transmitted in PSCell for PSCell.

During T2, the UE is carrying out CSI and RRM measurements on dormant SCell. Any interruptions due to CSI and RRM measurements shall fulfill requirements in clause 8.2.1.2.15.2 and 8.2.1.2.15.3 for NR victim cell. The test equipment verifies that the interruptions are within the allowed percentages by counting ACK/NACKs in PSCell. At the end of T2, the test equipment transmits a DCI with dormancy indication on PDCCH in PSCell carrying a dormany indication for switching SCell from dormancy to non-dormancy.

T3 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PSCell at the antenna connector, in a slot # denoted *n*, pertaining to dormancy indication for switching SCell from dormancy to non-dormancy. The UE shall complete switching of the SCell to non-dormancy by the end of slot *n* + ceil($T_{BWPswitchDelay}$/NR slot length) + 1 in Test1, and slot *n* + ceil($T_{BWPswitchDelay}$/NR slot length) + 2 in Test2, as specified in clause 8.6.2. Any PSCell interruptions due to the switching between non-dormant and dormant BWPs shall fulfill requirements in clause 8.2.1.2.15.1 for NR victim cell. The test equipment verifies that interruptions due to switching from dormancy to non-dormancy are within the requirements by analysing HARQ feedback transmitted in PSCell for PSCell. PDCCHs indicating new transmissions shall be sent continuously on SCell from the slot right after *n* + ceil($T_{BWPswitchDelay}$/NR slot length) + 1 in Test1, and slot *n* + ceil($T_{BWPswitchDelay}$/NR slot length) + 2 in Test2. The test equipment verifies the SCell dormancy switch delay by counting the slots from slot n till an ACK/NACK for SCell is received.

There are two subtests in this test. In Subtest 1 the DCI format 1_1 command for SCell dormancy switch is transmitted within the first 3 OFDM symbols in a slot, and in Subtest 2 the DCI format 1_1 command for SCell dormancy switch is transmitted after the first 3 OFDM symbols in a slot. A UE that only supports triggering during within the first three OFDM symbols of a slot shall only undergo Test1, whereas a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo Test1 and Test2.

**Table A.5.5.6.4.1.1-1: Dormancy switch supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: A UE which fulfils the requirements in test case in clause A.5.5.6.4.2 can skip the test cases in current clause A.5.5.6.4.1.<br>NOTE 3: NR configuration is the same for PSCell and SCells. | |

**Table A.5.5.6.4.1.1-2: General test parameters for Dormancy switch in synchronous EN-DC**

| Parameter | Unit | Value | | Comment |
|---|---|---|---|---|
| | | Subtest 1 | Subtest 2 | |

#### A.5.5.6.4.1.2 Test Requirements

During T1, any interruption on PSCell due to dormancy switching of SCell shall be within the requirement specified in in clause 8.2.1.2.15.1 for NR victim cell.

During T2, interruptions on PSCell due to CSI and RRM measurements on dormant SCell shall be within the interruption rate requirements specified in 8.2.1.2.15.1 for NR victim cell.

During T3, any interruption on PSCell due to dormancy switching of SCell shall be within the requirement specified in in clause 8.2.1.2.15.1 for NR victim cell. Monitoring of PDCCH for SCell in PSCell shall be resumed within the dormancy switching time specified in clause 8.6.2A.

For an event to be considered to be correct, all requirements above have to be fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.5.5.6.4.2 E-UTRAN – NR FR1 PSCell SCell dormancy switch of two FR2 SCells outside active time

#### A.5.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify the NR SCell dormant BWP switch delay requirement defined in clause 8.6.2A.1, interruption requirements due to the NR SCell dormant BWP switch defined in clause 8.2.1.2.15.1 for NR victim cells and in clause 7.32.2.14.1 of TS 36.133 [15] for E-UTRA victim cell, respectively, and interruption requirements due to CSI and RRM measurements on the NR dormant SCells defined in clauses 8.2.1.2.15.2 and 8.2.1.2.15.3 for NR victim cells and in clause 7.32.2.14.2 of TS 36.133 [15] for E-UTRA victim cell, respectively. Supported test configurations are shown in table A.5.5.6.4.2.1-1.

The general test parameters are given in table A.5.5.6.4.2.1-2, and NR cell specific test parameters are given in table A.5.5.6.4.2.1-3 and table A.5.5.6.4.2.1-4 below. And the E-UTRAN cell specific test parameters can refer to table A.3.7.2.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR FR1 PSCell (Cell 2), and three NR FR2 SCells (Cell 3-5) as given in table A.5.5.6.4.2.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in table A.5.5.6.4.2.1-3 and table A.5.5.6.4.2.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1), PSCell (Cell 2), and SCell (Cell 5) to ensure that the UE will have ACK/NACK sending except the time before T1 and during T3. PDCCHs indicating new transmissions shall be sent continuously on SCells (Cell 3,4) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on the cells and the time duration of when active BWP of the cell is dormant.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC), and Cell 3-5 (SCells) on radio channels 3-5 (SCCs), respectively.
- UE is configured with 2 different UE-specific downlink BWPs for Cell 3 and Cell 4, BWP-1 and BWP-2. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB. Here, BWP-2 on Cell 3 and Cell 4 is configured as dormant BWP.
- UE is configured with 1 UE-specific downlink BWP the same as initial BWP for Cell 3 and Cell 4.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in Cell 3 and Cell 4.
- UE is configured with DRX.
- UE is configured to monitor PDCCH for DCI format 2_6 from Cell 2 at *ps-Offset* before the start of *onDuration*. *ps-Offset* is selected to correspond to the dormancy switching time specified in clause 8.6.2A.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, T3, and T4, respectively.

During T1,

Time period T1 starts when a DCI format 2_6 command for Cell 3 and Cell 4 DL BWP switch to BWP-2, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i$+ $T_{MultipleBWPswitchDelay}$+X) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cell starting from the beginning of the DL slot right after slot ($i$+ $T_{MultipleBWPswitchDelay}$+X).

The UE shall be able to receive PDSCH at the beginning of the DL slot right after SCell(Cell 5)'s DL slot ($i$+ $T_{MultipleBWPswitchDelay}$+X) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cell starting from the beginning of the DL slot right after slot ($i$+ $T_{MultipleBWPswitchDelay}$+X).

PCell(Cell 1) interruption due to dormant BWP switch on PSCell shall occur within the dormant BWP switch delay.

SCell(Cell 5) interruption due to dormant BWP switch on SCell(Cell 5) shall occur within the dormant BWP switch delay.

During T2,

Time period T2 starts when dormant BWP switch latency requirement test is completed. The test equipement shall schedule PDSCH every slot.

The UE shall be able to report ACK/NACK corresponding to the scheduled PDSCH to PSCell except for the allowed times as defined in clauses 8.2.1.2.15.2 and 8.2.1.2.15.3.

The UE shall be able to report ACK/NACK corresponding to the scheduled PDSCH to PCell except for the allowed times as defined in clause 7.32.2.14.2 of TS 36.133 [15].

During T3,

Time period T3 starts when interruption due to SSB based RRM measurement and CSI measurement requirements test is completed. Test equipment shall not transmit PDCCH, hence, the UE doesn't monitor PDCCH except DCI format 2_6 based PDCCH.

During T4,

Time period T4 starts when a DCI format 2_6 command for Cell 3 and Cell 4 DL BWP switch to BWP-1, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *j*. The UE shall switch its bandwidth part from BWP-2 to BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($j+ T_{MultipleBWPswitchDelay}+X$) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cell starting from the beginning of the DL slot right after slot ($j+ T_{MultipleBWPswitchDelay}+X$).

The UE shall be able to receive PDSCH at the beginning of the DL slot right after all SCell's (Cell 3,4,5) DL slot ($j+ T_{MultipleBWPswitchDelay}+X$) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cells starting from the beginning of the DL slot right after slot ($j+ T_{MultipleBWPswitchDelay}+X$).

PCell(Cell 1) interruption due to dormant BWP switch on PSCell shall occur within the dormant BWP switch delay.

SCell(Cell 5) interruption due to dormant BWP switch on SCell(Cell 5) shall occur within the dormant BWP switch delay.

**Table A.5.5.6.4.2.1-1: Supported test configurations for EN-DC DCI 2_6 based Domant BWP Switch on Multiple NR FR2 SCells**

| Config | Cell 1 | Cell 2 | Cell 3, Cell 4, Cell 5 | DCI 2_6 of Cell 2 |

| NOTE 1: 10 MHz bandwidth for Cell 2 with 15 kHz SSB SCS.<br>NOTE 2: 40 MHz bandwidth for Cell 2 with 30 kHz SSB SCS.<br>NOTE 3: 100 MHz bandwidth for Cell 3,4,5.<br>NOTE 4: The UE is only required to be tested in one of the supported test configurations. | | | | |

**Table A.5.5.6.4.2.1-2: General test parameters for EN-DC DCI 2_6 based Domant BWP Switch on Multiple NR FR2 SCells**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| E-UTRA RF Channel Number | | 1 | One E-UTRAN carrier frequenciy is used. |
| NR RF Channel Number | | 2,3,4,5 | Four NR radio channels are used for this test. RF channel number 2 is in FR 1 and RF channel numbers 3,4,5 are in a band where intra-band FR2 CA is allowed. |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Active PSCell | | Cell 2 | Primary SCG cell on NR RF channel number 2. |
| Configured activated SCell | | Cell 3,4,5 | Configured activated secondary cell on NR RF channel numbers 3,4,5. |
| CP length | | Normal | |
| DRX | | DRX.3 | As specified in clause A.3.3 |

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| ps-Offset | | Depending on UE capability | Monitoring of DCI 2_6 ahead of start of drx-onDurationTimer. Value of ps-Offset shall correspond to SCell dormancy switching time for switching of two SCells, as specified in clause 8.6.2A. Actual value depends on reported UE capabilities. |
| ps-WakeUp | | true | Wake up for onDuration in case DCI format 2_6 is not detected. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell2 timing offset to Cell 1 | µs | 3 | |
| Cell3,4,5 timing offset to Cell 1 | µs | 3 | |
| Timing offset among Cell 3,4,5 | µs | 0 | |
| T1 | s | 0.2 | During this time Cell 3,4 switch to dormancy from non-dormancy. |
| T2 | s | 10 | During this time Cell 3,4 are dormant. |
| T3 | S | 0.1 | During this time PDCCH is not transmitted from all cells. |
| T4 | s | 0.2 | During this time Cell 3,4 switch to non-dormancy from dormancy. |

#### A.5.5.6.4.2.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of PSCell's DL slot ($i$+ $T_{MultipleBWPswitchDelay}$+X) as defined in clause 8.6.2A.2.

During T2, the UE shall transmit at least 98.5 % of ACK/NACK on NR PCell.

During T4, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of PSCell's DL slot ($j$+ $T_{MultipleBWPswitchDelay}$+X) as defined in clause 8.6.2A.2.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1, the start of the interruption of PCell and SCell (Cell 5) during dormant BWP switch on SCells (Cell 3,4) shall not happen outside the dormant BWP switch delay.

During T1, the start of the interruption of PCell and SCells (Cell 3,4,5) during dormant BWP switch on SCells (Cell 3,4) shall not happen outside the dormant BWP switch delay.

### A.5.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

#### A.5.5.6.5.1 E-UTRAN – NR PSCell FR2 and NR SCell FR2 DL active BWP switch on multiple CCs with non-DRX in synchronous EN-DC

#### A.5.5.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for simultaneous RRC-based BWP switch on multiple CCs defined in clause 8.6.3A. Supported test configurations are shown in table A.5.5.6.5.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in table A.5.5.6.5.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and NR SCell are specified in table A.5.5.6.5.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), to Cell 2 (PSCell) on radio channel 2 (PSCC) and to Cell 3 (SCell) on radio channel 3.
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 2 (PSCell) and Cell 3 (SCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in Cell 2 (PSCell) and Cell 3 (SCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration in Cell 2 and Cell3, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition in Cell 2 and Cell 3.

The UE shall be able to completely receive PDSCH on Cell 2 and Cell 3 at the beginning of the DL slot right after PSCell's DL slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$) as defined in clause 8.6.3A and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$). The UE shall be continuously scheduled on Cell 2's BWP-1and Cell 3's BWP-1 starting from the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$).

$T_{RRCprocessingDelay}$ , $T_{BWPswitchDelayRRC}$ and $D_{RRC}$ are defined in clause 8.6.3A.

The test equipment verifies the DL BWP switch time in Cell 2 and Cell 3 by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.5.5.6.5.1.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

A.5.5.6.5.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell and SCell in the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$).

All of the above test requirements shall be fulfilled in order for the observed PSCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.7 PSCell addition and release delay

### A.5.5.7.1 Addition and Release Delay of NR PSCell

#### A.5.5.7.1.1 Test purpose and environment

The purpose of this test is to verify that the NR PSCell addition and release delays under EN-DC are within the requirements stated in clause 7.31.2 of TS 36.133 [15] for the case when the PSCell is unknown by the UE at the time of addition.

Supported test configurations are shown in A.5.5.7.1.1-1. The test parameters for the E-UTRA cell are given in table A.3.7.2.2-1. The E-UTRA cell once set up is not changed across time.

The test parameters for NR cell are given in tables A.5.5.7.1.1-2, cell-specific parameters in A.5.5.7.1.1-3 and OTA parameters in A.5.5.7.1.1-4 below. The test consists of four successive time periods with duration of T1, T2, T3 and T4. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell) on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell 1 is known to the UE.

The test system shall send a RRC message to the UE to add PSCell (Cell 2) on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The RRC message to add PSCell shall be sent to the UE during period T1. The point in time at which the RRC message to add PSCell (Cell2) is received at the UE antenna connector defines the start of period T2.

The test system shall observe the periodic reporting of CSI for PSCell during T3. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of period T3.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell2) shall be sent to the UE during period T3, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell2) is received at the UE antenna connector defines the start of period T4.

**Table A.5.5.7.1.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | LTE TDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.5.5.7.1.1-2: General Test Parameters for PSCell Addition and Release**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Two radio channels are used for this test. One for E-UTRA cell and second for NR Cell |
| Initial Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Neighbour cell | | Cell2 | Neighbour cell on RF channel number 2. |
| Final Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Neighbour Cell | | Cell2 | PSCell released on RF channel number 2. |
| B1 | Hysteresis | dB | 0 | Hysteresis for evaluation of event B1. |
| | Threshold RSRP | dBm | -118 | Actual RSRP threshold for event B1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. |
| | Time to Trigger | s | 0 | |

| | | | |
|---|---|---|---|
| DRX | | OFF | Continuous monitoring of primary cell |
| PRACH configuration on Cell 2 | | FR2 configuration 2 | Captured in A.3.8.3.2 |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cells on primary component carrier. |
| Cell-individual offset for cells on RF channel number 2 | dB | 0 | Individual offset for cells on carrier frequency of Cell 2. |
| T1 | s | 1 | During this time the PCell shall be known and Cell 2 shall be unknown. |
| T2 | s | 1 | During this time the UE adds the PSCell. |
| T3 | s | 1 | During this time the UE sends CSI reports for PSCell. |
| T4 | s | 1 | During this time the UE releases the PSCell. |

NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 7: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.

#### A.5.5.7.1.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest 582 ms Note1 into T2.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T3.

The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T3

The UE shall stop sending CSI reports for PSCell in at latest 20 ms into T4.

All the above test requirements shall be fulfilled for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90 %.

NOTE 1: The PSCell addition delay can be expressed as follows as specified in clause 7.31.2 of TS 36.133 [15]:

$$T_{config_PSCell} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{PSCell_DU} + 2 \text{ ms}$$

Where:

$T_{RRC_delay}$ = 20 ms

$T_{processing}$ = 40 ms

$T_{search}$ = 8*3*20 = 480 ms

$T_{\Delta}$ = 20 ms

$T_{PSCell_DU}$ = 1*10+10 = 20 ms

## A.5.5.8 Active TCI state switch delay

### A.5.5.8.1 MAC-CE based active TCI state switch

#### A.5.5.8.1.1 E-UTRAN – NR PSCell FR2 active TCI state switch for a known TCI state

##### A.5.5.8.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configurations are shown in table A.5.5.8.1.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.5.5.8.1.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.5.5.8.1.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.5.5.8.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 2 different TCI states for PSCell, PDCCH TCI state 0 (QCL'd to SSB0) and TCIstate 1 (QCL'd to SSB1), in Cell 2 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. Figure A.5.5.8.1.1.1-1 and Figure A.5.5.8.1.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PSCell on TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time in PSCell by scheduling the UE on TCI state 1 after slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$ + ($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$)/*NR slot length* .

**Table A.5.5.8.1.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

**Figure A.5.5.8.1.1.1-1: Time multiplexed downlink transmissions during T1**

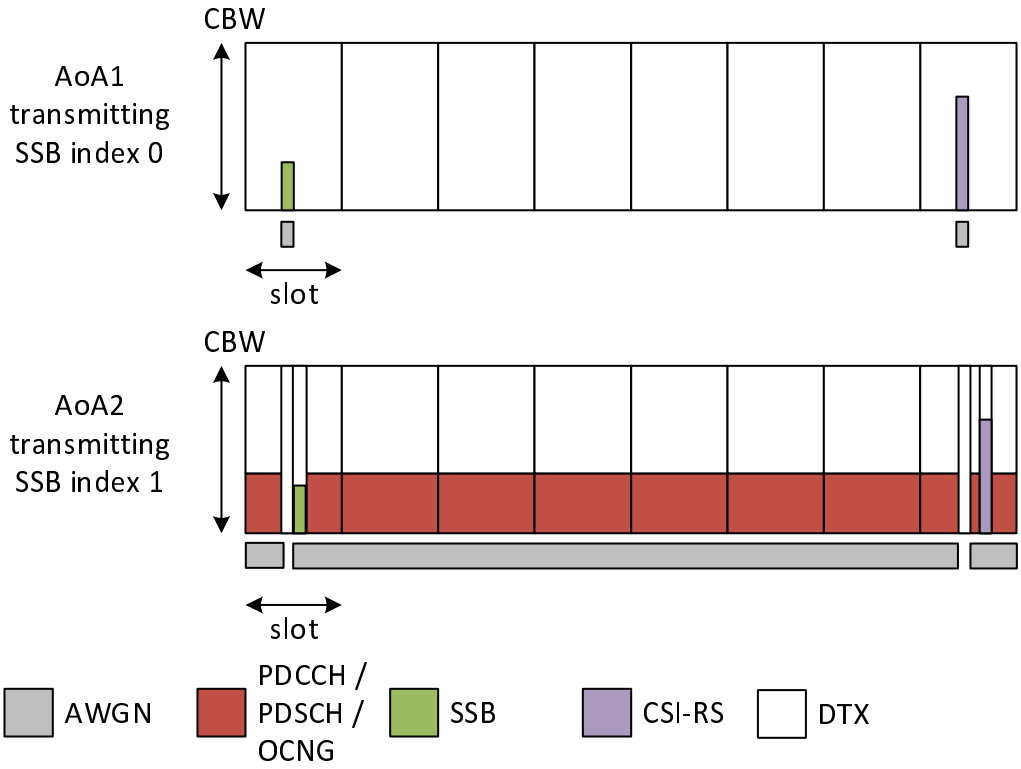

**Figure A.5.5.8.1.1.1-2: Time multiplexed downlink transmissions during T2**

### A.5.5.8.1.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$
- be able to start receiving on TCI state 1 after slot n+ $T_{HARQ}$ +5$N_{slot}^{subframe,\mu}$ + $T_{first\text{-}SSB}$/*NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.8.2 RRC based active TCI state switch

### A.5.5.8.2.1 E-UTRAN – NR PSCell FR2 active TCI state switch for a known TCI state

#### A.5.5.8.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3Supported test configurations are shown in table A.5.5.8.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.5.5.8.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.5.5.8.2.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.5.5.8.2.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 1 TCI state for PSCell, PDCCH-TCI-state0 (QCL'd to SSB0)
- UE is indicated in TCI state0 as the active TCI state

The test consists of two time periods, T1 and T2. Figure A.5.5.8.2.1.1-1 and Figure A.5.5.8.2.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI-state1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a RRC command indicating a switch to TCI-state1.

The test equipment verifies the TCI state switch time in PSCell by scheduling the UE on TCI state 1 after slot n+ ($T_{RRC_processing}$ + $T_{first\text{-}SSB}$)/*NR slot length* + 2$N_{slot}^{subframe,\mu}$.

#### A.5.5.8.2.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with both SSB0 and SSB1.

After receiving RRC command in slot n, UE shall be able to start receiving on TCI state 1 after slot n+ ($T_{RRC_processing}$ + $T_{first\text{-}SSB}$)/*NR slot length* + $2N_{slot}^{subframe,\mu}$.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.9 Uplink spatial relation switch delay

### A.5.5.9.1 MAC-CE based uplink spatial relation switch

#### A.5.5.9.1.1 E-UTRAN – NR PSCell FR2 uplink spatial relation switch for a known spatial relation

##### A.5.5.9.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the uplink spatial relation switch delay requirement defined in clause 8.12.3 by a UE capable of beam correspondence without the need for UL beam sweeping. Supported test configurations are shown in table A.5.5.9.1.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.5.5.9.1.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.5.5.9.1.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.5.5.9.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have continuous ACK/NACK sending by PUCCH.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).

- UE is configured with 2 different spatial relations for PSCell, PUCCH spatial relation 0 (QCL'd to SSB0) and spatial relation 1 (QCL'd to SSB1), in Cell 2 before starting the test.

- UE is indicated in spatial relation 0 as the active PUCCH spatial relation

The test consists of two time periods, T1 and T2. During T1 only SSB to which PUCCH spatial relation 0 QCLed is transmitted. At the beginning of T2, the SSB corresponding to spatial relation 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to transmit PUCCH with spatial relation 1.

The test equipment verifies that UE can be scheduled on PSCell on spatial relation 0 till $n$ + $T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu}$. The test equipment also verifies the spatial relation switch time in PSCell by scheduling the UE on spatial relation 1 from slot $n$ + $T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu}$ + 1 and onwards.

**Table A.5.5.9.1.1.1-1: Supported test configurations**

#### A.5.5.9.1.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to transmit PUCCH on spatial relation 0 till $n + T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu}$;
- be able to start transmitting PUCCH on spatial relation 1 from slot $n + T_{HARQ}$/NR slot length + $3N_{slot}^{subframe,\mu} + 1$.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.5.5.9.2 RRC based spatial relation switch

#### A.5.5.9.2.1 E-UTRAN – NR PSCell FR2 spatial relation switch associated with a known DL-RS

#### A.5.5.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the RRC based spatial relation switch delay requirement defined in clause 8.12.5 by a UE capable of beam correspondence without the need for UL beam sweeping. Supported test configurations are shown in table A.5.5.9.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.5.5.9.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in table A.5.5.9.2.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.5.5.9.2.1.1-4.

Periodic SRS is transmitted on NR PSCell (Cell2), and the SRS configuration is SRSConf.1 given in table A.5.4.1.1.1-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 1 SRS-SpatialRelation0 associated with SSB0.
- UE is indicated SRS-SpatialRelation0 as the active SRS spatial relation.

The test consists of two time periods, T1 and T2. During T1 only SSB0 to which SRS-SpatialRelation0 associated is transmitted. UE shall transmit periodic SRS with SRS-SpatialRelation0 of PSCell. At the beginning of T2, the SSB1 corresponding to SRS-SpatialRelation1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a RRC command indicating a switch to transmit periodic SRS with target SRS-SpatialRelation1. The test equipment verifies that UE shall be able to transmit periodic SRS with target spatial relation (SRS-SpatialRelation1) on PSCell in the slot n + $T_{RRC_processing}$/NR slot length + 1.

**Table A.5.5.9.2.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations. | |

NOTE 6: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.5.9.2.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with SSB1 to which SRS-SpatialRelation1 is associated.

After receiving RRC command in slot n, UE shall be able to transmit target periodic SRS with SRS-SpatialRelation1 on PSCell in the slot $n + T_{RRC_processing}/NR\ slot\ length + 1$.

The rate of correct events observed during repeated tests shall be at least 90 %.

# A.5.5.10 UE specific CBW change

## A.5.5.10.1 UE specific CBW change on FR2 NR PSCell

### A.5.5.10.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE specific CBW change delay requirement defined in clause 8.13. Supported test configurations are shown in table A.5.5.10.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) as given in table A.5.5.10.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell are specified in table A.5.5.10.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and to Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 2 (PSCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PSCell.
- UE is indicated in *SCS-SpecificCarrier* that the active CBW is CBW-1 of initial condition in PSCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* which reconfigure the UE specific CBW parameter, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its UE specific CBW with the updated UE specific CBW of final condition.

The UE shall be able to completely receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ($i+\frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$) as defined in clause 8.13 and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$). The UE shall be continuously scheduled on PSCell's BWP-1 on CBW-2 starting from the beginning of the DL slot right after slot ($i+\frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$).

$T_{RRCprocessingDelay}$ and $T_{CBWchangeDelayRRC}$ are defined in clause 8.13.

The test equipment verifies the UE specific CBW change switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated UE specific CBW configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.5.5.10.1.1-1: UE specific CBW change supported test configurations**

| Config | Description |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.5.10.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell in the beginning of the DL slot right after slot $(i+\frac{T_{RRCprocessingDelay}+T_{CBWchangeDelayRRC}}{NR\ Slot\ length})$.

All of the above test requirements shall be fulfilled in order for the observed PSCell UE specific CBW change switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

# A.5.5.11 Unified TCI state switch delay

## A.5.5.11.1 MAC-CE based active joint TCI state switch

### A.5.5.11.1.1 E-UTRAN – NR PSCell FR2 active joint TCI state switch for a known TCI state

#### A.5.5.11.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the MAC-CE based joint TCI state switch delay requirement defined in clause 8.15.3 and 8.16.3 by a UE capable of beam correspondence without the need for UL beam sweeping. Supported test configuration is shown in table A.5.5.11.1.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.5.5.11.1.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.2-1 and cell-specific parameters of NR PSCell is specified in table A.5.5.11.1.1.2-1 below. The OTA related test parameters for FR2 are shown in table A.5.5.11.1.1.2-2.

PDCCHs indicating new transmissions shall be sent continuously on PSCell to ensure that the UE would have ACK/NACK sending.

**Table A.5.5.11.1.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

**Table A.5.5.11.1.1.1-2: General test parameters for TCI state switch**

| Parameter | Unit | Value | Comment |
|---|---|---|---|

| Cell2 timing offset to Cell 1 | μs | 3 | Synchronous EN-DC |
| L1-RSRP reporting period | | 160 | Periodic L1-RSRP reporting configured |
| L1-RSRP measured RS | | SSB0, SSB1 | L1-RSRP measurements of SSB0 and SSB1. |
| Number of RS for L1-RSRP reporting | | 2 | L1-RSRP reporting of measurements on SSB0 and SSB1. |
| T1 | s | 0.2 | |
| T2 | s | 2 | |

#### A.5.5.11.1.1.2 Test parameters

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *joint.*
- UE is configured with 2 different DLorJoint States for PSCell, Joint TCI state 0 (QCL'd to SSB0) and Joint TCI state 1 (QCL'd to SSB1) before starting the test,

- UE is indicated in Joint TCI state 0 as the active joint TCI state.

The test consists of two time periods, T1 and T2. Figure A.5.5.11.3.1.1-1 and Figure A.5.5.11.3.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB0 to which Joint TCI state 0 is QCL'd is transmitted. At the beginning of T2, the SSB1 corresponding to Joint TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to Joint TCI state 1.The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The test equipment verifies that UE shall be able to receive and transmit with Joint TCI state 0 until slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$, and shall be able to receive and transmit with Joint TCI state 1 from slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$ + ($T_{first_target\text{-}PL\text{-}RS}$ + 4*$T_{target_PL\text{-}RS}$ + 2 ms) / *NR slot length*.

#### A.5.5.11.1.1.3 Test Requirements

The test verifies that UE can be scheduled by PSCell on Joint TCI state 0 and Joint TCI state 1.

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to receive and transmit with Joint TCI state 0 until slot n+ $T_{HARQ}$ + $3N_{slot}^{subframe,\mu}$
- be able to start receiving and transmitting with Joint TCI state 1 after slot n+ $T_{HARQ}$ +$3N_{slot}^{subframe,\mu}$ + ($T_{first_target\text{-}PL\text{-}RS}$ + 4*$T_{target_PL\text{-}RS}$ + 2 ms) / *NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.5.5.11.2 MAC-CE based active uplink TCI state switch

#### A.5.5.11.2.1 E-UTRAN – NR PSCell FR2 active uplink TCI state switch for a known TCI state

#### A.5.5.11.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the MAC-CE based uplink TCI state switch delay requirement defined in clause 8.16.3 by a UE capable of beam correspondence without the need for UL beam sweeping. Supported test configurations are shown in table A.5.5.11.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in table A.5.5.11.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.2-1 and cell-specific parameters of NR PSCell is specified in table A.5.5.11.2.1.2-1 below. The OTA related test parameters for FR2 is shown in table A.5.5.11.2.1.2-2.

**Table A.5.5.11.2.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

**Table A.5.5.11.2.1.1-2: General test parameters for spatial relation switch**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| E-UTRA RF Channel No. | | Channel 1 | One E-UTRA radio channel is used for this test |
| NR RF Channel No. | | Channel 2 | One NR radio channel is used for this test |
| Active PCell | | Cell 1 | PCell on RF channel number 1. |
| Active PSCell | | Cell 2 | PSCell on RF channel number 2. |
| CP length | | Normal | |

| | | | |
|---|---|---|---|
| DRX | | OFF | For both PCell and PSCell |
| Cell-individual offset for cells on RF channel number 1 | dB | 0 | Individual offset for cells on PCC. |
| Cell-individual offset for cells on RF channel number 2 | dB | 0 | Individual offset for cells on PSCC. |
| Cell2 timing offset to Cell 1 | µs | 3 | Synchronous EN-DC |
| L1-RSRP reporting period | slot | 160 | Periodic L1-RSRP reporting configured |
| L1-RSRP measured RS | | SSB0, SSB1 | L1-RSRP measurements of SSB0 and SSB1. |
| Number of reported RS | | 2 | L1-RSRP reporting of measurements on SSB0 and SSB1. |
| T1 | s | 0.2 | |
| T2 | s | 2 | |

#### A.5.5.11.2.1.2 Test parameters

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC);
- PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have continuous ACK/NACK sending by PUCCH;
- UE is provided with *TCI-UL-State-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *separate*;
- UE is configured with 2 different uplink TCI states for PSCell, uplink TCI state 0 (associated with SSB0) and uplink TCI state 1 (associated with SSB1), by using RRC signalling *ul-TCI-StateList-r17* in IE *BWP-UplinkDedicated*, in Cell 2 before starting the test;
- UE is indicated uplink TCI state 0 as the active uplink TCI state.

The test consists of two time periods, T1 and T2. During T1 only SSB#0 with which uplink TCI state 0 is associated is transmitted. At the beginning of T2, the SSB#1 corresponding to uplink TCI state 1 starts transmitting. After the beginning of T2, in slot *n* which is within 1280 ms of UE providing L1-RSRP report with results for both SSB#0 and SSB#1, UE receives a MAC-CE command indicating a switch to transmit PUCCH with uplink TCI state 1. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

Index of CSI-RS#1 is configured for UE as *PUSCH-PathlossReferenceRS-Id-r17* which is indicated in *TCI-UL-State-r17* of uplink TCI state 1. CSI-RS#1 is QCLed typeD with SSB#1. UE does not maintain CSI-RS#1 as pathloss RS before the uplink TCI state switching.

| NOTE 6: Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation. | | | | | |

### A.5.5.11.2.1.3 Test Requirements

The test verifies that UE can be scheduled by PSCell on uplink TCI state 0 and uplink TCI state 1. The test also verifies the active uplink TCI state switch time in PSCell meeting the requirement defined in 8.16.3. Specifically,

During T2, UE shall send L1-RSRP report with results for SSB#0 and SSB#1 before sending MAC-CE command.

After receiving MAC-CE command in slot *n* in T2, UE shall:

- be able to continue to transmit PUCCH on uplink TCI state 0 till slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu}$;
- be able to start transmitting PUCCH on uplink TCI state 1 from slot $n + T_{HARQ} + 3N_{slot}^{subframe,\mu} + (T_{first_target\text{-}PL\text{-}RS} + 4*T_{target_PL\text{-}RS} + 2$ ms) / *NR slot length* and onwards.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.11.3 MAC-CE based active downlink TCI state switch

### A.5.5.11.3.1 E-UTRAN – NR PSCell FR2 downlink TCI state switch to cell with additional PCI for a known TCI state

#### A.5.5.11.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the active DL TCI state switch delay requirement for unified TCI defined in clause 8.15.3. Supported test configurations are shown in table A.5.5.X.3.1.1-1.

**Table A.5.5.11.3.1.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

#### A.5.5.11.3.1.2 Test Parameters

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR PSCell (Cell 2), and one NR cell with additional PCI different from from serving cell (Cell 3) configured for intercell L1-RSRP measurement and report as given in table A.5.5.11.3.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and cell with additional PCI are specified in table A.5.5.11.3.1.1-3 below. The OTA related test parameters for FR2 is shown in table A.5.5.11.3.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) and cell with additional PCI (Cell 3) to ensure that the UE would have ACK/NACK transmission.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC), Cell 3 (Cell with additional PCI) in radio channel 3.
- UE is provided with *dl-OrJoint-TCIStateList-r17* and UE's higher layer signalling *unifiedTCI-StateType-r17* in IE *MIMOParam-r17* is set to *seperate*;
- UE is configured with L1-RSRP measurements on cell with additional PCI (Cell 3)
- UE is configured with 2 different TCI states for PSCell, PDCCH TCI state 0 (QCL'd to TRS resource set 1, TCI state of which is QCLed to SSB0 of Cell2) and TCI state 1 (QCL'd to TRS resource set 3, TCI state of which is QCLed to SSB1 of Cell3), in Cell 2 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. Figure A.5.5.11.3.1.1-1 and Figure A.5.5.11.3.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 of Cell 2 and SSB1 of Cell 3, UE receives a MAC-CE command indicating a switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PSCell on TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$. The test equipment also verifies the TCI state switch time in to cell with additional PCI by scheduling the UE on TCI state 1 after slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$ + ($T_{first\text{-}SSB}$ + $T_{SSB\text{-}proc}$) /*NR slot length* .

**Table A.5.5.11.3.1.1-2: General test parameters for TCI state switch**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| E-UTRA RF Channel Number | | 1 | One E-UTRA radio channel is used for this test |

**Figure A.5.5.11.3.1.1-2: Time multiplexed downlink transmissions during T2**

#### A.5.5.11.3.1.3 Test Requirements

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on DL TCI state 0 till slot n+ $T_{HARQ}$ +3$N_{slot}^{subframe,\mu}$
- be able to start receiving on DL TCI state 1 after slot n+ $T_{HARQ}$ +(5 ms + $T_{first\text{-}SSB}$) / *NR slot length*

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.5.12 PSCell activation and deactivation delay

### A.5.5.12.1 PSCell activation and deactivation delay

#### A.5.5.12.1.1 Test purpose and environment

The purpose of this test is to verify that the NR PSCell activation and deactivation delay under EN-DC are within the requirements stated in clause 7.38 in TS 36.133 [15] for the case when UE configured with one deactivated SCG and when PScell in one SCG is being activated where the PSCell is known by the UE at the time of activation.

Supported test configurations are shown in A.5.5.12.1.1-1. The test parameters for the E-UTRA cell are given in table A.3.7.2.2-1. The E-UTRA cell once set up is not changed across time.

The test parameters for NR cell are given in tables A.5.5.12.1.1-2, cell-specific parameters in A.5.5.12.1.1-3 and OTA parameters in A.5.5.12.1.1-4 below. The test consists of four successive time periods with duration of T1, T2, T3 and T4. There are two carriers each with one cell. The UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC) and PSCell (Cell2) is in deactivated state. During T1, both Cell 1 and Cell2 are known to UE and UE performs measurement on deactivated PCell. Before the test starts the UE is configured RLM and BFD on deactivated PSCell. During T1, UE performs RLM and BFD on the deactivated PSCell and TCI state is known.

The test system shall send a RRC message to the UE to activate PSCell (Cell 2) on radio channel 2, where no any PSCell parameter is modified in the RRC message. The RRC message (to activate PSCell) also includes a request for the UE to transmit scheduling request on PUCCH for the PSCell after the PSCell has been successfully activated. The RRC message to activate PSCell shall be sent to the UE during period T1. The point in time at which the RRC message to activate PSCell (Cell2) is received at the UE antenna connector defines the start of period T2.

The test system shall observe the periodic reporting of CSI for PSCell during T3. The point in time at which the UE has sent scheduling request on PUCCH for PSCell (Cell 2) defines the start of period T3.

The test system shall send a RRC message to the UE to deactivate PSCell (Cell 2) on radio channel 2. The RRC message to deactivate PSCell (Cell2) shall be sent to the UE during period T3, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to deativate PSCell (Cell2) is received at the UE antenna connector defines the start of period T4.

**Table A.5.5.12.1.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | LTE TDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.5.5.12.1.2 Test Requirements

The UE performs RACH-less based PSCell activation. UE shall transmit the SR on PUCCH for PSCell at latest 65 ms[Note1] into T2.

The UE shall send at least one PUSCH on PSCell during T3.

The UE shall stop transmit PUSCH for PSCell in at latest 20 ms into T4.

All the above test requirements shall be fulfilled for the observed PSCell activation delay and PSCell deactivation delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90 %.

Note1: The PSCell addition delay can be expressed as follows as specified in clause 7.38 in TS 36.133 [15]:

$T_{activation_time} = T_{RRC_delay} + T_{processing} + T_{search} + T_{\Delta} + T_{IU} + 2$ ms

Where:

$T_{RRC_delay} = 20$ ms

$T_{processing}$ = 5 ms

$T_{search}$ = 0 ms

$T_{\Delta}$ = 20 ms

$T_{IU}$= max 20 ms

# A.5.5.13 Conditional PSCell addition and release delay

## A.5.5.13.1 Addition and Release Delay of NR PSCell

### A.5.5.13.1.1 Test purpose and environment

The purpose of this test is to verify that the conditional NR PSCell addition and release delays under EN-DC are within the requirements stated in clause 8.9A.2.

Supported test configurations are shown in A.5.5.13.1.1-1. The test parameters for the E-UTRA cell are given in table A.3.7.2.2-1. The E-UTRA cell once set up is not changed across time.

The test parameters for NR cell are given in tables A.5.5.13.1.1-2, cell-specific parameters in A.5.5.13.1.1-3 and OTA parameters in A.5.5.13.1.1-4 below. The test consists of four successive time periods with duration of T1, T2, T3 and T4. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell) on radio channel 2. The UE is only monitoring the PCC.

During T1 only Cell 1 is known to the UE. NR shall configure a condition implying PSCell addition (Cell 2) during T1, at a time earlier than $T_{RRC_delay}$ before the beginning of T2.

Starting T2, Cell 2 becomes detectable. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of period T3. The test system shall observe the periodic reporting of CSI for PSCell during T3.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell2) shall be sent to the UE during period T3, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell2) is received at the UE antenna connector defines the start of period T4.

**Table A.5.5.13.1.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| 2 | LTE TDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.5.5.13.1.1-2: General Test Parameters for Conditional PSCell Addition and Release**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | | 1, 2 | Two radio channels are used for this test. One for E-UTRA cell and second for NR Cell |
| Initial Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Neighbour cell | | Cell2 | Neighbour cell on RF channel number 2. |
| Final Condition | Active PCell | | Cell 1 | PCell on RF channel number 1. |
| | Neighbour Cell | | Cell2 | PSCell released on RF channel number 2. |
| B1 | Hysteresis | dB | 0 | Hysteresis for evaluation of event B1. |
| | Threshold RSRP | dBm | -118 | Actual RSRP threshold for event B1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. |
| | Time to Trigger | s | 0 | |

#### A.5.5.13.1.2 Test Requirements

$T_{RRC_delay} + T_{Event_DU}$ occurs during T1 as the PSCell addition condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall transmit the PRACH to PSCell (Cell 2) less than $T_{config_PSCell_Addition_Conditional}$ Note1 into T2.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T3.

The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T3

The UE shall stop sending CSI reports for PSCell in at latest 20 ms into T4.

All the above test requirements shall be fulfilled for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90 %.

Note1: The PSCell addition delay during T2 can be expressed as follows:

$$T_{config_PSCell_Addition_Conditional} = T_{measure} + T_{UE_preparation} + T_{processing} + T_{\Delta} + T_{PSCell_DU} + 2 \text{ ms}$$

Where:

$T_{measure}$ = 6720 ms for power class 1 or 4160 for power class 2/3/4

$T_{UE_preparation}$ = 10 ms

$T_{processing}$ = 40 ms

$T_{\Delta}$ = 20 ms

$T_{PSCell_DU}$ = 1*10+10 = 20 ms

## A.5.6 Measurement procedure

### A.5.6.1 Intra-frequency Measurements

#### A.5.6.1.1 EN-DC event triggered reporting test without gap under non-DRX

##### A.5.6.1.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.1.1-1.

**Table A.5.6.1.1.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.6.1.1.1-2, A.5.6.1.1.1-3 and A.5.6.1.1.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

**Table A.5.6.1.1.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 without gap without DRX**

**Figure A.5.6.1.1.1-1: Time multiplexed downlink transmissions (Config 1,2 example)**

### A.5.6.1.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4 s for a UE supporting power class 1,
- 1.44 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.1.2 EN-DC event triggered reporting test without gap under DRX

### A.5.6.1.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.2.1-1.

**Table A.5.6.1.2.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.6.1.2.1-2 ~ table A.5.6.1.2.1-6 below.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.1.2.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 without gap with DRX**

| Parameter | Unit | Config | Value | | Comment |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

### A.5.6.1.2.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2 s for a UE supporting power class 1,
- 4.32 s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.1.3 EN-DC event triggered reporting test with per-UE gaps under non-DRX

### A.5.6.1.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.3.1-1.

**Table A.5.6.1.3.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.6.1.3.1-2 ~ 4 below.

There are two BWPs configured in Cell 2, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 2. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

**Table A.5.6.1.3.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 with per-UE gaps without DRX**

**Figure A.5.6.1.3.1-1: Time multiplexed downlink transmissions (Config 1,2 example)**

### A.5.6.1.3.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2 s for a UE supporting power class 1,
- 1.92 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.1.4 EN-DC event triggered reporting test with per-UE gaps under DRX

### A.5.6.1.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.4.1-1.

**Table A.5.6.1.4.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.6.1.4.1-2 ~ 6.

During the test, Cell 2 and Cell 3 are transmitted from the direction determined according to A3.8.

There are two BWPs configured in Cell 2, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 2. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.1.4.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 with per-UE gaps with DRX**

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

**Table A.5.6.1.4.1-5: Void**

**Table A.5.6.1.4.1-6: Void**

### A.5.6.1.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2 s for a UE supporting power class 1,
- 4.32 s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.20 s for a UE supporting power class 1,
- 30.72 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.1.5 EN-DC event triggered reporting test without gap under non-DRX when CD-SSB is outside active BWP

### A.5.6.1.5.1 Test purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of an event when CD-SSB is outside active BWP. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.1.1-1.

**The test environment is the same as in A.5.6.1.1 with following exceptions in table A.5.6.1.1.1-3.**

| Parameter | Unit | Config | Cell 2 | | Cell 3 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| Intial BWP configuration | | 1~4 | DLBWP.0.1<br>ULBWP.0.1 | | - | |
| Active DL BWP configuration | | 1~4 | DLBWP.1.5 | | - | |
| Active UL BWP configuration | | 1~4 | ULBWP.1.5 | | - | |

### A.5.6.1.5.2 Test Requirements

The test requirements are the same as in A.5.6.1.1.2.

## A.5.6.1.6 EN-DC event triggered reporting test without gap under non-DRX

### A.5.6.1.6.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.6.1-1.

**Table A.5.6.1. X.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.6.1.6.1-2, A.5.6.1.6.1-3 and A.5.6.1.6.1-4 below.

The CD-SSB is configured outside active DL BWP and NCD-SSB is configured fully within active DL BWP of FR2 PSCell. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

**Figure A.5.6.1.1.1-1: Time multiplexed downlink transmissions (Config 1,2 example)**

### A.5.6.1.6.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 9.6s for a UE supporting power class 1,
- 5.76s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.1.7 EN-DC event triggered reporting test without gap under non-DRX for UE configured with *cssf-Config*

### A.5.6.1.7.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2 based on the enhanced $CSSF_{outside,gap}$ by measuring one serving carrier per FR2 band. Supported test configurations are shown in table A.5.6.1.7.1-1.

**Table A.5.6.1.7.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are four cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2), FR2 SCell (Cell 3) and a FR2 neighbour cell (Cell 4) on the same frequency as the PSCell. All the FR2 cells are on the same FR2 band. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2, Cell 3 and Cell 4 are given in table A.5.6.1.7.1-2, A.5.6.1.7.1-3 and A.5.6.1.7.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PSCell and the frequency of the SCells respectively, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. At the beginning of T1 the UE receives an RRC message by which the PSCell and SCells (Cell 2 and Cell 3) becomes configured on NR. UE is also indicated to perform enhanced measurement by measuring one serving CC per FR2 band. During time duration T1, the UE shall not have any timing information of Cell 4.

**Table A.5.6.1.7.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 without gap without DRX**

| Parameter | Unit | Config | Value | Comment |

| Time multiplexing of the downlink transmissions from each AoA | | 1~4 | Defined in figure A.5.6.1.7.1-1 | | | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Void
NOTE 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.

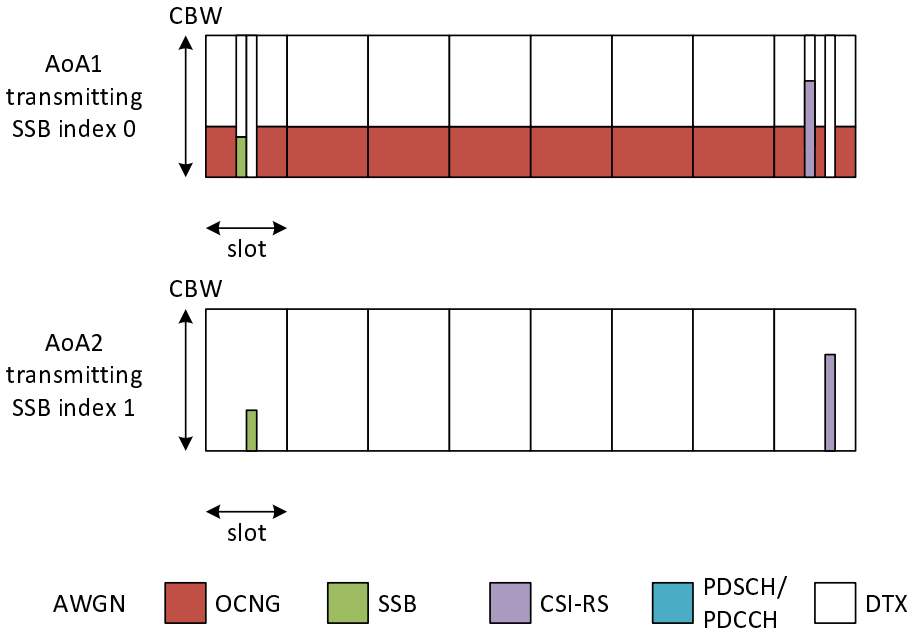

**Figure A.5.6.1.7.1-1: Time multiplexed downlink transmissions (Config 1,2 example)**

### A.5.6.1.7.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4 s for a UE supporting power class 1,
- 1.44 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.2 Inter-frequency Measurements

### A.5.6.2.1 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is not used

#### A.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR2 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.1.1-1, A.5.6.2.1.1-2, and A.5.6.2.1.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.5.6.2.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in table A.5.6.2.1.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.1.1-1.

**Table A.5.6.2.1.1-1 EN-DC event triggered reporting tests without SSB index reading for FR2-FR2**

| Config | Description |
|---|---|

NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

#### A.5.6.2.1.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.2.2 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is used

#### A.5.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR2 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.2.1-1, A.5.6.2.2.1-2, and A.5.6.2.2.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.5.6.2.2.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in table A.5.6.2.2.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.2.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.6.2.2.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

7680 for UE supporting power class 1, or

4800 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

81920 for UE supporting power class 1, or

51200 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.2.3 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is not used

### A.5.6.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR2 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.3.1-1, A.5.6.2.3.1-2, and A.5.6.2.3.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.5.6.2.3.1-1 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in table A.5.6.2.3.1-1 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.3.1-1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Void
NOTE 3: SSBRP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40]

#### A.5.6.2.3.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.2.4 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is used

#### A.5.6.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR2 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.4.1-1, A.5.6.2.4.1-2, and A.5.6.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.5.6.2.4.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in table A.5.6.2.4.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.4.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.2.4.1-1: EN-DC event triggered reporting tests with SSB index reading for FR2-FR2**

| Config | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

#### A.5.6.2.4.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.2.5 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is not used

#### A.5.6.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR1 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.5.1-1, A.5.6.2.5.1-2, and A.5.6.2.5.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.5.6.2.5.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in table A.5.6.2.5.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.5.1-1.

**Table A.5.6.2.5.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | |

NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

#### A.5.6.2.5.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.2.6 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is used

#### A.5.6.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR1 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.6.1-1, A.5.6.2.6.1-2, and A.5.6.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.5.6.2.6.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in table A.5.6.2.6.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.6.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.2.6.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.6.2.6.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

7680 for UE supporting power class 1, or

4800 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

81920 for UE supporting power class 1, or

51200 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.2.7 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is not used

### A.5.6.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR1 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.7.1-1, A.5.6.2.7.1-2, and A.5.6.2.7.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.5.6.2.7.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in table A.5.6.2.7.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.7.1-1.

**Table A.5.6.2.7.1-1: EN-DC event triggered reporting tests with SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 8: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 9: The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects as specified in TS 38.521-2 B.0 [40].

### A.5.6.2.7.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.2.8 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is used

### A.5.6.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR1 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.2.8.1-1, A.5.6.2.8.1-2, and A.5.6.2.8.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in table A.5.6.2.8.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in table A.5.6.2.8.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.8.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.2.8.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SSB_RP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

#### A.5.6.2.8.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.2.9 EN-DC event triggered reporting tests without gap under non-DRX in FR for UE supporting [*FR1 only EN-DC 3-searcher capability*]

#### A.5.6.2.9.1 Test purpose and Environment

The purpose of this test is to partly verify the intra-frequency cell search requirements in clause 9.1.5.1, clauses 9.2.5.1 and 9.2.5.2 for UE supporting [*FR1 only EN-DC 3-searcher capability*] makes correct reporting of an event.

#### A.5.6.2.9.2 Test parameters

In this test, LTE cell 1 as PCell in FR1 on LTE RF channel 1, NR cell 1 as PSCell in FR1 on NR RF channel 2, NR cell 2 as SCell in FR1 on NR RF channel 3 and NR cell 3 as SCell in FR1 on NR RF channel 4, where NR RF channel 2,

NR RF channel 3 and NR RF channel 4 are in different bands, furthermore, NR cell 4 as neighbour cell in FR1 on NR RF channel 2 same as NR cell 2.

In the measurement control information, SCells with only SSB based L3 measurement are configured, and a measurement object is configured for the frequency of the neigbor cell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 4.

Supported test configurations of tess are shown in table A.5.6.2.9.2-1.

**Table A.5.6.2.9.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | FR1 cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>FR2 cell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE cell: LTE FDD<br>FR2 cell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | FR2 cell: 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

The test parameters of tests are shown in table A.5.6.2.9.2-2 and A.5.6.2.9.2-3 below.

#### A.5.6.2.9.3 Test Requirements

In this test , the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

1600 for UE supporting power class 1, or

960 for UE supporting other power class.

In this test, UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.3 L1-RSRP measurement for beam reporting

### A.5.6.3.1 SSB based L1-RSRP measurement when DRX is not used

#### A.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.5.6.3.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.5.6.3.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.5.6.3.1.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.3.1.2-1 and table A.5.6.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.5.6.3.1.2-1: General test parameters**

| $\hat{E}_s / N_{oc}$ | 1~4 | dB | 0 | 0 | -Infinity | 9 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

#### A.5.6.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 1680 for UE supporting power class 1
- 1200 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.5.6.3.2 SSB based L1-RSRP measurement when DRX is used

#### A.5.6.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.5.6.3.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.5.6.3.2.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.5.6.3.2.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.3.2.2-1 and table A.5.6.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.5.6.3.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |

### A.5.6.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.6.3.3 CSI-RS based L1-RSRP measurement when DRX is not used

### A.5.6.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.5.6.3.3.1-1.

**Table A.5.6.3.3.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.5.6.3.3.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.3.3.2-1 and table A.5.6.3.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 480 ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in table A.5.6.3.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.5.6.3.3.2-1: General test parameters**

| Parameter | Config | Unit | Value |

| Io Note2 | 1~2 | dBm/95.04 MHz | -63.97 | -57.47 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 0 | 9 |
| NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| NOTE 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | |

### A.5.6.3.3.3 Test Requirements

After 480 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.5.6.3.3.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

**Table A.5.6.3.3.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| CSI-RS0 | CSI-RS _RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + $G_{max}$ |
| CSI-RS1 | CSI-RS _RP1 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + $G_{max}$ |
| NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.5.6.3.4 CSI-RS based L1-RSRP measurement when DRX is used

### A.5.6.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.5.6.3.4.1-1.

**Table A.5.6.3.4.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.5.6.3.4.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.3.4.2-1 and table A.5.6.3.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 1440 ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in table A.5.6.3.4.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.5.6.3.4.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |

| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 0 | 9 |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 3: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | |

### A.5.6.3.4.3 Test Requirements

After 1440 ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range from -10 to +20 dB which is referred to Table B.2.1.5.1-1 when calculated.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.5.6.3.4.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

**Table A.5.6.3.4.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| CSI-RS0 | CSI-RS _RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + $G_{max}$ |
| CSI-RS1 | CSI-RS _RP1 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + $G_{max}$ |
| NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.5.6.3.5 CSI-RS based L1-RSRP measurement when DRX is not used and when CD-SSB is outside active BWP

### A.5.6.3.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in table A.5.6.3.3.1-1.

The test is for UE supporting *rlm-BM-BFD-CSI-RS-OutsideActiveBWP-r18* and the UE is not required past legacy test in A.5.6.3.3.

The test environment is the same as in A.5.6.3.3 with following exceptions in table A.5.6.3.3.2-1.

The value of parameter "Dedicated BWP configuration" is DLBWP.1.2 and ULBWP.1.2.

NOTE: The starting PRB index of the SSB can be any possible PRB index of the RF channel BW occurring after the last PRB of the DL active BWP.

The test requirements are the same as in A.5.6.3.3.3.

## A.5.6.3.6 SSB based L1-RSRP measurement when DRX is not used when CD-SSB is outside active BWP

### A.5.6.3.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* makes correct reporting of L1-RSRP measurement when CD-SSB is outside active BWP. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.5.6.3.1.1-1.

The test environment is the same as in A.5.6.3.1 with following exceptions in table A.5.6.3.1.2-1.

| Parameter | Config | Unit | Value |
|---|---|---|---|
| Dedicated BWP configuration | 1~4 | | DLBWP.1.5<br>ULBWP.1.5 |

### A.5.6.3.6.2 Test Requirements

The test requirements are the same as in A.5.6.3.1.3.

## A.5.6.3.7 SSB based L1-RSRP measurement for UE supporting NCD-SSB based L1 measurement outside active BWP when DRX is not used

### A.5.6.3.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in table A.5.6.3.7.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.5.6.3.7.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.5.6.3.7.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.3.7.2-1 and table A.5.6.3.7.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. During time duration T1, the UE shall not have any timing information of NR Cell 2.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.5.6.3.7.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~4 | | freq1 |
| Duplex mode | 1~4 | | TDD |
| TDD Configuration | 1~4 | | TDDConf.3.1 |
| $BW_{channel}$ | 1~4 | MHz | 100: $N_{PRB,c}$ = 66 |
| Data PRBs allocated | 1~4 | | 66 |

| Propagation condition | 1~4 | | AWGN |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | |

**Table A.5.6.3.7.2-2: SSB specific test parameters**

| Parameter | Config | Unit | SSB#0 | | SSB#1 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| Angle of arrival configuration | | | Setup 1 according to A.3.15.1 | | | |
| Assumption for UE beams Note 4 | 1~4 | | Rough | | | |
| $N_{oc}$ Note2 | 1~4 | dBm/15 kHz | -105 | | | |
| $N_{oc}$ Note2 | 1,2 | dBm/SSB SCS | -96 | | | |
| | 3,4 | | -93 | | | |
| $\hat{E}_s / I_{ot}$ | 1~4 | dB | 0 | 0 | -Infinity | 9 |
| SSB_RP Note3 | 1,2 | dBm/SSB SCS | -96 | -96 | -Infinity | -87 |
| | 3,4 | | -93 | -93 | -Infinity | -84 |
| Io Note3 | 1,2 | dBm/95.04 MHz | -63.97 | -63.97 | -66.98 | -57.47 |
| | 3,4 | | -63.97 | -63.97 | -66.98 | -57.47 |
| $\hat{E}_s / N_{oc}$ | 1~4 | dB | 0 | 0 | -Infinity | 9 |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.6.3.7.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- [3360] for UE supporting power class 1
- [2080] for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.5.6.4 CLI measurements

### A.5.6.4.1 SRS-RSRP measurement with DRX

#### A.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SRS-RSRP measurement. This test will verify the SRS-RSRP measurement requirements in clause 9.7.2.5 with the testing configurations for NR cells in table A.5.6.4.1.1-1.

**Table A.5.6.4.1.1-1: Applicable NR configurations for FR2 SRS-RSRP test**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.5.6.4.1.2 Test Parameters

Two cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and FR2 PSCell (Cell 2). The test parameters for PSCell is given in table A.5.6.4.1.2-1 ~ A.5.6.4.1.2-3 below and applicability for the E-UTRAN cell are defined in A.3.7.2. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system transmits SRS resource for measurement in the DL slot according to the SRS configuration in table A.5.6.4.1.2-4 and the test parameters for the (virtual) neighbour cell UE in table A.5.6.4.1.2-3. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

**Table A.5.6.4.1.2-1: General test parameters for SRS-RSRP event triggered reporting for PSCell in FR2**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| Active cell | | 1 | E-UTRAN Cell 1 and NR Cell 2 | |

### A.5.6.4.1.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 60 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.4.2 CLI-RSSI measurement with DRX

### A.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of CLI-RSSI measurement. This test will verify the CLI-RSSI measurement requirements in clause 9.7.3.5 with the testing configurations for NR cells in table A.5.6.4.2.1-1.

**Table A.5.6.4.2.1-1: Applicable NR configurations for FR2 CLI-RSSI test**

| Configuration | Description |
|---|---|
| 1 | NR 120 kHz SCS, 100 MHz bandwidth, TDD duplex mode |

### A.5.6.4.2.2 Test Parameters

Two cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and FR2 PSCell (Cell 2). The test parameters for PSCell is given in table A.5.6.4.2.2-1 ~ A.5.6.4.2.2-3 below and applicability for the E-UTRAN cell are defined in A.3.7.2. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI measurement resource and on 2 data symbols before. The CLI-RSSI measurement resource configuration is in table A.5.6.4.2.2-4.

**Table A.5.6.4.2.2-1: General test parameters for CLI-RSSI event triggered reporting for PSCell in FR2**

### A.5.6.4.2.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 20 ms from the beginning of time period T2. The nominal RSSI used to evaluate the requirement shall be based on Io.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.5 Measurements with autonomous gaps

### A.5.6.5.1 EN-DC inter-frequency CGI identification of NR neighbor cell in FR2

### A.5.6.5.1.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of NR cell with autonomous gaps in clause 9.11.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR2 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.5.1.1-1, A.5.6.5.1.1-2, and A.5.6.5.1.1-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 3 Starting T2, Cell 3 becomes detectable and the UE is expected to detect and send a measurement report with SSB index. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. Gap pattern configuration with id #0 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading with autonomous gap shall be sent to the UE during period T2, within 3 s after the UE has reported Event A3. The RRC message shall create a measurement report configuration with *reportCGI* and *useAutonomousGaps-r16* setup. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of NR cell.

The configuration of LTE Cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.5.1.1-1.

**Table A.5.6.5.1.1-1 Supported test configurations for EN-DC inter-frequency CGI identification of NR neighbor cell in FR2**

| Config | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

| $\hat{E}_s/I_{ot}$ | dB | Config 1,2 | 4 | 4 | -Infinity | -3 |
| $N_{oc}$ [Note 2] | dBm/15 KHz | Config 1,2 | -102 | | | |

| Parameter | Unit | Config | Cell 2 | | Cell 3 | |
|---|---|---|---|---|---|---|
| | | | T1 | T2, T3 | T1 | T2, T3 |
| $N_{oc}$ Note 2 | dBm/SCS | Config 1, 2 | -93 | | | |
| SS-RSRP | dBm/SCS | Config 1, 2 | -89 | -89 | -Infinity | -96 |
| $\hat{E}_s / N_{oc}$ | dB | Config 1,2 | 4 | 4 | -Infinity | -3 |
| $Io$ | dBm/95.04 MHz | Config 1,2 | -58.56 | | -62.25 | |

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone

#### A.5.6.5.1.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of Cell 3 within 660 milliseconds from the start of T3.

Test requirement = RRC Procedure delay + $T_{identify_CGI}$ + additional margin for FR2 + TTI insertion uncertainty

= 15 + (25*20 + 6*20) + 20 + 2 ms from the start of T3

= 657 ms, allow 660 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 660 ms the number of interrupted slots shall not exceed the allowed number as defined in clause 8.2.1.2.16.

The maximum number of interrupted slots allowed is 25*48 + 6*49 = 1494.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.6 L1-SINR measurement for beam reporting

### A.5.6.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured when DRX is used

#### A.5.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.1, with the testing configurations for NR cells in table A.5.6.6.1.1-1.

**Table A.5.6.6.1.1-1: Applicable NR configurations for FR2 CSI-RS based L1-SINR test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.5.6.6.1.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.6.1.2-1 and table A.5.6.6.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1- SINR on aperiodic CSI-RS resources. After 480 ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in table A.5.6.6.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

**Table A.5.6.6.1.2-1: General test parameters**

| NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| NOTE 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | |

#### A.5.6.6.1.3 Test Requirements

After 480 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.28.1.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR when DRX is not used

#### A.5.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.2, with the testing configurations for NR cells in table A.5.6.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.5.6.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

#### A.5.6.6.2.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.6.2.2-1 and table A.5.6.6.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the SSBs and the associated CSI-RS resources, and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD measurements based on the SSBs, and UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

**Table A.5.6.6.2.2-1: General test parameters**

| Parameter | Config | Unit | Value |
|---|---|---|---|
| SSB ARFCN | 1~4 | | freq1 |
| Duplex mode | 1~4 | | TDD |

They are not settable parameters themselves.<br>NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | | | |

### A.5.6.6.2.3 Test Requirements

The UE shall send L1-SINR report every 640 slots. No later than X ms plus 640 slots from the beginning of time period T2, UE shall send L1-SINR report including the results for both SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.28.2, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2, 3 or 4.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR configured when DRX is not used

### A.5.6.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements with CSI-RS based CMR and dedicated IMR cofigured in clause 9.8.4.3, with the testing configurations for NR cells in table A.5.6.6.3.1-1.

**Table A.5.6.6.3.1-1: Applicable NR configurations for FR2 L1-SINR test with CMR and dedicated IMR**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.5.6.6.3.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.6.6.3.2-1 and table A.5.6.6.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the configured CSI-RS as CMR and an associated CSI-IM as IMR, and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources and the associated IMR. UE is also configured to measure L1-SINR based on SSB. After 480 ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in table A.5.6.6.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs, and UE is configured to perform L1-SINR measurement based on the CSI-RS as CMR and the CSI-IM as IMR.

**Table A.5.6.6.3.2-1: General test parameters**

| Parameter | Config | Unit | Value |

| NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | |
| NOTE 2: CSI-RS RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | |
| NOTE 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | |

#### A.5.6.6.3.3 Test Requirements

After 480 ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 as CMR + CSI-IM#0 as IMR and CSI-RS#1 as CMR + CSI-IM#1 as IMR while meeting the accuracy requirements defined in clause 10.1.28.3. The reported L1-SINR value shall consider the Rx antenna gain in the range from -10 to +20 dB which is referred to Table B.2.1.5.1-1 when calculated.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.7 CSI-RS based Intra-frequency Measurements

### A.5.6.7.1 EN-DC event triggered reporting test without gap under non-DRX

#### A.5.6.7.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell identification requirements in clause 9.10.2. Supported test configurations are shown in table A.5.6.7.1.1-1.

**Table A.5.6.7.1.1-1: supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 120Khz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 120Khz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.6.7.1.1-2, A.5.6.7.1.1-3 and A.5.6.7.1.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

**Table A.5.6.7.1.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with PSCell in FR2 without gap without DRX**

NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.

#### A.5.6.7.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2 s for a UE supporting power class 1,
- 2.4 s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test in order to detect associated SSB for the CSI-RS resource of Cell 3.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.8 CSI-RS based Inter-frequency Measurements

### A.5.6.8.1 EN-DC event triggered reporting tests for NR FR2 cell when DRX is used

#### A.5.6.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.10.3.

In this test, there are three cells: LTE Cell 1 as PCell on E-UTRA RF channel 1, NR Cell 2 as PSCell in FR2 on NR RF channel 1 and NR Cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in tables A.5.6.8.1.1-1, A.5.6.8.1.1-2, and A.5.6.8.1.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in table A.5.6.8.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in table A. 5.6.5.1.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #13, it is only required to pass test2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR Cell 3.

The configuration of LTE Cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.8.1.1-1.

**Table A.5.6.8.1.1-1 EN-DC event triggered reporting tests for FR2-FR2**

| Config | Description |
|---|---|
| 1 | LTE FDD, 120 kHz SSB SCS, 120 kHz CSI-RS SCS,100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, 120 kHz SSB SCS, 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell | |

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furhtermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.8.1.1-2: General test parameters for EN-DC inter-frequency event triggered reporting with SSB time index detection with DRX**

| Parameter | Unit | Test configuration | Value | | Comment |
|---|---|---|---|---|---|
| | | | Test 1 | Test 2 | |
| E-UTRA RF Channel Number | | Config 1,2 | 1 | | One E-UTRAN TDD carrier frequencies is used. |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP, CSI-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: SS-RSRP and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 5: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 6: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.6.8.1.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

20160 ms for UE supporting power class 1, or

12480 ms for UE supporting other power class.

The UE is required to read the neighbour cell SSB index in this test in order to detect associated SSB for the CSI-RS resource of Cell 3.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: The actual overall delays measured in the test may be up to $2xTTI_{DCCH}$ higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

# A.5.7 Measurement Performance requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in clause 10 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in clause 10 for at least 90 % of the reported cases.
- Measurements are performed in RRC_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

## A.5.7.1 SS-RSRP

### A.5.7.1.1 EN-DC intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.1.1 and 10.1.3.1.2 for intra-frequency measurements.

#### A.5.7.1.1.2 Test parameters

In this set of test cases, all NR cells are on the same carrier frequency. Supported test configurations are shown in table A.5.7.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in table A.5.7.1.1.2-2 and A.5.7.1.1.2-3. The E-UTRA PCell is configured as specified in clause A.3.7.2.2. In all test cases, Cell 1 is the PCell, Cell 2 is the PSCell and Cell 3 is the target cell. The test consists of two time phases T1 and T2.

**Table A.5.7.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Configuration | Description |
|---|---|
| 1 | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

| NOTE 7: All parameters apply for configurations 1 and 2 | | | | | |
| NOTE 8: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

#### A.5.7.1.1.3 Test Requirements

The SS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.1.1 and relative accuracy requirements in clause 10.1.3.1.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.1.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

During T2:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.1.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

During T1 and T2:

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1

Relative accuracy of Cell 3 during T2 compared with Cell 3 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in table 10.1.3.1.2-1.

**Table A.5.7.1.1.3-1: SS-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 2 | $SSB_RP2 - \delta + G_{min} \leq$ Reported RSRP(dBm) $\leq SSB_RP2 + \delta + G_{max}$ |
| Cell 3 | $SSB_RP3 - \delta + G_{min} \leq$ Reported RSRP(dBm) $\leq SSB_RP3 + \delta + G_{max}$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.3.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

### A.5.7.1.2 EN-DC inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 and 10.1.5.1.2 for inter-frequency measurements with the testing configurations for NR cells in table A.5.7.1.2.1-1.

**Table A.5.7.1.2.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | FDD LTE PCell, cells 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, cells 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | FDD LTE PCell, cells 2&3 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | TDD LTE PCell, cells 2&3 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.5.7.1.2.2 Test parameters

In this set of test cases, there are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on a different frequency than the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.7.1.2.2-1 and table A.5.7.1.2.2-2 below. Both absolute and relative accuracy of RSRP intrer-frequency measurements are tested by using the parameters in table A.5.7.1.2.2-1 and table A.5.7.1.2.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.5.7.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |
|---|---|---|---|---|---|---|
| | | | Cell 2 | Cell 3 | Cell 2 | Cell 3 |

| Io[Note2] | 1, 2 | dBm/95.04 MHz [Note4] | -50.00 | -50.00 | (Table B.2.3-2 Rx Beam Peak[Note 8] +52.68 dB) | (Table B.2.3-2 Rx Beam Peak[Note 8] +33.13 dB) |
| | 3, 4 | | -50.09 | -50.09 | (Table B.2.3-2 Rx Beam Peak[Note 8] +55.69 dB) | (Table B.2.3-2 Rx Beam Peak[Note 8] +36.14 dB) |
| ($Io_{freq\ 1}$ – $Io_{freq\ 2}$) | 1~4 | dB | 0 | | 19.55 | |

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB_RP, Es/Iot, Io, ($SSB_RP_{Cell\ 3}$ – $SSB_RP_{Cell\ 2}$) and ($Io_{freq\ 2}$ – $Io_{freq\ 1}$) levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ or $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation
NOTE 8: The value in table B.2.3-2 is the Minimum SSB_RP for $SCS_{SSB}$ = 120 kHz, selected according to the operating band of Cell 3 and UE power class, without $\Delta MB_{P,n}$ adjustment.

### A.5.7.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil the absolute requirements in clause 10.1.5.1.1 and the relative requirements in clause 10.1.5.1.2.

Test 1:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.2.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.5.7.1.2.3-2.

Test 2:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.2.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.5.7.1.2.3-2.

**Table A.5.7.1.2.3-1: SS-RSRP absolute accuracy test requirement**

| | **Test requirement** Notes1,2,3,4 |
|---|---|
| Cell 2 | SSB_RP2 -δ +$G_{min}$ +X ≤ Reported RSRP(dBm) ≤ SSB_RP2 +δ +$G_{max}$ |
| Cell 3 | SSB_RP3 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ SSB_RP3 +δ +$G_{max}$ |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |
| NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. | |

**Table A.5.7.1.2.3-2: SS-RSRP relative accuracy test requirement**

| | **Test requirement** Notes1,2,3,4, 5, 6, 7 |
|---|---|
| Cell 3 – Cell 2 | SSB_RP3 - SSB_RP2 -δ - D - $G_{inter}$ ≤ Reported RSRP(dB) ≤ SSB_RP3 - SSB_RP2 +δ + $G_{inter}$ –(X) + E |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP relative accuracy requirement from Table 10.1.5.1.2-1 | |
| NOTE 3: Void | |
| NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. | |
| NOTE 5: D is the margin due to mis-alignment between fine beam and rough beam. D is the Rough Beam gain reduction in Rx beam peak direction from Table B.2.1.5.3-1, selected according to the UE power class. D is always a positive value. | |
| NOTE 6: $G_{inter}$ is the margin due to different antenna gain caused by frequency separation. $G_{inter}$ is from Table B.2.1.5.2-1, selected according to the UE power class, and is always a positive value. | |
| NOTE 7: E = 3 (dB) is an additional margin to account for the actual gain difference between peak direction and spherical coverage using rough beams. | |

### A.5.7.1.3 EN-DC inter-frequency measurement accuracy with FR1 serving cell and FR2 target cell

#### A.5.7.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 for inter-frequency measurements with the testing configurations in table A.5.7.1.3.1-1.

**Table A.5.7.1.3.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| Config | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 3 | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| 4 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | |
| 5 | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | |
| 6 | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | |
| NOTE: The UE is only required to be tested in one of the supported test configurations | | |

#### A.5.7.1.3.2 Test parameters

In this set of test cases there are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on a different frequency than the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.7.1.3.2-1 and table A.5.7.1.3.2-2 below. Absolute accuracy of RSRP inter-frequency measurements are tested by using the parameters in table A.5.7.1.3.2-1 and table A.5.7.1.3.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.5.7.1.3.2-1: SS-RSRP inter-frequency test parameters**

### A.5.7.1.3.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 3 shall fulfil the Absolute requirement in clause 10.1.5.1.1.

Test 1:

Absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.3.3.

Test 2:

Absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.3.3.

**Table A.5.7.1.3.3: SS-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3,4 |
|---|---|
| Cell 3 | SSB_RP2 -δ +Gmin +X ≤ Reported RSRP(dBm) ≤ SSB_RP2 +δ +Gmax |
| NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration<br>NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test<br>NOTE 3: Gmin and Gmax are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class<br>NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. | |

## A.5.7.2 SS-RSRQ

### A.5.7.2.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.8.1.1.

#### A.5.7.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.5.7.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is test by using the parameters in table A.5.7.2.1.2-2 and table A.5.7.2.1.2-3. The configuration of Cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell.

**Table A.5.7.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Configuration | Description |
|---|---|
| 1 | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

**Table A.5.7.2.1.2-2: SS-RSRQ Intra frequency test parameters**

| Io Note2 | dBm/95.04 MHz Note4 | -50 | | -54 | Io Note2 |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SS-RSRQ, SSB_RP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: SS-RSRQ and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Void
NOTE 7: Void
NOTE 8: Void
NOTE 9: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

#### A.5.7.2.1.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5 dB to Nominal SS-RSRQ -2.5 dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal SS-RSRQ +3.5 dB to Nominal SS-RSRQ -3.5 dB according to the requirements in clause 10.1.8.1.1. Nominal SS-RSRQ is the value shown in table A.5.7.2.1.2-3.

### A.5.7.2.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.9.1.1 and 10.1.9.1.2 for inter-frequency measurement.

#### A.5.7.2.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.5.7.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test setup in table A.5.7.2.2.2-2 and table A.5.7.2.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

**Table A.5.7.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.5.7.2.2.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5 dB to Nominal SSRQ-2.5 dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal SS-RSRQ+3.5 dB to Nominal SS-RSRQ-3.5 dB according to the requirements in clause 10.1.10.1.1.

The SS-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.1.2.

## A.5.7.3 SS-SINR

### A.5.7.3.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.1.1.

#### A.5.7.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.5.7.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is test by using the parameters in table A.5.7.3.1.2-2 and table A.5.7.3.1.2-3. The configuration of Cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell.

**Table A.5.7.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

NOTE 6: Void
NOTE 7: Void
NOTE 8: Void
NOTE 9: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.3.1.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR+3B to Nominal SS-SINR -3 dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5 dB to Nominal SS-SINR -3.5 dB according to the requirements in clause 10.1.10.13.1. Nominal SS-SINR is the value shown in table A.5.7.3.1.2-3.

## A.5.7.3.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

### A.5.7.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.1.1 and 10.1.15.1.2 for inter-frequency measurement.

### A.5.7.3.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.5.7.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test setup in table A.5.7.3.2.2-2 and table A.5.7.3.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.5.7.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.5.7.3.2.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR+3 dB to Nominal SS-SINR -3 dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR+3.5 dB to Nominal SS-SINR -3.5 dB according to the requirements in clause 10.1.15.1.1. Nominal SS-SINR is the value shown in table A.5.7.2.2.2-3

The SS-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.1.2.

## A.5.7.4 L1-RSRP measurement for beam reporting

### A.5.7.4.1 SSB based L1-RSRP measurement

#### A.5.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.2 and clause 10.1.20.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in table A.5.7.4.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.4.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.5.7.4.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.7.4.1.2-1 and table A.5.7.4.1.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.5.7.4.1.2-1 and table A.5.7.4.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.5.7.4.1.2-1: FR2 SSB based L1-RSRP general test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| SSB ARFCN | 1~4 | | freq1 | freq1 |

### A.5.7.4.1.3 Test Requirements

After 320 ms from the beginning of the test, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.20.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB0. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.5.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

For Test 2:

Absolute accuracy of SSB resource reported by UE in L1-RSRP report (SSB0 or SSB1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.5.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.1.2-1.

**Table A.5.7.4.1.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| SSB0 | SSB_RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤ SSB_RP0 +δ + $G_{max}$ |
| SSB1 | SSB_RP1 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤ SSB_RP1 +δ + $G_{max}$ |

NOTE 1: SSB_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the Io used in the test
NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

## A.5.7.4.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

### A.5.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.3 and clause 10.1.20.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in table A.5.7.4.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.4.2.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.5.7.4.2.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.7.4.2.2-1 and table A.5.7.4.2.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in table A.5.7.4.2.2-1 and table A.5.7.4.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.5.7.4.2.2-1: FR2 CSI-RS based L1-RSRP general test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 | freq1 |

| Io Note1 | 1~2 | dBm/ 95.04 MHz | -59.86 | | SS-RSRP+28.98 | |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | -51.57 | -2 | n.a. | |

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: No additional noise is added by the test system in Test 2.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.4.2.3 Test Requirements

After 320 ms from the beginning of the test, the L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 2 shall fulfil the requirements in clauses 10.1.20.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.5.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

For Test 2:

Absolute accuracy of CSI-RS resource reported by UE in L1-RSRP report (CSI-RS0 or CSI-RS1). The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in table A.5.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in table 10.1.20.2.2-1.

**Table A.5.7.4.2.3-1: L1-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| CSI-RS0 | CSI-RS _RP0 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP0 +δ + $G_{max}$ |
| CSI-RS1 | CSI-RS _RP1 -δ + $G_{min}$ ≤ Reported RSRP(dBm) ≤CSI-RS _RP1 +δ + $G_{max}$ |
| NOTE 1: CSI-RS_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

# A.5.7.5 CLI measurements

## A.5.7.5.1 EN-DC SRS-RSRP measurement accuracy with FR2 serving cell

### A.5.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.1.1 with the testing configurations for NR cells in table A.5.7.5.1.1-1.

**Table A.5.7.5.1.1-1: Applicable NR configurations for FR2 SRS-RSRP accuracy test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.5.7.5.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.7.5.1.2-1 and A.5.7.5.1.2-2 below. The test parameter for the (virtual) neighbor cell UE transmitting SRS are given in table A.5.7.5.1.2-2.

Before the test UE is configured to perform SRS-RSRP measurement. During the test, the test system transmits SRS resources for measurement in the DL slots according to the SRS configuration in table A.5.7.5.1.2-3. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

**Table A.5.7.5.1.2-1: FR2 test parameters for SRS-RSRP accuracy**

| Parameter | Config | Unit | Test 1 | Test 2 |
|---|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 | freq1 |
| Duplex mode | 1~2 | | TDD | TDD |
| TDD configuration | 1~2 | | TDDConf.3.1 | TDDConf.3.1 |

#### A.5.7.5.1.3 Test Requirements

The SRS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.1.1. The following requirements are to be verified:

During Test 1:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.5.7.5.1.3-1.

During Test 2:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.5.7.5.1.3-1.

**Table A.5.7.5.1.3-1: SRS-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| SRS | SRS_RP -δ +$G_{min}$ ≤ Reported SRS-RSRP(dBm) ≤SRS_RP +δ +$G_{max}$ |
| NOTE 1: SRS_RP is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

### A.5.7.5.2 EN-DC CLI-RSSI measurement accuracy with FR2 serving cell

#### A.5.7.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CLI-RSSI measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.22.2.1 with the testing configurations for NR cells in table A.5.7.5.2.1-1.

**Table A.5.7.5.2.1-1: Applicable NR configurations for FR2 CLI-RSSI accuracy test**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

#### A.5.7.5.2.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.7.5.2.2-1 and A.5.7.5.2.2-2 below.

Before the test UE is configured to perform CLI-RSSI measurement. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI resource and on 2 data symbol before. The CLI-RSSI measurement resource configuration is in table A.5.7.5.2.2-3.

**Table A.5.7.5.2.2-1: FR2 test parameters for CLI-RSSI accuracy**

| Parameter | Config | Unit | Test 1 | Test 2 |

| | rssi-PeriodicityAndOffset | sl160, 25 |

### A.5.7.5.2.3 Test Requirements

The CLI-RSSI measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.2.1. The following requirements are to be verified:

During Test 1:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.5.7.5.2.3-1.

During Test 2:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.5.7.5.2.3-1.

**Table A.5.7.5.2.3-1: CLI-RSSI absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| | Io -δ +$G_{min}$ ≤ Reported CLI-RSSI(dBm) ≤Io +δ +$G_{max}$ |
| NOTE 1: Io is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for 1.08 MHz | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |

## A.5.7.6 L1-SINR measurement for beam reporting

### A.5.7.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured and CSI-RS resource set with repetition off

### A.5.7.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.1 and clause 10.1.28.1 for FR2 L1-SINR measurements based on CSI-RS with the testing configurations for NR cells in table A.5.7.6.1.1-1, which configures the measurement resources for the CSI-RS based CMR and no dedicated IMR.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.6.1.1-1: Applicable NR configurations for FR2 L1-SINR test with CSI-RS based CMR and no dedicated IMR configured**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.5.7.6.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.7.6.1.2-1 and table A.5.7.6.1.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.5.7.6.1.2-1 and table A.5.7.6.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.5.7.6.1.2-1: FR2 CSI-RS based L1-SINR general test parameters**

| Parameter | Config | Unit | Test 1 |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |
| Duplex mode | 1~2 | | TDD |
| TDD Configuration | 1~2 | | TDDConf.3.1 |
| $BW_{channel}$ | 1~2 | MHz | 100: $N_{PRB,c}$ = 66 |
| PDSCH Reference measurement channel | 1~2 | | SR.3.1 TDD |
| RMSI CORESET Reference Channel | 1~2 | | CR.3.1 TDD |
| Dedicated CORESET Reference Channel | 1~2 | | CCR.3.1 TDD |
| SSB configuration | 1~2 | | SSB.1 FR2 |
| OCNG Patterns | 1~2 | | OP.1 |
| Initial BWP Configuration | 1~2 | | DLBWP.0.1<br>ULBWP.0.1 |
| Dedicated BWP configuration | 1~2 | | DLBWP.1.1<br>ULBWP.1.1 |
| TRS Configuration | 1~2 | | TRS.2.1 TDD |
| PDCCH/PDSCH TCI Configuration | 1~2 | | TCI.State.2 |
| SMTC configuration | 1~2 | | SMTC.1 |
| CSI-RS | 1~2 | | CSI-RS.3.2 TDD |
| reportConfigType | 1~2 | | periodic |
| reportQuantity-r16 | 1~2 | | cri-SINR-r16 |
| nrofReportedRS | 1~2 | | 2 |
| L1-SINR reporting period | 1~2 | | slot640 |
| Propagation condition | 1~2 | | AWGN |
| Antenna configuration | 1~2 | | 1x2 |
| EPRE ratio of PSS to SSS | 1~2 | dB | 0 |

| EPRE ratio of PBCH to PBCH DMRS | | | |
| EPRE ratio of PDCCH DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS Note 1 | | | |
| EPRE ratio of OCNG to OCNG DMRS Note 1 | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.<br>NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | |

**Table A.5.7.6.1.2-2: FR2 CSI-RS based L1-SINR OTA related test parameters**

| Parameter | Config | Unit | Test 1 | |
|---|---|---|---|---|
| | | | CSI-RS0 | CSI-RS1 |
| Angle of arrival configuration | | | Setup 1 according to A.3.15.1 | |
| Assumption for UE beams Note 4 | | | Rough | |
| $N_{oc}$ | 1~2 | dBm/15 kHz | -100 | |
| $N_{oc}$ | 1~2 | dBm/SSB SCS | -91 | |
| $\hat{E}_s / I_{ot}$ | 1~2 | dB | 10 | -2 |
| CSI-RS-RSRP Note1 | 1~2 | dBm/SCS | -81 | -93 |
| Io Note1 | 1~2 | dBm/ 95.04 MHz | -51.57 | -59.86 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 10 | -2 |

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: Void.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.6.1.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 2 shall fulfil the requirements in clauses 10.1.28.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.5.7.6.1.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the reported differential L1-SINR meets is in the range shown in table A.5.7.6.1.3-2.

**Table A.5.7.6.1.3-1: L1-SINR absolute accuracy test requirement**

| | Test requirement Notes1,2 |
|---|---|
| CSI-RS0 | L1-SINR0-δ≤ Reported SINR(dB) ≤L1-SINR0+δ |

NOTE 1: L1-SINR0 is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS 0 under consideration
NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.1.1-1, selected according to the Io used in the test

**Table A.5.7.6.1.3-2: L1-SINR relative accuracy test requirement**

| | Test requirement Notes1,2 |
|---|---|
| CSI-RS0 - CSI-RS1 | L1-SINR0 - L1-SINR1 - σ ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ |

NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration
NOTE 2: σ is the SINR relative requirement from Table 10.1.28.1.2-1, selected according to the Io used in the test

## A.5.7.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR

### A.5.7.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.2 and clause 10.1.28.2 for L1-SINR measurements with SSB based CMR and dedicated CSI-RS based IMR, with the testing configurations for NR cells in table A.5.7.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3 | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4 | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.5.7.6.2.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.7.6.2.2-1 and table A.5.7.6.2.2-2 below. The absolute accuracy of L1-SINR measurements are tested by using the parameters in table A.5.7.6.2.2-1 and table A.5.7.6.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources and one CSI-RS resource set with two CSI-RS resource. UE is configured to perform RLM and BFD measurement based on the SSB resources 0 and 1. UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

**Table A.5.7.6.2.2-1: FR2 L1-SINR measurement test parameters with SSB based CMR and CSI-RS based IMR**

| Parameter | Config | Unit | Test 1 |
|---|---|---|---|
| SSB ARFCN | 1~4 | | freq1 |
| Duplex mode | 1~4 | | TDD |
| TDD Configuration | 1~4 | | TDDConf.3.1 |
| $BW_{channel}$ | 1~4 | MHz | 100: $N_{PRB,c}$ = 66 |
| PDSCH Reference measurement channel | 1~4 | | SR.3.1 TDD |

| NOTE 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | |

### A.5.7.6.2.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 of Cell 2 shall fulfil the requirements in clauses 10.1.28.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB#0+CSI-RS#0. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.5.7.6.2.3-1.

Relative accuracy of SSB#0+CSI-RS#0 compared with SSB#1+CSI-RS#1. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.5.7.6.2.3-2.

**Table A.5.7.6.2.3-1: L1-SINR absolute accuracy test requirement**

| | Test requirement Notes1,2 |
|---|---|
| SSB#0+CSI-RS#0 | L1_SINR0 -δ + ≤ Reported SINR (dB) ≤ L1_SINR 0 +δ |
| NOTE 1: L1_SINR0 is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB#0+CSI-RS#0 under consideration<br>NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.2.1-1, selected according to the Io used in the test | |

**Table A.5.7.6.2.3-2: L1-SINR relative accuracy test requirement**

| | Test requirement Notes1,2 |
|---|---|
| SSB#0+CSI-RS#0 - SSB#1+CSI-RS#1 | L1-SINR0 - L1-SINR1 - σ ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ |
| NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the SSB#n+CSI-RS#n under consideration<br>NOTE 2: σ is the SINR relative requirement from Table 10.1.28.2.2-1, selected according to the Io used in the test | |

## A.5.7.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR

### A.5.7.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will partly verify the requirements in clauses 9.8.4.3 and clause 10.1.28.3 for L1-SINR measurements based on CSI-RS as CMR and CSI-IM as IMR with the testing configurations for NR cells in table A.5.7.6.3.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.6.3.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with CSI-RS based CMR and CSI-IM based IMR**

| Config | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

### A.5.7.6.3.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in table A.5.7.6.3.2-1 and A.5.7.6.3.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in table A.5.7.6.3.2-1 and A.5.7.6.3.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources and one CSI-IM resource set with two CSI-IM resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB. UE is configured to perform L1-SINR measurement based on the configured CSI-RS as CMR and CSI-IM as IMR.

**Table A.5.7.6.3.2-1: FR2 L1-SINR measurement test with CSI-RS based CMR and CSI-IM based IMR**

| Parameter | Config | Unit | Test 1 |
|---|---|---|---|
| SSB ARFCN | 1~2 | | freq1 |
| Duplex mode | 1~2 | | TDD |
| TDD Configuration | 1~2 | | TDDConf.3.1 |
| $BW_{channel}$ | 1~2 | MHz | 100: $N_{PRB,c}$ = 66 |
| PDSCH Reference measurement channel | 1~2 | | SR.3.1 TDD |

| Parameter | Config | Unit | Test 1 |
|---|---|---|---|
| RMSI CORESET Reference Channel | 1~2 | | CR.3.1 TDD |
| Dedicated CORESET Reference Channel | 1~2 | | CCR.3.1 TDD |
| SSB configuration | 1~2 | | SSB.1 FR2 |
| OCNG Patterns | 1~2 | | OP.1 |
| Initial BWP Configuration | 1~2 | | DLBWP.0.1<br>ULBWP.0.1 |
| Dedicated BWP configuration | 1~2 | | DLBWP.1.1<br>ULBWP.1.1 |
| TRS Configuration | 1~2 | | TRS.2.1 TDD |
| PDCCH/PDSCH TCI Configuration | 1~2 | | TCI.State.2 |
| SMTC configuration | 1~2 | | SMTC.1 |
| CSI-RS configuration as CMR | 1~2 | | CSI-RS.3.2 TDD |
| CSI-IM configuration as IMR | 1~2 | | CSI-IM.3.3 TDD |
| reportConfigType | 1~2 | | periodic |
| reportQuantity-r16 | 1~2 | | cri-SINR-r16 |
| nrofReportedRS | 1~2 | | 2 |
| L1-SINR reporting period | 1~2 | | slot640 |
| Propagation condition | 1~2 | | AWGN |
| Antenna configutaion | 1~2 | | 1x2 |
| EPRE ratio of PSS to SSS | 1~2 | dB | 0 |
| EPRE ratio of PBCH DMRS to SSS | | | |
| EPRE ratio of PBCH to PBCH DMRS | | | |
| EPRE ratio of PDCCH DMRS to SSS | | | |
| EPRE ratio of PDCCH to PDCCH DMRS | | | |
| EPRE ratio of PDSCH DMRS to SSS | | | |
| EPRE ratio of PDSCH to PDSCH DMRS | | | |
| EPRE ratio of OCNG DMRS to SSS[Note 1] | | | |
| EPRE ratio of OCNG to OCNG DMRS [Note 1] | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

**Table A.5.7.6.3.2-2: FR2 CSI-RS based L1-SINR measurement OTA related test parameters**

| Parameter | Config | Unit | Test 1 | |
|---|---|---|---|---|
| | | | CSI-RS0 | CSI-RS1 |
| Angle of arrival configuration | | | Setup 1 according to A.3.15.1 | |
| Assumption for UE beams[Note 4] | | | Rough | |
| $N_{oc}$ | 1~2 | dBm/15 kHz | -100 | |
| $N_{oc}$ | 1~2 | dBm/SSB SCS | -91 | |
| $\hat{E}_s / I_{ot}$ | 1~2 | dB | 10 | -2 |
| CSI-RS-RSRP[Note1] | 1~2 | dBm/SCS | -81 | -93 |
| Io[Note1] | 1~2 | dBm/ 95.04 MHz | -51.57 | -59.86 |
| $\hat{E}_s / N_{oc}$ | 1~2 | dB | 10 | -2 |

NOTE 1: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 3: No additional noise is added by the test system in Test 2.
NOTE 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

#### A.5.7.6.3.3 Test Requirements

After 640 ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0+CSI-IM#0 and CSI-RS#1+CSI-IM#1 of Cell 2 shall fulfil the requirements in clauses 10.1.28.3. The following requirements are to be verified:

Absolute accuracy of CSI-RS#0+CSI-IM#0. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in table A.5.7.6.3.3-1.

Relative accuracy of CSI-RS#0+CSI-IM#0 compared with CSI-RS#1+CSI-IM#1. The UE is deemed to meet the requirement if the reported differential L1-SINR is in the range shown in table A.5.7.6.3.3-2.

**Table A.5.7.6.3.3-1: L1-SINR absolute accuracy test requirement**

| | **Test requirement** Notes1,2 |
|---|---|
| CSI-RS#0+CSI-IM#0 | L1-SINR0 -δ≤ Reported SINR(dBm) ≤L1-SINR 0 +δ |
| NOTE 1: L1-SINR0 is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS#0 under consideration<br>NOTE 2: δ is the SINR absolute accuracy requirement from Table 10.1.28.3.1-2. | |

**Table A.5.7.6.3.3-2: L1-SINR relative accuracy test requirement**

| | **Test requirement** Notes1,2 |
|---|---|
| CSI-RS#0+CSI-IM#0 - CSI-RS#1+CSI-IM#1 | L1-SINR0 - L1-SINR1 - σ≤ Reported DIFFSINR (dB) ≤ L1-SINR0 - L1-SINR1 + σ |
| NOTE 1: L1-SINRn is the equivalent SINR received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the CSI-RS#n+CSI-IM#n under consideration<br>NOTE 2: σ is the SINR relative requirement from Table 10.1.28.3.2-2, selected according to the Io used in the test | |

## A.5.7.7 CSI-RSRP

### A.5.7.7.1 EN-DC intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RS based RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.1.1 and 10.1.3.1.2 for intra-frequency measurements.

#### A.5.7.7.1.2 Test parameters

In this set of test cases, all NR cells are on the same carrier frequency. Supported test configurations are shown in table A.5.7.7.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in table A.5.7.7.1.2-2 and A.5.7.7.1.2-3. The E-UTRA PCell is configured as specified in clause A.3.7.2.2. In all test cases, Cell 1 is the PCell, Cell 2 is the PSCell and Cell 3 is the target cell. The test consists of two time phases T1 and T2.

**Table A.5.7.7.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| **Configuration** | **Description** |
|---|---|
| 1 | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

| $\hat{E}_s/I_{ot}$ BB Note6 for CSI-RS | dB | 2.44 | -5.98 | -5.98 | -5.98 |
| CSI_RP | dBm/SCS | -76.6 | -81.6 | (Table B.2.2-2 Rx Beam Peak +2.1 dB) | (Table B.2.2-2 Rx Beam Peak +2.1 dB) |
| Io Note2 | dBm/95.04 MHz Note4 | -50.05 | | (Table B.2.2-2 Rx Beam Peak +29.70 dB) | |

NOTE 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: SSB_RP, Es/Iot and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: Void
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: Void
NOTE 6: Calculation of $Es/Iot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1 dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4.
NOTE 7: All parameters apply for configurations 1 and 2
NOTE 8: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.7.1.3 Test Requirements

The CSI-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.1.1 and relative accuracy requirements in clause 10.1.3.1.2. The following requirements are to be verified:

During T1:

- Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.5.7.6.1.3-1.

- Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.1.2-1.

During T2:

- Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.5.7.6.1.3-1.

- Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.1.2-1.

During T1 and T2:

- Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in table 10.1.3.1.2-1

- Relative accuracy of Cell 3 during T2 compared with Cell 3 during T1. The UE is deemed to meet the requirement if the difference in reported CSI -RSRP meets the requirements in table 10.1.3.1.2-1.

**Table A.5.7.7.1.3-1: CSI-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3 |
|---|---|
| Cell 2 | CSI_RP2 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ CSI_RP2 +δ +$G_{max}$ |
| Cell 3 | CSI_RP3 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ CSI_RP3 +δ +$G_{max}$ |

NOTE 1: CSI_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration
NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.3.1.1-1, selected according to the Io used in the test
NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class

## A.5.7.7.2 EN-DC inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

### A.5.7.7.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RS based RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.3.1 and 10.1.5.3.2 for inter-frequency measurements with the testing configurations for NR cells in table A.5.7.7.2.1-1.

**Table A.5.7.7.2.1-1: Applicable NR configurations for FR2 inter-frequency CSI-RSRP accuracy test**

| Configuration | Description |
|---|---|
| 1 | FDD LTE PCell, cells 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, cells 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.5.7.7.2.2 Test parameters

In this set of test cases, there are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on a different frequency than the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in table A.5.7.7.2.2-1 and table A.5.7.7.2.2-2 below. Both absolute and relative accuracy of RSRP intrer-frequency measurements are tested by using the parameters in table A.5.7.7.2.2-1 and table A.5.7.7.2.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.5.7.7.2.2-1: CSI-RSRP inter-frequency general test parameters**

| Parameter | Config | Unit | Test 1 | | Test 2 | |

| NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation | | | | | |

### A.5.7.7.2.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil the absolute requirements in clause 10.1.5.3.1 and the relative requirements in clause 10.1.5.3.2.

Test 1:

- Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.5.7.7.2.3-1.
- Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI -RSRP meets the requirements in table A.5.7.7.2.3-2.

Test 2:

- Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI -RSRP is in the range shown in table A.5.7.7.2.3-1.
- Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI -RSRP meets the requirements in table A.5.7.7.2.3-2.

**Table A.5.7.7.2.3-1: CSI-RSRP absolute accuracy test requirement**

| | Test requirement Notes1,2,3,4 |
|---|---|
| Cell 2 | CSI _RP2 -δ +$G_{min}$ +X ≤ Reported RSRP(dBm) ≤ CSI _RP2 +δ +$G_{max}$ |
| Cell 3 | CSI _RP3 -δ +$G_{min}$ ≤ Reported RSRP(dBm) ≤ CSI _RP3 +δ +$G_{max}$ |
| NOTE 1: CSI_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test | |
| NOTE 3: $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class | |
| NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. | |

**Table A.5.7.7.2.3-2: CSI-RSRP relative accuracy test requirement**

| | Test requirement Notes1,2,3,4 |
|---|---|
| Cell 3 – Cell 2 | CSI _RP3 - CSI _RP2 – δ – D – $G_{inter}$ ≤ Reported RSRP(dB) ≤ CSI_RP3 - CSI_RP2 + δ + $G_{inter}$ – (X) + E |
| NOTE 1: CSI_RPn is the equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration | |
| NOTE 2: δ is the RSRP relative accuracy requirement from Table 10.1.5.1.2-1 | |
| NOTE 3: Void | |

NOTE 4: X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value.
NOTE 5: D is the margin due to mis-alignment between fine beam and rough beam. D is the Rough Beam gain reduction in Rx beam peak direction from Table B.2.1.5.3-1, selected according to the UE power class. D is always a positive value.
NOTE 6: $G_{inter}$ is the margin due to different antenna gain caused by frequency separation. $G_{inter}$ is from Table B.2.1.5.2-1, selected according to the UE power class, and is always a positive value.
NOTE 7: E = 3 (dB) is an additional margin to account for the actual gain difference between peak direction and spherical coverage using rough beams.

## A.5.7.8 CSI-RSRQ

### A.5.7.8.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.8 for inter-frequency measurement.

#### A.5.7.8.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in table A.5.7.8.1.2-1. The absolute accuracy of CSI-RSRQ intra-frequency measurement is test by using the parameters in table A.5.7.8.1.2-2. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell. The configuration of Cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1.

**Table A.5.7.8.1.2-1: CSI-RSRQ Intra frequency CSI-RSRQ supported test configurations**

| Config | Description |
|---|---|
| 1 | FDD LTE PCell, Cell 2&3 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, Cell 2&3 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations in each supported band | |

NOTE 2: CSI-RSRQ, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: NR operating band groups are as defined in clause 3.5.2.
NOTE 7: Void
NOTE 8: Void
NOTE 9: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.8.1.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ +2.5 dB to Nominal CSI-RSRQ –3.5 dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ +3.5 dB to Nominal CSI-RSRQ –4.5 dB according to the requirements in clause 10.1.8 with an additional -1 dB margin reflecting the possible impact of UE self-noise in the test. Nominal CSI-RSRQ is the value shown in table A.5.7.8.1.2-3.

## A.5.7.8.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

### A.5.7.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.10 for inter-frequency measurement.

### A.5.7.8.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.5.7.8.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-RSRQ inter-frequency measurement are tested by using test setup in table A.5.7.8.2.2-2 and table A.5.7.8.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1.

**Table A.5.7.8.2.2-1: CSI-RSRQ Inter frequency CSI-RSRQ supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: Void
NOTE 7: Void
NOTE 8: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.8.2.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ +2.5 dB to Nominal CSI-RSRQ -3.5 dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ +3.5 dB to Nominal CSI-RSRQ -4.5 dB according to the requirements in clause 10.1.10 with an additional -1 dB margin reflecting the possible impact of UE self-noise in the test.

The CSI-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.

## A.5.7.9 CSI-SINR

### A.5.7.9.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.2.1.

#### A.5.7.9.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in table A.5.7.9.1.2-1. The absolute accuracy of CSI-SINR intra-frequency measurement is test by using the parameters in table A.5.7.9.1.2-

2 and table A.5.7.9.1.2-3. The configuration of Cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell.

**Table A.5.7.9.1.2-1: CSI-SINR Intra frequency CSI-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | FDD LTE PCell, Cell 2&3 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | TDD LTE PCell, Cell 2&3 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to pass in one of the supported test configurations | |

**Table A.5.7.9.1.2-2: CSI-SINR Intra frequency test parameters**

| Parameter | Unit | Test 1 | | Test 2 | |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-SINR and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: NR operating band groups are as defined in clause 3.5.2.
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.5.7.9.1.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+3 dB to Nominal CSI-SINR -4 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +3.5 dB to Nominal CSI-SINR -4.5 dB according to the requirements in clause 10.13.2 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. Nominal CSI-SINR is the value shown in table A.5.7.9.1.2-3.

## A.5.7.9.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

### A.5.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.2.1 and 10.1.15.2.2 for inter-frequency measurement.

### A.5.7.9.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in table A.5.7.9.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test setup in table A.5.7.9.2.2-2 and table A.5.7.9.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in table A.3.7.2.1-1. The TCI status for Cell 1 is defined in table A.3.16.2-1 and TRS configuration for Cell 1 is defined in table A.3.17.2.1-1.

**Table A.5.7.9.2.2-1: CSI-SINR Inter frequency CSI-SINR supported test configurations**

| Configuration | Description |
|---|---|
| 1 | LTE FDD, NR 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2 | LTE TDD, NR 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

NOTE 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 2: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 3: CSI-SINR and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
NOTE 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone
NOTE 5: As observed with 0 dBi gain antenna at the centre of the quiet zone
NOTE 6: NR operating band groups are as defined in clause 3.5.2.
NOTE 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

#### A.5.7.9.2.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+3 dB to Nominal CSI-SINR -4 dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR+3.5 dB to Nominal CSI-SINR -4.5 dB according to the requirements in clause 10.1.15.2.1 with an additional -1 dB margin reflecting the possible impact of UE self noise in the test. Nominal CSI-SINR is the value shown in table A.5.7.2.2.2-3

The CSI-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.2.2.

## A.5.8 Void

# A.6 NR standalone tests with all NR cells in FR1

## A.6.1 SA: RRC_IDLE state mobility

### A.6.1.1 Cell re-selection to NR

#### A.6.1.1.1 Cell reselection to FR1 intra-frequency NR case

##### A.6.1.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the intra-frequency NR cell reselection requirements specified in clause 4.2.2.3.

##### A.6.1.1.1.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.1.2-1, A.6.1.1.1.2-2 and A.6.1.1.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2.

**Table A.6.1.1.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.1.1.1.2-2: General test parameters for intra-frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 1 | |
| T2 end condition | Active cell | | 1, 2, 3 | Cell 2 | |
| | Neighbour cells | | 1, 2, 3 | Cell 1 | |
| Final condition | Active cell | | 1, 2, 3 | Cell 1 | |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |
| RF Channel Number | | | 1, 2, 3 | 1 | |
| Time offset between cells | | | 1 | 3 ms | Asynchronous cells |
| | | | 2 | 3 μs | Synchronous cells |
| | | | 3 | 3 μs | Synchronous cells |
| Access Barring Information | | - | 1, 2, 3 | Not Sent | No additional delays in random access procedure. |
| SSB configuration | | | 1 | SSB.1 FR1 | |
| | | | 2 | SSB.1 FR1 | |
| | | | 3 | SSB.2 FR1 | |
| SMTC configuration | | | 1 | SMTC.2 | Configured in SIB2 of Cell 1 |
| | | | | SMTC.6 | Configured in SIB2 of Cell 2 |
| | | | 2 | SMTC.1 | |
| | | | 3 | SMTC.1 | |
| DRX cycle length | | s | 1, 2, 3 | 1.28 | The value shall be used for all cells in the test. |
| PRACH configuration index | | | 1, 2, 3 | 102 | The detailed configuration is specified in TS 38.211 clause 6.3.3.2 |
| rangeToBestCell | | | 1, 2, 3 | Not configured | |

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| T1 | s | 1, 2, 3 | >7 | During T1, Cell 2 shall be powered off, and during the off time the physical cell identity shall be changed, The intention is to ensure that Cell 2 has not been detected by the UE prior to the start of period T2 |
| T2 | s | 1, 2, 3 | 40 | T2 needs to be defined so that cell re-selection reaction time is taken into account. |
| T3 | s | 1, 2, 3 | 15 | T3 needs to be defined so that cell re-selection reaction time is taken into account. |

| Propagation Condition | | 1, 2, 3 | AWGN | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.1.1.1.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 34 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to an already detected cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $T_{detect, NR_Intra} + T_{SI-NR}$, and to an already detected cell can be expressed as: $T_{evaluate, NR_ intra} + T_{SI-NR}$,

Where:

$T_{detect, NR_Intra}$ See table 4.2.2.3-1 in clause 4.2.2.3

$T_{evaluate, NR_ intra}$ See table 4.2.2.3-1 in clause 4.2.2.3

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 33.28 s, allow 34 s for the cell re-selection delay to a newly detectable cell and 7.68 s for the cell re-selection delay to an already detected cell in the test case, which we allow 8 s.

### A.6.1.1.2 Cell reselection to FR1 inter-frequency NR case

#### A.6.1.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the inter-frequency NR cell reselection requirements specified in clause 4.2.2.4.

#### A.6.1.1.2.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.6.1.1.2.2-1, A.6.1.1.2.2-2 and A.6.1.1.2.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3

respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

**Table A.6.1.1.2.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.1.2.2-2: General test parameters for FR1 inter-frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 2 | The UE camps on Cell 2 in the initial phase and during T1 period the UE reselects to Cell 1 |
| | Neighbour cell | | 1, 2, 3 | Cell 1 | |
| T1 end condition | Active cell | | 1, 2, 3 | Cell 1 | The UE shall perform reselection to Cell 1 during T1 |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |
| T3 end condition | Active cell | | 1, 2, 3 | Cell 2 | The UE shall perform reselection to Cell 2 with higher priority during T3 |
| | Neighbour cell | | 1, 2, 3 | Cell 1 | |
| RF Channel Number | | | 1, 2, 3 | 1, 2 | |
| Time offset between cells | | | 1 | 3 ms | Asynchronous cells |
| | | | 2 | 3 µs | Synchronous cells |
| | | | 3 | 3 µs | Synchronous cells |
| Access Barring Information | | - | 1, 2, 3 | Not Sent | No additional delays in random access procedure. |

| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | | | |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | | |

#### A.6.1.1.2.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search}$ + $T_{evaluate,\ NR_\ inter}$ + $T_{SI\text{-}NR}$, and to a lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter}$ + $T_{SI\text{-}NR}$,

Where:

$T_{higher_priority_search}$ See clause 4.2.2.7

$T_{evaluate,\ NR_\ inter}$ See table 4.2.2.4-1 in clause 4.2.2.4

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

### A.6.1.1.3 Cell reselection to FR1 intra-frequency NR case for UE fulfilling low mobility relaxed measurement criterion

#### A.6.1.1.3.1 Test Purpose and Environment

This test is to verify the requirement for the intra-frequency NR cell reselection requirements for UE fulfilling low mobility criterion specified in clause 4.2.2.9.2

#### A.6.1.1.3.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.3.2-1, A.6.1.1.3.2-2 and A.6.1.1.3.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2.

**Table A.6.1.1.3.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.1.1.3.2-2: General test parameters for FR1 intra-frequency NR cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|

| Propagation Condition | | 1, 2, 3 | AWGN | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.1.1.3.3 Test Requirements

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected cell shall be less than 17 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected cell shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to an already detected cell can be expressed as: $T_{evaluate,NR_Intra} + T_{SI-NR}$,

Where:

$T_{evaluate,NR_Intra}$ See table 4.2.2.9.2-1 in clause 4.2.2.9.2 for reselection to Cell 2 during T1 with UE fulfilling low mobility criterion. 15.36 s.

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to an already detected cell for UE fulfilling low mobility criterion in the test case.

## A.6.1.1.4 Cell reselection to FR1 intra-frequency NR case for UE fulfilling not-at-cell edge relaxed measurement criterion

### A.6.1.1.4.1 Test Purpose and Environment

This test is to verify the relaxed cell re-selection requirement for UEs configured with not-at-cell edge criterion specified in clause 4.2.2.9.3.

### A.6.1.1.4.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.4.2-1, A.6.1.1.4.2-2 and A.6.1.1.4.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas.

**Table A.6.1.1.4.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.1.1.4.2-2: General test parameters for FR1 intra-frequency NR cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active Cell | | 1, 2, 3 | Cell 1 | The UE camps on Cell 1 in the initial phase |
| | Neighbour Cells | | 1, 2, 3 | Cell 2 | |
| T1 end condition | Active Cell | | 1, 2, 3 | Cell 2 | The UE shall fulfil the not-at-cell edge criterion and reselect to Cell 2 during T1 period during T1. |
| | Neighbour Cells | | 1, 2, 3 | Cell 1 | |
| T2 end condition | Active Cell | | 1, 2, 3 | Cell 1 | The UE shall perform reselection to Cell 1 during T2 |

### A.6.1.1.4.3 Test Requirements

The cell re-selection delay to an already detected cell for UE configured with *cellEdgeEvaluation* criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected cell for UE configured with *cellEdgeEvaluation* criterion shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to an already detected cell for UE configured with relaxed measurement criterion can be expressed as: $T_{evaluate,NR_Intra} + T_{SI\text{-}NR}$,

Where:

$T_{evaluate,NR_Intra}$ See table 4.2.2.9.3-1 for UE fulfilling not-at-cell edge criterion in clause 4.2.2.9.3.

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a Cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to an already detected cell for UE fulfilling not-at-cell edge criterion in the test case.

## A.6.1.1.5 Cell reselection to FR1 inter-frequency NR case for UE fulfilling low mobility relaxed measurement criterion

### A.6.1.1.5.1 Test Purpose and Environment

This test is to verify the requirement for the inter-frequency NR cell reselection requirements specified in clause 4.2.2.10.2, for UE fulfilling low mobility relaxed measurement criterion.

### A.6.1.1.5.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.6.1.1.5.2-1, A.6.1.1.5.2-2 and A.6.1.1.5.2-3. The test consists of two successive time periods, with time duration of T1 and T2

respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1]. So, Cell 2 and Cell 1 configure the UE as follows:

*lowMobilityEvalutation* [2] criterion is configured according to the parameters listed in table A.6.1.1.5.2-3;

*cellEdgeEvaluation* [2] criterion is not configured;

*combineRelaxedMeasCondition* [2] is not configured;

**Table A.6.1.1.5.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.1.5.2-2: General test parameters for FR1 inter-frequency NR cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 2 | The UE camps on Cell 2 in the initial phase, it fulfills Low Mobility relaxation measurements criterion, and during T1 period the UE reselects to Cell 1 |
| | Neighbour cells | | 1, 2, 3 | Cell 1 | |
| T1 end condition | Active cell | | 1, 2, 3 | Cell 1 | The UE shall perform reselection to Cell 1 during T1 |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |

### A.6.1.1.5.3 Test Requirements

The cell reselection delay to an already detected lower priority cell for UE fulfilling low mobility relaxed measurements is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to a lower priority cell for UE fulfilling low mobility relaxed measurements shall be less than 17 s.

The cell reselection delay to an already detected higher priority cell for UE fulfilling low mobility relaxed measurements is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRCSetupRequest message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected higher priority cell for UE fulfilling low mobility relaxed measurements shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a known lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter} + T_{SI\text{-}NR}$,

Where:

$T_{evaluate,\ NR_\ inter}$ See table 4.2.2.10.2-1 in clause 4.2.2.10.2

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to an already detected lower priority cell and 16.64 s for the cell re-selection delay to an already detected higher priority cell, which we allow 17 s for UE fulfilling low mobility relaxed measurements in the test case.

## A.6.1.1.6 Cell reselection to FR1 inter-frequency NR case for UE fulfilling not-at-cell edge relaxed measurement criterion

### A.6.1.1.6.1 Test Purpose and Environment

This test is to verify the requirement for the inter-frequency NR cell reselection requirements specified in clause 4.2.2.10.3, for UE fulfilling not-at-cell edge relaxed measurement criterion.

### A.6.1.1.6.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.6.1.1.6.2-1, A.6.1.1.6.2-2 and A.6.1.1.6.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE not-at-cell edge as defined in clause 5.2.4.9.2 in TS 38.304 [1]. So, Cell 2 and Cell 1configures the UE as follows:

*cellEdgeEvaluation* [2] criterion is configured according to the parameters listed in table A.6.1.1.5.2-3;

*lowMobilityEvalutation* [2] criterion is not configured;

*combineRelaxedMeasCondition* [2] is not configured;

**Table A.6.1.1.6.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.1.6.2-2: General test parameters for FR1 inter-frequency NR cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 2 | The UE camps on Cell 2 in the initial phase, it fulfills Not-at-cell edge relaxation measurements criterion, and during T1 period the UE reselects to Cell 1 |
| | Neighbour cells | | 1, 2, 3 | Cell 1 | |
| T1 end condition | Active cell | | 1, 2, 3 | Cell 1 | The UE shall perform reselection to Cell 1 during T1 |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |
| T2 end condition | Active cell | | 1, 2, 3 | Cell 2 | The UE shall perform reselection to Cell 2 with higher priority during T2 |
| | Neighbour cells | | 1, 2, 3 | Cell 1 | |
| RF Channel Number | | | 1, 2, 3 | 1, 2 | |
| Time offset between cells | | | 1 | 3 ms | Asynchronous cells |

#### A.6.1.1.6.3 Test Requirements

The cell reselection delay to an already detected lower priority cell for UE fulfilling not-at-cell edge relaxed measurements is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected lower priority cell for UE fulfilling not-at-cell edge relaxed measurements shall be less than 17 s.

The cell reselection delay to an already detected higher priority cell for UE fulfilling not-at-cell-edge relaxed measurements is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the RRCSetupRequest message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected higher priority cell for UE fulfilling not-at-cell-edge relaxed measurements shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate,\ NR_\ inter} + T_{SI\text{-}NR}$,

Where:

$T_{evaluate,\ NR_\ inter}$ See table 4.2.2.10.3-1 in clause 4.2.2.10

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s , allow 17 s for the cell re-selection delay to an already detected lower priority cell and 16.64 s for the cell re-selection delay to an already higher priority cell, which we allow 17 s for UE fulfilling not-at-cell edge relaxed measurements in the test case.

### A.6.1.1.7 Cell reselection to FR1 intra-frequency NR case for UE configured with *highSpeedMeasFlag-r16*

#### A.6.1.1.7.1 Test Purpose and Environment

This test is to verify the requirement for the intra-frequency NR cell reselection requirements for UE configured with *highSpeedMeasFlag-r16* specified in clause 4.2.2.3.

#### A.6.1.1.7.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.7.2-1, A.6.1.1.7.2-2 and A.6.1.1.7.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. *highSpeedMeasFlag-r16* is broadcasted to UE.

**Table A.6.1.1.7.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.1.1.7.2-2: General test parameters for intra-frequency NR cell re-selection test case for UE *configured with highSpeedMeasFlag-r16***

| Parameter | | Unit | Test configuration | Value | Comment |

| NOTE 4: The AWGN 1944 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 1944 Hz. | | | | | | | | |
| NOTE 5: The AWGN 3334 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 3334 Hz. | | | | | | | | |

#### A.6.1.1.7.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 4 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $T_{detect, NR_Intra} + T_{SI-NR}$, and to an already detected cell can be expressed as: $T_{evaluate, NR_ intra} + T_{SI-NR}$,

Where:

$T_{detect, NR_Intra}$ See table 4.2.2.3-2 in clause 4.2.2.3

$T_{evaluate, NR_ intra}$ See table 4.2.2.3-2 in clause 4.2.2.3

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 3.84 s, allow 4 s for the cell re-selection delay to a newly detectable cell and 2.24 s for the cell re-selection delay to an already detected cell in the test case, which we allow 3 s.

### A.6.1.1.8 Cell reselection to FR1 inter-frequency NR case for UE configured with *highSpeedMeasInterFreq-r17*

#### A.6.1.1.8.1 Test Purpose and Environment

This test is to verify the requirement for the inter-frequency NR cell reselection requirements for UE configured with *highSpeedMeasInterFreq-r17* specified in clause 4.2.2.4.

#### A.6.1.1.8.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.6.1.1.8.2-1, A.6.1.1.8.2-2 and A.6.1.1.8.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas and Cell 2 is of higher priority than Cell 1.

**Table A.6.1.1.8.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.1.8.2-2: General test parameters for FR1 inter-frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 2 | The UE camps on Cell 2 in the initial phase and during T1 period the UE reselects to Cell 1 |

| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | | | |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | | |
| NOTE 4: The AWGN 1944 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 1944 Hz. | | | | | | | | |
| NOTE 5: The AWGN 3334 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 3334 Hz. | | | | | | | | |

#### A.6.1.1.8.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 5 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $T_{detect,NR_Inter_HST} + T_{SI\text{-}NR}$, and to an already detected cell can be expressed as: $T_{evaluate,NR_Inter_HST} + T_{SI\text{-}NR}$,

Where:

$T_{detect,NR_Inter_HST}$ See table 4.2.2.4-2 in clause 4.2.2.4

$T_{evaluate,NR_Inter_HST}$ See table 4.2.2.4-2 in clause 4.2.2.4

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 4.48 s, allow 5 s for the cell re-selection delay to a newly detectable cell and 2.24 s for the cell re-selection delay to an already detected cell in the test case, which we allow 3 s.

### A.6.1.1.9 Cell reselection to FR1 intra-frequency NR case for UE operating on a cell with less than 5 MHz BW

#### A.6.1.1.9.1 Test Purpose and Environment

This test is to verify the requirement for the intra-frequency NR cell reselection requirements specified in clause 4.2.2.3. for UE capable of operating on a cell with less than 5 MHz BW.

#### A.6.1.1.9.2 Test Parameters

Supported test configurations are specified in table A.6.1.1.9.2-1. General test parameters as specified in table A.6.1.1.1.2-2 with config 1 apply except those specified in table A.6.1.1.9.2-2. Cell specific test parameters as specified in table A.6.1.1.1.2-3 with config 1 apply except those specified in table A.6.1.1.9.2-3. The test procedure specified in clause A.6.1.1.1.2 applies to this test.

**Table A.6.1.1.9.2-1: Supported test configurations**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 3 MHz bandwidth |

**Table A.6.1.1.9.2-2: General test parameters for intra-frequency NR cell re-selection test case**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| | | | Test 1 | |
| BWchannel | MHz | Config 1 | 3: $N_{PRB,c}$ = 15 | |
| SSB Configuration | | Config 1 | SSB.13 | |

**Table A.6.1.1.9.2-3: Cell specific test parameters for intra-frequency NR cell re-selection test case**

| Parameter | Unit | Test configuration | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|---|
| | | | T1 | T2 | T3 | T1 | T2 | T3 |
| PDSCH RMC | | 1 | SR.1.3 FDD | | | SR.1.3 FDD | | |
| RMSI CORESET | | 1 | CR.1.2 FDD | | | CR.1.2 FDD | | |
| Dedicated CORESET | | 1 | CCR.1.6 FDD | | | CCR.1.6 FDD | | |
| Io | dBm/2.7 MHz | 1 | -59.34 | -57.61 | -57.61 | Same as parameters specified in Cell 1 columns- | | |

### A.6.1.1.9.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 34 s for UE operating on a cell with less than 5 MHz BW.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a registration procedure for mobility and periodic registration update on Cell 1.

The cell re-selection delay to an already detected cell shall be less than 8 s for UE operating on a cell with less than 5 MHz BW.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $T_{detect, NR_Intra} + T_{SI\text{-}NR}$, and to an already detected cell can be expressed as: $T_{evaluate, NR_intra} + T_{SI\text{-}NR}$,

Where:

$T_{detect, NR_Intra}$ + 40 ms See table 4.2.2.3-1 in clause 4.2.2.3

$T_{evaluate, NR_intra}$ See table 4.2.2.3-1 in clause 4.2.2.3

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1320 ms is assumed in this test case.

This gives a total of 33.32 s, allow 34 s for the cell re-selection delay to a newly detectable cell and 7.72 s for the cell re-selection delay to an already detected cell in the test case, which we allow 8 s.

## A.6.1.1.10 Cell reselection to FR1 intra-frequency NR cell supporting OD-SIB1

### A.6.1.1.10.1 Test Purpose and Environment

This test is to verify the requirement for the intra-frequency NR cell reselection requirements specified in clause 4.2.2.3.

### A.6.1.1.10.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.10.2-1, A.6.1.1.10.2-2 and A.6.1.1.10.2-3. The test consists of one time period with time duration of T1. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. Cell2 is an NES Cell with OD-SIB1, and OD-SIB1-Config of Cell2 is provided in SIB26 of Cell1.

**Table A.6.1.1.10.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.1.1.10.2-2: General test parameters for intra-frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 1 | |
| T1 end condition | Active cell | | 1, 2, 3 | Cell 2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.1.1.10.3 Test Requirements

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to an already detected cell shall be less than $T_{evaluate,\ NR_Intra} + T_{SI\text{-}NR} + T_{OD\text{-}SIB1}$.

$T_{evaluate,\ NR_Intra}$ See table 4.2.2.3-1 in clause 4.2.2.3

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

$T_{OD\text{-}SIB1}$ is the time for OD-SIB1 acuqisition, whichi is assumed to be [1] second in the test case.

This gives a total of 8.68 s for the cell re-selection delay to an already detected cell in the test case.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

## A.6.1.1.11 Cell reselection to FR1 inter-frequency NR cell supporting OD-SIB1

### A.6.1.1.11.1 Test Purpose and Environment

This test is to verify the requirement for the inter-frequency NR cell reselection requirements specified in clause 4.2.2.3.

### A.6.1.1.11.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.11.2-1, A.6.1.1.11.2-2 and A.6.1.1.11.2-3. The test consists of one time period with time duration of T1. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. Cell2 is an NES Cell with OD-SIB1, and OD-SIB1-Config of Cell2 is provided in SIB26 of Cell1.

**Table A.6.1.1.11.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.1.1.11.2-2: General test parameters for inter-frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 1 | |
| T1 end condition | Active cell | | 1, 2, 3 | Cell 2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.1.1.11.3 Test Requirements

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to an already detected cell shall be less than $T_{evaluate, NR_Inter} + T_{SI-NR} + T_{OD-SIB1}$.

$T_{evaluate, NR_Inter}$ See table 4.2.2.4-1 in clause 4.2.2.4

$T_{SI-NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

$T_{OD-SIB1}$ is the time for OD-SIB1 acuqisition, whichi is assumed to be [1] second in the test case.

This gives a total of 8.68 s for the cell re-selection delay to an already detected cell in the test case.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

## A.6.1.2 Inter-RAT E-UTRAN cell re-selection

### A.6.1.2.1 Cell reselection to higher priority E-UTRAN

#### A.6.1.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2.2.5 when the E-UTRAN cell is of higher priority.

#### A.6.1.2.1.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.1.2-1, A.6.1.2.1.2-2, A.6.1.2.1.2-3 and A.6.1.2.1.2-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. NR Cell 1 is already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of higher priority than Cell 1.

**Table A.6.1.2.1.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.2.1.2-2: General test parameters for NR to E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE camps on Cell 1 in the initial phase and during T2 period the UE reselects to Cell 2. |
| T2 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | The UE shall perform reselection to cell 2 during T2. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | |
| T3 end | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE shall perform reselection to cell |

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| condition | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | 1 during T3 for iteration of the tests. |
| Access Barring Information | | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure. |

### A.6.1.2.1.3 Test Requirements

The cell reselection delay to a higher priority E-UTRAN cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as: $T_{higher_priority_search} + T_{evaluate,\ E\text{-}UTRAN} + T_{SI\text{-}E\text{-}UTRA}$,

Where:

$T_{higher_priority_search}$ See clause 4.2.2.7

$T_{evaluate,\ E\text{-}UTRAN}$ See table 4.2.2.5-1 in clause 4.2.2.5

$T_{SI\text{-}E\text{-}UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority E-UTRAN cell.

## A.6.1.2.2 Cell reselection to lower priority E-UTRAN

### A.6.1.2.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2.2.5 when the E-UTRAN cell is of lower priority.

### A.6.1.2.2.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.2.2-1, A.6.1.2.2.2-2, A.6.1.2.2.2-3 and A.6.1.2.2.2-4. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1.

**Table A.6.1.2.2.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.2.2.2-2: General test parameters for NR to E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE camps on Cell 1 in the initial phase. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | |
| T1 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | The UE shall perform reselection to Cell 2 during T1. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | |

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| T2 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE shall perform reselection to Cell 1 during T2 for iteration of the tests. |
| | Neighbour cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | |
| Access Barring Information | | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1, 2, 3, 4, 5, 6 | 1.28 | The value shall be used for all cells in the test. |
| NR PRACH configuration index | | | 1, 2, 3, 4, 5, 6 | 102 | The detailed configuration is specified in TS 38.211 [6] clause 6.3.3.2 |
| E-UTRAN PRACH configuration index | | | 1, 2, 3 | 534 | As specified in table 5.7.1-2 in TS 36.211 [23] |
| | | | 4, 5, 6 | | |
| T1 | | s | 1, 2, 3, 4, 5, 6 | 15 | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2 | | s | 1, 2, 3, 4, 5, 6 | 75 | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

### A.6.1.2.2.3 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

$T_{evaluate, E-UTRAN}$ See table 4.2.2.5-1 in clause 4.2.2.5

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 7.68 s, allow 8 s for the cell re-selection delay to a lower priority E-UTRAN cell.

## A.6.1.2.3 Cell reselection to lower priority E-UTRAN for UE fulfilling low mobility relaxed measurement criterion

### A.6.1.2.3.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection when UE fulfills the low mobility criterion specified in clause 4.2.2.11.2 and the E-UTRAN cell is of lower priority.

### A.6.1.2.3.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.3.2-1, A.6.1.2.3.2-2, A.6.1.2.3.2-3 and A.6.1.2.3.2-4. The test consists of two successive time periods, with time duration of T1 and T2, respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1.

As specified in the test purpose, the UE is configured with the relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in TS 38.304 [1]. So, Cell 1 configures the UE as follows:

- *lowMobilityEvalutation* [2] criterion is configured according to the parameters listed in table A.6.1.2.3.2-3;
- *cellEdgeEvaluation* [2] criterion is not configured;
- *combineRelaxedMeasCondition* [2] is not configured

**Table A.6.1.2.3.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.2.3.2-2: General test parameters for NR to E-UTRAN cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE camps on Cell 1 in the initial phase, it fulfills Low Mobility relaxation measurements criterion, and during T1 period the UE reselects to Cell 2 |
| | Neighbour cells | | 1, 2, 3, 4, 5, 6 | Cell 2 | |
| T1 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | The UE shall perform reselection to Cell 2 during T1 |
| | Neighbour cells | | 1, 2, 3, 4, 5, 6 | Cell 1 | |
| T2 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE shall perform reselection to Cell 1 with higher priority during T2 for iteration of the tests. |
| | Neighbour cells | | 1, 2, 3, 4, 5, 6 | Cell 2 | |
| Access Barring Information | | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1, 2, 3, 4, 5, 6 | 0.64 | The value shall be used for all cells in the test. |
| NR PRACH configuration index | | | 1, 2, 3, 4, 5, 6 | 102 | The detailed configuration is specified in TS 38.211 [6] clause 6.3.3.2 |
| E-UTRAN PRACH configuration index | | | 1, 2, 3 | 53 | As specified in table 5.7.1-2 in TS 36.211 [23] |
| | | | 4, 5, 6 | 4 | |
| T1 | | s | 1, 2, 3, 4, 5, 6 | 24 | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2 | | s | 1, 2, 3, 4, 5, 6 | 24 | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

### A.6.1.2.3.3 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell with UE fulfilling low mobility criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCConnectionRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

$T_{evaluate, E-UTRAN}$ See table 4.2.2.11.2-1 in clause 4.2.2.11.2

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 15.36 ($T_{evaluate, E-UTRAN}$) + 1.28 ($T_{SI-E-UTRA}$) = 16.64 s, allow 17 s for the cell re-selection delay to a lower priority E-UTRAN cell for UE fulfilling low mobility criterion.

## A.6.1.2.4 Cell reselection to lower priority E-UTRAN for UE fulfilling not-at-cell edge relaxed measurement criterion

### A.6.1.2.4.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements when UE fulfills not-at-cell edge criterion specified in clause 4.2.2.11.3 when the E-UTRAN cell is of lower priority.

### A.6.1.2.4.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.4.2-1, A.6.1.2.4.2-2, A.6.1.2.4.2-3 and A.6.1.2.4.2-4. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE with not-at-cell edge defined in clause 5.2.4.9.2 in [1]. So, Cell 1 configures the UE as follows:

- *lowMobilityEvalutation* [2] criterion is not configured;
- *cellEdgeEvaluation* [2] criterion is configured according to the parameters listed in table A.6.1.2.4.2-3;
- *combineRelaxedMeasCondition* [2] is not configured

**Table A.6.1.2.4.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |

| | | |
|---|---|---|
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.2.4.2-2: General test parameters for NR to E-UTRAN cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE camps on Cell 1 in the initial phase and fulfill the not at the cell edge criteria. |
| | Neighbour cells | | 1, 2, 3, 4, 5, 6 | Cell 2 | |
| T1 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | The UE shall perform reselection to Cell 2 during T1. |
| | Neighbour cells | | 1, 2, 3, 4, 5, 6 | Cell 1 | |
| T2 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE shall perform reselection to Cell 1 during T2 for iteration of the tests. |
| | Neighbour cells | | 1, 2, 3, 4, 5, 6 | Cell 2 | |
| Access Barring Information | | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure. |
| DRX cycle length | | s | 1, 2, 3, 4, 5, 6 | 0.64 | The value shall be used for all cells in the test. |
| NR PRACH configuration index | | | 1, 2, 3, 4, 5, 6 | 102 | The detailed configuration is specified in TS 38.211 clause 6.3.3.2 |
| E-UTRAN PRACH configuration index | | | 1, 2, 3 | 53 | As specified in table 5.7.1-2 in TS 36.211 [23] |
| | | | 4, 5, 6 | 4 | |
| T1 | | s | 1, 2, 3, 4, 5, 6 | 24 | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2 | | s | 1, 2, 3, 4, 5, 6 | 24 | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

### A.6.1.2.4.3 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCConnectionRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E-UTRAN} + T_{SI-E-UTRA}$,

Where:

$T_{evaluate, E-UTRAN}$ See table 4.2.2.11.3-1 in clause 4.2.2.11.3

$T_{SI-E-UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to a lower priority E-UTRAN cell for UE fulfilling not-at-cell edge criterion.

## A.6.1.2.5 Cell reselection to lower priority E-UTRAN cell for UE configured with highSpeedMeasFlag-r16

### A.6.1.2.5.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements for UE configured with *highSpeedMeasFlag-r16* specified in clause 4.2.2.5 when the E-UTRAN cell is of lower priority.

### A.6.1.2.5.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.5.2-1, A.6.1.2.5.2-2, A.6.1.2.5.2-3 and A.6.1.2.5.2-4. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR Cell 1 and E-UTRAN Cell 2 are already identified by the UE prior to the start of the test. E-UTRAN Cell 2 is of lower priority than Cell 1. The E-UTRAN Cell 2 is indicated by NR Cell 1 as an HST cell.

**Table A.6.1.2.5.2-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |

| | | |
|---|---|---|
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.1.2.5.2-2: General test parameters for NR to E-UTRAN cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE camps on Cell 1 in the initial phase. |
| T1 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 2 | The UE shall perform reselection to Cell 2 during T1. |
| | Neighbour cells | | 1, 2, 3, 4, 5, 6 | Cell 1 | |
| T2 end condition | Active cell | | 1, 2, 3, 4, 5, 6 | Cell 1 | The UE shall perform reselection to Cell 1 during T2 for iteration of the tests. |

#### A.6.1.2.5.3 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a lower priority cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90 %.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as: $T_{evaluate, E\text{-}UTRAN_HST} + T_{SI\text{-}E\text{-}UTRA}$,

Where:

$T_{evaluate, E\text{-}UTRAN_HST}$ See table 4.2.2.5-2 in clause 4.2.2.5

$T_{SI\text{-}E\text{-}UTRA}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 2.24 s, allow 3 s for the cell re-selection delay to a lower priority E-UTRAN cell.

### A.6.1.1.7 Void

## A.6.2 SA: RRC_INACTIVE state mobility

### A.6.2.1 Configured Grant based Small Data Transmissions (CG-SDT)

#### A.6.2.1.1 Test purpose and Environment

The purpose of this test is to partly verify that the UE properly perform TA validation for CG-SDT transmission in clause 5.5.3. The test includes two sub-tests, Sub-test#1 for testing valid TA where UE can initiat CG-SDT transmission, and Sub-test#2 for testing invalid TA where UE does not initiate CG-SDT transmission. Subtest#2 is only tested if Sub-test#1 is passed. For each sub-test, UE is configured with CG-SDT configurations when entering RRC Inactive state. Sub-test#1 consists of four successive time periods, with time duration of T1, T2, T3 and T4 repectively. Sub-test#2 consists of two successive time periods, with time duration of T5 and T6 repectively. There is one cell, which is the active NR cell in FR1. Figure A.6.2.1.1-1 shows the variation of the RSRP over the duration of Sub-test#1, and figure A.6.2.1.1-2 shows the variation of the RSRP over the duration of Sub-test#2.

In Sub-test#1:

- Prior to the time point TA, the UE shall be fully synchronized to PCell (Cell 1), be registered to the cell and have entered RRC connected mode.
- At time point TB, RSRP is changed from P0 to P1.
- At time point TC, which is W1 after time point TB, UE expect to receive RRC release with CG SDT configuration and RRC status is changed to INACTIVE status.
- At time point TD, RSRP is changed from P1 to P0.

- At time point TE, RSRP is changed from P0 to P2. TE must be W2 before TF.
- Test equipment triggers UL data arrival at UE lower layer at time point TF. After time point TF, test equipment observes whether UE transmits with CG-SDT no later than TG which is W3 after TF.
- After time point TG, RRC status is changed from RRC INACTIVE to RRC CONNECTED.

In Sub-test#2:

- Prior to the time point TA, the UE shall pass Sub-test#1 and have entered RRC connected mode. Otherwise, Sub-test#2 shall not be executed.
- From time point TA to time point TD, RSRP is set to P2.
- At time point TC, which is W1 after time point TB, UE expect to receive RRC release with CG SDT configuration and RRC status is changed to INACTIVE status.
- At time point TD, RSRP is changed from P2 to P0.
- Test equipment triggers UL data arrival at UE lower layer at time point TF. TF is 3360 ms after TD. After time point TF, test equipment observes whether UE transmits with CG-SDT no later than TG which is W3 after TF.

W1 equals to 640 ms and W2 equals to 640 ms based on requirements in clause 5.5.3. W3 is 860 ms.

#### A.6.2.1.3 Test requirements

The UE behaviour in each test during time durations shall be as follows:

During Sub-test#1, UE shall transmit PUSCH at CG-SDT resource within 860 ms after time point TF.

During Sub-test#2, after passing Sub-test#1, UE shall not transmit PUSCH at CG-SDT resources after TF until the end of the test at time point TG.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.2.2 Cell reselection for positioning

#### A.6.2.2.1 Cell reselection to FR1 intra-frequency NR case with RRC_ INACTIVE eDRX and positioning SRS

##### A.6.2.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the intra-frequency NR cell reselection requirements specified in clause 5.6.1A.2, when UE is in RRC_INACTIVE and configured with eDRX and to transmit SRS for positioning.

##### A.6.2.2.1.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.2.2.1.2-1, A.6.2.2.1.2-2 and A.6.2.2.1.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Only Cell 1 is already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. UE is configured with transmit SRS for positioning in Cell 1.

**Table A.6.2.2.1.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.2.2.1.2-2: General test parameters for intra frequency NR cell re-selection test case**

| Parameter | | Unit | Test configuration | Value | Comment |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.2.2.1.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 119 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as: $T_{detect, NR_Intra} + T_{SI\text{-}NR}$,

Where:

$T_{detect, NR_Intra}$ See table 5.6.1A.2-1 in clause 5.6.1A.2

$T_{SI\text{-}NR}$ Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280ms is assumed in this test case.

This gives a total of 119.04 s, allow 120 s for the cell re-selection delay to a newly detectable cell.

## A.6.3 RRC_CONNECTED state mobility

### A.6.3.1 Handover

### A.6.3.1.1 Intra-frequency handover from FR1 to FR1; known target cell

#### A.6.3.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency handover requirements specified in clause 6.1.1.2.

#### A.6.3.1.1.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.1.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.1.2-2, and A.6.3.1.1.2-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2.

NR shall send a RRC message implying handover to Cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3. T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.6.3.1.1.2-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.1.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 62 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

## A.6.3.1.2 Intra-frequency handover from FR1 to FR1; unknown target cell

### A.6.3.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency handover requirements specified in clause 6.1.1.2.

### A.6.3.1.2.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.2.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.2.2-2, and A.6.3.1.2.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2, respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.6.3.1.2.2-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.1.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 92 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 82 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 92 ms.

### A.6.3.1.3 Inter-frequency handover from FR1 to FR1; unknown target cell

#### A.6.3.1.3.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 inter-frequency handover requirements specified in clause 6.1.1.2.

#### A.6.3.1.3.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.3.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.3.2-2, and A.6.3.1.3.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.1.3.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 122 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 132 ms.

### A.6.3.1.4 SA NR - E-UTRAN handover

#### A.6.3.1.4.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1. This test shall verify the NR to E-UTRAN handover requirements as specified in clause 6.1.2.1.

The test comprises of one NR carrier and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in table 9.1.2-1 is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the next instant after the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.6.3.1.4-1. General test parameters are provided in table A.6.3.1.4-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.6.3.1.4-3 and A.6.3.1.4-4 respectively.

**Table A.6.3.1.4-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.3.1.4-2: General test parameters for SA inter-RAT E-UTRAN handover**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].
NOTE 3: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 7: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

#### A.6.3.1.4.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 85 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{interrupt}$ = 35 ms in the test; $T_{interrupt}$ is defined in clause 6.1.2.1.

This gives a total of 85 ms.

### A.6.3.1.5 SA NR - E-UTRAN handover with unknown target cell

#### A.6.3.1.5.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1. This test shall verify the NR to E-UTRAN handover requirements for the case when the target E-UTRAN cell is unknown as specified in clause 6.1.2.1.

The test comprises of one NR carrier and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable. No gap pattern shall be configured.

A RRC message implying handover shall be sent to the UE during period T1. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.6.3.1.5-1. General test parameters are provided in table A.6.3.1.5-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.6.3.1.5-3 and A.6.3.1.5-4 respectively.

**Table A.6.3.1.5-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].
NOTE 3: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 7: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

#### A.6.3.1.5.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 165 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{interrupt}$ = 115 ms in the test; $T_{interrupt}$ is defined in clause 6.1.2.1.

This gives a total of 165 ms.

### A.6.3.1.6 SA NR - UTRAN FDD handover

#### A.6.3.1.6.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT UTRAN FDD handover when operating in standalone (SA) operation with PCell in FR1. This test shall verify the NR to UTRAN FDD handover requirements as specified in clause 6.1.2.2.1.

The test comprises of one NR carrier and one UTRA FDD carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT UTRAN FDD neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a

measurement report. Gap pattern configuration with id #0 as specified in table 9.1.2-1 is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.6.3.1.6-1. General test parameters are provided in table A.6.3.1.6-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in tables A.6.3.1.6-3 and A.6.3.1.6-4 respectively.

**Table A.6.3.1.6-1: Supported test configurations for SA inter-RAT UTRAN FDD handover tests**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, UTRAN FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, UTRAN FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, UTRAN FDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.3.1.6-2: General test parameters for SA inter-RAT UTRAN FDD handover**

| Propagation Condition | | AWGN | | |
| NOTE 1: The DPCH level is controlled by the power control loop<br>NOTE 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$. | | | | |

### A.6.3.1.6.2 Test Requirements

The UE shall start to transmit the UL DPCCH to Cell 2 less than 190 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms, which is specified in clause 5.3.1.1.1.

$T_{interrupt}$ = 140 ms in the test; $T_{interrupt}$ is defined in clause 5.3.1.1.2. This gives a total of 190 ms.

## A.6.3.1.7 Intra-frequency synchronous DAPS handover in FR1

### A.6.3.1.7.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency DAPS handover requirements in synchronous scenario specified in clause 6.1.3.2.

### A.6.3.1.7.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.7.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.7.2-2, and A.6.3.1.7.2-3.The test consists of five successive time periods, with time durations of T1, T2, T3, T4, and T5 respectively.

Before the start of T1, the UE is connected to the cell1 and not aware of the cell2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE does not have any timing information of the cell2.

Starting T2, the cell2 becomes detectable. During T2, the UE performs cell detection and measurements on the cell2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing DAPS handover command is sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the cell2 while the DL scheduling and UL feedback in the cell1 shall be avoided. After successful RACH procedure of the cell2, UE is scheduled with PDSCH from cell1 and cell2 in alternative TTIs where both cell1 and cell2 belong to the same TAG. In the end the network sends a RRC message implying cell1 release to the UE. During T3, the handover delay $D_{handover1}$ for target cell addition need to be verified.

The start of T4 is the instant when the last TTI containing cell1 release command is sent to the UE. During T4, the UE shall accomplish the release actions within $D_{handover2}$.

Starting T5, the UE stops sending the periodical CSI report to the cell1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.1.7.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The target cell add delay $D_{handover1}$ can be expressed as: $T_{RRC_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{search}$, $T_{IU}$, $T_{processing}$, $T_{\Delta}$ and $T_{margin}$ are defined in clause 6.1.1.2.2.

If the target cell is known, then $T_{search}$ = 0 ms

$T_{IU}$ = 20 ms in the test. $T_{IU}$ is defined in clause 6.1.1.2.2.

$T_{\Delta}$ = 20 ms in the test. $T_{\Delta}$ is defined in clause 6.1.1.2.2.

$T_{processing}$ = 20 ms in the test. $T_{processing}$ is defined in clause 6.1.1.2.2.

$T_{margin}$ = 2 ms in the test. $T_{margin}$ is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

After successful RACH to Cell 2 and until the start of time period T4, UE shall be able to receive PDSCH alternatively from Cell 1 and Cell 2. UE is not expected to transmit UL to both Cell 1 and Cell 2 in the same TTI.

The UE shall release Cell 1 less than $D_{handover2} = (T_{RRC_procedure} + T_{interrupt2})$ from the beginning of time period T4.

NOTE: $D_{handover2}$ is defined in clause 6.1.3.2.1.

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt2}$ is defined in clause 6.1.3.2.2.

UE shall not report CSI to Cell 1 during T5.

### A.6.3.1.8 Intra-frequency asynchronous DAPS handover in FR1

#### A.6.3.1.8.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency DAPS handover requirements in asynchronous scenario specified in clause 6.1.3.2.

#### A.6.3.1.8.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.8.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.8.2-2, and A.6.3.1.8.2-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4, and T5 respectively.

Before the start of T1, the UE is connected to the cell1 and not aware of the cell2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE does not have any timing information of the cell2.

Starting T2, the cell2 becomes detectable. During T2, the UE performs cell detection and measurements on the cell2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing DAPS handover command is sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the cell2 while the DL scheduling and UL feedback in the cell1 shall be avoided. After successful RACH procedure of the cell2, UE is scheduled with PDSCH from cell1 and cell2 in alternative TTIs where both cell1 and cell2 belong to the same TAG. In the end the network sends a RRC message implying cell1 release to the UE. During T3, the handover delay $D_{handover1}$ for target cell addition needs to be verified.

The start of T4 is the instant when the last TTI containing cell1 release command is sent to the UE by cell2. During T4, the UE shall accomplish the release actions within $D_{handover2}$.

Starting T5, the UE stops sending the periodical CSI report to the cell1.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.1.8.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The target cell add delay $D_{handover1}$ can be expressed as: $T_{RRC_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{search}$, $T_{IU}$, $T_{processing}$, $T_{\Delta}$ and $T_{margin}$ are defined in clause 6.1.1.2.2.

If the target cell is known, then $T_{search}$ = 0 ms

$T_{IU}$ = 20 ms in the test. $T_{IU}$ is defined in clause 6.1.1.2.2.

$T_{\Delta}$ = 20 ms in the test. $T_{\Delta}$ is defined in clause 6.1.1.2.2.

$T_{processing}$ = 20 ms in the test. $T_{processing}$ is defined in clause 6.1.1.2.2.

$T_{margin}$ = 2 ms in the test. $T_{margin}$ is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

After successful RACH to Cell 2 and until the start of time period T4, UE shall be able to receive PDSCH alternatively from Cell 1 and Cell 2. UE is not expected to transmit UL to both Cell 1 and Cell 2 in the same TTI.

The UE shall release Cell 1 less than $D_{handover2} = (T_{RRC_procedure} + T_{interrupt2})$ from the beginning of time period T4.

NOTE: $D_{handover2}$ is defined in clause 6.1.3.2.1.

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt2}$ is defined in clause 6.1.3.2.2.

UE shall not report CSI to Cell 1 during T5.

## A.6.3.1.9 Intra-band inter-frequency synchronous DAPS handover test in SA for FR1

### A.6.3.1.9.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-band inter-frequency synchronous DAPS handover requirements specified in clause 6.1.3.2.

### A.6.3.1.9.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.9.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.9.2-2, and A.6.3.1.9.2-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. The UE shall be configured with periodic CSI reporting for cell1. The test scenario comprises of two carriers and one cell on each carrier. Gap pattern with ID 0 as specified in table 9.1.2-1 is configured before T2 in the test case.

Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC message implying DAPS handover to the UE.

T3 is defined as the end of the last TTI containing the RRC message implying DAPS handover. During T3 UE shall be able to perform random access to Cell 2. Cell 1 is continuously scheduled in DL during T3. DL schedule and UL feedback to Cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in Cell 2, except preamble transmission. At the end of T3 Cell 2 shall send an RRC message implying Cell 1 release command.

T4 is defined as the end of the last TTI containing the RRC message implying DAPS handover. Cell 2 is continuously scheduled in DL during T4. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell. And the test system shall observe the periodic reporting of CSI for Cell 1 during T5.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.1.9.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.

During T3 UE is allowed to cause $T_{interrupt1}$ interruption to Cell 1. $T_{interrupt1}$ is defined in clause 6.1.3.2.2 table 6.1.3.2.2-2. When UE is transmitting PRACH preamble to Cell 2, interruption to Cell 1 is allowed.

During T4 UE is allowed to cause $T_{interrupt2}$ interruption to Cell 1. $T_{interrupt2}$ is defined in clause 6.1.3.2.2 table 6.1.3.2.2-5.

UE shall finish Cell 1 release in T4 and shall not send any CSI reports to Cell 1 during T5.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

### A.6.3.1.10 Intra-band inter-frequency asynchronous DAPS handover test in SA for FR1

#### A.6.3.1.10.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-band inter-frequency asynchronous DAPS handover requirements specified in clause 6.1.3.2.

#### A.6.3.1.10.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.10.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.10.2-2, and A.6.3.1.10.2-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2. The UE shall be configured with periodic CSI reporting for cell1. The test scenario comprises of two carriers and one cell on each carrier. Gap pattern ID gp0 as specified in table 9.1.2-1 is configured before T2 in the test case.

Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC message implying DAPS handover to the UE.

T3 is defined as the end of the last TTI containing the RRC message implying DAPS handover.During T3 UE shall be able to perform random access to Cell 2. Cell 1 is continuously scheduled in DL during T3. DL schedule and UL feedback to Cell 1 shall be avoided when UE is required to perfrom DL reception or UL transmission in PRACH procedure in Cell 2, except preamble transmission. At the end of T3 Cell 2 shall send an RRC message implying Cell 1 release command.

T4 is defined as the end of the last TTI containing the RRC message implying DAPS handover. Cell 2 is continuously scheduled in DL during T4. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell. And the test system shall observe the periodic reporting of CSI for Cell 1 during T5.

#### A.6.3.1.10.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.

During T3 UE is allowed to cause $T_{interrupt1}$ interruption to Cell 1. $T_{interrupt1}$ is defined in clause 6.1.3.2.2 table 6.1.3.2.2-2. When UE is transmitting PRACH preamble to Cell 2, interruption to Cell 1 is allowed.

During T4 UE is allowed to cause $T_{interrupt2}$ interruption to Cell 1. $T_{interrupt2}$ is defined in clause 6.1.3.2.2 table 6.1.3.2.2-6.

UE shall finish Cell 1 release in T4 and shall not send any CSI reports to Cell 1 during T5.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

### A.6.3.1.11 Inter-band inter-frequency synchronous DAPS handover from FR1 to FR1

#### A.6.3.1.11.1 Test Purpose and Environment

This test is to verify the requirement for the FR1-to-FR1 inter-band inter-frequency synchronous DAPS handover requirements specified in clause 6.1.3.2.

#### A.6.3.1.11.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.11.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.11.2-2, A.6.3.1.11.2-3 and A.6.3.1.11.2-4.

The test scenario comprises of two bands each with one cell. The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to Cell 1 (source PCell) on radio channel 1 but is not aware of Cell 2 (neighbour cell) on radio channel 2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE shall not have any timing information of Cell 2.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event A3 is configured for neighbour cell (Cell 2), and the UE is configured with the measurement gaps (gap pattern ID # 0). Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC m`essage implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing the RRC message implying DAPS handover to Cell 2 (target PCell) is sent to the UE. During T3, the UE shall be able to perform random access to Cell 2. DL schedule and UL feedback to Cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in Cell 2, except preamble transmission. After the RACH procedure is completed, the test system shall send a RRC message to the UE to release Cell 1 (source cell) on radio channel 1.

The start of T4 is the instant when the last TTI containing the RRC message implying source cell release is sent to the UE. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell.

**Table A.6.3.1.11.2-1: Inter-band inter-frequency synchronous DAPS handover from FR1 to FR1 test configurations**

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.1.11.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3. During $D_{handover1}$, the interruption on Cell 1 shall not exceed $T_{interrupt1}$ as defined in table 6.1.3.2.2-3 for synchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay $D_{handover1}$ can be expressed as: $T_{RRC_procedure} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{IU}$ = 20 ms in the test. $T_{IU}$ is defined in clause 6.1.1.2.2.

$T_{\Delta}$ = 20 ms in the test. $T_{\Delta}$ is defined in clause 6.1.1.2.2.

$T_{processing}$ = 20 ms in the test. $T_{processing}$ is defined in clause 6.1.1.2.2.

$T_{margin}$ = 2 ms in the test. $T_{margin}$ is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

The UE shall complete to release Cell 1 less than (10 ms + $T_{interrupt2}$) from the beginning of time period T4. During $D_{handover2}$, the interruption on Cell 2 shall not exceed $T_{interrupt2}$ as defined in table 6.1.3.2.2-7 for synchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay $D_{handover2}$ can be expressed as: $T_{RRC_procedure} + T_{interrupt2}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

## A.6.3.1.12 Inter-band inter-frequency asynchronous DAPS handover from FR1 to FR1

### A.6.3.1.12.1 Test Purpose and Environment

This test is to verify the requirement for the FR1-to-FR1 inter-band inter-frequency asynchronous DAPS handover requirements specified in clause 6.1.3.2.

### A.6.3.1.12.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.12.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.12.2-2, A.6.3.1.12.2-3 and A.6.3.1.12.2-4.

The test scenario comprises of two bands each with one cell. The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to Cell 1 (source PCell) on radio channel 1 but is not aware of Cell 2 (neighbour cell) on radio channel 2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE shall not have any timing information of Cell 2.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event A3 is configured for neighbour cell (Cell 2), and the UE is configured with the measurement gaps (gap pattern ID # 0). Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing the RRC message implying DAPS handover to Cell 2 (target PCell) is sent to the UE. During T3, the UE shall be able to perform random access to Cell 2. DL schedule and UL feedback to Cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in Cell 2, except preamble transmission. After the RACH procedure is completed, the test system shall send a RRC message to the UE to release Cell 1 (source cell) on radio channel 1.

The start of T4 is the instant when the last TTI containing the RRC message implying source cell release is sent to the UE. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.1.12.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3. During $D_{handover1}$, the interruption on Cell 1 shall not exceed $T_{interrupt1}$ as defined in table 6.1.3.2.2-3 for asynchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay $D_{handover1}$ can be expressed as: $T_{RRC_procedure} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{IU}$ = 20 ms in the test. $T_{IU}$ is defined in clause 6.1.1.2.2.

$T_{\Delta}$ = 20 ms in the test. $T_{\Delta}$ is defined in clause 6.1.1.2.2.

$T_{processing}$ = 20 ms in the test. $T_{processing}$ is defined in clause 6.1.1.2.2.

$T_{margin}$ = 2 ms in the test. $T_{margin}$ is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

The UE shall complete to release Cell 1 less than (10 ms + $T_{interrupt2}$) from the beginning of time period T4. During $D_{handover2}$, the interruption on Cell 2 shall not exceed $T_{interrupt2}$ as defined in table 6.1.3.2.2-7 for asynchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay $D_{handover2}$ can be expressed as: $T_{RRC_procedure}$ + $T_{interrupt2}$, where:

$T_{RRC_procedure}$ = 10 ms and is specified in clause 12 in TS 38.331 [2].

## A.6.3.1.13 SA NR - E-UTRAN with NR PSCell addition in FR1

### A.6.3.1.13.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover with PSCell addition when operating in standalone (SA) operation with PCell in FR1 where target PCell and target PSCell are unknown. This test shall verify the Handover with PSCell from NR SA to EN-DC requirements as specified in clause 6.1.5.2.

The test comprises of two NR carrier and one E-UTRA carrier. There are three cells and one cell on each carrier. Cell 1 is the NR PCell, Cell 2 is an inter-RAT E-UTRAN neighbour cell and Cell 3 is an NR neighbour cell. The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2 and Cell 3. Starting T2, Cell 2 and Cell 3 becomes detectable

A RRC message implying handover with PSCell shall be sent to the UE during period T1. The start of T2 is the instant when the last TTI containing the RRC message implying handover with PSCell is sent to the UE.Before T2, the UE does not have any information of Cell 3. The handover with PSCell message shall contain Cell 2 and Cell 3 as the target cells and the SMTC for Cell 3 is configured in *RRCConnectionReconfiguration.*

Supported test configurations are shown in table A.6.3.1.13.1-1. General test parameters are provided in table A.6.3.1.13.1-2. Cell specific test parameters for Cell 1, Cell 2 and Cell 3 are provided in tables A.6.3.1.13.1-3, A.6.3.1.13.1-4 and A.6.3.1.13.1-5 respectively.

**Table A.6.3.1.13.1-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.3.1.13.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 175 ms from the beginning of time period T2.

The UE shall start to transmit the PRACH to Cell 3 less than 270 ms from the beginning of time period T2.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 50 ms and is specified in clause 6.1.5.2.

$T_{interrupt}$ = 125 ms in the test; $T_{interrupt}$ is defined in clause 6.1.5.2.

The PSCell addition time can be expressed as: $T_{RRC_delay} + T_{processing} + T_{search_HO} + T_{search_PSCell} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms which is defined in clause 6.1.5.2.

The rate of correct handovers observed during repeated tests shall be at least 90%.

## A.6.3.1.14 SA NR - E-UTRAN handover with NR FR1 PSCell addition

### A.6.3.1.14.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct SA inter-RAT handover from NR to E-UTRAN with FR1 PSCell addition when operating in standalone (SA) operation with PCell in FR1, for the case where the PSCell is known to the UE at the time of addition and SMTC of target known PSCell is not present in

*RRCConnectionReconfiguration*. This test shall verify delay requirements of inter-RAT handover from NR to E-UTRAN and FR1 PSCell addition as specified in clause 6.1.5.

The test comprises of two NR cells and one E-UTRA cell. Cell 1 is the NR PCell, Cell 2 is an inter-RAT E-UTRAN neighbour cell and Cell 3 is the target NR PSCell, on radio channel 1 in FR1, radio channel 2 in E-UTRAN and radio channel 3 in FR1, respectively.

In this test, inter-RAT handover from NR to E-UTRAN and FR1 PSCell addition are performed in parallel processing. The test consists of successive time periods for inter-RAT handover and FR1 PSCell addition with time durations of T1, T2 and T3 respectively.

At the start of time duration T1, the UE does not have any timing information of Cell 2 and Cell 3, and the UE is only monitoring Cell 1. During T1, only Cell 1 is known to the UE.

Before the start of T2, the test system shall send measurement control information including measurement gap configuration and event-triggered reporting configuration with event B2 for neighbour Cell 2 and event B1 for Cell 3. Gap pattern configuration with id #0 as specified in table 9.1.2-1 is configured before T2 begins.

Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report, and the Cell 3 (PSCell-to-be) on radio channel 3 becomes known to the UE at the time of addition. The RRC message implying handover with PSCell shall be sent to the UE during period T2 after the UE has reported Event B2 and Event B1. After receiving both Event B2 and Event B1the test system shall send a RRC message to the UE to release the measurement gaps.

The point in time at which the RRC message implying handover with PSCell is received at the UE antenna connector defines the start of period T3 and T3'. The handover with PSCell message shall contain Cell 2 as the target cell and Cell 3 as PSCell-to-be added. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added.

During T3, the UE shall carry out random access (i.e., transmit the PRACH) towards the Cell 2. Reception by the test system of the PRACH preamble defines the end of T3.

During T3', the UE shall carry out random access (i.e., transmit the PRACH) towards the Cell 3. Reception by the test system of the PRACH preamble defines the start of period T4'.

During T4', the UE shall send periodic CSI reports in PSCell and the test system shall observe the periodic reporting of CSI for PSCell.

Supported test configurations are shown in table A.6.3.1.14.1-1. General test parameters are provided in table A.6.3.1.14.1-2. Cell specific test parameters for NR Cell 1, E-UTRAN PCell Cell 2 and NR PSCell Cell 3 are provided in tables A.6.3.1.14.1-3, A.6.3.1.14.1-4 and A.6.3.1.14.1-5 respectively.

**Table A.6.3.1.14.1-1: Supported test configurations for SA inter-RAT E-UTRAN handover with FR1 PSCell addition tests**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD, LTE TDD |
| 6 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.3.1.14.1-2: General test parameters for SA inter-RAT E-UTRAN handover with FR1 PSCell addition**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| NR RF Channel Number | | | 1, 3 | 2 NR carrier frequency is used in the test |
| LTE RF Channel Number | | | 2 | 1 E-UTRAN carrier frequency is used in the test |
| Initial conditions | Active cell | | Cell 1 | NR cell |
| | Neighbouring cell | | Cell 2, 3 | E-UTRAN cell and NR cell in FR1 |

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Final condition | Active PCell | | Cell 2 | E-UTRAN cell |
| | Active PSCell | | Cell 3 | NR cell in FR1 |
| NR measurement quantity | | | SS-RSRP | |
| E-UTRAN measurement quantity | | | RSRP | |
| Event B1 | Hysteresis | dB | 0 | Hysteresis for evaluation of event B1. |
| | Threshold RSRP | dBm | -93 | Actual RSRP threshold for event B1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. |
| | Time to Trigger | s | 0 | |
| Event B2 | Threshold1 | dBm | As specified in Table A.6.3.1.4-3 | Absolute NR SS-RSRP threshold for event B2 |
| | Threshold2EUTRAN | dBm | -98 | Absolute E-UTRAN RSRP threshold for event B2 |
| | Hysteresis | dB | 0 | |
| | TimeToTrigger | s | 0 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| DRX | | | OFF | Non-DRX test |
| Access Barring Information | | - | Not sent | No additional delays in random access procedure |
| Time offset between Cell 1 and Cell 2 | | | 3 ms | Asynchronous cells |
| Measurement Gap pattern ID | | | 0 | As specified in Table 9.1.2-1 |
| T1 | | s | 1 | During this time only Cell 1 is known to UE. |
| T2 | | s | ≤5 | During this time the UE shall identify Cell 2 and report event B2, and identify Cell 3 and report event B1. |
| T3 | | s | 1 | During this time the UE handovers to Cell 2. |
| T3' | | s | 0.5 | During this time the UE adds the PSCell (Cell 3). |
| T4' | | s | 0.5 | During this time the UE sends CSI reports for PSCell (Cell 3). |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].
NOTE 3: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 7: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

| NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port. | | | | | | |

### A.6.3.1.14.2 Test Requirements

In this test, the UE shall start to transmit the PRACH to E-UTRA Cell 2 less than 85 ms [Note1] from the beginning of time period T3.

The UE shall transmit the PRACH to PSCell no later than 117 ms [Note2] from the start of T3'. The UE shall send at least one CSI report for PSCell with non-zero CQI index during T4'. The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T4'.

The above test requirements shall be fulfilled in order of T1, T2, T3 for the observed inter-RAT handover delay from NR to E-UTRAN to be counted as correct, and in order of T1, T2, T3', T4' for the observed PSCell addition delay to be counted as correct.

The rate of correct handovers and correct PSCell addition delay during repeated tests shall be at least 90 %.

NOTE1: The handover delay can be expressed as specified in clause 6.1.5.2:

$D_{HOwithPSCell_PCell}$ = RRC procedure delay + $T_{interrupt}$,

Where RRC procedure delay = 50 ms, $T_{interrupt} = T_{search_HO} + T_{IU} + T_{processing}$ is defined in clause 6.1.5.2.1, where

$T_{search}$ = 0 ms

$T_{IU}$ = 10 ms,

$T_{processing}$ = 25 ms

Note2: The PSCell addition delay can be expressed as follows as specified in clause 6.1.5.2.2:

$D_{HOwithPSCell_PSCell} = T_{RRC_delay} + T_{processing} + T_{search_HO} + T_{search_PSCell} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms

Where:

$T_{RRC_delay}$ = 50 ms

$T_{processing}$ = 25 ms

$T_{search_HO}$ = 0

$T_{search_PSCell}$ = 0

$T_{\Delta}$ = 20 ms

$T_{PSCell_DU}$ = 1*10+10 = 20 ms

## A.6.3.1.15 Intra-frequency handover from FR1 to FR1; known target cell configured with NCD-SSB

### A.6.3.1.15.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency handover requirements specified in clause 6.1.1.2, when the target cell is configured with NCD-SSB.

### A.6.3.1.15.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.15.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.15.2-2, and A.6.3.1.15.2-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2.

Before the test starts,

- UE is connected to Cell 1 with active DL BWP and active UL BWP;
- UE is configured with *nonCellDefiningSSB-r17* under *BWP-DownlinkDedicated*, and NCD-SSB serves as the reference SSB for the serving cell, and is contained in the active DL BWP.

During T2, Cell 2 is switched ON, and transmits two SSBs, i.e. CD-SSB at SSB frequency 1 and NCD-SSB at SSB frequency 2. Before the test, UE is configured to measure SSB frequency 2. The test equipment shall send an RRC message implying handover to Cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3.

The start of T3 is defined as the end of the last TTI containing the RRC message implying handover. The handover command indicates the UE to handover to Cell 2 with *firstActiveDownlinkBWP-Id* configured to BWP-1. The UE then performs handover from Cell 1's active DL-BWP associated with the NCD-SSB of Cell 1 to Cell 2's BWP-1 which is associated with NCD-SSB of Cell 2.

**Table A.6.3.1.15.2-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The starting PRB index for dedicated DL BWP is selected such that NCD-SSB is within the BWP BW.

### A.6.3.1.15.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T3.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 122 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 132 ms.

## A.6.3.1.16 Inter-frequency handover from FR1 to FR1; known target cell configured with NCD-SSB

### A.6.3.1.16.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 inter-frequency handover requirements specified in clause 6.1.1.2, when the target cell is configured with NCD-SSB.

### A.6.3.1.16.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.16.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.16.2-2 and A.6.3.1.16.2-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2.

Before the test starts,

- UE is connected to Cell 1 with active DL BWP and active UL BWP;
- UE is not configured with *nonCellDefiningSSB-r17* under *BWP-DownlinkDedicated*, and CD-SSB serves as the reference SSB for the serving cell, and is contained in the active DL BWP.

During T2, Cell 2 is switched ON, and transmits two SSBs, i.e. CD-SSB at SSB frequency 1 and NCD-SSB at SSB frequency 2. Before the test, UE is configured to measure SSB frequency 1. The test equipment shall send an RRC message implying handover to Cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3.

The start of T3 is defined as the end of the last TTI containing the RRC message implying handover. The handover command indicates the UE to handover to Cell 2 with *firstActiveDownlinkBWP-Id* configured to BWP-1. The UE then performs handover from Cell 1's active DL-BWP associated with the CD-SSB of Cell 1 to Cell 2's BWP-1 which is associated with NCD-SSB of Cell 2.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The starting PRB index for dedicated DL BWP is selected such that NCD-SSB is within the BWP BW.

### A.6.3.1.16.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 212 ms from the beginning of time period T3.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 202 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 212 ms.

## A.6.3.1.17 Handover with PSCell change delay from NR-DC (FR1-FR1) to NR-DC (FR1-FR1)

### A.6.3.1.17.1 Test Purpose and Environment

The purpose of this test is to verify the handover delay requirements and PSCell change delay requirements in HO with PSCell from NR-DC (FR1-FR1) to NR-DC (FR1-FR1) defined in clauses 6.1.5.4. The requirements are applicable to NR FR1-FR1 intra-frequency PCell handover and NR FR1-FR1 intra-frequency PSCell change.

The supported test configurations are given in table A.6.3.1.17.1-1. The test scenario comprises four NR cells, source PCell(Cell 1) and source PSCell(Cell 2), target PCell(Cell 3), target PSCell(Cell 4).

Cell 1 and Cell 3 are on radio channel 1 in FR1. Cell 2 and Cell 4 are on radio channel 2 in FR1. Test parameters are given in Tables A.6.3.1.17.1-2, A.6.3.1.17.1-3, A.6.3.1.17.1-4 and A.6.3.1.17.1-5 below. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of T1, the UE shall be connected to Cell 1 on radio channel 1 and Cell 2 on radio channel 2. UE is not aware of Cell 3 and Cell 4. Starting T2, Cell 3 and Cell 4 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

### A.6.3.1.17.2 Test Requirements

In this test, the UE shall start to transmit the PRACH to target PCell (Cell 3) less than 93 ms from the beginning of time period T2.

The UE shall transmit the PRACH to target PSCell (Cell 4) no later than 103 ms from the beginning of time period T2.

The rate of correct handovers and correct PSCell change delay during repeated tests shall be at least 90 %.

NOTE: The handover with PSCell change delay is defined in clause 6.1.5.4.1 as

$D_{HOwithPSCell_PCell}$ = RRC procedure delay + $T_{interrupt}$, where

$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$

PSCell change delay during handover is defined in clause 6.1.5.4.2 as

$D_{HOwithPSCell_PSCell} = T_{RRC_delay} + T_{processing} + T_{search_HO} + T_{search_PSCell} + T_{\Delta} + T_{PSCell_DU}$ + 2 ms.

In this test the definition of each components are specified as followings :

$T_{RRC_delay}$ = 16 ms and is specified in clause 12 in TS 38.331 [2],

$T_{processing}$ = 25 ms,

$T_{search}$ = 20 ms,

$T_{search_HO}$ = 0,

$T_{search_PSCell}$ = 20 ms,

$T_{IU}$ = 10 ms,

$T_{\Delta}$ = 20 ms,

$T_{margin}$ = 2 ms,

$T_{PSCell_DU}$ = 1*10+10 = 20 ms

## A.6.3.1.18 Intra-frequency handover from FR1 to FR1; unknown target cell operating with 12 PRB SSB bandwidth

### A.6.3.1.18.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency handover requirements for unknown target cell operating with 12 PRB SSB bandwidth specified in clause 6.1.1.2.

### A.6.3.1.18.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.18.2-1. General test parameters as specified in table A.6.3.1.2.2-2 with config 1 apply except those specified in table A.6.3.1.18.2-2. Cell specific test parameters as specified in table A.6.3.1.2.2-3 with config 1 apply except those specified in table A.6.3.1.18.2-3.

The test procedure specified in clause A.6.3.1.2.2 applies to this test. The Cell 2 is the unknown target cell operating with 12 PRB SSB bandwidth.

**Table A.6.3.1.18.2-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 3 MHz bandwidth with 15PRB CBW, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 3 MHz bandwidth with 15PRB CBW, FDD duplex mode |

| NOTE 1: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

### A.6.3.1.18.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2.
The rate of correct handovers observed during repeated tests shall be at least 90 %.

NOTE: The handover delay can be expressed as: RRC procedure delay + $T_{interrupt}$, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$ = 122 ms in the test. $T_{interrupt}$ is defined in clause 6.1.1.2.2.

This gives a total of 132 ms.

## A.6.3.1.19 Handover with PSCell change delay where target PSCell is with 12PRB SSB bandwidth

### A.6.3.1.19.1 Test Purpose and Environment

The purpose of this test is to verify the handover delay requirements and PSCell change/addition delay requirements in HO with PSCell from NR-DC (FR1-FR1) to NR-DC (FR1-FR1) defined in clauses 6.1.5.4. The requirements are applicable to NR FR1-FR1 intra-frequency PCell handover and NR FR1-FR1 intra-frequency PSCell change/addition. The requirements are only applicable when the target PSCell is configured with 12PRB SSB bandwidth.

### A.6.3.1.19.2 Test Parameters

The supported test configurations are given in table A.6.3.1.19.2-1. Only 15kHz FDD cases are considered. The test scenario comprises 3 NR cells, source PCell(Cell 1), target PCell(Cell 2), target PSCell(Cell 3).

Cell 1 and Cell 2 are on radio channel 1 in FR1. Cell 3 is on radio channel 2 in FR1. Test parameters are given in Tables A.6.3.1.19.2-2, A.6.3.1.19.2-3, and A.6.3.1.19.2-4 below. Note that for Cell 3 the SSB configuration refers to SSB pattern 13 in FR1: SSB allocation for SSB SCS=15kHz in 3 MHz. In the test, the SSB is configured with 12PRB bandwidth.

The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of T1, the UE shall be connected to Cell 1 on radio channel 1. UE is not aware of Cell 2 and Cell 3. Starting T2, Cell 2 and Cell 3 becomes detectable to the UE and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

The UE is required to successfully handover from Cell 1 to Cell 2 and at the same time in time period T2 add Cell 3 as PSCell attached to Cell 2. This test case verifies the delay starting from the start of T2 to time points where the UE finishes handover to Cell 2 and where the UE finishes addition of Cell 3. Test cases delay requirements are specified.

**Table A.6.3.1.19.2-1: Supported test configurations for HO with PSCell with 12PRB SSB bandwidth**

### A.6.3.1.19.3 Test Requirements

*Handover to PCell delay requirements*

In this test, the UE shall start to transmit the PRACH to target PCell (Cell 2) less than [98] ms from the beginning of time period T2.

The handover delay is defined as

$$D_{HOwithPSCell_PCell} = \text{RRC procedure delay} + T_{interrupt}, \text{ where}$$

$$T_{interrupt} = T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$$

The UE is required to follow the below parameters according to derivation from the test setup specified:

- RRC procedure delay = 16 ms,
- $T_{search}$ = 20 ms,
- $T_{IU}$ = 20 ms where PRACH association period should be configured as 1,

- $T_{processing}$ = 20 ms,
- $T\Delta$ = 20 ms,
- $T_{margin}$ = 2ms.

That sums up to 98ms exactly.

*PSCell change/addition delay requirements*

The UE shall transmit the PRACH to target PSCell (Cell 3) no later than [178] ms from the beginning of time period T2.

PSCell change delay during handover is defined as

$$D_{HOwithPSCell_PSCell} = T_{RRC_delay} + T_{processing} + T_{search_PCell} + T_{search_PSCell} + T_{\Delta} + T_{PSCell_DU} + 2 \text{ ms}.$$

In this test the UE is required to follow the below parameters according to derivation from the test setup specified:

- $T_{RRC_delay}$ = 16ms,
- $T_{processing}$ = 20 ms,
- $T_{search_PCell}$ = 0,
- $T_{search_PSCell}$ = 60 ms,
- $T_{\Delta}$ = 60 ms,
- $T_{PSCell_DU}$ = 1*10+10 = 20 ms where PRACH association period should be configured as 1.

That sums up to 178ms exactly.

The test is considered successful only when both requirements are correctly verified, and the success rate during repeated tests shall be at least 90 %.

## A.6.3.2 RRC Connection Mobility Control

### A.6.3.2.1 SA: RRC Re-establishment

#### A.6.3.2.1.1 Intra-frequency RRC Re-establishment in FR1

##### A.6.3.2.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the NR intra-frequency RRC re-establishment delay in FR1 with known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.6.3.2.1.1.1-1, table A.6.3.2.1.1.1-2 and table A.6.3.2.1.1.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.6.3.2.1.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.3.2.1.1.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case in FR1**

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.2.1.1.2 Test Requirements

The RRC re-establishment delay is defined as the time from the moment UE declares RLF, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to a known NR intra-frequency cell shall be less than 1.6 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay} = 50 \text{ ms} + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

$N_{freq} = 1$

$T_{identify_intra_NR} = 200$ ms

$T_{SI} = 1280$ ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 [2] for the target intra-frequency NR cell.

$T_{PRACH}$ = 15 ms; it is the additional delay caused by the random access procedure.

This gives a total of 1545 ms for RRC re-establishment delay, allow 1840 ms (240 ms + 1.6 s) from the beginning of T2 in the test case.

### A.6.3.2.1.2 Inter-frequency RRC Re-establishment in FR1

#### A.6.3.2.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the NR inter-frequency RRC re-establishment delay in FR1 without known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.6.3.2.1.2.1-1, table A.6.3.2.1.2.1-2 and table A.6.3.2.1.2.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of Cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of Cell 2 by the end of T1.

**Table A.6.3.2.1.2.1-1: Supported test configurations**

| Configuration | Description of serving cell | Description of target cell |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | | |

**Table A.6.3.2.1.2.1-2: General test parameters for NR inter-frequency RRC Re-establishment test case in FR1**

| | | | T1 | T2 | T3 | T1 | T2 | T3 |
| Io | dBm/9.36 MHz | 1 | -64.59 | -70. 05 | -70. 05 | -70. 05 | -70. 05 | -62.26 |
| | dBm/9.36 MHz | 2 | -64.59 | -70. 05 | -70. 05 | -70. 05 | -70.05 | -62.26 |
| | dBm/38.16 MHz | 3 | -58.50 | -63.94 | -63.94 | -63.94 | -63.94 | -56.15 |
| Propagation Condition | | 1, 2, 3 | AWGN | | | | | |
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. | | | | | | | | |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled. | | | | | | | | |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | | | |

#### A.6.3.2.1.2.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR inter-frequency cell shall be less than 3 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$$T_{UE_re-establish_delay} = 50\ ms + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$$

$N_{freq} = 2$.

$T_{identify_intra_NR} = 800$ ms.

$T_{identify_inter_NR} = 800$ ms.

$T_{SI} = 1280$ ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 [2] for the target inter-frequency NR cell.

$T_{PRACH} = 15$ ms; it is the additional delay caused by the random access procedure.

This gives a total of 2945 ms, allow 3 s in the test case.

### A.6.3.2.1.3 Intra-frequency RRC Re-establishment in FR1 without serving cell timing

#### A.6.3.2.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the NR intra-frequency RRC re-establishment delay in FR1 without serving cell timing is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.6.3.2.1.3.1-1, table A.6.3.2.1.3.1-2 and table A.6.3.2.1.3.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, Cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.6.3.2.1.3.1-1: Supported test configurations**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.3.2.1.3.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case in FR1**

| Parameter | | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|---|
| Initial condition | Active cell | | 1, 2, 3 | Cell 1 | |
| | Neighbour cells | | 1, 2, 3 | Cell 2 | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{OC}$ to be fulfilled.
NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.2.1.3.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to Cell 2 for sending the *RRCReestablishmentRequest* message to Cell 2.

The RRC re-establishment delay to an unknown NR intra-frequency cell without serving cell timing shall be less than 2.2 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90 %.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re\text{-}establish_delay} = T_{UL_grant} + T_{UE_re\text{-}establish_delay}.$$

Where:

$T_{UL_grant}$ is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence $T_{UL_grant}$ is not used.

$T_{UE_re-establish_delay} = 50 \text{ ms} + T_{identify_intra_NR} + \sum_{i=1}^{Nfreq-1} T_{identify_inter_NR,i} + T_{SI-NR} + T_{PRACH}$.

$N_{freq} = 1$.

$T_{identify_intra_NR} = 800$ ms.

$T_{SI} = 1280$ ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 [2] for the target intra-frequency NR cell.

$T_{PRACH} = 15$ ms; it is the additional delay caused by the random access procedure.

This gives a total of 2145 ms, allow 2.2 s in the test case.

## A.6.3.2.2 Random Access

### A.6.3.2.2.1 4-step RA type contention based random access test in FR1 for NR standalone

#### A.6.3.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in clause 6.2.2.2 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in table A.6.3.2.2.1.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.6.3.2.2.1.1-2.

**Table A.6.3.2.2.1.1-1: Supported test configurations for contention based random access test in FR1 for NR standalone**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

**Table A.6.3.2.2.1.1-2: General test parameters for contention based random access test in FR1 for NR Standalone**

| Parameter | | Unit | Test-1 | Comments |
|---|---|---|---|---|

| PRACH Configuration | | | | FR1 PRACH configuration 1 | As defined in clause A.3.8. |
| Propagation Condition | | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: Void
NOTE 4: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

#### A.6.3.2.2.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.6.3.2.2.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in clause 6.2.2.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.1.2.2 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2.2.1.4 the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.6.3.2.2.1.2.5 Reception of an Incorrect Message over Temporary C-RNTI

To test the UE behavior specified in clause 6.2.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element *not* matching the CCCH SDU transmitted in msg3 uplink message.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

#### A. 6.3.2.2.1.2.6 Reception of a Correct Message over Temporary C-RNTI

To test the UE behavior specified in clause 6.2.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element matching the CCCH SDU transmitted in the msg3 uplink message.

The UE shall send ACK if the Contention Resolution is successful.

#### A.6.3.2.2.1.2.7 Contention Resolution Timer expiry

To test the UE behavior specified in clause 6.2.2.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.6.3.2.2.2 4-step RA type non-contention based random access test in FR1 for NR standalone

#### A.6.3.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in clause 6.2.2.2 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in table A.6.3.2.2.2.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.6.3.2.2.2.1-2 for SSB-based non-contention based random access test (Test 1) and CSI-RS-based non-contention based random access test (Test 2). Test 2 is only applicable to UE which supports csi-RSRP-AndRSRQ-MeasWithSSB or csi-RSRP-AndRSRQ-MeasWithoutSSB.

**Table A.6.3.2.2.2.1-1: Supported test configurations for non-contention based random access test in FR1 for NR standalone**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

| Propagation Condition | | | - | AWGN | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: Void
NOTE 4: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

#### A.6.3.2.2.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.6.3.2.2.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in clause 6.2.2.2.2.1 for SSB-based Random Access Preamble transmsission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belongs to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.2.2.2 CSI-RS-based Random Access Preamble Transmission

In Test-2, to test the UE behavior specified in clause 6.2.2.2.2.1 for CSI-RS-based Random Access Preamble tranmsision, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with CSI-RSs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the CSI-RS configured.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the CSI-RS configured, and the selected PRACH occasion shall belongs to the PRACH occasions permitted by the restrictions given by the *ra-OccasionList*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.2.2.3 Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.2.2.4 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.2. The power of the first preamble shall be 22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in clause 7.1.2.

### A.6.3.2.2.3 2-step RA type contention based random access test in FR1 for NR standalone

#### A.6.3.2.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the 2-step RA type random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits. This test will verify the requirements in clause 6.2.2.3 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in table A.6.3.2.2.3.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.6.3.2.2.3.1-2.

**Table A.6.3.2.2.3.1-1: Supported test configurations for 2-step RA type contention based random access with successRAR test in FR1 for NR standalone**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

**Table A.6.3.2.2.3.1-2: General test parameters for 2-step RA type contention based random access with successRAR test in FR1 for NR standalone**

| Parameter | | | Unit | Test-1 | Comments |
|---|---|---|---|---|---|
| SSB Configuration | | Config 1 | | SSB pattern 1 in FR1 | As defined in clause A.3.10, except for number of SSBs per SS-burst and SS/PBCH block index as below |
| | | Config 2 | | SSB pattern 2 in FR1 | |
| Number of SSBs per SS-burst | | | | 2 | Different from the definition in clause A.3.10 |
| SS/PBCH block index | | | | 0,1 | Different from the definition in clause A.3.10 |
| Duplex Mode for Cell 2 | | Config 1 | | FDD | |
| | | Config 2 | | TDD | |

| MsgA Configuration | | | | FR1 MsgA configuration 1 | As defined in clause A.3.20.2.1. |
| *msgA-RSRP-ThresholdSSB* | | | dBm | RSRP_51 | The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2]. |
| Propagation Condition | | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

#### A.6.3.2.2.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.6.3.2.2.3.2.1 MsgA Transmission

To test the UE behavior specified in clause 6.2.2.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB.*

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2.3. The power of the first MsgA preamble transmission shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be 3dB lower than the first MsgA PRACH power for test configuration 1 and equal to the first MsgA PRACH power for test configuration 2 & 3 with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

##### A.6.3.2.2.3.2.2 MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.1.2 the System Simulator shall transmit a MsgB containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for MsgB(s) and shall transmit an ACK if the MsgB with a successRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble and if the Contention Resolution is successful.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the

backoff time expires if all received MsgB(s) contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be 3dB lower than the first MsgA PRACH power for test configuration 1 and equal to the first MsgA PRACH power for test configuration 2 & 3 with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.1.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be 3dB lower than the first MsgA PRACH power for test configuration 1 and equal to the first MsgA PRACH power for test configuration 2 & 3 with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

### A.6.3.2.2.4 2-step RA type non-contention based test in FR1 for NR standalone

#### A.6.3.2.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits. This test will verify the requirements in clause 6.2.2.3 and clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in table A.6.3.2.2.4.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in table A.6.3.2.2.4.1-2.

**Table A.6.3.2.2.4.1-1: Supported test configurations for non-contention based random access test in FR1 for NR standalone**

| Config | Description |
|---|---|
| 1 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations depending on UE capability | |

**Table A.6.3.2.2.4.1-2: General test parameters for non-contention based random access test in FR1 for NR Standalone**

| Parameter | | Unit | Test-1 | Comments |
|---|---|---|---|---|
| SSB Configuration | Config 1 | | SSB pattern 2 in FR1 | As defined in clause A.3.10, except for number of SSBs per SS-burst and SS/PBCH block index as below |

| Parameter | | | Unit | Test-1 | Comments |
|---|---|---|---|---|---|
| Number of SSBs per SS-burst | | | | 2 | Different from the definition in clause A.3.10 |
| SS/PBCH block index | | | | 0,1 | Different from the definition in clause A.3.10 |
| Duplex Mode for Cell 1 | | Config 1 | | TDD | |
| TDD Configuration | | Config 1 | | TDDConf.2.1 | |
| OCNG Pattern Note 1 | | | | OP.1 | As defined in clause A.3.2.1. |
| PDSCH parameters Note 4 | | Config 1 | | SR.2.1 TDD | As defined in clause A.3.1.1. |
| NR RF Channel Number | | | | 1 | |
| EPRE ratio of PSS to SSS | | | dB | 0 | |
| EPRE ratio of PBCH_DMRS to SSS | | | dB | | |
| EPRE ratio of PBCH to PBCH_DMRS | | | dB | | |
| EPRE ratio of PDCCH_DMRS to SSS | | | dB | | |
| EPRE ratio of PDCCH to PDCCH_DMRS | | | dB | | |
| EPRE ratio of PDSCH_DMRS to SSS | | | dB | | |
| EPRE ratio of PDSCH to PDSCH_DMRS | | | dB | | |
| msgA-*RSRP-ThresholdSSB* | | | dBm | RSRP_51 | The actual value of the threshold is -105 dBm, as defined in TS 38.331 [2]. |
| SSB with index 0 | $\hat{E}_s / I_{ot}$ | | dB | 3 | Power of SSB with index 0 is set to be above configured msgA-*RSRP-ThresholdSSB* |
| | $N_{oc}$ | Config 1 | dBm/15kHz | -101 | |
| | $\hat{E}_s / N_{oc}$ | | dB | 3 | |
| | SS-RSRP Note 3 | | dBm/ SCS | -95 | |
| SSB with index 1 | $\hat{E}_s / I_{ot}$ | | dB | -17 | Power of SSB with index 1 is set to be below configured msgA-*RSRP-ThresholdSSB* |
| | $N_{oc}$ | Config 1 | dBm/15kHz | -101 | |
| | $\hat{E}_s / N_{oc}$ | | dB | -17 | |
| | SS-RSRP Note 3 | | dBm/ SCS | -115 | |
| Io Note 2 | | Config 1 | dBm | -62.2/38.16 MHz | For symbols without SSB index 1 |
| ss-PBCH-BlockPower | | | dBm/ SCS | -5 | As defined in clause 6.3.2 in TS 38.331 [2]. |
| Configured UE transmitted power ( $P_{\mathrm{CMAX,\ f,c}}$ ) | | | dBm | 23 | As defined in clause 6.2.4 in TS 38.101-1 [18]. |
| MsgA Configuration | | | | FR1 MsgA configuration 2 | As defined in clause A.3.20.2.2. |
| Propagation Condition | | | - | AWGN | |

NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.
NOTE 2: SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.
NOTE 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.

### A.6.3.2.2.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

#### A.6.3.2.2.4.2.1 MsgA Transmission

To test the UE behavior specified in clause 6.2.2.3.2.1, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA PRACH on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belongs to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be same as the first MsgA PRACH power with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.4.2.2 MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.2.2 the System Simulator shall transmit a MsgB containing a fallbackRAR containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 containing the payload of MsgA PUSCH if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble. The UE shall monitor contention resolution as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be same as the first MsgA PRACH power with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA and msg3 transmissions shall be within the accuracy specified in clause 7.1.2.

#### A.6.3.2.2.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.2.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be same as the first MsgA PRACH power with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in clause 7.1.2.

### A.6.3.2.3 SA: RRC Connection Release with Redirection

#### A.6.3.2.3.1 Redirection from NR in FR1 to NR in FR1

#### A.6.3.2.3.1.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR to NR requirements specified in clause 6.2.3.2.1.

#### A.6.3.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.6.3.2.3.1.2-1. The time delay is tested by using the parameters in table A.6.3.2.3.1.2-2, and A.6.3.2.3.1.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2. Cell 1 and Cell 2 belong to different tracking areas.

**Table A.6.3.2.3.1.2-1: Redirection from NR to NR test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.3.2.3.1.2-2: General test parameters for Redirection from NR to NR test case**

| Parameter | | Unit | Value | Comment |
|---|---|---|---|---|
| Initial conditions | Active cell | | Cell 1 | |
| | Neighbouring cell | | Cell 2 | |
| Final condition | Active cell | | Cell 2 | |
| Filter coefficient | | | 0 | L3 filtering is not used |
| Access Barring Information | | - | Not Sent | No additional delays in random access procedure. |
| Time offset between cells | | | 3 µs | Synchronous cells |
| T1 | | s | 5 | |
| T2 | | s | 2.3 | |

**Table A.6.3.2.3.1.2-3: Cell specific test parameters for Redirection from NR to NR test case**

| Parameter | | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|---|

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.2.3.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 2240 ms from the beginning of time period T2.
The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90 %.

NOTE: The redirection delay can be expressed as:

$$T_{connection_release_redirect_NR} = T_{RRC_procedure_delay} + T_{identify\text{-}NR} + T_{SI\text{-}NR} + T_{RACH},$$

where:

$T_{RRC_procedure_delay}$ = 110 msin the test.

$T_{identify-NR}$ = 680 ms in the test.

$T_{SI-NR}$ = 1280 ms, it is the time required for receiving all the relevant system information as defined in TS 38.331[2] for the target NR cell.

$T_{RACH}$ = 170 ms in the test.

This gives a total of 2240 ms.

### A.6.3.2.3.2 Redirection from NR in FR1 to E-UTRAN

#### A.6.3.2.3.2.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR to E-UTRAN requirements specified in clause 6.2.3.2.2.

#### A.6.3.2.3.2.2 Test Parameters

Supported test configurations are shown in table A.6.3.2.3.2.2-1. The time delay is tested by using the parameters in table A.6.3.2.3.2.2-2, A.6.3.2.3.2.2-3 and A.6.3.2.3.2.2-4.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.6.3.2.3.2.2-1: Redirection from NR to E-UTRAN test configurations**

| Configuration | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6 | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].
NOTE 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].
NOTE 3: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.
NOTE 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 6: $\hat{E}_s/I_{ot}$, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 7: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

#### A.6.3.2.3.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 2205 ms from the beginning of time period T2.
The rate of correct RRC connection release redirection to E-UTRAN observed during repeated tests shall be at least 90 %.

NOTE: The redirection delay can be expressed as:

$$T_{connection_release_redirect_E\text{-}UTRA} = T_{RRC_procedure_delay} + T_{identify\text{-}E\text{-}UTRA} + T_{SI\text{-}E\text{-}UTRA} + T_{RACH},$$

where:

$T_{RRC_procedure_delay}$ = 110 ms in the test.

$T_{identify\text{-}E\text{-}UTRA}$ = 800 ms in the test.

$T_{SI\text{-}E\text{-}UTRA}$ = 1280 ms, it is the time required for receiving all the relevant system information as defined in TS 36.331 [2] for the target E-UTRA cell.

$T_{RACH}$ = 15 ms in the test.

This gives a total of 2205 ms.

### A.6.3.2.4 LTM PDCCH-order Random Access

#### A.6.3.2.4.1 PDCCH-order RACH on neighbor cell in FR1 when RACH BW is within active UL BWP

##### A.6.3.2.4.1.1 Test Purpose and Environment

This test is to verify the requirement for PDCCH-order RACH on neighbour cell in FR1 when RACH BW is within active UL BWP specified in clause 8.1 in TS 38.213 [3] and UE transmit timing in clause 7.1 for UE supporting *rach-EarlyTA-Measurement-r18*.

##### A.6.3.2.4.1.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in table A.6.3.2.4.1.2-1. Both PDCCH order RACH delay, transmit timing requirement and the interruption requirements are tested by using the parameters in table A.6.3.2.4.1.2-2 and A.6.3.2.4.1.2-3.

This test contains 2 tests (test 1, and 2) and UE may have to pass one of the tests based on the conditions defined in this clause.

In test 1, joint TCI state configuration as defined in table A.6.3.2.4.1.2-2 is provided.

In test 2, no candidate TCI state configurations are configured as in table A.6.3.2.4.1.2-2.

If a UE supports *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 1. If a UE does not support *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 2.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. No gap patterns are configured in the test case.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- A measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

- For tests 1, 2, the UE has reported L3 measurement results and performed SSB based L1-RSRP measurement on Cell 2.

In test 1 and 2, T1 starts from UE transmitting a valid L1 report on Cell 2.

In test 1, after receiving the first L1 report on Cell 2 during T1, the test equipment sends TCI state activation MAC CE to active TCI state of Cell 2 no later than 100 ms after receiving the L1 report.

- In test 1, CandidateTCI-State#1 is activated.

- In test 2, test equipment shall not send TCI state activation MAC CE to active TCI state of Cell 2.

The start of T2 is the instant when PDCCH order to trigger PRACH transmission on Cell 2 is sent to the UE.

**Table A.6.3.2.4.1.2-1: PDCCH order RACH on neighbor cell in FR1 test configurations**

| Config | Description |

#### A.6.3.2.4.1.3 Test Requirements

The UE shall transmit the PRACH preamble to Cell 2 in the first available PRACH occasion after $N_{T,2}$ + 0.5 ms + $T_{\text{SSB}}$ from the beginning of time period T2. After transmitting PRACH on Cell 2, UE shall retune back to Cell 1.

NOTE: The PDCCH order RACH delay can be expressed as: $N_{T,2} + T_{\text{BWPswitchDelay}} + \Delta_{\text{Delay}} + T_{\text{switch}} + T_{\text{SSB}} + \Delta_{\text{RF/BB preparation}}$, where:

- $N_{T,2}$ is a time duration of $N_2$ symbols corresponding to a PUSCH preparation time for UE processing capability 1 assuming $\mu$ corresponds to the smallest SCS configuration between the SCS configuration of the PDCCH order and the SCS configuration of the corresponding PRACH transmission and is specified in table 6.4-1 in TS 38.214 [26].
- $T_{\text{BWPswitchDelay}}$ = 0, $T_{\text{switch}}$ = 0, $\Delta_{\text{RF/BB preparation}}$ = 0
- $\Delta_{\text{Delay}}$ = 0.5 ms
- $T_{\text{SSB}}$ = 0 for UE supporting *ltm-MAC-CE-JointTCI-r18* and/or *ltm-MAC-CE-SeparateTCI-r18*, otherwise $T_{\text{SSB}} = T_{\text{first-SSB_RACH}} + T_{\text{SSB-proc}}$, where $T_{\text{first-SSB_RACH}}$ is the time to first SSB after 1 slot from the end of the slot that UE receives PDCCH-order, and $T_{\text{SSB-proc}}$ = 2 ms, which is the time for SSB processing.

During T2, interruption on Cell 1 UL shall not happen outside the overlapped slot to transmit PRACH and *N* symbols before and after the PRACH occasion as defined in clause 8.1 in 38.213 [3], where N=2. During T2, interruption on Cell 1 DL shall not occur outside the overlapped slot to transmit PRACH.

The test equipment will verify that the timing of PRACH transmission on Cell 2 is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB of Cell 2.

- The $N_{TA_offset}$ value (in $T_c$ units) is 25600
- The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.3.2.4.2 PDCCH-ordered RACH to an inter-frequency candidate cell in FR1 for LTM

#### A.6.3.2.4.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 PDCCH-ordered RACH to an inter-frequency candidate cell in FR1 for LTM. The Te requirements are specified in 7.1. The interruption requirements specified in clause 8.2.2.2.20. This test is for UE supporting PDCCH-ordered RACH to an inter-frequency candidate cell, whose SSB is outside active BWPs of the UE.

#### A.6.3.2.4.2.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency from the PCell. Test configurations are given in table A.6.3.2.4.2.2-1. Both interruption length and Te requirements for the first uplink transmission are tested by using the parameters in table A.6.3.2.4.2.2-2 and A.6.3.2.4.2.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18*

The test consists of two successive time periods, with time durations of T1 and T2, respectively. Measurement gap patterns are configured in the test case and the SSB of Cell 2 is outside the active BWP of Cell 1. The PCell is continuously scheduled during the whole test.

Before T1, for Test 1, 2:

- Cell 1 and Cell 2 on radio channel 1 are powered on.
- UE establishes a connection with the Cell 1.
- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used. UE has reported an L3 measurement result of Cell 2 to Cell 1.
- UE is provided with *LTM-Candidate-r18* for Cell 2
  - Joint TCI state configuration as defined in table A.6.3.2.4.2.2-2 for Test 1 is provided.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2, and UE has already reported a valid L1-RSRP result of Cell 2.

During T1, for Test 1:

- At the start of T1, UE receives candidate cell TCI state activation MAC CE for Cell 2.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T1 ends 100 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T1 is skipped.

During T2, for Test 1, 2:

- At the start of T2, UE receives PDCCH order to trigger PRACH transmission on Cell 2.

  Note: PDCCH order is not expected on the frame with SFN mod 8 =3.
- T2 ends with UE back to Cell 1 after transmitting PRACH to Cell 2.
- The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during the transmission of PDCCH ordered RACH.
- The test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB.
- The $N_{TA}$ offset value (in $T_c$ units) is 25600
- The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1

#### A.6.3.2.4.2.3 Test Requirements

The UE shall transmit the PRACH preamble to Cell 2 in the first available PRACH occasion after $N_{T,2}$ + 0.5 ms + $T_{\text{SSB}}$ from the beginning of time period T2. After transmitting PRACH on Cell 2, UE shall retune back to Cell 1.

NOTE: The PDCCH order RACH delay can be expressed as: $N_{T,2} + T_{\text{BWPswitchDelay}} + \Delta_{\text{Delay}} + T_{\text{switch}} + T_{\text{SSB}} + \Delta_{\text{RF/BB preparation}}$, where:

- $N_{T,2}$ is a time duration of $N_2$ symbols corresponding to a PUSCH preparation time for UE processing capability 1 assuming $\mu$ corresponds to the smallest SCS configuration between the SCS configuration of the PDCCH order and the SCS configuration of the corresponding PRACH transmission and is specified in table 6.4-1 in TS 38.214 [26].
- $T_{\text{BWPswitchDelay}}$ = 0, $T_{\text{switch}}$ = 0
- $\Delta_{\text{Delay}}$ = 0.5 ms
- $\Delta_{\text{RF/BB preparation}}$ is defined in clause 6.2.2C
- $T_{\text{SSB}}$ = 0 for UE supporting *ltm-MAC-CE-JointTCI-r18* and/or *ltm-MAC-CE-SeparateTCI-r18*, otherwise $T_{\text{SSB}} = T_{\text{first-SSB_RACH}} + T_{\text{SSB-proc}}$, where $T_{\text{first-SSB_RACH}}$ is the time to first SSB occasion overlapped with MGL after 2ms and 1 slot from the end of the slot that UE receives PDCCH-order, and $T_{\text{SSB-proc}}$ = 2 ms, which is the time for SSB processing.

During T2, interruption on Cell 1 UL shall not happen outside ceil (Y/NR Slot length) +1 slots before and after PRACH transmission and the same slot of PRACH, where Y as reported in *pdcch-RACH-Switching-TargetBandTimeList-r18*.

The test equipment will verify that the timing of PRACH transmission on Cell 2 is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB of Cell 2.

- The $N_{TA_offset}$ value (in $T_c$ units) is 25600
- The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.3.2.4.3 PDCCH-order RACH on neighbor cell without L1-RSRP measurement in FR1 when RACH BW is within active UL BWP

#### A.6.3.2.4.3.1 Test Purpose and Environment

This test is to verify the requirement for PDCCH-order RACH on neighbour cell without L1-RSRP measurement in FR1 when RACH BW is within active UL BWP specified in clause 8.1 in 38.213 [3] and UE transmit timing in clause 7.1 for UE supporting *rach-EarlyTA-Measurement-r18.*

#### A.6.3.2.4.3.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in table A.6.3.2.4.3.2-1. Both PDCCH order RACH delay, transmit timing requirement and the interruption requirements are tested by using the parameters in table A.6.3.2.4.3.2-2 and A.6.3.2.4.3.2-3.

This test contains 2 tests (test 1 and 2) and UE may have to pass one of the tests based on the conditions defined in this clause.

- In test 1, joint TCI state configuration as defined in table A.6.3.2.4.3.2-2 is provided.
- In test 2, no candidate TCI state configurations are configured as in table A.6.3.2.4.3.2-2.

If a UE supports *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 1. If a UE does not support *ltm-MAC-CE-JointTCI-r18*, it is only required to pass test 2. The test consists of two successive time periods, with time durations of T1 and T2 respectively. No gap patterns are configured in the test case.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is provided with *LTM-Candidate-r18* for Cell 2.
- A measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

In test 1 and 2, T1 starts from UE transmitting a L3 report on Cell 2. In test 1, after receiving the L3 report on Cell 2 during T1, the test equipment sends TCI state activation MAC CE to active TCI state of Cell 2 no later than 100 ms after receiving the L3 report.

- In test 1, CandidateTCI-State#1 is activated.
- In test 2, test equipment shall not send TCI state activation MAC CE to active TCI state of Cell 2.

The start of T2 is the instant when PDCCH order to trigger PRACH transmission on Cell 2 is sent to the UE.

**Table A.6.3.2.4.3.2-1: PDCCH order RACH on neighbor cell in FR1 test configurations**

| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. | | | | | | |
| NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. | | | | | | |

#### A.6.3.2.4.3.3 Test Requirements

The UE shall transmit the PRACH preamble to Cell 2 in the first available PRACH occasion after $N_{T,2}$ + 0.5 ms + $T_{\text{SSB}}$ from the beginning of time period T2. After transmitting PRACH on Cell 2, UE shall retune back to Cell 1.

NOTE: The PDCCH order RACH delay can be expressed as: $N_{T,2} + T_{\text{BWPswitchDelay}} + \Delta_{\text{Delay}} + T_{\text{switch}} + T_{\text{SSB}} + \Delta_{\text{RF/BB preparation}}$, where:

- $N_{T,2}$ is a time duration of $N_2$ symbols corresponding to a PUSCH preparation time for UE processing capability 1 assuming $\mu$ corresponds to the smallest SCS configuration between the SCS configuration of the PDCCH order and the SCS configuration of the corresponding PRACH transmission and is specified in table 6.4-1 in TS 38.214 [26].
- $T_{\text{BWPswitchDelay}} = 0$, $T_{\text{switch}} = 0$, $\Delta_{\text{RF/BB preparation}} = 0$
- $\Delta_{\text{Delay}} = 0.5$ ms
- $T_{\text{SSB}}$ is the time to first SSB occasion, after 1 slot from the end of the slot of the PDCCH plus 2 ms (SSB processing time) .

During T2, interruption on Cell 1 UL shall not happen outside the overlapped slot to transmit PRACH and $N$ symbols before and after the PRACH occasion as defined in clause 8.1 in TS 38.213 [3], where N=2. During T2, interruption on Cell 1 DL shall not occur outside the overlapped slot to transmit PRACH.

The test equipment will verify that the timing of PRACH transmission on Cell 2 is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB of Cell 2.

- The $N_{TA_offset}$ value (in $T_c$ units) is 25600
- The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.3.3 Conditional handover

### A.6.3.3.1 Intra-frequency conditional handover from FR1 to FR1

#### A.6.3.3.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency conditional handover requirements specified in clause 6.1.4.2.

#### A.6.3.3.1.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.1.2-1. Both conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.1.2-2 and A.6.3.3.1.2-3.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2.

NR shall configure a condition implying handover to Cell 2 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2.

**Table A.6.3.3.1.2-1: Intra-frequency conditional handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.3.3.1.2-2: General test parameters Intra-frequency conditional handover from FR1 to FR1**

| Parameter | | Unit | Value | Comment |

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.3.1.3 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ = 800 +62 +10=872 ms from the start of T2 and the interruption during T2 shall not exceeed $T_{interrupt}=T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ =40+20+2 = 62 ms

### A.6.3.3.2 Inter-frequency conditional handover from FR1 to FR1

### A.6.3.3.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR conditional FR1-NR FR1 inter-frequency conditional handover requirements specified in clause 6.1.4.2.

### A.6.3.3.2.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.2.2-1. Both conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.2.2-2 and A.6.3.3.2.2-3.

The test scenario comprises of two carriers and one cell on each carrier Gap pattern ID gp0 is configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. NR shall configure a condition implying handover to Cell 2 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. At the start of T2, Cell 2 becomes detectable and meets the handover condition.

**Table A.6.3.3.2.2-1: Inter-frequency handover from FR1 to FR1 test configurations**

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.3.2.3 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ =920 +62 +10=992 ms from the start of T2 and the interruption during T2 shall not exceeed $T_{interrupt}=T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ =40+20+2 = 62 ms excluding any transmissions which do not occur due to measurement gaps.

### A.6.3.3.3 NR conditional handover including target MCG and target SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC

#### A.6.3.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that UE can make correct NR-RC to NR-DC conditional handover including target MCG in FR1 and target SCG in FR1 as specified in clauses 6.1.6.1.

The supported test configurations are given in table A.6.3.3.3.1-1. The test scenario comprises four NR cells, source PCell (Cell 1) and source PSCell (Cell 2), target PCell (Cell 3), and target PSCell (Cell 4). Cell 1 and Cell 3 are on radio channel 1 in FR1. Cell 2 and Cell 4 are on radio channel 2 in FR1.

Test parameters are given in tables A.6.3.3.3.1-2, A.6.3.3.3.1-3, A.6.3.3.3.1-4 and A.6.3.3.3.1-5 below.

The test consists of two successive time periods, with time durations of T1, T2 respectively.

At the start of T1, the UE shall be connected to Cell 1 on radio channel 1 and Cell 2 on radio channel 2. UE is not aware of Cell 3 and Cell 4. NR shall configure a condition implying handover to Cell 3 and Cell 4 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2.

At the start of T2, Cell 3 and Cell 4 become detectable. The condition for conditional PCell handover is met during T2.

**Table A.6.3.3.3.1-1: Supported test configurations for NR conditional handover including target MCG and target SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.3.3.2 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 3 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ =920 +57 +10=987 ms from the start of T2, and the interruption during T2 shall not exceeed $T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$=10+25+20+2=57 ms.

The UE shall start to transmit the PRACH to Cell 4 less than $T_{measure} + T_{CHO_execution} + T_{processing} + T_{search_PCell_Conditional} + T_{search_PSCell} + T_{\Delta_PSCell} + T_{PSCell_DU}$ + 2 ms =920+10+25+0+ (3*20)+ 20+2=1037 ms from the start of T2, excluding any transmissions which do not occur due to measurement gaps.

The rate of correct conditional handovers observed during repeated tests shall be at least 90 %.

Note1: The PCell conditional handover delay can be expressed as specified in clause 6.1.6.1:

$D_{CHOwithPSCell_PCell} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{interrupt} + T_{CHO_execution}$

The interruption time is the time between when the UE starts to execute the conditional handover to the target cell and the time the UE starts transmission of the new PRACH as specified in clause 6.1.6.1.1

$T_{interrupt} = T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$ ms

The PSCell conditional handover delay can be expressed as specified in clause 6.1.6.1.2:

$D_{CHOwithPSCell_PSCell} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{CHO_execution} + T_{processing} + T_{search_PCell_Conditional} + T_{search_PSCell} + T_{\Delta_PSCell} + T_{PSCell_DU} + 2$ ms

## A.6.3.3.4 NR conditional handover including target MCG and candidate SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC

### A.6.3.3.4.1 Test Purpose and Environment

This test is to verify the requirement for conditional handover including target MCG and candidate SCG for CPC in FR1 NR-DC specified in clause 6.1.7.1. This test verifies the requirements for PCell conditional handover delay in section 6.1.7.1.1 and PSCell conditional change delay in section 6.1.7.1.2 for FR1-FR1 NR-DC to FR1-FR1 NR-DC CHO with CPC.

### A.6.3.3.4.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.4.2-1. Conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.4.2-2 and A.6.3.3.4.2-3. Conditional PSCell change delay and interruption length are tested by using the parameters in tables A.6.3.3.4.2-2 and A.6.3.3.4.2-4.

The test consists of three successive time periods, with time durations of T1, T2, and T3, respectively.

At the start of time duration T1, the UE is connected to Cell 1 (source PCell) and Cell 2 (source PSCell). The UE may not have any timing information of Cell 3 (target PCell) and Cell 4 (target PSCell).

TE shall configure a condition implying conditional handover to Cell 3 with a condition implying conditional PSCell change to Cell 4 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2.

At the start of T2, Cell 3 becomes detectable. At the start of T3, Cell 4 becomes detectable. UE meets the handover condition and meets the PSCell change condition during T3.

**Table A.6.3.3.4.2-1: Supported test configurations for NR conditional handover including target MCG and candidate SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC**

| Config | Description |
|---|---|

#### A.6.3.3.4.3 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during T1 and T2, as the conditional handover condition for Cell 3 becomes satisfied at the start of T2, and the conditional PSCell change condition for Cell 4 becomes satisfied at the start of T3. The test shall verify that there are no interruptions during T1 and T2. The UE shall not send PRACH to Cell 3 before the end of T3. The UE shall not send PRACH to Cell 4 before the end of T3.

The UE shall start to transmit PRACH to Cell 3 less than max ($T_{measure_PCell}$, $T_{measure_PSCell}$) + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta_PCell}$ + $T_{PCell_DU}$ + 2 ms = (800 + 10 + 25 + 20 + 20 + 2) ms = 877 ms from the start of T3 and the interruption during T3 shall not exceeed $T_{processing}$ + $T_{\Delta_PCell}$ + $T_{PCell_DU}$ + 2 ms = (25 + 20 + 20 + 2) ms = 67 ms.
The UE shall start to transmit PRACH to Cell 4 less than max ($T_{measure_PCell}$, $T_{measure_PSCell}$) + $T_{UE_preparation}$ + $T_{processing}$ + $T_{\Delta_PSCell}$ + $T_{PSCell_DU}$ + 2 ms = (800 + 10 + 25 + 20 + 20 + 2) ms = 877 ms from the start of T3. The interruption during T3 shall not exceed $T_{processing}$ + $T_{\Delta_PSCell}$ + $T_{PSCell_DU}$ + 2 ms = 25 ms + 20 + 20 ms + 2 ms = 67 ms.

### A.6.3.3.5 NR conditional handover including target MCG and candidate SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC with complementary conditional handover configuration

#### A.6.3.3.5.1 Test Purpose and Environment

This test verifies the requirement for conditional handover when the UE is configured with target MCG and candidate SCG for CPC in FR1 NR-DC and additionally configured with a complementary CHO only configuration in FR1. The test verifies that the UE makes the correct decision to proceed with CHO without CPC in case CHO condition is met without CPC condition being met, meanwhile verifying the conditional handover delay requirement in section 6.1.4.2.

For UE which can pass test case defined in clause A.6.3.3.5, test case defined in clause A.6.3.3.1 can be skipped and corresponding test requirements are deemed to be fulfilled.

#### A.6.3.3.5.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.5.2-1. Both conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.5.2-2 and A.6.3.3.5.2-3.

The test consists of two successive time periods, with time durations of T1 and T2 respectively.

At the start of time duration T1, the UE is connected to Cell 1 (source PCell) and Cell 2 (source PSCell). The UE may not have any timing information of Cell 3 (target PCell) and Cell 4 (target PSCell).

TE shall configure a condition implying conditional handover to Cell 3 with a condition implying conditional PSCell change to Cell 4 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. Additionally, the TE shall configure a complementary condition only implying conditional handover to Cell 3.

At the start of T2, Cell 3 becomes detectable. UE meets the handover condition during T2.

**Table A.6.3.3.5.2-1: Supported test configurations for NR conditional handover including target MCG and candidate SCG from FR1-FR1 NR-DC to FR1-FR1 NR-DC with complementary conditional handover configuration**

| Config | Description |
|---|---|
| 1 | Source cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cells (PCell and PSCell): NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

### A.6.3.3.5.3 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the conditional handover condition for cell becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 3 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ = 800 +62 +10=872 ms from the start of T2 and the interruption during T2 shall not exceeed $T_{interrupt}=T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ =40+20+2 = 62 ms.

The UE shall not send PRACH to Cell 4.

## A.6.3.3.6 NES triggering intra-frequency conditional handover from FR1 to FR1

### A.6.3.3.6.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency NES-based conditional handover requirements specified in clause 6.1.4.2.

### A.6.3.3.6.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.6.2-1. Both NES-based conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.6.2-2 and A.6.3.3.6.2-3.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of Cell 2.

NR shall configure the NES-based condition implying handover to Cell 2 firstly, and then configure DCI 2-9 with NES-mode indication during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. In the RRC signaling, one conditional execution condition with condEventA3 should be configured, that nesEvent set as true and A3-offset set as 0 dB.

Starting T2, Cell 2 becomes detectable and offset better than Cell 1 and NES-based event is fulfilled.

**Table A.6.3.3.6.2-1: NES triggering Intra-frequency conditional handover from FR1 to FR1 test configurations**

| Config | Description |

### A.6.3.3.6.3 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the NES-based handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ = 800 +62 +10=872ms from the start of T2 and the interruption during T2 shall not exceed $T_{interrupt}=T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ =40+20+2 = 62ms.

## A.6.3.3.7 NES-based Inter-frequency conditional handover from FR1 to FR1

### A.6.3.3.7.1 Test Purpose and Environment

This test is to verify the requirement for the NES-based NR FR1-NR FR1 inter-frequency conditional handover requirements specified in clause 6.1.4.2.

### A.6.3.3.7.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.7.2-1. Both conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.7.2-2 and A.6.3.3.7.2-3.

The test scenario comprises of two carriers and one cell on each carrier. Gap pattern ID gp0 is configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. NR shall configure a condition implying handover to Cell 2 during T1, at a time earlier than $T_{RRC}$ before the beginning of T2. At the start of T2, Cell 2 becomes detectable and meets the NES-based handover condition. In this test, UE is not indicated to report SSB based RRM measurement result with the associated SSB index for carrier of Cell 2, and DCI 2-9 command of '1' value for indicating NES-specific CHO execution condition is transmitted to UE at 950 ms from the start of T2, i.e., UE receives DCI 2-9 command later than the time at the end of $T_{Event_DU} + T_{identify_inter_without_index}$.

**Table A.6.3.3.7.2-1: NES-based inter-frequency conditional handover from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.3.7.3 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure} + T_{interrupt} + T_{CHO_execution}$ =950 +62 +10=1022 ms from the start of T2 and the interruption during T2 shall not exceeed $T_{interrupt}=T_{processing} + T_{IU} + T_{\Delta} + T_{margin}$ =40+20+2 = 62 ms excluding any transmissions which do not occur due to measurement gaps.

## A.6.3.4 LTM PCell Switch

### A.6.3.4.1 RACH-based Intra-frequency PCell switch from FR1 to FR1

#### A.6.3.4.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 RACH-based intra-frequency PCell switch specified in clause 6.3.1 for both with and without early TCI state activation.

#### A.6.3.4.1.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in table A.6.3.4.1.2-1. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.4.1.2-2 and A.6.3.4.1.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18*

The test consists of four successive time periods, with time durations of T1 to T4 respectively. No gap patterns are configured in the test case.

During T1, for Test 1 and 2:

- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used.
- T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

During T2, for Test 1 and 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2
- In Test 1 and Test 2, joint TCI state configurations as defined in table A.6.3.4.1.2-2 are provided.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.
- T2 ends with UE reporting a valid L1-RSRP result of Cell 2.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 2.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T3 ends 50 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T3 is skipped.

During T4, for Test 1 and 2:

- The start of T4 is the last TTI containing LTM cell switch command MAC CE is sent by Cell 1 to the UE.
- In the cell switch command, Cell 2 is the target cell. Contention-Free Random-Access Resources are indicated and the field of Timing Advance Command is set to FFF.
  - In test 1, CandidateTCI-State#2 is indicated.
  - In test 2, CandidateTCI-State#1 is indicated.
  - T4 ends upon the reception of PRACH at Cell 2.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.4.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T4. The rate of correct cell switches observed during repeated tests shall be at least 90 %.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3 ms and is specified in clause 6.3.1.2. $T_{LTM\text{-}interrupt}$ = $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$ ms and is specified in clause 6.3.1.2.1

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 0 ms for Test 1, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 22 ms for Test 2
- $T_{LTM\text{-}IU_}$=20 ms
- $T_{LTM\text{-}RRC\text{-}processing}$ =10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0 ms
- $T_{LTM\text{-}processing}$ =10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ =15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability

- $T_{LTM-processing}$ =20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

## A.6.3.4.2 RACH based Inter-frequency LTM PCell switch from FR1 to FR1

### A.6.3.4.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 inter-frequency LTM RACH based cell switch delay requirements specified in clause 6.3.1 for both with and without early TCI state activation.

### A.6.3.4.2.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency from the PCell. Test configurations are given in table A.6.3.4.2.2-1. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.4.2.2-2 and A.6.3.4.2.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18*

The test consists of four successive time periods, with time durations of T1, T2, T3 and T4, respectively.

During T1, for Test 1, 2:

- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used.
- T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

During T2, for Test 1, 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2
  - In Test 1 and Test 2 joint TCI state configurations as defined in table A.6.3.4.2.2-2 are provided.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.
- T2 ends with UE reporting a valid L1-RSRP result of Cell 2.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 2.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T3 ends 100 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T3 is skipped.

During T4, for Test 1 and 2:

- The start of T4 is the instant when the last TTI containing LTM cell switch command MAC CE is sent by Cell 2 to the UE.
- In the cell switch command, Cell 2 is the target cell for PCell switch. Contention-Free Random-Access Resources are indicated and the field of Timing Advance Command is set to FFF.
  - In test 1, CandidateTCI-State#2 is indicated.
  - In test 2, CandidateTCI-State#1 is indicated.
- T4 ends upon the reception of PRACH at Cell 2.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.4.2.3 Test Requirements

The UE shall start to transmit PRACH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T4.
The rate of correct cell switches observed during repeated tests shall be at least 90 %.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3 ms and is specified in clause 6.3.1.2, $T_{LTM\text{-}interrupt}$ is defined in clause 6.3.1.3 as $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$,

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 0 ms for Test 1, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 22 ms for Test 2,
- $T_{LTM\text{-}IU_}$= 20 ms.

- $T_{LTM\text{-}RRC\text{-}processing}$ =10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ = 0 ms

- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability

- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability

- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

### A.6.3.4.3 RACH-less Intra-frequency PCell switch from FR1 to FR1

#### A.6.3.4.3.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 RACH-less intra-frequency PCell switch specified in clause 6.3.1 for both with and without early TCI state activation.

#### A.6.3.4.3.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Supported test configurations are shown in table A.6.3.4.3.2-1. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.4.3.2-2 and A.6.3.4.3.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*

  - Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18 8*

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5, respectively. No gap patterns are configured in the test case.

During T1, for Test 1, 2:

- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

- T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

During T2, for Test 1, 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2

  - Joint TCI state configuration as defined in table A.6.3.4.3.2-2 for Test 1 are provided.

  - Separate TCI state configuration as defined in table A.6.3.4.3.2-2 for Test 1 are provided.

- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports on candidate cell (Cell 2) in PUCCH format 2.

- T2 ends with UE reporting a valid L1-RSRP result of Cell 2.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 2.

  - In Test 1, *CandidateTCI-State#1* is activated.

- T3 ends 50 ms after the candidate cell TCI state activation MAC CE transmission.

- In Test 2, T3 is skipped.

During T4, for Test 1, 2:

- At the start of T4, UE receives PDCCH order to trigger PRACH transmission on Cell 2.

- T4 ends 5 ms after the UE transmits the PRACH to Cell 2.
- For UE incapable of *rach-EarlyTA-Measurement-r18*, T4 is skipped.

During T5, for Test 1, 2:

- The start of T5 is the last TTI containing LTM cell switch command MAC CE is sent by Cell 1 to the UE.
- In the cell switch command, Cell 2 is the target cell and the field of Timing Advance Command is set to 0.
  - In test 1, CandidateTCI-State#2 is indicated.
  - In test 2, CandidateTCI-State#1 is indicated.
- Cell 2 continuously schedules PUSCH for the UE.
- T5 ends either at the UL slot of PUSCH scheduled by Cell 2 at the first DL slot not earlier than ($T_{cmd}$ + $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$) after the beginning of T5 or upon the reception of PUSCH at Cell 2, whichever is earlier.
  - The values of $T_{cmd}$, $T_{LTM\text{-}RRC\text{-}processing}$ $T_{LTM\text{-}processing}$, $T_{first\text{-}RS}$ and $T_{RS\text{-}proc}$ are specified in clause A.6.3.4.3.3.

**Table A.6.3.4.3.2-1: Intra-frequency cell switch from FR1 to FR1 test configurations**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.4.3.3 Test Requirements

The UE shall start to transmit PUSCH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T5.
The rate of correct cell switches observed during repeated tests shall be at least 90 %.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3 ms and is specified in clause 6.3.1.2.

$T_{LTM\text{-}interrupt}$ is defined in clause 6.3.1.3 as $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$. $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$=0 for Test 1, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$=22 ms for Test 2, and $T_{LTM\text{-}IU}$ is the uncertainty on transmitting the first uplink transmission on Cell 2.

- $T_{LTM\text{-}RRC\text{-}processing}$ = 10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0 ms
- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

### A.6.3.4.4 RACH-less Intra-frequency PCell switch from FR1 to FR1 without L1-RSRP measurement

#### A.6.3.4.4.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 RACH-less intra-frequency PCell switch specified in clause 6.3.1 without L1-RSRP measurement and measurement reporting.

#### A.6.3.4.4.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Supported test configurations are shown in table A.6.3.4.4.2-1. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.4.4.2-2 and A.6.3.4.4.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting ltm-MAC-CE-JointTCI-r18

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5, respectively. No gap patterns are configured in the test case.

During T1, for Test 1, 2

- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used.
- T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

During T2, for Test 1, 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2
  - Joint TCI state configuration as defined in table A.6.3.4.4.2-2 for Test 1 are provided.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 2.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T3 ends 50 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T3 is skipped.

During T4, for Test 1, 2:

- At the start of T4, UE receives PDCCH order to trigger PRACH transmission on Cell 2.
- T4 ends 5 ms after the UE transmits the PRACH to Cell 2.
- For UE incapable of *rach-EarlyTA-Measurement-r18*, T4 is skipped.

During T5, for Test 1, 2:

- The start of T5 is the last TTI containing LTM cell switch command MAC CE is sent by Cell 1 to the UE.
- In the cell switch command, Cell 2 is the target cell and the field of Timing Advance Command is set to 0.
  - In test 1, CandidateTCI-State#2 is indicated.
  - In test 2, CandidateTCI-State#1 is indicated.
- Cell 2 continuously schedules PUSCH for the UE.
- T5 ends either at the UL slot of PUSCH scheduled by Cell 2 at the first DL slot not earlier than ($T_{cmd}$ + $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$) after the beginning of T5 or upon the reception of PUSCH at Cell 2, whichever is earlier.
  - The values of $T_{cmd}$, $T_{LTM\text{-}RRC\text{-}processing}$ $T_{LTM\text{-}processing}$,$T_{first\text{-}RS}$ and $T_{RS\text{-}proc}$ are specified in clause A.6.3.4.3.3.

#### A.6.3.4.4.3 Test Requirements

The UE shall start to transmit PUSCH to Cell 2 in no later than $D_{LTM}$ from the beginning of time period T5.
The rate of correct cell switches observed during repeated tests shall be at least 90 %.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM-interrupt}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3 ms and is specified in clause 6.3.1.2.

$T_{LTM-interrupt}$ is defined in clause 6.3.1.3 as $T_{LTM-RRC-processing}$ + $T_{LTM-processing}$ + $T_{first-RS}$ + $T_{RS-proc}$ + $T_{LTM-IU}$. $T_{first-RS}$ + $T_{RS-proc}$=0 for Test 1, $T_{first-RS}$ + $T_{RS-proc}$=22 ms for Test 2, and $T_{LTM-IU_}$is the uncertainty on transmitting the first uplink transmission on Cell 2.

- $T_{LTM-RRC-processing}$ = 10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM-RRC-processing}$ =0 ms
- $T_{LTM-processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM-processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM-processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

## A.6.3.5 LTM PSCell Switch

### A.6.3.5.1 RACH-based intra-frequency LTM PSCell switch from FR1 to FR1

#### A.6.3.5.1.1 Test Purpose and Environment

This test is to verify the intra-frequency RACH based LTM PSCell switch requirements from NR FR1 to NR FR1 specified in clause 8.20 for both with and without early TCI state activation.

#### A.6.3.5.1.2 Test Parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), FR1 PSCell (Cell 2) and a FR1 neighbour cell (Cell 3) on the same frequency as the PSCell. The test configurations of PCell and PSCell are given in table A.6.3.5.1.2-1 and table A.6.3.5.1.2-1A. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.5.1.2-2 and table A.6.3.5.1.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18*

The test consists of four successive time periods, with time durations of T1, T2, T3 and T4, respectively.

During T1, for Test 1 and 2:

- A measurement object is configured for the frequency of the Cell 3, and it is indicated to the UE that event-triggered reporting with Event A3 is used.
- T1 ends with UE reporting an L3 measurement result of Cell 3 to Cell 2.

During T2, for Test 1 and 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 3
  - Joint TCI state configuration as defined in table A.6.3.5.1.2-2 for Test 1 are provided.
- UE is configured with SSB-based L1-RSRP measurements and periodic L1-RSRP measurement reports for candidate cell (Cell 3) in PUCCH format 2.
- T2 ends with UE reporting a valid L1-RSRP result of Cell 3.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 3.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T3 ends 50 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T3 is skipped.

During T4, for Test 1 and 2:

- The start of T4 is the instant when the last TTI containing LTM cell switch command MAC CE is sent by Cell 2 to the UE.
- In the cell switch command, Cell 3 is the target cell for PSCell switch. Contention-Free Random-Access Resources are indicated and the field of Timing Advance Command is set to FFF.
  - In test 1, CandidateTCI-State#2 is indicated.
  - In test 2, CandidateTCI-State#1 is indicated.
- T4 ends upon the reception of PRACH at Cell 3.

**Table A.6.3.5.1.2-1: Supported PCell test configurations for intra-frequency PSCell cell switch from FR1 to FR1**

| Config | Description |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

#### A.6.3.5.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 3 in no later than $D_{LTM}$ from the beginning of time period T4. The rate of correct cell switches observed during repeated tests shall be at least 90 %.

NOTE: The cell switch delay can be expressed as $D_{LTM}$ (= $T_{cmd}$ + $T_{LTM\text{-}RRC\text{-}processing}$ + $T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{LTM\text{-}IU}$), where:

$T_{cmd}$ = $T_{HARQ}$ + 3 ms and is specified in clause 6.3.1.2

- $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 0 ms for Test 1, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 22 ms for Test 2
- $T_{LTM\text{-}IU}$ = 20 ms
- $T_{LTM\text{-}RRC\text{-}processing}$ = 10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0 ms
- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

## A.6.3.6 CLTM PCell Switch

### A.6.3.6.1 RACH-based intra-frequency CLTM PCell switch from FR1 to FR1 triggered by SSB based L1-RSRP measurement

#### A.6.3.6.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 RACH-based intra-frequency CLTM PCell switch triggered by SSB-based L1-RSRP measurement specified in clause 6.3.2 for both with and without early TCI state activation, for UE supporting *intraFreqL1-MeasConfig-r18* and not supporting *cltm-EarlyTA-Indication-r19* and *ltm-InterFreqMeasGap-r18*.

#### A.6.3.6.1.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Test configurations are given in table A.6.3.6.1.2-1. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.6.1.2-2 and A.6.3.6.1.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18*

The test consists of four successive time periods, with time durations of T1 to T4 respectively. No gap patterns are configured in the test case.

During T1, for Test 1 and 2:

- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used.
- T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

During T2, for Test 1 and 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2

- In Test 1 and Test 2, joint TCI state configurations as defined in table A.6.3.6.1.2-2 are provided.

- *LTM-Candidate-r18* includes the L1 condition implying cell switch to Cell 2 in *ltm-ExecutionCondition-r19*.
  - Event LTM3 is used in the CLTM execution condition as defined in table A.6.3.6.1.2-2.
- UE is configured with SSB-based L1-RSRP measurements.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 2.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T3 ends 50 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T3 is skipped.

During T4, for Test 1 and 2:

- The start of T4 is the condition in *ltm-ExecutionCondition-r19* becomes satisfied, Cell 2 is the target cell.
- T4 ends upon the reception of PRACH at Cell 2.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.6.1.3 Test Requirements

$T_{RRC} + T_{Event_DU}$ occurs during [T2 and] T3 as the cell switch condition becomes satisfied at the start of T4.

The UE shall start to transmit the PRACH to Cell 2 in no later than $T_{measure} + T_{CLTM\text{-}RRC\text{-}processing} + T_{CLTM\text{-}interrupt}$ from the beginning of time period T4 and the interruption during T4 shall not exceed $T_{CLTM\text{-}interrupt}$. The rate of correct cell switches observed during repeated tests shall be at least 90 %.

NOTE: The cell switch delay can be expressed as $D_{CLTM} = T_{RRC} + T_{Event_DU} + T_{measure} + T_{CLTM\text{-}RRC\text{-}processing} + T_{CLTM\text{-}interrupt}$ and is specified in clause 6.3.2.2, where:

- $T_{measure}$ = 20ms.
- $T_{CLTM\text{-}RRC\text{-}processing}$ =10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ =0 ms.

NOTE: $T_{CLTM\text{-}interrupt} = T_{LTM\text{-}processing} + T_{first\text{-}RS} + T_{RS\text{-}proc} + T_{CLTM\text{-}IU}$ and is specified in clause 6.3.2.2.3, where:

- $T_{first\text{-}RS} + T_{RS\text{-}proc}$= 0 ms for Test 1, $T_{first\text{-}RS} + T_{RS\text{-}proc}$= 22 ms for Test 2
- $T_{CLTM\text{-}IU_}$=20 ms
- $T_{LTM\text{-}processing}$ =10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ =15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
- $T_{LTM\text{-}processing}$ =20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.

### A.6.3.6.2 RACH-based inter-frequency CLTM PCell switch from FR1 to FR1 triggered by SSB based L1-RSRP measurement

#### A.6.3.6.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR conditional FR1-NR FR1 inter-frequency conditional LTM cell switch requirements specified in clause 6.3.2.2 for both with and without early TCI state activation, for UE not supporting *cltm-EarlyTA-Indication-r19* and supporting *ltm-InterFreqMeasGap-r18*.

#### A.6.3.6.2.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency from the PCell. Test configurations are given in table A.6.3.6.2.2-1. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.6.2.2-2 and A.6.3.6.2.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18*

The test consists of four successive time periods, with time durations of T1, T2, T3 and T4, respectively.

During T1, for Test 1, 2:

- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used.
- T1 ends with UE reporting an L3 measurement result of Cell 2 to Cell 1.

During T2, for Test 1, 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2
  - In Test 1 and Test 2 joint TCI state configurations as defined in table A.6.3.6.2.2-2 are provided.
- *LTM-Candidate-r18* includes the L1 condition implying cell switch to Cell 2 in *ltm-ExecutionCondition-r19*.
  - Event LTM3 is used in the CLTM execution condition as defined in table A.6.3.6.2.2-2.
- UE is configured with SSB-based L1-RSRP measurements.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 2.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T3 ends 100 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T3 is skipped.

During T4, for Test 1 and 2:

- The start of T4 is the condition in *ltm-ExecutionCondition-r19* becomes satisfied, Cell 2 is the target cell.
- T4 ends upon the reception of PRACH at Cell 2.

**Table A.6.3.6.2.2-1: Inter-frequency RACH based CLTM cell switch from FR1 to FR1 test configurations**

| Config | Description |
|---|---|
| 1 | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

#### A.6.3.6.2.3 Test Requirements

$T_{RRC}$ + $T_{Event_DU}$ occurs during T3 as the CLTM condition becomes satisfied at the start of T4.

The UE shall start to transmit the PRACH to Cell 2 less than $T_{measure}$ + $T_{CLTM\text{-}RRC\text{-}processing}$ + $T_{CLTM\text{-}interrupt}$ from the start of T4 and the interruption during T4 shall not exceeed $T_{CLTM\text{-}interrupt}$ =$T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{CLTM\text{-}IU}$ excluding any transmissions which do not occur due to measurement gaps, where:

- $T_{measure}$= $T_{L1\text{-}RSRP_Measurement_Period_SSB_inter}$ =20ms in the test,
- $T_{CLTM\text{-}RRC\text{-}processing}$=10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ = 0 ms
- $T_{CLTM\text{-}interrupt}$ =$T_{LTM\text{-}processing}$ + $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$ + $T_{CLTM\text{-}IU}$, where
  - $T_{LTM\text{-}RRC\text{-}processing}$ =10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{LTM\text{-}RRC\text{-}processing}$ = 0 ms
  - $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability
  - $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability
  - $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.
  - $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 0 ms for Test 1, $T_{first\text{-}RS}$ + $T_{RS\text{-}proc}$= 22 ms for Test 2,
  - $T_{CLTM\text{-}IU_}$= 20 ms.

The rate of correct cell switches observed during repeated tests shall be at least 90 %.

### A.6.3.6.3 RACH-less intra-frequency CLTM PCell switch from FR1 to FR1 triggered by SSB-based L1-RSRP measurement

#### A.6.3.6.3.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 RACH-less intra-frequency CLTM PCell switch triggered by SSB-based L1-RSRP measurement specified in clause 6.3.2 for both with and without early TCI state activation, for UE supporting *cltm-EarlyTA-Indication-r19* and *intraFreqL1-MeasConfig-r18*.

#### A.6.3.6.3.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. Supported test configurations are shown in table A.6.3.6.3.2-1. Both cell switch delay and interruption length are tested by using the parameters in tables A.6.3.6.3.2-2 and A.6.3.6.3.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18*

The test consists of five successive time periods, with time durations of T1, T2, T3, T4, and T5 respectively. No gap patterns are configured in the test case.

During T1, for Test 1, 2:

- A measurement object is configured for the frequency of the Cell 2, and it is indicated to the UE that event-triggered reporting with Event A3 is used.
- T1 ends with UE reporting L3 measurement results of Cell 2 to Cell 1.

During T2, for Test 1, 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2.
  - In Test 1 and Test 2, joint TCI state configurations as defined in table A.6.3.6.3.2-1 are provided.
- *LTM-Candidate-r18* includes the L1 condition implying cell switch to Cell 2 in *ltm-ExecutionCondition-r19*.
  - Event LTM3 is used in the CLTM execution condition as defined in table A.6.3.6.3.2-1.
- UE is configured with SSB-based L1-RSRP measurements.

During T3, for Test 1:

- At the start of T3, UE receives candidate cell TCI state activation MAC CE for Cell 2.
  - In Test 1, *CandidateTCI-State#1* is activated.
- T4 ends 50 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T3 is skipped.

During T4, for Test 1, 2:

- At the start of T4, UE receives PDCCH order to trigger PRACH transmission on Cell 2.
- T4 ends 5 ms after the UE transmits the PRACH to Cell 2.

During T5, for Test 1, 2:

- At the start of T5, Cell 2 meets the CLTM execution condition in *ltm-ExecutionCondition-r19*.
- Cell 2 continuously schedules PUSCH for the UE.
- T5 ends at the reception of PUSCH at Cell 2.

**Table A.6.3.6.3.2-1: Intra-frequency cell switch from FR1 to FR1 test configurations**

| Config | Description |

#### A.6.3.6.3.3 Test Requirements

The UE shall start to transmit PUSCH to Cell 2 in no later than $T_{measure} + T_{CLTM\text{-}RRC\text{-}processing} + T_{CLTM\text{-}interrupt}$ from the start of T5 and the interruption during T5 shall not exceeed $T_{CLTM\text{-}interrupt} = T_{LTM\text{-}processing} + T_{first\text{-}RS} + T_{RS\text{-}proc} + T_{CLTM\text{-}IU}$, where:

- $T_{measure}$ = 20 ms.
- $T_{CLTM\text{-}RRC\text{-}processing}$ = 10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{CLTM\text{-}RRC\text{-}processing}$ = 0 ms.
- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability.
- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability.
- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.
- $T_{first\text{-}RS} + T_{RS\text{-}proc}$ = 0 ms for Test 1, $T_{first\text{-}RS} + T_{RS\text{-}proc}$ = 22 ms for Test 2.
- $T_{CLTM\text{-}IU}$ is the uncertainty on transmitting the new uplink transmission on Cell 2.

The rate of correct cell switches observed during repeated tests shall be at least 90 %.

### A.6.3.6.4 RACH-less intra-frequency CLTM Pcell switch from FR1 to FR1 triggered by SSB-based L3-RSRP measurement

#### A.6.3.6.4.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-frequency conditional LTM Pcell switch requirements specified in clause 6.3.2 for both with and without early TCI state activation. For UE supporting *cltm-EarlyTA-Indication-r19* and not supporting *intraFreqL1-MeasConfig-r18*.

#### A.6.3.6.4.2 Test Parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and two FR1 neighbour cells (Cell 2 and Cell 3) on the same frequency as the PCell. Supported test configurations are shown in table A.6.3.6.4.2-1. Both cell switch delay and interruption length are tested by using the parameters in table A.6.3.6.4.2-2 and A.6.3.6.4.2-3.

The test consists of 2 tests, and UE is required to pass one among Test 1, Test 2.

- Test 1: for a UE supporting *ltm-MAC-CE-JointTCI-r18*
- Test 2: for a UE not supporting *ltm-MAC-CE-JointTCI-r18 8*

No gap patterns are configured in the test case.

The test consists of six successive time periods, with time durations of T1, T2, T3, T4, T5, and T6 respectively. During T3, the UE peforms initial CLTM cell switch from Cell 1 to Cell 2, while subsequent CLTM cell switch from Cell 2 to Cell 3 is performed during T6.

During T1, for Test 1, 2:

A measurement object is configured for the frequency of the Cell 2 and Cell 3, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

- UE is configured with SSB-based L3 measurement reports on candidate cell (Cell 2) in PUCCH format 2.
- T1 ends with UE reporting L3 measurement results of Cell 2 and Cell 3 to Cell 1.

During T2, for Test 1, 2:

- At the start of T2, UE is provided with *LTM-Candidate-r18* for Cell 2 and Cell 3.

  In Test 1 and Test 2, joint TCI state configurations as defined in table A.6.3.6.4.2-1 are provided.

  *LTM-Candidate-r18* includes the L3 conditions implying cell switches to Cell 2 and Cell 3.

  Event LTM3 is used in the CLTM execution conditions as defined in table A.6.3.6.4.2-1.
- UE is configured with SSB-based L1-RSRP measurements.

During T3, for Test 1 and 2:

- At the start of T3, Cell 2 meets the CLTM condition.
- T3 ends at the reception of *RRCReconfigurationComplete* message at Cell 2.

During T4, for Test 1, 2:

- At the start of T4, UE receives candidate cell TCI state activation MAC CE for Cell 3.
- In Test 1, *CandidateTCI-State#1* is activated.
- T4 ends 50 ms after the candidate cell TCI state activation MAC CE transmission.
- In Test 2, T4 is skipped.

During T5, for Test 1, 2:

- At the start of T5, UE receives PDCCH order to trigger PRACH transmission on Cell 3.
- T5 ends 5 ms after the UE transmits the PRACH to Cell 3.

During T6, for Test 1, 2:

- At the start of T6, Cell 3 meets the CLTM condition.
- Cell 3 continuously schedules PUSCH for the UE.
- T6 ends at the reception of PUSCH at Cell 3.

**Table A.6.3.6.4.2-1: Intra-frequency conditional handover from FR1 to FR1 test configurations**

NOTE 1: OCNG shall be used such that cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.6.4.3 Test Requirements

The UE shall start to transmit PUSCH to Cell 3 in no later than $T_{measure} + T_{CLTM\text{-}RRC\text{-}processing} + T_{CLTM\text{-}interrupt}$ from the start of T6 and the interruption during T6 shall not exceeed $T_{CLTM\text{-}interrupt} = T_{LTM\text{-}processing} + T_{first\text{-}RS} + T_{RS\text{-}proc} + T_{CLTM\text{-}IU}$, where:

- $T_{measure}$ = 20 ms.
- $T_{CLTM\text{-}RRC\text{-}processing}$ = 10 ms if UE does not support *ltm-FastProcessingConfig-r18*, otherwise $T_{CLTM\text{-}RRC\text{-}processing}$ =0 ms.
- $T_{LTM\text{-}processing}$ = 10 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 10 ms for FR1-to-FR1 cell switch in the capability.

- $T_{LTM\text{-}processing}$ = 15 ms if the UE supports *ltm-FastUE-Processing-r18* capability and UE reports 15 ms for FR1-to-FR1 cell switch in the capability.
- $T_{LTM\text{-}processing}$ = 20 ms if the UE does not support *ltm-FastUE-Processing-r18* capability.
- $T_{first\text{-}RS} + T_{RS\text{-}proc}$ = 0 ms for Test 1, $T_{first\text{-}RS} + T_{RS\text{-}proc}$ = 22 ms for Test 2.
- $T_{CLTM\text{-}IU_}$is the uncertainty on transmitting the new uplink transmission on Cell 3.

The rate of correct cell switches observed during repeated tests shall be at least 90 %.

# A.6.4 Timing

## A.6.4.1 UE transmit timing

### A.6.4.1.1 NR UE Transmit Timing Test for FR1

#### A.6.4.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNB and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in table A.6.4.1.1.1-1.

**Table A.6.4.1.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

For this test a single NR cell is used. Table A.6.4.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.6.4.1.1.1-3.

**Table A.6.4.1.1.1-4: Void**

### A.6.4.1.1.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Setup NR PCell according to parameters given in table A.6.4.1.1.1-1.
2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB.
   a. The $N_{TA}$ offset value (in $T_c$ units) is 25600
   b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1
3) The test system shall adjust the timing of the DL path by values given in table A.6.4.1.1.2-1

**Table A.6.4.1.1.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |
| 15 | $+64*64T_c$ | $+32*64T_c$ |
| 30 | $+32*64T_c$ | $+16*64T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ respective to the first path (in time) of DL SSB used by the UE to determine downlink timing is received from the reference cell at the UE antenna. Skip this step for test 2 with DRX configured.
5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first path (in time) of DL SSB used by the UE to determine downlink timing is received from the reference cell at the UE antenna. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment

## A.6.4.1.2 NR UE Transmit Timing Test for two TRPs in FR1

### A.6.4.1.2.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNB and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits for both TRPs. The test is configured with two TRPs in NR PCell. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in table A.6.4.1.1.1-1.

**Table A.6.4.1.2.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

For this test a single NR cell is used. Table A.6.4.1.2.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.6.4.1.2.1-3.

For UE not supporting the capability of “rxTimingDiff-r18”, the UE is only required to be tested in Test1 and Test3.

For UE supports the capability of “rxTimingDiff-r18”, the UE is only required to be tested in Test2 and Test4.

### A.6.4.1.2.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Setup NR PCell according to parameters given in table A.6.4.1.1.1-1.

2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first detected path of DL SSB of TRP#1 and TRP#2.

   a. The $N_{TA}$ offset value (in $T_c$ units) is 25600

   b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1

3) The test system shall adjust the timing of the DL path by values given in table A.6.4.1.2.2-1 for only TRP#1. The timing of the DL path of TRP#2 is not changed.

**Table A.6.4.1.2.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1&Test2 | Test3&Test4 |
| 15 | $+64*64T_c$ | $+32*64T_c$ |
| 30 | $+32*64T_c$ | $+16*64T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ respective to the first path (in time) of DL SSB used by the UE to determine downlink timing is received from the reference cell at the UE antenna for TRP#1. For TRP#2, the test system shall verify there is no adjustment. Skip this step for test 3&4 with DRX configured.

5) The test system shall verify that the UE transmit timing offset stays within $(N_{TA} + N_{TA_offset}) \times T_c \pm T_e$ of the first path (in time) of DL SSB used by the UE to determine downlink timing is received from the reference cell at the UE antenna of TRP#1. For Test 3&4 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

### A.6.4.1.3 NR UE Transmit Timing Test with 2-TA and two TRPs for FR1 UE supporting single DCI

#### A.6.4.1.3.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNB and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits for UE not configured PL offset and is configured with 2 TAGs for

single-DCI multi-TRP operation. The test is configured with two TRPs in NR PCell. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in table A.6.4.1.1.1-1.

**Table A.6.4.1.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | NR TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

For this test a single NR cell is used. Table A.6.4.1.3.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in table A.6.4.1.3.1-3.

#### A.6.4.1.3.2 Test requirements

The test sequence shall be carried out in RRC_CONNECTED for every test case.

Following will be the test sequence for this test

1) Setup NR PCell according to parameters given in table A.6.4.1.1.1-1.
2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within ($N_{TA}$ + $N_{TA_offset}$) ×$T_c$ ± $T_e$ of the first detected corresponding path of DL SSB (index 0) for each TAG and detected another path of DL SSB (index 1).
    a. The $N_{TA}$ offset value (in $T_c$ units) is 25600
    b. The $T_e$ values depend on the DL and UL SCS for which the test is being run and are given in table 7.1.2-1
3) The test system shall adjust the timing of the DL path by values given in table A.6.4.1.3.2-1 for only TRP#1. The timing of the DL path of TRP#2 is not changed.

**Table A.6.4.1.3.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value | |
|---|---|---|
| | Test1 | Test2 |
| 15 | +64*64$T_c$ | +32*64$T_c$ |
| 30 | +32*64$T_c$ | +16*64$T_c$ |

4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within ($N_{TA}$ + $N_{TA_offset}$) ×$T_c$ ± $T_e$ respective to the first path (in time) of corresponding DL SSB (TRP#1) of each TAG used by the UE to determine downlink timing is received from the reference cell at UE antenna. For TRP#2, the test system shall verify there is adjusted as well. Skip this step for test 2 with DRX configured.
5) The test system shall verify that the UE transmit timing offset stays within (NTA + NTA_offset) ×Tc ± Te of the first path (in time) of corresponding DL SSB used by the UE to determine downlink timing is received from the reference cell at the UE antenna of TRP#1 for each TAG. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.6.4.2 UE timer accuracy

## A.6.4.3 Timing advance

### A.6.4.3.1 SA FR1 timing advance adjustment accuracy

#### A.6.4.3.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

#### A.6.4.3.1.2 Test Parameters

Supported test configurations are shown in table A.6.4.3.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.6.4.3.1.2-2, A.6.4.3.1.2-3 and A.6.4.3.1.2-4.

In all test cases, single cell is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.6.4.3.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which

according to and clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.6.4.3.1.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in clause 7.3.2.1, the UE adjusts its uplink timing at slot n+k+1 for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.6.4.3.1.2-1: Timing advance supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

**Table A.6.4.3.1.2-2: General test parameters for timing advance**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF channel number | | 1 | |
| Initial DL BWP | | DLBWP.0.1 | As specified in Table A.3.9.2.1-1 |

#### A.6.4.3.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e. *k+1* slots after the reception of the timing advance command, where k=5.

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

### A.6.4.3.2 SA FR1 timing advance adjustment accuracy for asymmetric DL sTRP/UL mTRP deployment with two TAs

#### A.6.4.3.2.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3 for asymmetric DL sTRP/UL mTRP deployment with two TAs when PL-offset is configured joint/UL TCI state(s).

#### A.6.4.3.2.2 Test Parameters

Supported test configurations are shown in table A.6.4.3.2.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.6.4.3.2.2-2, A.6.4.3.2.2-3 and A.6.4.3.2.2-4.

In all test cases, single cell is used. The cell is configured with two TRPs in the test. UE is also configured with tag2 in ServingCellConfig. Two SRS resource sets are configured and associated to different TAGs via TCI state configuration. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands for two TRP are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.6.4.3.2.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured for each TRP.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31 and 16 respectively for TRP1 and TRP2, which according to and clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance for TRP1 and TRP2 used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements for both TRPs, with Timing Advance Command value specified in table A.6.4.3.2.2-2. This value shall result in changes of the timing advance for TRP1 and TRP2 used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE for both TRPs.

As specified in clause 7.3.2.1, the UE adjusts its uplink timing at slot n+k+1 for a timing advance command received in slot n. This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.6.4.3.2.2-1: Timing advance supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations | |

### A.6.4.3.2.3 Test Requirements

The UE shall apply the signalled Timing Advance value for TRP1 and TRP2 to the transmission timing at the designated activation time i.e. *k+1* slots after the reception of the timing advance command, where k=5.

The Timing Advance adjustment accuracy for TRP1 and TRP2 shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90 %.

## A.6.5 Signalling characteristics

### A.6.5.1 Radio link Monitoring

In the following clause, any uplink signal transmitted by the UE is used for detecting the In-/Out-of-Sync state of the UE. In terms of measurement, the uplink signal is verified on the basis of the UE output power:

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means uplink signal
- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means no uplink signal.

## A.6.5.1.1 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in non-DRX mode

### A.6.5.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.6.5.1.1.1-1. The test parameters are given in tables A.6.5.1.1.1-2, A.6.5.1.1.1-3, and A.6.5.1.1.1-4 below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.1.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in test 1.

**Table A.6.5.1.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

| NOTE: Ensure that RLM RS is partially overlapped with measurement gap | |

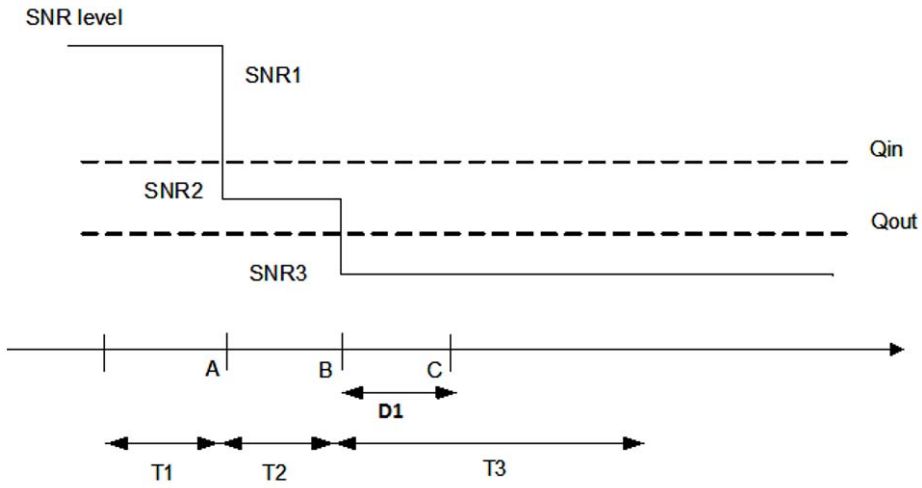

**Figure A.6.5.1.1.1-1: SNR variation for out-of-sync testing**

### A.6.5.1.1.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.1.2 Radio Link Monitoring In-sync Test for FR1 PCell configured with SSB-based RLM RS in non-DRX mode

#### A.6.5.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.6.5.1.2.1-1. The test parameters are given in tables A.6.5.1.2.1-2, and A.6.5.1.2.1-3 below. There is one cell (Cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.2.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

**Table A.6.5.1.2.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 3: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 4: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in Figure A.6.5.1.2.1-1.
NOTE 5: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 and T4 is modified as specified in clause A.3.6.

**Table A.6.5.1.2.1-4: Void**

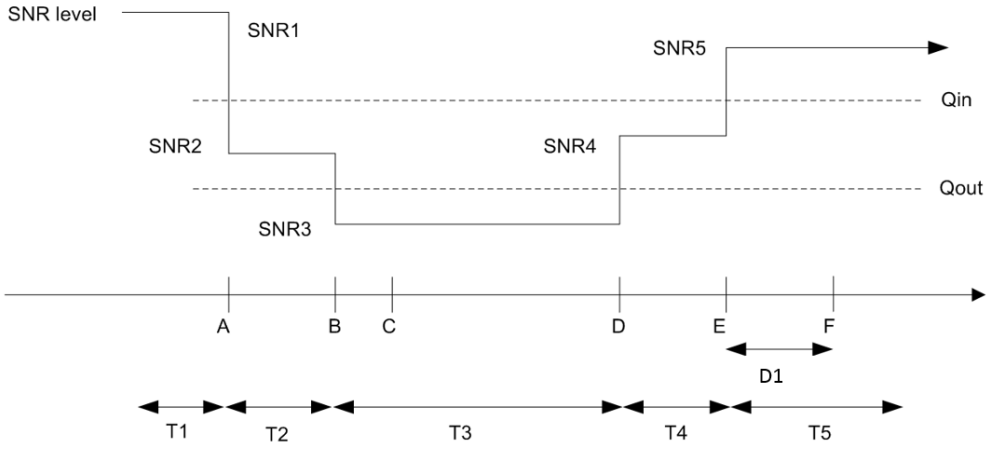

**Figure A.6.5.1.2.1-1: SNR variation for in-sync testing**

### A.6.5.1.2.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.3 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in DRX mode

### A.6.5.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.6.5.1.3.1-1. The test parameters are given in tables A.6.5.1.3.1-2, and A.6.5.1.3.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.6.5.1.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

### A.6.5.1.3.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.4 Radio Link Monitoring In-sync Test for FR1 PCell configured with SSB-based RLM RS in DRX mode

### A.6.5.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.6.5.1.4.1-1. The test parameters are given in tables A.6.5.1.4.1-2, and A.6.5.1.4.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.4.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

### A.6.5.1.4.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.5 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode

### A.6.5.1.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in tables A.6.5.1.5.1-1, A.6.5.1.5.1-2, A.6.5.1.5.1-3, and A.6.5.1.5.1-3A below. There is one cell, Cell 1 which is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.5.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test. In the test, SSB0 is configured as the BFD-RS.

**Table A.6.5.1.5.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Table A.6.5.1.5.1-2: General test parameters for FR1 PCell for CSI-RS out-of-sync testing in non-DRX mode**

| Parameter | | Unit | Value |

### A.6.5.1.5.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.6 Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode

### A.6.5.1.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in tables A.6.5.1.6.1-1, A.6.5.1.6.1-2, and A.6.5.1.6.1-3 below. There is one cells, Cell 1which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.6.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. In the test, SSB0 is configured as the BFD-RS.

**Table A.6.5.1.6.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is specified in clause A.3.6.1.1.

**Table A.6.5.1.6.1-4: Void**

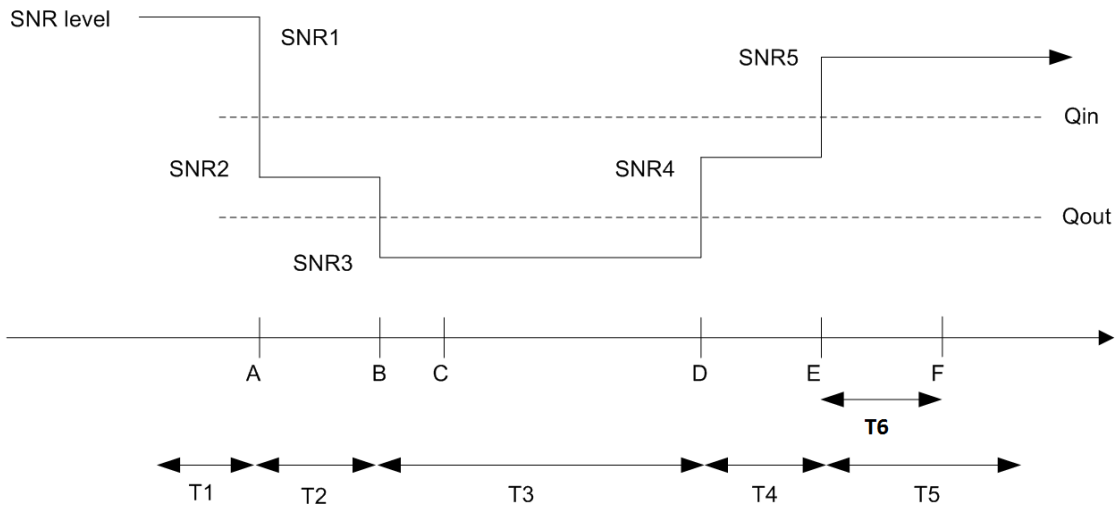

**Figure A.6.5.1.6.1-1: SNR variation for CSI-RS in-sync testing**

## A.6.5.1.6.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.1.7 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode

#### A.6.5.1.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in tables A.6.5.1.7.1-1, A.6.5.1.7.1-2, and A.6.5.1.7.1-3 below. There is one cell, Cell 1 is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.7.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. In the test, SSB0 is configured as the BFD-RS.

**Table A.6.5.1.7.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

### A.6.5.1.7.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.8 Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode

### A.6.5.1.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in tables A.6.5.1.8.1-1, A.6.5.1.81-2, A.6.5.1.8.1-3 and A.6.5.1.8.1-3A below. There is one cells, Cell 1which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.8.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test. In the test, SSB0 is configured as the BFD-RS.

**Table A.6.5.1.8.1-1: Supported test configurations for FR1 PSCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure A.6.5.1.8.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is specified in clause A.3.6.1.1.

### A.6.5.1.8.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.9 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM for UE fulfilling relaxed measurement criterion

### A.6.5.1.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.3.4 for UE fulfilling good serving cell quality criterion.

The test parameters are given in tables A.6.5.1.9.1-1, A.6.5.1.9.1-2, and A.6.5.1.9.1-3 below. There is one cell, Cell 1 is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.9.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. In the test, SSB0 is configured as the BFD-RS.

**Table A.6.5.1.9.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Figure A.6.5.1.9.1-1: SNR variation for CSI-RS out-of-sync testing**

### A.6.5.1.9.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ($D_1$ ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.10 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode when CD-SSB is outside active BWP

### A.6.5.1.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used and when CD-SSB is outside active BWP. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test is for UE supporting *rlm-BM-BFD-CSI-RS-OutsideActiveBWP-r18* and the UE is not required past legacy test in clause A.6.5.1.5.

The test environment is the same as in clause A.6.5.1.5 with following exceptions in Table A.6.5.1.5.1-2.

The value of parameter “DL dedicated BWP configuration” is DLBWP.1.2. The value of parameter “UL dedicated BWP configuration” is ULBWP.1.2.

NOTE: The starting PRB index of the SSB can be any possible PRB index of the RF channel BW occurring after the last PRB of the DL active BWP.

The test requirements are the same as for A.6.5.1.5.2.

### A.6.5.1.11 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in non-DRX mode when CD-SSB is outside active BWP

#### A.6.5.1.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *bwpOperationMeasWithoutInterrupt-r18* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when CD-SSB is outside active BWP. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

The test environment is the same as in clause A.6.5.1.1 with following exceptions in table A.6.5.1.1.1-2.

| Parameter | | Unit | Value |
|---|---|---|---|
| | | | Test 1 |
| DL dedicated BWP configuration | Config 1, 2, 3 | | DLBWP.1.2 |
| UL dedicated BWP configuration | Config 1, 2, 3 | | ULBWP.1.2 |

#### A.6.5.1.11.2 Test Requirements

The test requirements are the same as in clause A.6.5.1.1.2.

### A.6.5.1.12 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in non-DRX mode for UE supporting NCD-SSB based measurement outside active BWP

#### A.6.5.1.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell for UE supporting FG 53-3. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.6.5.1.12.1-1. The test parameters are given in tables A.6.5.1.12.1-2, A.6.5.1.12.1-3, and A.6.5.1.12.1-4 below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.12.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in test 1.

**Table A.6.5.1.12.1-1: Supported test configurations for FR1 PCell for UE supporting FG NCD-SSB based measurement outside active BWP**

| Configuration | Description |
|---|---|
| 1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 2 | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |
| 3 | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 20 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

### A.6.5.1.12.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.13 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in DRX mode for UE operating on a cell with less than 5 MHz BW

### A.6.5.1.13.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *support3MHz-ChannelBW-Symmetric-r18* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell operating on a 3 MHz channel bandwidth. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

Supported test configurations are specified in table A.6.5.1.13.1-1. General test parameters as specified in table A.6.5.1.3.1-2 with config 1 apply except those specified in table A.6.5.1.13.1-2. Cell specific test parameters as specified in table A.6.5.1.3.1-3 apply except those specified in table A.6.5.1.13.1-3.

The test procedure specified in clause A.6.5.1.3.1 applies to this test.

**Table A.6.5.1.13.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 3 MHz bandwidth |

**Table A.6.5.1.13.1-2: General test parameters for FR1 OOS 12 PRB in DRX mode**

| Parameter | | Unit | Value |

### A.6.5.1.13.2 Test Requirements

Test requirements specified in clause A.6.5.1.3.2 apply to this test.

## A.6.5.1.14 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in non-DRX mode for UE operating on a cell with less than 5 MHz BW

### A.6.5.1.14.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *support3MHz-ChannelBW-Symmetric-r18* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell operating on a 3 MHz channel bandwidth. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

Supported test configurations are specified in table A.6.5.1.14.1-1. General test parameters as specified in table A.6.5.1.1.1-2 with config 1 apply except those specified in table A.6.5.1.14.1-2. Cell specific test parameters as specified in table A.6.5.1.1.1-3 apply except those specified in table A.6.5.1.14.1-3.

The test procedure specified in clause A.6.5.1.1.1 applies to this test.

**Table A.6.5.1.14.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|

| | |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 3 MHz bandwidth |

| SNR_SSB of set $q_0$ | Config 1 | dB | 2 | -6 | -14 |

### A.6.5.1.14.2 Test Requirements

Test requirements specified in clause A.6.5.1.1.2 apply to this test.

## A.6.5.1.15 Radio Link Monitoring In-sync Test for FR1 PCell with 3 MHz Channel Bandwidth configured with SSB-based RLM RS in non-DRX mode

### A.6.5.1.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *support3MHz-ChannelBW-Symmetric-r18* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell operating on a 3 MHz channel bandwidth. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

Supported test configurations are specified in table A.6.5.1.15.1-1. General test parameters as specified in table A.6.5.1.2.1-2 with config 1 apply to this test for both config 1 and 2, except those specified in table A.6.5.1.15.1-2. Cell specific test parameters as specified in table A.6.5.1.2.1-3 apply except those specified in table A.6.5.1.15.1-3.

The test procedure specified in clause A.6.5.1.2.1 applies to this test.

**Table A.6.5.1.15.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 3 MHz (15PRB) |
| NOTE: The UE is required to pass the test with configuration 1 for every supported 3 MHz band in FR1. | |

**Table A.6.5.1.15.1-2: General test parameters for FR1 in-sync testing in non-DRX mode**

| Parameter | | Unit | Value |

### A.6.5.1.15.2 Test Requirements

Test requirements specified in clause A.6.5.1.2.2 apply to this test.

## A.6.5.1.16 Radio Link Monitoring In-sync Test for FR1 PCell with 3MHz Channel Bandwidth configured with SSB-based RLM RS in DRX mode

### A.6.5.1.16.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *support3MHz-ChannelBW-Symmetric-r18* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell operating on a 3MHz channel bandwidth. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

Supported test configurations are specified in Table A.6.5.1.16.1-1. General test parameters as specified in Table A.6.5.1.4.1- with config 1 apply to this test, except those specified in Table A.6.5.1.16.1-2. Cell specific test parameters as specified in Table A.6.5.1.4.1-3 apply except those specified in Table A.6.5.1.16.1-3.

The test procedure specified in A.6.5.1.4.1 applies to this test.

**Table A.6.5.1.16.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 3 MHz (12 PRB) |
| Note: If the UE indicates the support for band n100, the UE is also required to pass the test with 12 PRB configuration. | |

**Table A.6.5.1.16.1-2: General test parameters for FR1 in-sync testing in non-DRX mode**

| Parameter | | Unit | Value |

### A.6.5.1.16.2 Test Requirements

Test requirements specified in Clause A.6.5.1.4.2 apply to this test.A.6.5.1.17 Radio Link Monitoring Out-of-sync Test for FR1 PCell with *LowBandCA-Switching-r19* configured with SSB-based RLM RS in non-DRX mode

### A.6.5.1.17.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *featureSetCombinationLowBandSwitching-r19* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.6.5.1.17.1-1. The test parameters are given in tables A.6.5.1.17.1-2 and A.6.5.1.17.1-3 below. There are two cells, Cell 1 is the FDD PCell and Cell 2 is the SDL SCell, in the test. The PCell and SCell are co-located deployed and synchronized with 3us MRTD. The

frequencies of PCell and SCell are lower than 1GHz. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.17.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

**Table A.6.5.1.17.1-1: Supported test configurations for FR1 PCell and SCell**

| Configuration | Description |
|---|---|
| 1 | FDD for PCell, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz<br>SDL for SCell, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz |

| Propagation condition | | TDL-C 300 ns 100 Hz | | | TDL-C 300 ns 100 Hz | | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 3: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 4: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in Figure A.6.5.1.17.1-1.
NOTE 5: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is A.3.6.

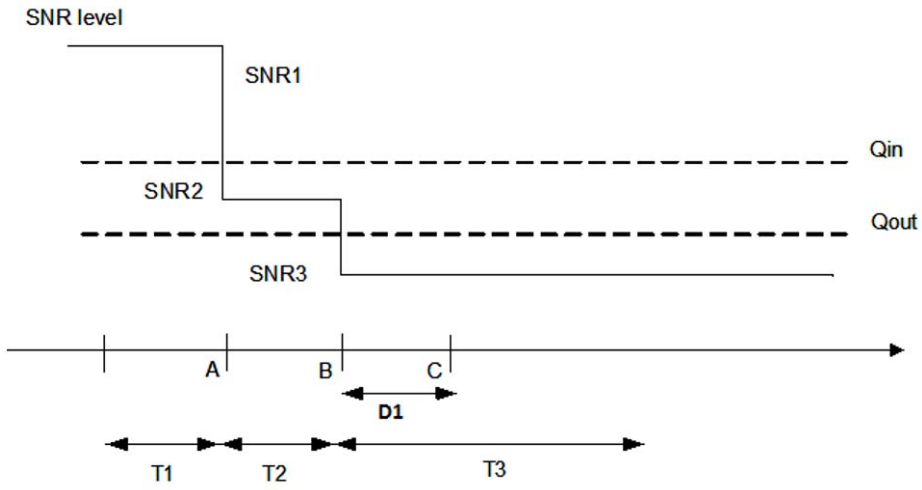

**Figure A.6.5.1.17.1-1: SNR variation for out-of-sync testing**

## A.6.5.1.17.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting and overlapped with FDD PCell ON duration corresponding to the LB CA switching pattern.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.18 Radio Link Monitoring In-sync Test for FR1 PCell with *LowBandCA-Switching-r19* configured with SSB-based RLM RS in non-DRX mode

### A.6.5.1.18.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *featureSetCombinationLowBandSwitching-r19* properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to '*rlf*'. Supported test configurations are shown in table A.6.5.1.18.1-1. The test parameters are given in tables A.6.5.1.18.1-2, and A.6.5.1.18.1-3 below. There are two cells, Cell 1 is the FDD PCell and Cell 2 is the SDL SCell, in the test. The PCell and SCell are co-located deployed and synchronized with 3us MRTD. The frequencies of PCell and SCell are lower than 1GHz. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.18.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

**Figure A.6.5.1.18.1-1: SNR variation for in-sync testing**

### A.6.5.1.18.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting and overlapped with FDD PCell ON duration corresponding to the LB CA switching pattern.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.1.19 Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode for a UE operating with SBFD

### A.6.5.1.19.1 Test Purpose and Environment

The purpose of this test is to verify that when the UE supports *supportSBFD* and SBFD is configured by the network, the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when there are overlapping between occasions of the CSI-RS resource for RLM and dynamic UL transmission on SBFD symbols. This test will partly verify the FR1 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in tables A.6.5.1.19.1-1, A.6.5.1.19.1-2, A.6.5.1.19.1-3 and A.6.5.1.19.1-4 below. There is one cells, Cell 1which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.19.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test. In the test, SSB0 is configured as the BFD-RS.

CSI-RS resource for RLM are on SBFD symbols. During T5, there is overlapping between occasions of the CSI-RS resource for RLM and dynamic UL transmission on SBFD symbols, as specified in A.3.

### A.6.5.1.19.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.2 Interruption

### A.6.5.2.1 Interruptions during measurements on deactivated NR SCC in FR1

#### A.6.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE missed ACK/NACK rate does not exceed the limits at NR PCell interruptions during the measurement on the deactivated NR SCC. This test will verify the missed ACK/NACK rate for PCell in standalone NR specified in clause 8.2.2.2.3. Supported test configurations for NR PCell are shown in table A.6.5.2.1.1-1. Supported test configurations for NR SCell are shown in table A.6.5.2.1.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

The general test parameters and NR cell specific test parameters are given in Table A.6.5.2.1.1-2, A.6.5.2.1.1-3 and A.6.5.2.1.1-4 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell, Cell2 is an NR deactivated SCell. Cell1 shall be configured as PCell and Cell2 shall be configured as SCell.

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE is connected to Cell1 and Cell2 and the RRC message including *measCycleSCell* or *allowInterruptions* for the deactivated NR SCell is received at the UE antenna connector. During T1, PCell is continuously scheduled in DL.

**Table A.6.5.2.1.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations for NR PCell**

### A.6.5.2.1.2 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1. During the time duration T1 the UE shall transmit at least 99.5 % of ACK/NACK on PCell.

If the NR PCell is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-1.

If the NR PCell is non-contiguous to the deactivated SCell in the same band and UE is capable of intraBandNRCA-NonCollocated-r18 on this FR1 bnad and nonCollocatedTypeNR-CA-r18 is not provided, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-1.

If the NR PCell is non-contiguous to the deactivated SCell in the same band, when UE is not capable of intraBandNRCA-NonCollocated-r18 or when UE is capable of*intraBandNRCA-NonCollocated-r18* and provided with *nonCollocatedTypeNR-CA-r18*, the UE is only allowed to cause an interruption on PCell no earlier than 1 slot before an SMTC and no later than 1 slot after the SMTC. The interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-2.

If the NR PCell is contiguous to the deactivated SCell in the same band, the UE is only allowed to cause an interruption on PCell no earlier than 1 slot before an SMTC and no later than 1 slot after the SMTC. The interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-2.

**Table A.6.5.2.1.2-1: Interruption duration if the PCell is not in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length (slots) |
|---|---|---|
| 0 | 1 | 1 |
| 1 | 0.5 | 1 |

**Table A.6.5.2.1.2-2: Interruption duration if the PCell is in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length (slots) |
|---|---|---|
| 0 | 1 | 2 + SMTC duration |
| 1 | 0.5 | 2 + SMTC duration |

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.2.1A Interruptions during measurements on deactivated NR SCC in FR1 for UE supporting *intraBandNR-CA-non-collocated-r19*

### A.6.5.2.1A.1 Test Purpose and Environment

The purpose of this test is to verify that the UE missed ACK/NACK rate does not exceed the limits at NR PSCell interruptions during the measurement on the deactivated NR SCC for UE supporting *intraBandNR-CA-non-collocated-r19*. This test will verify the missed ACK/NACK rate for PCell in standalone NR specified in clause 8.2.2.2. Supported test configurations for NR PCell are shown in table A.6.5.2.1A.1-1. Supported test configurations for NR SCell are shown in table A.6.5.2.1A.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

The general test parameters and NR cell specific test parameters are given in table A.6.5.2.1A.1-2, A.6.5.2.1A.1-3 and A.6.5.2.1A.1-4 below. In the test there are two cells: Cell 1 and Cell 2. Cell 1 is PCell, Cell 2 is an NR deactivated SCell. Cell 1 shall be configured as PCell and Cell 2 shall be configured as SCell.

There are four sub tests in this section.

In test 1, the UE is configured with maxMIMO-Layers with value equal to 4, and *nonCollocatedTypeNR-CA-v1900* is presented with “type 4”.

In test 2, the UE is configured with maxMIMO-Layers with value equal to 4, and *nonCollocatedTypeNR-CA-v1900* is presented with “type 1”.

In test 3, the UE is configured with maxMIMO-Layers with value equal to 4, and *nonCollocatedTypeNR-CA-v1900* is not provided.

In test 4, the UE is configured with maxMIMO-Layers with value equal to 2.

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2 and the RRC message including *measCycleSCell* or *allowInterruptions* for the deactivated NR SCells is received at the UE antenna connector. During T1, PCell is continuously scheduled in DL.

**Table A.6.5.2.1A.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations for NR PCell**

#### A.6.5.2.1A.2 Test Requirements

The NR PCell is non-contiguous to the deactivated SCell in the same band, and the UE is capable of *intraBandNR-CA-non-collocated-r19*. The UE shall be continuously scheduled on PCell during the entire length of T1. During the time duration T1 the UE shall transmit at least 99.5 % of ACK/NACK on PCell.

For test 1, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-1.

For test 2 and test 3, the UE is only allowed to cause an interruption on PCell no earlier than 1 slot before an SMTC and no later than 1 slot after the SMTC. The interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-2.

For test 4, if *nonCollocatedTypeNR-CA-r18* is not provided, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-1. If *nonCollocatedTypeNR-CA-r18* is provided, the UE is only allowed to cause an interruption on PCell no earlier than 1 slot before an SMTC and no later than 1 slot after the SMTC. The interruption on NR PCell shall not exceed the value defined in table A.6.5.2.1.2-2.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.2.2 SA interruptions at NR SRS carrier based switching

#### A.6.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that when a UE needs to transmit aperiodic SRS, the UE can perform carrier based switching to one carrier not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission. The test will partly verify the UE missed ACK/NACK does not exceed the interruption requirements on PCell in clause 8.2.2.2.9.

### A.6.5.2.2.2 Test Parameters

which operates in downlink without PUCCH/PUSCH. The UE is configured with the SRS switching between PCell and SCell. The test parameters for PCell and SCell are given in table A.6.5.2.2.2-2 and A.6.5.2.2.2-3 below. The test consists of two successive time periods, with duration of T1 and T2, respectively. Immediately at the beginning of T2, the UE is triggered for SRS switching by DCI 2_3 scheduling. After T2, the UE is expected to transmit aperiodic SRS on a special slot in the configured TDD UL/DL configuration, as scheduled by DCI 2_3.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in PCell.

**Table A.6.5.2.2.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD – TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. | |

**Table A.6.5.2.2.2-2: General test parameters for SA interruptions at NR SRS carrier based switching**

NOTE 3: SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.

**Table A.6.5.2.2.2-4: Void**

### A.6.5.2.2.3 Test Requirements

The UE shall be scheduled on PCell continuously throughout the test. During the time duration T2, the missed ACK/NACK interruption on PCell shall not be more than the values specified for SA in clause 8.2.2.2.9.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.2.3 SA interruptions at NR SRS antenna port switching with 1 SRS symbol in a slot in NR-CA

### A.6.5.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that when a UE performs SRS antenna port switching, i.e. transmits SRS on the antenna port(s) not used for PUCCH/PUSCH transmission and on the antenna port(s) used for PUCCH/PUSCH transmission at different SRS transmission occasions. The test will partly verify the interruption requirements on PCell and SCell in clause 8.2.2.2.16. The interruption requirement is defined based on the band combination capability reported by UE, i.e., based on *txSwitchImpactToRx* or *txSwitchWithAnotherBand* as specified in requirement applicability in clause 8.2.2.2.16.

### A.6.5.2.3.2 Test Parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the FR1 PCell and Cell 2 is activated SCell on the TDD PCC. Only PCC may be configured with more than 1 SRS resources in each SRS resource set with usage set to 'antennaSwitching'. The test parameters for PCell and SCell are given in table A.6.5.2.3.2-2 and A.6.5.2.3.2-3 below. The test consists of two successive time periods, with duration of T1 and T2, respectively. Immediately at the beginning of T2, the UE is configured with periodic SRS for antenna port switching via RRC reconfiguration. Note that the RRC reconfiguration message should be sent to UE at the time 50 ms before the beginning of T2.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in SCell.

**Table A.6.5.2.3.2-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode for NR PCell and FDD duplex mode for NR SCell |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode for NR PCell and TDD duplex mode for NR SCell |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode for NR PCell and TDD duplex mode for NR SCell |
| Note1: The UE is only required to be tested in one of the supported test configurations.<br>Note2: Test configuration for NR PCell and NR SCell are chosen independently. | |

**Table A.6.5.2.3.2-2: General test parameters for SA interruptions at NR SRS antenna switching**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channel (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1 |

### A.6.5.2.3.3 Test Requirements

The UE shall be scheduled on SCell continuously throughout the test.

During the time duration T2, the DL interruption on NR SCell during the SRS antenna switching in each SRS transmission slot on NR PCell shall not exceed 1 slot if SCell is indicated in *txSwitchImpactToRx*.

During the time duration T2, the UL interruption on NR SCell during the SRS antenna switching in each SRS transmission slot on NR PCell shall not exceed 1 slot if SCell is indicated in *txSwitchWithAnotherBand.*

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.2.4 SA interruptions at NR SRS antenna port switching

### A.6.5.2.4.1 Test Purpose and Environment

The purpose of this test is to verify the interruption requirement on victim CC during SRS antenna port switching with more than 1 SRS symbols on aggressor CC defined in clause 8.2.2.2.16. The interruption requirement is defined based on the band combination capability reported by UE, i.e., based on *txSwitchImpactToRx* or *txSwitchWithAnotherBand* as specified in requirement applicability in clause 8.2.2.2.16.

### A.6.5.2.4.2 Test Parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the FR1 PCell and Cell 2 is FR1 SCell. The UE is configured with the SRS antenna port in FR1 PCell. The test parameters for PCell and SCell are given in table A.6.5.2.4.2-2 and A.6.5.2.4.2-3 below. Common SRS configuration is given in clause A.3.24. Dedicated SRS configuration which is dependent on reported SRS capability *supportedSRS-TxPortSwitch*, is given in table A.6.5.2.4.2-4. The test consists of two successive time periods, with duration of T1 and T2, respectively. Immediately at the beginning of T2, the UE is triggered for SRS antenna port switching.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in PCell.

**Table A.6.5.2.4.2-1: Supported test configurations**

| Configuration | Description | |
|---|---|---|
| | NR PCell Note 2 | NR SCell Note 2 |
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations.<br>NOTE 2: Test configuration for NR PCell and NR SCell are chosen independently. | | |

### A.6.5.2.4.3 Test Requirements

The UE shall be scheduled on PCell continuously throughout the test. During the time duration T2, the interruption on SCell shall not be more than the values specified in table 8.2.1.2.18-3 in clause 8.2.1.2.18 for each SRS transmission slot.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.2.5 Interruptions during measurements on deactivated NR SCC in FR1

### A.6.5.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that a UE supporting *LBCA-SwitchingPattern* performs correct interruption requirements on PCell, where the UE missed ACK/NACK rate does not exceed the limits at NR PSCell interruptions during the measurement on the deactivated NR SCC. This test will verify the missed ACK/NACK rate for PCell in standalone NR specified in clause 8.2.2.2. Supported test configurations for NR PCell are shown in table A.6.5.2.5.1-1. Supported test configurations for NR SCell are shown in table A.6.5.2.5.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

The general test parameters and NR cell specific test parameters are given in table A.6.5.2.5.1-2, A.6.5.2.5.1-3 and A.6.5.2.5.1-4 below. In the test there are two cells: Cell 1 and Cell 2. Cell 1 is PCell, Cell 2 is an NR deactivated SCell. Cell 1 shall be configured as PCell and Cell 2 shall be configured as SCell.

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2 and the RRC message including *measCycleSCell* or *allowInterruptions* for the deactivated NR SCells is received at the UE antenna connector. During T1, PCell is continuously scheduled in DL.

**Table A.6.5.2.5.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations for NR PCell**

NOTE 7: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 8: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.

## A.6.5.2.5.2 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1. During the time duration T1 the UE shall transmit at least 99.5 % of ACK/NACK on PCell.

The UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in table A.6.5.2.5.2-1.

**Table A.6.5.2.5.2-1: Interruption duration if the PCell is in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length (slots) |
|---|---|---|
| 0 | 1 | 2 + SMTC duration |
| 1 | 0.5 | 2 + SMTC duration |

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.3 SCell Activation and Deactivation Delay

### A.6.5.3.1 SCell Activation and deactivation of known SCell in FR1 in non-DRX for 160 ms SCell measurement cycle

#### A.6.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is known by the UE at the time of activation.

The supported test configurations for NR PCell are shown in table A.6.5.3.1.1-1 below. Supported test configurations for NR SCell are shown in table A.6.5.3.1.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. The test parameters are given in tables A.6.5.3.1.1-2 and cell-specific parameters in tables A.6.5.3.1.1-3 and A.6.5.3.1.1-4 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\text{T}_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.1.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in clause 5.2.2.5 in TS 38.214 [26], and reporting after slot (n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstSSB}$+ 5ms, as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for SCell at latest in a slot m + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot m + $1 + \frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to m + $1 + \frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{\mathrm{T_{HARQ}}+T_{\mathrm{activtion_time}}+T_{\mathrm{CSI_Reporting}}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.2 SCell Activation and deactivation of known SCell in FR1 in non-DRX for 640 ms SCell measurement cycle

### A.6.5.3.2.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.6.5.3.1.1. The supported test configurations are the same as defined in clause A.6.5.3.1.1. The test parameters are the same except those described in the following clause. The listed parameter values in tables A.6.5.3.2.1-1 will replace the values of corresponding parameters in tables A.6.5.3.1.1-1.

**Table A.6.5.3.2.1-1: General test parameters for known FR1 SCell activation case, 640 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCell measurement cycle (measCycleSCell) | ms | 640 | |

### A.6.5.3.2.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except $T_{activation_time}$ will be replaced with the value $T_{FirstSSB_MAX} + T_{rs}$ + 5 ms.

## A.6.5.3.3 SCell Activation and deactivation of unknown SCell in FR1 in non-DRX

### A.6.5.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is known by the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.1.1-1 and table A.6.5.3.1.1-1A. The test parameters are given in table A.6.5.3.1.1-2 and cell-specific parameters in table A.6.5.3.1.1-3. The listed parameter values in table A.6.5.3.3.1-1 will replace the values of corresponding parameters in table A.6.5.3.1.1-2. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activation_time}}+T_{\mathrm{CSI_Reporting}}}{\mathrm{NR\ slot\ length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting

after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\text{T}_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.6.5.3.3.1-1: General test parameters for unknown FR1 SCell activation case, 160 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| T1 | ms | 100 | During this time the PCell shall be known and the SCell configured, but not detected. |

### A.6.5.3.3.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except $T_{activation_time}$ will be replaced with the value $T_{FirstSSB_MAX} + T_{SMTC_MAX} + 2*T_{rs}$ + 5 ms as defined in clause 8.3.

## A.6.5.3.4 Direct SCell activation at SCell addition of known SCell in FR1

### A.6.5.3.4.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of direct SCell activation delay and interruption requirements at SCell addition as defined in clause 8.3.4 and 8.2.2, respectively. The supported test configurations for NR PCell are shown in table A.6.5.3.4.1-1. The supported test configurations for NR SCell are shown in table A.6.5.3.4.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as outlined in table A.6.5.3.4.1-2. Cell-specific parameters are provided in table A.6.5.3.4.1-3 and table A.6.5.3.4.1-4.

The test consists of two successive time periods with duration T1 and T2, respectively. There are two carriers, each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), and Cell 2 (SCell) is on RF channel 2 (SCC). Cell 1 and Cell 2 both operate according to one of the configurations in table A.6.5.3.4.1-1 and table A.6.5.3.4.1-1A respectively.

Before the test starts the UE is connected to Cell 1 on RF channel 1. The UE is only monitoring RF channel 1 and is not aware of Cell 2 on RF channel 2.

The UE is continuously scheduled in PCell throughout the test.

At the beginning of T1 the UE is configured to measure RF channel 2 in measurement gaps. During T1, the UE detects and measures Cell 2 on RF channel 2, and sends a measurement report containing Cell 2 to the test equipment. After having received a measurement report containing Cell 2, the test equipment deconfigures the measurement gaps and thereafter sends a RRC connection reconfiguration message to the UE by which it configures the SCell (Cell 2) in activated state (*sCellState* is set to *activated*). The time between reception of the last measurement report carrying SCell and transmission of the RRC connection reconfiguration message directly activating SCell is kept short enough to allow the SCell to remain known to the UE.

Time period T2 starts when the UE receives the RRC connection reconfiguration message at the UE antenna connector. The corresponding slot at which the message is received at the UE antenna connector is denoted *n*. The UE shall complete activation of the SCell no later than in slot $n + \frac{N_{direct}}{\text{NR slot length}}$, as specified in clause 8.3.4. From slot $n+ \frac{N_{direct}}{\text{NR slot length}}$ and onwards the UE shall report valid CSI both for PCell and SCell.

The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received.

The test equipment verifies that interruptions on other serving cells are within the requirements by counting ACK/NACKs transmitted in PCell.

**Table A.6.5.3.4.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table A.6.5.3.4.1-1A: Supported test configurations for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | |

**Table A.6.5.3.4.1-2: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Inter-frequency neighbor cell (SCell to-be) | | Cell 2 | Inter-frequency neighbor cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Measurement gap pattern | | gp0 | Measurement gap is used during parts of time period T1 for detection of Cell 2. |
| CSI reporting periodicity | ms | 2 | CSI reporting periodicity for periodic reporting of CQI for PCell and, when added, SCell. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | Measurement cycle for SCell does not come into effect in direct activation at SCell addition. |
| Timing offset between Cell 1 and Cell 2 | µs | ≤ MRTD | The value of maximum timing offset depends upon the carrier aggregation scenario. |
| T1 | s | 7 | During this time period the PCell shall be known and Cell 2 shall be detected as an inter-frequency neighbor cell. |
| T2 | s | 1 | During this time period Cell 2 shall be configured and directly activated as SCell. |
| A3-offset | dB | -15 | |
| THARQ | ms | k1×NR slot length | k1 is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by dl-DataToUL-ACK if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |

| | | | |
|---|---|---|---|
| TCSI_Reporting | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |
| k | ms | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe},\ \mu} + 1$ | As specified in clause 4.3 of TS 38.213 [3] |

#### A.6.5.3.4.2 Test Requirements

The UE shall complete the direct activation of the SCell no later than at slot $n + \frac{N_{direct}}{\text{NR slot length}}$.

The UE shall report non-zero CQI for SCell from slot $n + \frac{N_{direct}}{\text{NR slot length}}$ and onwards throughout time period T2.

The interruption on PCell during direct activation of the SCell shall occur within the interruption window specified in clause 8.3.4 and shall not exceed the length specified in clause 8.2.2.2.11.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.3.5 Direct SCell activation at handover with known SCell in FR1

#### A.6.5.3.5.1 Test Purpose and Environment

This test is to verify the requirement for the FDD-FDD and TDD-TDD intra-frequency handover with direct SCell activation requirements specified in subclause 8.3.5.

Supported test configurations for NR PCell are shown in table A.6.5.3.5.1-1. Supported test configurations for NR SCell are shown in table A.6.5.3.5.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. Both handover with direct SCell activation requirements are tested by using the parameters in table A.6.5.3.5.1-2, A.6.5.3.5.1-3 and A.6.5.3.5.1-4.

The test scenario comprises of two NR carriers and 3 cells as given in tables A.6.5.3.5.1-1 and A.6.5.3.5.1-2. The test consists of three successive time periods, with time durations of T1, T2, and T3 respectively.

At the start of time duration T1, the UE is in connected mode with PCell and SCell 1 (Cell 2) is in activated state and UE is reporting CQI for both PCell and SCell 1.

Time period T2 starts when UE receives a handover command to Cell 3 that also activates SCell 1 (Cell 2). This is done using an *RRCReconfiguration* message with parameter *sCellState* set to *activated* for the SCell 1 (Cell 2). The message is sent from the test equipment to the UE and is received in a subframe # denoted n at the UE antenna connector. The UE shall accomplish the activation of the SCell no later than subframe ($n + N_{direct}$).

Time period T3 starts at ($n + N_{direct}$), at which point UE shall be reporting a valid CQI for both PCell and SCell 1.

**Table A.6.5.3.5.1-1: Intra-frequency handover with direct SCell activation from FR1 to FR1 test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | Source PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode<br>Target PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |

### A.6.5.3.5.2 Test Requirements

The UE shall be capable to transmit valid CSI report for the directly activated SCell 1 no later than in subframe $n+N_{direct}$.

The rate of correct observed SCell 1 direct activation delay during repeated tests shall be at least 90 %.

NOTE: The SCell activation delay, $N_{direct}$, can be expressed as: $N_{direct} = T_{RRC_process} + T_{interrupt} + T_2 + T_3 + T_{activation_time} + T_{CSI_Reporting}$ - 3 ms, where:

$T_{RRC_Process}$: RRC procedure delay defined in clause 12 of TS 38.331 [2],

$T_{interrupt}$: Interruption time during handover as specified in clause 6.1.1,

$T_2$: Delay from slot $n + \frac{T_{RRC_Process}+T_{interrupt}}{\text{NR slot length}}$ until UE has obtained a valid TA command for the target PCell,

$T_3$: Delay for applying the received TA for uplink transmission in the target PCell, and greater than or equal to k+1 slot, where k is defined in clause 4.2 in TS 38.213,

$T_{activation_time}$ and $T_{CSI_Reporting}$ are specified in clause 8.3.2, where the following definitions of $T_{FirstSSB}$ and $T_{FirstSSB_MAX}$ as defined in section 8.3.5 shall apply:

- $T_{FirstSSB}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot n + $(T_{RRC_Process}+T_{interrupt}+T_2+T_3)/(NR\ slot\ length)$
- $T_{FirstSSB_MAX}$: the time to the end of the first complete SSB burst indicated by the SMTC after slot n + $(T_{RRCProcess}+T_{interrupt}+T_2+T_3)/(NR\ slot\ length)$

This gives a total of $N_{direct} = 10 + 52 + T_{IU} + T_2 + T_3 + T_{activation_time} + T_{CSI_Reporting}$ - 3 ms = 62 + 10 + 13 + 6 + 20 + 2 - 3 = 94 ms for test configurations 1 and 2.

This gives a total of $N_{direct}$ = 10 + 52 + $T_{IU}$ + $T_2$ + $T_3$ + $T_{activation_time}$ + $T_{CSI_Reporting}$ - 3 ms = 62 + 10 + 13 + 6 + 20 + 2 - 3 = 94 ms for test configuration 3.

During T3 the UE shall send valid CSI reports for PCell and SCell 1 with non-zero CQI index and continue to send CSI reports for PCell and SCell 1 (Cell 2) with non-zero CQI index until the end of T3.

All of the above test requirements shall be fulfilled in order for the observed SCell 1 direct activation delay to be counted as correct.

## A.6.5.3.6 PUCCH SCell Activation and deactivation of known SCell in FR1

### A.6.5.3.6.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell activation and deactivation times are within the requirements stated in clause 8.3, when the PUCCH SCell in FR1 is known by the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.6.1-1 below. The test parameters are given in tables A.6.5.3.6.1-2 and cell-specific parameters in table A.6.5.3.6.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Cell 1 is the PCell in primary Timing Advance Group (pTAG) and Cell 2 is the PUCCH SCell in the secondary Timing Advance Group (sTAG). Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

The test consists of two sub tests. In Test 1, UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment for sTAG. In Test 2, the TimeAlignmentTimer of sTAG expires before receiving the activation command.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the PUCCH SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. In Test 1, the UE shall be able to report valid CSI on for the activated PUCCH SCell on PUCCH SCell at latest in slot $n+\frac{T_{HARQ}+T_{activation_time}+\max((T_{First_available_CSI}+T_{CSI_processing}),\ 3*T_{target_PL-RS})+T_{CSI_Reporting_after}}{NR\ slot\ length}$, as defined in clause 8.3. In Test 2, the UE shall be able to report valid CSI for the activated PUCCH SCell on PUCCH SCell at latest in slot n + $\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.

Any PCell interruption due to activation of PUCCH SCell shall occur in the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}} + N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of PUCCH SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the PUCCH SCell in a slot m + $\frac{\mathrm{T_{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the PUCCH SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the PUCCH SCell deactivation command is sent until CQI reporting for PUCCH SCell is discontinued.

**Table A.6.5.3.6.1-1: known FR1 SCell activation test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |

| NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured. | | | | | | | |
| NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$. | | | | | | | |
| NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26]. | | | | | | | |

### A.6.5.3.6.2 Test Requirements

In Test1, during T2 the UE shall start sending CSI reports for PUCCH SCell with non-zero CQI index at latest in a slot $n+\frac{T_{HARQ}+T_{activation_time}+\max((T_{First_available_CSI}+T_{CSI_processing}),\ 3*T_{target_PL-RS})+T_{CSI_Reporting_after}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstSSB} + 5ms$, as defined in clause 8.3. In Test2, during T2 the UE shall start sending CSI reports for PUCCH SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstSSB} + 5ms$, as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for PUCCH SCell at latest in a slot $m + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell / PSCell during PUCCH SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{interruption}$, as defined in clause 8.3.

During T3 the starting point of interruption of PCell during PUCCH SCell deactivation shall not happen outside the slot $m + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$ to $m + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.18.

All of the above test requirements shall be fulfilled in order for the observed PUCCH SCell activation delay and PUCCH SCell deactivation delay to be counted as correct. The rate of correct observed PUCCH SCell activation delay and PUCCH SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in slot $n+\frac{T_{HARQ}+T_{activation_time}+\max((T_{First_available_CSI}+T_{CSI_processing}),\ 3*T_{target_PL-RS})+T_{CSI_Reporting_after}}{NR\ slot\ length}$ in Test 1 or in slot $n + \frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$ in Test 2 as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.7 SCell Activation and deactivation of unknown SCell in FR1 in non-DRX

### A.6.5.3.7.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell activation and deactivation times are within the requirements stated in clause 8.3, when the PUCCH SCell in FR1 is unknown by the UE at the time of activation. In this test, UE shall support cross PUCCH group CSI reporting capability *csi-ReportingCrossPUCCH-Grp-r16*.

The supported test configurations are shown in table A.6.5.3.7.1-1 below. The test parameters are given in table A.6.5.3.7.1-2 and cell-specific parameters in table A.6.5.3.7.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Cell 1 is the PCell in primary Timing Advance Group (pTAG) and Cell 2 is the PUCCH SCell in the secondary Timing Advance Group (sTAG). Both cells have constant signal levels throughout the test.

There are two sub tests in this section.

For Test 1 (valid TA case), UE is provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment for sTAG.

For Test 2 (invalid TA case), TimeAlignmentTimer of sTAG expires before UE receives the activation command

Before the test starts the UE is connected to PCell, but is not aware of PUCCH SCell. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell becomes configured on NR. During T1 the PUCCH SCell is powered off and UE is not aware of PUCCH SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI on PUCCH SCell for the activated PUCCH SCell at latest in

slot $n+\frac{T_{HARQ}+T_{activation_time}+\max((T_{First_available_CSI}+T_{CSI_processing}),\ 3*T_{target_PL-RS})+T_{CSI_Reporting_after}}{NR\ slot\ length}$ for Test 1, or

slot $n+\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$ for Test 2

Note: $T_{delay_PUCCH_SCell} = T_{activation_time} + \max((T_{First_available_CSI} + T_{CSI_processing}), (T1+T2+T3), 3*T_{target_PL\text{-}RS}) + T_{CSI_reporting_after}$, as defined in clause 8.3,

Any PCell interruption due to activation of PUCCH SCell shall occur in the slot $n+1+\frac{T_{\mathrm{HARQ}}}{\text{NR slot length}}$ to $n+1+\frac{T_{\mathrm{HARQ}}+3\mathrm{ms}+T_{\mathrm{X}}}{\text{NR slot length}}+N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of PUCCH SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the PUCCH SCell in a slot $m+\frac{T_{\mathrm{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and the starting point of any PCell interruption due to the deactivation shall occur in the slot $m+1+\frac{T_{\mathrm{HARQ}}}{NR\ slot\ length}$ to $m+1+\frac{T_{\mathrm{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the PUCCH SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the PUCCH SCell deactivation command is sent until CQI reporting for PUCCH SCell is discontinued.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: SS-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.7.2 Test Requirements

During T2, as defined in clause 8.3, the UE shall start sending CSI reports for PUCCH SCell on PUCCH SCell with non-zero CQI index at latest in

a slot $n+\frac{T_{HARQ}+T_{activation_time}+\max((T_{First_available_CSI}+T_{CSI_processing}),\ 3*T_{target_PL-RS})+T_{CSI_Reporting_after}}{NR\ slot\ length}$ for Test 1. $T_{activation_time}$ = $T_{FirstSSB_MAX}$ + $T_{SMTC_MAX}$ + 2*$T_{rs}$ + 5ms.

a slot n + $\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$ for Test 2.

During T3 the UE shall stop sending CSI reports for PUCCH SCell at latest in a slot m + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during PUCCH SCell activation shall not happen outside the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}} + N_{\mathrm{interruption}}$, as defined in clause 8.3.

During T3 the starting point of interruption of PCell during PUCCH SCell deactivation shall not happen outside the slot m + 1 + $\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.18.

All of the above test requirements shall be fulfilled in order for the observed PUCCH SCell activation delay and PUCCH SCell deactivation delay to be counted as correct. The rate of correct observed PUCCH SCell activation delay and PUCCH SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot n+$\frac{T_{HARQ}+T_{activation_time}+\max\left((T_{First_available_CSI}+T_{CSI_processing}),\ 3*T_{target_PL-RS}\right)+T_{CSI_Reporting_after}}{NR\ slot\ length}$ and in a slot n + $\frac{T_{HARQ}+T_{delay_PUCCH_SCell}}{NR\ slot\ length}$ for Test 1 and Test 2, respectively, as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.8 SCell Activation and Deactivation of one FR1 known PUCCH SCell and one FR1 unknown SCell with single activation/deactivation command

### A.6.5.3.8.1 Test Purpose and Environment

The purpose of this test is to verify the SCell activation and deactivation delay requirements for PUCCH SCell with multiple SCells specified in clause 8.3.13 and 8.3.15, when one configured deactivated known PUCCH SCells in FR1 and one configured unknown SCell in FR1 by the UE at the time of activation.

The supported test configurations are defined in table A.6.5.3.8.1-1 below. The test parameters are given in table A.6.5.3.8.1-2 and cell-specific parameters in table A.6.5.3.8.1-3 below.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three NR carriers. All Cells has constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCC), but is not aware of Cell 2 (PUCCH SCell) and Cell 3(SCell). The UE is monitoring the Cell 1 (PCC). The UE shall be continuously scheduled in the Cell 1 throughout the whole test. PCC, SCC of Cell 2 and SCC of Cell 3 are on different FR1 bands.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 2) and SCell (Cell 3) become configured on radio channel 2 and 3 respectively.

A MAC message for activation of PUCCH SCell (Cell 2) and SCell (Cell 3) is sent by the test equipment 100 ms after the RRC message, in a slot # denoted m. The point in time at which the MAC message for activation of PUCCH SCell (Cell 2) and SCell (Cell 3) is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 and Cell 3 are increased to same level as for Cell 1. The UE shall be able to report valid CSI on PCell for the activated PUCCH SCell (Cell 2) at latest in slot m + $\frac{T_{HARQ}+T_{delay_\mathrm{multiple_SCells_PUCCH_SCell}}}{NR\ slot\ length}$ and be able to report valid CSI on PCell for the activated SCell (Cell 3) at latest in slot m + $\frac{T_{HARQ}+T_{delay_\mathrm{multiple_SCells_other_SCell}}}{NR\ slot\ length}$ as defined in clause 8.3.13 provided the PUCCH SCell can be successfully detected on the first attempt.

For Cell 2 activtion, the UE shall start reporting CSI in PCell in slot $n + \frac{T_{\mathrm{HARQ}}+3\ ms}{\mathrm{NR\ slot\ length}}$ and shall report CQI index 0 (out-of-range) until the PUCCH SCell activation has been completed. For Cell 3 activtion, the UE shall start reporting CSI in

PCell in slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the DL SCell activation has been completed.

Any PCell interruption due to activation of SCells (including one SCell configured with PUCCH) shall occur in the slot $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to slot $m + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in section 8.2.

Time period T3 starts when a MAC message for deactivation of the SCells (Cell 2 and Cell 3), sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector. The UE shall carry out deactivation of the SCells (Cell 2 and Cell 3) at latest in slot n $+ \frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$ as defined in clause 8.3. The starting point of PCell interruption due to the deactivation shall occur in the slot n + 1 $+ \frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to n + 1 $+ \frac{\text{T}_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell and DL SCell, respectively.

The test equipment verifies the PUCCH SCell activation time by counting the slots from the time when the PUCCH SCell activation command is sent until a CSI report with other than CQI index 0 is received. The test equipment verifies the DL SCell activation time by counting the slots from the time when the DL SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the PUCCH SCell deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for PUCCH SCell is discontinued. The test equipment verifies the DL SCell deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for DL SCell is discontinued.

NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.

### A.6.5.3.8.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell in the first available uplink resource after slot (m+k). UE is allowed to postpone CSI report to next available uplink resource if an available uplink resource is subject to interruption. Whether CSI report in slot (m+k) was interrupted is checked by monitoring ACK/NACK sent in PCell in slot (m+k). And the UE shall be able to report valid CSI for the activated PUCCH SCell (Cell 2) at latest in slot m + $\frac{T_{HARQ}+T_{delay_multiple_SCells_PUCCH_SCell}}{NR\ slot\ length}$ and report valid CSI for the activated SCell (Cell 3) at latest in slot m + $\frac{T_{HARQ}+T_{delay_multiple_SCells_other_SCell}}{NR\ slot\ length}$ as defined in clause 8.3.13. And the PCell interruption due to activation of SCells

(including one SCell configured with PUCCH) shall occur in the slot $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to slot $m + 1 + \frac{T_{\text{HARQ}}+3\text{ms}+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in section 8.2.

During T3, the UE shall carry out deactivation of the the SCells (including one SCell configured with PUCCH) at latest in slot n + $\frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$ as defined in clause 8.3. And the starting point of PCell interruption due to the deactivation shall occur in the slot n + 1 + $\frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to n + 1 + $\frac{\text{T}_{\text{HARQ}}+3\text{ms}}{NR\ slot\ length}$, as defined in clause 8.3.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

## A.6.5.3.9 SCell Activation and deactivation of unknown PUCCH SCell and unknown DL SCell in FR1 in non-DRX

### A.6.5.3.9.1 Test Purpose and Environment

The purpose of this test is to verify that the PUCCH SCell and DL SCell activation and deactivation times are within the requirements stated in clause 8.3.13 and clause 8.3.15, when the PUCCH SCell in FR1 and DL SCell in FR1 is unknown to the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.9.1-1 below. The test parameters are given in table A.6.5.3.9.1-2 and cell-specific parameters in table A.6.5.3.9.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three NR carriers, each with one cell. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2 (PUCCH SCell) and Cell 3(DL SCell). The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test. PCC, SCC of Cell 2 and SCC of Cell 3 are on different bands. The primary PUCCH group contain Cell 1 and the secondary PUCCH group contains Cell 2 and Cell 3.

At the beginning of T1 the UE receives an RRC message by which the PUCCH SCell (Cell 2) and DL SCell (Cell 3) becomes configured on radio channel 2 and 3 respectively. The UE starts monitoring the SCC1(Cell 2 CC) and SCC2(Cell 3 CC). The test equipment sends a MAC message for activation of the PUCCH SCell and DL SCell simultaneously.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated PUCCH SCell at latest in slot $n+\frac{T_{HARQ}+T_{delay_\text{multiple}_SCells_PUCCH_SCell}}{NR\ slot\ length}$, and report valid CSI in PCell for the activated DL SCell at latest in slot $n+\frac{T_{HARQ}+T_{delay_\text{multiple}_SCells_other_SCell}}{NR\ slot\ length}$, as defined in clause 8.3.13. In this test case, both valid TA and invalid TA cases shall be tested.

Test for case when UE has valid TA: the *TimeAlignmentTimer* [2] associated with the TAG containing the PUCCH SCell is running, and $T_{delay_multiple_SCells_PUCCH_SCell} = T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + \max((T_{First_available_CSI} + T_{CSI_processing}), 3*T_{target_PL\text{-}RS}) + T_{CSI_reporting_after}$.

Test for case when UE do not have valid TA: $T_{delay_multiple_SCells_PUCCH_SCell} = T_{activation_time_multiple_scells} + \max((T_{First_available_CSI} + T_{CSI_processing}), (T1+T2+T3), 3*T_{target_PL\text{-}RS}) + T_{CSI_reporting_after}$.

$T_{delay_multiple_SCells_other_SCell} = T_{activation_time_multiple_scells} + T_{CSI_Reporting}$.

$T_{activation_time_multiple_scells}$ is the target SCell activation delay in millisecond in multiple SCell activation scenario as specified in section 8.3.7

For Cell 2 activtion, the UE shall start reporting CSI in PCell in slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the PUCCH SCell activation has been completed. For Cell 3 activtion, the UE shall start reporting CSI in PCell in slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the DL SCell activation has been completed.

Any PCell interruption due to activation of PUCCH SCell or DL SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.13, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.2.2.7.

Time period T3 starts when a MAC message for deactivation of PUCCH SCell abd DL SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m $+ \frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3.15, and the starting point of any PCell interruption due to the deactivation shall occur in the slot m $+ 1 + \frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to m $+ 1 + \frac{\text{T}_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.15.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell and DL SCell, respectively.

The test equipment verifies the PUCCH SCell activation time by counting the slots from the time when the PUCCH SCell activation command is sent until a CSI report with other than CQI index 0 is received. The test equipment verifies the DL SCell activation time by counting the slots from the time when the DL SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the PUCCH SCell deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for PUCCH SCell is discontinued. The test equipment verifies the DL SCell deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for DL SCell is discontinued.

**Table A.6.5.3.9.1-1: unknown FR1 PUCCH SCell and DL SCell activation test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode, for both PUCCH SCell and DL SCell |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: SS-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [26] clause 5.2.2.5.

#### A.6.5.3.9.2 Test Requirements

The test requirements defined in clause A.6.5.3.8.2 shall apply to this test case.

### A.6.5.3.10 Fast SCell Activation of known SCell in FR1 in non-DRX for 160 ms SCell measurement cycle

#### A.6.5.3.10.1 Test Purpose and Environment

The purpose of this test is to verify that the fast SCell activation and deactivation times are within the requirements stated in clause 8.3.16, when the SCell in FR1 is known by the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.10.1-1 below. The test parameters are given in tables A.6.5.3.10.1-2 and cell-specific parameters in table A.6.5.3.10.1-3 below. The test consists of two successive time

periods, with duration of T1and T2, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell and triggering the aperiodic CSI-RS for fast SCell activation.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mode 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: SS-RSRP, CSI-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [26] clause 5.2.2.5.

### A.6.5.3.10.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot ($n + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{FirstATRS} + 5$ ms, as defined in clause 8.3.16.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.16.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.11 SCell Activation of known SCell in FR1 in non-DRX for 640 ms SCell measurement cycle

### A.6.5.3.11.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.6.5.3.10.1. The supported test configurations are the same as defined in clause A.6.5.3.10.1. The test parameters are the same except those described in the following clause. The listed parameter values in table A.6.5.3.11.1-1 will replace the values of corresponding parameters in tables A.6.5.3.10.1-2 and the listed parameter values in table A.6.5.3.11.1-2 will replace the values of corresponding parameters in tables A.6.5.3.10.1-3.

**Table A.6.5.3.11.1-1: General test parameters for known FR1 SCell activation case, 640 ms SCell measurement cycle**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| SCell measurement cycle (measCycleSCell) | ms | 640 | |

|---|---|---|---|---|---|---|
| | | | T1 | T2 | T1 | T2 |
| gapBetweenBursts | | slots | 2 | | | |

### A.6.5.3.11.2 Test Requirements

The test requirements defined in clause A.6.5.3.10.2 shall apply to this test case, except $T_{activation_time}$ will be replaced with the value $T_{FirstATRS} + T_{gap} + T_{ATRS}$ + 5 ms.

## A.6.5.3.12 SCell Activation and deactivation of unknown SCell in FR1 in DRX for UE capable of short measurement interval

### A.6.5.3.12.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clauses 8.3.2 and 8.3.3, respectively, when the SCell in FR1 is unknown by the UE at the time of activation and when UE supports *shortMeasInterval-r18* capability.

The supported test configurations are shown in table A.6.5.3.12.1-1 below. The test parameters are given in table A.6.5.3.12.1-2 and cell-specific parameters in table A.6.5.3.12.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3.2. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\text{T}_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.6.5.3.12.1-1: unknown FR1 SCell activation in DRX for 160 ms SCell measurement cycle supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: SS-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-118] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in TS 38.214 [26] clause 5.2.2.5.

### A.6.5.3.12.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except $T_{activation_time}$ will be replaced with the value below as defined in clause 8.3.2 when UE supports *shortMeasInterval-r18* capability:

$T_{activation_time}$ = 3 ms + $T_{FirstSSB_MAX,\ enhanced}$ + $T_{SMTC_MAX,\ enhanced}$ + $T_{rs,\ enhanced}$ + $T_{L1\text{-}RSRP,\ enhanced_measure}$ + $T_{L1\text{-}RSRP\ ,report}$ + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$), for which $T_{FirstSSB_MAX,\ enhanced}$ = $T_{SMTC_MAX,\ enhanced}$ = $T_{rs,\ enhanced}$ =20 ms; $T_{L1\text{-}RSRP,\ enhanced_measure}$ = 60 ms and $T_{L1\text{-}RSRP,\ report}$=5 ms.

## A.6.5.3.13 SCell Activation of multiple unknown SCells in FR1 with L3 reporting with single activation/deactivation commandin non-DRX

### A.6.5.3.13.1 Test Purpose and Environment

The purpose of this test is to verify that the multiple SCells activation times are within the requirements stated in clause 8.3.18, when all the multiple SCells in the same FR1 band are unknown to the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.13.1-1 below. The test parameters are given in tables A.6.5.3.13.1-2. The cell-specific parameters for NR PCell and NR SCell are given in tables A.6.5.3.13.1-3 and A.6.5.3.13.1-4 below. The test consists of two successive time periods, with duration of T1 and T2, respectively. There are three NR carriers, each with one cell. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1(PCell), but is not aware of Cell 2 (DL SCell) and Cell 3(DL SCell). The UE is only monitoring the PCC. TE continuously schedules the downlink data to UE on PCell throughout the whole test. PCC and SCC of Cell 2, Cell 3 are on different bands. SCC of Cell 2 and SCC of Cell 3 are on same band.

The test consists of two sub tests. The slot at which the MAC message is received at the UE antenna connector, is denoted slot #n.

At the beginning of T1 the UE receives an RRC message by which the Cell 2 and Cell 3 becomes configured on radio channel 2 and 3 respectively. The UE starts monitoring the SCC1(Cell 2 CC) and SCC2(Cell 3 CC). The test equipment sends a MAC message for activation of the Cell 2 and Cell 3 simultaneously.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2.

In sub test 1, TE shall transmit DCI 0-1 on PCell to schedule the PUSCH at slot $n + \frac{T_{\text{HARQ}}+7\ ms}{\text{NR slot length}}$, and the UE shall be able to transmit L3 measurement report of SCells at slot $n + \frac{T_{\text{HARQ}}+7\ ms+\text{k2}}{\text{NR slot length}}$, where k2 = 1.

In sub test 2, TE shall transmit DCI 0-1 on PCell to schedule the PUSCH at slot $n + \frac{T_{\text{HARQ}}+3\text{ms}+\text{M}-\text{k2}}{\text{NR slot length}}$, where M is defined in clause 8.3.17 and k2 = 1, and the UE shall be able to transmit L3 measurement report of SCells at slot $n + \frac{T_{\text{HARQ}}+3\text{ms}+\text{M}}{\text{NR slot length}}$. For sub test 2, TE will send TCI activation command after receiving L3 measurement report of the SCell.

The UE shall be able to report valid CSI in PCell for the activated DL SCells at latest in slot n + $\frac{T_{HARQ}+T_{activation_time_multiple_scells}+T_{CSI_Reporting}}{NR\ slot\ length}$, as defined in clause 8.3.18.

The UE shall start reporting CSI in PCell for the activated SCells(Cell 2 and Cell 3) after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the multiple DL SCell activation has been completed.

Any PCell interruption due to activation DL SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.18, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.2.2.2.

The test equipment verifies the activation time for Cell 2 by counting the slots from the time when the SCell activation command is sent until CSI report of acticated Cell 2 with other than CQI index 0 is received.

The test equipment verifies the activation time for Cell 3 by counting the slots from the time when the SCell activation command is sent until CSI report of acticated Cell 3 with other than CQI index 0 is received.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of multiple DL SCells.

The test equipment verifies the multiple DL SCell activation time by counting the slots from the time when the multiple DL SCell activation command is sent until a CSI report with other than CQI index 0 is received.

**Table A.6.5.3.13.1-1: Supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode, for all Cells |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode, for all Cells |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode, for all Cells |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration | |

**Table A.6.5.3.13.1-2: General test parameters for multiple unknown FR1 DL SCell activation case**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2,3 | Three NR radio channel (1, 2, 3) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated DL SCell 1 | | Cell 2 | Configured deactivated DL secondary cell on NR RF channel number 2 |
| Configured deactivated DL SCell 2 | | Cell 3 | Configured deactivated DL secondary cell on NR RF channel number 3 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | For both Cell 2 and Cell 3 |
| Cell 2/Cell 3 timing offset to cell1 | µs | 0 | |
| Time alignment error between cell2 and cell1; cell3 and cell1; cell3 and cell2 | µs | ≤ Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1 | s | 0.1 | During this time the PCell shall be known and the SCell configured but not detected. |
| T2 | s | 1 | During this time the UE shall activate the SCell 1 and SCell 2. |
| A2-threshold | dBm | -130 | |

NOTE 3: SS-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in Clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.13.2 Test Requirements

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot n + $\frac{T_{HARQ}+Tactivation_time_multiple_scells+T_{CSI_Reporting}}{NR\ slot\ length}$, where as defined in clause 8.3.18, in sub test 1, $T_{activation_time_multiple_scells}$ = 7 ms + $\frac{k2}{NR\ slot\ length}$ + max ($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$), where $\frac{k2}{NR\ slot\ length}$= 1 ms for Config 1 and 2, and 0.5 ms for config 3.

In sub test 2, $T_{activation_time_multiple_scells}$ = 3 ms + M + max ($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$).

## A.6.5.3.14 SCell Activation of unknown SCell with valid L3 measurement results in FR1 in non-DRX for 160 ms SCell measurement cycle

### A.6.5.3.14.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation time are within the requirements stated in clause 8.3.17, when the SCell in FR1 is unknown by the UE at the time of activation, but UE has valid L3 measurement results of the SCell.

The supported test configurations for NR PCell are shown in table A.6.5.3.14.1-1 below. Supported test configurations for NR SCell are shown in table A.6.5.3.14.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. The test parameters are given in Tables A.6.5.3.14.1-2 and cell-specific parameters in tables A.6.5.3.14.1-3 and A.6.5.3.14.1-4 below. The test consists of three successive time periods, with duration of T1, T2 and T3 respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC.

The test consists of three sub tests. The slot at which the MAC message is received at the UE antenna connector, is denoted slot #n. TE continuously schedules the downlink data to UE on PCell. In Sub-test 1, TE shall schedule DCI format 0_1 at slot n + $\frac{T_{\text{HARQ}}+7ms}{\text{NR slot length}}$. In Sub-test 2, TE shall schedule DCI format 0_1 at slot n + $\frac{T_{\text{HARQ}}+3ms+M-k2}{\text{NR slot length}}$, where M is defined in clause 8.3.17 and k2 = 1. In Sub-test 3, UE shall tranmsit scheduling request on the first SR resource by 7ms+ $T_{HARQ}$ + $T_{SR_Periodicity}$ to obtain the UL grant for L3 report transmission.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. T1 is sufficiently long enough so that UE is able to complete the L3 detection and measurements on the SCell to be activated. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. UE is expected to report L3 measurement result at the first PUSCH scheduled by TE.

The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3.17. TE also indicates the TCI, based on L3 report of the UE. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after the slot that UE sends the L3 reports and shall report CQI index 0 (out-of-range) until the SCell activation has been completed.

During T2, any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.17, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

At the beginning of T3, the SCell de-activation command is sent. T3 shall be long enough to ensure UE completes the SCell de-activation.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

**Table A.6.5.3.14.1-1: known FR1 SCell activation in non-DRX for 160 ms SCell measurement cycle supported test configurations for NR PCell**

## A.6.5.3.14.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $(n + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length})$. UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$.

For Sub-test 1, $T_{activation_time}$ = 7 ms + k2/SCS + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.17, where k2/SCS is 1 ms for config 1,2 and 0.5 ms for config 3.

For Sub-test 2, $T_{activation_time}$ = 3 ms + M + max($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5 ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.17.

For Sub-test 3, $T_{activation_time}$ = 7ms + $T_{uncertainity_ULgrant}$ + max ($T_{HARQ}$ + $T_{uncertainty_MAC}$ + 5ms + $T_{FineTiming}$, $T_{uncertainty_RRC}$ + $T_{RRC_delay}$) as defined in clause 8.3.17. Where, $T_{uncertainity_ULgrant}$ is uncertainty in acquiring UL grant after sending scheduling request.

During T2, interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.17.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and L3 measurement reporting to be counted as correct. The rate of correct observed SCell activation delay and L3 measurement reporting during repeated tests shall be at least 90 %.

NOTE: During T2, if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.15 TRS based SCell Activation of SSB-less SCell in FR1 inter-band CA in non-DRX

### A.6.5.3.15.1 Test Purpose and Environment

The purpose of this test is to verify that the SSB-less SCell activation delay is within the requirements stated in clause 8.3.2, when the to be activated SCell in FR1 is provided with periodic CSI-RS for tracking instead of SSB. SCell does not provide neighther SSB configuration (*absoluteFrequencySSB*) nor SMTC configuration.

The supported test configurations are shown in table A.6.5.3.15.1-1A and A.6.5.3.15.1-1B below. The test parameters are given in Tables A.6.5.3.15.1-2 and cell-specific parameters in tables A.6.5.3.15.1-3 and A.6.5.3.15.1-4 below. The test consists of two successive time periods, with duration of T1 and T2, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1(PCell), but is not aware of Cell 2(SCell). Cell 1 and Cell 2 are in different bands. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. At the same time, UE also receives the indication of reference serving cell in the same RRC message. The Cell 1 is indicated as the reference cell of Cell 2. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mod 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{HARQ}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.

NOTE 3: Io, SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.

NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.

NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in Clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.15.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot ($n + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time}$ is

- $T_{first_TRS} + T_{TRS} + 5$ ms, when the the EPRE difference ($\Delta_{EPRE}$) is 12 dB
- $T_{first_TRS} + 2*T_{TRS} + 5$ ms, when the EPRE difference ($\Delta_{EPRE}$) is 30 dB

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.2.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.16 Inter-band SSB-less SCell Activation based on A-TRS

### A.6.5.3.16.1 Test Purpose and Environment

The purpose of this test is to verify that the inter-band SSB-less SCell activation times are within the requirements stated in clause 8.3.2.

The supported test configurations are shown in table A.6.5.3.16.1-1A and A.6.5.3.16.1-1B below. The test parameters are given in Tables A.6.5.3.16.1-2 and cell-specific parameters in tables A.6.5.3.16.1-3 below. The test consists of two successive time periods, with duration of T1and T2, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to PCell Cell 1, but is not

aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The test equipment sends a MAC message for activation of the SCell and triggering the aperiodic CSI-RS for SCell activation.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n (where n mod 20=1), defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

**Table A.6.5.3.16.1-1A: Inter-band SSB-less SCell Activation based on A-TRS for NR PCell**

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: Io, SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in Clause 5.2.2.5 in TS 38.214 [26].
NOTE 9: The SSB in referenceSignal in the TCI state is configured as the SSB in Cell 1.

### A.6.5.3.16.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot ($n + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot $n + \frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{first_ATRS} + T_{gap} + T_{ATRS} + 5$ ms, as defined in clause 8.3.2.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.2.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.17 SCell Activation and deactivation of known SCell in FR1 in non-DRX for 160 ms SCell measurement cycle with less than 5MHz BW

### A.6.5.3.17.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is known by the UE at the time of activation, and the SCell operate with a bandwidth of less than 5 MHz. Supported test configurations are specified in Table A.6.5.3.17.1-1 below. General test parameters for known Scell activation case are specified in Table A.6.5.3.1.1-2. Supported Cell specific test parameters for NR PCell specified in Table A.6.5.3.1.1-3. Supported Cell specific test parameters for NR SCell specified in Table A.6.5.3.1.1-4 apply except those specified in Table A.6.5.3.17.1-2.

The test procedure specified in A.6.5.3.1 applies to this test.

**Table A.6.5.3.17.1-1: Supported test configurations**

### A.6.5.3.17.2 Test Requirements

Test requirements specified in Clause A.6.5.3.1.2 apply to this test except $T_{activation_time}$ will be replaced with $T_{FirstSSB}$+ $T_{\Delta}$ + 5ms.

## A.6.5.3.18 OD-SSB based SCell Activation and deactivation of unknown SCell in FR1 in DRX (OD-SSB Case 1)

### A.6.5.3.18.1 Test Purpose and Environment

The purpose of this test is to verify that the OD-SSB based SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is unknown by the UE at the time of activation.

The supported test configurations for NR PCell are shown in table A.6.5.3.18.1-1 below. Supported test configurations for unknown NR SCell are shown in table A.6.5.3.18.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. The test parameters are given in tables A.6.5.3.18.1-2 and cell-specific parameters in tables A.6.5.3.18.1-3 and A.6.5.3.18.1-4 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell and the related OD-SSB transmission on the SCell. The point in time at which the MAC message which includes both OD-SSB activation and SCell activation commands is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activation_time}}+T_{\mathrm{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting after slot $n + \frac{T_{\mathrm{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\text{NR slot length}} + N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell and deactivation of OD-SSB transmission, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell and deactivation of OD-SSB transmission in a slot m + $\frac{\mathrm{T_{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\mathrm{T_{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\mathrm{T_{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.6.5.3.18.1-1: unknown FR1 SCell activation in DRX for 160 ms SCell measurement cycle supported test configurations for NR PCell**

NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.18.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in clause 5.2.2.5 in TS 38.214 [26], and reporting after slot (n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot n + $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, $T_{activation_time} = T_{First,\ OD\text{-}SSB} + 3*T_{rs,\ OD\text{-}SSB}$ + 5 ms, as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for SCell at latest in a slot m + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot m + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to m + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activtion_time}}+T_{\mathrm{CSI_Reporting}}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.19 OD-SSB based SCell Activation and deactivation of unknown SCell in FR1 DRX mode(OD-SSB Case 2, Alt Time-C1)

### A.6.5.3.19.1 Test Purpose and Environment

The purpose of this test is to verify that the OD-SSB based SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is unknown by the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.19.1-1 below. The test parameters are given in table A.6.5.3.19.1-2 and cell-specific parameters in table A.6.5.3.19.1-3 below.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell and the related OD-SSB transmission in the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\mathrm{HARQ}}+T_{\mathrm{activation_time}}+T_{\mathrm{CSI_Reporting}}}{\mathrm{NR\ slot\ length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting after slot $n + \frac{T_{\mathrm{HARQ}}+3\ ms}{\mathrm{NR\ slot\ length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\mathrm{HARQ}}}{\mathrm{NR\ slot\ length}}$ to $n + 1 + \frac{T_{\mathrm{HARQ}}+3\ ms+T_{\mathrm{X}}}{\mathrm{NR\ slot\ length}} + N_{\mathrm{interruption}}$, as defined in clause 8.3, where $N_{\mathrm{interruption}}$ is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{T_{\mathrm{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{T_{\mathrm{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{T_{\mathrm{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

NOTE 3: SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.19.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in clause 5.2.2.5 in TS 38.214 [26], and reporting after slot (n + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.

During T3 the UE shall stop sending CSI reports for SCell at latest in a slot m + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot m + 1 + $\frac{T_{HARQ}}{NR\ slot\ length}$ to m + 1 + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{\text{HARQ}}+T_{\text{activtion_time}}+T_{\text{CSI_Reporting}}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.20 OD-SSB based SCell Activation and deactivation of known SCell in FR1 non-DRX mode(OD-SSB Case 2, Alt Time-C1)

### A.6.5.3.20.1 Test Purpose and Environment

The purpose of this test is to verify that the OD-SSB based SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is known by the UE at the time of activation.

The supported test configurations for NR PCell are shown in table A.6.5.3.20.1-1 below. Supported test configurations for NR SCell are shown in table A.6.5.3.20.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. The test parameters are given in tables A.6.5.3.20.1-2 and cell-specific parameters in tables A.6.5.3.20.1-3 and A.6.5.3.20.1-4 below. The test consists of three successive time periods, with duration of T1 and T2, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell and the related OD-SSB transmission in the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within BW$_{occupied}$.
NOTE 3: SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within BW$_{occupied}$ (i.e. 10 MHz, 52 PRBs) from F$_{C,low}$, and Io is independent of the BW$_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within BW$_{occupied}$ (i.e. 40 MHz, 106 PRBs) from F$_{C,low}$, and Io is independent of the BW$_{channel}$ configured.
NOTE 7: N$_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured BW$_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.20.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in clause 5.2.2.5 in TS 38.214 [26], and reporting after slot ($n + 1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption.

During T2 interruption of PCell during SCell activation shall not happen outside the slot $n + 1 + \frac{T_{HARQ}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{HARQ}+3\ ms+T_X}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90 %.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot $\frac{T_{HARQ}+T_{activtion_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.6.5.3.21 OD-SSB based Direct SCell activation at SCell addition in FR1(OD-SSB Case 2)

### A.6.5.3.21.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of OD-SSB based direct SCell activation delay and interruption requirements at SCell addition as defined in clause 8.3.21 and 8.2.2, respectively. The supported test configurations for NR PCell are shown in table A.6.5.3.18.1-1. The supported test configurations for NR SCell are shown in table A.6.5.3.18.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as outlined in table A.6.5.3.21.1-1. Cell-specific parameters are provided in table A.6.5.3.21.1-2 and table A.6.5.3.21.1-3.

The test consists of two successive time periods with duration T1 and T2, respectively. There are two carriers, each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), and Cell 2 (SCell) is on RF channel 2 (SCC). Cell 1 and Cell 2 both operate according to one of the configurations in table A.6.5.3.18.1-1 and table A.6.5.3.18.1-1A respectively.

Before the test starts the UE is connected to Cell 1 on RF channel 1. The UE is only monitoring RF channel 1 and is not aware of Cell 2 on RF channel 2.

The UE is continuously scheduled in PCell throughout the test.

At the beginning of T1 the UE is configured to measure RF channel 2 in measurement gaps. During T1, the UE detects and measures Cell 2 on RF channel 2, and sends a measurement report containing Cell 2 to the test equipment. After having received a measurement report containing Cell 2, the test equipment deconfigures the measurement gaps and thereafter sends a RRC connection reconfiguration message to the UE by which it configures the SCell (Cell 2) in activated state (*sCellState* is set to *activated*) and OD-SSB configurations. The time between reception of the last measurement report carrying SCell and transmission of the RRC connection reconfiguration message directly activating SCell is kept short enough to allow the SCell to remain known to the UE.

Time period T2 starts when the UE receives the RRC connection reconfiguration message at the UE antenna connector. The corresponding slot at which the message is received at the UE antenna connector is denoted *n.* The UE shall complete activation of the SCell no later than in slot $n + \frac{N_{direct}}{\text{NR slot length}}$, as specified in clause 8.3.21. From slot $n+ \frac{N_{direct}}{\text{NR slot length}}$ and onwards the UE shall report valid CSI both for PCell and SCell.

The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received.

The test equipment verifies that interruptions on other serving cells are within the requirements by counting ACK/NACKs transmitted in PCell.

**Table A.6.5.3.21.1-1: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Inter-frequency neighbor cell (SCell to-be) | | Cell 2 | Inter-frequency neighbor cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Measurement gap pattern | | gp1 | Measurement gap is used during parts of time period T1 for detection of Cell 2. |
| CSI reporting periodicity | ms | 2 | CSI reporting periodicity for periodic reporting of CQI for PCell and, when added, SCell. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | Measurement cycle for SCell does not come into effect in direct activation at SCell addition. |
| Timing offset between Cell 1 and Cell 2 | µs | ≤ MRTD | The value of maximum timing offset depends upon the carrier aggregation scenario. |
| T1 | s | 7 | During this time period the PCell shall be known and Cell 2 shall be detected as an inter-frequency neighbor cell. |
| T2 | s | 1 | During this time period Cell 2 shall be configured and directly activated as SCell. |
| A3-offset | dB | -15 | |
| $T_{HARQ}$ | ms | k1×NR slot length | k1 is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by dl-DataToUL-ACK if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| $T_{CSI_Reporting}$ | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |
| k | ms | $k_1 + 3 \cdot N_{slot}^{subframe,\ \mu} + 1$ | As specified in clause 4.3 of TS 38.213 [3] |

### A.6.5.3.21.2 Test Requirements

The UE shall complete the direct activation of the SCell no later than at slot $n + \frac{N_{direct}}{\text{NR slot length}}$.

$N_{direct} = T_{RRC_Process} + T_1 + T_{HARQ} + T_{activation_time} + T_{CSI_Reporting}$

$T_{RRC_Process}$ and T1 are defined in Clause 8.3.21.

$T_{activation_time} = T_{First,\ OD\text{-}SSB} + 5$ ms

The UE shall report non-zero CQI for SCell from slot $n + \frac{N_{direct}}{\text{NR slot length}}$ and onwards throughout time period T2.

The interruption on PCell during direct activation of the SCell shall occur within the interruption window specified in clause 8.3.21 and shall not exceed the length specified in clause 8.2.2.2.11.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.3.22 OD-SSB based Direct SCell activation at SCell addition in FR1 without first SSB transmission

### A.6.5.3.22.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of OD-SSB based direct SCell activation delay and interruption requirements at SCell addition as defined in clause 8.3.21 and 8.2.2, respectively. The supported test configurations for NR PCell are shown in table A.6.5.3.22.1-1. The supported test configurations for NR SCell are shown in table A.6.5.3.22.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently.

The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as outlined in table A.6.5.3.22.1-1. Cell-specific parameters are provided in table A.6.5.3.22.1-2 and table A.6.5.3.22.1-3.

The test consists one time period with duration T1. There are two carriers, each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), and Cell 2 (SCell) is on RF channel 2 (SCC). Cell 1 and Cell 2 both operate according to one of the configurations in table A.6.5.3.22.1-1 and table A.6.5.3.22.1-1A respectively.

Before the test starts the UE is connected to Cell 1 on RF channel 1. The UE is only monitoring RF channel 1 and is not aware of Cell 2 on RF channel 2.

The UE is continuously scheduled in PCell throughout the test.

Time period T1 starts when the UE receives the RRC connection reconfiguration message at the UE antenna connector, by which it configures the SCell (Cell 2) in activated state (*sCellState* is set to *activated*) and OD-SSB configuration in activated state. The corresponding slot at which the message is received at the UE antenna connector is denoted *n*. The UE shall complete activation of the SCell no later than in slot $n + \frac{N_{direct}}{\text{NR slot length}}$, as specified in clause 8.3.21. From slot $n + \frac{N_{direct}}{\text{NR slot length}}$ and onwards the UE shall report valid CSI both for PCell and SCell.

The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received.

The test equipment verifies that interruptions on other serving cells are within the requirements by counting ACK/NACKs transmitted in PCell.

**Table A.6.5.3.22.1-1: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |

| | | | |
|---|---|---|---|
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Inter-frequency neighbor cell (SCell to-be) | | Cell 2 | Inter-frequency neighbor cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| CSI reporting periodicity | ms | 2 | CSI reporting periodicity for periodic reporting of CQI for PCell and, when added, SCell. |
| Timing offset between Cell 1 and Cell 2 | µs | ≤ MRTD | The value of maximum timing offset depends upon the carrier aggregation scenario. |
| T1 | s | 1 | During this time period the PCell shall be known and Cell 2 shall be detected as an inter-frequency neighbor cell. |
| A3-offset | dB | -15 | |
| $T_{HARQ}$ | ms | k1×NR slot length | k1 is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by dl-DataToUL-ACK if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| $T_{CSI_Reporting}$ | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |
| k | ms | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe},\ \mu} + 1$ | As specified in clause 4.3 of TS 38.213 [3] |

### A.6.5.3.22.2 Test Requirements

The UE shall complete the direct activation of the SCell no later than at slot $n + \frac{N_{direct}}{\text{NR slot length}}$.

$N_{direct} = T_{RRC_Process} + T_1 + T_{HARQ} + T_{activation_time} + T_{CSI_Reporting}$

$T_{RRC_Process}$ and T1 are defined in Clause 8.3.21

$T_{activation_time} = T_{First,\ OD\text{-}SSB} + T_{rs,\ OD\text{-}SSB} + 5$ ms

The UE shall report non-zero CQI for SCell from slot $n + \frac{N_{direct}}{\text{NR slot length}}$ and onwards throughout time period T1.

The interruption on PCell during direct activation of the SCell shall occur within the interruption window specified in clause 8.3.21 and shall not exceed the length specified in clause 8.2.2.2.11.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.3.23 SDL SCell Activation and deactivation of unknown SCell in FR1 for LBCA

### A.6.5.3.23.1 Test Purpose and Environment

The purpose of this test is to verify that the SDL SCell activation and deactivation times are within the requirements stated in clause 8.3.2, when the SDL SCell in FR1 is unknown by the UE at the time of activation, and the UE supporting *LB-CA via switching* is configured with *switchingPattern-r19*. The test verifies SCell activation delay when SDL SCell reference signals are partially overlapped with SCell active periods according to the switching pattern.

The supported test configuration for PCell and SCell is Config 1 as shown in table A.6.5.3.23.1-1. The test parameters are given in table A.6.5.3.1.1-2, except for the parameters specific for this test case, which are given in table A.6.5.3.23.1-2 below. Cell-specific parameters are given in table A.6.5.3.1.1-3 and A.6.5.3.1.1-4.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both radio channels in this test are at frequency lower than 1GHz. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. Also the LBCA switching pattern is configured in this RRC message. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot n + $\frac{T_{\text{HARQ}}+T_{\text{LBCA}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{LBCA}}}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot m + $\frac{T_{\text{HARQ}}+3ms+T_{\text{LBCA}}}{NR\ slot\ length}$, as defined in clause 8.3.2.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.6.5.3.23.1-1: Supported test configuration for SDL SCell activation**

| Config | Description |
|---|---|
| 1 | PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode<br>SCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, SDL mode |

**Table A.6.5.3.23.1-2: General test parameters for unknown FR1 SDL SCell activation case for LBCA**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1 | One NR radio channel is used for this test for PCell and SDL SCell |
| SCell measurement cycle (measCycleSCell) | ms | 20 | |
| switchingPattern-r19 | | 00000 00000 00000 00111 11111 11000 00000 00000 | Pattern duration is 40 ms. SCell SSB is transmitted every 20 ms so that 50 % of the SSBs overlap with SCell active periods. |
| gapDurationPCelltoSCell-r19 | symbols | 3 | |
| gapDurationSCelltoPCell-r19 | symbols | 4 | |
| SSB configuration | | SSB.23 FR1 | |
| SMTC configuration | | SMTC.14 | |

## A.6.5.3.23.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except $T_{activation_time}$ will be replaced with the value $T_{FirstSSB_MAX} + T_{SMTC_MAX} + 2*T_{rs}$ + 5 ms as defined in clause 8.3.2 for the case when *LowBandCA-Switching-r19* is configured.

## A.6.5.3.24 Direct SCell activation at SCell addition of known SCell in FR1 for LBCA

### A.6.5.3.24.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of direct SCell activation delay and interruption requirements at SCell addition as defined in clause 8.3.4 and 8.2.2, respectively, when the UE supporting *LB-CA via switching* and *directSCellActivation-r19* is configured with *switchingPattern-r19*. The test verifies SCell activation delay when SDL SCell reference signals are partially overlapped with SCell active periods according to the switching pattern.

The supported test configuration for PCell and SCell is Config 1 as shown in table A.6.5.3.24.1-1.

The test parameters are given in tables A.6.5.3.4.1-2, except for the parameters specific for this test case, which are given in table A.6.5.3.24.1-2 below.

The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as outlined in table A.6.5.3.4.1-2. Cell-specific parameters are provided in table A.6.5.3.4.1-3 and table A.6.5.3.4.1-4.

The test consists of two successive time periods with duration T1 and T2, respectively. There are two carriers, each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), and Cell 2 (SCell) is on RF channel 2 (SCC).

Before the test starts the UE is connected to Cell 1 on RF channel 1. The UE is only monitoring RF channel 1 and is not aware of Cell 2 on RF channel 2.

The UE is continuously scheduled in PCell throughout the test.

At the beginning of T1, the UE is configured to measure RF channel 2 in measurement gaps. During T1, the UE detects and measures Cell 2 on RF channel 2 and sends a measurement report containing Cell 2 to the test equipment. After having received a measurement report containing Cell 2, the test equipment deconfigures the measurement gaps and thereafter sends a RRC connection reconfiguration message to the UE by which it configures the SCell (Cell 2) in activated state (*sCellState* is set to *activated*). The time between reception of the last measurement report carrying SCell and transmission of the RRC connection reconfiguration message directly activating SCell is kept short enough to allow the SCell to remain known to the UE.

Time period T2 starts when the UE receives the RRC connection reconfiguration message at the UE antenna connector. The corresponding slot at which the message is received at the UE antenna connector is denoted *n.* The UE shall complete activation of the SCell no later than in slot $n + \frac{N_{direct}}{\text{NR slot length}}$, as specified in clause 8.3.4. From slot $n+ \frac{N_{direct}}{\text{NR slot length}}$ and onwards the UE shall report valid CSI both for PCell and SCell.

The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received.

The test equipment verifies that interruptions on other serving cells are within the requirements by counting ACK/NACKs transmitted in PCell.

**Table A.6.5.3.24.1-1: Supported test configuration for direct SDL SCell activation**

| Config | Description |
|---|---|
| 1 | PCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode<br>SCell: NR 15 kHz SSB SCS, ≥10 MHz bandwidth, SDL mode |

### A.6.5.3.24.2 Test Requirements

The UE shall complete the direct activation of the SCell no later than at slot $n + \frac{N_{direct}}{\text{NR slot length}}$.

The UE shall report non-zero CQI for SCell from slot $n + \frac{N_{direct}}{\text{NR slot length}}$ and onwards throughout time period T2.

The interruption on PCell during direct activation of the SCell shall occur within the interruption window specified in clause 8.3.4 and shall not exceed the length specified in clause 8.2.2.2.11.

The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.3.25 PUCCH SCell Activation and deactivation for UE supporting EMR in FR1

### A.6.5.3.25.1 Test Purpose and Environment

The purpose of this test is to verify that EMR (early measurement reporting) based SCell activation and deactivation are done within the required time period defined in clause 8.3.2A, when PUCCH for a being activated SCell is configured on the NR FR1 SCell. The PCell and SCell are in different FR1 band. The SCell is unknown by the UE and the UE does not have valid TA for a sTAG which the SCell belongs to at the time of activation. Supported test configurations are shown in table A.6.5.3.25.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.6.5.3.25.1-2 and A.6.5.3.25.1-3 below.

In the test there are two cells: Cell 1 and Cell 2. Cell 1 is PCell, Cell 2 is the PUCCH SCell being activated and deactivated. The test consists of three successive time periods with duration of T1, T2 and T3, respectively. The UE shall be continuously scheduled in Cell 1 (PCell) throughout the test.

Before the test starts, the UE is connected to the PCell (Cell 1) on NR radio channel 1 (PCC), but is not aware of SCell (Cell 2) on NR radio channel 2 (SCC). The PCell is in the pTAGs and the SCell is in a sTAG. The UE is only monitoring the PCC and configured with inter-frequency measurement reporting for Cell 2 in:

*measIdleCarrierListNR-r16* for UE supporting *measValidationReportEMR-r18*

or *idleInactiveNR-MeasReport-r16* only,

or *measReselectionCarrierListNR-r18* for UE supporting *measValidationReportReselectionMeasurements*.

During T1 the UE is only configured to the PCell (Cell 1) only. The time when UE receives the early measurement report configuration denote as the starting time of T2. UE will perform the inter-frequency measurement during T2 with the configuration with SCC. The time when UE receive paging from the TE denoted as the starting time of T3. During T3 UE needs to send a valid early measurement report. The time when TE receives the EMR report denote as the end of the T3.

Immediately after the receive of the EMR report, the TE will send an MAC CE message to activate the PUCCH Scell (SCC).The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted n, defines the start of time period T4.

During T4, the test equipment monitors the L1-RSRP measurement reporting for the SCell when test equipment receives a valid L1-RSRP report is denoted as slot $m+T_{L1\text{-}RSRP}$. In the next DL slot after slot $m+T_{L1\text{-}RSRP}$, the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

During T4, the test equipment should send a PDCCH order to the UE to initiate RA procedure on the PUCCH SCell at slot ($m+\frac{T_{HARQ}+T_{activation_time}}{NR\ slot\ length}$) as defined in clause 8.3 after UE report on PCell.

Any PCell interruption due to activation of PUCCH SCell shall occur in the slot $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$ to $n + 1 + \frac{T_{\text{HARQ}}+3\ ms+T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$, as defined in clause 8.3, where $N_{\text{interruption}}$ is the interruption length given in clause 8.2.

Time period T5 starts when a MAC message for deactivation of PUCCH SCell, sent from the test equipment to the UE in a slot # denoted m, is received at the UE antenna connector.

The deactivation message shall be sent after is sent until a CSI report with other than CQI index 0 is received at the TE.

[The UE shall carry out deactivation of the PUCCH SCell in a slot m + $\frac{\text{T}_{\text{HARQ}}+3ms}{NR\ slot\ length}$, as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot m + 1 + $\frac{\text{T}_{\text{HARQ}}}{NR\ slot\ length}$ to m + 1 + $\frac{\text{T}_{\text{HARQ}}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.]

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of PUCCH SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the PUCCH SCell activation command is sent until a CSI report with other than CQI index 0 is received.

**Table A.6.5.3.25.1-1: known FR1 SCell activation test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table A.6.5.3.25.1-2: General test parameters for known FR1 SCell activation case**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1,2 | Two NR radio channel (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Configured deactivated SCell | | Cell 2 | Configured deactivated secondary cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to cell1 | µs | 0 | |
| Time alignment error between cell2 and cell1 | µs | ≤ Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| TimeAlignmentTimer | ms | 500 | Test 1 and Test 2 |
| T1 | s | 10 | During this time the PCell is connected to the UE |
| T2 | s | 11.25 | During this time the UE shall perform early measurement. |
| T3 | s | 10 | During this time the UE shall send a valid measurement report |
| T4 | s | 2 | During this time the UE shall activate a PUCCH Scell |
| T5 | s | 1 | During this time the UE shall deactivate the PUCCH Scell |
| *measIdleValidityDuration-r18* | s | 5 | Applicable and configured when UE supporting *measValidationReportEMR-r18* is tested in this test. |

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| *measReselectionValidityDuration-r18* | s | 5 | Applicable and configured when UE supporting *measValidationReportReselectionMeasurements* is tested in this test. |
| *measIdleDuration-r16* | s | 60 | Value for timer T331 for UE performing idle/inactive measurements while in RRC_IDLE or RRC_INACTIVE. |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: SS-RSRP, Io and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.
NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.
NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26].

### A.6.5.3.25.2 Test Requirements

The UE behaviour during time durations t2 and t3 shall be as follows:

During the time period t2 the UE is in Idle mode and the signal level of Cell 2 is changed. The UE shall not perform reselection. The UE shall perform Idle Mode CA measurement according to section 4.4.

At the start of t3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for Cell 2. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for Cell 2 meets the requirements in section 10.1.4B for SS-RSRP and in section 10.1.8B for SS-RSRQ and test ends.

The rate of correct events observed during repeated tests shall be at least 90%.

All of the above test requirements shall be fulfilled in order for the observed PUCCH SCell activation delay and PUCCH SCell deactivation delay to be counted as correct. The rate of correct observed PUCCH SCell activation delay and PUCCH SCell deactivation delay during repeated tests shall be at least 90 %.

During T4, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting no later than at slot $n + \frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ as defined in clause 8.3.2A.

During T4, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot $n + \frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$, where

- $T_{HARQ}$ is defined in Table A.7.5.3.X.1-2
- $T_{activation_time}$ is defined in clause 8.3.2A

During T5, the UE shall stop sending CSI reports for SCell no later than slot n + $\frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$, as defined in clause 8.3.2A.

[During T5, the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot n + $1 + \frac{T_{HARQ}}{NR\ slot\ length}$ to n + $1 + \frac{T_{HARQ}+3\ ms}{NR\ slot\ length}$ as defined in clause 8.3.2A.]

## A.6.5.3.26 EMR based SCell activation of unknown SCell in FR1

### A.6.5.3.26.1 Test Purpose and Environment

The purpose of this test is to verify that the EMR (early measurement reporting) based SCell activation delay is within the requirements stated in clause 8.3.2A, when the SCell in FR1 is unknown by the UE at the time of activation.

In the test, there are two cells: NR Cell 1 as PCell in FR1 on NR RF channel 1 and NR Cell 2 as SCell in FR1 on NR RF channel 2. The supported test configurations for PCell and SCell are provided in table A.6.5.3.26.1-1 and table A.6.5.3.26.1-1A respectively. The general test parameters are given in table A.6.5.3.26.1-2 and cell-specific parameters for PCell and SCell are given in table A.6.5.3.26.1-3 and table A.6.5.3.26.1-4 respectively.

**Table A.6.5.3.26.1-1: supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table A.6.5.3.26.1-1A: supported test configurations for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

The test consists of 6 successive time periods, with time duration of T1, T2, T3, T4, T5 and T6 respectively.

During T1, the UE is connected to Cell 1 (PCell) only and shall not have any timing information of Cell 2. UE is configured with inter-frequency measurement reporting for Cell 2 in:

*measIdleCarrierListNR-r16* for UE supporting *measValidationReportEMR-r18* or *idleInactiveNR-MeasReport-r16* only, or

*measReselectionCarrierListNR-r18* for UE supporting *measValidationReportReselectionMeasurements*.

Beam level reporting for early measurements is configured. The time point when UE receives *RRC_Release* message from the TE defines the starting point of T2.

At the beginning of T2, Cell 2 becomes detectable however cell reselection shal not be performed. Signal level of Cell 2 is set to the value given in table A.6.5.3.26.1-4. The duration of T2 is set to a fixed value according to the table A.6.5.3.26.1-2.

At the beginning of T3, the signal level of the Cell 2 is set to another value according to the table A.6.5.3.26.1-4. The duration of the T3 equals to *measIdleValidityDuration-r18* or *measReselectionValidityDuration-r18* depending on the UE capabilities of the UE under test.

During T2 and T3, UE is in RRC_IDLE mode.

The time when TE sends the paging message is defined as the starting point of T4. During T4, the UE shall send a valid measurement report with SSB index of Cell 2 to the PCell.

At the beginning of T5 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. UE is only monitoring the PCC and shall be continuously scheduled in the PCell when UE is connected to PCell. Then the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted *n*, defines the start of time period T6. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot $n + \frac{T_{\text{HARQ}}+T_{\text{activation_time}}+T_{\text{CSI_Reporting}}}{\text{NR slot length}}$, as defined in clause 8.3.2A. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement plus $n_{CSI_ref}$ slots, as defined in 5.2.2.5 in [26], and reporting after slot $n + \frac{T_{\text{HARQ}}+3\ ms}{\text{NR slot length}}$ and shall report CQI index 0 (out-of-range) until the SCell activation has been completed.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

**Table A.6.5.3.26.1-2: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| RF Channel Number | | 1, 2 | Two FR1 NR radio channel (1, 2) are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| SCell | | Cell 2 | Secondary cell on NR RF channel number 2 configured by RRC during the test. |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Cell-individual offset for cells on NR channel number | dB | 0 | Individual offset for cells on primary component carrier. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | |
| Cell 2 timing offset to cell1 | µs | 0 | |
| Time alignment error between cell2 and cell1 | µs | ≤ Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1 | s | 10 | During this time UE connects to PCell and early measurement report on the carrier frequency of Cell 2 is configured. |
| T2 | s | 30 | During this time UE is in RRC_IDLE state and Cell 2 becomes detectable. |
| T3 | s | 5 | During this time UE determines the validity of reported idle/inactive and reselection measurements. |

| | | | |
|---|---|---|---|
| T4 | s | 1 | During this time UE shall send a valid measurement report with SSB index of Cell 2 to the PCell. |
| T5 | s | 4 | During this time SCell (Cell 2) is configured via RRC signalling. |
| T6 | s | 1 | During this time UE completes the activation of SCell (Cell 2). |
| Filter coefficient | | 0 | L3 filtering is not used |
| *measIdleValidityDuration-r18* | s | 5 | Applicable and configured when UE supporting *measValidationReportEMR-r18* is tested in this test. |
| *measReselectionValidityDuration-r18* | s | 5 | Applicable and configured when UE supporting *measValidationReportReselectionMeasurements* is tested in this test. |
| *measIdleDuration-r16* | s | 60 | Value for timer T331 for UE performing idle/inactive measurements while in RRC_IDLE or RRC_INACTIVE. |
| PRACH configuration index | | 102 | The detailed configuration is specified in TS 38.211 clause 6.3.3.2. |
| $T_{HARQ}$ | ms | Config 1: 2<br>Config 2: 3<br>Config 3: 2.5 | $k_1 \times$NR slot length, where $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by *dl-DataToUL-ACK*, the value of $k_1$ should be the minimum value defined in TS 38.213 [3] that will meet the timing constraints of this test case. |
| $T_{CSI_Reporting}$ | ms | 15 | The delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214 [26]) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |

| Correlation Matrix and Antenna Configuration | | | 2x2 Low | | | | | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.

NOTE 3: SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.

NOTE 5: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 10 MHz, 52 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

NOTE 6: All UL/DL transmission shall be confined within $BW_{occupied}$ (i.e. 40 MHz, 106 PRBs) from $F_{C,low}$, and Io is independent of the $BW_{channel}$ configured.

NOTE 7: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.

| Parameter | Unit | Cell 2 | | | | | |
|---|---|---|---|---|---|---|---|
| | | T1 | T2 | T3 | T4 | T5 | T6 |
| NOTE 8: On top of the reference configurations, CSI-RS offset should be set to meet the CSI reference resource timing definition in clause 5.2.2.5 in TS 38.214 [26]. | | | | | | | |

### A.6.5.3.26.2 Test Requirements

The UE shall complete the SCell activation no later than at slot $n + \frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$.

The UE shall report non-zero CQI for SCell from slot $n + \frac{T_{HARQ}+T_{activation_time}+T_{CSI_Reporting}}{NR\ slot\ length}$ and onwards throughout time period T6.

$T_{activation_time}$ is defined in clause 8.3.2A in TS 38.133 for FR1 SCell as $T_{activation_time}$ is $T_{FirstSSB_MAX} + T_{rs}$ + 5ms.

The observed SCell activation delay fulfiiling the SCell activation delay requirements specified in clause 8.3.2A in TS 38.133 is counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90 %.

## A.6.5.3.27 EMR based Direct SCell activation at SCell addition of unknown SCell in FR1

### A.6.5.3.27.1 Test Purpose and Environment

The purpose of this test is to verify that the EMR (early measurement reporting) based direct SCell activation delay as defined in clause 8.3.4, when the SCell in FR1 is unknown by the UE at the time of activation.

The supported test configurations for NR PCell are shown in table A.6.5.3.27.1-1. The supported test configurations for NR SCell are shown in table A.6.5.3.27.1-1A. Test configurations for NR PCell and test configurations for NR SCell are chosen independently.

The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as outlined in table A.6.5.3.27.1-2. Cell-specific parameters for PCell and SCell are provided in table A.6.5.3.27.1-3 and table A.6.5.3.27.1-4, respectively.

There are two carriers, each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), and Cell 2 (SCell) is on RF channel 2 (SCC). Cell 1 and Cell 2 both operate according to one of the configurations in table A.6.5.3.27.1-1 and table A.6.5.3.27.1-1A respectively.

Before the test starts the UE is connected to Cell 1 on RF channel 1. The UE is only monitoring RF channel 1 and is not aware of Cell 2 on RF channel 2.

The test consists of 5 successive time periods, with time duration of T1, T2, T3, T4, and T5 respectively.

During T1, the UE is connected to Cell 1 only and shall not have any timing information of Cell 2. UE is configured with early measurement reporting for Cell 2 in

*measIdleCarrierListNR-r16* for UE supporting *measValidationReportEMR-r18* or

*idleInactiveNR-MeasReport-r16* only, or

*measReselectionCarrierListNR-r18* for UE supporting *measValidationReportReselectionMeasurements-r18*.

Beam level reporting for early measurements is configured. The time point when UE receives RRC_Release message from the TE defines the starting point of T2.

During T2 and T3 the UE is in idle mode.

At the beginning of T2, Cell 2 becomes detectable however cell reselection shall not be performed. Signal level of Cell 2 is set to the value given in table A.6.5.3.27.1-4. The time when T331 timer expires defines the ending point of T2.

At the beginning of T3, the signal level of the neighbour cell is set to turned off. The duration of the T3 equals to *measIdleValidityDuration-r18* or *measReselectionValidityDuration-r18* depending on the UE capabilities of the UE under test.

The time when TE sends the paging message is defined as the starting point of T4. During T4, in this test the UE shall send measurement report with SSB index of Cell 2 to the PCell.

At the beginning of T5 the UE receives the RRC connection reconfiguration message at the UE antenna connector. The corresponding slot at which the message is received at the UE antenna connector is denoted *n*. The UE shall complete activation of the SCell no later than in slot n + $\frac{N_{direct}}{NR\ slot\ length}$, as specified in clause 8.3.4 and $T_{activation_time}$ in $N_{direct}$ is defined in clause 8.3.2A. From slot n + $\frac{N_{direct}}{NR\ slot\ length}$ and onwards the UE shall report valid CSI both for PCell and SCell.

The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received.

**Table A.6.5.3.27.1-1: Supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration, | |

**Table A.6.5.3.27.1-1A: Supported test configurations for NR SCell**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | |

**Table A.6.5.3.27.1-2: General test parameters**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| NR RF Channel Number | | 1, 2 | Two NR radio channels are used for this test |
| Active PCell | | Cell 1 | Primary cell on NR RF channel number 1. |
| Inter-frequency neighbor cell (SCell to-be) | | Cell 2 | Inter-frequency neighbor cell on NR RF channel number 2 |
| CP length | | Normal | |
| DRX | | OFF | Continuous monitoring of primary cell |
| Measurement gap pattern | | gp0 | Measurement gap is used during parts of time period T5 for detection of Cell 2. |
| SCell measurement cycle (measCycleSCell) | ms | 160 | Measurement cycle for SCell does not come into effect in direct activation at SCell addition. |
| Timing offset between Cell 1 and Cell 2 | μs | ≤ MRTD | The value of maximum timing offset depends upon the carrier aggregation scenario. |
| T1 | s | 10 | During this time UE connects to PCell and early measurement report on the carrier frequency of Cell 2 is configured. |
| T2 | s | 30 | During this time UE is in RRC_IDLE state and Cell 2 becomes detectable. |
| T3 | s | 5 | During this time UE determines the validity of reported idle/inactive and reselection measurements. |
| T4 | s | 1 | During this time UE shall send a measurement report with SSB index of Cell 2 to the PCell. |
| T5 | s | 5 | During this time SCell (Cell 2) is configured via RRC signalling and the UE completes the activation of SCell (Cell 2) |

| | | | |
|---|---|---|---|
| *measIdleValidityDuration-r18* | s | 5 | Applicable and configured when UE supporting *measValidationReportEMR-r18* is tested in this test. |
| *measReselectionValidityDuration-r18* | s | 5 | Applicable and configured when UE supporting *measValidationReportReselectionMeasurements* is tested in this test. |
| *measIdleDuration-r16* | s | 60 | Value for timer T331 for UE performing idle/inactive measurements while in RRC_IDLE or RRC_INACTIVE. |
| A3-offset | dB | -15 | |
| $T_{HARQ}$ | ms | k1×NR slot length | k1 is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by dl-DataToUL-ACK if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| $T_{CSI_Reporting}$ | ms | 2 | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2] |
| k | ms | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe},\ \mu} + 1$ | As specified in clause 4.3 of TS 38.213 [3] |

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP, SCH_RP, and Io levels have been derived from other parameters for information purpose. They are not settable parameters themselves.

#### A.6.5.3.27.2 Test Requirements

The UE shall complete the SCell activation no later than at slot n + $\frac{N_{direct}}{NR\ slot\ length}$.

The UE shall report non-zero CQI for SCell from slot n + $\frac{N_{direct}}{NR\ slot\ length}$ and onwards throughout time period T5.

$T_{activation_time}$ in $N_{direct}$ is defined in clause 8.3.2A in TS 38.133 for FR1 SCell as $T_{activation_time}$ is $T_{FirstSSB_MAX}$ + $T_{rs}$ + 5ms.

The observed SCell activation delay fulfilling the SCell activation delay requirements specified in clause 8.3.4 in TS 38.133 is counted as correct. The rate of correct observed SCell activation delay during repeated tests shall be at least 90%.

## A.6.5.4 UE UL carrier RRC reconfiguration Delay

### A.6.5.4.1 UE UL carrier RRC reconfiguration Delay

**Table A.6.5.4.1-1 - Table A.6.5.4.1-4 : Void**

#### A.6.5.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that when the UE receives a RRC message implying NR UL or Supplementary UL carrier configuration, the UE shall be ready to start transmission on the newly configured carrier within the time limits specified in clause 8.4.2 and 8.4.3 for configuring and deconfiguring, respectively.

There is one cell with two UL carriers: FR1 PCell and FR1 SUL. Both NR uplink and supplementary uplink are broadcast by *ServingCellConfigCommonSIB.* The test parameters for PCell and SUL are given in Table A. 6.5.4.1.1-1, Table A.6.5.4.1.1-2, Table A.6.5.4.1.1-3 and Table A.6.5.4.1.1-4 below. The test consists of three time periods, with duration of T1, T2 and T3 respectively. During time duration T1, only NR uplink of PCell is configured to UE. At the start of T2, a supplementary uplink is configured to UE through *RRCReconfiguration*, then UE shall start transmission on the supplementary uplink. At the start of T3, the supplementary uplink is released through *RRCReconfiguration*.

**Table A.6.5.4.1.1-1: Supported test configurations**

| Configuration | PCell | SUL |
|---|---|---|
| 1 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | SUL: 15 kHz SCS, 10 MHz bandwidth, SUL duplex mode |
| 2 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | SUL: 30kHz SCS, 40 MHz bandwidth, SUL duplex mode |
| 3 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | SUL: 15 kHz SCS, 10 MHz bandwidth, SUL duplex mode |
| 4 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | SUL: 30kHz SCS, 40 MHz bandwidth, SUL duplex mode |
| 5 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | SUL: 15 kHz SCS, 10 MHz bandwidth, SUL duplex mode |
| 6 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | SUL: 30kHz SCS, 40 MHz bandwidth, SUL duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations<br>Note 2: Void | | |

**Table A.6.5.4.1.1-2: General test parameters for NR standalone UE UL carrier RRC reconfiguration Delay on Pcell**

| Parameter | Unit | Test configuration | Value | Comment |

NOTE 1: OCNG shall be used such that both cells are fully allocated, and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled within $BW_{occupied}$.
NOTE 3: $\hat{E}_s / I_{ot}$, Io, and SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: Void.
NOTE 5: Void.
NOTE 6: $N_{PRB,c}$. is derived from Table 5.3.2-1 in TS38.101-1[18] with configured $BW_{channel}$.

#### A.6.5.4.1.2 Test Requirements

The UE shall be ready to start transmission on the supplementary uplink carrier on SUL within 20ms from the start of T2.

The UE shall stop the transmission on the supplementary uplink carrier on SUL within 20ms from the start of T3.

All of the above test requirements shall be fulfilled in order for the observed UE UL carrier configuration delay and UE UL carrier release delay to be counted as correct. The rate of correct observed UE UL carrier configuration delay and UE UL carrier release delay during repeated tests shall be at least 90%.

### A.6.5.4.2 Void

## A.6.5.5 Beam Failure Detection and Link recovery procedures

### A.6.5.5.1 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in non-DRX mode

#### A.6.5.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in tables A.6.5.5.1.1-1, A.6.5.5.1.1-2, A.6.5.5.1.1-3 and A.6.5.5.1.1-4 below. There is one cell, Cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.1.1-1 shows the variation of the downlink SNR of the SSB in set $q_0$ in the active cell to emulate SSB based beam failure. Figure A.6.5.5.1.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.6.5.5.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.4.5.5.1.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.

**Table A.6.5.5.1.1-4: Void**

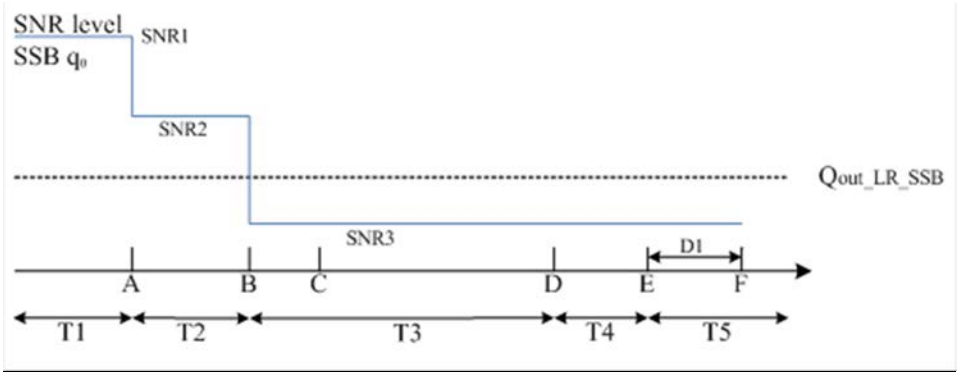

**Figure A.6.5.5.1.1-1: SNR variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

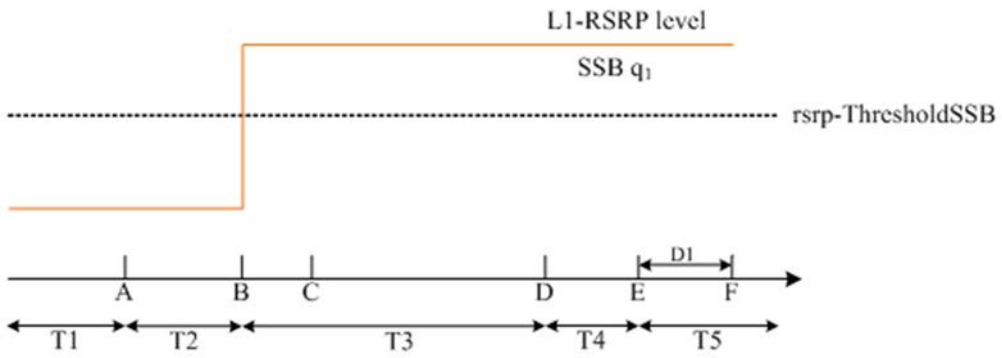

**Figure A.6.5.5.1.1-2: L1-RSRP level variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.6.5.5.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 120+20 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.5.2 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in DRX mode

### A.6.5.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in tables A.6.5.5.2.1-1, A.6.5.5.2.1-2, A.6.5.5.2.1-3, A.6.5.5.2.1-4 and A.6.5.5.2.1-5 below. There is one cell, Cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.2.1-1 shows the variation of the downlink SNR of the SSB in set $q_0$ in the active cell to emulate SSB based beam failure. Figure A.6.5.5.2.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.6.5.5.2.1-1: Supported test configurations for FR1 PCell**

#### A.6.5.5.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 1920+20 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.5.3 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in non-DRX mode

#### A.6.5.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in tables A.6.5.5.3.1-1, A.6.5.5.3.1-2, and below. There is one cell, Cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.3.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active cell to emulate CSI-RS based beam failure. Figure A.6.5.5.3.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

**Table A.6.5.5.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

### A.6.5.5.3.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 30+20 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.5.4 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in DRX mode

### A.6.5.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in tables A.6.5.5.4.1-1, A.6.5.5.4.1-2, A.6.5.5.4.1-3, and A.6.5.5.4.1-4 below. There is one cell, Cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.4.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_0$ in the active cell to emulate CSI-RS based beam failure. Figure A.6.5.5.4.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.6.5.5.4.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Figure A.6.5.5.4.1-2: L1-RSRP level variation for CSI-RS based beam failure detection and link recovery testing in DRX mode**

#### A.6.5.5.4.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 1920+20 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.5.5 Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in non-DRX mode

#### A.6.5.5.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP without *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in tables A.6.5.5.5.1-1, A.6.5.5.5.1-2, and below. There are two cells, Cell 1 is the PCell and Cell 2 is the SCell, in the test. UE is not provided by *schedulingRequestID-BFR-SCell-r16*, i.e., no configuration for PUCCH transmission resources, and UE shall perform the random access procedure to recover the beam failure. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.5.1-1 shows the SNR of the CSI-RS in set $q_0$ in the active SCell to emulate beam failure. Figure A.6.5.5.5.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

**Table A.6.5.5.5.1-1: Supported test configurations for FR1 PCell and SCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

### A.6.5.5.5.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 120+10 ms after the start of T5, the UE shall transmit preamble for UL-SCH resource application, followed by MAC-CE on the assigned uplink resources containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble earlier than time point B.

During T5, the System Simulator shall transmit a Random Access Response to UE after the System Simulator receives the preamble from UE. The UE shall transmit the msg.3 containing candidate beam set q1 for SCell BFR if UE receives the Random Access Response.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.5.6 Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in DRX mode

### A.6.5.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP without *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.6.5.5.6.1-1, A.6.5.5.6.1-2, and A.6.5.5.6.1-3 below. There are two cells, Cell 1 is the PCell and Cell 2 is the SCell, in the test. UE is not provided by *schedulingRequestID-BFR-SCell-r16*, i.e., no configuration for PUCCH transmission resources, and UE shall perform the random access procedure to recover the beam failure. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.6.1-1 shows the SNR of the CSI-RS in set $q_0$ in the active SCell to emulate beam failure. Figure A.6.5.5.6.1-2 shows the variation of the downlink L1-RSRP of the SSB in set $q_1$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in SCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.6.5.5.6.1-1: Supported test configurations for FR1 PCell and SCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

**Figure A.6.5.5.6.1-2: L1-RSRP level variation for beam failure detection and link recovery testing for SCell in DRX mode**

### A.6.5.5.6.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 120+10 ms after the start of T5, the UE shall transmit preamble for UL-SCH resource application, followed by MAC-CE on the assigned uplink resources containing a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble earlier than time point B.

During T5, the System Simulator shall transmit a Random Access Response to UE after the System Simulator receives the preamble from UE. The UE shall transmit the msg.3 containing candidate beam set q1 for SCell BFR if UE receives the Random Access Response.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.5.7 TRP Specific Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in DRX mode

### A.6.5.5.7.1 Test Purpose and Environment

The test scenario is NR configured in the test contains two TRPs (i.e., TRP0 and TRP1). Each TRP is configured with different CSI-RS for beam failure detection and candidate beam detection. CSI-RS is configured as BFD-RS and CBD-RS.

The purpose of this test is to verify that the UE properly detects TRP specific CSI-RS-based beam failure in the sets $q_{0,0}$ for TRP0 configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set $q_{1,0}$. The purpose is to test the downlink monitoring for beam failure detection on TRP0 within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based TRP specific beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.18 with *schedulingRequestID-BFR-r17* configured.

The test parameters are given in Tables A.6.5.5.7.1-1, A.6.5.5.7.1-2, and A.6.5.5.7.1-3 below. There is one cell, Cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.7.1-1 shows the variation of the downlink SNR of the CSI-RS in set $q_{0,0}$ and $q_{0,1}$ for TRP0 and TRP1 respectively to emulate CSI-RS based beam failure on TRP0. Figure A.6.5.5.7.1-2 shows the variation of the downlink L1-RSRP of the CSI-RS in set $q_{1,0}$ and $q_{1,1}$ of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.6.5.5.7.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description |
|---|---|
| 1 | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2 | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3 | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 | |

NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
NOTE 4: Void
NOTE 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
NOTE 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
NOTE 7: SNR levels correspond to the signal to noise ratio over the REs carrying CSI-RS.
NOTE 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.6.5.5.7.1-1.
NOTE 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.

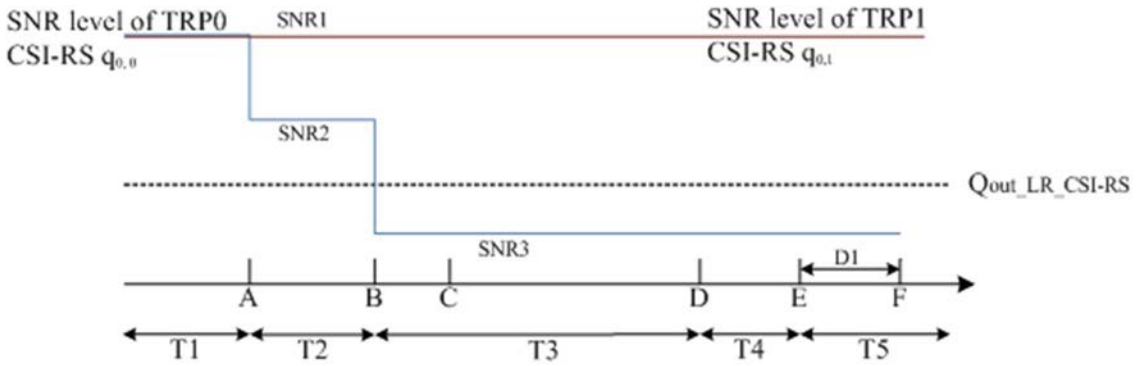

**Figure A.6.5.5.7.1-1: SNR variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode**

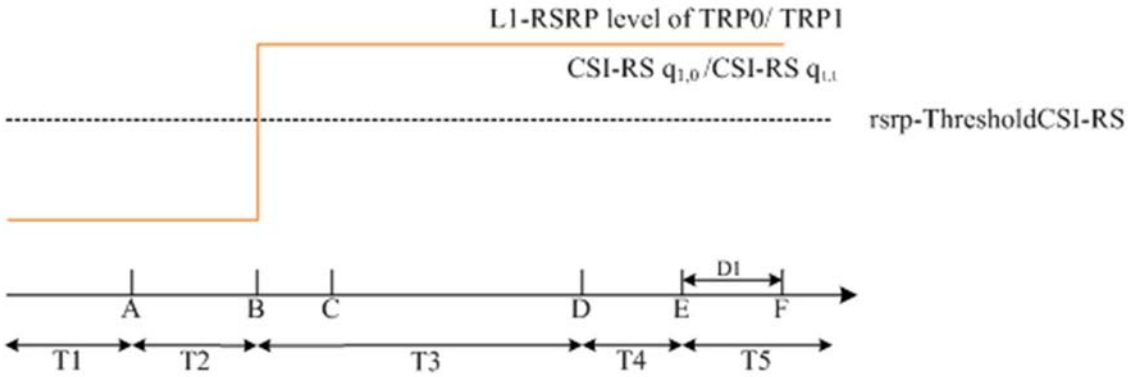

**Figure A.6.5.5.7.1-2: L1-RSRP level variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode**

### A.6.5.5.7.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_{1,0}$.

No later than time point F occurring no later than D1 = 1920+10 ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set $q_{1,0}$. The UE shall not transmit PUCCH with an LRR with the candidate beam set $q_{1,0}$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.5.8 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in non-DRX mode for a UE operating on a cell with less than 5 MHz BW

### A.6.5.5.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *support3MHz-ChannelBW-Symmetric-r18* properly detects SSB-based beam failure in the set $q_0$ configured for a serving cell operating on a less than 5 MHz bandwidth, and that the UE performs correct SSB-based link recovery based on beam candidate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

Supported test configurations are specified in table A.6.5.5.8.1-1. General test parameters as specified in table A.6.5.5.1.1-2 with config 1 apply except those specified in table A.6.5.5.8.1-2. Cell specific test parameters as specified in table A.6.5.5.1.1-3 apply except those specified in table A.6.5.5.8.1-3.

The test procedure specified in clause A.6.5.5.1.1 applies to this test.

## A.6.5.5.8.2 Test Requirements

Test requirements specified in clause A.6.5.5.1.2 apply to this test.

## A.6.5.5.9 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in non-DRX mode for a UE operating with SBFD

### A.6.5.5.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE supporting *supportSBFD* properly detects CSI-RS-based beam failure in the set $q_0$ configured for a serving cell operating on SBFD, and that the UE performs correct CSI-RS-based link recovery based on beam candicate set $q_1$. The purpose is to test the downlink monitoring for beam failure detection within the DL subband of UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

Supported test configurations are specified in Table A.6.5.5.9.1-1. General test parameters as specified in Table A.6.5.5.3.1-2 with config 3 apply except those specified in Table A.6.5.5.9.1-2. Cell specific test parameters as specified in Table A.6.5.5.3.1-3 apply except those specified in Table A.6.5.5.9.1-3.

The test procedure specified in clause A.6.5.5.3.1 applies to this test. In addition, during T3 and T5, there is overlapping between occasions of the CSI-RS resource for BFD ($q_0$) and dynamic UL transmission on SBFD symbols, as specified in A.3.

**Table A.6.5.5.9.1-1: Supported test configurations for FR1 PCell**

#### A.6.5.5.9.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set $q_1$.

No later than time point F occurring no later than D1 = 30+20+10 ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set $q_1$. The UE shall not transmit preamble on a beam associated with the candidate beam set $q_1$ earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90 %.

## A.6.5.6 Active BWP switch

### A.6.5.6.1 DCI-based and Timer-based Active BWP Switch

#### A.6.5.6.1.1 NR FR1- NR FR1 DL active BWP switch of SCell with non-DRX in SA

##### A.6.5.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations for PCell are shown in table A.6.5.6.1.1.1-1 below. Supported test configurations for NR SCell are shown in table A.6.5.6.1.1.1-1A below. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. The test scenario comprises of one NR PCell (Cell 1) and one SCell (Cell 2) as given in table A.6.5.6.1.1.1-2. NR Cell-specific parameters are specified in table A.6.5.6.1.1.1-3 and table A.6.5.6.1.1.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.
- UE is configured with a *bwp-InactivityTimer* timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.
>
> The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).
>
> The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment will not transmit DCI format for PDSCH reception on SCell (Cell 2).

During T3,

> The time period T3 starts from the slot #*j*, where j is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.
>
> The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).
>
> The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

**Table A.6.5.6.1.1.1-1: DL BWP switch supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |

#### A.6.5.6.1.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in TS 38.321 [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first DL slot that occurs after the beginning of DL slot ($i+ T_{BWPswitchDelay}+k1$), ($j+ T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.6.5.6.1.2 NR FR1 DL active BWP switch with non-DRX in SA

#### A.6.5.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6.

The supported test configurations are shown in table A.6.5.6.1.2.1-1. The test scenario comprises of one cell (Cell 1) as given in table A.6.5.6.1.2.1-2. Cell-specific parameters of the cell are specified in table A.6.5.6.1.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1.
- UE is configured with a *bwp-InactivityTimer* timer value for Cell 1.

The cell has constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for DL BWP switch, sent from the test equipment to the UE, is received at the UE side in Cell 1's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2.
>
> The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ($i+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 no later than the first UL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-2 starting from the first DL slot that occurs after the beginning of slot ($i+T_{BWPswitchDelay}$).

During T2, the test equipment will not transmit DCI format for PDSCH reception on Cell 1.

During T3,

> The time period T3 starts from the slot #*j*, where j is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.
>
> The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's slot ($j+T_{BWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 at latest on the first UL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}+k1$). The UE shall be continuously scheduled on Cell 1's BWP-1 starting from the first DL slot that occurs after the beginning of slot ($j+T_{BWPswitchDelay}$).

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

**Table A.6.5.6.1.2.1-1: DL BWP switch supported test configurations**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

#### A.6.5.6.1.2.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($i+T_{BWPswitchDelay}+k1$).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ($j+T_{BWPswitchDelay}+k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in TS 38.321 [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{BWPswitchDelay}$ defined in table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed Cell 1 active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot ($i+T_{BWPswitchDelay}+k1$), ($j+T_{BWPswitchDelay}+k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.6.5.6.2 RRC-based Active BWP Switch

#### A.6.5.6.2.1 NR FR1 DL active BWP switch of Cell with non-DRX in SA

#### A.6.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.

The supported test configurations are shown in table A.6.5.6.2.1.1-1. The test scenario comprises of one Cell (Cell 1) as given in table A.6.5.6.2.1.1-2. Cell-specific parameters of Cell are specified in table A.6.5.6.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in Cell 1.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1 on BWP-1 of final condition. The UE shall be continuously scheduled on PCell's BWP-1 of final condition starting from the first DL slot right after slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$.

$T_{\text{RRCprocessingDelay}}$ and $T_{\text{BWPswitchDelayRRC}}$ are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in Cell by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when a vaild ACK/NACK is received is received.

**Table A.6.5.6.2.1.1-1: DL BWP switch supported test configurations in SA scenario**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations | |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].

#### A.6.5.6.2.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for the Cell from the first DL slot that occurs right after the begining of slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{\text{RRCprocessingDelay}}+T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ + k1.

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in TS 38.321 [7].

All of the above test requirements shall be fulfilled in order for the observed Cell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

#### A.6.5.6.3.1 NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA

#### A.6.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify requirements on the DL BWP switch delay on multiple CCs and interruption requirement for NR victim cell, both defined in clause 8.6.

The supported test configurations for NR PCell are shown in table A.6.5.6.3.1.1-1 below. The supported test configurations for NR SCells are shown in table A.6.5.6.3.1.1-1A below. Test configuration for NR PCell and test configuration for NR SCells are chosen independently. Test configuration for two NR SCells are chosen independently. The test scenario comprises of one NR PCell (Cell 1) and two NR SCells (Cell 2 and Cell 3) as given in table A.6.5.6.3.1.1-2. NR Cell-specific parameters are specified in table A.6.5.6.3.1.1-3, table A.6.5.6.3.1.1-4 and table A.6.5.6.3.1.1-5 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) and SCell (Cell 3) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and Cell 3 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 3) to ensure that the UE will have ACK/NACK sending.Before the test starts,

- UE is connected to PCell (Cell 1) on radio channel 1 (PCC), and SCell (Cell 2) on radio channel 2 (SCC) and SCell (Cell 3) on radio channel 3(SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for SCell (Cell 2) and SCell (Cell 3), BWP-1 and BWP-2, in Cell 2 and Cell 3 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for PCell (Cell 1). BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell (Cell 2) and SCell (Cell 3).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell (Cell 1).
- UE is configured with a *bwp-InactivityTimer* timer value for SCell (Cell 2) and SCell (Cell 3).

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

> Time period T1 starts when a DCI format 1_1 command for both SCell (Cell 2) and SCell (Cell 3) DL BWP switch, sent from the test equipment to the UE, is received at the UE side in both SCell (Cell 2)'s and SCell (Cell 3)'s slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2 at both SCell (Cell 2) and SCell (Cell 3).
>
> The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell (Cell 2)'s and SCell (Cell 3)'s DL slot ($i+ T_{MultipleBWPswitchDelay}$) as defined in clause 8.6.2A.1 and starts to report valid ACK/NACK for the both SCell (Cell 2) and SCell (Cell 3) no later than the first UL slot that occurs after the beginning of slot ($i+ T_{MultipleBWPswitchDelay} +k1$). The UE shall be continuously scheduled on both SCell (Cell 2)'s and SCell (Cell 3)'s BWP-2 no later than the first DL slot that occurs after the beginning of slot ($i+ T_{MultipleBWPswitchDelay}$).
>
> The starting time of PCell interruption due to BWP switch on SCell (Cell 2) and SCell (Cell 3) shall occur within the BWP switch delay.

During T2, the test equipment will not transmit DCI format for PDSCH reception on SCell (Cell 2) and SCell (Cell 3).

During T3,

> The time period T3 starts from the slot #*j*, where j is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1 on both SCell (Cell 2) and SCell (Cell 3).

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell (Cell 2)'s an SCell (Cell 3)'s slot ($j+ T_{MultipleBWPswitchDelay}$) as defined in clause 8.6.2A.1 and starts to report valid ACK/NACK for the SCell (Cell 2) and SCell (Cell 3) no later than the first UL slot that occurs after the beginning of slot ($j+ T_{MultipleBWPswitchDelay} +k1$). The UE shall be continuously scheduled on SCell (Cell 2)'s and SCell (Cell 3)'s BWP-1 no later than the first DL slot that occurs after the beginning of slot ($j+ T_{MultipleBWPswitchDelay}$).

The starting time of PCell interruption due to BWP switch of SCell (Cell 2) and SCell (Cell 3) shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCells by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCells, respectively.

**Table A.6.5.6.3.1.1-1: DL BWP switch supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration | |

**Table A.6.5.6.3.1.1-1A: DL BWP switch supported test configurations for NR SCells**

| $Config_{SCell}$ | Description |

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.

NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].

#### A.6.5.6.3.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for both SCell (Cell 2) and SCell (Cell 3) from the first UL slot that occurs after the beginning of DL slot ($i+ T_{MultipleBWPswitchDelay} +k1$).

During T3, the UE shall start to send the ACK/NACK for both SCell (Cell 2) and SCell (Cell 3) from the first UL slot that occurs after the beginning of DL slot ($j+ T_{MultipleBWPswitchDelay} +k1$).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in TS 38.321 [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration $T_{MultipleBWPswitchDelay}$ defined in 8.6.2A.1.

All of the above test requirements shall be fulfilled in order for the observed Cell 2 and Cell 3 active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T3, the start time of PCell interruption during SCell (Cell 2) and SCell (Cell 3) active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed SCell (Cell 2) and SCell (Cell 3) active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot ($i+ T_{MultipleBWPswitchDelay} +k1$), ($j+ T_{MultipleBWPswitchDelay} +k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.6.5.6.4 SCell dormancy switch

#### A.6.5.6.4.1 NR FR1 PCell SCell dormancy switch of single FR1 SCell outside active time

##### A.6.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify the SCell dormancy switch delay requirements defined in clause 8.6 when the UE is triggered to switch between dormancy to non-dormancy and non-dormancy to dormancy outside the DRX active time. Further the test purpose is to verify the interruption rate on other serving cells when the UE performing CSI and RRM measurements on dormant SCell(s) as defined in clause 8.2.2.2.12 and also to verify the interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

In the test scenario UE is connected to one PCell (Cell 1) in FR1 and one SCell in FR1. In the test the SCell is switched from non-dormancy to dormancy, and vice versa, at a point in time before start of *onDuration*. The UE is configured to monitor PDCCH for DCI format 2_6 at *ps-Offset* before the start of *onDuration*. Two tests are specified, where a UE that only supports triggering within the first three OFDM symbols of a slot shall undergo Test1 only, and a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo both Test1 and Test2. In the tested scenario, *ps-Offset* is selected to correspond to the dormancy switching time specified in clause 8.6.

The supported test configurations for NR PCell are shown in table A.6.5.6.4.1.1-1, The supported test configurations for NR SCell are shown in table A.6.5.6.4.1.1-1A. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. The general test parameters are given in table A.6.5.6.4.1.1-2. NR Cell-specific parameters are specified in table A.6.5.6.4.1.1-3 and table A.6.5.6.4.1.1-4.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.

- UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell.
- UE is indicated in *dormantBWP -Id* that the active DL BWP is BWP-2 in the SCell.
- UE is configured with DRX.
- UE is configured to monitor DCI format 2_6, and to be active during *onDuration* even when no DCI format 2_6 is detected (*ps-WakeUp*).

All cells have constant signal levels throughout the test.

The test consists of 4 successive time periods, with durations of T1, T2, T3 and T4, respectively.

During T1,

Time period T1 starts when a DCI format 2_6 command intended for dormant BWP switch in a SCell from non-dormancy to dormancy, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i* (at *ps-Offset* before *onDuration*). Upon reception of the PDCCH indicating entering dormant BWP in PCell (i.e. through cross-carrier scheduling), UE shall switch the DL BWP-1 to DL BWP-2 in SCell, i.e., switching from non-dormant BWP to dormant BWP and the UE shall complete the switching before the start of *onDuration*.

The UE shall be able to receive PDCCH on PCell no later than the first DL slot that occurs after the beginning of PCell's DL slot ($i+ T_{dormantBWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK on the PCell no later than the first UL slot that occurs after the beginning of slot ($i+N$) as defined in clause 10.3 in TS38.213. The UE shall be continuously scheduled on PCell's BWP-0 no later than the first DL slot that occurs after the beginning of slot ($i+ T_{dormantBWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to dormancy switching on SCell shall occur within the dormant BWP switch delay, i.e. before start of *onDuration*.

The UE shall not transmit signals on SCell after the beginning of PCell's DL slot (i+ TdormantBWPswitchDelay) as defined in clause 8.6. The UE shall not be scheduled on SCells BWP-1 no later than the first DL slot that occurs after the beginning of slot (i+ TdormantBWPswitchDelay).

Time period T2 starts when T1 is completed. During T2, the test equipment continues to schedule the UE continuously in PCell. The UE shall carry out CSI and RRM measurements on the dormant SCells. The UE shall report ACK/NACK in PCell in response to scheduled PDSCH, with the maximum loss of transmitted ACK/NACKs fulfilling the requirement in clause 8.2.2.2.12. The test equipment verifies that the loss of ACK/NACKs is no larger than 1.5 %.

Time period T3 starts when T2 is completed. During T3, the test equipment does not schedule the UE, by which the inactivity timer expires and the UE stops monitoring PDCCH except for signalling using DCI format 2_6 at wake-up signalling occasions.

During T4,

Time period T4 starts when a DCI format 2_6 command for leaving dormant BWP in SCell, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted j (at ps-Offset before onDuration). Upon reception of the PDCCH indicating leaving dormant BWP in PCell (i.e. through cross-carrier scheduling), UE shall switch the DL BWP-2 to DL BWP-1 in SCell, i.e., switching from dormant BWP to non-dormant BWP.

The UE shall be able to receive PDSCH on PCell and SCell no later than the first DL slot that occurs after the beginning of PCell's DL slot ($j+ T_{dormantBWPswitchDelay}$) as defined in clause 8.6 and starts to report valid ACK/NACK on the PCell (for both PCell and SCell) no later than the first UL slot that occurs after the beginning of slot ($j+N$) as defined in clause 10.3 in TS 38.213. The UE shall be continuously scheduled on PCell's BWP-0 no later than the first DL slot that occurs after the beginning of slot ($j+ T_{dormantBWPswitchDelay}$).

The starting time of PCell (Cell 1) interruption due to dormancy switching on SCell shall occur within the dormant BWP switch delay.

The UE shall be ready to transmit signals on SCell no later than the first DL slot that occurs after the beginning of PCell's DL slot (j+ TdormantBWPswitchDelay) as defined in clause 8.6. The UE shall be ready to continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot (j+ TdormantBWPswitchDelay).

The test equipment verifies the DL dormant BWP switch time in SCell by counting the slots from the time when the dormant BWP switch command is received till an ACK/NACK on PCell is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during dormant BWP switch of SCell (i.e. before start of *onDuration*), respectively.

A.6.5.6.4.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot (*i+N*) (i.e. from the start of *onDuration*).

During time period T2, the UE shall transmit ACK/NACKs in response to scheduling in PCell and the rate of missed ACK/NACKs shall be no more than 1.5 %.

During T4, the UE shall start to send the ACK/NACK for PCell and SCell from the first UL slot that occurs after the beginning of DL slot (*j+N*) (i.e. from the start of *onDuration*).

Where, *N* is the timing that UE provide HARQ-ACK information in response to a detection of a DCI format 2_6 indicating SCell dormancy as specified in [3].

All of the above test requirements shall be fulfilled in order for the observed SCell dormant BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

During T1 and T4, the start time of PCell interruption during SCell dormant BWP switch shall not happen outside the dormant BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for dormant BWP switch in clause 8.6.

NOTE: During T1, T4 if there are no uplink resources for reporting the ACK/NACK in the first DL slot that occurs after the beginning of DL slot (*i+ N*), (*j+ N*), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.6.5.6.4.2 NR FR1 PCell SCell dormancy switch of two FR1 SCells inside active time

#### A.6.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of SCell dormancy switching delay requirements in clause 8.6.2A, requirements on interruptions due to SCell dormancy switching in clause 8.2.2.2.12.1, and requirements on interruptions due to CSI and RRM measurements on dormant SCells in clauses 8.2.2.2.12.2 and 8.2.2.2.12.3, respectively. In the tested scenario, the UE is connected to PCell and two SCells in FR1, and the SCells are switched from non-dormancy to dormancy, and back, during active time. Depending on UE capability on whether DCI for dormancy switching can be received also later than within the initial three OFDM symbols of a slot, the UE may have to undergo one or two sets of tests. A UE that only supports triggering during within the first three OFDM symbols of a slot shall only undergo Test1 and Test2, whereas a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo Test1 through Test4.

The supported test configurations for NR PCell are provided in table A.6.5.6.4.2.1-1 below. The supported test configurations for NR SCells are provided in table A.6.5.6.4.2.1-1A below. Test configuration for NR PCell and test configuration for NR SCells are chosen independently. Test configurations for two NR SCells are chosen independently. General test parameters are provided in table A.6.5.6.4.2.1-2, and cell-specific parameters are provided in table A.6.5.6.4.2.1-3, table A.6.5.6.4.2.1-4 and table A.6.5.6.4.2.1-5 below.

The tests consist of three consecutive time periods T1, T2, and T3, respectively.

Three carriers are used in the test, each within FR1 and each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), Cell 2 (SCell 1) is on RF channel 2 (SCC1), and Cell 3 (SCell2) is on RF channel 3 (SCC2). All three cells have constant signal levels throughout the test. The UE is continuously scheduled in PCell throughout the test.

Before the test starts,

- UE is connected to Cell 1 (PCell), Cell 2 (SCell 1) and Cell 3 (SCell2).
- UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is configured with one non-dormant and one dormant UE-specific downlink bandwidth part, BWP-0 and BWP-1, respectively, for Cell 2 and Cell 3. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 1 is BWP-0.

- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 2 is BWP-0.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 3 is BWP-0.
- UE is continuously scheduled in PCell, SCell 1 and SCell2.

T1 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PCell at the antenna connector, in a slot # denoted *m*, pertaining to dormancy indication for switching SCell 1 and SCell2 from non-dormancy to dormancy. The UE shall complete switching of the SCells to dormancy by the end of slot *m* + ceil($T_{MultipleBWPswitchDelay}$/NR slot length) + 1 in Test1 and Test2, and slot *m* + ceil($T_{MultipleBWPswitchDelay}$/NR slot length) + 2 in Test3 and Test4, as specified in clause 8.6.2A. Any PCell interruptions due to the switching between non-dormant and dormant BWPs shall fulfill requirements in clause 8.2.2.2.12.1. The test equipment verifies that interruptions due to switching from non-dormancy to dormancy are within the requirements by analysing HARQ feedback transmitted in PCell for PCell.

During T2, the UE is carrying out CSI and RRM measurements on dormant SCell 1 and SCell2. Any PCell interruptions due to CSI and RRM measurements shall fulfill requirements in clauses 8.2.2.2.12.2 and 8.2.2.2.12.3, respectively. The test equipment verifies that the interruptions are within the allowed percentages by counting ACK/NACKs in PCell. At the end of T2, the test equipment transmits a DCI with dormancy indication on PDCCH in PCell carrying a dormany indication for switching SCell 1 and SCell2 from dormancy to non-dormancy.

T3 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PCell at the antenna connector, in a slot # denoted *n*, pertaining to dormancy indication for switching SCell 1 and SCell2 from dormancy to non-dormancy. The UE shall complete switching of the SCells to non-dormancy by the end of slot *n* + ceil($T_{MultipleBWPswitchDelay}$/NR slot length) + 1 in Test1 and Test2, and slot *n* + ceil($T_{MultipleBWPswitchDelay}$/NR slot length) + 2 in Test3 and test4, as specified in clause 8.6.2A. Any PCell interruptions due to the switching between dormant and non-dormant BWPs shall fulfill requirements in clause 8.2.2.2.12.1. The test equipment verifies that interruptions due to switching from dormancy to non-dormancy are within the requirements by analysing HARQ feedback transmitted in PCell for PCell. The test equipment verifies the switching delay by analysing HARQ feedback transmitted in PCell for SCells.

**Table A.6.5.6.4.2.1-1: Supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration. | |

**Table A.6.5.6.4.2.1-1A: Supported test configurations for NR SCells**

| $Config_{SCell}$ | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration.<br>NOTE 3: Test configurations for two NR SCells are selected independently. | |

**Table A.6.5.6.4.2.1-2: General test parameters**

| Parameter | Unit | Value | | | | Comment |
|---|---|---|---|---|---|---|
| | | Test1 | Test2 | Test3 | Test4 | |
| NR RF Channel Number | | 1, 2, 3 | | | | Three NR radio channels are used for this test |
| Active PCell | | Cell 1 | | | | Primary cell on NR RF channel number 1 in FR1 |
| SCell 1 | | Cell 2 | | | | SCell 1 on NR RF channel number 2 in FR1 |
| SCell2 | | Cell 3 | | | | SCell2 on NR RF channel number 3 in FR1 |

| Parameter | Unit | Value | | | | Comment |
|---|---|---|---|---|---|---|
| | | Test1 | Test2 | Test3 | Test4 | |
| CP length | | Normal | | | | |
| DRX | | OFF | | | | Continuous monitoring of primary cell |
| CSI reporting periodicity, Non-dormant BWP | ms | 2 | | | | CSI reporting periodicity for periodic reporting of CQI for PCell and non-dormant SCells |
| CSI reporting periodicity, Dormant BWP | ms | 40 | | | | CSI reporting periodicity for periodic reporting of CQI for dormant SCells |
| Timing offset between Cell 1 and Cell 2 | ns | 0 | | | | |
| Timing offset between Cell 1 and Cell 3 | ns | 0 | | | | |
| Triggering DCI format | | 1_1 | 0_1 | 1_1 | 0_1 | Triggering DCI format for triggering during active time |
| OFDM symbol range in slot for transmission of DCI with dormancy indication | | 0 – 2 | | 3 – 11 | | Test1 and Test3 are based on that triggering DCI is received within the first three OFDM symbols of a slot.Test2 and Test4 are based on that the triggering DCI is received later than within the first three OFDM symbols of a slot. |

#### A.6.5.6.4.2.2 Test Requirements

During T1, any interruption on PCell due to dormancy switching of SCells shall be within the requirement specified in clause 8.2.2.2.12.1.

During T2, interruptions on PCell due to CSI and RRM measurements on dormant SCells shall be within the interruption rate requirements specified in clauses 8.2.2.2.12.2 and 8.2.2.2.12.3, respectively.

During T3, any interruption on PCell due to dormancy switching of SCells shall be within the requirement specified in clause 8.2.2.2.12.1. Monitoring of PDCCH for SCell in SCell shall be resumed within the dormancy switching time specified in clause 8.6.2A.

For an event to be considered to be correct, all requirements above have to be fulfilled.

The rate of correct events observed during repeated tests shall be at least 90 %.

### A.6.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

#### A.6.5.6.5.1 NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA

##### A.6.5.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify requirements on the RRC-based DL BWP switch delay on multiple CCs defined in clause 8.6.

The supported test configurations for NR PCell are shown in table A.6.5.6.5.1.1-1 below. The supported test configurations for NR SCell are shown in table A.6.5.6.5.1.1-1A below. Test configuration for NR PCell and test configuration for NR SCell are chosen independently. The test scenario comprises of one NR PCell (Cell 1) and one NR SCell (Cell 2) as given in table A.6.5.6.5.1.1-2. NR Cell-specific parameters are specified in table A.6.5.6.5.1.1-3 and A.6.5.6.5.1.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) and SCell (Cell 2) to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (SCell) on radio channel 2 (SCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for PCell and SCell (Cell 2).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell and SCell (Cell 2).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration for both PCell and SCell (Cell 2), sent from the test equipment to the UE, is completely received at the UE side in PCell's and SCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition for both PCell and SCell (Cell 2).

The UE shall be able to receive PDSCH on PCell and SCell (Cell 2) from the first DL slot that occurs after the beginning of DL slot i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$ as defined in clause 8.6.3A.1 and starts to report valid ACK/NACK for the PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$ + k1 on BWP-1 of final condition. The UE shall be continuously scheduled on PCell's and SCell (Cell 2)'s BWP-1 of final condition starting from the first DL slot right after slot i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$.

$T_{RRCprocessingDelay}$, $T_{BWPswitchDelayRRC}$ and $D_{RRC}$ are defined in clause 8.6.3A.1, N=2 in this test case.

The test equipment verifies the DL BWP switch time in PCell and SCell by counting the slots from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when a vaild ACK/NACK is received.

**Table A.6.5.6.5.1.1-1: DL BWP switch supported test configurations for NR PCell**

| Config | Description |
|---|---|
| 1 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, FDD duplex mode |
| 2 | NR 15 kHz SSB SCS, ≥10 MHz bandwidth, TDD duplex mode |
| 3 | NR 30 kHz SSB SCS, ≥40 MHz bandwidth, TDD duplex mode |
| NOTE 1: The UE is only required to be tested in one of the supported test configurations<br>NOTE 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs ≥ the bandwidth ($BW_{channel}$) defined in each test configuration | |

**Table A.6.5.6.5.1.1-1A: DL BWP switch supported test configurations for NR SCell**

NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].

**Table A.6.5.6.5.1.1-4: NR Cell specific test parameters for NR SCell for DL BWP switch in SA**

| Parameter | | | Unit | Cell 2 |

| | $Config_{SCell}$ 3 | dBm/ 38.16 MHz | -52.86 |

NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.
NOTE 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
NOTE 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].

#### A.6.5.6.5.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for both PCell and SCell (Cell 2) from the first DL slot that occurs right after the begining of slot (i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$) and starts to report valid ACK/NACK for both PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot (i + $\frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length}$ + k1).

Where, *k1* is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch on PCell and SCell (Cell 2) within the time duration $T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}$ defined in 8.6.3A.1.

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell (Cell 2) active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90 %.

NOTE: During T1 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot ($i+ \frac{T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}+D_{RRC}}{NR\ slot\ length} + k1$), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

## A.6.5.7 DL interruptions at switching between two uplink carriers

### A.6.5.7.1 DL interruptions at switching between two uplink carriers in FDD-TDD CA

#### A.6.5.7.1.1 Test Purpose and Environment

The purpose of this test is to verify DL interruption requirements during UE dynamic switching between two uplink carriers defined in clause 8.2.2.2.10. The test case is applicable for an uplink band pair of an inter-band FDD-TDD CA configuration when the capability *uplinkTxSwitchingPeriod* is present.

There are two cells: FR1 FDD PCell (Cell 1), FR1 TDD SCell (Cell 2). The test parameters for the two cells are given in table A.6.5.7.1.1-1, table A.6.5.7.1.1-2 and table A.6.5.7.1.1-3 below.

For NR FDD carrier (Cell 1), aperiodic CSI-RS for L1-RSRP reporting is triggered with power boosting 6 dB on the following symbol in the slot overlapping with the 1 s$^{t}$ special slot of every radio frame of the NR TDD carrier (Cell 2):

symbol#12 if UE does not report uplinkTxSwitching-DL-Interruption-r16;

otherwise,

symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 210 us or

symbol #9 if UE capability *uplinkTxSwitchingPeriod* is 140 us or

symbol #10 if UE capability *uplinkTxSwitchingPeriod* is 35 us.

For NR TDD carrier (Cell 2), aperiodic CSI-RS for L1-RSRP reporting is configured with power boosting 6 dB on the following symbol in the 2$^{nd}$ special slot of every radio frame:

symbol#9 if UE does not report uplinkTxSwitching-DL-Interruption-r16;

otherwise,

symbol #2 if UE capability *uplinkTxSwitchingPeriod* is 210 us or

symbol #3 if UE capability *uplinkTxSwitchingPeriod* is 140 us or

symbol #6 if UE capability *uplinkTxSwitchingPeriod* is 35 us.

This test verifies that the UE correctly report the L1-RSRP reporting. The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, *uplinkTxSwitching* is indicated to UE.

**Table A.6.5.7.1.1-1: Supported test configurations**

| Configuration | Description |
|---|---|
| 1 | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.6.5.7.1.1-2: General test parameters for DL interruptions at switching between two uplink carriers in FDD-TDD CA**

| Parameter | Unit | Test configuration | Value | Comment |
|---|---|---|---|---|
| RF Channel Number | | Config 1 | 1, 2 | Two radio channels are used for this test. |
| Active cell | | Config 1 | Cell 1: FR1 PCell<br>Cell 2: FR1 SCell | FR1 PCell on RF channel number 1<br>FR1 SCell on RF channel number 2 |
| CP length | | Config 1 | Normal | |
| DRX | | Config 1 | OFF | |
| Measurement gap pattern Id | | Config 1 | OFF | |
| Filter coefficient | | Config 1 | 0 | L3 filtering is not used |
| CSI-RS configuration for L1-RSRP reporting | | Config 1 | Cell 1: CSI-RS.1.5 FDD<br>Cell 2: CSI-RS.2.5 TDD | |
| T1 | s | Config 1 | 5 | |
