12.3.1.1.16 Sidelink Relay / L2 U2N / Remote UE / Measurement configuration control and reporting / Periodical reporting

12.3.1.1.16.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_CONNECTED state and acting as a L2 U2N Remote UE }
ensure that {
  when { UE receives RRCReconfiguration including measConfig to setup periodical measurement
reporting on candidate L2 U2N Relay UE }
    then { UE sends RRCReconfigurationComplete and starts sending periodic measurement reports }
            }
```

12.3.1.1.16.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 38.331 clause 5.5.4.1 and 5.5.5.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.331, clause 5.5.4.1]

If AS security has been activated successfully, the UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a *reportType* set to *eventTriggered* or *periodical*:

…

3> else if the corresponding *measObject* concerns L2 U2N Relay UE:

4> if *eventY1-Relay* or *eventY2-Relay* is configured in the corresponding *reportConfig*; or

4> if corresponding *reportConfig* includes *reportType* set to *periodical*:

5> consider any L2 U2N Relay UE fulfilling upper layer criteria detected on the associated frequency to be applicable for this *measId*;

…

2> if *reportType* is set to *periodical* and if a (first) measurement result is available:

3> include a measurement reporting entry within the *VarMeasReportList* for this *measId*;

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> if the corresponding *reportConfig* includes *measRSSI-ReportConfig*:

4> initiate the measurement reporting procedure as specified in 5.5.5 immediately when RSSI sample values are reported by the physical layer after the first L1 measurement duration;

3> else if the corresponding *reportConfig* includes the *ul-DelayValueConfig*:

4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after a first measurement result is provided from lower layers of the associated DRB identity;

3> else if the corresponding *reportConfig* includes the *ul-ExcessDelayConfig*:

4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after a first measurement result is provided from lower layers of the associated DRB identity(ies) according to the configured threshold per DRB identity(ies);

3> else if the *reportAmount* exceeds 1:

4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell or for the serving L2 U2N Relay UE (if the UE is a L2 U2N Remote UE);

3> else (i.e. the *reportAmount* is equal to 1):

4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell and for the strongest cell among the applicable cells, or for the NR SpCell and for the strongest L2 U2N Relay UEs among the applicable L2 U2N Relay UEs; or initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the serving L2 U2N Relay UE and for the strongest cell among the applicable cells (if the UE is a L2 U2N Remote UE);

[TS 38.331, clause 5.5.5.1]

1> if the UE is acting as L2 U2N Remote UE:

2> set the *sl-MeasResultServingRelay* in accordance with the following:

3> set the *cellIdentity* to include the *cellAccessRelatedInfo* contained in the discovery message received from the serving L2 U2N Relay UE;

3> set the *sl-RelayUE-Identity* to include the Source L2 ID of the serving L2 U2N Relay;

3> set the *sl-MeasResult* to include the SL-RSRP of the serving L2 U2N Relay UE;

NOTE 1: In case of no data transmission from L2 U2N Relay UE to L2 U2N Remote UE, it is left to UE implementation whether to use SL-RSRP or SD-RSRP when setting the *sl-MeasResultServingRelay* of the serving L2 U2N Relay UE.

1> if there is at least one applicable neighbouring cell or candidate L2 U2N Relay UE to report:

2> if the *reportType* is set to *eventTriggered* or *periodical*:

3> if the measurement report concerns the candidate L2 U2N Relay UE:

4> set the *sl-MeasResultsCandRelay* in *measResultNeighCells* to include the best candidate L2 U2N Relay UEs up to *maxNrofRelayMeas* in accordance with the following:

5> if the *reportType* is set to *eventTriggered*:

6> include the L2 U2N Relay UEs included in the *relaysTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

5> else:

6> include the applicable L2 U2N Relay UEs for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

5> for each L2 U2N Relay UE that is included in the *sl-MeasResultsCandRelay*:

6> set the *cellIdentity* to include the *cellAccessRelatedInfo* contained in the discovery message received from the concerned L2 U2N Relay UE;

6> set the *sl-RelayUE-Identity* to include the Source L2 ID of the concerned L2 U2N Relay UE;

6> set the *sl-MeasResult* to include the SD-RSRP of the concerned L2 U2N Relay UE;

5> for each included L2 U2N Relay UE, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

6> set the *sl-MeasResult* to include the quantity(ies) indicated in the *reportQuantityRelay* within the concerned *reportConfigRelay* in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best L2 U2N Relay UE is included first;

…

1> else:

2> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

12.3.1.1.16.3 Test Description

12.3.1.1.16.3.1 Pre-test conditions

System Simulator:

- SS-NW
  - NR Cell 2.
  - System information combination NR-31 as defined in TS 38.508-1 [4] clause 4.4.3.1 is used.

- NR-SS-UE
  - NR-SS-UE1 operating as L2 U2N Relay UE.
  - NR-SS-UE1 is synchronised on GNSS.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.4 and *ProSeP* using condition Monitoring_Restricted_Model_A as per TS 38.508-1 [4] clause 4.7C.1.
- UE is synchronised on GNSS.

Preamble:

- The UE is in state 3N-A as defined in TS 38.508-1 [4] on NR Cell 2, subclause 4.4A.

12.3.1.2 Relay UE

12.3.1.2.1

12.3.1.2.2 Sidelink Relay / L2 U2N / Relay UE / 5G ProSe U2N Relay Discovery / Announcing

12.3.1.2.2.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing restricted 5G ProSe direct discovery model A announcing
and having sent a DISCOVERY_REQUEST message }
ensure that {
  when { the SS does not answer to the UE }
    then { UE retransmits the DISCOVERY_REQUEST message }
            }
```

(2)

```
with { UE being authorized for performing the announcing UE procedure for UE-to-network relay
discovery }
ensure that {
  when { UE is configured by upper layer to transmit NR sidelink discovery message and SIB12
includes sl-TxPoolSelectedNormal }
    then { UE transmits PROSE PC5 DISCOVERY message for UE-to-Network Relay Discovery Announcement
using the pools of resources indicated by sl-TxPoolSelectedNormal }
            }
```

(3)

```
with { UE being authorized for performing the announcing UE procedure for UE-to-network relay
discovery }
ensure that {
  when { UE is configured by upper layer to transmit NR sidelink discovery message and SIB12
includes sl-TxPoolExceptional }
```

```
    then { UE transmits PROSE PC5 DISCOVERY message for UE-to-Network Relay Discovery Announcement
using the pools of resources indicated by sl-TxPoolExceptional }
            }
```

(4)

```
with { UE being authorized for performing the announcing UE procedure for UE-to-network relay
discovery }
ensure that {
  when { UE is configured by upper layer to transmit NR sidelink discovery message and SIB12
includes sl-DiscTxPoolSelected }
    then { UE transmits PROSE PC5 DISCOVERY message for UE-to-Network Relay Discovery Announcement
using the pools of resources indicated by sl-DiscTxPoolSelected }
            }
```

12.3.1.2.2.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 38.331 clause 5.8.13.3, TS 23.304 clause 6.3.1.2, TS 23.304 clause 6.3.2.3.2, TS 24.554 clause 6.2.3.6.1 and TS 24.554 clause 8.2.1.2.2.2.

[TS 38.331, clause 5.8.13.3]

A UE capable of NR sidelink discovery that is configured by upper layer to transmit NR sidelink discovery message shall:

1> if the frequency used for NR sidelink discovery is included in *sl-FreqInfoToAddModList* in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message; or if the frequency used for NR sidelink discovery is included in *sl-FreqInfoList* within *SIB12*:

2> if the UE is in RRC_CONNECTED and uses the frequency included in *sl-ConfigDedicatedNR* within *RRCReconfiguration* message:

...

2> else if the cell chosen for NR sidelink discovery transmission provides *SIB12*:

3> if the UE is acting as NR sidelink U2N Relay UE and *sl-DiscConfigCommon* is included in *SIB12*, and if the NR sidelink U2N Relay UE threshold conditions as specified in 5.8.14.2 are met based on *sl-RelayUE-ConfigCommon* in *SIB12*; or

3> if the UE is selecting NR sidelink U2N Relay UE / has a selected NR sidelink U2N Relay UE and *sl-DiscConfigCommon* is included in *SIB12*, and if the NR sidelink U2N Remote UE threshold conditions as specified in 5.8.15.2 are met based on *sl-RemoteUE-ConfigCommon* in *SIB12*; or

3> if the UE is performing NR sidelink non-relay discovery:

4> if *SIB12* includes *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency, and a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in the *sl-DiscTxPoolSelected* for NR sidelink discovery transmission is available in accordance with TS 38.214 [19] or random selection, if allowed by *sl-AllowedResourceSelectionConfig*, is selected:

5> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* using the pools of resources indicated by *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency in *SIB12* as defined in TS 38.321 [3];

4> else if *SIB12* includes *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency, and a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in the *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission is available in accordance with TS 38.214 [19] or random selection, if allowed by *sl-AllowedResourceSelectionConfig*, is selected:

5> configure lower layers to perform the sidelink resource allocation mode 2 based on resource selection operation according to *sl-AllowedResourceSelectionConfig* using the pools of resources

indicated by *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency in *SIB12* as defined in TS 38.321 [3];

4> else if *SIB12* includes *sl-TxPoolExceptional* for the concerned frequency:

5> from the moment the UE initiates RRC connection establishment or RRC connection resume, until receiving an *RRCReconfiguration* including *sl-ConfigDedicatedNR*, or receiving an *RRCRelease* or an *RRCReject*; or

5> if a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency in *SIB12* is not available in accordance with TS 38.214 [19]; or

5> if *sl-DiscTxPoolSelected* for NR sidelink discovery transmission on the concerned frequency is not included in *SIB12* and if a result of full/partial sensing, if selected and is allowed by *sl-AllowedResourceSelectionConfig*, on the resources configured in *sl-TxPoolSelectedNormal* for NR sidelink discovery transmission on the concerned frequency in *SIB12* is not available in accordance with TS 38.214 [19]:

6> configure lower layers to perform the sidelink resource allocation mode 2 based on random selection (as defined in TS 38.321 [3]) using one of the pools of resources indicated by *sl-TxPoolExceptional* for NR sidelink discovery transmission on the concerned frequency;

...

[TS 23.304, clause 6.3.1.2]

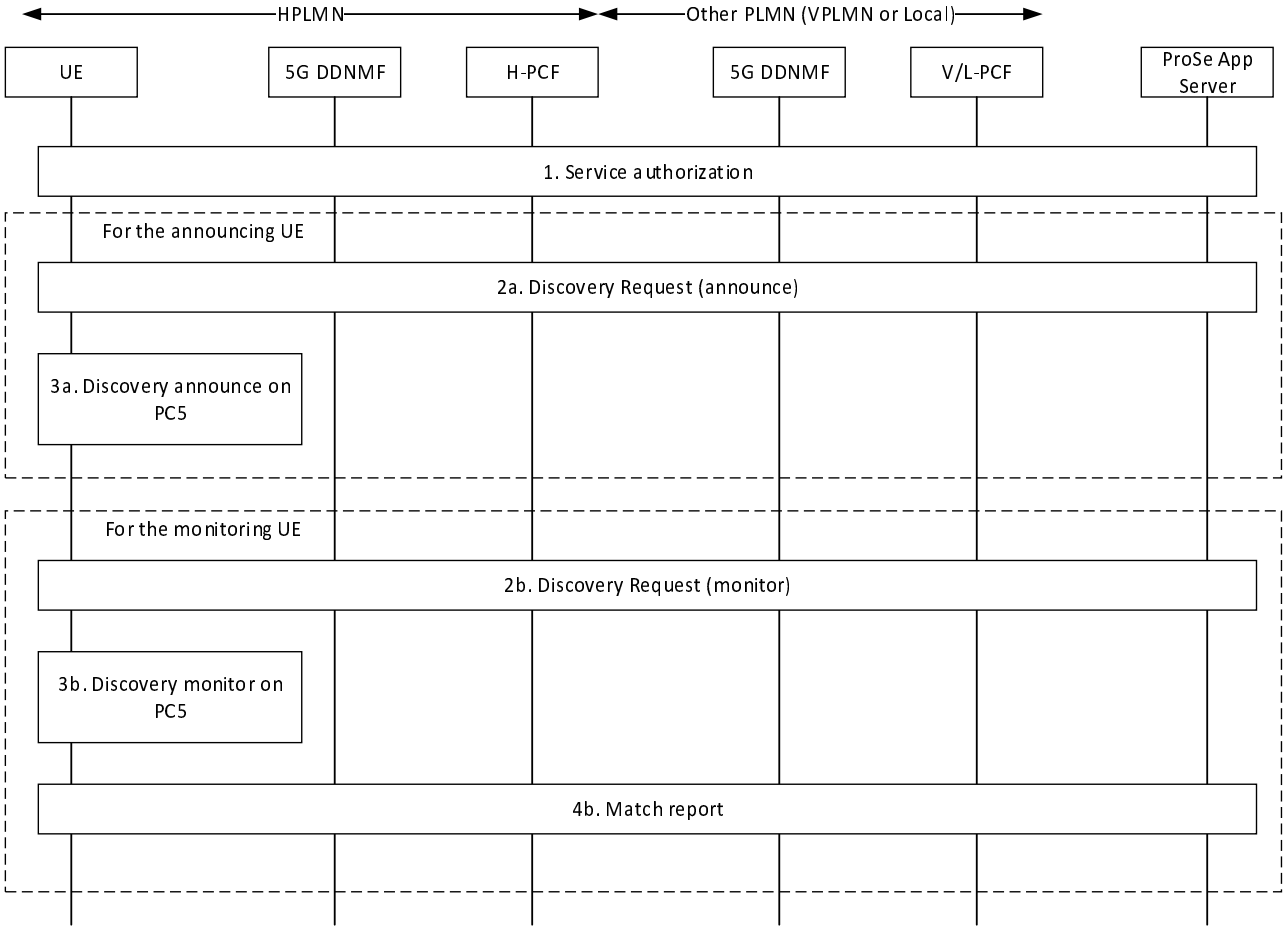

Figure 6.3.1.2-1: Overall procedure for Model A 5G ProSe Direct Discovery

This procedure is applied for open and restricted 5G ProSe Direct Discovery when the ProSe enabled UE is served by NG-RAN.

1. Service authorisation for 5G ProSe Direct Discovery services is performed for as defined in clause 6.2.

If the UE is authorised to announce:

2a. When the UE is triggered to announce, then it sends a discovery request for announcing to the 5G DDNMF in HPLMN as defined in clause 6.3.1.4. In addition, for restricted 5G ProSe Direct Discovery, the 5G DDNMF further interacts with the ProSe Application server for the authorization of the discovery request.

3a. If the request is successful and is provided with ProSe Application Code/ProSe Restricted Code, it starts announcing on PC5 interface.

For ProSe restricted discovery and UE requests "on demand" announcing, ProSe Restricted Code may be provided to UE after this procedure. In this case, UE waits for the ProSe Restricted Code allocation and starts to announce the ProSe Restricted Code on PC5 after receiving it in Announcing Alert procedure specified in clause 6.3.1.6.

NOTE 1: More details on the Access Stratum protocol of this step are provided in RAN specifications.

…

[TS 23.304, clause 6.3.2.3.2]

Depicted in Figure 6.3.2.3.2-1 is the procedure for 5G ProSe UE-to-Network Discovery with Model A.

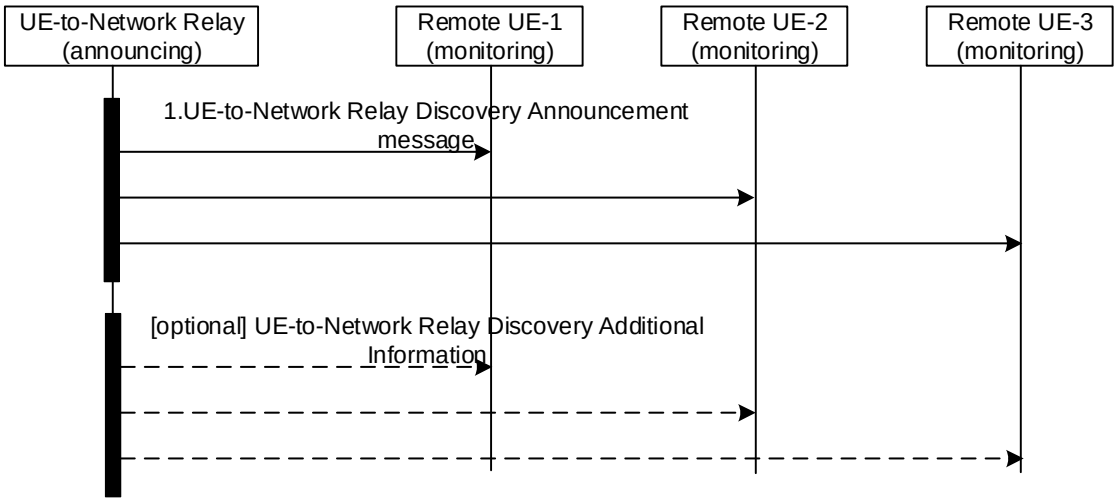

Figure 6.3.2.3.2-1: 5G ProSe UE-to-Network Relay Discovery with Model A

1. The 5G ProSe UE-to-Network Relay sends a UE-to-Network Relay Discovery Announcement message. The UE-to-Network Relay Discovery Announcement message contains the Type of Discovery Message, Announcer Info and RSC, and is sent using the Source Layer-2 ID and Destination Layer-2 ID as described in clause 5.8.3.

   For 5G ProSe Layer-3 UE-to-Network Relay, the 5G ProSe Layer-3 UE-to-Network Relay shall only include a RSC in the UE-to-Network Relay Discovery Announcement when the S-NSSAI associated with that RSC belongs to the Allowed NSSAI of the UE-to-Network Relay.

   The 5G ProSe Remote UE (1 to 3) determines the Destination Layer-2 ID for signalling reception. The Destination Layer-2 ID is configured with the UE(s) as specified in clause 5.1.4.1.

   5G ProSe Remote UE (1 to 3) monitors announcement messages with the 5G ProSe UE-to-Network RSC corresponding to the desired services.

Optionally, the 5G ProSe UE-to-Network Relay may also send Relay Discovery Additional Information messages as defined in clause 6.5.1.3. The parameters contained in this message and the Source Layer-2 ID and Destination Layer-2 ID used for sending and receiving the message are described in clause 5.8.3.

The 5G ProSe Remote UE selects the 5G ProSe UE-to-Network Relay based on the information received in step 1.

[TS 24.554, clause 6.2.3.6.1]

The following abnormal cases can be identified:

a) Indication from the transport layer of transmission failure of DISCOVERY_REQUEST message (e.g., after TCP retransmission timeout)

   The UE shall close the existing secure connection to the 5G DDNMF, establish a new secure connection and then restart the announce request procedure.

NOTE 1: The UE can abort this procedure when detecting loss of NG-RAN coverage in its serving PLMN.

b) No response from the 5G DDNMF after the DISCOVERY_REQUEST message has been successfully delivered (e.g., TCP ACK has been received for the DISCOVERY_REQUEST message)

   The UE shall retransmit the DISCOVERY_REQUEST message.

NOTE 2: The UE can abort this procedure when detecting loss of NG-RAN coverage in its serving PLMN.

NOTE 3: The timer to trigger retransmission and the maximum number of allowed retransmissions are UE implementation specific.

…

[TS 24.554, clause 8.2.1.2.2.2]

The UE is authorised to perform the announcing UE procedure for UE-to-network relay discovery if:

a) the UE is authorised to act as a UE-to-network relay in the PLMN indicated by the serving cell as specified in clause 5.2.5, and

   1) the UE is served by NG-RAN and the UE is authorised to perform 5G ProSe direct discovery in the PLMN as specified in clause 5; or

   2) the UE is authorised to perform 5G ProSe direct discovery when not served by NG-RAN as specified in clause 5 and intends to use the provisioned radio resources for UE-to-network relay discovery;

b) the UE is configured with:

   1) the relay service code parameter identifying the connectivity service to be announced as specified in clause 5.2.5 and the indicated security procedure for the relay service code is supported by the UE. For 5G ProSe layer-3 UE-to-network relay UE,

      i) the S-NSSAI associated with that relay service code shall belong to the allowed NSSAI of the UE; and

      ii) if the UE is camped on a cell whose TAI is in the list of "non-allowed tracking areas" or is camped on a cell whose TAI is not in the list of "allowed tracking areas", then the relay service code shall be associated with high priority access as defined in clause 5.3.5 of 3GPP TS 24.501 [11]; and

   2) the User info ID for the UE-to-network relay discovery parameter as specified in clause 5.2.5;

c) for 5G ProSe layer-3 UE-to-network relay UE, the UE is configured with PDU Session parameters which is used for relayed traffic for the associated relay service code, as specified in clause 5.2.5; and

d) the back-off timer T3346 used for NAS mobility management congestion control as specified in clause 5.3.9 of 3GPP TS 24.501 [11] is not running at the UE;

otherwise, the UE is not authorised to perform the announcing UE procedure for UE-to-network relay discovery.

Figure 8.2.1.2.2.2.1 illustrates the interaction of the UEs in the announcing UE procedure for UE-to-network relay discovery.

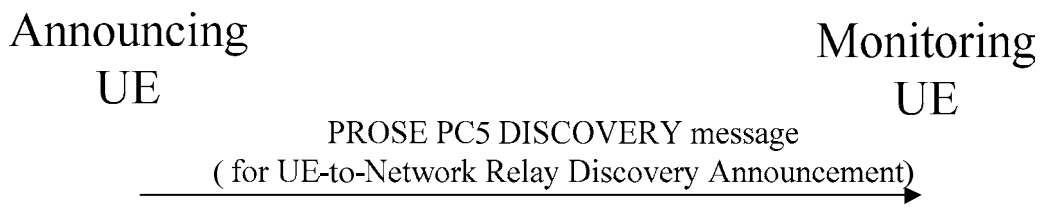

Figure 8.2.1.2.2.2.1: Announcing UE procedure for UE-to-network relay discovery

…

12.3.1.2.2.3 Test Description

12.3.1.2.2.3.1 Pre-test conditions

System Simulator:

- SS-NW
  - NR Cell 1.
  - System information combination NR-31 as defined in TS 38.508-1 [4] clause 4.4.3.1 is used.
- NR-SS-UE
  - NR-SS-UE1 operating as L2 U2N Remote UE.
  - NR-SS-UE1 is synchronised on GNSS.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.4 and *ProSeP* using condition Announcing_Restricted_Model_A as per TS 38.508-1 [4] clause 4.7C.1.
- UE is synchronised on GNSS.

Preamble:

- The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.

12.3.1.2.2.3.2 Test procedure sequence

Table 12.3.1.2.2.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1-9	Steps 1 to 9 of the generic procedure described in TS 38.508-1 table 4.9.43.2.2-1 is performed.	-	-	-	-
10	Check: Does the UE retransmit a DISCOVERY_REQUEST message over the PC3a interface?	-->	HTTP Request containing DISCOVERY_REQUEST	1	P
11	The SS-NW transmits a DISCOVERY_RESPONSE message over the PC3a interface.	<--	HTTP Response containing DISCOVERY_RESPONSE	-	-
12	Check: Does the UE transmit PROSE PC5 DISCOVERY message for UE-to-Network	-->	PC5-D: PROSE PC5 DISCOVERY (for UE-to-Network	2	P

	Relay Discovery Announcement using the pools of resources indicated in *sl-TxPoolSelectedNormal*?		Relay Discovery Announcement)		
13	The SS-NW transmits an *RRCRelease* message to release RRC connection and move to RRC_IDLE.	<--	NR RRC: *RRCRelease*	-	-
14	SS-NW resets SIB12 according to table 12.3.1.2.2.3.3-4, The *ValueTag* of *SIB12* in the SI-SchedulingInfo of *SIB1* is increased.	-	-	-	-
15	SS-NW notifies UE of the system information change by send Short Message on PDCCH using P-RNTI.	<--	NR RRC: *Paging*	-	-
16	Check: Does the UE transmit PROSE PC5 DISCOVERY message for UE-to-Network Relay Discovery Announcement using the pools of resources indicated in *sl-TxPoolExceptional*?	-->	PC5-D: PROSE PC5 DISCOVERY (for UE-to-Network Relay Discovery Announcement)	3	P
17	SS-NW resets SIB12 according to table 12.3.1.2.2.3.3-4, The *ValueTag* of *SIB12* in the SI-SchedulingInfo of *SIB1* is increased.	-	-	-	-
18	SS-NW notifies UE of the system information change by send Short Message on PDCCH using P-RNTI.	<--	NR RRC: *Paging*	-	-
19	Check: Does the UE transmit PROSE PC5 DISCOVERY message for UE-to-Network Relay Discovery Announcement using the pools of resources indicated in *sl-DiscTxPoolSelected*?	-->	PC5-D: PROSE PC5 DISCOVERY (for UE-to-Network Relay Discovery Announcement)	4	P

12.3.1.2.3

12.3.1.2.4 Sidelink Relay / L2 U2N / Relay UE / Direct link establishment, reject and release

12.3.1.2.4.1 Test Purpose (TP)

(1)

```
with { UE is out of coverage and acting as a L2 U2N Relay UE }
ensure that {
  when { UE receives a request from upper layers to trigger 5G ProSe direct link establishment }
    then { UE sends a PROSE DIRECT LINK ESTABLISHMENT REQUEST message }
            }
```

(2)

```
with { UE having transmitted unicast PROSE DIRECT LINK ESTABLISHMENT REQUEST message }
ensure that {
  when { UE receives a PROSE DIRECT LINK ESTABLISHMENT REJECT message with cause set to “congestion
situation” and back-off timer provided}
    then { UE aborts the 5G ProSe direct link establishment procedure and not attempts to start the
5G ProSe direct link establishment procedure with the same target UE for a time period same as the
back-off timer }
            }
```

(3)

```
with { UE in NR RRC_CONNECTED state and acting as a L2 U2N Relay UE }
ensure that {
  when { UE receives a PROSE DIRECT LINK RELEASE REQUEST message with cause set to “congestion
situation” and back-off timer provided }
    then { UE responds with a PROSE DIRECT LINK RELEASE ACCEPT message and deletes the 5G ProSe
direct link context of the 5G ProSe direct link and not attempts to start the 5G ProSe direct link
establishment procedure with the same target UE for a time period same as the back-off timer }
            }
```

12.3.1.2.4.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 24.554 clause 7.2.2.2, 7.2.2.5 and 7.2.6.3. Unless otherwise stated these are Rel-17 requirements.

[TS 24.554, clause 7.2.2.2]

The initiating UE shall meet the following pre-conditions before initiating this procedure:

a) a request from upper layers to transmit the packet for ProSe application over PC5 or a request from lower layers to trigger ProSe direct link establishment;

b) the communication mode is unicast mode (e.g., pre-configured as specified in clause 5.2.4 or indicated by upper layers);

c) the link layer identifier for the initiating UE (i.e., layer-2 ID used for unicast communication) is available (e.g., pre-configured or self-assigned) and is not being used by other existing 5G ProSe direct links within the initiating UE;

d) the link layer identifier for the destination UE (i.e., the unicast layer-2 ID of the target UE or the broadcast layer-2 ID) is available to the initiating UE (e.g., pre-configured, obtained as specified in clause 5.2, known via prior ProSe direct communication or indicated by lower layers);

NOTE 1: In the case where different ProSe applications are mapped to distinct default destination layer-2 IDs, when the initiating UE intends to establish a single unicast link that can be used for more than one ProSe identifiers, the UE can select any of the default destination layer-2 ID for unicast initial signalling.

e) the initiating UE is either authorised for 5G ProSe direct communication over PC5 in NR-PC5 in the serving PLMN, has a valid authorization for 5G ProSe direct communication over PC5 in NR-PC5 when not served by NG-RAN, or is authorized to use a 5G ProSe UE-to-network relay UE. The UE considers that it is not served by NG-RAN if the following conditions are met:

   1) not served by NG-RAN for ProSe direct communication over PC5;

   2) in limited service state as specified in 3GPP TS 23.122 [14], if the reason for the UE being in limited service state is one of the following;

      i) the UE is unable to find a suitable cell in the selected PLMN as specified in 3GPP TS 38.304 [15];

      ii) the UE received a REGISTRATION REJECT message or a SERVICE REJECT message with the 5GMM cause #11 "PLMN not allowed" as specified in 3GPP TS 24.501 [11]; or

      iii) the UE received a REGISTRATION REJECT message or a SERVICE REJECT message with the 5GMM cause #7 "5GS services not allowed" as specified in 3GPP TS 24.501 [11]; or

   3) in limited service state as specified in 3GPP TS 23.122 [14] for reasons other than i), ii) or iii) above and located in a geographical area for which the UE is provisioned with "non-operator managed" radio parameters as specified in clause 5.2;

f) there is no existing 5G ProSe direct link for the pair of peer application layer IDs, or there is an existing 5G ProSe direct link for the pair of peer application layer IDs and:

   1) the network layer protocol of the existing 5G ProSe direct link is not identical to the network layer protocol required by the upper layer in the initiating UE for this ProSe application;

   2) the security policy (either signalling security policy or user plane security policy) corresponding to the ProSe identifier is not compatible with the security policy of the existing 5G ProSe direct link; or

   3) in case of the 5G ProSe direct link establishment procedure is for direct communication between the 5G ProSe layer-3 remote UE and the 5G ProSe layer-3 UE-to-network relay UE, the existing 5G ProSe direct link for the peer UE is established with a different RSC or established not for direct communication between the 5G ProSe layer-3 remote UE and the 5G ProSe layer-3 UE-to-network relay UE; or

   4) in case of the 5G ProSe direct link establishment procedure is for direct communication between the 5G ProSe layer-2 remote UE and the 5G ProSe layer-2 UE-to-network relay UE, the existing 5G ProSe direct

link for the peer UE is established not for direct communication between the 5G ProSe layer-2 remote UE and the 5G ProSe layer-2 UE-to-network relay UE;

g) the number of established 5G ProSe direct links is less than the implementation-specific maximum number of established 5G ProSe direct links allowed in the UE at a time; and

h) timer T5088 is not associated with the link layer identifier for the destination UE or timer T5088 associated with the link layer identifier for the destination UE has already expired or stopped.

…

[TS 24.554, clause 7.2.2.5]

…

Upon receipt of the PROSE DIRECT LINK ESTABLISHMENT REJECT message, the initiating UE shall stop timer T5080 and abort the 5G ProSe direct link establishment procedure. If the PC5 signalling protocol cause value in the PROSE DIRECT LINK ESTABLISHMENT REJECT message is #1 "direct communication to the target UE not allowed" or #5 "lack of resources for 5G ProSe direct link", then the initiating UE shall not attempt to start the 5G ProSe direct link establishment procedure with the same target UE at least for a time period T. If the PC5 signalling protocol cause value in the PROSE DIRECT LINK ESTABLISHMENT REJECT message is #13 "congestion situation" and a back-off timer value is provided in the PROSE DIRECT LINK ESTABLISHMENT REJECT message, the initiating UE shall start timer T5088 associated with the layer-2 ID of the target UE and set its value to the provided timer value. If the PC5 signalling protocol cause value in the PROSE DIRECT LINK ESTABLISHMENT REJECT message is #15 "security procedure failure of 5G ProSe UE-to-network relay", and initiating UE has included the UE identity IE set to SUCI in the PROSE DIRECT LINK ESTABLISHMENT REQUEST message, then the initiating UE shall initiate the UE-to-network relay reselection procedure as specified in clause 8.2.3. If the PC5 signalling protocol cause value in the PROSE DIRECT LINK ESTABLISHMENT REJECT message is #15 "security procedure failure of 5G ProSe UE-to-network relay" and the initiating UE has included the User security key ID IE set to UP-PRUK ID or CP-PRUK ID in the PROSE DIRECT LINK ESTABLISHMENT REQUEST message, then the initiating UE may initiate the UE-to-network relay reselection procedure as specified in clause 8.2.3 and the UE shall further:

a) if the same 5G ProSe UE-to-network relay UE is selected, discard the previously used CP-PRUK and associated CP-PRUK ID, or the UP-PRUK and associated UP-PRUK ID, if any, and include the UE identity IE set to SUCI in the PROSE DIRECT LINK ESTABLISHMENT REQUEST when initiating the subsequent 5G ProSe direct link establishment procedure as specified in clause 7.2.2.2; or

b) if a different 5G ProSe UE-to-network relay UE is selected, include the User security key ID IE set to the previously used UP-PRUK ID or CP-PRUK ID in the PROSE DIRECT LINK ESTABLISHMENT REQUEST message.

NOTE 5: The length of time period T is UE implementation specific and can be different for the case when the UE receives PC5 signalling protocol cause value #1 "direct communication to the target UE not allowed" or when the UE receives PC5 signalling protocol cause value #5 "lack of resources for 5G ProSe direct link".

After receiving the PROSE DIRECT LINK ESTABLISHMENT REJECT message, the initiating UE shall provide the following information along with the initiating UE's layer-2 ID for unicast communication and the target UE's layer-2 ID for unicast communication to the lower layer:

a) an indication of deactivation of the PC5 unicast security protection and deletion of security context for the 5G ProSe direct link, if applicable.

[TS 24.554, clause 7.2.6.3]

Upon receiving a PROSE DIRECT LINK RELEASE REQUEST message, the target UE shall stop all running timers for this 5G ProSe direct link and abort any other ongoing PC5 signalling protocol procedures on this 5G ProSe direct link.

If the PC5 signalling protocol cause value in the PROSE DIRECT LINK RELEASE REQUEST message is #13 "congestion situation" and a back-off timer value is provided in the PROSE DIRECT LINK RELEASE REQUEST message, the target UE shall start timer T5088 associated with the layer-2 ID of the initiating UE and set its value to the provided timer value.

The target UE shall respond with a PROSE DIRECT LINK RELEASE ACCEPT message. The target UE shall include the new 2 LSBs of K_{NRP} ID in the PROSE DIRECT LINK RELEASE ACCEPT message. After the message is sent, the target UE shall release the 5G ProSe direct link by performing the following behaviours:

a) inform the lower layer along with the PC5 link identifier that the 5G ProSe direct link has been released; and

b) delete the 5G ProSe direct link context of the 5G ProSe direct link after an implementation specific time.

The target UE shall form the new K_{NRP} ID from the new MSBs of K_{NRP} ID received in the PROSE DIRECT LINK RELEASE REQUEST message and the new LSBs of K_{NRP} ID included in the PROSE DIRECT LINK RELEASE ACCEPT message. The target UE shall replace the existing K_{NRP} ID with the new K_{NRP} ID. The target UE may include the new K_{NRP} ID in PROSE DIRECT LINK ESTABLISHMENT REQUEST message with the initiating UE as specified in clause 7.2.2.2.

12.3.1.2.4.3 Test Description

12.3.1.2.4.3.1 Pre-test conditions

System Simulator:

- NR-SS-UE
  - NR-SS-UE1 operating as L2 U2N Remote UE.
  - NR-SS-UE1 is synchronised on GNSS.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.4 and *ProSeP* using using condition Announcing_Restricted_Model_A as per TS 38.508-1 [4] clause 4.7C.1.
- UE is synchronised on GNSS.

Preamble:

- The UE is in state 0-A as defined in TS 38.508-1 [4].

12.3.1.2.4.3.2 Test procedure sequence

Table 12.3.1.2.4.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The UE is switched on.	-	-	-	-
2	Whole procedure for 5G ProSe U2N Relay Discovery in TS 38.508-1[4] 4.9.43.2.2-1 is performed.	-	-	-	-
3	UE is configured by upper layer to establish unicast mode link. NOTE: This can be done by sending AT COMMAND +CCUTLE to close test loop function.	-	-	-	-
4	Check: Does the UE send a PROSE DIRECT LINK ESTABLISHMENT REQUEST message?	-->	PC5-S: PROSE DIRECT LINK ESTABLISHMENT REQUEST	1	P

```

12.3.1.2.6.2 Conformance requirements

References: The conformance requirements covered in the current TC is specified in: TS 38.331 clause 5.3.2.1, 5.3.2.3, 5.8.9.9.2 and 5.8.9.8.3.

[TS 38.331, clause 5.3.2.1]

The purpose of this procedure is:

- to transmit paging information to a UE in RRC_IDLE or RRC_INACTIVE.
- to transmit paging information for a L2 U2N Remote UE in RRC_IDLE or RRC_INACTIVE to its serving L2 U2N Relay UE in any RRC state.

[TS 38.331, clause 5.3.2.3]

1> if the UE is acting as a L2 U2N Relay UE, for each of the *PagingRecord*, if any, included in the *Paging* message:

2> if the *ue-Identity* included in the *PagingRecord* in the *Paging* message matches the UE identity in *sl-PagingIdentityRemoteUE* included in *sl-PagingInfo-RemoteUE* received in *RemoteUEInformationSidelink* message from a L2 U2N Remote UE:

3> inititate the Uu Message transfer in sidelink to that UE as specified in 5.8.9.9;

[TS 38.331, clause 5.8.9.9.2]

The L2 U2N Relay UE initiates the Uu message transfer procedure when at least one of the following conditions is met:

1> upon receiving *Paging* message related to the connected L2 U2N Remote UE from network (including *Paging* message within *RRCReconfiguration* message);

1> upon acquisition of the SIB(s) requested by the connected L2 U2N Remote UE (as indicated in *sl-RequestedSIB-List* in the *RemoteUEInformationSidelink*) or upon receiving the updated SIB(s) from network which has been requested by the connected L2 U2N Remote UE;

1> upon unsolicited SIB1 forwarding to the connected L2 U2N Remote UE or upon receiving the updated *SIB1* from network;

For each associated L2 U2N Remote UE, the L2 U2N Relay UE shall set the contents of *UuMessageTransferSidelink* message as follows:

1> include *sl-PagingDelivery* if the *Paging* message received from network containing the *ue-Identity* of the L2 U2N Remote UE;

1> include *sl-SIB1-Delivery* if any of the conditions for initiating Uu message transfer procedure related to SIB1 are met;

1> include *sl-SystemInformationDelivery* if any of the conditions for initiating Uu message transfer procedure related to System Information are met;

1> submit the *UuMessageTransferSidelink* message to lower layers for transmission.

NOTE: The L2 U2N Relay UE may perform unsolicited forwarding of SIB1 to the L2 U2N Remote UE based on UE implementation.

[TS 38.331, clause 5.8.9.8.3]

The L2 U2N Relay UE shall:

1> if the *RemoteUEInformationSidelink* includes the *sl-PagingInfo-RemoteUE*:

2> if the UE is in RRC_CONNECTED on an active BWP with common search space configured including *pagingSearchSpace*; or

2> if the UE is in RRC_IDLE or RRC_INACTIVE:

3> if the *sl-PagingInfo-RemoteUE* is set to *setup*:

4> monitor the *Paging* message at the L2 U2N Remote UE's paging occasion calculated according to *sl-PagingIdentityRemoteUE* and *sl-PagingCycleRemoteUE* included in *sl-PagingInfo-RemoteUE*;

3> else (the *sl-PagingInfo-RemoteUE* is set to *release*):

4> stop monitoring the *Paging* message at the L2 U2N Remote UE's paging occasion;

4> release the received paging information in *sl-PagingInfo-RemoteUE*;

2> else (the UE is in RRC_CONNECTED on an active BWP without *pagingSearchSpace* configured):

3> if the *sl-PagingInfo-RemoteUE* is set to *setup*:

4> include the received *sl-PagingIdentityRemoteUE* in *SidelinkUEInformationNR* message and perform Sidelink UE information transmission in accordance with 5.8.3;

3> else (the *sl-PagingInfo-RemoteUE* is set to *release*):

4> initiate transmission of the *SidelinkUEInformationNR* message to release the *sl-PagingIdentityRemoteUE* in *SidelinkUEInformationNR* message in accordance with 5.8.3;

4> release the received paging information in *sl-PagingInfo-RemoteUE*;

12.3.1.2.6.3 Test Description

12.3.1.2.6.3.1 Pre-test conditions

System Simulator:

- SS-NW
  - NR Cell 1.
  - System information combination NR-31 as defined in TS 38.508-1 [4] clause 4.4.3.1 is used.
- NR-SS-UE
  - NR-SS-UE1 operating as L2 U2N Relay UE.
  - NR-SS-UE1 is synchronised on GNSS.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.

- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.4 and *ProSeP* using condition Announcing_Restricted_Model_A as per TS 38.508-1 [4] clause 4.7C.1.

- UE is synchronised on GNSS.

Preamble:

- The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.

13 V2X layer

13.1 V2X policy provisioning

13.1.1 V2X policy provisioning / Precedence / Validity timer expires / geographical area changes

13.1.1.1 Test Purpose (TP)

(1)

```
with { UE having V2XP over PC5 configured in the USIM and UE being out of NR network coverage }
ensure that {
  when { UE is required to start NR V2X communication }
    then { UE conducts V2X communication according to parameters of V2XP over PC5 from USIM }
            }
```

(2)

```
with { UE having V2XP over PC5 configured in the USIM and UE being in NR network coverage }
ensure that {
  when { UE receives V2XP over PC5 from SS and then NR cell is off }
    then { UE conducts V2X communication according to parameters of V2XP over PC5 from SS }
            }
```

(3)

```
with { UE having received V2XP over PC5 from SS }
ensure that {
  when { Validity timer expires and NR cell is on }
    then { UE initiates a UE-requested V2X policy provisioning procedure }
            }
```

(4)

```
with { UE having received V2XP over PC5 from SS after UE initiates a UE-requested V2X policy
provisioning procedure }
ensure that {
  when { UE is located in the geographical area and UE is requested by a service to transmit a V2X
packet }
    then { UE initiates a V2X communication on the frequency associated with the service }
            }
```

(5)

```
with { UE having initiated a V2X communication on the frequency associated with the service }
ensure that {
  when { UE moves out of the geographical area }
    then { UE cannot continue the V2X communication on the frequency associated with the service }
            }
```

13.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.587, clauses 5.2.2 and 5.2.3. Unless otherwise stated these are Rel-16 requirements.

[TS 24.501, clause 5.2.2]

…

The UE shall use the V2X configuration parameters in the following order of decreasing precedence:

a) the V2X configuration parameters provided as a V2XP using the UE policy delivery service as specified in annex D of 3GPP TS 24.501 [6];

b) the V2X configuration parameters provided by a V2X application server via V1 reference point;

c) the V2X configuration parameters configured in the USIM; and

d) the V2X configuration parameters pre-configured in the ME.

[TS 24.501, clause 5.2.3]

The configuration parameters for V2X communication over PC5 consist of:

a) a validity timer for the validity of the configuration parameters for V2X communication over PC5;

b) a list of PLMNs and RATs in which the UE is authorized to use V2X communication over PC5 when the UE is served by E-UTRA or served by NR. Each entry of the list contains a PLMN ID and RATs in which the UE is authorized to use V2X communication over PC5;

c) an indication of whether the UE is authorized to use V2X communication over PC5 when the UE is not served by E-UTRA and not served by NR;

d) list of RATs in which the UE is authorized to use V2X communication over PC5 and the radio parameters of the RAT for V2X communication over PC5 applicable per geographical area with an indication of whether these radio parameters of the RAT are "operator managed" or "non-operator managed" when the UE is not served by E-UTRA and not served by NR;

e) void

f) optionally, a list of V2X service identifier to PC5 RAT(s) and Tx profiles mapping rules. Each mapping rule contains one or more V2X service identifiers, PC5 RAT(s) and, if the PC5 RAT(s) include E-UTRA-PC5, Tx profiles corresponding to the E-UTRA-PC5;

g) configuration parameters for privacy support, consisting of:

   1) a list of V2X services requiring privacy. Each entry of the list contains one or more V2X service identifiers and one or more geographical areas where the privacy is required; and

   2) a privacy timer value as specified in 3GPP TS 24.588 [7] clause 5.3;

h) configuration parameters for a V2X communication over PC5 in E-UTRA-PC5, consisting of:

   1) a list of V2X service identifier to destination layer-2 ID mapping rules. Each mapping rule contains one or more V2X service identifiers and the destination layer-2 ID;

   2) optionally, a default destination layer-2 ID;

   3) a list of PPPP to PDB mapping rules. Each mapping rule contains a ProSe Per-Packet Priority (PPPP) and a Packet Delay Budget (PDB);

   4) optionally, list of V2X service identifier to V2X E-UTRA frequency mapping rules. Each mapping rule contains one or more V2X service identifiers and the V2X E-UTRA frequencies with associated geographical areas; and

   5) optionally, a list of the V2X services authorized for ProSe Per-Packet Reliability (PPPR). Each entry of the list contains one or more V2X service identifiers and a ProSe Per-Packet Reliability (PPPR) value; and

i) configuration parameters for a V2X communication over PC5 in NR-PC5, consisting of:

   1) optionally, a list of V2X service identifier to V2X NR frequency mapping rules. Each mapping rule contains one or more V2X service identifiers and the V2X NR frequencies with associated geographical areas;

   2) a list of V2X service identifier to destination layer-2 ID for broadcast mapping rules. Each mapping rule contains one or more V2X service identifiers and the destination layer-2 ID for broadcast;

   3) optionally, a default destination layer-2 ID for broadcast;

   4) a list of V2X service identifier to destination layer-2 ID for groupcast mapping rules. Each mapping rule contains one or more V2X service identifiers and the destination layer-2 ID for groupcast;

   5) a list of V2X service identifier to default destination layer-2 ID for unicast initial signalling mapping rules. Each mapping rule contains one or more V2X service identifiers and the default destination layer-2 ID for initial signalling to establish unicast connection;

   6) a list of V2X service identifier to PC5 QoS parameters mapping rules. The PC5 QoS parameters are specified in clause 5.4.2 of 3GPP TS 23.287 [3];

   7) an AS configuration, including a list of SLRB mapping rules applicable when the UE is not served by E-UTRA and is not served by NR. Each SLRB mapping rule contains a PC5 QoS profile and an SLRB. The PC5 QoS profile contains the following parameters:

      i) the PC5 QoS profile contains a PQI;

      ii) if the PQI of the PC5 QoS profile identifies a GBR QoS, the PC5 QoS profile contains a PC5 flow bit rates consisting of a guaranteed flow bit rate (GFBR) and a maximum flow bit rate (MFBR);

      iii) if the PQI of the PC5 QoS profile identifies a non-GBR QoS, the PC5 QoS profile contains the PC5 link aggregated bit rate consisting of a per link aggregate maximum bit rate (PC5 LINK-AMBR);

NOTE: PC5 link aggregated bit rate is only used for unicast mode communications over PC5.

iv) the PC5 QoS profile contains a range, which is only used for groupcast mode communications over PC5; and

v) the PC5 QoS profile can contain the priority level, the averaging window, and the maximum data burst volume. If one or more of the priority level, the averaging window or the maximum data burst volume are not contained in the PC5 QoS profile, their default values apply;

8) a list of NR-PC5 unicast security policies. Each entry in the list contains an NR-PC5 unicast security policy composed of:

i) one or more V2X service identifiers;

ii) the signalling integrity protection policy for the V2X service identifier(s);

iii) the signalling ciphering policy for the V2X service identifier(s);

iv) the user plane integrity protection policy for the V2X service identifier(s);

v) the user plane ciphering policy for the V2X service identifier(s); and

vi) one or more geographical areas where the NR-PC5 unicast security policy applies; and

9) a list of V2X service identifier to default mode of communication mapping rules. Each mapping rule contains one or more V2X service identifiers and the default mode of communication (one of unicast, groupcast or broadcast).

13.1.1.3 Test description

13.1.1.3.1 Pre-test conditions

SS-NW:

- NR Cell 1.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.3 is used in NR Cell 1.
- 1 GNSS simulator

NR-SS-UE:

- NR-SS-UE 1 is as defined in TS 38.508-1 [4], configured for and operating as NR Sidelink Communication receiving device on the resources which the UE is expected to use for transmission.
- NR-SS-UE 1 is synchronised on GNSS.

UE:

- The UE is equipped with a USIM configuration as defined in clause 4.8.3.3.3 of TS 38.508-1 [4].
- UE is synchronised on GNSS.

Preamble:

- UE is brought to state 4-A, Out of Coverage (NR sidelink), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.7.2-1 using generic procedure parameter Sidelink (*On*), Cast Type (*unicast*), UE initiating unicast mode NR sidelink communication, Test Loop Function (On) with UE test loop mode E.

13.1.1.3.2 Test procedure sequence

Table 13.1.1.3.2-1: Main behaviour

St	Procedure	Message Sequence	TP	Verdict

		U - S	Message		
1	The SS configures: SS-NW - NR Cell 1 as "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3. - GNSS simulator is configured for Scenario #1.	-	-	-	-
2	Check: Does the UE continuously send STCH SDAP PDUs on SL DRB#n in every PSSCH duration with the resources pre-configured in SL-PreconfigurationNR IE with NRf1 test frequency for NR Sidelink in USIM? (Note 1) NOTE: The UE has activated and closed test loop mode E in the preamble.	-->	V2X Data packet	1	P
3	Trigger the UE to open UE test loop mode E NOTE: The UE test loop mode E may be opened by MMI or AT command (+CCUTLE).	-	-	-	-
4	Trigger the UE to deactivate UE test loop mode. NOTE: The deactivation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	-	-	-
4A-4B	The NR-SS-UE1 releases unicast mode sidelink connection by executing steps 1-2 of Table 4.9.30.2.2-1 in TS 38.508-1 [4].	-	-	-	-
5	The SS configures: SS-NW - NR Cell 1 as "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3.	-	-	-	-
6	The UE performs Step 1-22a1 of Table 4.5.2.2-2 in TS 38.508-1 [4], with 'connected without release'.	-	-	-	-
7	SS-NW transmits a DL NAS TRANSPORT message containing a MANAGE UE POLICY COMMAND message to transfer the V2X policy to the UE.	<--	5GMM: DL NAS TRANSPORT PCF: MANAGE UE POLICY COMMAND	-	-
8	The UE transmits a UL NAS TRANSPORT message containing a MANAGE UE POLICY COMPLETE message	-->	*5GMM: UL NAS TRANSPORT* UE V2X: MANAGE UE POLICY COMPLETE	-	-
8A	SS-NW transmits an RRCRelease message	<--	*NR RRC: RRCRelease*	-	-
9	The SS configures: SS-NW - NR Cell 1 as "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3.	-	-	-	-
10	Trigger the UE to activate UE test loop mode NOTE: The activation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	-	-	-
11	Trigger the UE to close UE test loop mode E (transmission mode). NOTE: The UE test loop mode E may be closed by MMI or AT command (+CCUTLE).	-	-	-	-
11A-11F	The UE performs Steps 2-7 of Table 4.9.22.2.2-1 in TS 38.508-1 [4] to establish unicast mode NR sidelink communication on NRf2.	-	-	-	-
12	Check: Does the UE continuously send STCH SDAP PDUs on SL DRB#n in every PSSCH duration with the resources pre-configured in SL-PreconfigurationNR IE with NRf2 test frequency for NR Sidelink of V2X policy in step 7? (Note 1)	-->	V2X Data packet	2	P
12A	Trigger the UE to open UE test loop mode E NOTE: The UE test loop mode E may be opened by MMI or AT command (+CCUTLE).	-	-	-	-
13	Check: Does the UE transmit an	-->	NR RRC: *RRCSetupRequest*	3	P

A	*RRCSetupRequest* message within 30 seconds after step 7?				
13B-13G	The UE performs Step 3-8 of Table 4.5.4.2-3 in TS 38.508-1 [4], with 'connected without release'.	-	-	-	-
12B	Trigger the UE to deactivate UE test loop mode. NOTE: The deactivation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	-	-	-
12C-12D	The NR-SS-UE1 releases unicast mode sidelink connection by executing steps 1-2 of Table 4.9.30.2.2-1 in TS 38.508-1 [4].	-	-	-	-
13	The SS configures: SS-NW - NR Cell 1 as "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3.	-	-	-	-
14	Check: Does the UE transmit a UL NAS TRANSPORT message containing a UE POLICY PROVISIONING REQUEST message ?	-->	*5GMM: UL NAS TRANSPORT* UE V2X: UE POLICY PROVISIONING REQUEST	3	P
15	SS-NW transmits a DL NAS TRANSPORT message containing a MANAGE UE POLICY COMMAND message	<--	5GMM: DL NAS TRANSPORT PCF: MANAGE UE POLICY COMMAND	-	-
15A	The UE transmits a UL NAS TRANSPORT message containing a MANAGE UE POLICY COMPLETE message	-->	*5GMM: UL NAS TRANSPORT* UE V2X: MANAGE UE POLICY COMPLETE	-	-
15B	SS-NW transmits an RRCRelease message	<--	*NR RRC: RRCRelease*	-	-
16A	Trigger the UE to activate UE test loop mode NOTE: The activation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	-	-	-
16B	Trigger the UE to close UE test loop mode E (transmission mode). NOTE: The UE test loop mode E may be closed by MMI or AT command (+CCUTLE).	-	-	-	-
16C-16H	The UE performs Steps 2-7 of Table 4.9.22.2.2-1 in TS 38.508-1 [4] to establish unicast mode NR sidelink communication on NRf3.	-	-	-	-
16	The SS configures: SS-NW - NR Cell 1 as "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3.	-	-	-	-
17	Trigger the UE to reset UTC time. NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).	-	-	-	-
18	SS configures: GNSS simulator is configured for Scenario #2: move from inside Geographical area #1 to outside Geographical area #1, and starts step 1 to simulate a location in the centre of Geographical area #1 as defined in TS 38.508-1 [4] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.	-	-	-	-
19	Check: Does the UE continuously send STCH SDAP PDUs on SL DRB#n in every PSSCH duration with the resources in SL-PreconfigurationNR IE with NRf3 test frequency for NR Sidelink of V2X policy in step 15? (Note 1)	-->	V2X Data packet	4	P
20	SS configures: GNSS simulator is triggered to start step 2 of Scenario #2 to simulate the UE moving to a	-	-	-	-

	location outside Geographical area #1 as defined in TS 38.508-1 [4] Table 4.11.2-2. The area outside Geographical area #1 is not pre-configured in the UE.				
21	Wait for 71 sec (as detailed in TS 38.508-1 [4] Table 4.11.2-2) to allow the simulated location for the UE to leave Geographical area #1 and for the UE to acquire new location data.	-	-	-	-
22	Check: Does the UE continuously send STCH SDAP PDUs on SL DRB#n in every PSSCH duration with the resources in SL-PreconfigurationNR IE with NRf3 test frequency for NR Sidelink of V2X policy in step 15, in the next 10 seconds?	-->	V2X Data packet	5	F
23	Trigger the UE to open UE test loop mode E NOTE: The UE test loop mode E may be opened by MMI or AT command (+CCUTLE).	-	-	-	-
24	Trigger the UE to deactivate UE test loop mode. NOTE: The deactivation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	-	-	-
Note 1: Although the UE is expected to transmit continuously, only one STCH SDAP SDU packet is shown explicitly in this step sequence.

13.2.1 PC5 unicast / link establishment / Reject / Conflict Layer 2 ID

13.2.1.1 Test Purpose (TP)

(1)

```
with { UE being out of coverage, Test loopback activated}
ensure that {
  when { UE has a V2X packet to be transmitted over PC5 }
    then { UE initiates PC5 unicast link establishment }
         }
```

(2)

```
with { UE having transmitted PC5 unicast link establishment Request message }
ensure that {
  when { The Layer 2 ID is conflicted }
    then { the PC5 unicast link establishment procedure fails}
         }
```

13.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.587 [FFS], subclause 6.1.2.2.2 and 6.1.2.2.5. Unless otherwise stated these are Rel-16 requirements.

[TS 24.587, subclause 6.1.2.2.2]

The initiating UE shall meet the following pre-conditions before initiating this procedure:

a) a request from upper layers to transmit the packet for V2X service over PC5;

b) the communication mode is unicast mode (e.g. pre-configured as specified in clause 5.2.3 or indicated by upper layers);

c) the link layer identifier for the initiating UE (i.e. layer-2 ID used for unicast communication) is available (e.g. pre-configured or self-assigned) and is not being used by other existing PC5 unicast links within the initiating UE;

d) the link layer identifier for the destination UE (i.e. the unicast layer-2 ID of the target UE or the broadcast layer-2 ID) is available to the initiating UE (e.g. pre-configured, obtained as specified in clause 5.2.3 or known via prior V2X communication);

NOTE 1: In the case where different V2X services are mapped to distinct default destination layer-2 IDs, when the initiating UE intends to establish a single unicast link that can be used for more than one V2X service identifiers, the UE can select any of the default destination layer-2 ID for unicast initial signalling.

[TS 24.587, subclause 6.1.2.2.5]

If the DIRECT LINK ESTABLISHMENT REQUEST message cannot be accepted, the target UE shall send a DIRECT LINK ESTABLISHMENT REJECT message. The DIRECT LINK ESTABLISHMENT REJECT message contains a PC5 signalling protocol cause IE set to one of the following cause values:

#1 direct communication to the target UE not allowed;

#3 conflict of layer-2 ID for unicast communication is detected;

#5 lack of resources for PC5 unicast link; or

#111 protocol error, unspecified.

…

For a received DIRECT LINK ESTABLISHMENT REQUEST message from a layer-2 ID (for unicast communication), if the target UE already has an existing link established to a UE using this layer-2 ID or is currently processing a DIRECT LINK ESTABLISHMENT REQUEST message from the same layer-2 ID, and with one of following parameters different from the existing link or the link for which the link establishment is in progress:

a) the source user info;

b) type of data (e.g. IP or non-IP); or

c) security policy,

the target UE shall send a DIRECT LINK ESTABLISHMENT REJECT message containing PC5 signalling protocol cause value #3 "conflict of layer-2 ID for unicast communication is detected".

NOTE: The type of data (e.g. IP or non-IP) is indicated by the optional IP address configuration IE included in the corresponding DIRECT LINK SECURITY MODE COMPLETE message, i.e. the type of data for the requested link is IP type if this IE is included, and the type of data for the requested link is non-IP if this IE is not included.

…

After sending the DIRECT LINK ESTABLISHMENT REJECT message, the target UE shall provide the following information along with the initiating UE's layer-2 ID for unicast communication and the target UE's layer-2 ID for unicast communication to the lower layer:

a) an indication of deactivation of the PC5 unicast security protection and deletion of security context for the PC5 unicast link, if applicable.

Upon receipt of the DIRECT LINK ESTABLISHMENT REJECT message, the initiating UE shall stop timer T5000 and abort the PC5 unicast link establishment procedure.

…

After receiving the DIRECT LINK ESTABLISHMENT REJECT message, the initiating UE shall provide the following information along with the initiating UE's layer-2 ID for unicast communication and the target UE's layer-2 ID for unicast communication to the lower layer:

a) an indication of deactivation of the PC5 unicast security protection and deletion of security context for the PC5 unicast link, if applicable.

13.2.1.3 Test description

13.2.1.3.1 Pre-test conditions

System Simulator:

- NR-SS-UE
  - NR-SS-UE1 operating as NR sidelink communication device on the resources (i.e. the frequency included in pre-configuration) that UE is expected to use for transmission and reception via PC5 interface.
  - NR-SS-UE 1 is synchronised on GNSS.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.3.

- UE is synchronised on GNSS.

Preamble:

- The UE is in state 4-A and Test Mode (*On*), Test Loop Function (*Off*) as defined in TS 38.508-1 [4], Table 4.5.7.2-1 using generic procedure parameter Sidelink (*On*),Cast Type (*Unicast*), UE initiating unicast mode NR sidelink communication, GNSS Sync (*On*).

13.2.2 PC5 unicast / link Security Mode

13.2.2.1 Test Purpose (TP)

(1)

```
with { UE having received a DIRECT LINK SECURITY MODE COMMAND message }
ensure that {
  when { The DIRECT LINK SECURITY MODE COMMAND message includes non matching UE security
capabilities }
    then { UE transmits a DIRECT LINK SECURITY MODE REJECT message }
         }
```

13.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.587 [FFS], subclause 6.1.2.7.5. Unless otherwise stated these are Rel-16 requirements.

[TS 24.587, subclause 6.1.2.7.5]

If the DIRECT LINK SECURITY MODE COMMAND message cannot be accepted, the target UE shall send a DIRECT LINK SECURITY MODE REJECT message, and the target UE shall abort the ongoing procedure that triggered the initiation of the PC5 unicast link security mode control procedure unless the ongoing procedure is a PC5 unicast link establishment procedure and the Target user info is not included in the DIRECT LINK ESTABLISHMENT REQUEST message. The DIRECT LINK SECURITY MODE REJECT message contains a PC5 signalling protocol cause IE indicating one of the following cause values:

#7: integrity failure;

#8: UE security capabilities mismatch;

#9: LSBs of $K_{NRP-sess}$ ID conflict;

#10:UE PC5 unicast signalling security policy mismatch;

#11:lack of resources for PC5 unicast link; or

#111: protocol error, unspecified.

…

If the target UE detects that the received UE security capabilities IE in the DIRECT LINK SECURITY MODE COMMAND message has been altered compared to the latest values that the target UE sent to the initiating UE in the DIRECT LINK ESTABLISHMENT REQUEST message or DIRECT LINK REKEYING REQUEST message, the target UE shall include PC5 signalling protocol cause #8 "UE security capabilities mismatch" in the DIRECT LINK SECURITY MODE REJECT message.

…

After the DIRECT LINK SECURITY MODE REJECT message is generated, the target UE shall pass this message to the lower layers for transmission along with the initiating UE's layer-2 ID for unicast communication and the target UE's layer-2 ID for unicast communication.

Upon receipt of the DIRECT LINK SECURITY MODE REJECT message, the initiating UE shall stop timer T5007, provide an indication to the lower layer of deactivation of the PC5 unicast security protection and deletion of security context for the PC5 unicast link, if applicable and:

a) if the PC5 signalling protocol cause IE in the DIRECT LINK SECURITY MODE REJECT message is set to #9 "LSBs of $K_{NRP-sess}$ ID conflict", retransmit the DIRECT LINK SECURITY MODE COMMAND message with a different value for the 8 LSBs of $K_{NRP-sess}$ ID and restart timer T5007; or

b) if the PC5 signalling protocol cause IE is set to the value other than #9 "LSBs of KNRP-sess ID conflict", abort the ongoing procedure that triggered the initiation of the PC5 unicast link security mode control procedure.

13.2.2.3 Test description

```

13.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.587, subclause 6.1.2.3.2, 6.1.2.3.3. Unless otherwise stated these are Rel-16 requirements.

[TS 24.587, subclause 6.1.2.3.2]

The initiating UE shall meet the following pre-conditions before initiating this procedure for adding a new V2X service to the existing PC5 unicast link:

a) there is a PC5 unicast link between the initiating UE and the target UE; and

b) the pair of application layer IDs and the network layer protocol of this PC5 unicast link are identical to those required by the application layer in the initiating UE for this V2X service.

c) the security policy corresponding to the V2X service identifier (e.g. ITS-AID of the new V2X service) is aligned with the security policy of the existing PC5 unicast link.

After receiving the service data or request from the upper layers, the initiating UE shall perform the PC5 QoS flow match as apecified in clause 6.1.2.13. If there is no matched PC5 QoS flow, the initiating UE shall derive the PC5 QoS parameters and assign the PQFI(s) for the PC5 QoS flows(s) to be established as specified in clause 6.1.2.12.

If the PC5 unicast link modification procedure is to add new PC5 QoS flow(s) to the existing PC5 unicast link, the initiating UE shall create a DIRECT LINK MODIFICATION REQUEST message. In this message, initiating UE:

a) shall include the PQFI(s) and the corresponding PC5 QoS parameters, including the V2X service identifier(s); and

b) shall include the link modification operation code set to "add new PC5 QoS flow(s) to the existing PC5 unicast link ".

If the PC5 unicast link modification procedure is to modify the PC5 QoS parameters for existing PC5 QoS flow(s) in the existing PC5 unicast link, the initiating UE shall create a DIRECT LINK MODIFICATION REQUEST message. In this message, the initiating UE:

a) shall include the PQFI(s) and the corresponding PC5 QoS parameters, including the V2X service identifier(s); and

b) shall include the link modification operation code set to "modify PC5 QoS parameters of the existing PC5 QoS flow(s)".

If the PC5 unicast link modification procedure is to associate new V2X service(s) with existing PC5 QoS flow(s), the initiating UE shall create a DIRECT LINK MODIFICATION REQUEST message. In this message, the initiating UE:

a) shall include the PQFI(s) and the corresponding PC5 QoS parameters, including the V2X service identifier(s); and

b) shall include the link modification operation code set to "associate new V2X service(s) with existing PC5 QoS flow(s)".

If the PC5 unicast link modification procedure is to remove the associated V2X service(s) from existing PC5 QoS flow(s), the initiating UE shall create a DIRECT LINK MODIFICATION REQUEST message. In this message, the initiating UE:

a) shall include the PQFI(s) and the corresponding PC5 QoS parameters including the V2X service identifier(s); and

b) shall include the link modification operation code set to "remove V2X service(s) from existing PC5 QoS flow(s)".

If the PC5 unicast link modification procedure is to remove any PC5 QoS flow(s) from the existing PC5 unicast link, the initiating UE shall create a DIRECT LINK MODIFICATION REQUEST message. In this message, the initiating UE:

a) shall include the PQFI(s); and

b) shall include the link modification operation code set to "remove existing PC5 QoS flow(s) from the existing PC5 unicast link".

After the DIRECT LINK MODIFICATION REQUEST message is generated, the initiating UE shall pass this message to the lower layers for transmission along with the initiating UE's layer-2 ID for unicast communication and the target UE's layer-2 ID for unicast communication, and start timer T5001. The UE shall not send a new DIRECT LINK MODIFICATION REQUEST message to the same target UE while timer T5001 is running.

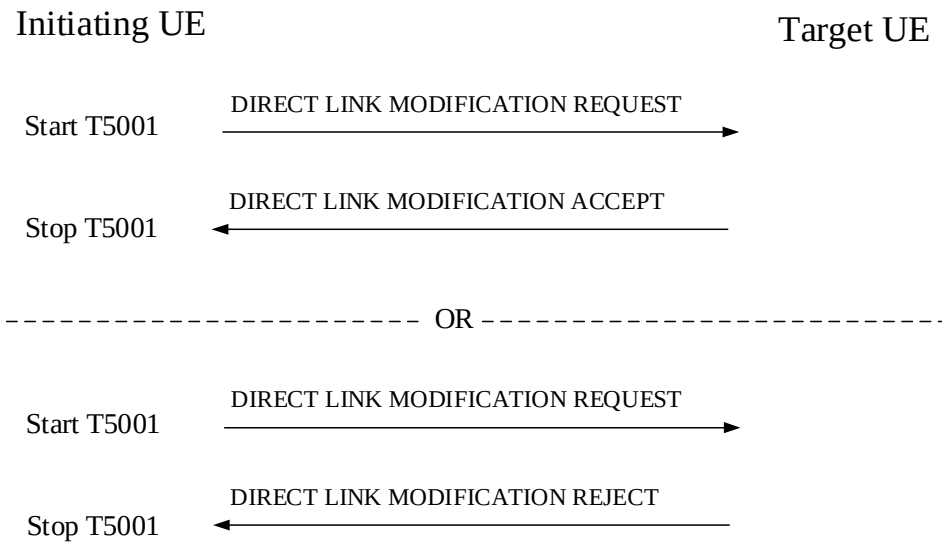

Figure 6.1.2.3.2: PC5 unicast link modification procedure

[TS 24.587, subclause 6.1.2.3.3]

If the DIRECT LINK MODIFICATION REQUEST message is accepted, the target UE shall respond with the DIRECT LINK MODIFICATION ACCEPT message.

If the DIRECT LINK MODIFICATION REQUEST message is to add a new V2X service, add new PC5 QoS flow(s) or modify any existing PC5 QoS flow(s) in the PC5 unicast link, the target UE shall include in the DIRECT LINK MODIFICATION ACCEPT message:

a) the PQFI(s), the corresponding PC5 QoS parameters and the V2X service identifier(s) that the target UE accepts.

If the DIRECT LINK MODIFICATION REQUEST message is to remove an existing V2X service from the PC5 unicast link, the target UE shall delete the V2X service identifier received in the DIRECT LINK MODIFICATION REQUEST message and the corresponding PQFI(s) and PC5 QoS parameters from the profile associated with the PC5 unicast link.

If the DIRECT LINK MODIFICATION REQUEST message is to remove existing PC5 QoS flow(s) from the PC5 unicast link, the target UE shall delete the PQFI(s) and the corresponding PC5 QoS parameters from the profile associated with the PC5 unicast link.

If the DIRECT LINK MODIFICATION REQUEST message is to add a new V2X service, add new PC5 QoS flow(s) or modify any existing PC5 QoS flow(s) in the PC5 unicast link, after sending the DIRECT LINK MODIFICATION ACCEPT message, the target UE shall provide the added or modified PQFI(s) and corresponding PC5 QoS parameters along with PC5 link identifier to the lower layer.

If the DIRECT LINK MODIFICATION REQUEST message is to remove an existing V2X service or to remove the existing PC5 QoS flow(s) from the PC5 unicast link, after sending the DIRECT LINK MODIFICATION ACCEPT message, the target UE shall provide the removed PQFI(s) along with the PC5 link identifier to the lower layer.

If the target UE accepts the PC5 unicast link modification request, then the target UE may perform the PC5 QoS flow establishment over PC5 unicast link as specified in clause 6.1.2.12 and perform the PC5 QoS flow match over PC5 unicast link as specified in clause 6.1.2.13.

13.2.3.3 Test description

13.2.3.3.1 Pre-test conditions

System Simulator:

- NR-SS-UE
  - NR-SS-UE1 operating as NR sidelink communication device on the resources (i.e. the frequency included in pre-configuration) that UE is expected to use for transmission and reception via PC5 interface.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.
- NR-SS-UE 1 is synchronised on GNSS.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.3.
- UE is synchronised on GNSS.

Preamble:

- The UE is in state 4-A with Test Mode (*On*), Test Loop Function (*Off*) as defined in TS 38.508-1 [4], Table 4.5.7.2-1 using generic procedure parameter Sidelink (*On*), NR-SS-UE initiating unicast mode NR sidelink communication, Cast Type (*Unicast*), GNSS Sync (*On*).

13.2.4 PC5 unicast / link Release / Reestablish PC5 unicast link to same UE

13.2.4.1 Test Purpose (TP)

(1)

```
with { UE having established a V2X DIRECT LINK with a K_NRP ID to a SS-UE, and released the DIRECT
LINK after receiving a DIRECT LINK RELEASE REQUEST message }
ensure that {
  when { UE has a V2X packet to be transmitted over PC5 to the same SS-UE }
    then { UE transmits DIRECT LINK ESTABLISHMENT REQUEST }
         }
```

13.2.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.587 , subclause 6.1.2.4.2, 6.1.2.4.4, 6.1.2.2.2. Unless otherwise stated these are Rel-16 requirements.

[TS 24.587, subclause 6.1.2.4.2]

The initiating UE shall initiate the procedure if a request from upper layers to release a PC5 unicast link with the target UE which uses a known layer-2 ID (for unicast communication) is received and there is an existing PC5 unicast link between these two UEs.

The initiating UE may initiate the procedure if the target UE has been non-responsive, e.g. no response in the PC5 unicast link modification procedure, PC5 unicast link identifier update procedure, PC5 unicast link re-keying procedure or PC5 unicast link keep-alive procedure.

The initiating UE may initiate the procedure to release an established PC5 unicast link if the UE has reached the maximum number of established PC5 unicast links and there is a need to establish a new PC5 unicast link. In this case, which PC5 unicast link is to be released is up to UE implementation.

The initiating UE may initiate the procedure to release an established PC5 unicast link upon expiry of the timer T5005.

In order to initiate the PC5 unicast link release procedure, the initiating UE shall create a DIRECT LINK RELEASE REQUEST message with a PC5 signalling protocol cause IE indicating one of the following cause values:

#1 direct communication with the target UE not allowed;

#2 direct communication to the target UE no longer needed;

#4 direct connection is not available anymore;

#5 lack of resources for PC5 unicast link; or

#111 protocol error, unspecified.

The initiating UE shall include the new MSB of K_{NRP} ID in the DIRECT LINK RELEASE REQUEST message.

After the DIRECT LINK RELEASE REQUEST message is generated, the initiating UE shall pass this message to the lower layers for transmission along with the initiating UE's layer-2 ID for unicast communication and the target UE's layer-2 ID for unicast communication, and shall stop T5011 if running. The initiating UE shall start timer T5002.

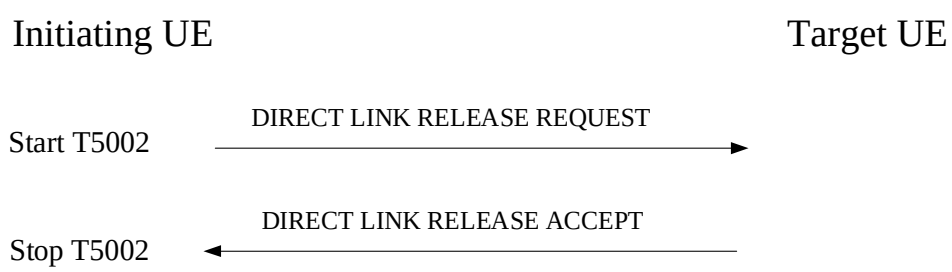

Figure 6.1.2.4.2.1: PC5 unicast link release procedure

[TS 24.587, subclause 6.1.2.4.4]

Upon receipt of the DIRECT LINK RELEASE ACCEPT message, the initiating UE shall stop timer T5002 and shall release the PC5 unicast link by performing the following behaviors:

a) inform the lower layer along with the PC5 link identifier that the PC5 unicast link has been released; and

b) delete the PC5 unicast link context of the PC5 unicast link after an implementation specific time.

The initiating UE shall form the new K_{NRP} ID from the MSB of K_{NRP} ID included in the DIRECT LINK RELEASE REQUEST message and the LSB of K_{NRP} ID received in the DIRECT LINK RELEASE ACCEPT message. The initiating UE shall replace the existing K_{NRP} ID with the new K_{NRP} ID. The initiating UE may include the new K_{NRP} ID in DIRECT LINK ESTABLISHMENT REQUEST message with the target UE as specified in clause 6.1.2.2.2.

[TS 24.587, subclause 6.1.2.2.2]

The initiating UE shall meet the following pre-conditions before initiating this procedure:

a) a request from upper layers to transmit the packet for V2X service over PC5;

b) the communication mode is unicast mode (e.g. pre-configured as specified in clause 5.2.3 or indicated by upper layers);

c) the link layer identifier for the initiating UE (i.e. layer-2 ID used for unicast communication) is available (e.g. pre-configured or self-assigned) and is not being used by other existing PC5 unicast links within the initiating UE;

d) the link layer identifier for the destination UE (i.e. the unicast layer-2 ID of the target UE or the broadcast layer-2 ID) is available to the initiating UE (e.g. pre-configured, obtained as specified in clause 5.2.3 or known via prior V2X communication);

NOTE 1: In the case where different V2X services are mapped to distinct default destination layer-2 IDs, when the initiating UE intends to establish a single unicast link that can be used for more than one V2X service identifiers, the UE can select any of the default destination layer-2 ID for unicast initial signalling.

e) the initiating UE is either authorised for V2X communication over PC5 in NR-PC5 in the serving PLMN, or has a valid authorization for V2X communication over PC5 in NR-PC5 when not served by E-UTRA and not served by NR. The UE considers that it is not served by E-UTRA and not served by NR if the following conditions are met:

1) not served by NR and not served by E-UTRA for V2X communication over PC5;

2) in limited service state as specified in 3GPP TS 23.122 [2], if the reason for the UE being in limited service state is one of the following;

i) the UE is unable to find a suitable cell in the selected PLMN as specified in 3GPP TS 38.304 [9];

ii) the UE received a REGISTRATION REJECT message or a SERVICE REJECT message with the 5GMM cause #11 "PLMN not allowed" as specified in 3GPP TS 24.501 [6]; or

iii) the UE received a REGISTRATION REJECT message or a SERVICE REJECT message with the 5GMM cause #7 "5GS services not allowed" as specified in 3GPP TS 24.501 [6]; or

3) in limited service state as specified in 3GPP TS 23.122 [2] for reasons other than i), ii) or iii) above, and located in a geographical area for which the UE is provisioned with "non-operator managed" radio parameters as specified in clause 5.2.3;

f) there is no existing PC5 unicast link for the pair of peer application layer IDs, or there is an existing PC5 unicast link for the pair of peer application layer IDs and:

1) the network layer protocol of the existing PC5 unicast link is not identical to the network layer protocol required by the upper layer in the initiating UE for this V2X service; or

2) the security policy (either signalling security policy or user plane security policy) corresponding to the V2X service identifier is not compatible with the security policy of the existing PC5 unicast link; and

g) the number of established PC5 unicast links is less than the implementation-specific maximum number of established NR PC5 unicast links allowed in the UE at a time.

After receiving the service data or request from the upper layers, the initiating UE shall derive the PC5 QoS parameters and assign the PQFI(s) for the PC5 QoS flows(s) to be established as specified in clause 6.1.2.12.

In order to initiate the PC5 unicast link establishment procedure, the initiating UE shall create a DIRECT LINK ESTABLISHMENT REQUEST message. The initiating UE:

a) shall include the source user info set to the initiating UE's application layer ID received from upper layers;

b) shall include the V2X service identifier(s) received from upper layer;

c) shall include the target user info set to the target UE's application layer ID if received from upper layers or if the destination layer-2 ID is the unicast layer-2 ID of target UE;

d) shall include the Key establishment information container if the UE PC5 unicast signalling integrity protection policy is set to "signalling integrity protection required" or "signalling integrity protection preferred", and may include the Key establishment information container if the UE PC5 unicast signalling integrity protection policy is set to "signalling integrity protection not needed";

NOTE 2: The Key establishment information container is provided by upper layers.

e) shall include a Nonce_1 set to the 128-bit nonce value generated by the initiating UE for the purpose of session key establishment over this PC5 unicast link if the UE PC5 unicast signalling integrity protection policy is set to "signalling integrity protection required" or "signalling integrity protection preferred";

f) shall include its UE security capabilities indicating the list of algorithms that the initiating UE supports for the security establishment of this PC5 unicast link;

g) shall include the 8 MSBs of $K_{NRP-sess}$ ID chosen by the initiating UE as specified in 3GPP TS 33.536 [20] if the UE PC5 unicast signalling integrity protection policy is set to "signalling integrity protection required" or "signalling integrity protection preferred";

h) may include a K_{NRP} ID if the initiating UE has an existing K_{NRP} for the target UE; and

i) shall include its UE PC5 unicast signalling security policy. In the case where the different V2X services are mapped to the different PC5 unicast signalling security policies, when the initiating UE intends to establish a single unicast link that can be used for more than one V2X service, each of the signalling security polices of those V2X services shall be compatible, e.g. "signalling integrity protection not needed" and "signalling integrity protection required" are not compatible.

After the DIRECT LINK ESTABLISHMENT REQUEST message is generated, the initiating UE shall pass this message to the lower layers for transmission along with the initiating UE's layer-2 ID for unicast communication and the destination layer-2 ID, and start timer T5000. The UE shall not send a new DIRECT LINK ESTABLISHMENT REQUEST message to the same target UE identified by the same application layer ID while timer T5000 is running. If the target user info IE is not included in the DIRECT LINK ESTABLISHMENT REQUEST message (i.e. V2X service oriented PC5 unicast link establishment procedure), the initiating UE shall handle multiple DIRECT LINK ESTABLISHMENT ACCEPT messages, if any, received from different target UEs for the establishment of multiple PC5 unicast links before the expiry of timer T5000.

NOTE 3: In order to ensure successful PC5 unicast link establishment, T5000 should be set to a value larger than the sum of T5006 and T5007.

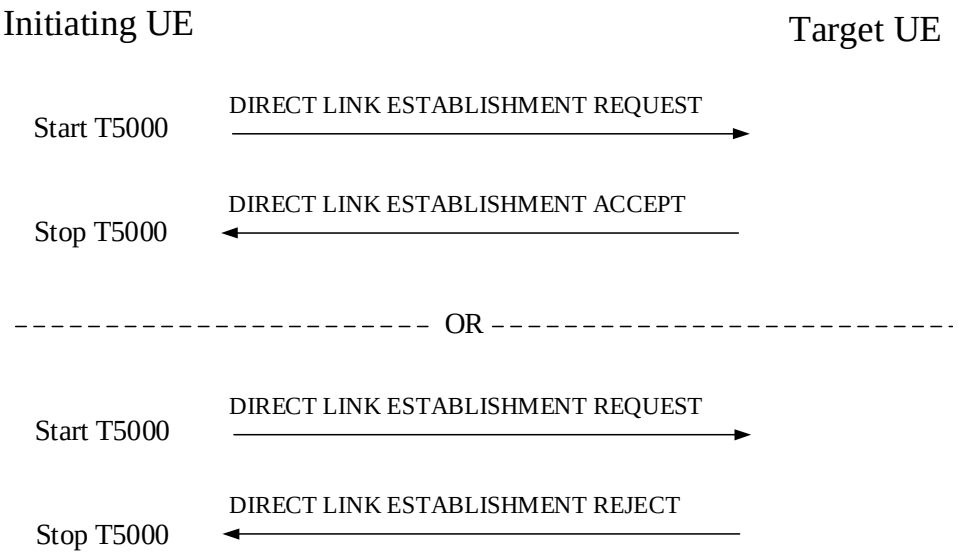

Figure 6.1.2.2.2: UE oriented PC5 unicast link establishment procedure

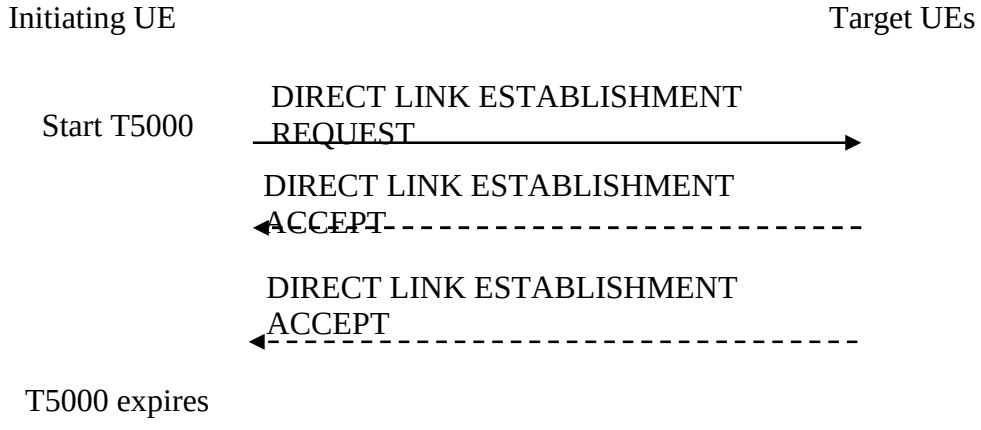

Figure 6.1.2.2.3: V2X service oriented PC5 unicast link establishment procedure

13.2.4.3 Test description

13.2.4.3.1 Pre-test conditions

System Simulator:

- NR-SS-UE
  - NR-SS-UE1 operating as NR sidelink communication device on the resources (i.e. the frequency included in pre-configuration) that UE is expected to use for transmission and reception via PC5 interface.
  - NR-SS-UE 1 is synchronised on GNSS.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.3.
- UE is synchronised on GNSS.

Preamble:

- The UE is in state 4-A with Test Mode (*On*), Test Loop Function (*Off*) as defined in TS 38.508-1 [4], Table 4.5.7.2-1 using generic procedure parameter Sidelink (*On*), NR-SS-UE initiating unicast mode NR sidelink communication, Cast Type (*Unicast*), GNSS Sync (*On*).

    then { the Layer 2 ID associated with the V2X packet is the old Layer 2 ID-1 }
         }
```

(3)

```
with { UE having established a DIRECT LINK with old Layer 2 ID-1 to a peer UE. UE receives a DIRECT
LINK IDENTIFIER UPDATE REQUEST message and responds with a DIRECT LINK IDENTIFIER UPDATE ACCEPT
message with new Layer 2 ID-2 }
ensure that {
  when { UE receives a DIRECT LINK IDENTIFIER UPDATE ACK message from the peer UE }
    then { UE transmits a V2X packet and the Layer 2 ID associated with the V2X packet is the new
Layer 2 ID-2 }
         }
```

13.2.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.587, subclause 6.1.2.5.3, 6.1.2.5.4 and 6.1.2.5.6. Unless otherwise stated these are Rel-16 requirements.

[TS 24.587, subclause 6.1.2.5.3]

Upon receipt of a DIRECT LINK IDENTIFIER UPDATE REQUEST message, if the target UE determines:

a) the PC5 unicast link associated with this request message is still valid; and

b) the timer T5010 for the PC5 unicast link identified by this request message is not running,

then the target UE accepts this request, and responds with a DIRECT LINK IDENTIFIER UPDATE ACCEPT message.

The target UE shall create the DIRECT LINK IDENTIFIER UPDATE ACCEPT message. In this message, the target UE:

a) shall include the target UE's new layer-2 ID assigned by itself;

b) shall include the new LSB of $K_{NRP\text{-}sess}$ ID;

c) shall include the initiating UE's new MSB of $K_{NRP\text{-}sess}$ ID;

d) shall include the initiating UE's new layer-2 ID;

e) shall include the target UE's new application layer ID if received from upper layer;

f) shall include the initiating UE's new IP address/prefix if received from the initiating UE and IP communication is used;

g) shall include the initiating UE's new application layer ID if received from the initiating UE; and

h) shall include the target UE's new IP address/prefix if IP communication is used and changed.

After the DIRECT LINK IDENTIFIER UPDATE ACCEPT message is generated, the target UE shall pass this message to the lower layers for transmission along with the initiating UE's old layer-2 ID for unicast communication and the target UE's old layer-2 ID for unicast communication, and start timer T5010. The UE shall not send a new DIRECT LINK IDENTIFIER UPDATE ACCEPT message to the same initiating UE while timer T5010 is running.

Before target UE receives the traffic using the new layer-2 IDs, the target UE shall continue to receive the traffic with the old layer-2 IDs (i.e. initiating UE's old layer-2 ID and target UE's old layer-2 ID) from initiating UE.

Before target UE receives the DIRECT LINK IDENTIFIER UPDATE ACK message from initiating UE, the target UE shall keep sending traffic to the initiating UE using the old layer-2 IDs (i.e. initiating UE's old layer-2 ID for unicast communication and target UE's old layer-2 ID for unicast communication).

[24.587, subclause 6.1.2.5.4]

Upon receipt of the DIRECT LINK IDENTIFIER UPDATE ACCEPT message, the initiating UE shall stop timer T5009 and respond with a DIRECT LINK IDENTIFIER UPDATE ACK message. In this message, the initiating UE:

a) shall include the target UE's new layer-2 ID;

b) shall include the target UE's new LSB of $K_{NRP-sess}$ ID;

c) shall include the target UE's new application layer ID, if received; and

d) shall include the target UE's new IP address/prefix, if received.

After the DIRECT LINK IDENTIFIER UPDATE ACK message is generated, the initiating UE shall pass this message to the lower layers for transmission along with the initiating UE's old layer-2 ID for unicast communication and the target UE's old layer-2 ID for unicast communication and shall stop timer T5011 if running and start a timer T5011 as configured if at least one of V2X service identifiers for the PC5 unicast link satisfying the privacy requirements as specified in clause 5.2.3.

Upon sending the DIRECT LINK IDENTIFIER UPDATE ACK message, the initiating UE shall update the associated PC5 unicast link context with the new identifiers and pass the new layer-2 IDs (i.e. initiating UE's new layer-2 ID for unicast communication and target UE's new layer-2 ID for unicast communication if changed) along with the PC5 link identifier down to the lower layer. Then the initiating UE shall use the new layer-2 IDs (i.e. initiating UE's new layer-2 ID for unicast communication and target UE's new layer-2 ID for unicast communication if changed) to transmit the PC5 signalling message and PC5 user plane data.

The initiating UE shall continue to receive traffic with the old layer-2 IDs (i.e. initiating UE's old layer-2 ID for unicast communication and target UE's old layer-2 ID for unicast communication) from the target UE until it receives traffic with the new layer-2 IDs (i.e. initiating UE's new layer-2 ID and target UE's new layer-2 ID if changed) from the target UE.

[24.587, subclause 6.1.2.5.6]

If the DIRECT LINK IDENTIFIER UPDATE REQUEST message cannot be accepted, the target UE shall send a DIRECT LINK IDENTIFIER UPDATE REJECT message. The DIRECT LINK IDENTIFIER UPDATE REJECT message contains a PC5 signalling protocol cause IE set to one of the following cause values:

#3 conflict of layer-2 ID for unicast communication is detected; or

#111 protocol error, unspecified.

For a received DIRECT LINK IDENTIFIER UPDATE REQUEST message from a layer-2 ID (for unicast communication), if the target UE already has an existing link using this layer-2 ID or is currently processing a DIRECT LINK IDENTIFIER UPDATE REQUEST message from the same layer-2 ID, but with user info different from the user info IE included in this new incoming message, the target UE shall send a DIRECT LINK IDENTIFIER UPDATE REJECT message with PC5 signalling protocol cause value #3 "conflict of layer-2 ID for unicast communication is detected".

NOTE: After receiving the DIRECT LINK IDENTIFIER UPDATE REJECT message, whether the initiating UE initiates the PC5 unicast link release procedure or initiates another PC5 unicast link identifier update procedure with a new layer-2 ID depends on UE implementation.

For other reasons causing the failure of link identifier update, the target UE shall send a DIRECT LINK IDENTIFIER UPDATE REJECT message with PC5 signalling protocol cause value #111 "protocol error, unspecified".

Upon receipt of the DIRECT LINK IDENTIFIER UPDATE REJECT message, the initiating UE shall stop timer T5009 and abort this PC5 unicast link identifier update procedure.

13.2.5.3 Test description

13.2.5.3.1 Pre-test conditions

System Simulator:

- NR-SS-UE
  - NR-SS-UE1 operating as NR sidelink communication device on the resources (i.e. the frequency included in pre-configuration) that UE is expected to use for transmission and reception via PC5 interface.
  - NR-SS-UE1 uses GNSS as the synchronization reference source.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE uses GNSS as the synchronization reference source.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.3.

Preamble:

- The UE is in state 4-A and Test Loop Function (*On*) with UE test loop mode E as defined in TS 38.508-1 [4], subclause 4.4A using generic procedure parameter Sidelink (*On*), Cast Type (*Unicast*), GNSS Sync (*On*) using NR-SS-UE initiated unicast mode NR sidelink communication procedure in subclause 4.9.23.

13.2.5.3.2 Test procedure sequence

Table 13.2.5.3.2-1: Main behaviour

```

13.2.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.587 [FFS], subclause 6.1.2.8.5.1 and 6.1.2.8.5.2. Unless otherwise stated these are Rel-16 requirements.

[TS 24.587, subclause 6.1.2.8.5.1]

a) Timer T5004 expires.

The initiating UE shall retransmit the DIRECT LINK KEEPALIVE REQUEST message with the last used value of the keep-alive counter and restart timer T5004. After reaching the maximum number of allowed retransmissions, the initiating UE shall abort the PC5 unicast link keep-alive procedure and locally release the PC5 unicast link.

NOTE: The maximum number of allowed retransmissions is UE implementation specific.

b) The need to use this PC5 unicast link no longer exists before the PC5 unicast link keep-alive procedure is completed.

The initiating UE shall abort the PC5 unicast link keep-alive procedure and initiate a PC5 unicast link release procedure.

c) The initiating UE receives a DIRECT LINK KEEPALIVE RESPONSE message with a keep-alive counter value different from the value which the initiating UE had included in the last sent DIRECT LINK KEEPALIVE REQUEST message.

The initiating UE shall discard the DIRECT LINK KEEPALIVE RESPONSE message.

d) The initiating UE receives a PC5 signalling message other than a DIRECT LINK KEEPALIVE RESPONSE message or PC5 user plane data from the target UE over this PC5 unicast link while timer T5004 is running.

The initiating UE shall stop timer T5004, abort the PC5 unicast link keep-alive procedure, start timer T5003 and increment the keep-alive counter for the PC5 unicast link.

e) The initiating UE receives a DIRECT LINK KEEPALIVE RESPONSE message when T5004 is not running.

The initiating UE shall discard the DIRECT LINK KEEPALIVE RESPONSE message.

[TS 24.587, subclause 6.1.2.8.5.2]

a) Timer T5005 expires.

The target UE shall:

1) initiate a PC5 unicast link keep-alive procedure to check the link; or

2) initiate the PC5 unicast link release procedure.

Whether the UE chooses 1) or 2) is left to UE implementation.

b) The target UE receives a DIRECT LINK KEEPALIVE REQUEST message with a keep-alive counter value lower than the value which the target UE had included in the last sent DIRECT LINK KEEPALIVE RESPONSE message.

The target UE shall discard the DIRECT LINK KEEPALIVE REQUEST message.

c) The target UE receives a DIRECT LINK KEEPALIVE REQUEST message if there is a pending PC5 signalling message or PC5 user plane data to be sent to the initiating UE over this PC5 unicast link.

The target UE:

1) shall pass this PC5 signalling message to the lower layers for transmission along with the target UE's layer-2 ID for unicast communication and the initiating UE's layer-2 ID for unicast communication, or perform the data transmission over PC5 unicast link as specified in clause 6.1.2.9; and

2) shall consider transmission of this PC5 signalling message or PC5 user plane data to be an implicit DIRECT LINK KEEPALIVE RESPONSE message and skip generating a DIRECT LINK KEEPALIVE RESPONSE message. If a maximum inactivity period is included in the DIRECT LINK KEEPALIVE REQUEST message, the target UE shall stop T5005, if running, and start T5005 with its value set to the maximum inactivity period.

13.2.6.3 Test description

13.2.6.3.1 Pre-test conditions

System Simulator:

- NR-SS-UE
  - NR-SS-UE1 operating as NR sidelink communication device on the resources (i.e. the frequency included in pre-configuration) that UE is expected to use for transmission and reception via PC5 interface.
  - NR-SS-UE1 is synchronised on GNSS.
- GNSS simulator
  - The GNSS simulator is started and configured for Scenario #1.

UE:

- UE is authorised to perform NR sidelink communication.
- The UE is equipped with a USIM containing default values as per TS 38.508-1 [4] clause 4.8.3.3.3.
- UE is synchronised on GNSS.

Preamble:

- The UE is in state 4-A and Test Mode (*On*) , Test Loop Function(*Off*) as defined in TS 38.508-1 [4], Table 4.5.7.2-1 using generic procedure parameter Sidelink (*On*), NR-SS-UE initiating unicast mode NR sidelink communication , Cast Type (*Unicast*), GNSS Sync (*On*).

mcch-WindowStartSlot and during mcch-WindowDuration }
```

14.1.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.6.2; TS 38.331, clauses 5.9.1.1, 5.9.1.2, 5.9.2.2 and 5.9.2.3. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.6.2]

MBS broadcast can be received by UEs in RRC_IDLE, RRC_INACTIVE and RRC_CONNECTED state. A UE can receive the MBS configuration for broadcast session (e.g., parameters needed for MTCH reception) via MCCH in RRC_IDLE, RRC_INACTIVE and RRC_CONNECTED state. The parameters needed for the reception of MCCH are provided via System Information.

The following principles govern the MCCH structure:

- MCCH provides the list of all broadcast services with ongoing sessions transmitted on MTCH(s) and the associated information for broadcast session includes MBS session ID, associated G-RNTI scheduling information and information about neighbouring cells providing certain service on MTCH(s). MCCH content is transmitted within periodically occurring time domain windows, referred to as MCCH transmission window defined by MCCH repetition period, MCCH window duration and radio frame/slot offset;

…

[TS 38.331, clause 5.9.1.1]

UE receiving or interested to receive MBS broadcast service(s) applies MBS broadcast procedures described in this clause as well as the MBS Interest Indication procedure as specified in clause 5.9.4.

MBS broadcast configuration information is provided on MCCH logical channel. MCCH carries the *MBSBroadcastConfiguration* message which indicates the MBS broadcast sessions that are provided in the cell as well as the corresponding scheduling related information for these sessions. Optionally, the *MBSBroadcastConfiguration* message may also contain a list of neighbour cells providing the same broadcast MBS service(s) as provided in the current cell. The configuration information required by the UE to receive MCCH is provided in *SIB20*. Additionally, System Information provides also an information related to service continuity of MBS broadcast in *SIB21*.

[TS 38.331, clause 5.9.1.2]

The MCCH information (i.e. information transmitted in messages sent over MCCH) is transmitted periodically, using a configurable repetition period and within a configured transmission window. MCCH transmissions (and the associated radio resources and MCS) are indicated via the PDCCH addressed to MCCH-RNTI. PDCCH monitoring occasion(s) for MCCH transmission are determined according to the common search space indicated by *searchspaceMCCH*. If *searchspaceMCCH* is set to zero, PDCCH monitoring occasions for MCCH message reception in the MCCH transmission window are the same as PDCCH monitoring occasions for *SIB1* where the mapping between PDCCH monitoring occasions and SSBs is specified in TS 38.213[13]. If *searchspaceMCCH* is not set to zero, PDCCH monitoring occasions for MCCH message are determined based on search space indicated by *searchspaceMCCH*. PDCCH monitoring occasions for MCCH message which are not overlapping with UL symbols (determined according to *tdd-UL-DL-ConfigurationCommon*) are sequentially numbered from one in the MCCH transmission window.

[TS 38.331, clause 5.9.2.2]

A UE shall apply the MCCH information acquisition procedure upon becoming interested to receive MBS broadcast services. A UE interested to receive MBS broadcast services shall apply the MCCH information acquisition procedure upon entering the cell providing *SIB20* (e.g. upon power on, following UE mobility), upon receiving *SIB20* of an SCell via dedicated signalling and upon receiving a notification that the MCCH information has changed due to the start of new MBS service(s).

[TS 38.331, clause 5.9.2.3]

An MBS capable UE interested to receive or receiving an MBS broadcast service shall:

…

1> if the UE enters a cell broadcasting *SIB20*; or

1> if the UE receives *sCellSIB20*:

2> acquire the *MBSBroadcastConfiguration* message on MCCH in the concerned cell at the next repetition period.

14.1.1.1.3 Test description

14.1.1.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 (TAI-1) and NR Cell 2 (TAI-1).
- The SS configures the NR Cell 1 as the "Serving cell" and NR Cell 2 as "Non-suitable "Off" cell".
- System information combination NR-20 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

UE:

- None.

Preamble:

- The UE is in state 0N-B as defined in TS 38.508-1 [4], subclause 4.4A.
- Before being switched off the UE is made interested in receiving MBS Broadcast service with MBS Service ID ‘000001’H.

14.1.1.1.3.2 Test procedure sequence

2-	Steps 1 to 19Ba2 of the registration procedure	-		-	-

20 Ba 2	described in TS 38.508-1 [4] subclause 4.5.2.2-2 are performed on NR Cell 1 with condition UE TEST LOOP MODE C.				
21	The SS starts to transmit *MBSBroadcastConfiguration* message on NR Cell 1.	-	-	-	-
21 A	The SS transmits an *RRCRelease* message.	<--	NR RRC: *RRCRelease*	-	-
22	Wait for a period equal to the MCCH repetition period for the UE to receive *MBSBroadcastConfiguration* message on NR Cell 1. (Note 1)	-	-	-	-
23-31a 2	Steps 1 to 9a2 of the generic procedures described in TS 38.508-1 [4] subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C.	-	-	-	-
-	Exception: Step 32 is repeated 5 times.	-	-	-	-
32	The SS transmits an MBS Packet on the MTCH with LCID=1 and g-RNTI = ’0001’H.	<--	MBS Packet.	-	-
33	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
34	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
35	Check: Is the number of reported MBS Packets received on the MTCH in step 34 greater than zero?	-	-	1, 6	P
36	The SS transmits an *RRCRelease* message.	<--	NR RRC: *RRCRelease*	-	-
37	The SS configures: -NR Cell 1 as the "Non-suitable cell". -NR Cell 2 as the "Serving cell".	-	-	-	-
37 A	The SS starts to transmit *MBSBroadcastConfiguration* message on NR Cell 2.	-	-	-	-
38	Wait for 34[FR1]/130[FR2] seconds.(Note 2)	-	-	-	-
39	Wait for a period equal to the MCCH repetition period for the UE to receive *MBSBroadcastConfiguration* message on NR Cell 2. (Note 1)	-	-	-	-
39 A-39 H	Steps 1 to 8 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 2.	-	-	-	-
39I	The SS transmits an OPEN UE TEST LOOP message.	<--	NR RRC: *DLInformationTransfer* TC: OPEN UE TEST LOOP	-	-
39J	The UE transmits an OPEN UE TEST LOOP COMPLETE message.	-->	NR RRC: *ULInformationTransfer* TC: OPEN UE TEST LOOP COMPLETE	-	-
39 K-39L	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed with condition UE TEST LOOP MODE C.	-	-	-	-
39 M	The SS transmits an *RRCRelease* message.	<--	NR RRC: *RRCRelease*	-	-
-	Exception: Step 40 is repeated 5 times.	-	-	-	-
40	The SS transmits an MBS Packet on the MTCH with LCID= 1 and g-RNTI = ’FFF2’H.	<--	MBS Packet	-	-
41-48	Steps 1 to 8 of the generic procedures described in TS 38.508-1 [4] subclause 4.5.4.2-3 are performed on NR Cell 2.	-	-	-	-
49	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER	-	-

			REQUEST		
50	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
51	Check: Is the number of reported MBS Packets received on the MTCH in step 50 greater than zero?	-	-	2, 6	P
52	SS changes NR Cell 1 system information and update MBSBroadcastConfiguration message on NR Cell 1.	-	-	-	-
53	The SS configures: -NR Cell 1 as the "Serving cell ". -NR Cell 2 as the "Suitable neighbour intra-frequency cell ".				
54	The SS transmits an *RRCReconfiguration* message including *reconfigurationWithSync* to order the UE to perform intra-frequency handover to NR Cell 1.	<--	NR RRC: *RRCReconfiguration*	-	-
55	Check: Does the UE transmit RRCReconfigurationComplete message in NR Cell 1?	-->	NR RRC: *RRCReconfigurationComplete*	4	P
56	Wait for 700ms.(Note 5)	-	-	-	-
57	Wait for a period equal to the MCCH repetition period for the UE to receive *MBSBroadcastConfiguration* message on NR Cell 1. (Note 3)	-	-	-	-
57A	The SS transmits an OPEN UE TEST LOOP message.	<--	NR RRC: *DLInformationTransfer* TC: OPEN UE TEST LOOP	-	-
57B	The UE transmits an OPEN UE TEST LOOP COMPLETE message.	-->	NR RRC: *ULInformationTransfer* TC: OPEN UE TEST LOOP COMPLETE	-	-
57C-57D	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed with condition UE TEST LOOP MODE C.	-	-	-	-
-	Exception: Step 58 is repeated 5 times.	-	-	-	-
58	The SS transmits an MBS Packet on the MTCH with LCID=1 and g-RNTI = ’0002’H.	<--	MBS Packet	-	-
59	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
60	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
61	Check: Is the number of reported MBS Packets received on the MTCH in step 60 greater than zero?	-	-	4, 5	P
-	EXCEPTION: Steps 62a1-62a13 describe behaviour that depends on UE configuration; the "lower case letter" identifies a step sequence that takes place if inactiveState is configured.	-	-	-	-
62a1	IF pc_inactiveState THEN the SS transmits an *RRCRelease* message with *suspendConfig*.	<--	NR RRC: *RRCRelease*	-	-
62a2	SS change NR Cell 2 system information and update MBSBroadcastConfiguration message on NR Cell 2.	-	-	-	-
62a3	The SS configures: -NR Cell 1 as the "Non-suitable cell". -NR Cell 2 as the "Serving cell".	-	-	-	-
62a4	Wait for 8[FR1]/27[FR2] seconds.(Note 4)	-	-	-	-
62a5	Wait for a period equal to the MCCH repetition period for the UE to receive	-	-	-	-

	MBSBroadcastConfiguration message on NR Cell 2. (Note 3)

62a 9	The SS transmits an *RRCResume* message.	<--	NR RRC: *RRCResume*	-	-
62a 10	The UE transmits an *RRCResumeComplete* message.	-->	NR RRC: *RRCResumeComplete*	-	-
62a 11	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
62a 12	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
62a 13	Check: Is the number of reported MBS Packets received on the MTCH in step 62a12 greater than zero?	-	-	3, 5	P

Note 1: MAC PDU for *MBSBroadcastConfiguration* is 22 bytes (19 bytes RLC SDU + 1 byte UMD PDU header + 2 bytes MAC sub Header) and DL assignments are set to 120 bits (L_{RBs} & I_{MCS} as per 38.523-3[3] annex B) so that *MBSBroadcastConfiguration* need to be sent in 2 slots.

Note 2: The wait time at steps 38 is the cell re-selection delay to a newly detectable cell, it can be expressed as: T_{detect,NR_Intra} (as per TS 38.133 [30], clause 4.2.2.3) plus the time to read the system information $T_{SI\text{-}NR}$ (1280ms).

Note 3: MAC PDU for *MBSBroadcastConfiguration* is 22 bytes (19 bytes RLC SDU + 1 byte UMD PDU header + 2 bytes MAC sub Header) and DL assignment is set to larger than 176 bits (L_{RBs} & I_{MCS} as per 38.523-3[3] annex B) so that *MBSBroadcastConfiguration* could to be sent in 1 slot.

Note 4: The wait time at steps 62a4 is the cell re-selection delay to an already detected cell, it can be expressed as: $T_{evaluate,NR_Intra}$ (as per TS 38.133 [30], clause 4.2.2.3) plus the time to read the system information $T_{SI\text{-}NR}$ (1280ms).

Note 5: The scheduling period is 640ms for SIB20 specified in TS 38.508-1[4] clause 4.4.3.1. The wait timer should be larger than 640ms to make sure the UE receive SIB20.

14.1.1.2 MBS Broadcast/ MCCH Information Acquisition/ becoming interested to receive MBS broadcast services / searchspaceMCCH and searchspaceMTCH set to zero

14.1.1.2.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_IDLE state and camped on a cell providing SIB20 and not interested to receive
MBS broadcast services and searchspaceMCCH/ searchspaceMTCH set to zero }
ensure that {
  when { UE is becoming interested to receive one MBS broadcast service }
    then { UE acquires the MBSBroadcastConfiguration message and starts MBS reception for this MBS
broadcast service }
            }
```

14.1.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331, clauses 5.9.2.2. Unless otherwise stated these are Rel-17 requirements.

[TS 38.331, clause 5.9.2.2]

A UE shall apply the MCCH information acquisition procedure upon becoming interested to receive MBS broadcast services. A UE interested to receive MBS broadcast services shall apply the MCCH information acquisition procedure upon entering the cell providing *SIB20* (e.g. upon power on, following UE mobility), upon receiving *SIB20* of an SCell via dedicated signalling and upon receiving a notification that the MCCH information has changed due to the start of new MBS service(s).

14.1.1.2.3 Test description

14.1.1.2.3.1 Pre-test conditions

System Simulator:

- System information combination NR-20 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.
- SS starts broadcasting MBSBroadcastConfiguration in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.- UE is made not interested in receiving MBS Broadcast services14.1.1.2.3.2 Test procedure sequence

Table 14.1.1.2.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS updates *MBSBroadcastConfiguration* message to include the configuration for MBS Service ID ‘000002’H	-	-	-	-
2	The SS transmits MCCH information change notification due to the start of new MBS service.	-	-	-	-
3	Wait until SS stops transmitting MCCH information change notification.	-	-	-	-

4	UE is made interested in receiving MBS Broadcast service with MBS Service ID '000002'H. (Note 1)	-	-	-	-
5	Wait for 10s to ensure that UE have acquired the updated *MBSBroadcastConfiguration* in step 1 due to becoming interested to receiving MBS Broadcast service with MBS Service ID '000002'H.	-	-	-	-
6-14a2	Steps 1 to 9a2 of the generic procedures described in TS 38.508-1 [4] subclause 4.5.4.2-3 are performed with condition UE TEST LOOP MODE C.	-	-	-	-
-	Exception: Step 15 is repeated 5 times.	-	-	-	-
15	The SS transmits an MBS Packet on the MTCH with LCID=2 and g-RNTI = '0002'H.	<--	MBS Packet.	-	-
16	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
17	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
18	Check: Is the number of reported MBS Packets received on the MTCH in step 17 greater than zero?	-	-	1	P
Note 1: The request may be performed by MMI or AT command.

14.1.1.3 MBS Broadcast/ MCCH Information Acquisition/ MCCH Information change notification

14.1.1.3.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC IDLE state and camped on a cell providing SIB20 and interested to receive MBS
broadcast service }
ensure that {
  when { UE is receiving a notification that the MCCH information has changed due to the start of
new MBS service }
    then { UE starts acquiring the MBSBroadcastConfiguration message on MCCH from the slot in which
the change notification was received }
            }
```

(2)

```
with { UE in NR RRC CONNECTED state and is receiving data via broadcast MRB }
ensure that {
  when { UE is receiving a notification that the MCCH information has changed due to MCCH
information modification other than the change caused by the start of new MBS session }
    then { UE starts acquiring the MBSBroadcastConfiguration message on MCCH from the slot in which
the change notification was received }
            }
```

14.1.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.6.2; TS 38.331, clauses 5.9.1.3, 5.9.2.2 and 5.9.2.3. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.6.2]

The following principles govern the MCCH structure:

…

- MCCH uses a modification period and MCCH contents are only allowed to be modified at each modification period boundary; A notification mechanism is used to announce the change of MCCH contents due to broadcast session start, modification or stop and due to neighbouring cell information modification;

NOTE: It is up to UE implementation to use the start and stop times in the USD to determine when to start monitoring the MCCH for the session the UE is interested in.

- When the UE receives a MCCH change notification, it acquires the updated MCCH in the same MCCH modification period where the change notification is sent.

[TS 38.331, clause 5.9.1.3]

Change of MCCH information only occurs at specific radio frames, i.e. the concept of a modification period is used. Within a modification period, the same MCCH information may be transmitted a number of times, as defined by its scheduling (which is based on a repetition period).

When the network changes (some of) the MCCH information, it notifies the UEs about the change starting from the beginning of the MCCH modification period via PDCCH which schedules the MCCH in every repetition in that modification period.

Upon receiving a change notification, a UE receiving or interested to receive MBS services transmitted using MBS broadcast acquires the new MCCH information starting from the same slot. The UE applies the previously acquired MCCH information until the UE acquires the new MCCH information. The notification is transmitted with a 2-bit bitmap, see TS 38.212 [17] clause 7.3.1.5.1. The MSB in the 2-bit bitmap, when set to '1', indicates the start of new MBS service(s). The LSB in the 2-bit bitmap, when set to '1', indicates modification of MCCH information other than the change caused by start of new MBS service(s), e.g. modification of a configuration of an on-going MBS session(s), MBS session(s) stop or neighbouring cell information modification.

[TS 38.331, clause 5.9.2.2]

A UE shall apply the MCCH information acquisition procedure upon becoming interested to receive MBS broadcast services. A UE interested to receive MBS broadcast services shall apply the MCCH information acquisition procedure upon entering the cell providing *SIB20* (e.g. upon power on, following UE mobility), upon receiving *SIB20* of an SCell via dedicated signalling and upon receiving a notification that the MCCH information has changed due to the start of new MBS service(s). A UE that is receiving data via broadcast MRB shall apply the MCCH information acquisition procedure upon receiving a notification that the MCCH information has changed due to MCCH information modification other than the change caused by the start of new MBS service(s).

[TS 38.331, clause 5.9.2.3]

An MBS capable UE interested to receive or receiving an MBS broadcast service shall:

1> if the procedure is triggered by an MCCH information change notification:

2> start acquiring the *MBSBroadcastConfiguration* message on MCCH in the concerned cell from the slot in which the change notification was received;

…

14.1.1.3.3 Test description

14.1.1.3.3.1 Pre-test conditions

System Simulator:

- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-20 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.
- SS starts broadcasting MBSBroadcastConfiguration in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- UE is made interested in receiving MBS Broadcast service with MBS Service ID ‘000001’H.

            }
```

14.1.1.4.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331, clauses 6.3.2, 5.9.2.2 and 5.9.2.3. Unless otherwise stated these are Rel-17 requirements.

[TS 38.331, clause 5.9.2.2]

A UE shall apply the MCCH information acquisition procedure upon becoming interested to receive MBS broadcast services. A UE interested to receive MBS broadcast services shall apply the MCCH information acquisition procedure upon entering the cell providing *SIB20* (e.g. upon power on, following UE mobility), upon receiving *SIB20* of an SCell via dedicated signalling and upon receiving a notification that the MCCH information has changed due to the start of new MBS service(s).

[TS 38.331, clause 5.9.2.3]

An MBS capable UE interested to receive or receiving an MBS broadcast service shall:

…

1> if the UE enters a cell broadcasting *SIB20*; or

1> if the UE receives *sCellSIB20*:

2> acquire the *MBSBroadcastConfiguration* message on MCCH in the concerned cell at the next repetition period.

[TS 38.331, clause 6.3.2]

***CellGroupConfig* field descriptions**
npn-IdentityInfoList This field is used to transfer *npn-IdentityInfoList* in *SIB1* of the SCell. The UE uses this field to translate the *plmn-Index* in MCCH of SCell to SNPN Identity. If this field and *plmn-IdentityInfoList* are both absent, the UE uses the *npn-IdentityInfoList* in *SIB1* of the PCell.
plmn-IdentityInfoList This field is used to transfer *plmn-IdentityInfoList* in *SIB1* of the SCell. The UE uses this field to translate the *plmn-Index* in MCCH of SCell to PLMN Identity. If this field and *npn-IdentityInfoList* are both absent, the UE uses the *plmn-IdentityInfoList* in *SIB1* of the PCell.

14.1.1.4.1.3 Test description

14.1.1.4.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the PCell, NR Cell 3 is the SCell to be added.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 3N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- UE is made interested in receiving MBS Broadcast service with MBS Service ID ‘000001’H.

14.1.1.4.2 MBS Broadcast/ MCCH Information Acquisition/ receiving SIB20 of an SCell via dedicated signalling / Inter-band CA

The scope and description of the present TC is the same as test case 14.1.1.4.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA
- Cells configuration: NR Cell 10 replaces NR Cell 3

14.1.1.4.3 MBS Broadcast/ MCCH Information Acquisition/ receiving SIB20 of an SCell via dedicated signalling / Intra-band non Contiguous CA

The scope and description of the present TC is the same as test case 14.1.1.4.1 with the following differences:

- CA configuration: Intra-band non-Contiguous CA replaces Intra-band Contiguous CA

14.1.2 MBS Broadcast/ Service Continuity

14.1.2.1 MBS Broadcast/ Service Continuity/ Cell reselection/ frequency prioritization

14.1.2.1.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC IDLE state and is receiving MBS broadcast service via broadcast MRB and camped
on a cell providing SIB21 indicating a MBS FSAI in mbs-FSAI-IntraFreq-r17 and the same MBS FSAI is
also indicated for this MBS broadcast service in MBS User Service Description (USD)}
ensure that {
  when { an intra-frequency neighbour cell providing the MBS service and an inter-frequency
neighbour cell not providing the MBS service becomes better than the serving cell }
    then { UE performs cell reselection to the intra-frequency cell even if the inter-frequency cell
is better and continues MBS reception }
            }
```

(2)

```
with { UE in NR RRC IDLE state and interested to receive MBS broadcast service and camped on a cell
not providing SIB20 }
ensure that {
  when { serving cell providing SIB21 indicating a MBS FSAI in mbs-FSAI-InterFreq-r17 and the same
MBS FSAI is also indicated for this MBS broadcast service in MBS User Service Description (USD) }
    then { UE performs cell reselection to the inter-frequency neighbour cell even if the serving
cell is better and starts MBS reception }
            }
```

(3)

```
with { UE in NR RRC INACTIVE state and is receiving MBS data via broadcast MRB and camped on a cell
providing SIB20 and SIB21 indicating a MBS FSAI in mbs-FSAI-IntraFreq-r17 and the same MBS FSAI is
also indicated for this MBS broadcast service in MBS User Service Description (USD) }
ensure that {
  when { an intra-frequency neighbour cell providing the MBS service and an inter-frequency
neighbour cell not providing the MBS service becomes better than the serving cell }
    then { UE performs cell reselection to the intra-frequency cell even if the inter-frequency cell
is better and continues MBS reception }
            }
```

14.1.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.6.5.1; TS 38.304, clause 5.2.4.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.6.5.1]

In RRC_IDLE and RRC_INACTIVE, the UE applies the normal cell reselection rules with the following modifications:

- the UE which is receiving or interested to receive MBS broadcast service(s) via PTM and can only receive these MBS broadcast service(s) via PTM while camping on the frequency providing these MBS broadcast service(s) is allowed to make this frequency highest priority when the conditions described in TS 38.304 [10] are met;

- when the MBS broadcast service(s) which the UE is interested in are no longer available (after the end of the session) or the UE is no longer interested in receiving the service(s), the UE no longer prioritises the frequency providing these MBS broadcast service(s).

[TS 38.304, clause 5.2.4.1]

The UE shall only perform cell reselection evaluation for NR frequencies and inter-RAT frequencies that are given in system information and for which the UE has a priority provided.

If the MBS broadcast capable UE is receiving or interested to receive an MBS broadcast service(s) and can only receive this MBS broadcast service(s) by camping on a frequency on which it is provided, the UE may consider that frequency to be the highest priority during the MBS broadcast session as specified in TS 38.300 [2] as long as the two following conditions are fulfilled:

1) SIB1 scheduling information of the cell reselected by the UE due to frequency prioritization for MBS contains SIB20;

2) Either:

   - One or more MBS FSAI(s) of that frequency is indicated in SIB21 of the serving cell and the same MBS FSAI(s) is also indicated for this MBS broadcast service in MBS User Service Description (USD) as specified in TS 26.346 [20], or

   - SIB21 is not provided in the serving cell and that frequency is included in the USD of this service, or

   - SIB21 is provided in the serving cell but does not provide the frequency mapping for the concerned service, and that frequency is included in the USD of this service.

NOTE 0g: It is up to UE implementation which frequency to select, when the USD provides multiple frequencies for the service the UE is interested in.

If the MBS broadcast capable UE is receiving or interested to receive an MBS broadcast service, the UE may consider cell reselection candidate frequencies at which it cannot receive the MBS broadcast service to be of the lowest priority during the MBS broadcast session as specified in TS 38.300 [2], as long as the SIB20 is provided by the cell on the MBS frequency which the UE monitors and as long as the condition 2) above is fulfilled for the serving cell.

NOTE 0h: Example scenarios in which such down-prioritisation may be needed include the cases where camping is not possible for the UE on the MBS broadcast frequency (e.g. the MBS broadcast frequency belongs to a PLMN different from UE's registered PLMN) while the UE can receive the MBS broadcast service when camped on another frequency than the MBS broadcast frequency or current frequency.

[TS 23.247, clause 6.5.4]

The MBS Frequency Selection Area (FSA) ID is used for broadcast MBS session to guide the frequency selection of the UE.

MBS FSA ID identifies a preconfigured area within, and in proximity to, which the cell(s) announces the MBS FSA ID and the associating frequency (details see TS 38.300 [9]).

14.1.2.1.3 Test description

14.1.2.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 (TAI-1), NR Cell 11 (TAI-2) and NR Cell 23 (TAI-2).
- System information combination NR-4 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 23.
- System information combination NR-25 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1 and NR cell 11.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 23(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.1.2.1.3.2 Test procedure sequence

Table 14.1.2.1.3.2-1 and 14.1.2.1.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1, NR Cell 11 and NR Cell 23 at various time instants of the test execution. Row marked "T0" denotes the conditions for the preamble, while the configuration marked "T1", "T2"and "T3" are applied at the point indicated in the Main behaviour description in Table 14.1.2.1.3.2-3.

Table 14.1.2.1.3.2-1: Time instances of cell power level and parameter changes for FR1

14.1.2.2 MBS Broadcast/ Service Continuity/ Handover/ MBS Interest Indication/ inter-frequency

14.1.2.2.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_CONNECTED state and interested to receive MBS broadcast service and has not
transmitted a MBSInterestIndication message }
ensure that {
  when { SIB21 provided in the serving cell indicates that the MBS service is available on a
frequency of an inter-frequency neighbour cell and the FSAI of this frequency is also indicated in
the USD for this session }
    then { UE transmits a MBSInterestIndication message indicating interest in MBS reception on the
frequency }
            }
```

(2)

```
with { UE in NR RRC_CONNECTED state and having transmitted a MBSInterestIndication message
indicating interest in MBS reception on a frequency of an inter-frequency neighbour cell }
ensure that {
  when { 1s after the UE has transmitted the MBSInterestIndication message the UE receives
RRCReconfiguration message including a reconfigurationWithSync indicating a the NR frequency of the
inter-frequency neighbour cell }
    then { UE performs inter-frequency handover and starts MBS reception }
            }
```

(3)

```
with { UE in NR RRC_CONNECTED state and having transmitted a MBSInterestIndication message }
ensure that {
```

```
  when { UE handover from a cell not providing SIB20 to a cell providing SIB20 and SIB21 }
    then { UE transmits a MBSInterestIndication message }
            }
```

(4)

```
with { UE in NR RRC_CONNECTED state and having transmitted a MBSInterestIndication message }
ensure that {
  when { The set of MBS broadcast frequencies of interest is different from mbs-FreqList included in
the last transmission of the MBS Interest Indication }
    then { UE transmits a MBSInterestIndication message indicating interest in MBS reception on the
frequency }
            }
```

(5)

```
with { UE in NR RRC_CONNECTED state and having transmitted a MBSInterestIndication message }
ensure that {
  when { UE receives a RRCReconfiguration message including reconfigurationWithSync less than 1
second after the last transmission of an MBSInterestIndication message and target cell provides
SIB21}
    then { UE re-transmits a MBSInterestIndication message }
            }
```

14.1.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.6.5.2; TS 38.331, clauses 5.9.4.2, 5.9.4.3, 5.9.4.4, 5.9.4.5 and 5.3.5.3. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.6.5.2]

To ensure service continuity of MBS broadcast, the UE in RRC_CONNECTED state may send MBS Interest Indication to the gNB, consisting of the following information:

- List of MBS frequencies UE is interested to receive, sorted in decreasing order of interest;
- Priority between the reception of all listed MBS frequencies and the reception of any unicast bearer;
- List of MBS broadcast services the UE is interested to receive, in case SIB20 is scheduled by the UE's PCell.

MBS Interest Indication information reporting can be implicitly enabled/disabled by the presence of SIB21.

The gNB may use this information, together with the information about the UE's capabilities (e.g., supported band combinations), when providing an RRC configuration and/or downlink assignments to the UE, to allow the UE to receive the MBS services the UE is interested in. MBS Interest Indication information can be exchanged between source gNB and target gNB during handover.

[TS 38.331, clause 5.9.4.2]

Upon initiating the procedure, the UE shall:

1> if *SIB21* is provided by the PCell:

2> ensure having a valid version of *SIB21* for the PCell;

2> if the UE did not transmit MBS Interest Indication since last entering RRC_CONNECTED state; or

2> if since the last time the UE transmitted an MBS Interest Indication, the UE connected to a PCell not providing *SIB21*:

3> if the set of MBS broadcast frequencies of interest, determined in accordance with 5.9.4.3, is not empty:

4> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate transmission of the *MBSInterestIndication* message;

2> else:

3> if the set of MBS broadcast frequencies of interest, determined in accordance with 5.9.4.3, is different from *mbs-FreqList* included in the last transmission of the MBS Interest Indication; or

…

4> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate transmission of the *MBSInterestIndication* message;

NOTE: The UE may send MBS Interest Indication even when it is able to receive the MBS services it is interested in i.e. to avoid that the network allocates a configuration inhibiting MBS broadcast reception.

3> else if *SIB20* is provided for the PCell or for the SCell:

4> if since the last time the UE transmitted the MBS Interest Indication, the UE connected to a PCell not providing *SIB20* and the UE was not provided with *SIB20* for an SCell; or

4> if the set of MBS broadcast services of interest determined in accordance with 5.9.4.4 is different from *mbs-ServiceList* included in the last transmission of the MBS Interest Indication:

5> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate the transmission of *MBSInterestIndication* message.

[TS 38.331, clause 5.9.4.3]

The UE shall:

1> consider a frequency to be part of the MBS frequencies of interest if the following conditions are met:

2> at least one MBS session the UE is receiving or interested to receive via a broadcast MRB is ongoing or about to start; and

NOTE 1: The UE may determine whether the session is ongoing from the start and stop time indicated in the User Service Description (USD), see TS 38.300 [2] or TS 23.247 [67].

2> for at least one of these MBS sessions, *SIB21* acquired from the PCell includes mapping between the concerned frequency and one or more MBS FSAIs indicated in the USD for this session, or for at least one of these MBS sessions, the concerned frequency is not included in *SIB21* but is indicated in the USD for this session; and

NOTE 2: The UE considers a frequency to be part of the MBS frequencies of interest even though NG-RAN may (temporarily) not employ a broadcast MRB for the concerned session, i.e., the UE does not verify if the session is indicated on MCCH.

2> the *supportedBandCombinationList* the UE included in *UE-NR-Capability* contains at least one band combination including the concerned MBS frequency.

NOTE 3: When evaluating which frequencies the UE is capable of receiving, the UE does not take into account whether they are currently configured as serving frequencies.

[TS 38.331, clause 5.9.4.4]

The UE shall:

1> consider an MBS service to be part of the MBS services of interest if the following conditions are met:

2> the UE is receiving or interested to receive this service via a broadcast MRB; and

2> the session of this service is ongoing or about to start; and

2> one or more MBS FSAIs in the USD for this service is included in *SIB21* acquired from the PCell for a frequency belonging to the set of MBS frequencies of interest, determined according to 5.9.4.3 or *SIB21* acquired from the PCell does not provide the frequency mapping for the concerned service but that frequency is included in the USD of this service.

NOTE: The UE may determine whether the session is ongoing from the start and stop time indicated in the User Service Description (USD), see TS 38.300 [2] or TS 23.247 [67].

[TS 38.331, clause 5.9.4.5]

The UE shall set the contents of the MBS Interest Indication as follows:

1> if the set of MBS frequencies of interest, determined in accordance with 5.9.4.3, is not empty:

2> include *mbs-FreqList* and set it to include the MBS frequencies of interest sorted by decreasing order of interest, using the *absoluteFrequencySSB* for serving frequency, if applicable, and the *ARFCN-ValueNR*(s) as included in *SIB21* or in USD (for neighbouring frequencies);

…

2> if *SIB20* is provided for the PCell or for the SCell:

3> include *mbs-ServiceList* and set it to indicate the set of MBS services of interest sorted by decreasing order of interest determined in accordance with 5.9.4.4.

[TS 38.331, clause 5.3.5.3]

1> if *reconfigurationWithSync* was included in *spCellConfig* of an MCG or SCG and when MAC of an NR cell group successfully completes a Random Access procedure triggered above; or,

…

2> if *reconfigurationWithSync* was included in *masterCellGroup* and the target cell provides *SIB21*:

3> if the UE initiated transmission of an *MBSInterestIndication* message during the last 1 second preceding reception of this *RRCReconfiguration* message; or

…

4> initiate transmission of an *MBSInterestIndication* message in accordance with clause 5.9.4;

14.1.2.2.3 Test description

14.1.2.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 (TAI-1) and NR Cell 3 (TAI-1).
- System information combination NR-4 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.
- System information combination NR-25 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR Cell 3.

UE:

- None.

Preamble:

- The UE is in state 3N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.1.2.2.3.2 Test procedure sequence

Table 14.1.2.2.3.2-1/2 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions for preamble, while columns marked " T1",and " T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 14.1.2.2.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-88	Off	
T1	SS/PBCH SSS EPRE	dBm/SCS	-88	-94	Power levels are such that entry condition for event A3 is not satisfied

					for the neighbour NR cell: Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off
T2	SS/PBCH SSS EPRE	dBm/SCS	-88	-82	Power levels are such that entry condition for event A3 is satisfied for inter-frequency neighbour NR cell 3(measId 1): Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off

Table 14.1.2.2.3.2-2: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-91	Off	
T1	SS/PBCH SSS EPRE	dBm/SCS	-91	-100	Power levels are such that entry condition for event A3 is not satisfied for the neighbour NR cell: Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off
T2	SS/PBCH SSS EPRE	dBm/SCS	-91	-82	Power levels are such that entry condition for event A3 is satisfied for inter-frequency neighbour NR cell 3(measId 1): Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off

Table 14.1.2.2.3.2-3: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
0	The SS changes NR Cell 1 and NR Cell 3 level according to the row "T1" in table 14.1.2.2.3.2-1/2.	-	-	-	-
1	The UE is made interested in receiving a MBS service with MBS Service ID ‘000001’H associated with the MBS FSAI-1 (Note 1).	-	-	-	-
2	The UE is made aware that the MBS Service ID ‘000001’H is ongoing (Note 1).	-	-	-	-
3	The SS starts to broadcast SIB21 (according to System information combination NR-24) as defined in TS 38.508-1 [4] clause 4.4.3.1.2) on NR Cell 1 including mbs-FSAI-InterFreqList-r17 indicating MBS-FSAI-r17=1 for the frequency of NR Cell 3.	-	-	-	-
4	The SS transmits a Short message on PDCCH using P-RNTI indicating a *systemInfoModification* on NR Cell 1.	-	PDCCH (DCI 1_0): Short Message	-	-
5	Check: Does the UE transmit *MBSInterestIndication* message.	-->	*MBSInterestIndication*	1	P

14.1.2.3 MBS Broadcast/ Service Continuity/ Handover/ MBS Interest Indication/ intra-frequency

14.1.2.3.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_CONNECTED state and is receiving MBS broadcast service and has not transmitted a
MBSInterestIndication message }
ensure that {
  when { SIB21 provided in the serving cell indicates that the MBS service is available on a
frequency of intra-frequency neighbour cell and the FSAI of this frequency is also indicated in the
USD for this session }
    then { UE transmits a MBSInterestIndication message indicating interest in MBS reception on the
frequency }
            }
```

(2)

```
with { UE in NR RRC_CONNECTED state and having transmitted a MBSInterestIndication message
indicating interest in MBS reception on a frequency of intra-frequency neighbour cell }
ensure that {
  when { 1s after the UE has transmitted the MBSInterestIndication message the UE receives
RRCReconfiguration message including a reconfigurationWithSync indicating a the NR frequency of the
intra-frequency neighbour cell }
    then { UE performs intra-frequency handover and continues to receive MBS reception }
            }
```

(3)

```
with { UE in NR RRC_CONNECTED state and having transmitted a MBSInterestIndication message }
ensure that {
  when { Since the last time the UE transmitted an MBS Interest Indication, UE handovers from a cell
not providing SIB21 to a cell providing SIB21 }
    then { UE transmits a MBSInterestIndication message }
            }
```

(4)

```
with { UE in NR RRC_CONNECTED state and having transmitted a MBSInterestIndication message }
ensure that {
  when { The set of MBS broadcast services of interest is different from mbs-ServiceList included in
the last transmission of the MBS Interest Indication }
    then { UE transmits a MBSInterestIndication message indicating new mbs-ServiceList }
            }
```

14.1.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.6.5.2; TS 38.331, clauses 5.9.4.2, 5.9.4.3, 5.9.4.4 and 5.9.4.5. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.6.5.2]

To ensure service continuity of MBS broadcast, the UE in RRC_CONNECTED state may send MBS Interest Indication to the gNB, consisting of the following information:

- List of MBS frequencies UE is interested to receive, sorted in decreasing order of interest;
- Priority between the reception of all listed MBS frequencies and the reception of any unicast bearer;
- List of MBS broadcast services the UE is interested to receive, in case SIB20 is scheduled by the UE's PCell.

MBS Interest Indication information reporting can be implicitly enabled/disabled by the presence of SIB21.

The gNB may use this information, together with the information about the UE's capabilities (e.g., supported band combinations), when providing an RRC configuration and/or downlink assignments to the UE, to allow the UE to receive the MBS services the UE is interested in. MBS Interest Indication information can be exchanged between source gNB and target gNB during handover.

[TS 38.331, clause 5.9.4.2]

Upon initiating the procedure, the UE shall:

1> if *SIB21* is provided by the PCell:

2> ensure having a valid version of *SIB21* for the PCell;

2> if the UE did not transmit MBS Interest Indication since last entering RRC_CONNECTED state; or

2> if since the last time the UE transmitted an MBS Interest Indication, the UE connected to a PCell not providing *SIB21*:

3> if the set of MBS broadcast frequencies of interest, determined in accordance with 5.9.4.3, is not empty:

4> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate transmission of the *MBSInterestIndication* message;

2> else:

3> if the set of MBS broadcast frequencies of interest, determined in accordance with 5.9.4.3, is different from *mbs-FreqList* included in the last transmission of the MBS Interest Indication; or

…

4> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate transmission of the *MBSInterestIndication* message;

NOTE: The UE may send MBS Interest Indication even when it is able to receive the MBS services it is interested in i.e. to avoid that the network allocates a configuration inhibiting MBS broadcast reception.

3> else if *SIB20* is provided for the PCell or for the SCell:

4> if since the last time the UE transmitted the MBS Interest Indication, the UE connected to a PCell not providing *SIB20* and the UE was not provided with *SIB20* for an SCell; or

4> if the set of MBS broadcast services of interest determined in accordance with 5.9.4.4 is different from *mbs-ServiceList* included in the last transmission of the MBS Interest Indication:

5> set the contents of MBS Interest Indication according to 5.9.4.5 and initiate the transmission of *MBSInterestIndication* message.

[TS 38.331, clause 5.9.4.3]

The UE shall:

1> consider a frequency to be part of the MBS frequencies of interest if the following conditions are met:

2> at least one MBS session the UE is receiving or interested to receive via a broadcast MRB is ongoing or about to start; and

NOTE 1: The UE may determine whether the session is ongoing from the start and stop time indicated in the User Service Description (USD), see TS 38.300 [2] or TS 23.247 [67].

2> for at least one of these MBS sessions, *SIB21* acquired from the PCell includes mapping between the concerned frequency and one or more MBS FSAIs indicated in the USD for this session, or for at least one of these MBS sessions, the concerned frequency is not included in *SIB21* but is indicated in the USD for this session; and

NOTE 2: The UE considers a frequency to be part of the MBS frequencies of interest even though NG-RAN may (temporarily) not employ a broadcast MRB for the concerned session, i.e., the UE does not verify if the session is indicated on MCCH.

2> the *supportedBandCombinationList* the UE included in *UE-NR-Capability* contains at least one band combination including the concerned MBS frequency.

NOTE 3: When evaluating which frequencies the UE is capable of receiving, the UE does not take into account whether they are currently configured as serving frequencies.

[TS 38.331, clause 5.9.4.4]

The UE shall:

1> consider an MBS service to be part of the MBS services of interest if the following conditions are met:

2> the UE is receiving or interested to receive this service via a broadcast MRB; and

2> the session of this service is ongoing or about to start; and

2> one or more MBS FSAIs in the USD for this service is included in *SIB21* acquired from the PCell for a frequency belonging to the set of MBS frequencies of interest, determined according to 5.9.4.3 or *SIB21* acquired from the PCell does not provide the frequency mapping for the concerned service but that frequency is included in the USD of this service.

NOTE: The UE may determine whether the session is ongoing from the start and stop time indicated in the User Service Description (USD), see TS 38.300 [2] or TS 23.247 [67].

[TS 38.331, clause 5.9.4.5]

The UE shall set the contents of the MBS Interest Indication as follows:

1> if the set of MBS frequencies of interest, determined in accordance with 5.9.4.3, is not empty:

2> include *mbs-FreqList* and set it to include the MBS frequencies of interest sorted by decreasing order of interest, using the *absoluteFrequencySSB* for serving frequency, if applicable, and the *ARFCN-ValueNR*(s) as included in *SIB21* or in USD (for neighbouring frequencies);

…

2> if *SIB20* is provided for the PCell or for the SCell:

3> include *mbs-ServiceList* and set it to indicate the set of MBS services of interest sorted by decreasing order of interest determined in accordance with 5.9.4.4.

14.1.2.3.3 Test description

14.1.2.3.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 (TAI-1) and NR Cell 2 (TAI-1).
- System information combination NR-20 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.
- System information combination NR-20 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 2.

UE:

- None.

Preamble:

- The UE is in state 3N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.1.2.3.3.2 Test procedure sequence

Table 14.1.2.3.3.2-1/2 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions for preamble, while columns marked " T1"," T2" and " T3" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 14.1.2.3.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-88	Off	
T1	SS/PBCH SSS EPRE	dBm/SCS	-88	-94	Power levels are such that entry condition for event A3 is not satisfied for the neighbour NR cell: Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off
T2	SS/PBCH SSS EPRE	dBm/SCS	-88	-82	Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell 2 (measId 1): Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off
T3	SS/PBCH SSS EPRE	dBm/SCS	-82	-88	Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell 1(measId 1): Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off

Table 14.1.2.3.3.2-2: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-91	Off	
T1	SS/PBCH SSS EPRE	dBm/SCS	-91	-100	Power levels are such that entry condition for event A3 is not satisfied for the neighbour NR cell: Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off
T2	SS/PBCH SSS EPRE	dBm/SCS	-91	-82	Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell 2 (measId 1): Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off
T3	SS/PBCH SSS EPRE	dBm/SCS	-82	-91	Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell 1(measId 1): Mn + Ofn + Ocn – Hys > Mp + Ofp + Ocp + Off

Table 14.1.2.3.3.2-3: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The UE is made interested in receiving a MBS service with MBS Service ID‘000001’H associated with the MBS FSAI -1 (Note 1).	-	-	-	-
2	The UE is made aware that the MBS Service ID‘000001’H is ongoing (Note 1).	-	-	-	-
3	The SS starts to broadcast SIB21 (according to System information combination NR-22) as defined in TS 38.508-1 [4] clause 4.4.3.1.2) on NR Cell 1 including mbs-FSAI-IntraFreqList-r17 indicating MBS-FSAI-r17=1. The SS starts broadcasting MBSBroadcastConfiguration message on NR Cell 1.	-	-	-	-
4	The SS transmits a Short message on PDCCH	-	PDCCH (DCI 1_0): Short	-	-

	using P-RNTI indicating a *systemInfoModification* on NR Cell 1.		Message		
5	Check: Does the UE transmit *MBSInterestIndication* message.	-->	*MBSInterestIndication*	1	P
6	Wait for 700ms.(Note 2)	-	-	-	-
7	Wait for a period equal to the MCCH repetition period for the UE to receive *MBSBroadcastConfiguration* message on NR Cell 1.	-	-	-	-
8a1 - 8a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C.	-	-	-	-
-	Exception: Step 9 is repeated 5 times	-	-	-	-

14.1.3 MBS Broadcast/ MAC

14.1.3.1 MBS Broadcast/ MAC/ Correct HARQ process handling

14.1.3.1.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_CONNECTED state and is interested to receive or receiving data via broadcast MRB
}
ensure that {
  when { UE receives data addressed to G-RNTI on broadcast MRB }
    then { UE does not transmit the HARQ feedback for the MBS broadcast HARQ process }
            }
```

(2)

```
with { UE in NR RRC_CONNECTED state and is receiving MBS broadcast services }
ensure that {
  when { UE receives a notification that the MCCH information has changed due to MCCH information
modification other than the change caused by the start of new MBS session(s) }
    then { UE starts acquiring the MBSBroadcastConfiguration message on MCCH and UE does not
transmit the HARQ feedback for the MBS broadcast HARQ process}
            }
```

14.1.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clause 5.3.2.2. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.3.2.2]

When a transmission takes place for the HARQ process, one or two (in case of downlink spatial multiplexing) TBs and the associated HARQ information are received from the HARQ entity.

For each received TB and associated HARQ information, the HARQ process shall:

…

1> if the HARQ process is associated with a transmission indicated with a MCCH-RNTI for MBS broadcast, and this is the first received transmission for the TB according to the MCCH schedule indicated by RRC; or

1> if the HARQ process is associated with a transmission indicated with a G-RNTI for MBS broadcast, and this is the first received transmission for the TB according to the MTCH schedule indicated by RRC or according to the scheduling indicated by DCI as specified in TS 38.214 [7]; or

1> if this is the very first received transmission for this TB (i.e. there is no previous NDI for this TB):

2> consider this transmission to be a new transmission.

1> else:

2> consider this transmission to be a retransmission.

The MAC entity then shall:

1> if this is a new transmission:

2> attempt to decode the received data.

…

1> if the HARQ process is associated with a transmission indicated with a MCCH-RNTI or a G-RNTI for MBS broadcast; or

…

1> if the HARQ process is configured with disabled HARQ feedback:

2> not instruct the physical layer to generate acknowledgement(s) of the data in this TB.

14.1.3.1.3 Test description

14.1.3.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-20 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.
- SS starts broadcasting MBSBroadcastConfiguration in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 3N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving a MBS service with MBS Service ID '000001'H.

14.1.3.1.3.2 Test procedure sequence

Table 14.1.3.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict

14.1.3.2.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_IDLE state and is receiving data via broadcast MRB }
ensure that {
  when { Long DRX cycle for MBS Broadcast is configured for a G-RNTI and  [(SFN × 10) + subframe
number] modulo (drx-LongCycle-PTM) = drx-StartOffset-PTM }
    then { UE starts the drx-onDurationTimerPTM and monitors the PDCCH for this G-RNTI }
            }
```

(2)

```
with { UE in NR RRC_INACTIVE state and  is receiving data via broadcast MRB }
ensure that {
  when { Long DRX cycle for MBS Broadcast is configured for a G-RNTI and  [(SFN × 10) + subframe
number] modulo (drx-LongCycle-PTM) = drx-StartOffset-PTM }
    then { UE starts the drx-onDurationTimerPTM and monitors the PDCCH for this G-RNTI }
            }
```

(3)

```
with { UE in NR RRC_CONNECTED state and is receiving data via broadcast MRB }
ensure that {
  when { Long DRX cycle for MBS Broadcast is configured for a G-RNTI and  [(SFN × 10) + subframe
number] modulo (drx-LongCycle-PTM) = drx-StartOffset-PTM }
    then { UE starts the drx-onDurationTimerPTM and monitors the PDCCH for this G-RNTI }
            }
```

14.1.3.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clause 5.7a. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 5.7a]

For MBS broadcast, the MAC entity may be configured by RRC with a DRX functionality per G-RNTI that controls the UE's PDCCH monitoring activity for the MAC entity's G-RNTI(s) as specified in TS 38.331 [5]. When in RRC_IDLE or RRC_INACTIVE or RRC_CONNECTED, if broadcast DRX is configured for a G-RNTI, the MAC entity is allowed to monitor the PDCCH for this G-RNTI discontinuously using the broadcast DRX operation specified in this clause; otherwise the MAC entity monitors each PDCCH for this G-RNTI as specified in TS 38.213 [6]. The broadcast DRX operation specified in this clause is performed independently for each G-RNTI and independently from the DRX operation specified in clauses 5.7 and 5.7b.

RRC controls broadcast DRX operation by configuring the following parameters:

- *drx-onDurationTimerPTM*: the duration at the beginning of a DRX cycle;
- *drx-SlotOffsetPTM*: the delay before starting the *drx-onDurationTimerPTM*;
- *drx-InactivityTimerPTM*: the duration after the PDCCH occasion in which a PDCCH indicates a new DL broadcast transmission for the MAC entity;
- *drx-LongCycleStartOffsetPTM*: the long DRX cycle *drx-LongCycle-PTM* and *drx-StartOffset-PTM* which defines the subframe where the DRX cycle starts.

When broadcast DRX is configured for a G-RNTI, the Active Time includes the time while:

- *drx-onDurationTimerPTM* or *drx-InactivityTimerPTM* for this G-RNTI is running.

When broadcast DRX is configured for a G-RNTI, the MAC entity shall for this G-RNTI:

1> if [(SFN × 10) + subframe number] modulo (*drx-LongCycle-PTM*) = *drx-StartOffset-PTM*:

2> start *drx-onDurationTimerPTM* after *drx-SlotOffsetPTM* from the beginning of the subframe.

1> if the MAC entity is in Active Time for this G-RNTI:

2> monitor the PDCCH for this G-RNTI as specified in TS 38.213 [6];

2> if the PDCCH indicates a DL transmission for MBS broadcast:

3> start or restart *drx-InactivityTimerPTM* in the first symbol after the end of the PDCCH reception.

NOTE: If a cell is configured for MBS broadcast reception, the SFN of this cell is used to calculate the DRX duration of MBS broadcast on this cell.

14.1.3.2.3 Test description

14.1.3.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-20 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.
- SS starts broadcasting MBSBroadcastConfiguration in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 3N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving a MBS Broadcast service with MBS Service ID '000001'H.

14.2 MBS Multicast

14.2.1 MBS Multicast/ MAC

14.2.1.1 MBS Multicast/ MAC / DL Data Transfer

14.2.1.1.1 MBS Multicast / MAC / DL Data Transfer / PTM transmission / PTP transmission / DCI format 4_1

14.2.1.1.1.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-AM entity for PTP transmission and HARQ feedback for Multicast is not
enabled }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and successfully
decodes it }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-AM entity for PTP transmission and HARQ feedback for Multicast is not
enabled }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's C-RNTI and successfully
decodes it }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-AM entity for PTP transmission and HARQ feedback for Multicast is not
enabled }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for unknown G-RNTI }
    then { UE does not receive the MAC PDU }
            }
```

(4)

```
with { UE in RRC_Connected state and LCID is used to configure MAC logical Channel for receiving PTM
transmission }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and LCID of the MAC
PDU is matched with the LCID configured for receiving PTM transmission }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

(5)

```
with { UE in RRC_Connected state and eLCID is used to configure MAC logical Channel for receiving
PTM transmission }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and eLCID of the MAC
PDU is matched with the eLCID configured for receiving PTM transmission }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

(6)

```
with { UE in RRC_Connected state and size of CFR configured in locationAndBandwidthMulticast-r17 is
the same as the size of CORESET 0 }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

(7)

```
with { UE in RRC_Connected state and size of CFR configured in locationAndBandwidthMulticast-r17 is
the same as the value of locationAndBandwidth of the DL BWP in which the cfr-ConfigMulticast is
configured }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

14.2.1.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.4, 16.10.5.4; TS 38.321, clause 5.3.1, 5.3.2, 5.3.3 and 7.1; TS 38.214, clause 5.1.2.2.3; TS 38.212, clause 7.3.1.5.2. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.4]

The following logical channels are used for MBS delivery:

- MTCH: A point-to-multipoint downlink channel for transmitting MBS data of either multicast session or broadcast session from the network to the UE;

- DTCH: A point-to-point channel defined in clause 6.2.2 for transmitting MBS data of a multicast session from the network to the UE;

…

The following connections between logical channels and transport channels for group transmission exist:

…

- MTCH can be mapped to DL-SCH.

[TS 38.300, clause 16.10.5.4]

For multicast service, gNB may deliver Multicast MBS data packets using the following methods:

- PTP Transmission: gNB individually delivers separate copies of MBS data packets to each UEs independently, i.e., gNB uses UE-specific PDCCH with CRC scrambled by UE-specific RNTI (e.g., C-RNTI) to schedule UE-specific PDSCH which is scrambled with the same UE-specific RNTI.

- PTM Transmission: gNB delivers a single copy of MBS data packets to a set of UEs, e.g., gNB uses group-common PDCCH with CRC scrambled by group-common RNTI to schedule group-common PDSCH which is scrambled with the same group-common RNTI.

If a UE is configured with both PTM and PTP transmissions, a gNB dynamically decides whether to deliver multicast data by PTM leg and/or PTP leg for a given UE based on the protocol stack defined in clause 16.10.3, based on information such as MBS Session QoS requirements, number of joined UEs, UE individual feedback on reception quality, and other criteria. The same QoS requirements apply regardless of the decision.

[TS 38.321, clause 5.3.1]

When the MAC entity has a C-RNTI, Temporary C-RNTI, CS-RNTI, G-RNTI or G-CS-RNTI, the MAC entity shall for each PDCCH occasion during which it monitors PDCCH and for each Serving Cell:

1> if a downlink assignment for this PDCCH occasion and this Serving Cell has been received on the PDCCH for the MAC entity's C-RNTI, or Temporary C-RNTI, or G-RNTI configured for multicast MTCH:

…

2> if the downlink assignment is for the MAC entity's C-RNTI, and if the previous downlink assignment indicated to the HARQ entity of the same HARQ process was either a downlink assignment received for the MAC entity's CS-RNTI or G-CS-RNTI, or a configured downlink assignment for unicast or MBS multicast; or

2> if the downlink assignment is for the MAC entity's G-RNTI configured for multicast MTCH, and if the previous downlink assignment indicated to the HARQ entity of the same HARQ process was either a downlink assignment received for the MAC entity's CS-RNTI or G-CS-RNTI, or other G-RNTI, or C-RNTI, or a configured downlink assignment for unicast or MBS multicast:

3> consider the NDI to have been toggled regardless of the value of the NDI.

[TS 38.321, clause 5.3.2]

For each received TB and associated HARQ information, the HARQ process shall:

1> if the NDI, when provided, has been toggled compared to the value of the previous received transmission corresponding to this TB; or

…

2> consider this transmission to be a new transmission.

1> else:

2> consider this transmission to be a retransmission.

[TS 38.321, clause 5.3.3]

When a MAC entity receives a MAC PDU for MAC entity's G-RNTI or G-CS-RNTI, or by the configured downlink assignment for MBS multicast containing an LCID or eLCID which is not configured, the MAC entity shall at least:

1> discard the received subPDU.

[TS 38.321, clause 7.1]

Table 7.1-2: RNTI usage

RNTI	Usage	Transport Channel	Logical Channel
…	…	…	…
C-RNTI	Dynamically scheduled unicast transmission	DL-SCH	CCCH, DCCH, DTCH
…	…	…	…
G-RNTI	Dynamically scheduled MBS PTM transmission	DL-SCH	MTCH
…	…	…	…

[TS 38.214, clause 5.1.2.2.3]

In downlink resource allocation of type 1 scheduled using DCI format 4_0 or DCI format 4_1 with CRC scrambled by G-RNTI, G-CS-RNTI or MCCH-RNTI, the resource block assignment information indicates to a scheduled UE a set of contiguously allocated non-interleaved or interleaved virtual resource blocks.

A downlink type 1 resource block assignment field in the DCI format 4_0 or DCI format 4_1 consists of a *RIV* corresponding to a starting resource block in reference to the lowest RB of the CFR $RB_{start} = 0, K, 2 \cdot K, \ldots, (N_{\mathrm{BWP}}^{initial} - 1) \cdot K$ and a length in terms of virtually contiguously allocated resource blocks L_{RBs}, where $N_{\mathrm{BWP}}^{initial}$ is given by

- the size of CORESET 0 if CORESET 0 is configured for the cell;
- the size of initial DL bandwidth part if CORESET 0 is not configured for the cell.

The resource indication value is defined by:

if $(L'_{RBs} - 1) \leq \lfloor N_{BWP}^{initial} / 2 \rfloor$ then

$$RIV = N_{BWP}^{initial} (L'_{RBs} - 1) + RB'_{start}$$

else

$$RIV = N_{BWP}^{initial} (N_{BWP}^{initial} - L'_{RBs} + 1) + (N_{BWP}^{initial} - 1 - RB'_{start})$$

where $L'_{RBs} = L_{RBs} / K$, and where L'_{RBs} shall not exceed $N_{BWP}^{initial} - RB'_{start}$.

If $N_{CFR} \geq N_{BWP}^{initial}$, K is the maximum value from set {1, 2, 4, 6, 8, 10, 12} which satisfies $K \leq \lfloor N_{CFR} / N_{BWP}^{initial} \rfloor$; otherwise $K = 1$.

[TS 38.212, clause 7.3.1.5.2]

DCI format 4_1 is used for the scheduling of PDSCH for multicast in DL cell.

The following information is transmitted by means of the DCI format 4_1 with CRC scrambled by G-RNTI configured by *G-RNTI-Config* or G-CS-RNTI:

- Frequency domain resource assignment – $\lceil \log_2(N_{RB}^{DL,CFR}(N_{RB}^{DL,CFR}+1)/2) \rceil$ bits where $N_{RB}^{DL,CFR}$ equals to $N_{RB}^{DL,BWP}$ as given by clause 7.3.1.0
- Time domain resource assignment – 4 bits as defined in Clause 5.1.2.1 of [6, TS38.214]
- VRB-to-PRB mapping – 1 bit according to Table 7.3.1.2.2-5

- Modulation and coding scheme – 5 bits as defined in Clause 5.1.3 of [6, TS38.214]
- New data indicator – 1 bit
- Redundancy version – 2 bits as defined in Table 7.3.1.1.1-2
- HARQ process number – 4 bits
- Downlink assignment index – 2 bits as defined in Clause 9.1.3 of [5, TS 38.213], as counter DAI
- PUCCH resource indicator – 3 bits as defined in Clause 9.2.3 of [5, TS38.213]
- PDSCH-to-HARQ_feedback timing indicator – 3 bits as defined in Clause 9.2.3 of [5, TS38.213]
- Reserved bits – 3 bits

14.2.1.1.1.3 Test description

14.2.1.1.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.1.1.1.3.2 Test procedure sequence

Table 14.2.1.1.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS transmits a downlink assignment addressed to the G-RNTI assigned to the UE	<--	(PDCCH (G-RNTI))	-	-

14.2.1.1.2 MBS Multicast / MAC / DL Data Transfer/ PTM transmission/ DCI format 4_2

14.2.1.1.2.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and locationAndBandwidthMulticast-r17 does not equal to the value
of locationAndBandwidth of the DL BWP in which the cfr-ConfigMulticast is configured and resource
allocation type 0 for pdsch-ConfigMulticast }
ensure that {
  when { UE receives downlink assignment DCI format 4_2 with MAC PDU scheduled for UE's G-RNTI }
    then { UE receives the MAC PDU and forwards it to higher layer }
          }
```

(2)

```
with { UE in RRC_Connected state and locationAndBandwidthMulticast-r17 does not equal to the value
of locationAndBandwidth of the DL BWP in which the cfr-ConfigMulticast is configured and resource
allocation type 1 for pdsch-ConfigMulticast }
```

```
ensure that {
  when { UE receives downlink assignment DCI format 4_2 with MAC PDU scheduled for UE's G-RNTI }
    then { UE receives the MAC PDU and forwards it to higher layer }
           }
```

14.2.1.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.214, clauses 5.1.2.2.1 and 5.1.2.2.3; TS 38.212, clause 7.3.1.5.3. Unless otherwise stated these are Rel-17 requirements.

[TS 38.214, clause 5.1.2.2.1]

In downlink resource allocation of type 0 scheduled using a DCI with CRC scrambled by G-RNTI for multicast or G-CS-RNTI, the resource block assignment information bitmap is calculated based on the description above with the following changes: the parameter $N_{BWP,i}^{start}$ is the starting PRB of the CFR, $N_{BWP,i}^{size}$ is the size of the common frequency resource (CFR) and the value of the higher layer parameter *rbg-Size* is configured by *pdsch-ConfigMulticast*.

[TS 38.214, clause 5.1.2.2.3]

In downlink resource allocation of type 1 scheduled using DCI format 4_2 with CRC scrambled by G-RNTI for multicast or G-CS-RNTI, the description in clause 5.1.2.2.2 with the following changes: RB_{start} corresponds to a starting resource block in reference to the lowest RB of the CFR and N_{BWP}^{size} is the size of the CFR.

[TS 38.214, clause 7.3.1.5.3]

DCI format 4_2 is used for the scheduling of PDSCH in DL cell.

The following information is transmitted by means of the DCI format 4_2 with CRC scrambled by G-RNTI for multicast or G-CS-RNTI configured by *MBS-RNTI-SpecificConfig*:

- Frequency domain resource assignment – number of bits determined by the following, where $N_{RB}^{DL,CFR}$ is the size of the common frequency resource as configured by higher layer parameter *locationAndBandwidthMulticast*:
  - N_{RBG} bits if only resource allocation type 0 is configured, where N_{RBG} is defined in Clause 5.1.2.2.1 of [6, TS38.214],
  - $\lceil \log_2(N_{RB}^{DL,CFR}(N_{RB}^{DL,CFR}+1)/2) \rceil$ bits if only resource allocation type 1 is configured, or
  - $\max(\lceil \log_2(N_{RB}^{DL,CFR}(N_{RB}^{DL,CFR}+1)/2) \rceil, N_{RBG}) + 1$ bits if *resourceAllocation* in *pdsch-ConfigMulticast* is configured as '*dynamicSwitch*'.
  - If *resourceAllocation* in *pdsch-ConfigMulticast* is configured as '*dynamicSwitch*', the MSB bit is used to indicate resource allocation type 0 or resource allocation type 1, where the bit value of 0 indicates resource allocation type 0 and the bit value of 1 indicates resource allocation type 1.
  - For resource allocation type 0, the N_{RBG} LSBs provide the resource allocation as defined in Clause 5.1.2.2.1 of [6, TS 38.214].
  - For resource allocation type 1, the $\lceil \log_2(N_{RB}^{DL,CFR}(N_{RB}^{DL,CFR}+1)/2) \rceil$ LSBs provide the resource allocation as defined in Clause 5.1.2.2.2 of [6, TS 38.214]

14.2.1.1.2.3 Test description

14.2.1.1.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR Cell 1.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.1.2.3.2 Test procedure sequence

Table 14.2.1.1.2.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b12a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session. (Note 1) (Note 2)	-	-	-	-
2-12	Void	-	-	-	-
13a1-13a2	Steps 9a1 to 9a2 of the NR RRC_CONNECTED procedure in TS 38.508-1 Table 4.5.4.2-3 are executed with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
14	The SS transmits a MBS Packet.	<--	MBS Packet.	-	-
15	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
16	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
17	Check: Is the number of reported MBS Packets received in step 16 equal to 1?	-	-	1	P
18	The SS transmits an *RRCReconfiguration* message including *pdsch-ConfigMulticast* with IE resourceAllocation set to resourceAllocationType1.	<--	NR RRC: *RRCReconfiguration*	-	-
19	The UE transmit an *RRCReconfigurationComplete* message	-->	NR RRC: *RRCReconfigurationComplete*	-	-
20	The SS transmits a MBS Packet.	<--	MBS Packet.	-	-
21	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
22	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
23	Check: Is the number of reported MBS Packets received in step 22 equal to 2?	-	-	2	P

Note 1: *LocationAndBandwidthMulticast* is configured to use same frequency domain resources as CORESET#0. *LocationAndBandwidthMulticast* is different from *locationAndBandwidth* of the DL BWP expect for n38, n39, n48 and n50.
Note 2: ResourceAllocation of *pdsch-ConfigMulticast* set to *resourceAllocationType0*.

14.2.1.1.3 MBS Multicast / MAC / DL Data Transfer/ PTM transmission / Multiple G-RNTIs

14.2.1.1.3.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and two Multicast MRBs are established and two G-RNTIs(G-RNTI-1 and
G-RNTI-2) are configured for PTM transmission }
ensure that {
```

```
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI-1 and successfully
decodes it }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

(2)

```
with { UE in RRC_Connected state and two Multicast MRBs are established and two G-RNTIs(G-RNTI-1 and
G-RNTI-2) are configured for PTM transmission }
ensure that {
  when {  UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI-2 and successfully
decodes it }
    then { UE receives the MAC PDU and forwards it to higher layer }
            }
```

14.2.1.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.213, clause 18; TS 38.321, clause 5.3.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.213, clause 18]

A UE can be provided one or more G-RNTIs for multicast per serving cell for scrambling the CRC of multicast DCI formats for scheduling PDSCH receptions. The UE can be provided one or more G-CS-RNTI per serving cell for scrambling the CRC of multicast DCI formats providing activation/release/scheduling retransmission for SPS PDSCH receptions.

[TS 38.321, clause 5.3.1]

Downlink assignments received on the PDCCH both indicate that there is a transmission on a DL-SCH for a particular MAC entity and provide the relevant HARQ information.

When the MAC entity has a C-RNTI, Temporary C-RNTI, CS-RNTI, G-RNTI or G-CS-RNTI, the MAC entity shall for each PDCCH occasion during which it monitors PDCCH and for each Serving Cell:

1> if a downlink assignment for this PDCCH occasion and this Serving Cell has been received on the PDCCH for the MAC entity's C-RNTI, or Temporary C-RNTI, or G-RNTI configured for multicast MTCH:

2> if this is the first downlink assignment for this Temporary C-RNTI:

3> consider the NDI to have been toggled.

2> if the downlink assignment is for the MAC entity's C-RNTI, and if the previous downlink assignment indicated to the HARQ entity of the same HARQ process was either a downlink assignment received for the MAC entity's CS-RNTI or G-CS-RNTI, or a configured downlink assignment for unicast or MBS multicast; or

2> if the downlink assignment is for the MAC entity's G-RNTI configured for multicast MTCH, and if the previous downlink assignment indicated to the HARQ entity of the same HARQ process was either a downlink assignment received for the MAC entity's CS-RNTI or G-CS-RNTI, or other G-RNTI, or C-RNTI, or a configured downlink assignment for unicast or MBS multicast:

3> consider the NDI to have been toggled regardless of the value of the NDI.

…

2> indicate the presence of a downlink assignment and deliver the associated HARQ information to the HARQ entity.

14.2.1.1.3.3 Test description

14.2.1.1.3.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell.

- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H and ‘000102’H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.1.4 MBS Multicast/ MAC / DL Data Transfer/ PTM retransmission for multicast/ RRC-based enabling-disabling HARQ feedback for Multicast / ACK-NACK

14.2.1.1.4.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by RRC }
ensure that {
```

```
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and successfully
decodes it }
    then { UE sends ACK for the corresponding HARQ process and forwards it to higher layer }
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by RRC }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and decodes it
failure }
    then { UE sends NACK for the corresponding HARQ process }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by RRC }
ensure that {
  when { UE receives MAC PDU retransmission for UE's G-RNTI and successfully decodes it }
    then { UE sends ACK for the corresponding HARQ process and forwards it to higher layer }
            }
```

(4)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by RRC and pdsch-
AggregationFactor > 1 }
ensure that {
  when { UE receives downlink assignment on the PDCCH for the UE’s G-RNTI and receives data in the
associated slot and successive pdsch-AggregationFactor – 1 HARQ retransmissions within a bundle and
UE could not successfully decode the data }
    then { UE sends NACK on the HARQ process }
            }
```

(5)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by RRC and pdsch-
AggregationFactor > 1 }
ensure that {
  when { UE receives downlink assignment on the PDCCH for the UE’s G-RNTI and receives data in the
associated slot and successive pdsch-AggregationFactor – 1 HARQ retransmissions within a bundle and
UE could successfully decode the data }
    then { UE sends ACK on the HARQ process }
            }
```

(6)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast is disabled by RRC }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI  }
    then { UE does not send HARQ feedback }
            }
```

14.2.1.1.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.5.7; TS 38.321, clause 5.3.2; TS 38.213, clause 18. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.5.7]

Two HARQ-ACK reporting modes are defined for MBS:

- For the first HARQ-ACK reporting mode, the UE generates HARQ-ACK information with ACK value when a UE correctly decodes a transport block or detects a DCI format indicating an SPS PDSCH release; otherwise, the UE generates HARQ-ACK information with NACK value.

- For the second HARQ-ACK reporting mode, the UE does not transmit a PUCCH that would include only HARQ-ACK information with ACK values.

HARQ-ACK feedback for multicast can be enabled or disabled by higher layer configuration per G-RNTI or per G-CS-RNTI and/or indication in the DCI scheduling multicast transmission.

[TS 38.321, clause 5.3.2]

For each received TB and associated HARQ information, the HARQ process shall:

1> if the NDI, when provided, has been toggled compared to the value of the previous received transmission corresponding to this TB; or

…

2> consider this transmission to be a new transmission.

1> else:

2> consider this transmission to be a retransmission.

The MAC entity then shall:

1> if this is a new transmission:

2> attempt to decode the received data.

1> else if this is a retransmission:

2> if the data for this TB has not yet been successfully decoded:

3> instruct the physical layer to combine the received data with the data currently in the soft buffer for this TB and attempt to decode the combined data.

…

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI for MBS multicast and HARQ feedback is disabled; or

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI for MBS multicast and NACK only HARQ feedback is configured and the data for this TB is successfully decoded; or

…

1> if the HARQ process is configured with disabled HARQ feedback:

2> not instruct the physical layer to generate acknowledgement(s) of the data in this TB.

1> else:

2> instruct the physical layer to generate acknowledgement(s) of the data in this TB.

[TS 38.213, clause 18]

This clause is applicable only for PDCCH receptions, PDSCH receptions, and PUCCH transmissions for MBS on a serving cell. DCI formats with CRC scrambled by G-RNTI or G-CS-RNTI scheduling PDSCH receptions are referred to as multicast DCI formats and the PDSCH receptions are referred to as multicast PDSCH receptions. DCI formats with CRC scrambled by MCCH-RNTI or G-RNTI for MTCH scheduling PDSCH receptions are referred to as broadcast DCI formats and the PDSCH receptions are referred to as broadcast PDSCH receptions. HARQ-ACK information associated with multicast DCI formats or multicast PDSCH receptions is referred to as multicast HARQ-ACK information.

…

A PDSCH reception providing an initial transmission of a transport block is scheduled only by a multicast DCI format. For the first HARQ-ACK reporting mode, a PDSCH reception providing a retransmission of the transport block can be

scheduled either by a multicast DCI format using a same G-RNTI as the G-RNTI of the initial transmission of the transport block, or by a unicast DCI format using a C-RNTI [6, TS 38.214].

14.2.1.1.4.3 Test description

14.2.1.1.4.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.1.1.4.3.2 Test procedure sequence

Table 14.2.1.1.4.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Step 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
4	The SS transmits a MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission. The content of the MBS Packet is set so that UE could successfully decode the data from its soft buffer.	<--	MBS Packet	-	-
5	Check: Does the UE transmit a HARQ ACK?	-->	HARQ ACK	1	P
6	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
7	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
8	Check: Is the number of reported MBS Packets received on the MRB in step 7 equal to 1?	-	-	1	P
9	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
10	The SS transmits a MBS Packet on the MTCH	<--	MBS Packet	-	-

	with LCID matched with the LCID configured for receiving PTM transmission. The CRC is calculated in such a way, it will result in CRC error on UE side.				
11	Check: Does the UE transmit a HARQ NACK?	-->	HARQ NACK	2	P
-	EXCEPTION: Steps 12-13 shall be repeated till HARQ ACK is received at step 13 or until HARQ retransmission count = 4 is reached for MBS Packet at step 13 (Note 1).	-	-	-	-
12	The SS indicates a retransmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
13	The SS transmits the same MBS Packet like step 10 for PTM retransmission for multicast. The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet	-	-
13	Check: Does the UE transmit a HARQ ACK?	-->	HARQ ACK	3	P
14	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
15	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
16	Check: Is the number of reported MBS Packets received on the MRB in step 15 equal to 2?	-	-	3	P
17	The SS transmits *RRCReconfiguration* to configure *pdsch-AggregationFactor-r17* to n4 for multicast.	<--	NR RRC: *RRCReconfiguration*	-	-
18	The UE transmits *RRCReconfigurationComplete*.	-->	NR RRC: *RRCReconfigurationComplete*	-	-
19	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
20	The SS transmits a MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission. The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet.	-	-
21	In the following 3 consecutive slots, the SS transmits same MBS Packet in step 20. The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet.	-	-
22	Check: Does the UE transmit a HARQ NACK on slot n3+k1? (Note 2)	-->	HARQ NACK	4	P
23	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
24	The SS transmits a MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission. The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet.	-	-
25	In the following 3 consecutive slots, the SS transmits same MBS Packet in step 24. The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet.	-	-
26	Check: Does the UE transmit a HARQ ACK on slot n3+k1? (Note 2)	-->	HARQ ACK	5	P
27	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
28	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
29	Check: Is the number of reported MBS	-	-	5	P

	Packets received on the MRB in step 28 equal to 3?				
30	The SS transmits *RRCReconfiguration* to disable HARQ feedback for multicast	<--	NR RRC: *RRCReconfiguration*	-	-
31	The UE transmits *RRCReconfigurationComplete*.	-->	NR RRC: *RRCReconfigurationComplete*	-	-
32	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
33	The SS transmits a MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission.	<--	MBS Packet	-	-
34	Check: Does the UE transmit a HARQ ACK/NACK?	-->	HARQ ACK/NACK	6	F
35	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
36	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
37	Check: Is the number of reported MBS Packets received on the MRB in step 36 equal to 4?	-	-	6	P

Note 1: The value 4 for the maximum number of HARQ retransmissions has been chosen based on an assumption that, given the radio conditions used in this test case, a UE soft combiner implementation should have sufficient retransmissions to be able to successfully decode the data in its soft buffer.

Note 2: n0 is the index of slot when 1st transmission of MBS Packet in step 20/24 happens, n1, n2, n3 are indices of slots when 2nd, 3rd, 4th transmission of MBS Packet in step 21/25 may happen, k1 is obtained from "PDSCH-to-HARQ_feedback timing indicator" of downlink assignment in step 19/23.

14.2.1.1.5 MBS Multicast/ MAC / DL Data Transfer/ PTP retransmission for multicast / RRC-based enabling-disabling HARQ feedback for Multicast/ ACK-NACK

14.2.1.1.5.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by RRC and a MAC PDU for
UE's G-RNTI is not successfully decoded }
ensure that {
  when { UE receives MAC PDU retransmission for UE's C-RNTI and successfully decodes it }
    then { UE sends ACK for the corresponding HARQ process and forwards it to higher layer }
          }
```

14.2.1.1.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clause 5.3.2; TS 38.213, clause 18. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.3.2]

For each received TB and associated HARQ information, the HARQ process shall:

1> if the NDI, when provided, has been toggled compared to the value of the previous received transmission corresponding to this TB; or

…

2> consider this transmission to be a new transmission.

1> else:

2> consider this transmission to be a retransmission.

The MAC entity then shall:

1> if this is a new transmission:

2> attempt to decode the received data.

1> else if this is a retransmission:

2> if the data for this TB has not yet been successfully decoded:

3> instruct the physical layer to combine the received data with the data currently in the soft buffer for this TB and attempt to decode the combined data.

…

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI for MBS multicast and HARQ feedback is disabled; or

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI for MBS multicast and NACK only HARQ feedback is configured and the data for this TB is successfully decoded; or

…

1> if the HARQ process is configured with disabled HARQ feedback:

2> not instruct the physical layer to generate acknowledgement(s) of the data in this TB.

1> else:

2> instruct the physical layer to generate acknowledgement(s) of the data in this TB.

[TS 38.213, clause 18]

This clause is applicable only for PDCCH receptions, PDSCH receptions, and PUCCH transmissions for MBS on a serving cell. DCI formats with CRC scrambled by G-RNTI or G-CS-RNTI scheduling PDSCH receptions are referred to as multicast DCI formats and the PDSCH receptions are referred to as multicast PDSCH receptions. DCI formats with CRC scrambled by MCCH-RNTI or G-RNTI for MTCH scheduling PDSCH receptions are referred to as broadcast DCI formats and the PDSCH receptions are referred to as broadcast PDSCH receptions. HARQ-ACK information associated with multicast DCI formats or multicast PDSCH receptions is referred to as multicast HARQ-ACK information.

…

A PDSCH reception providing an initial transmission of a transport block is scheduled only by a multicast DCI format. For the first HARQ-ACK reporting mode, a PDSCH reception providing a retransmission of the transport block can be scheduled either by a multicast DCI format using a same G-RNTI as the G-RNTI of the initial transmission of the transport block, or by a unicast DCI format using a C-RNTI [6, TS 38.214].

14.2.1.1.5.3 Test description

14.2.1.1.5.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.1.1.5.3.2 Test procedure sequence

Table 14.2.1.1.5.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
4	The SS transmits a MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission. The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet	-	-
5	Check: Does the UE transmit a HARQ NACK?	-->	HARQ NACK	1	P
-	EXCEPTION: Steps 6-7 shall be repeated till	-	-	-	-

	HARQ ACK is received at step 8 or until HARQ retransmission count = 4 is reached for MBS Packet at step 7 (Note 1).				
6	The SS indicates a retransmission addressed to the C-RNTI assigned to the UE.	<--	(PDCCH (C-RNTI))	-	-
7	The SS transmits the same MBS Packet like step 4 for PTP retransmission for multicast. The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet	-	-
8	Check: Does the UE transmit a HARQ ACK?	-->	HARQ ACK	1	P
9	The SS transmits an UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
10	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
11	Check: Is the number of reported MBS Packets received on the MRB in step 10 equal to 1?	-	-	1	P
Note 1: The value 4 for the maximum number of HARQ retransmissions has been chosen based on an assumption that, given the radio conditions used in this test case, a UE soft combiner implementation should have sufficient retransmissions to be able to successfully decode the data in its soft buffer.

14.2.1.1.6 MBS Multicast/ MAC / DL Data Transfer/ PTM retransmission for multicast/ DCI-based enabling-disabling HARQ feedback for Multicast/ ACK-NACK

14.2.1.1.6.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by DCI 4_2 }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and successfully
decodes it }
    then { UE sends ACK for the corresponding HARQ process and forwards the MAC PDU to higher layer
}
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by DCI 4_2 }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and decodes it
failure }
    then { UE sends NACK for the corresponding HARQ process }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with ACK-NACK mode is enabled by DCI 4_2 }
ensure that {
  when { UE receives MAC PDU retransmission for UE's G-RNTI and successfully decodes it }
    then { UE sends ACK for the corresponding HARQ process and forwards the MAC PDU to higher layer
}
            }
```

(4)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast is disabled by DCI 4_2 }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTIand successfully
decodes it }
    then { UE does not send HARQ feedback and UE forwards the MAC PDU to higher layer }
            }
```

(5)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and harq-FeedbackEnablerMulticast with value set to 'dci-enabler' for a G-RNTI }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled by multicast DCI format 4_1
associated with the G-RNTI and successfully decodes it }
    then { UE send HARQ feedback and forwards the MAC PDU to higher layer }
            }
```

14.2.1.1.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clause 5.3.2; TS 38.213, clause 18. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.3.2]

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI or a configured downlink assignment for MBS multicast and HARQ feedback is disabled; or

…

2> not instruct the physical layer to generate acknowledgement(s) of the data in this TB.

1> else:

2> instruct the physical layer to generate acknowledgement(s) of the data in this TB.

[TS 38.213, clause 18]

A UE can be configured per G-RNTI for multicast or per G-CS-RNTI, by *harq-FeedbackEnablerMulticast* with value set to 'enabled', to provide HARQ-ACK information for PDSCH receptions. When the UE is not provided *harq-FeedbackEnablerMulticast* for a G-RNTI for multicast or G-CS-RNTI and *pdsch-HARQ-ACK-Codebook = dynamic* for multicast HARQ-ACK information, the UE does not provide HARQ-ACK information for respective PDSCH receptions. If a UE is provided *harq-FeedbackEnablerMulticast* with value set to 'dci-enabler' for a G-RNTI for multicast or a G-CS-RNTI, the UE provides HARQ-ACK information for PDSCH receptions scheduled by multicast DCI format 4_1 associated with the G-RNTI or the G-CS-RNTI, and determines whether or not to provide the HARQ-ACK information for PDSCH receptions scheduled by multicast DCI format 4_2 based on an indication by the multicast DCI format 4_2 associated with the G-RNTI for multicast or the G-CS-RNTI [4, TS 38.212]. If a UE is

provided *pdsch-HARQ-ACK-Codebook = semi-static* for multicast HARQ-ACK information, the UE does not expect to be provided *harq-FeedbackEnablerMulticast* with value set to 'dci-enabler' for a G-RNTI or a G-CS-RNTI.

14.2.1.1.6.3 Test description

14.2.1.1.6.3.1 Pre-test conditions

System Simulator:

- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.1.7 MBS Multicast/ MAC / DL Data Transfer/ RRC-based enabling-disabling HARQ feedback for Multicast / NACK-only

14.2.1.1.7.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with NACK-only mode is enabled by RRC }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and successfully
decodes it }
    then { UE does not send ACK for the corresponding HARQ process and UE forwards MAC PDU to higher
layer }
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with NACK-only mode is enabled by RRC }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and decodes it
failure }
    then { UE sends NACK for the corresponding HARQ process }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with NACK-only mode is enabled by RRC and pdsch-
AggregationFactor > 1 }
ensure that {
  when { UE receives downlink assignment on the PDCCH for the UE's G-RNTI and receives data in the
associated slot and successive pdsch-AggregationFactor – 1 HARQ retransmissions within a bundle and
UE could not successfully decode the data }
    then { UE sends NACK on the HARQ process }
            }
```

(4)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast is disabled by RRC }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI }
    then { UE does not send HARQ feedback }
            }
```

(5)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with NACK-only mode is enabled by RRC and
moreThanOneNackOnlyMode is configured }
ensure that {
  when { UE needs to provide more than one HARQ-ACK information bits in a PUCCH }
    then { UE provide more than one HARQ-ACK information bits in a PUCCH by selecting a resource
from a set of resources for the PUCCH transmission based on the values of the HARQ-ACK information
bits as described in 38.213 Table 18-1 }
            }
```

(6)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with NACK-only mode is enabled by RRC and
moreThanOneNackOnlyMode is not configured }
ensure that {
  when { UE needs to provide more than one HARQ-ACK information bits in a PUCCH }
    then { UE provide more than one HARQ-ACK information bits in a PUCCH according to ACK-NACK mode
}
            }
```

14.2.1.1.7.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clause 5.3.2; TS 38.213, clause 18; TS 38.214, clause 5.1.2.1; TS 38.331, clause 6.3.2. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.3.2]

For each received TB and associated HARQ information, the HARQ process shall:

1> if the NDI, when provided, has been toggled compared to the value of the previous received transmission corresponding to this TB; or

…

2> consider this transmission to be a new transmission.

1> else:

2> consider this transmission to be a retransmission.

The MAC entity then shall:

1> if this is a new transmission:

2> attempt to decode the received data.

1> else if this is a retransmission:

2> if the data for this TB has not yet been successfully decoded:

3> instruct the physical layer to combine the received data with the data currently in the soft buffer for this TB and attempt to decode the combined data.

…

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI for MBS multicast and HARQ feedback is disabled; or

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI for MBS multicast and NACK only HARQ feedback is configured and the data for this TB is successfully decoded; or

…

1> if the HARQ process is configured with disabled HARQ feedback:

2> not instruct the physical layer to generate acknowledgement(s) of the data in this TB.

1> else:

2> instruct the physical layer to generate acknowledgement(s) of the data in this TB.

[TS 38.213, clause 18]

For the second HARQ-ACK reporting mode, the UE does not transmit a PUCCH that would include only HARQ-ACK information with ACK values. The second HARQ-ACK reporting mode is not applicable for the first SPS PDSCH reception after activation of SPS PDSCH receptions for a SPS configuration, or for DCI formats having associated HARQ-ACK information without scheduling a PDSCH reception.

For the second HARQ-ACK reporting mode, when a number of HARQ-ACK information bits is one, a UE transmits a PUCCH only when the HARQ-ACK information bit has NACK value. The UE determines a PUCCH to provide the HARQ-ACK information as described in clause 9.2.1 when UE is not provided *moreThanOneNackOnlyMode*, or as the first PUCCH in Table 18-1 when UE is provided *moreThanOneNackOnlyMode.* For a PUCCH resource associated with PUCCH format 0, the UE transmits the PUCCH as described in [4, TS 38.211] by obtaining m_0 as described for HARQ-ACK information in clause 9.2.3 and by setting $m_{cs} = 0$. For a PUCCH resource associated with PUCCH format 1, the UE transmits the PUCCH as described in [4, TS 38.211] by setting $b(0) = 0$.

A UE that is indicated the second HARQ-ACK reporting mode, and for the case when the UE reports more than one HARQ-ACK information bits, the UE can be indicated to provide the HARQ-ACK information bits in a PUCCH either according to the first HARQ-ACK reporting mode when the UE is not provided *moreThanOneNackOnlyMode* or, for only one G-RNTI or only one G-CS-RNTI, according to the second HARQ-ACK reporting mode by selecting a PUCCH resource from a set of PUCCH resources for the PUCCH transmission based on the values of the HARQ-ACK information bits as described in Table 18-1 when the UE is provided moreThanOneNackOnlyMode. The UE generates HARQ-ACK information bits for the second HARQ-ACK reporting mode according to a Type-2 HARQ-ACK codebook as described in clause 9.1.3.1. For a PUCCH resource associated with PUCCH format 0, the UE transmits the PUCCH as described in [4, TS 38.211] by obtaining m_0 as described for HARQ-ACK information in clause 9.2.3 and by setting $m_{cs} = 0$. For a PUCCH resource associated with PUCCH format 1, the UE transmits the PUCCH as described in [4, TS 38.211] by setting $b(0) = 0$.

For a UE that is indicated the second HARQ-ACK reporting mode, the UE does not expect to be provided *pdsch-HARQ-ACK-Codebook = semi-static* for multicast HARQ-ACK information.

For a UE that is indicated the second HARQ-ACK reporting mode and *moreThanOneNackOnlyMode*, all PUCCH resources associated with the second HARQ-ACK reporting mode have same starting symbol and same number of symbols and, when PUCCH resources in Table 18-1 are located in more than one PRBs, the more than one PRBs are adjacent and are associated with a same MPR value [8-1, TS 38.101-1].

Table 18-1: Mapping of values of HARQ-ACK information bits to PUCCH resources for the second HARQ-ACK reporting mode

Value of HARQ-ACK information bits	PUCCH resource

{0}	{0,0}	{0,0,0}	{0,0,0,0}	1st PUCCH resource from *resourceList/sps-PUCCH-AN-ListMulticast*
	{1,0}	{1,0,0}	{1,0,0,0}	2nd PUCCH resource from *resourceList/sps-PUCCH-AN-ListMulticast*
	{0,1}	{0,1,0}	{0,1,0,0}	3rd PUCCH resource from *resourceList/sps-PUCCH-AN-ListMulticast*
		{1,1,0}	{1,1,0,0}	4th PUCCH resource from *resourceList*
		{0,0,1}	{0,0,1,0}	5th PUCCH resource from *resourceList*
		{1,0,1}	{1,0,1,0}	6th PUCCH resource from *resourceList*
		{0,1,1}	{0,1,1,0}	7th PUCCH resource from *resourceList*
			{1,1,1,0}	8th PUCCH resource from *resourceList*
			{0,0,0,1}	9th PUCCH resource from *resourceList*
			{1,0,0,1}	10th PUCCH resource from *resourceList*
			{0,1,0,1}	11th PUCCH resource from *resourceList*
			{1,1,0,1}	12th PUCCH resource from *resourceList*
			{0,0,1,1}	13th PUCCH resource from *resourceList*
			{1,0,1,1}	14th PUCCH resource from *resourceList*
			{0,1,1,1}	15th PUCCH resource from *resourceList*

[TS 38.214, clause 5.1.2.1]

When receiving PDSCH scheduled by DCI format 4_1, or 4_2 in PDCCH with CRC scrambled by G-RNTI for multicast, if the UE is configured with *pdsch-AggregationFactor* in the *MBS-RNTI-SpecificConfig* associated with the corresponding G-RNTI for multicast, the same symbol allocation is applied across the *pdsch-AggregationFactor* consecutive slots.

[TS 38.331, clause 6.3.2]

moreThanOneNackOnlyMode
Indicates the mode of supporting more than one NACK-only feedback in the same PUCCH transmission. Mode 1 means UE multiplexing the HARQ-ACK bits by transforming NACK-only into ACK/NACK HARQ bits. Mode 2 means UE transmitting a specific sequence or a PUCCH transmission corresponding to the combination of more than one NACK-only HARQ feedback. If multicast CFR is not configured, this field is not included. Otherwise, if the field is absent, UE uses mode 1 for multicast CFR.

14.2.1.1.7.3 Test description

14.2.1.1.7.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.1.1.7.3.2 Test procedure sequence

Table 14.2.1.1.7.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
4	The SS transmits an MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission. The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet	-	-
5	Check: Does the UE transmit a HARQ ACK/NACK?	-->	HARQ ACK/NACK	1	F
6	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
7	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
8	Check: Is the number of reported MBS Packets received on the MRB in step 7 equal to 1?	-	-	1	P
9	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE.	<--	(PDCCH (G-RNTI))	-	-
10	The SS transmits an MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission. The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet	-	-

14.2.1.1.8 MBS Multicast/ MAC / DL Data Transfer/ Multiplex multicast HARQ-ACK information with unicast HARQ-ACK information

14.2.1.1.8.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-AM entity for PTP transmission and HARQ feedback for Multicast with ACK-
NACK mode is enabled by RRC and unicast is configured to use dynamic harq-ack codebook and multicast
is configured to use semi-static harq-ack codebook }
ensure that {
  when { UE needs to multiplex the unicast and multicast HARQ-ACK information in a same PUCCH based
on SS scheduling }
    then { UE uses the last unicast DCI format to determine the PUCCH resource }
          }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-AM entity for PTP transmission and HARQ feedback for Multicast with ACK-
NACK mode is enabled by RRC and unicast is configured to use dynamic harq-ack codebook and multicast
is configured to use semi-static harq-ack codebook }
ensure that {
  when { UE needs to multiplex the unicast and multicast HARQ-ACK information in a same PUCCH based
on SS scheduling }
    then { UE appends the HARQ-ACK codebooks for the multicast HARQ-ACK information to the HARQ-ACK
codebooks for the unicast HARQ-ACK information }
            }
```

14.2.1.1.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.213, clause 18 and 9.1.2.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.213, clause 18]

If a UE would report unicast HARQ-ACK information and multicast HARQ-ACK information with same priority index in a slot, the UE multiplexes the unicast HARQ-ACK information and the multicast HARQ-ACK information following the procedures in this clause and in clauses 9.1.2 and 9.1.3.

If, for unicast and multicast HARQ-ACK information of same priority value, a UE

- is provided
  - either *pdsch-HARQ-ACK-Codebook* = *dynamic* or *pdsch-HARQ-ACK-Codebook-r16* for unicast HARQ-ACK information and *pdsch-HARQ-ACK-Codebook* = *semi-static* for multicast HARQ-ACK information,
  - or *pdsch-HARQ-ACK-Codebook* = *semi-static* for unicast HARQ-ACK information and *pdsch-HARQ-ACK-Codebook* = *dynamic* for multicast HARQ-ACK information, and
- would multiplex the unicast and multicast HARQ-ACK information in a same PUCCH or PUSCH

the UE

- appends the HARQ-ACK codebooks for the multicast HARQ-ACK information to the HARQ-ACK codebooks for the unicast HARQ-ACK information
- if $O_{ACK} + O_{SR} + O_{CSI} \leq 11$, the UE determines $n_{HARQ-ACK}$ for obtaining a power of a PUCCH transmission with the HARQ-ACK information, as described in clause 7.2.1, as a sum of the $n_{HARQ-ACK}$ value from clause 9.1.2.1 or clause 9.1.3.3 and the $n_{HARQ-ACK}$ value from clause 9.1.3.1.

A UE determines a PUCCH resource for a PUCCH transmission with HARQ-ACK information as described in clauses 9.2 and 9.2.1 through 9.2.5.

If a UE multiplexes in a PUCCH HARQ-ACK information of same priority associated with unicast DCI formats and with multicast DCI formats in a same PUCCH, the last DCI format that the UE uses to determine the PUCCH resource, as described in clause 9.2.3, is a last unicast DCI format.

[TS 38.213, clause 9.1.2.1]

For a serving cell c, an active DL BWP, and an active UL BWP, as described in clause 12, the UE determines a set of $M_{A,c}$ occasions for candidate PDSCH receptions for which the UE can transmit corresponding HARQ-ACK information in a PUCCH in slot n_U. If serving cell c is deactivated, the UE uses as the active DL BWP for determining the set of $M_{A,c}$ occasions for candidate PDSCH receptions a DL BWP provided by *firstActiveDownlinkBWP-Id*. The determination is based:

a) on a set of slot timing values K_1 associated with the active UL BWP on the primary cell or, if the PUCCH transmission is indicated by a DCI format to be on the PUCCH-sSCell as described in clause 9A, on a set of slot timing values K_1 associated with the active UL BWP on the PUCCH-sSCell

…

- If the UE is configured to monitor PDCCH for multicast DCI formats for serving cell c

- if the UE is not provided *type1-Codebook-GenerationMode* = 'mode1', K_1 is additionally provided by the union of *dl-DataToUL-ACK* from *pucch-ConfigMulticast1/pucch-ConfigurationListMulticast1* or *pucch-ConfigMulticast2/pucch-ConfigurationListMulticast2* and *dl-DataToUL-ACK-ForDCI Format4-1*

  - if the UE is not provided *dl-DataToUL-ACK-ForDCI Format4-1*, K_1 is provided by the union of *dl-DataToUL-ACK* from *pucch-ConfigurationListMulticast1 or pucch-ConfigurationListMulticast2* and the slot timing values {1, 2, 3, 4, 5, 6, 7, 8}

14.2.1.1.8.3 Test description

14.2.1.1.8.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.1.1.8.3.2 Test procedure sequence

Table 14.2.1.1.8.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS indicates a new transmission addressed to the G-RNTI assigned to the UE in SFN x, slot 2 and the "PDSCH-to-HARQ_feedback timing indicator" is configured to require UE to feedback HARQ-ACK information in SFN x, slot 9.	<--	(PDCCH (G-RNTI))	-	-
4	The SS transmits an MBS Packet on the MTCH with LCID matched with the LCID configured for receiving PTM transmission. The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet	-	-
5	The SS indicates a new transmission addressed to the C-RNTI assigned to the UE in SFN x, slot 5 and the "PDSCH-to-HARQ_feedback timing indicator" is configured to require UE to feedback HARQ-ACK information in SFN x, slot 9.	<--	(PDCCH (C-RNTI))	-	-

14.2.1.1.9 MBS Multicast/ MAC / DL Data Transfer/ DCI-based enabling-disabling HARQ feedback for Multicast/ NACK-only

14.2.1.1.9.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with NACK-only mode is enabled by DCI 4_2 }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and successfully
decodes it }
    then { UE does not send HARQ feedback and UE forwards the MAC PDU to higher layer }
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast with NACK-only mode is enabled by DCI 4_2 }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and decodes it
failure }
    then { UE sends NACK for the corresponding HARQ process }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and HARQ feedback for Multicast is disabled by DCI 4_2 }
ensure that {
  when { UE receives downlink assignment with MAC PDU scheduled for UE's G-RNTI and decodes it
failure }
    then { UE does not send HARQ feedback and UE forwards the MAC PDU to higher layer }
            }
```

14.2.1.1.9.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clause 5.3.2; TS 38.213, clause 18. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.3.2]

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI or a configured downlink assignment for MBS multicast and HARQ feedback is disabled; or

1> if the HARQ process is associated with a transmission indicated with a G-RNTI or a G-CS-RNTI or a configured downlink assignment for MBS multicast and NACK only HARQ feedback is configured and the data for this TB is successfully decoded; or

…

2> not instruct the physical layer to generate acknowledgement(s) of the data in this TB.

1> else:

2> instruct the physical layer to generate acknowledgement(s) of the data in this TB.

[TS 38.213, clause 18]

A UE can be configured per G-RNTI for multicast or per G-CS-RNTI, by *harq-FeedbackEnablerMulticast* with value set to 'enabled', to provide HARQ-ACK information for PDSCH receptions. When the UE is not provided *harq-FeedbackEnablerMulticast* for a G-RNTI for multicast or G-CS-RNTI and *pdsch-HARQ-ACK-Codebook = dynamic* for multicast HARQ-ACK information, the UE does not provide HARQ-ACK information for respective PDSCH receptions. If a UE is provided *harq-FeedbackEnablerMulticast* with value set to 'dci-enabler' for a G-RNTI for multicast or a G-CS-RNTI, the UE provides HARQ-ACK information for PDSCH receptions scheduled by multicast DCI format 4_1 associated with the G-RNTI or the G-CS-RNTI, and determines whether or not to provide the HARQ-ACK information for PDSCH receptions scheduled by multicast DCI format 4_2 based on an indication by the

multicast DCI format 4_2 associated with the G-RNTI for multicast or the G-CS-RNTI [4, TS 38.212]. If a UE is provided *pdsch-HARQ-ACK-Codebook = semi-static* for multicast HARQ-ACK information, the UE does not expect to be provided *harq-FeedbackEnablerMulticast* with value set to 'dci-enabler' for a G-RNTI or a G-CS-RNTI.

14.2.1.1.9.3 Test description

14.2.1.1.9.3.1 Pre-test conditions

System Simulator:

- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.1.9.3.2 Test procedure sequence

14.2.1.2 MBS Multicast/ MAC/ DRX operation

14.2.1.2.1 MBS Multicast/ MAC/ DRX operation/ PTM transmission / PTP transmission

14.2.1.2.1.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, and Multicast DRX and unicast DRX are
configured }
ensure that {
  when { Long DRX cycle for a G-RNTI is configured and [(SFN * 10) + subframe number] modulo (drx-
LongCycle-PTM) = drx-StartOffset-PTM }
    then { UE starts the drx-OnDurationTimerPTM and monitors the PDCCH for this G-RNTI during drx-
OnDurationTimerPTM }
```

```
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, and Multicast DRX and unicast DRX are
configured }
ensure that {
  when { Long DRX cycle for a G-RNTI is configured and a new DL transmission is indicated on the
PDCCH during Active Time }
    then { UE starts or restarts the drx-InactivityTimerPTM in the first symbol after the end of the
PDCCH reception and monitors the PDCCH for this G-RNTI during drx-InactivityTimerPTM }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, and Multicast DRX and unicast DRX are
configured }
ensure that {
  when { Long DRX cycle for C-RNTI is configured and [(SFN * 10) + subframe number] modulo (drx-
LongCycle) = drx-StartOffset }
    then { UE monitors the PDCCH for C-RNTI during drx-OnDurationTimer }
            }
```

(4)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, and Multicast DRX and unicast DRX are
configured }
ensure that {
  when { Long DRX cycle for C-RNTI is configured and a new DL transmission is indicated on the PDCCH
during Active Time }
    then { UE starts or restarts the drx-InactivityTimer in the first symbol after the end of the
PDCCH reception and monitors the PDCCH for C-RNTI during drx-InactivityTimer }
            }
```

(5)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, and Multicast DRX and unicast DRX are
configured }
ensure that {
  when { DRX Command MAC CE indicated by PDCCH addressed to with DCI scrambled with a G-RNTI is
received }
    then { UE stops drx-onDurationTimerPTM of the DRX for this G-RNTI }
            }
```

(6)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, and only unicast DRX is configured }
ensure that {
  when { PDCCH indicated a DL multicast transmission is received }
    then { UE stops drx-RetransmissionTimerDL for the corresponding HARQ process }
            }
```

(7)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, both multicast DRX and unicast DRX are
configured, and allowCSI-SRS-Tx-MulticastDRX-Active is configured }
ensure that {
  when { Both unicast DRX and multicast DRX are not in Active Time }
    then { UE stop report CSI on PUCCH }
            }
```

(8)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, only unicast DRX is configured, and
allowCSI-SRS-Tx-MulticastDRX-Active is not configured }
```

```
ensure that {
  when { Unicast DRX is not in Active Time }
    then { UE stop report CSI on PUCCH }
           }
```

(9)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, both multicast DRX and unicast DRX are
configured, and allowCSI-SRS-Tx-MulticastDRX-Active is configured }
ensure that {
  when { Unicast DRX or multicast DRX are in Active Time}
    then { UE does not stop report CSI on PUCCH }
           }
```

(10)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, only unicast DRX is configured, and
allowCSI-SRS-Tx-MulticastDRX-Active is not configured }
ensure that {
  when { Unicast DRX is in Active Time }
    then { UE does not stop report CSI on PUCCH }
           }
```

14.2.1.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clause 5.7, 5.7b. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.7]

1> if the Long DRX cycle is used for a DRX group, and [(SFN × 10) + subframe number] modulo (*drx-LongCycle*) = *drx-StartOffset*:

2> if DCP monitoring is configured for the active DL BWP as specified in TS 38.213 [6], clause 10.3:

….

2> else:

3> start *drx-onDurationTimer* for this DRX group after *drx-SlotOffset* from the beginning of the subframe.

…

1> if a DRX group is in Active Time:

2> monitor the PDCCH on the Serving Cells in this DRX group as specified in TS 38.213 [6];

2> if the PDCCH indicates a DL transmission; or

2> if the PDCCH indicates a one-shot HARQ feedback as specified in clause 9.1.4 of TS 38.213 [6]; or

2> if the PDCCH indicates a retransmission of HARQ feedback as specified in clause 9.1.5 of TS 38.213 [6]:

3> if this Serving Cell is configured with *downlinkHARQ-FeedbackDisabled*:

…

3> else:

4> start or restart the *drx-HARQ-RTT-TimerDL* for the corresponding HARQ process(es) whose HARQ feedback is reported in the first symbol after the end of the corresponding transmission carrying the DL HARQ feedback.

…

3> stop the *drx-RetransmissionTimerDL* for the corresponding HARQ process(es) whose HARQ feedback is reported;

3> stop the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process;

…

2> if the PDCCH indicates a new transmission (DL, UL or SL) on a Serving Cell in this DRX group:

3> start or restart *drx-InactivityTimer* for this DRX group in the first symbol after the end of the PDCCH reception.

…

1> if DCP monitoring is configured for the active DL BWP as specified in TS 38.213 [6], clause 10.3; and

1> if the current symbol n occurs within *drx-onDurationTimer* duration; and

1> if *drx-onDurationTimer* associated with the current DRX cycle is not started as specified in this clause:

…

1> else:

2> in current symbol n, if a DRX group would not be in Active Time considering grants/assignments scheduled on Serving Cell(s) in this DRX group and DRX Command MAC CE/Long DRX Command MAC CE received and Scheduling Request sent until 4 ms prior to symbol n when evaluating all DRX Active Time conditions as specified in this clause; and

2> if *allowCSI-SRS-Tx-MulticastDRX-Active* is not configured or, in current symbol n, if all multicast DRXes corresponding to the DRX group would not be in Active Time considering multicast assignments/DRX Command MAC CE for MBS multicast received until 4 ms prior to symbol n when evaluating all DRX Active Time conditions as specified in Clause 5.7b and all multicast sessions corresponding to the DRX group are configured with multicast DRX:

3> not transmit periodic SRS and semi-persistent SRS defined in TS 38.214 [7] in this DRX group;

3> not report CSI on PUCCH and semi-persistent CSI configured on PUSCH in this DRX group.

…

[TS 38.321, clause 5.7b]

For MBS multicast, the MAC entity may be configured by RRC with a DRX functionality per G-RNTI or per G-CS-RNTI that controls the UE's PDCCH monitoring activity for the MAC entity's G-RNTI(s) and G-CS-RNTI(s) as specified in TS 38.331 [5]. When in RRC_CONNECTED, if multicast DRX is configured for a G-RNTI or G-CS-RNTI, the MAC entity is allowed to monitor the PDCCH for this G-RNTI or G-CS-RNTI discontinuously using the multicast DRX operation specified in this clause; otherwise the MAC entity monitors the PDCCH for this G-RNTI or G-CS-RNTI as specified in TS 38.213 [6]. The multicast DRX operation specified in this clause is performed independently for each G-RNTI or G-CS-RNTI and independently from the DRX operation specified in clauses 5.7 and 5.7a.

RRC controls multicast DRX operation per G-RNTI or per G-CS-RNTI by configuring the following parameters:

- *drx-onDurationTimerPTM*: the duration at the beginning of a DRX cycle;
- *drx-SlotOffsetPTM*: the delay before starting the *drx-onDurationTimerPTM*;
- *drx-InactivityTimerPTM*: the duration after the PDCCH occasion in which a PDCCH indicates a new DL multicast transmission for the MAC entity;
- *drx-LongCycleStartOffsetPTM*: the long DRX cycle *drx-LongCycle-PTM* and *drx-StartOffset-PTM* which defines the subframe where the long DRX cycle starts;

…

When multicast DRX is configured for a G-RNTI or G-CS-RNTI, the Active Time includes the time while:

- *drx-onDurationTimerPTM* or *drx-InactivityTimerPTM* or *drx-RetransmissionTimerDL-PTM* for this G-RNTI or G-CS-RNTI is running.

When multicast DRX is not configured for a G-RNTI or G-CS-RNTI and unicast DRX is configured, the MAC entity shall for this G-RNTI or G-CS-RNTI:

1> monitor the PDCCH as specified in TS 38.213 [6];

1> if the PDCCH indicates a DL multicast transmission; or

1> if a MAC PDU is received in a configured downlink multicast assignment and CS-RNTI is configured:

…

2> stop the *drx-RetransmissionTimerDL* for the corresponding HARQ process.

When multicast DRX is configured for a G-RNTI or G-CS-RNTI, the MAC entity shall for this G-RNTI or G-CS-RNTI:

…

1> if a *drx-HARQ-RTT-TimerDL-PTM* expires:

2> if the data of the corresponding HARQ process was not successfully decoded:

3> start the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process in the first symbol after the expiry of *drx-HARQ-RTT-TimerDL-PTM*.

1> if a DRX Command MAC CE indicated by PDCCH addressed to a G-RNTI or G-CS-RNTI, or by a configured downlink multicast assignment is received:

2> stop *drx-onDurationTimerPTM* of the DRX for this G-RNTI or G-CS-RNTI;

2> stop *drx-InactivityTimerPTM* of the DRX for this G-RNTI or G-CS-RNTI.

1> if [(SFN × 10) + subframe number] modulo (*drx-LongCycle-PTM*) = *drx-StartOffset-PTM*:

2> start *drx-onDurationTimerPTM* after *drx-SlotOffsetPTM* from the beginning of the subframe.

1> if the MAC entity is in Active Time for this G-RNTI or G-CS-RNTI:

2> monitor the PDCCH for this G-RNTI or G-CS-RNTI as specified in TS 38.213 [6];

2> if the PDCCH indicates a DL multicast transmission:

…

3> stop the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process;

3> stop the *drx-RetransmissionTimerDL* for the corresponding HARQ process.

2> if the PDCCH indicates a new multicast transmission for this G-RNTI or G-CS-RNTI:

3> start or restart *drx-InactivityTimerPTM* in the first symbol after the end of the PDCCH reception.

14.2.1.2.1.3 Test description

14.2.1.2.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR Cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.1.2.1.3.2 Test procedure sequence

Table 14.2.1.2.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-

14.2.1.2.2 MBS Multicast/ MAC/ DRX operation/ PTM retransmission for multicast

14.2.1.2.2.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission, and multicast DRX is configured, and HARQ ACK/NACK feedback for multicast is enabled }
ensure that {
  when { UE receives a PTM transmission with G-RNTI and the data in the soft buffer of the
corresponding HARQ process for MBS multicast was not successfully decoded }
    then { UE starts the drx-RetransmissionTimerDL-PTM for the corresponding HARQ process after
expiry of drx-HARQ-RTT-TimerDL-PTM and monitors the G-RNTI PDCCH for drx-RetransmissionTimerDL-PTM
consecutive PDCCH Occasion }
            }
```

14.2.1.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clauses 5.7b. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.7b]

RRC controls multicast DRX operation per G-RNTI or per G-CS-RNTI by configuring the following parameters:

…

- *drx-RetransmissionTimerDL-PTM* (per DL HARQ process for MBS multicast): the maximum duration until a DL multicast retransmission is received;

- *drx-HARQ-RTT-TimerDL-PTM* (per DL HARQ process for MBS multicast): the minimum duration before a DL multicast assignment for HARQ retransmission is expected by the MAC entity.

…

When multicast DRX is configured for a G-RNTI or G-CS-RNTI, the MAC entity shall for this G-RNTI or G-CS-RNTI:

…

1> if a *drx-HARQ-RTT-TimerDL-PTM* expires:

2> if the data of the corresponding HARQ process was not successfully decoded:

3> start the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process in the first symbol after the expiry of *drx-HARQ-RTT-TimerDL-PTM*.

…

1> if the MAC entity is in Active Time for this G-RNTI or G-CS-RNTI:

2> monitor the PDCCH for this G-RNTI or G-CS-RNTI as specified in TS 38.213 [6];

2> if the PDCCH indicates a DL multicast transmission:

3> if HARQ feedback is enabled:

4> start the *drx-HARQ-RTT-TimerDL-PTM* for the corresponding HARQ process in the first symbol after the end of the corresponding transmission carrying the DL HARQ feedback;

4> if the first HARQ-ACK reporting mode (i.e. ack-nack) is configured as specified in TS 38.213 [6]:

5> if the PDCCH addressed to G-RNTI indicates a DL multicast transmission; or

5> if the PDCCH addressed to G-CS-RNTI indicates a DL multicast transmission and CS-RNTI is configured:

6> start the *drx-HARQ-RTT-TimerDL* for the corresponding HARQ process in the first symbol after the end of the corresponding transmission carrying the DL HARQ feedback.

3> stop the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process;

3> stop the *drx-RetransmissionTimerDL* for the corresponding HARQ process.

2> if the PDCCH indicates a new multicast transmission for this G-RNTI or G-CS-RNTI:

3> start or restart *drx-InactivityTimerPTM* in the first symbol after the end of the PDCCH reception.

14.2.1.2.2.3 Test description

14.2.1.2.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell.

- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.2.2.3.2 Test procedure sequence

Table 14.2.1.2.2.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the NR RRC_CONNECTED procedure in TS 38.508-1 Table 4.5.4.2-3 are executed with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS transmits RRCReconfiguration to configure multicast DRX parameters and enable HARQ feedback for multicast.	<--	NR RRC: *RRCReconfiguration*	-	-
4	The UE transmits RRCReconfigurationComplete.	-->	NR RRC: *RRCReconfigurationComplete*	-	-
5	In the last PDCCH occasion before the *drx-onDurationTimerPTM* expires, the SS indicates the new transmission of an MBS Packet on the PDCCH addressed to G-RNTI. (Note 1) The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet.	-	-
6	Check: Does the UE transmit a HARQ NACK for the MBS Packet in step 5?	-->	HARQ NACK	-	-
7	In the first PDCCH occasion when the *drx-RetransmissionTimerDL-PTM* for the MBS Packet in step 5 is started (i.e. after expiry of *drx-HARQ-RTT-TimerDL-PTM* after step 5*)*, the SS indicates the retransmission of a MBS Packet in step 5 using PTM retransmission for multicast on the PDCCH addressed to G-RNTI. (Note 1) The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet.	-	-
8	Check: Does the UE transmit a HARQ ACK/ NACK for the MBS Packet in step 7?	-->	HARQ ACK/NACK	1	P
9	In the last PDCCH occasion before the *drx-onDurationTimerPTM* expires, the SS indicates the new transmission of an MBS Packet on the PDCCH addressed to G-RNTI. (Note 1) The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet.	-	-
10	Check: Does the UE transmit a HARQ NACK for the MBS Packet in step 9?	-->	HARQ NACK	-	-
-	EXCEPTION: Step 11 shall be repeated till HARQ ACK is received at step 12 or until HARQ retransmission count = 4 is reached for MBS Packet at step 9 (Note 2) (Note 3).	-	-	-	-
11	In the last PDCCH occasion when the *drx-RetransmissionTimerDL-PTM* for the MBS Packet is started (i.e. after expiry of *drx-HARQ-RTT-TimerDL-PTM)*, the SS indicates the retransmission of a MBS Packet in step 9 using PTM retransmission for multicast on the PDCCH addressed to G-RNTI. (Note 1) The CRC is calculated in such a way, it will	<--	MBS Packet.	-	-

	result in CRC pass on UE side.				
-	EXCEPTION: Up to 3 HARQ NACK from the UE should be allowed at step 12 (Note 2).	-	-	-	-
12	Check: Does the UE transmit a HARQ ACK/NACK for the MBS Packet in step 11?	-->	HARQ ACK/NACK	1	P

Note 1: The DCI format for all the PDCCH addressed to G-RNTI is DCI format 4-1.
Note 2: The value 4 for the maximum number of HARQ retransmissions has been chosen based on an assumption that, given the radio conditions used in this test case, a UE soft combiner implementation should have sufficient retransmissions to be able to successfully decode the data in its soft buffer.
Note 3: SS performs new transmission for a MBS Packet in step9, and UE starts drx-HARQ-RTT-TimerDL and drx-HARQ-RTT-TimerDL-PTM after sending HARQ NACK in step 10. UE starts drx-RetransmissionTimerDL after expiry of drx-HARQ-RTT-TimerDL, and SS performs retransmission for the MBS Packet using PTM retransmission for multicast during retransmission timer running. If UE decodes the retransmitted MBS Packet successfully, UE feedbacks HARQ ACK. If UE fails to decode the retransmitted MBS Packet successfully, UE feedbacks HARQ NACK and starts drx-HARQ-RTT-TimerDL again.

14.2.1.2.3 MBS Multicast/ MAC/ DRX operation/ PTP retransmission for multicast

14.2.1.2.3.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission, both multicast DRX and unicast DRX are configured, and HARQ ACK/NACK feedback for
multicast is enabled }
ensure that {
  when { UE receives a PTM transmission with G-RNTI and the data in the soft buffer of the
corresponding HARQ process for MBS multicast was not successfully decoded }
    then { UE starts the drx-RetransmissionTimerDL for the corresponding HARQ process for MBS
multicast after expiry of drx-HARQ-RTT-TimerDL and monitors the PDCCH addressed to C-RNTI for drx-
RetransmissionTimerDL consecutive PDCCH Occasion }
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, both multicast DRX and unicast DRX are
configured, and HARQ ACK/NACK feedback for multicast is enabled }
ensure that {
  when { UE receives a DL transmission with C-RNTI during drx-RetransmissionTimerDL for the
corresponding HARQ process for MBS multicast }
    then { UE stops the drx-RetransmissionTimerDL and drx-RetransmissionTimerDL-PTM for the
corresponding HARQ process }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, both multicast DRX and unicast DRX are
configured, and period CSI report is configured, and allowCSI-SRS-Tx-MulticastDRX-Active is
configured }
ensure that {
  when { Both unicast DRX and multicast DRX are not in Active Time }
    then { UE stop report CSI on PUCCH }
            }
```

(4)

```
with { UE in RRC_Connected state and Multicast MRB established with one RLC-UM entity for PTM
transmission and one RLC-UM entity for PTP transmission, both multicast DRX and unicast DRX are
configured, and period CSI report is configured, and allowCSI-SRS-Tx-MulticastDRX-Active is
configured }
ensure that {
  when { Unicast DRX or multicast DRX are in Active Time}
    then { UE does not stop report CSI on PUCCH }
          }
```

14.2.1.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.321, clauses 5.7 and 5.7b. Unless otherwise stated these are Rel-17 requirements.

[TS 38.321, clause 5.7]

1> if a DRX group is in Active Time:

2> monitor the PDCCH on the Serving Cells in this DRX group as specified in TS 38.213 [6];

2> if the PDCCH indicates a DL transmission; or

2> if the PDCCH indicates a one-shot HARQ feedback as specified in clause 9.1.4 of TS 38.213 [6]; or

2> if the PDCCH indicates a retransmission of HARQ feedback as specified in clause 9.1.5 of TS 38.213 [6]:

3> if this Serving Cell is configured with *downlinkHARQ-FeedbackDisabled*:

…

3> else:

4> start or restart the *drx-HARQ-RTT-TimerDL* for the corresponding HARQ process(es) whose HARQ feedback is reported in the first symbol after the end of the corresponding transmission carrying the DL HARQ feedback.

NOTE 3: When HARQ feedback is postponed by PDSCH-to-HARQ_feedback timing indicating an inapplicable k1 value, as specified in TS 38.213 [6], the corresponding transmission opportunity to send the DL HARQ feedback is indicated in a later PDCCH requesting the HARQ-ACK feedback.

3> stop the *drx-RetransmissionTimerDL* for the corresponding HARQ process(es) whose HARQ feedback is reported;

3> stop the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process;

…

1> if DCP monitoring is configured for the active DL BWP as specified in TS 38.213 [6], clause 10.3; and

1> if the current symbol n occurs within *drx-onDurationTimer* duration; and

1> if *drx-onDurationTimer* associated with the current DRX cycle is not started as specified in this clause:

…

1> else:

2> in current symbol n, if a DRX group would not be in Active Time considering grants/assignments scheduled on Serving Cell(s) in this DRX group and DRX Command MAC CE/Long DRX Command MAC CE received and Scheduling Request sent until 4 ms prior to symbol n when evaluating all DRX Active Time conditions as specified in this clause; and

2> if *allowCSI-SRS-Tx-MulticastDRX-Active* is not configured, or if *cfr-ConfigMulticast* is not configured for any of the active BWP(s) of the Serving Cell(s), or, in current symbol n, if all multicast DRXes corresponding to the DRX group would not be in Active Time considering multicast assignments/DRX Command MAC CE for MBS multicast received until 4 ms prior to symbol n when evaluating all DRX

Active Time conditions as specified in Clause 5.7b and all multicast sessions corresponding to the DRX group are configured with multicast DRX:

3> not transmit periodic SRS and semi-persistent SRS defined in TS 38.214 [7] in this DRX group;

3> not report CSI on PUCCH and semi-persistent CSI configured on PUSCH in this DRX group

[TS 38.321, clause 5.7b]

RRC controls multicast DRX operation per G-RNTI or per G-CS-RNTI by configuring the following parameters:

…

- *drx-RetransmissionTimerDL-PTM* (per DL HARQ process for MBS multicast): the maximum duration until a DL multicast retransmission is received;

- *drx-HARQ-RTT-TimerDL-PTM* (per DL HARQ process for MBS multicast): the minimum duration before a DL multicast assignment for HARQ retransmission is expected by the MAC entity.

…

When multicast DRX is configured for a G-RNTI or G-CS-RNTI, the MAC entity shall for this G-RNTI or G-CS-RNTI:

…

1> if a *drx-HARQ-RTT-TimerDL-PTM* expires:

2> if the data of the corresponding HARQ process was not successfully decoded:

3> start the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process in the first symbol after the expiry of *drx-HARQ-RTT-TimerDL-PTM*.

…

1> if the MAC entity is in Active Time for this G-RNTI or G-CS-RNTI:

2> monitor the PDCCH for this G-RNTI or G-CS-RNTI as specified in TS 38.213 [6];

2> if the PDCCH indicates a DL multicast transmission:

3> if HARQ feedback is enabled:

4> start the *drx-HARQ-RTT-TimerDL-PTM* for the corresponding HARQ process in the first symbol after the end of the corresponding transmission carrying the DL HARQ feedback;

4> if the first HARQ-ACK reporting mode (i.e. ack-nack) is configured as specified in TS 38.213 [6]:

5> if the PDCCH addressed to G-RNTI indicates a DL multicast transmission; or

5> if the PDCCH addressed to G-CS-RNTI indicates a DL multicast transmission and CS-RNTI is configured:

6> start the *drx-HARQ-RTT-TimerDL* for the corresponding HARQ process in the first symbol after the end of the corresponding transmission carrying the DL HARQ feedback.

3> stop the *drx-RetransmissionTimerDL-PTM* for the corresponding HARQ process;

3> stop the *drx-RetransmissionTimerDL* for the corresponding HARQ process.

2> if the PDCCH indicates a new multicast transmission for this G-RNTI or G-CS-RNTI:

3> start or restart *drx-InactivityTimerPTM* in the first symbol after the end of the PDCCH reception.

14.2.1.2.3.3 Test description

14.2.1.2.3.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.2.3.3.2 Test procedure sequence

Table 14.2.1.2.3.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the NR RRC_CONNECTED procedure in TS 38.508-1 Table 4.5.4.2-3 are executed with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS transmits RRCReconfiguration to configure multicast DRX parameters and unicast DRX parameters and enable HARQ feedback for multicast.	<--	NR RRC: *RRCReconfiguration*	-	-
4	The UE transmits RRCReconfigurationComplete.	-->	NR RRC: *RRCReconfigurationComplete*	-	-
5	In the last PDCCH occasion before the *drx-onDurationTimerPTM* expires, the SS indicates the new transmission of an MBS Packet on the PDCCH addressed to G-RNTI. The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet.	-	-
6	UE transmits a HARQ NACK for the MBS Packet in step 5.	-->	HARQ NACK	-	-
7	In the first PDCCH occasion when the *drx-RetransmissionTimerDL* for the MBS Packet in step 5 is started (i.e. after expiry of *drx-HARQ-RTT-TimerDL* after step 5), the SS indicates the retransmission of a MBS Packet in step 5 using PTP retransmission for multicast on the PDCCH addressed to C-RNTI.(Note 1) The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet	-	-
8	Check: Does the UE transmit a HARQ ACK/ NACK for the MBS Packet in step 7?	-->	HARQ ACK/NACK	1	P
9	In the last PDCCH occasion before the *drx-onDurationTimerPTM* expires, the SS indicates the new transmission of a MBS Packet on the PDCCH addressed to G-RNTI. The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet	-	-

10	Check: Does the UE transmit a HARQ NACK for the MBS Packet in step 9?	-->	HARQ NACK	-	-
-	EXCEPTION: Step 11 shall be repeated till HARQ ACK is received at step 12 or until HARQ retransmission count = 4 is reached for MBS Packet at step 11 (Note 2).	-	-	-	-
11	In the last PDCCH occasion when the *drx-RetransmissionTimerDL* for the MBS Packet is started (i.e. after expiry of *drx-HARQ-RTT-TimerDL)*, the SS indicates the retransmission of a MBS Packet in step 9 using PTP retransmission for multicast on the PDCCH addressed to C-RNTI.(Note 3) The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet	-	-
-	EXCEPTION: Up to 3 HARQ NACK from the UE should be allowed at step 12 (Note 2).	-	-	-	-
12	Check: Does the UE transmit a HARQ ACK/NACK for the MBS Packet in step 11?	-->	HARQ ACK/NACK	1	P
13	The SS transmits RRCReconfiguration to configure CSI report and allowCSI-SRS-Tx-MulticastDRX-Active-r17.	<--	NR RRC: *RRCReconfiguration*	-	-
14	The UE transmits RRCReconfigurationComplete.	-->	NR RRC: *RRCReconfigurationComplete*	-	-
15	In the last PDCCH occasion before the *drx-onDurationTimerPTM* expires, the SS indicates the new transmission of an MBS Packet via RLC-UM for PTM transmission on the PDCCH addressed to G-RNTI. The CRC is calculated in such a way, it will result in CRC error on UE side.	<--	MBS Packet	-	-
16	The UE transmits a HARQ NACK for the MBS Packet in step 15.	-->	HARQ NACK	-	-
17	Check: Does the UE transmit a CSI Report during when the *drx-RetransmissionTimerDL* and *drx-RetransmissionTimerDL-PTM* are running?	-->	CSI Report	4	P
18	In a PDCCH occasion which is X PDCCH sub frames before the PDCCH occasion in which the *drx-RetransmissionTimerDL* expires, with X > period of CSI Report, the SS indicates the new transmission of an MBS Packet via RLC-UM for PTP transmission on the PDCCH addressed to C-RNTI. (Note 5) The CRC is calculated in such a way, it will result in CRC pass on UE side.	<--	MBS Packet	-	-
19	Check: Does the UE transmit a CSI Report after step 18?	-->	CSI Report	2,3	F

Note 1: If UE support PTP retransmission for multicast, UE start *drx-HARQ-RTT-TimerDL* and *drx-HARQ-RTT-TimerDL-PTM* for the corresponding HARQ process in the first symbol after the end of the corresponding transmission carrying the DL HARQ feedback (i.e. HARQ NACK in step 10).

Note 2: The value 4 for the maximum number of HARQ retransmissions has been chosen based on an assumption that, given the radio conditions used in this test case, a UE soft combiner implementation should have sufficient retransmissions to be able to successfully decode the data in its soft buffer.

Note 3: SS performs new transmission for a MBS Packet in step9, UE starts *drx-HARQ-RTT-TimerDL* and *drx-HARQ-RTT-TimerDL-PTM* after sending HARQ NACK in step 10. UE starts *drx-RetransmissionTimerDL* after expiry of *drx-HARQ-RTT-TimerDL*, SS performs retransmission for the MBS Packet using PTP retransmission for multicast. If UE decode the MBS Packet successfully, UE feedback HARQ ACK. If UE fail to decode the MBS Packet successfully, UE feedbacks HARQ NACK and starts drx-HARQ-RTT-TimerDL again.

Note 4: The DCI format for all the PDCCH addressed to G-RNTI is DCI format 4-1.

Note 5: UE stops *drx-RetransmissionTimerDL* and *drx-RetransmissionTimerDL-PTM,* and *drx-inactiveTimer*=0ms. Therefore, UE leaves Active Time.

14.2.1.3 MBS Multicast/ MAC/ SPS

14.2.1.3.1 MBS Multicast/ MAC/ SPS/ PTM transmission

14.2.1.3.1.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and one sps-Configuration in sps-ConfigMulticastToAddModList-r17 is configured }
ensure that {
  when { UE receives a DL assignment addressed to its stored G-CS-RNTI in slot y and with NDI set as
0 and PDCCH content indicates activation }
    then { UE starts receiving DL MAC PDU in slots y+n*[semiPersistSchedIntervalDL] where 'n' is
positive integer starting at zero }
            }
```

(2)

```
with { UE in RRC_Connected state and used configured DL assignment to receive MAC PDU in slot
y+n*[semiPersistSchedIntervalDL] for PTM transmission }
ensure that {
  when { UE receives a DL assignment addressed to its stored G-CS-RNTI in slot p and with NDI set as
0 and PDCCH content indicates activation and p!= y+n*[semiPersistSchedIntervalDL] }
    then { UE starts receiving DL MAC PDU in slots p+n*[semiPersistSchedIntervalDL] and stops
receiving DL MAC PDU at slots y+n*[semiPersistSchedIntervalDL] where 'n' is positive integer
starting at zero }
            }
```

(3)

```
with { UE in RRC_Connected state and used configured DL assignment to receive MAC PDU in slot
p+n*[semiPersistSchedIntervalDL] for PTM transmission }
ensure that {
  when { :UE receives a DL assignment addressed to its stored G-CS-RNTI in slot q and with NDI set
as 0 and PDCCH content indicates activation and q!= p+n*[semiPersistSchedIntervalDL] }
    then { UE starts receiving DL MAC PDU in slots q+n*[semiPersistSchedIntervalDL] where 'n' is
positive integer starting at zero }
            }
```

(4)

```
with { UE in RRC_Connected state and used configured DL assignment to receive MAC PDU in slot
q+n*[semiPersistSchedIntervalDL] }
ensure that {
  when { UE receives a DL assignment addressed to its G-RNTI in slot z for PTM transmission, such
that z= q+n*[semiPersistSchedIntervalDL] }
    then { UE receives DL MAC PDU as per assignment addressed to its G-RNTI where 'n' is positive
integer starting at zero }
            }
```

(5)

```
with { UE in RRC_Connected state and used configured DL assignment to receive MAC PDU in slot
q+n*[semiPersistSchedIntervalDL] for PTM transmission }
ensure that {
  when { UE receives a DL assignment addressed to its stored G-CS-RNTI in slot a and with NDI set as
0 and PDCCH content indicates deactivation and a!= q+n*[semiPersistSchedIntervalDL] }
    then { UE sends an ACK and stops receiving DL MAC PDU in slot q+n*[semiPersistSchedIntervalDL].
where 'n' is positive integer starting at zero }
            }
```

(6)

```
with { UE in RRC_Connected state and used configured DL assignment to receive MAC PDU in slot
y+n*[semiPersistSchedIntervalDL] for PTM transmission }
ensure that {
  when { UE receives a RRCReconfiguration including sps-ConfigMulticastToReleaseList-r17 with SPS-
ConfigIndex-r16 and hence resulting in MBS SPS released}
```

```
    then { UE deletes the stored sps-Configuration DL parameters and stops receiving DL MAC PDU in
slot y+n*[semiPersistSchedIntervalDL] where 'n' is positive integer starting at zero }
            }
```

14.2.1.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.214, clause 10.2; TS 38.321, clauses 5.8.1a and 5.3.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.214, clause 10.2]

A UE validates, for scheduling activation or scheduling release, a DL SPS assignment PDCCH or a configured UL grant Type 2 PDCCH if

- the CRC of a corresponding DCI format is scrambled with a CS-RNTI provided by *cs-RNTI* or a G-CS-RNTI provided by g-cs-RNTI, and
- the new data indicator field in the DCI format for the enabled transport block is set to '0', and
- the DFI flag field, if present, in the DCI format is set to '0', and
- the time domain resource assignment field in the DCI format indicates a row with single SLIV, and
- if validation is for scheduling activation and if the PDSCH-to-HARQ_feedback timing indicator field in the DCI format is present, the PDSCH-to-HARQ_feedback timing indicator field does not provide an inapplicable value from *dl-DataToUL-ACK-r16*.

If a UE is provided a single configuration for UL grant Type 2 PUSCH or for SPS PDSCH, validation of the DCI format is achieved if all fields for the DCI format are set according to Table 10.2-1 or Table 10.2-2.

…

If validation is achieved, the UE considers the information in the DCI format as a valid activation or valid release of DL SPS or configured UL grant Type 2. If validation is not achieved, the UE discards all the information in the DCI format.

Table 10.2-1: Special fields for single DL SPS or single UL grant Type 2 scheduling activation PDCCH validation when a UE is provided a single SPS PDSCH or UL grant Type 2 configuration in the active DL/UL BWP of the scheduled cell

	DCI format 0_0/0_1/0_2	DCI format 1_0/1_2/4_1	DCI format 1_1/4_2
HARQ process number (if present)	set to all '0's	set to all '0's	set to all '0's
Redundancy version (if present)	set to all '0's	set to all '0's	For the enabled transport block: set to all '0's

Table 10.2-2: Special fields for single DL SPS or single UL grant Type 2 scheduling release PDCCH validation when a UE is provided a single SPS PDSCH or UL grant Type 2 configuration in the active DL/UL BWP of the scheduled cell

	DCI format 0_0/0_1/0_2	DCI format 1_0/1_1/1_2/4_1/4_2
HARQ process number (if present)	set to all '0's	set to all '0's
Redundancy version (if present)	set to all '0's	set to all '0's
Modulation and coding scheme	set to all '1's	set to all '1's
Frequency domain resource assignment	set to all '0's for FDRA Type 2 with $\mu = 1$ set to all '1's, otherwise	set to all '0's for FDRA Type 0 or for *dynamicSwitch* set to all '1's for FDRA Type 1

[TS 38.321, clause 5.8.1a]

MBS Semi-Persistent Scheduling (SPS) is configured by RRC on one Serving Cell per BWP. Multiple assignments can be active simultaneously in the same BWP.

For the DL MBS SPS, a DL assignment is provided by PDCCH, and stored or cleared based on L1 signalling indicating SPS activation or deactivation.

RRC configures the following parameters when the MBS SPS is configured:

- *cs-RNTI*: CS-RNTI for MBS SPS deactivation, PTP for PTM retransmission if configured;
- *g-cs-RNTI*: G-CS-RNTI for activation, deactivation, and retransmission;
- *nrofHARQ-Processes*: the number of configured HARQ processes for MBS SPS;
- *harq-ProcID-Offset*: Offset of HARQ process for MBS SPS;
- *periodicity*: periodicity of configured downlink assignment for MBS SPS.

When the MBS SPS is released by upper layers, all the corresponding configurations shall be released.

After a downlink assignment is configured for MBS SPS, the MAC entity shall consider sequentially that the N^{th} downlink assignment occurs in the slot for which:

$$(numberOfSlotsPerFrame \times \text{SFN} + \text{slot number in the frame}) = [(numberOfSlotsPerFrame \times \text{SFN}_{\text{start time}} + \text{slot}_{\text{start time}}) + N \times periodicity \times numberOfSlotsPerFrame / 10] \text{ modulo } (1024 \times numberOfSlotsPerFrame)$$

where $\text{SFN}_{\text{start time}}$ and $\text{slot}_{\text{start time}}$ are the SFN and slot, respectively, of the first transmission of PDSCH where the configured downlink assignment was (re-)initialised.

[TS 38.321, clause 5.3.1]

When the MAC entity has a C-RNTI, Temporary C-RNTI, CS-RNTI, G-RNTI or G-CS-RNTI, the MAC entity shall for each PDCCH occasion during which it monitors PDCCH and for each Serving Cell:

…

1> else if a downlink assignment for this PDCCH occasion has been received for this Serving Cell on the PDCCH for the MAC entity's CS-RNTI or G-CS-RNTI:

2> if the NDI in the received HARQ information is 1:

3> consider the NDI for the corresponding HARQ process not to have been toggled;

3> indicate the presence of a downlink assignment for this Serving Cell and deliver the associated HARQ information to the HARQ entity.

2> if the NDI in the received HARQ information is 0:

3> if PDCCH contents indicate SPS deactivation:

4> clear the configured downlink assignment for this Serving Cell (if any);

4> if the *timeAlignmentTimer*, associated with the TAG containing the Serving Cell on which the HARQ feedback is to be transmitted, is running:

5> indicate a positive acknowledgement for the SPS deactivation to the physical layer.

3> else if PDCCH content indicates SPS activation:

4> store the downlink assignment for this Serving Cell and the associated HARQ information as configured downlink assignment;

4> initialise or re-initialise the configured downlink assignment for this Serving Cell to start in the associated PDSCH duration and to recur according to rules in clause 5.8.1 or in clause 5.8.1a;

For each Serving Cell and each configured downlink assignment, if configured and activated, the MAC entity shall:

1> if the PDSCH duration of the configured downlink assignment does not overlap with the PDSCH duration of a downlink assignment received on the PDCCH for this Serving Cell:

2> instruct the physical layer to receive, in this PDSCH duration, transport block on the DL-SCH according to the configured downlink assignment and to deliver it to the HARQ entity;

2> set the HARQ Process ID to the HARQ Process ID associated with this PDSCH duration;

2> consider the NDI bit for the corresponding HARQ process to have been toggled;

2> indicate the presence of a configured downlink assignment and deliver the stored HARQ information to the HARQ entity.

For configured downlink assignments without *harq-ProcID-Offset*, the HARQ Process ID associated with the slot where the DL transmission starts is derived from the following equation:

HARQ Process ID = [floor (CURRENT_slot × 10 / (*numberOfSlotsPerFrame* × *periodicity*))] modulo *nrofHARQ-Processes*

where CURRENT_slot = [(SFN × *numberOfSlotsPerFrame*) + slot number in the frame] and *numberOfSlotsPerFrame* refers to the number of consecutive slots per frame as specified in TS 38.211 [8].

For configured downlink assignments with *harq-ProcID-Offset*, the HARQ Process ID associated with the slot where the DL transmission starts is derived from the following equation:

HARQ Process ID = [floor (CURRENT_slot × 10 / (*numberOfSlotsPerFrame* × *periodicity*))] modulo *nrofHARQ-Processes* + *harq-ProcID-Offset*

where CURRENT_slot = [(SFN × *numberOfSlotsPerFrame*) + slot number in the frame] and *numberOfSlotsPerFrame* refers to the number of consecutive slots per frame as specified in TS 38.211 [8].

NOTE 1: In case of unaligned SFN across carriers in a cell group, the SFN of the concerned Serving Cell is used to calculate the HARQ Process ID used for configured downlink assignments.

NOTE 2: CURRENT_slot refers to the slot index of the first transmission occasion of a bundle of configured downlink assignment.

14.2.1.3.1.3 Test description

14.2.1.3.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.3.1.3.2 Test procedure sequence

Table 14.2.1.3.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 -	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1	-	-	-	-

1b1 2a1	subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.				
2a1 - 2a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS transmits a PDCCH for DL SPS activation using UE's G-CS-RNTI in Slot 'Y', NDI=0.	<--	(PDCCH (G-CS-RNTI))	-	-
4	The SS transmits in Slot 'Y', a MBS Packet (PDCP SN = 0 and RLC SN =0) on MRB with RLC-UM entity for PTM transmission.	<--	MBS Packet	-	-

14.2.1.3.2 MBS Multicast/ MAC/ SPS/ PTM retransmission for multicast

14.2.1.3.2.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and one sps-Configuration in sps-ConfigMulticastToAddModList-r17 is configured and harq
feedback is enabled }
ensure that {
  when { UE receives a DL assignment addressed to its stored G-CS-RNTI in slot y and with NDI set as
0 and PDCCH content indicates activation }
    then { UE starts receiving DL MAC PDU in slots y+n*[semiPersistSchedIntervalDL] where 'n' is
positive integer starting at zero }
            }
```

(2)

```
with { UE in RRC_Connected state and DL MBS SPS has been activated in slot y }
ensure that {
  when { UE uses configured DL assignment to receive a valid MAC PDU in slot
y+n*[semiPersistSchedIntervalDL] }
    then { UE sends ACK for the corresponding HARQ process and forwards it to higher layer }
            }
```

(3)

```
with { UE in RRC_Connected state and DL MBS SPS has been activated in slot y }
ensure that {
  when { UE uses configured DL assignment to receive an invalid MAC PDU in slot
y+n*[semiPersistSchedIntervalDL] }
    then { UE sends NACK for the corresponding HARQ process and forwards it to higher layer }
            }
```

(4)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and used configured DL assignment to receive an invalid MAC PDU in slot
y+n*[semiPersistSchedIntervalDL }
ensure that {
  when { UE receives a DL assignment for PTM retransmission addressed to its G-CS-RNTI in Slot p and
with NDI set as 1, where p!= y+n*[semiPersistSchedIntervalDL] }
    then { UE receives MAC PDU as per the retransmission grant for G-CS-RNTI }
```

}

14.2.1.3.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.213, clause 18; TS 38.321, clause 5.3.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.213, clause 18]

An activation for SPS PDSCH receptions using a G-CS-RNTI for a corresponding SPS PDSCH configuration is provided only by a multicast DCI format as described in clause 10.2 by replacing CS-RNTI with the G-CS-RNTI. A release for SPS PDSCH receptions using a G-CS-RNTI for a corresponding SPS PDSCH configuration is provided by a multicast DCI format as described in clause 10.2 by replacing CS-RNTI with the G-CS-RNTI, or by a DCI format with CRC scrambled by CS-RNTI. For the first HARQ-ACK reporting mode and for a transport block that a UE received in a SPS PDSCH, a PDSCH reception providing a retransmission of the transport block can be scheduled either by a unicast DCI format using a CS-RNTI or by a multicast DCI format using a same G-CS-RNTI as the G-CS-RNTI of the initial transmission of the transport block [6, TS 38.214].

[TS 38.321, clause 5.3.1]

Downlink assignments received on the PDCCH both indicate that there is a transmission on a DL-SCH for a particular MAC entity and provide the relevant HARQ information.

…

1> else if a downlink assignment for this PDCCH occasion has been received for this Serving Cell on the PDCCH for the MAC entity's CS-RNTI or G-CS-RNTI:

2> if the NDI in the received HARQ information is 1:

3> consider the NDI for the corresponding HARQ process not to have been toggled;

3> indicate the presence of a downlink assignment for this Serving Cell and deliver the associated HARQ information to the HARQ entity.

14.2.1.3.2.3 Test description

14.2.1.3.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

3	The SS transmits in Slot 'Y', a MBS Packet (PDCP SN = 0 and RLC SN =0) on MRB with RLC-UM entity for PTM transmission.	<--	MBS Packet	-	-
4	Check: Does the UE transmit a HARQ ACK?	-->	HARQ ACK	1	P
5	The SS transmits in Slot 'Y+X', a MBS Packet (PDCP SN = 1 and RLC SN =1) on MRB with RLC-UM entity for PTM transmission. (Note 1)	<--	MBS Packet	-	-
6	Check: Does the UE transmit a HARQ ACK?	-->	HARQ ACK	2	P
7	The SS transmits in Slot 'Y+2X', a MBS Packet (PDCP SN = 2 and RLC SN =2) on MRB with RLC-UM entity for PTM transmission. CRC is calculated in such a way will result in CRC error in UE.	<--	MBS Packet	-	-
8	Check: Does the UE transmit a HARQ NACK?	-->	HARQ NACK	3	P
-	EXCEPTION: Step 9 and 10 shall be repeated until HARQ retransmission count = 3 is reached for MBS Packet at step 7.(Note 2)	-	-	-	-
9	The SS transmits a DL assignment using UE's G-CS-RNTI in Slot 'P', NDI=1; Where (Y+2X < P <Y+3X); The DL HARQ process is same as in step 7.	<--	(PDCCH (G-CS-RNTI))	-	-
10	The SS performs PTM retransmission for multicast in Slot 'P', to re-transmit a MBS Packet (PDCP SN = 2 and RLC SN =2) on MRB with RLC-UM entity for PTM transmission.	<--	MBS Packet	-	-
-	EXCEPTION: Up to 3 HARQ NACK from the UE should be allowed at step 11(Note 2).	-	-	-	-
11	Check: Does the UE transmit a HARQ ACK?	-->	HARQ ACK	4	P

NOTE 1: X is equal to semiPersistSchedIntervalDL in this document.
NOTE 2: The value 4 for the maximum number of HARQ retransmissions has been chosen based on an assumption that, given the radio conditions used in this test case, a UE soft combiner implementation should have sufficient retransmissions to be able to successfully decode the data in its soft buffer.

14.2.1.3.3 MBS Multicast/ MAC/ SPS/ PTP retransmission for multicast

14.2.1.3.3.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with RLC-UM entity for PTM
transmission and CS-RNTI is configured and UE has received an invalid MAC PDU in slot
y+n*[semiPersistSchedIntervalDL] based on configured DL assignment }
ensure that {
  when { UE receives a DL assignment for PTP retransmission addressed to its CS-RNTI in Slot p and
with NDI set as 1, where p!= y+n*[semiPersistSchedIntervalDL] }
    then { UE receives MAC PDU as per the retransmission grant for CS-RNTI }
          }
```

14.2.1.3.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.213, clause 18; TS 38.321, clauses 5.3.1 and 5.8.1a. Unless otherwise stated these are Rel-17 requirements.

[TS 38.213, clause 18]

An activation for SPS PDSCH receptions using a G-CS-RNTI for a corresponding SPS PDSCH configuration is provided only by a multicast DCI format as described in clause 10.2 by replacing CS-RNTI with the G-CS-RNTI. A release for SPS PDSCH receptions using a G-CS-RNTI for a corresponding SPS PDSCH configuration is provided by a multicast DCI format as described in clause 10.2 by replacing CS-RNTI with the G-CS-RNTI, or by a DCI format with CRC scrambled by CS-RNTI. For the first HARQ-ACK reporting mode and for a transport block that a UE received in a SPS PDSCH, a PDSCH reception providing a retransmission of the transport block can be scheduled either by a unicast DCI format using a CS-RNTI or by a multicast DCI format using a same G-CS-RNTI as the G-CS-RNTI of the initial transmission of the transport block [6, TS 38.214].

[TS 38.321, clause 5.3.1]

Downlink assignments received on the PDCCH both indicate that there is a transmission on a DL-SCH for a particular MAC entity and provide the relevant HARQ information.

…

1> else if a downlink assignment for this PDCCH occasion has been received for this Serving Cell on the PDCCH for the MAC entity's CS-RNTI or G-CS-RNTI:

2> if the NDI in the received HARQ information is 1:

3> consider the NDI for the corresponding HARQ process not to have been toggled;

3> indicate the presence of a downlink assignment for this Serving Cell and deliver the associated HARQ information to the HARQ entity.

[TS 38.321, clause 5.8.1a]

MBS Semi-Persistent Scheduling (SPS) is configured by RRC on one Serving Cell per BWP. Multiple assignments can be active simultaneously in the same BWP.

For the DL MBS SPS, a DL assignment is provided by PDCCH, and stored or cleared based on L1 signalling indicating SPS activation or deactivation.

RRC configures the following parameters when the MBS SPS is configured:

- *cs-RNTI*: CS-RNTI for MBS SPS deactivation, PTP for PTM retransmission if configured;
- *g-cs-RNTI*: G-CS-RNTI for activation, deactivation, and retransmission;

…

14.2.1.3.3.3 Test description

14.2.1.3.3.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.1.3.3.3.2 Test procedure sequence

Table 14.2.1.3.3.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b12a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2	The SS transmits a PDCCH for DL SPS activation using UE's G-CS-RNTI in Slot 'Y', NDI=0.	<--	(PDCCH (G-CS-RNTI))	-	-

14.2.2 MBS Multicast/ RLC

14.2.2.1 MBS Multicast/ UM RLC / 6bit SN / Correct set initial value for UM receive state variable/ PTM

14.2.2.1.1 Test Purpose (TP)

(1)

```
with { UE in RRC_Connected state and Multicast MRB established with DL only RLC-UM entity for PTM
transmission }
ensure that {
  when { UE receives first UMD PDU including SN and '2^[sn-FieldLength - 1] <= SN <=  2^[sn-
FieldLength] -1' }
    then { The UE sets the initial value of RX_Next_Highest to the SN of the first UMD PDU including
SN and initial value of RX_Next_Reassembly to a value before RX_Next_Highest and stores the UMD PDU
in receive buffer }
            }
```

(2)

```
with { UE in RRC_Connected state and Multicast MRB established with DL only RLC-UM entity for PTM
transmission }
ensure that {
  when { UE receives a UMD PDU, which is not the first UMD PDU, including SN and 'SN = SN of first
UMD PDU - 1' before t-reassembly expiry }
    then { The UE stores the UMD PDU in receive buffer }
            }
```

(3)

```
with { UE in RRC_Connected state and Multicast MRB established with DL only RLC-UM entity for PTM
transmission }
ensure that {
  when { UE receives a UMD PDU, which is not the first UMD PDU, including SN and '(RX_Next_Highest –
UM_Window_Size) <= SN < RX_Next_Reassembly'  }
    then {  The UE discards the received UMD PDU }
            }
```

(4)

```
with { UE in RRC_Connected state and Multicast MRB established with DL only RLC-UM entity for PTM
transmission }
ensure that {
  when { UE places a UMD PDU including SN into the reception buffer and all byte segments with that
SN are received }
    then {  UE delivers the reassembled SDU to upper layers }
```

```
            }
```

(5)

```
with { UE in RRC_Connected state and using Multicast MRB with DL only RLC-UM entity for PTM
transmission }
ensure that {
  when { RLC re-establishment is performed upon request by RRC }
    then { The UE resets initial value of RX_Next_Highest to the SN of the first received UMD PDU
containing an SN and initial value of RX_Next_Reassembly to a value before RX_Next_Highest and
stores the UMD PDU in receive buffer }
            }
```

14.2.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.322, clause 5.1.2, 5.2.2.2.2, 7.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38. 322, clause 5.1.2]

When upper layers request an RLC entity re-establishment, the UE shall:

- discard all RLC SDUs, RLC SDU segments, and RLC PDUs, if any;
- stop and reset all timers;
- reset all state variables to their initial values.

[TS 38. 322, clause 5.2.2.2.2]

When an UMD PDU is received from lower layer, the receiving UM RLC entity shall:

- if the UMD PDU header does not contain an SN:
  - remove the RLC header and deliver the RLC SDU to upper layer.
- else if (RX_Next_Highest – UM_Window_Size) <= SN < RX_Next_Reassembly:
  - discard the received UMD PDU.
- else:
  - place the received UMD PDU in the reception buffer.

[TS 38.322, clause 7.1]

Each receiving UM RLC entity shall maintain the following state variables:

a) RX_Next_Reassembly – UM receive state variable

This state variable holds the value of the earliest SN that is still considered for reassembly. It is initially set to 0. For groupcast and broadcast of NR sidelink communication or for SL-SRB4 of NR sidelink discovery, it is initially set to the SN of the first received UMD PDU containing an SN. For the receiving UM RLC entity configured for MCCH or MTCH, it is up to UE implementation to set the initial value of RX_Next_Reassembly to a value before RX_Next_Highest.

b) RX_Timer_Trigger – UM *t-Reassembly* state variable

This state variable holds the value of the SN following the SN which triggered *t-Reassembly*.

c) RX_Next_Highest– UM receive state variable

This state variable holds the value of the SN following the SN of the UMD PDU with the highest SN among received UMD PDUs. It serves as the higher edge of the reassembly window. It is initially set to 0. For groupcast and broadcast of NR sidelink communication or for SL-SRB4 of NR sidelink discovery, it is initially set to the SN of the first received UMD PDU containing an SN. For the receiving UM RLC entity configured for MCCH or MTCH, it is initially set to the SN of the first received UMD PDU containing an SN.

14.2.2.1.3 Test description

14.2.2.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR Cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.2.1.3.2 Test procedure sequence

Table 14.2.2.1.3.2-3: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in MBS Multicast session.	-	-	-	-
2a1 - 2a2	Steps 9a1 to 9a2 of the generic procedures described in TS 38.508-1 subclause 4.5.4.2-3 are performed on NR Cell 1 with condition UE TEST LOOP MODE C and Multicast MRB.	-	-	-	-
3	The SS transmits UMD PDU#3 containing first segment of RLC SDU#2 via RLC-UM of MRB, RLC SN=K.(Note 1)	<--	MBS Packet (UMD PDU#3)	-	-
4	20ms after step 3 the SS transmits UMD PDU#1 containing first segment of RLC SDU#1 via RLC-UM of MRB, RLC SN=K-1.(Note 1)	<--	MBS Packet (UMD PDU#1)	-	-
5	40 ms after step 3 the SS transmits UMD PDU#6 containing last segment of RLC SDU#3 via RLC-UM of MRB, RLC SN=K. (Note 1)	<--	MBS Packet (UMD PDU#4)	-	-
6	60 ms after step 3 the SS transmits UMD PDU#4 containing last segment of RLC SDU#2 via RLC-UM of MRB, RLC SN=K-1. (Note 1)	<--	MBS Packet (UMD PDU#2)	-	-
7	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
8	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
9	Check: Is the number of reported MBS Packets received on the MRB in step 8 equal to 2?	-	-	1,2, 4	P
10	Wait 140ms to ensure t-Reassembly expire.(Note 2)	-	-	-	-
11	The SS transmits UMD PDU#6 containing last	<--	MBS Packet (UMD PDU#6)	-	-

	segment of RLC SDU#3 via RLC-UM of MRB, RLC SN=0.				
12	20ms after step 11 the SS transmits UMD PDU#5 containing first segment of RLC SDU#3 via RLC-UM of MRB, RLC SN=0.	<--	MBS Packet (UMD PDU#5)	-	-
13	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: *DLInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
14	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: *ULInformationTransfer* TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
15	Check: Is the number of reported MBS Packets received on the MRB in step 14 equal to 2?	-	-	3	P
16	The SS transmits NR *RRCR*econfiguration message to trigger RLC re-establishment on DRB using Reconfig with sync procedure. (Note 1)	<--	*RRCReconfiguration*	-	-
17	The UE transmits a NR *RRCReconfigurationComplete* message.	-->	*RRCReconfigurationComplete*	-	-
18	The SS transmits UMD PDU#9 containing first segment of RLC SDU#5 via RLC-UM of MRB, RLC SN=L.(Note 3)	<--	MBS Packet (UMD PDU#9)	-	-
19	20ms after step 3 the SS transmits UMD PDU#7 containing first segment of RLC SDU#4 via RLC-UM of MRB, RLC SN=L-1.(Note 3)	<--	MBS Packet (UMD PDU#7)	-	-
20	40 ms after step 3 the SS transmits UMD PDU#10 containing last segment of RLC SDU#5 via RLC-UM of MRB, RLC SN=L. (Note 3)	<--	MBS Packet (UMD PDU#10)	-	-
21	60 ms after step 3 the SS transmits UMD PDU#8 containing last segment of RLC SDU#4 via RLC-UM of MRB, RLC SN=L-1. (Note 3)	<--	MBS Packet (UMD PDU#8)	-	-
22	The SS transmits a UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST message.	<--	NR RRC: DLInformationTransfer TC: UE TEST LOOP MODE C MBMS PACKET COUNTER REQUEST	-	-
23	UE responds with UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE.	-->	NR RRC: ULInformationTransfer TC: UE TEST LOOP MODE C MBMS PACKET COUNTER RESPONSE	-	-
24	Check: Is the number of reported MBS Packets received on the MRB in step 23 equal to 4?	-	-	5,2, 4	P
Note 1: K = (2^[sn-FieldLength])-1. If UM RLC sn-FieldLength =6, K=63. If UM RLC sn-FieldLength =12, K= 4095. Note 2: T-Reassembly (200ms) starts in step3. Note 3: L = 2^[sn-FieldLength-1]. If UM RLC sn-FieldLength =6, L=32. If UM RLC sn-FieldLength =12, L= 2048.

    then { UE delivers PDCP Data PDU to upper layers }
            }
```

14.2.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.323, clause 5.1.2, 5.2.2.1, 7.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38. 323, clause 5.1.2]

When upper layers request a PDCP entity re-establishment, the receiving PDCP entity shall:

…

- for SRBs and UM DRBs, set RX_NEXT and RX_DELIV to the initial value;
- for UM MRBs and AM MRBs, set RX_NEXT and RX_DELIV to the initial value if *initialRX-DELIV* is configured in TS 38.331 [3];

…

[TS 38. 323, clause 5.2.2.1]

After determining the COUNT value of the received PDCP Data PDU = RCVD_COUNT, the receiving PDCP entity shall:

…

- if RCVD_COUNT < RX_DELIV; or
- if the PDCP Data PDU with COUNT = RCVD_COUNT has been received before:
  - discard the PDCP Data PDU;

If the received PDCP Data PDU with COUNT value = RCVD_COUNT is not discarded above, the receiving PDCP entity shall:

- store the resulting PDCP SDU in the reception buffer;
- if RCVD_COUNT >= RX_NEXT:
  - update RX_NEXT to RCVD_COUNT + 1.

…

- if RCVD_COUNT = RX_DELIV:
  - deliver to upper layers in ascending order of the associated COUNT value after performing header decompression, if not decompressed before;
    - all stored PDCP SDU(s) with consecutively associated COUNT value(s) starting from COUNT = RX_DELIV;
  - update RX_DELIV to the COUNT value of the first PDCP SDU which has not been delivered to upper layers, with COUNT value > RX_DELIV;

…

[TS 38.323, clause 7.1]

The receiving PDCP entity shall maintain the following state variables:

a) RX_NEXT

This state variable indicates the COUNT value of the next PDCP SDU expected to be received. The initial value is 0, except for sidelink broadcast and groupcast, for SRBs configured with state variables continuation, and for broadcast MRBs.

…

b) RX_DELIV

This state variable indicates the COUNT value of the first PDCP SDU not delivered to the upper layers, but still waited for. The initial value is 0, except for sidelink broadcast and groupcast, for SRBs configured with state variables continuation, and for MRBs. For NR sidelink communication for broadcast and groupcast or sidelink SRB4 for broadcast and groupcast based sidelink discovery, the initial value of the SN part of RX_DELIV is $(x - 0.5 \times 2^{[sl\text{-}PDCP\text{-}SN\text{-}}$

$^{Size-1]}$) modulo ($2^{[sl\text{-}PDCP\text{-}SN\text{-}Size]}$), where x is the SN of the first received PDCP Data PDU. For broadcast MRBs, the initial value of the SN part of RX_DELIV is set to ($x - 0.5 \times 2^{[PDCP\text{-}SN\text{-}SizeDL-1]}$) modulo ($2^{[PDCP\text{-}SN\text{-}SizeDL]}$), where x is the SN of the first received PDCP Data PDU. For multicast MRBs, the initial value of RX_DELIV is set, if provided, by *initialRXDELIV* in TS 38.331 [3].

14.2.3.1.3 Test description

14.2.3.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell and NR Cell 2 is a suitable neighbour intra-frequency cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR Cell 1 and NR Cell 2.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.3.1.3.2 Test procedure sequence

Table 14.2.3.1.3.2-1 for FR1 and table 14.2.3.1.3.2-2 for FR2 illustrate the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently in the Main behaviour. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 14.2.3.1.3.2-1: Cell configuration changes over time for FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remarks

    then {  UE delivers PDCP Data PDU to upper layers }
            }
```

14.2.3.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in TS 38.300, clause 16.10.5.3.2; TS 38.323, clause 5.1.2, 5.2.2.1, 5.4.1,7.1; TS 38.331, clause 5.3.5.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38. 300, clause 16.10.5.3.2]

The source gNB may propose data forwarding for some MRBs to minimize data loss and may exchange the corresponding MRB PDCP Sequence Number with the target gNB during the handover preparation:

- The lossless handover for multicast service is supported for the handover between MBS supporting cells if the UE is configured with PTP RLC AM entity in target cell MRB of a UE, regardless of whether the UE is configured with PTP RLC AM entity in the source cell or not.
- In order to support lossless handover for multicast service, the network has to ensure DL PDCP COUNT value synchronization and continuity between the source cell and the target cell. Furthermore, data forwarding from the source gNB to the target gNB and/or PDCP status report provided by a UE for an MRB for multicast session can be used during lossless handover.

[TS 38. 323, clause 5.1.2]

When upper layers request a PDCP entity re-establishment, the receiving PDCP entity shall:

…

- for SRBs and UM DRBs, set RX_NEXT and RX_DELIV to the initial value;
- for UM MRBs and AM MRBs, set RX_NEXT and RX_DELIV to the initial value if *initialRX-DELIV* is configured in TS 38.331 [3];

…

[TS 38. 323, clause 5.2.2.1]

After determining the COUNT value of the received PDCP Data PDU = RCVD_COUNT, the receiving PDCP entity shall:

…

- if RCVD_COUNT < RX_DELIV; or
- if the PDCP Data PDU with COUNT = RCVD_COUNT has been received before:
  - discard the PDCP Data PDU;

If the received PDCP Data PDU with COUNT value = RCVD_COUNT is not discarded above, the receiving PDCP entity shall:

- store the resulting PDCP SDU in the reception buffer;
- if RCVD_COUNT >= RX_NEXT:
  - update RX_NEXT to RCVD_COUNT + 1.

…

- if RCVD_COUNT = RX_DELIV:
  - deliver to upper layers in ascending order of the associated COUNT value after performing header decompression, if not decompressed before;
    - all stored PDCP SDU(s) with consecutively associated COUNT value(s) starting from COUNT = RX_DELIV;
  - update RX_DELIV to the COUNT value of the first PDCP SDU which has not been delivered to upper layers, with COUNT value > RX_DELIV;

…

[TS 38. 323, clause 5.4.1]

For AM MRBs configured by upper layers to send a PDCP status report in the uplink (*statusReportRequired* in TS 38.331 [3]), the receiving PDCP entity shall trigger a PDCP status report when:

- upper layer requests a PDCP entity re-establishment;
- upper layer requests a PDCP data recovery.

If a PDCP status report is triggered, the receiving PDCP entity shall:

- compile a PDCP status report as indicated below by:
  - setting the FMC field to RX_DELIV;
  - if RX_DELIV < RX_NEXT:
    - allocating a Bitmap field of length in bits equal to the number of COUNTs from and not including the first missing PDCP SDU up to and including the last out-of-sequence PDCP SDUs, rounded up to the next multiple of 8, or up to and including a PDCP SDU for which the resulting PDCP Control PDU size is equal to 9000 bytes, whichever comes first;
    - setting in the bitmap field as '0' for all PDCP SDUs that have not been received, and optionally PDCP SDUs for which decompression have failed;

- setting in the bitmap field as '1' for all PDCP SDUs that have been received;

- submit the PDCP status report to lower layers as the first PDCP PDU for transmission via the transmitting PDCP entity as specified in clause 5.2.1 for Uu interface and in clause 5.2.3 for PC5 interface.

[TS 38.323, clause 7.1]

The receiving PDCP entity shall maintain the following state variables:

a) RX_NEXT

This state variable indicates the COUNT value of the next PDCP SDU expected to be received. The initial value is 0, except for sidelink broadcast and groupcast, for SRBs configured with state variables continuation, and for broadcast MRBs.

…

b) RX_DELIV

This state variable indicates the COUNT value of the first PDCP SDU not delivered to the upper layers, but still waited for. The initial value is 0, except for sidelink broadcast and groupcast, for SRBs configured with state variables continuation, and for MRBs. For NR sidelink communication for broadcast and groupcast or sidelink SRB4 for broadcast and groupcast based sidelink discovery, the initial value of the SN part of RX_DELIV is $(x - 0.5 \times 2^{[sl\text{-}PDCP\text{-}SN\text{-}Size-1]})$ modulo $(2^{[sl\text{-}PDCP\text{-}SN\text{-}Size]})$, where x is the SN of the first received PDCP Data PDU. For broadcast MRBs, the initial value of the SN part of RX_DELIV is set to $(x - 0.5 \times 2^{[PDCP\text{-}SN\text{-}SizeDL-1]})$ modulo $(2^{[PDCP\text{-}SN\text{-}SizeDL]})$, where x is the SN of the first received PDCP Data PDU. For multicast MRBs, the initial value of RX_DELIV is set, if provided, by *initialRXDELIV* in TS 38.331 [3].

[TS 38.331, clause 5.3.5.1]

RRC reconfiguration to perform reconfiguration with sync includes, but is not limited to, the following cases:

- reconfiguration with sync and security key refresh, involving RA to the PCell/PSCell, MAC reset, refresh of security and re-establishment of RLC and PDCP triggered by explicit L2 indicators;

- reconfiguration with sync but without security key refresh, involving RA to the PCell/PSCell, MAC reset and RLC re-establishment and PDCP data recovery (for AM DRB or AM MRB) triggered by explicit L2 indicators.

…

14.2.3.3.3 Test description

14.2.3.3.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell and NR Cell 2 is a suitable neighbour intra-frequency cell.

- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR Cell 1 and NR Cell 2.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.3.3.3.2 Test procedure sequence

Table 14.2.3.3.3.2-1 for FR1 and table 14.2.3.3.3.2-2 for FR2 illustrate the downlink power levels to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2" are to be applied subsequently in the Main behaviour. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 14.2.3.3.3.2-1: Cell configuration changes over time for FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remarks
T0	SS/PBCH SSS EPRE	dBm/SCS	-88	"Off"	Power level "Off" is defined in TS 38.508-1 [4] Table 6.2.2.1-3

UE has released, not including ue-Identity }
    then { UE does not establish any RRC connection }
            }
```

14.2.4.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.5.2; TS 38.331, clause 5.3.2.3; TS 24.501, clause 5.6.2.2.1, 5.6.1.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.5.2]

A UE can receive data of MBS multicast session only in RRC_CONNECTED state. If the UE which joined a multicast session is in RRC_CONNECTED state and when the multicast session is activated, the gNB sends *RRCReconfiguration* message with relevant MBS configuration for the multicast session to the UE.

When there is (temporarily) no data to be sent to the UEs for a multicast session, the gNB may move the UE to RRC IDLE/INACTIVE state. gNBs supporting MBS use a group notification mechanism to notify the UEs in RRC IDLE/INACTIVE state when a multicast session has been activated by the CN or the gNB has multicast session data to deliver. Upon reception of the group notification, the UEs reconnect to the network. The group notification is addressed with P-RNTI on PDCCH, and the paging channels are monitored by the UE as described in clause 9.2.5. Paging

message for group notification contains MBS session ID which is utilized to page all UEs in RRC IDLE and RRC INACTIVE states that joined the associated MBS multicast session, i.e., UEs are not paged individually. The UE stops monitoring for group notifications related to a specific multicast session once the UE leaves this multicast session.

[TS 38.331, clause 5.3.2.3]

1> for each *TMGI* included in *pagingGroupList*, if any, included in the *Paging* message:

2> if the UE has joined an MBS session indicated by the *TMGI* included in the *pagingGroupList*:

3> forward the *TMGI* to the upper layers;

[TS 24.501, clause 5.6.2.2.1]

If TMGI is used as paging identity and the TMGI matches with MBS multicast session which the has UE joined, the UE shall respond to the paging. Otherwise, the UE shall not respond to the paging.

[TS 24.501, clause 5.6.1.1]

…

The UE shall invoke the service request procedure when:

a) the UE, in 5GMM-IDLE mode over 3GPP access, receives a paging request from the network;

14.2.4.1.1.3 Test description

14.2.4.1.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.4.1.1.3.2 Test procedure sequence

14.2.4.1.2 MBS Multicast / RRC / Paging for group notification / RRC_INACTIVE

14.2.4.1.2.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_INACTIVE state and UE has joined one MBS multicast session }
ensure that {
  when { UE receives a Paging message including TMGIs unmatched with MBS multicast session which the
UE has joined, not including ue-Identity }
    then { UE does not resume RRC connection }
            }
```

(2)

```
with { UE in NR RRC_INACTIVE state and UE has joined one MBS multicast session }
ensure that {
  when { UE receives a Paging message including a TMGI matched with MBS multicast session which the
UE has joined, not including ue-Identity }
    then { UE successfully resumes the RRC connection with resumecause set to mt-Access }
            }
```

(3)

```
with { UE in NR RRC_INACTIVE state and UE has released MBS multicast session }
ensure that {
  when { UE receives a Paging message including a TMGI matched with MBS multicast session which the
UE has released, not including ue-Identity }
    then { UE does not resume RRC connection }
            }
```

(4)

```
with { UE in NR RRC_INACTIVE state and UE has joined one MBS multicast session }
ensure that {
  when { UE receives a Paging message including a TMGI matched with MBS multicast session which the
UE has joined, and including a matched identity fullI-RNTI }
    then { UE successfully resumes the RRC connection with resumecause set to mt-Access}
            }
```

(5)

```
with { UE in NR RRC_INACTIVE state and UE has joined one MBS multicast session }
ensure that {
  when {  UE receives a Paging message including a TMGI matched with MBS multicast session which the
UE has joined, and including a matched identity ng-5G-S-TMSI }
    then { UE releases RRC connection with release cause ‘other’ and goes to NR RRC_IDLE state }
            }
```

(6)

```
with { UE in NR RRC_INACTIVE state and UE has joined one MBS multicast session }
ensure that {
  when { UE receives a Paging message including a TMGI matched with MBS multicast session which the
UE has joined, and including a unmatched identity ng-5G-S-TMSI }
    then { UE successfully resumes the RRC connection with resumecause set to mt-Access}
            }
```

14.2.4.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.5.2; TS 38.331, clause 5.3.2.3; TS 24.501, clause 5.6.2.2.1 and 5.3.1.4. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.5.2]

When there is (temporarily) no data to be sent to the UEs for a multicast session, the gNB may move the UE to RRC IDLE/INACTIVE state. gNBs supporting MBS use a group notification mechanism to notify the UEs in RRC IDLE/INACTIVE state when a multicast session has been activated by the CN or the gNB has multicast session data to deliver. Upon reception of the group notification, the UEs reconnect to the network. The group notification is addressed with P-RNTI on PDCCH, and the paging channels are monitored by the UE as described in clause 9.2.5. Paging message for group notification contains MBS session ID which is utilized to page all UEs in RRC IDLE and RRC INACTIVE states that joined the associated MBS multicast session, i.e., UEs are not paged individually. The UE stops monitoring for group notifications related to a specific multicast session once the UE leaves this multicast session.

[TS 38.331, clause 5.3.2.3]

1> if in RRC_INACTIVE, for each of the *PagingRecord*, if any, included in the *Paging* message, or

…

2> if the *ue-Identity* included in the *PagingRecord* matches the UE's stored *fullI-RNTI*:

…

3> else:

4> initiate the RRC connection resumption procedure according to 5.3.13 with *resumeCause* set to *mt-Access*;

…

2> else if the *ue-Identity* included in the *PagingRecord* matches the UE identity allocated by upper layers:

3> if upper layers indicate the support of paging cause:

4> forward the *ue-Identity*, *accessType* (if present) and paging cause (if determined) to the upper layers;

3> else:

4> forward the *ue-Identity* and *accessType* (if present) to the upper layers;

3> perform the actions upon going to RRC_IDLE as specified in 5.3.11 with release cause 'other';

1> for each *TMGI* included in *pagingGroupList*, if any, included in the *Paging* message:

2> if the UE has joined an MBS session indicated by the *TMGI* included in the *pagingGroupList*:

3> forward the *TMGI* to the upper layers;

1> if in RRC_INACTIVE and the UE has joined one or more MBS session(s) indicated by the *TMGI* included in the *pagingGroupList*; and

1> if none of the *ue-Identity* included in any of the *PagingRecord*, if included in the *Paging* message, matches the UE identity allocated by upper layers:

2> initiate the RRC connection resumption procedure according to 5.3.13 with *resumeCause* set as below:

…

3> else:

4> *resumeCause* is set to *mt-Access*.

[TS 24.501, clause 5.6.2.2.1]

If TMGI is used as paging identity and the TMGI matches with MBS multicast session which the has UE joined, the UE shall respond to the paging. Otherwise, the UE shall not respond to the paging.

[TS 24.501, clause 5.3.1.4]

…

Upon receiving AMF paging indication from the lower layers, the UE shall transition from 5GMM-CONNECTED mode with RRC inactive indication to 5GMM-IDLE mode over 3GPP access and handle the AMF paging same as the paging request received in the 5GMM-IDLE mode over 3GPP access as specified in clause 5.6.1.

14.2.4.1.2.3 Test description

14.2.4.1.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1.
- The SS configures the NR Cell 1 as the "Serving cell".
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.4.1.2.3.2 Test procedure sequence

14.2.4.2 MBS Multicast / RRC / MRB Reconfiguration

14.2.4.2.1 MBS Multicast / RRC / MRB Reconfiguration / Establishment / Modification / Release / Success

14.2.4.2.1.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_IDLE state and UE has joined one MBS multicast session }
ensure that {
  when { UE receives a Paging with matched TMGI and moves to RRC_CONNECTED state and receives
RRCReconfiguration message including a MRB-ToAddModList to add an UM MRB with one UM RLC for PTM
transmission as MRB-Identity 1 and an AM MRB with one AM RLC for PTP transmission as MRB-Identity 2
}
    then { UE successfully establishes the MRBs }
            }
```

(2)

```
with { UE in NR RRC_CONNECTED state and MRB-Identity 1 and MRB-Identity 2 have established }
ensure that {
  when { UE receives RRCReconfiguration message including a MRB-ToReleaseList to release a MRB-
Identity which is not part of current UE configuration }
    then { UE does not consider the message as erroneous and replies RRCReconfigurationComplete }
            }
```

(3)

```
with { UE in NR RRC_CONNECTED state and MRB-Identity 1 and MRB-Identity 2 have established }
ensure that {
  when { UE receives RRCReconfiguration message including a MRB-ToReleaseList to release MRB-
Identity 2 and including rlc-BearerToaddModList to modify MRB-Identity 1 by adding a RLC-AM for PTP
transmission }
    then { UE releases PDCP entity for MRB-Identity 2 and MRB-Identity 2 and changes MRB-Identity 1
to AM MRB with one UM RLC for PTM transmission and one AM RLC for PTP transmission and could
receives MBS data of MRB-Identity 1 with PTM transmission and PTP transmission }
            }
```

(4)

```
with { UE in NR RRC_CONNECTED state and MRB-Identity 1 have established }
ensure that {
  when { UE receives RRCReconfiguration message including a MRB-ToAddModList to update the MRB-
Identity 1 to the MRB-Identity 3 by setting the value of MRB-IdentityNew to 3 }
    then { UE updates the MRB-Identity to the value MRB-IdentityNew }
            }
```

(5)

```
with { UE in NR RRC_CONNECTED state and MRB(s) have established }
ensure that {
  when { UE receives RRCReconfiguration message including a MRB-ToReleaseList to release all the MRB
configured with same mbs-SessionId }
    then { UE releases PDCP entity and the MRB-Identity and indicate release of the user plane
resources for mbs-SessionId to upper layers }
            }
```

14.2.4.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331, clause 5.3.5.5.4, 5.3.5.6.6 and 5.3.5.6.7. Unless otherwise stated these are Rel-17 requirements.

[TS 38. 331, clause 5.3.5.5.4]

For each *RLC-BearerConfig* received in the *rlc-BearerToAddModList* IE the UE shall:

1> if the UE's current configuration contains an RLC bearer with the received *logicalChannelIdentity/LogicalChannelIdentityExt* within the same cell group:

2> if the RLC bearer is associated with an DAPS bearer, or

2> if any DAPS bearer is configured and the RLC bearer is associated with an SRB:

…

2> else:

3> if *reestablishRLC* is received:

4> re-establish the RLC entity as specified in TS 38.322 [4];

3> reconfigure the RLC entity or entities in accordance with the received *rlc-Config*;

3> reconfigure the logical channel in accordance with the received *mac-LogicalChannelConfig*;

3> if *servedMBS-RadioBearer* is received:

4> associate this logical channel with the PDCP entity identified by *servedMBS-RadioBearer*;

NOTE 1: For DRB and SRB, the network does not re-associate an already configured logical channel with another radio bearer. Hence *servedRadioBearer* is not present in this case. For MRB, the network does not re-associate an already configured logical channel with DRB or SRB or another MRB (i.e. MRB with another PDCP entity). Hence *multicastRLC-BearerConfig* is not present in this case.

…

1> else (a logical channel with the given *logicalChannelIdentity/LogicalChannelIdentityExt* is not configured within the same cell group, including the case when full configuration option is used):

2> if the *servedRadioBearer* associates the logical channel with an SRB and *rlc-Config* is not included:

3> establish an RLC entity in accordance with the default configuration defined in 9.2 for the corresponding SRB;

2> else:

3> establish an RLC entity in accordance with the received *rlc-Config*;

2> if the *servedRadioBearer* associates the logical channel with an SRB and if *mac-LogicalChannelConfig* is not included:

3> configure this MAC entity with a logical channel in accordance to the default configuration defined in 9.2 for the corresponding SRB;

2> else:

3> configure this MAC entity with a logical channel in accordance to the received *mac-LogicalChannelConfig*;

2> associate this logical channel with the PDCP entity identified by *servedRadioBearer* or *servedMBS-RadioBearer*.

[TS 38. 331, clause 5.3.5.6.6]

The UE shall:

1> for each *mrb-Identity* value included in the *mrb-ToReleaseList* that is part of the current UE configuration; or

1> for each *mrb-Identity* value that is to be released as the result of full configuration according to 5.3.5.11:

2> release the PDCP entity and the *mrb-Identity*;

2> if there is no other multicast MRB configured with the same *mbs-SessionId* as configured for the released multicast MRB:

3> indicate the release of the user plane resources for the *mbs-SessionId* to upper layers.

NOTE 1: The UE does not consider the message as erroneous if the *mrb-ToReleaseList* includes any *mrb-Identity* value that is not part of the current UE configuration.

NOTE 2: Whether or not the RLC and MAC entities associated with this PDCP entity are reset or released is determined by the *CellGroupConfig*.

[TS 38.331, clause 5.3.5.6.7]

The UE shall for each element in the order of entry in the list *mrb-ToAddModList*:

1> if *mrb-Identity* value included in the *mrb-ToAddModList* is part of the UE configuration:

2> if *mrb-Identity* value included in the *mrb-ToAddModList* for which *mrb-IdentityNew* is included (i.e., multicast MRB ID change):

3> update the *mrb-Identity* to the value *mrb-IdentityNew*;

…

2> if the *pdcp-Config* is included:

3> reconfigure the PDCP entity in accordance with the received *pdcp-Config*;

1> else if *mrb-Identity* value included in the *mrb-ToAddModList* is not part of the UE configuration (i.e., multicast MRB establishment including the case when full configuration option is used):

2> establish a PDCP entity and configure it in accordance with the received *pdcp-Config*;

2> associate the established multicast MRB with the corresponding *mbs-SessionId*;

2> if an SDAP entity with the received *mbs-SessionId* does not exist:

3> establish an SDAP entity as specified in TS 37.324 [24] clause 5.1.1;

3> if an SDAP entity with the received *mbs-SessionId* did not exist prior to receiving this reconfiguration:

4> indicate the establishment of the user plane resources for the *mbs-SessionId* to upper layers.

NOTE 1: When setting the *reestablishPDCP* flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g., by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

NOTE 2: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

NOTE 3: When updating the mrb-Identity, the network ensures new MRBs are listed at the end of the mrb-ToAddModList if they have the same MRB ID as in the existing UE configuration.

14.2.4.2.1.3 Test description

14.2.4.2.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR Cell 1.

UE:

- None.

Preamble:

- The UE is in state 1N-A on NR Cell 1(serving cell) according to TS 38.508-1 [4] Table 4.4A.2-3 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.
- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

14.2.4.2.1.3.2 Test procedure sequence

14.2.4.3 MBS Multicast/ RRC/ Handover

14.2.4.3.1 MBS Multicast/ RRC/ Handover between multicast supporting cell / Success

14.2.4.3.1.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_CONNECTED state and UE has joined one MBS multicast session and receives MBS
data in MRB }
ensure that {
  when { UE receives an RRCReconfiguration message including a reconfigurationWithSync for handover
to a multicast supporting cell and not updating the mrb-Identity}
```

```
    then { UE performs handover to the target cell and transmits an RRCReconfigurationComplete
message and receives MBS data in MRB }
            }
```

(2)

```
with { UE in NR RRC_CONNECTED state and UE has joined one MBS multicast session and receives MBS
data in MRB }
ensure that {
  when { UE receives an RRCReconfiguration message including a reconfigurationWithSync for handover
to a multicast supporting cell and updating the mrb-Identity to the value mrb-IdentityNew }
    then { UE performs handover to the target cell and transmits an RRCReconfigurationComplete
message and receives MBS data in the updated MRB }
            }
```

14.2.4.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.5.3.2; TS 38.331, clause 5.3.5. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.5.3.2]

Mobility procedures for multicast reception allow the UE to continue receiving multicast service(s) via PTM or PTP in a new cell after handover.

During handover preparation phase, the source gNB transfers to the target gNB about the MBS multicast sessions the UE has joined in the UE context information. To support provision of local multicast service with location dependent content as specified in TS 23.247 [45], for each active multicast session, service area information per Area Session ID may be provided to the target gNB.

…

During handover execution, the MBS configuration decided at target gNB is sent to the UE via the source gNB within an RRC container as specified in TS 38.331 [12]. The PDCP entities for multicast MRBs in the UE can either be re-established or remain as it is. When the UE connects to the target gNB, the target gNB sends an indication that it is an MBS-supporting node to the SMF in the Path Switch Request message (Xn handover) or Handover Request Acknowledge message (NG handover).

[TS 23.247, clause 7.2.3.2]

This clause describes an Xn based handover with MBS traffic delivered to the UE at the source NG-RAN node supporting MBS.

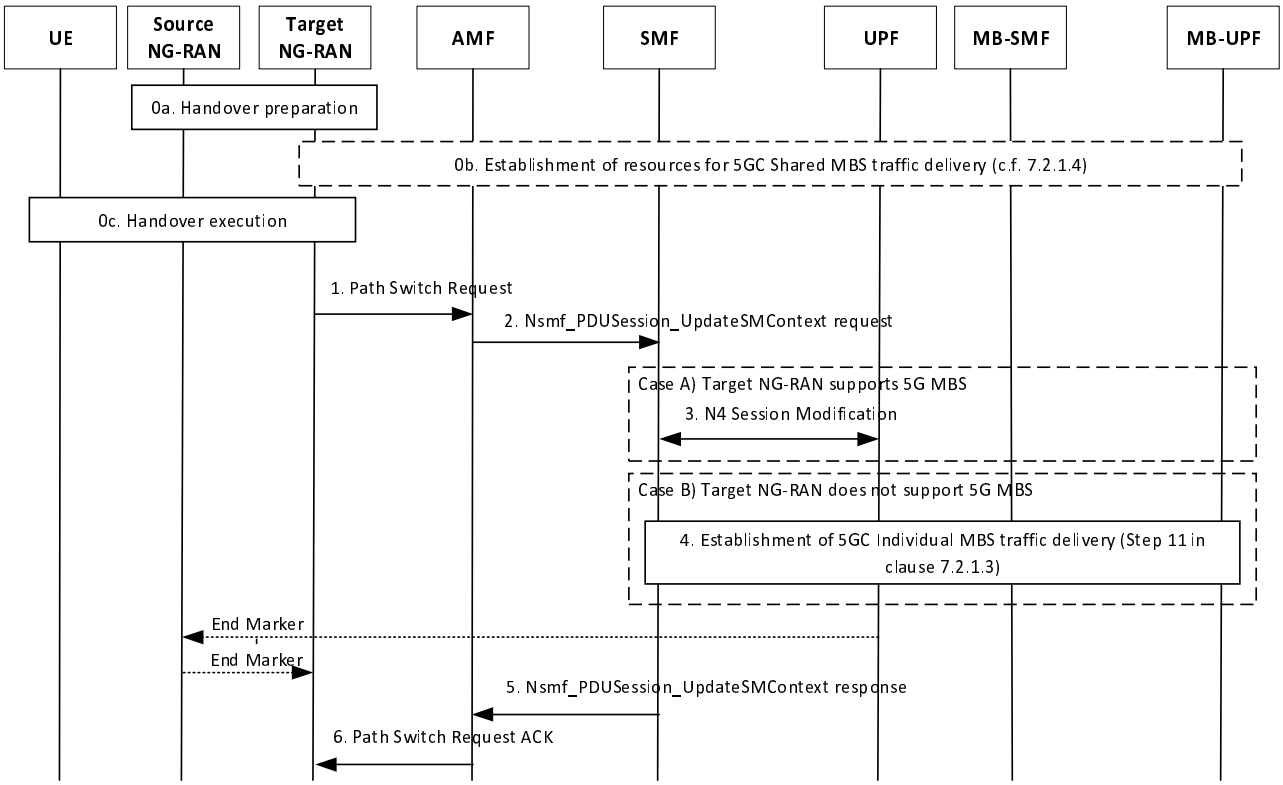

Figure 7.2.3.2-1: Xn based handover with MBS Session

The following additions apply compared to clause 4.9.1.2 of TS 23.502 [6]:

Before Handover:

The source NG RAN has been provided with MBS Session Resource information (including the MBS Session ID and multicast QoS flow information) and the UE Context information contains a mapping information within the PDU Session Resource associated with the MBS Session Resource, e.g. including mapped unicast QoS Flows associated with the multicast QoS flow(s) of the MBS Session Resource.

Handover Preparation Phase:

At Xn handover, the target NG-RAN is provided with MBS session information by the source NG-RAN which causes:

…

- an MBS supporting target NG-RAN node to allocate to the UE shared NG-RAN resources according to the MBS session information. If the 5GC Shared MBS traffic delivery for the indicated multicast MBS Session has not been established in target NG-RAN, target NG-RAN triggers setup of the resources for the 5GC Shared MBS traffic delivery, see clause 7.2.1.4 for details.

1. Target NG-RAN to AMF: the target NG-RAN sends N2 Path Switch Request to AMF.

   The target NG-RAN node, if MBS-capable, indicates it supports of MBS to SMF in N2 SM information. Per the received N2 SM information, the SMF knows whether the target NG-RAN node supports MBS and determines the delivery method, i.e. whether the 5GC Shared MBS traffic delivery or 5GC Individual MBS traffic delivery is used for MBS data transferring.

The SMF differentiates two cases:

Case A) The target NG-RAN supports MBS. Step 3 applies and step 4 is skipped.

3. SMF to UPF: The SMF invokes N4 Session Modification procedure with the UPF (PSA) only for unicast PDU Session.

…

The details of how to perform data forwarding refers to clause 7.2.3.5.

5. SMF to AMF: The SMF responds to AMF through Nsmf_PDUSession_UpdateSMContext response.
6. AMF to target NG-RAN: The AMF sends the path switch Ack to target NG-RAN.

[TS 38.331, clause 5.3.5.6.7]

The UE shall for each element in the order of entry in the list *mrb-ToAddModList*:

1> if *mrb-Identity* value included in the *mrb-ToAddModList* is part of the UE configuration:

2> if *mrb-Identity* value included in the *mrb-ToAddModList* for which *mrb-IdentityNew* is included (i.e., multicast MRB ID change):

3> update the *mrb-Identity* to the value *mrb-IdentityNew*;

14.2.4.3.1.3 Test description

14.2.4.3.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell and NR Cell 2 is the intra-frequency neighbour cell of NR Cell 1.
- NR Cell 1 and NR Cell 2 are Multicast-supporting cells.
- System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.4.3.1.3.2 Test procedure sequence

Tables 14.2.4.3.1.3.2-1 and 14.2.4.3.1.3.2-2 illustrate the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1", are applied at the point indicated in the Main behaviour description in Table 14.2.4.3.1.3.2-3.

Table 14.2.4.3.1.3.2-1: Power levels in FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-88	-91	
T1	SS/PBCH SSS EPRE	dBm/SCS	-91	-88	

Table 14.2.4.3.1.3.2-2: Power levels in FR2

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/ SCS	-82	-91	
T1	SS/PBCH SSS EPRE	dBm/ SCS	-91	-82

14.2.4.3.2 MBS Multicast / RRC / Handover between multicast supporting cell / Failure/ Re-establishment successful

14.2.4.3.2.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_CONNECTED state and UE has joined one MBS multicast session and having received
an RRCReconfiguration message including a reconfigurationWithSync for handover to the target cell }
ensure that {
  when { UE detects handover failure and the initial cell is selectable }
    then { UE performs an RRCReestablishment procedure on the source cell }
            }
```

(2)

```
with { UE detects handover failure and having performed an RRCReestablishment procedure }
ensure that {
  when { UE receives first RRCReconfiguration message }
    then { UE transmits an RRCReconfigurationComplete message and resumes multicast MRB }
            }
```

14.2.4.3.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331, clauses 5.3.5.3, 5.3.5.8.3 and 5.3.7.1. Unless otherwise stated these are Rel-17 requirements.

[TS 38.331, clause 5.3.5.3]

1> else (*RRCReconfiguration* was received via SRB1):

…

2> if this is the first *RRCReconfiguration* message after successful completion of the RRC re-establishment procedure:

3> resume SRB2, SRB4, DRBs, multicast MRB, and BH RLC channels for IAB-MT, and Uu Relay RLC channels for L2 U2N Relay UE, that are suspended;

[TS 38.331, clause 5.3.5.8.3]

The UE shall:

1> if T304 of the MCG expires; or

1> if T420 expires; or,

1> if the target L2 U2N Relay UE (i.e., the UE indicated by *targetRelayUE-Identity* in the received *RRCReconfiguration* message containing *reconfigurationWithSync* indicating path switch as specified in 5.3.5.5.2) changes its serving PCell before path switch:

2> release dedicated preambles provided in *rach-ConfigDedicated* if configured;

2> release dedicated msgA PUSCH resources provided in *rach-ConfigDedicated* if configured;

2> if any DAPS bearer is configured, and radio link failure is not detected in the source PCell, according to clause 5.3.10.3:

…

2> else:

3> revert back to the UE configuration used in the source PCell;

3> if the associated T304 was not initiated upon cell selection performed while timer T311 was running, as defined in clause 5.3.7.3:

4> store the handover failure information in *VarRLF-Report* as described in the clause 5.3.10.5;

3> initiate the connection re-establishment procedure as specified in clause 5.3.7.

NOTE 1: In the context above, "the UE configuration" includes state variables and parameters of each radio bearer.

[TS 38.331, clause 5.3.7.1]

Upon initiation of the procedure, the UE shall:

1> stop timer T310, if running;

1> stop timer T312, if running;

1> stop timer T304, if running;

1> start timer T311;

1> stop timer T316, if running;

1> if UE is not configured with *attemptCondReconfig*:

2> reset MAC;

2> release *spCellConfig*, if configured;

2> suspend all RBs, and BH RLC channels for IAB-MT, and Uu Relay RLC channels for L2 U2N Relay UE, except SRB0 and broadcast MRBs;

14.2.4.3.2.3 Test description

14.2.4.3.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell and NR Cell 2 is the intra-frequency neighbour cell of NR Cell 1.
- NR Cell 1 and NR Cell 2 are Multicast-supporting cells.
- System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.4.3.2.3.2 Test procedure sequence

Tables 14.2.4.3.2.3.2-1 and 14.2.4.3.2.3.2-2 illustrate the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1", are applied at the point indicated in the Main behaviour description in Table 14.2.4.3.2.3.2-3.

Table 14.2.4.3.2.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-88	-94	
T1	SS/PBCH SSS EPRE	dBm/SCS	-88	-88	

Table 14.2.4.3.2.3.2-2: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-82	-91	
T1	SS/PBCH SSS EPRE	dBm/SCS	-82	-82

14.2.4.3.3 MBS Multicast/ RRC/ Handover between Multicast-supporting cell and Multicast non-supporting cell / Success

14.2.4.3.3.1 Test Purpose (TP)

(1)

```
with { UE in NR RRC_CONNECTED state and UE has joined one MBS multicast session and receives MBS
data in MRB }
ensure that {
  when { UE receives an RRCReconfiguration message to switch the MBS data transmission from the MRB
to DRB }
    then { UE transmits an RRCReconfigurationComplete }
          }
```

(2)

```
with { UE in NR RRC_CONNECTED state and UE has switched to receive MBS data in DRB }
ensure that {
  when { UE receives an RRCReconfiguration message including a reconfigurationWithSync for handover
to a multicast non-supporting cell }
    then { UE performs handover to the target cell and transmits an RRCReconfigurationComplete
message }
            }
```

(3)

```
with { UE in NR RRC_CONNECTED state and UE has joined one MBS multicast session and configured to
receive MBS data in DRB }
ensure that {
  when { UE receives an RRCReconfiguration message including a reconfigurationWithSync for handover
to a multicast supporting cell }
    then { UE performs handover to the target cell and transmits an RRCReconfigurationComplete
message and successfully established MRB and receives MBS data in MRB }
            }
```

(4)

```
with { UE in NR RRC_CONNECTED state and UE has joined one MBS multicast session and receives MBS
data in MRB }
ensure that {
  when { UE receives an RRCReconfiguration message including a reconfigurationWithSync and full
configuration for handover to a multicast non-supporting cell }
    then { UE performs handover to the target cell and transmits an RRCReconfigurationComplete
message }
            }
```

14.2.4.3.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.300, clause 16.10.5.3.3; TS 38.331, clause 5.3.5.11; TS 23.247, clauses 7.2.3.2, 7.2.3.4 and 7.2.3.5. Unless otherwise stated these are Rel-17 requirements.

[TS 38.300, clause 16.10.5.3.3]

During an MBS multicast session, at mobility from an MBS-supporting cell to an MBS non-supporting cell, the target gNB sets up PDU Session Resources mapped to the MBS multicast Session. The 5GC infers from the absence of an "MBS-support" indication from gNB in the Path Switch Request message (Xn handover) or Handover Request Acknowledge message (NG handover) that MBS multicast data packets delivery has to be switched to 5GC individual MBS traffic delivery as specified in TS 23.247 [45]. If data forwarding is applied, the source gNB infers from the handover preparation response message that the target gNB does not support MBS and changes the QFI(s) in the forwarded packets to the associated PDU Session QFI(s) if respective mapping information is available. The source gNB may be aware that the target gNB is non-MBS supporting already before Handover Preparation.

For mobility from MBS non-supporting cell to MBS-supporting cell, the existing Xn/NG handover procedures apply. The 5GC infers from the presence of the "MBS-support" indicator from gNB in the Path Switch Request message (Xn handover) or in the Handover Request Acknowledge message (NG handover) that MBS multicast data packets delivery can be switched from 5GC Individual MBS traffic delivery to 5GC Shared MBS traffic delivery. After Xn handover, the SMF triggers switching MBS multicast data packets delivery from 5GC Individual to 5GC Shared MBS traffic delivery by providing MBS Session IDs joined by the UE to the target gNB by means of the PDU Session Resource Modification procedure. And for NG handover, the SMF provides the MBS Session IDs joined by the UE to the target gNB by means of NGAP Handover Request. Minimization of data loss and duplication avoidance may be applied by means of identical MBS QFI SNs received over the shared NG-U tunnel against those received over unicast NG-U tunnels or forwarding tunnels.

Mobility from a multicast-supporting cell to a multicast non-supporting cell can be achieved by switching the MRB to a DRB in the source gNB before a handover.

NOTE: A UE may be handed over to a target gNB not supporting MBS without prior reconfiguration from MRB to the DRB in the source gNB. In this case, the AS configuration may not be comprehended by the target gNB causing full configuration.

[TS 38.331, clause 5.3.5.11]

The UE shall:

1> release/ clear all current dedicated radio configurations except for the following:

- the MCG C-RNTI;
- the AS security configurations associated with the master key;
- the SRB1/SRB2 configurations and DRB/multicast MRB configurations as configured by *radioBearerConfig* or *radioBearerConfig2*.

…

NOTE 1b: To establish the RLC bearer of SRB(s) after release due to *fullConfig*, the network can include the *srb-Identity* within *srb-ToAddModList* (i.e. the UE applies RLC default configuration) and/or provide *rlc-BearerToAddModList* of concerned SRB(s) explicitly.

- the logged measurement configuration;

1> if the *spCellConfig* in the *masterCellGroup* includes the *reconfigurationWithSync*:

2> release/ clear all current common radio configurations;

2> if *sl-PathSwitchConfig* was included in *reconfigurationWithSync*:

…

2> else:

3> use the default values specified in 9.2.3 for timers T310, T311 and constants N310, N311;

1> else (full configuration after re-establishment or during RRC resume):

…

1> if the UE is acting as L2 U2N Remote UE at the target side during reconfiguration with sync, or after re-establishment, or during RRC resume:

…

1> else:

2> apply the default L1 parameter values as specified in corresponding physical layer specifications except for the following:

- parameters for which values are provided in *SIB1*;

2> apply the default MAC Cell Group configuration as specified in 9.2.2;

2> for each *srb-Identity* value included in the *srb-ToAddModList* (SRB reconfiguration):

3> establish an RLC entity for the corresponding SRB;

3> apply the default SRB configuration defined in 9.2.1 for the corresponding SRB;

NOTE 2: This is to get the SRBs (SRB1 and SRB2 for reconfiguration with sync and SRB2 for resume and reconfiguration after re-establishment) to a known state from which the reconfiguration message can do further configuration.

1> for each *pdu-Session* that is part of the current UE configuration:

2> release the SDAP entity (clause 5.1.2 in TS 37.324 [24]);

2> release each DRB associated to the *pdu-Session* as specified in 5.3.5.6.4;

NOTE 3: This will retain the *pdu-Session* but remove the DRBs including *drb-identity* of these bearers from the current UE configuration. Setup of the DRBs within the AS is described in clause 5.3.5.6.5 using the new configuration. The *pdu-Session* acts as the anchor for associating the released and re-setup DRB. In the AS the DRB re-setup is equivalent with a new DRB setup (including new PDCP and logical channel configurations).

1> for each *mbs-SessionId* that is part of the current UE configuration and associated to a multicast MRB:

2> release the SDAP entity (clause 5.1.2 in TS 37.324 [24]);

2> release each multicast MRB associated to the *mbs-SessionId* as specified in 5.3.5.6.6;

NOTE 4: This will retain the *mbs-SessionId* but remove the multicast MRBs including *mrb-identity* of these bearers from the current UE configuration. Setup of the multicast MRBs within the AS is described in clause 5.3.5.6.7 using the new configuration. The *mbs-SessionId* acts as the anchor for associating the released and re-setup multicast MRB. In the AS the multicast MRB re-setup is equivalent with a new multicast MRB setup (including new PDCP and logical channel configurations).

1> for each *pdu-Session* that is part of the current UE configuration but not added with same *pdu-Session* in the *drb-ToAddModList*:

2> if the procedure was triggered due to reconfiguration with sync:

3> indicate the release of the user plane resources for the *pdu-Session* to upper layers after successful reconfiguration with sync;

2> else:

3> indicate the release of the user plane resources for the *pdu-Session* to upper layers immediately;

1> for each *mbs-SessionId* that is part of the current UE configuration but not added with the same *mbs-SessionId* in the *mrb-ToAddModList*:

2> if the procedure was triggered due to reconfiguration with sync:

3> indicate the release of the user plane resources for the *mbs-SessionId* to upper layers after successful reconfiguration with sync;

2> else:

3> indicate the release of the user plane resources for the *mbs-SessionId* to upper layers immediately.

[TS 23.247, clause 7.2.3.2]

This clause describes an Xn based handover with MBS traffic delivered to the UE at the source NG-RAN node supporting MBS.

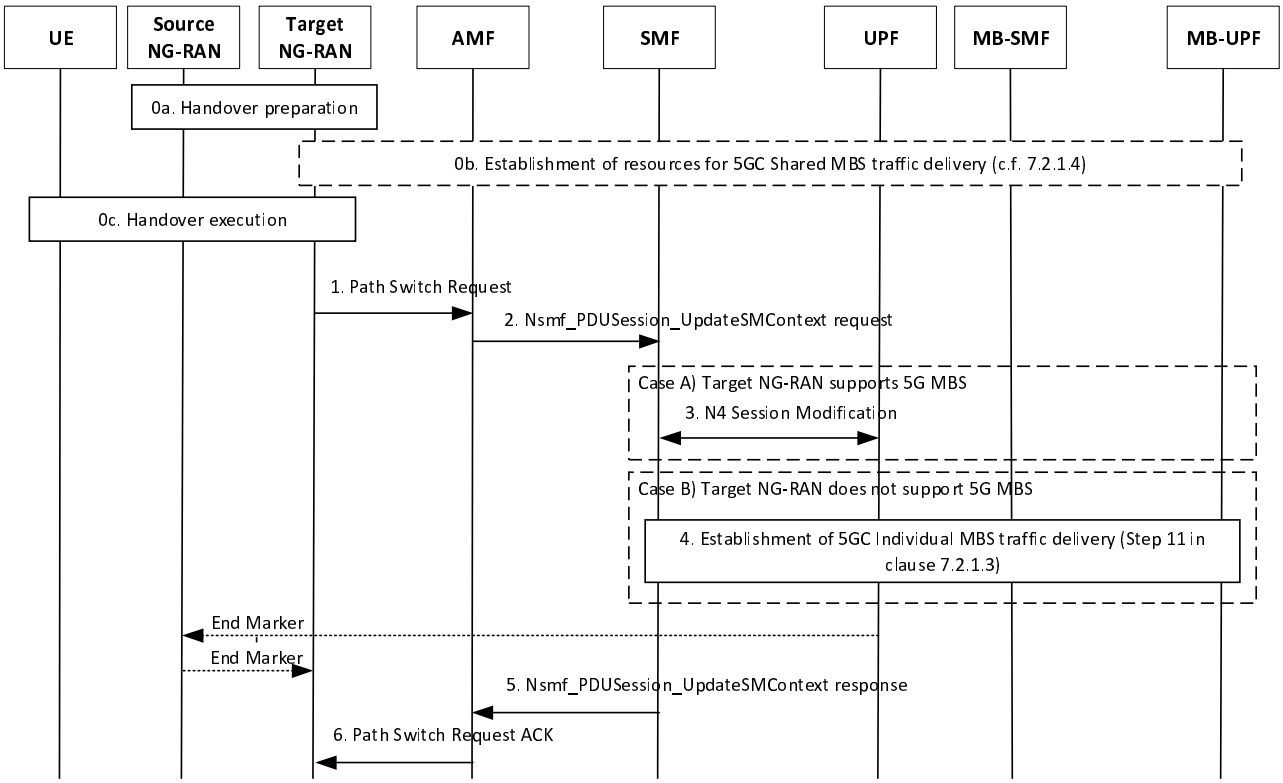

Figure 7.2.3.2-1: Xn based handover with MBS Session

The following additions apply compared to clause 4.9.1.2 of TS 23.502 [6]:

Before Handover:

The source NG RAN has been provided with MBS Session Resource information (including the MBS Session ID and multicast QoS flow information) and the UE Context information contains a mapping information within the PDU Session Resource associated with the MBS Session Resource, e.g. including mapped unicast QoS Flows associated with the multicast QoS flow(s) of the MBS Session Resource.

Handover Preparation Phase:

At Xn handover, the target NG-RAN is provided with MBS session information by the source NG-RAN which causes:

- an MBS non-supporting target NG-RAN node to prepare the unicast resources according to associated QoS flow(s) information.

…

1. Target NG-RAN to AMF: the target NG-RAN sends N2 Path Switch Request to AMF.

   The target NG-RAN node, if MBS-capable, indicates it supports of MBS to SMF in N2 SM information. Per the received N2 SM information, the SMF knows whether the target NG-RAN node supports MBS and determines the delivery method, i.e. whether the 5GC Shared MBS traffic delivery or 5GC Individual MBS traffic delivery is used for MBS data transferring.

The SMF differentiates two cases:

...

Case B) The target NG-RAN does not support MBS. Step 3 is skipped, step 4 applies.

4. This steps is same as described in step 11 of clause 7.2.1.3.

   The details of how to perform data forwarding refers to clause 7.2.3.5.

5. SMF to AMF: The SMF responds to AMF through Nsmf_PDUSession_UpdateSMContext response.

6. AMF to target NG-RAN: The AMF sends the path switch Ack to target NG-RAN.

[TS 23.247, clause 7.2.3.4]

When the UE has joined the multicast MBS session and the source NG-RAN node does not support MBS, the 5GC Individual MBS traffic delivery method is used for the multicast MBS session data delivery. When the Xn/N2 based handover procedure is triggered, the UE is handed over to the target NG-RAN node per existing Xn /N2 based handover procedure defined in TS 23.502 [6].

[TS 23.247, clause 7.2.3.5]

To minimize data loss of a multicast MBS session during the handover procedure the following functions apply:

…

- If source NG-RAN node supports MBS and target NG-RAN node does not support MBS, the multicast MBS session data is forwarded from source NG-RAN node to target NG-RAN node via data forwarding tunnels allocated by the target NG-RAN node associated with the mapped unicast QoS flows within the associated PDU session according to the data forwarding mechanism defined in TS 23.502 [6].

- If source NG-RAN node does not support MBS and target NG-RAN node supports MBS, for Xn/N2 handover, the multicast MBS session data is forwarded to the target NG-RAN node as the data forwarding mechanism defined in TS 23.502 [6]. Directly after the handover the target NG-RAN node thus still receives MBS session data via individual delivery. The UPF forwards multicast MBS session data within the associated PDU session which includes the sequence number received from the MB-UPF to the target NG-RAN node. Shared delivery of MBS data towards the target RAN node is being established as described in clause 7.2.1.4 and the target RAN node receives sequence numbers as part of the MBS data with sequence numbers via shared delivery.

14.2.4.3.3.3 Test description

14.2.4.3.3.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell and NR Cell 3 is the inter-frequency neighbour cell of NR Cell 1.

- NR Cell 1 is a Multicast-supporting cell and NR Cell 3 is a Multicast non-supporting cell.

- System information combination NR-4 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

UE:

- The UE is made interested in receiving MBS Multicast service with MBS service ID '000101'H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.4.3.3.3.2 Test procedure sequence

Tables 14.2.4.3.3.3.2-1 and 14.2.4.3.3.3.2-2 illustrate the downlink power levels to be applied for NR Cell 1 and NR Cell 3 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1", are applied at the point indicated in the Main behaviour description in Table 14.2.4.3.3.3.2-3.

Table 14.2.4.3.3.3.2-1: Power levels in FR1

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-88	-91	
T1	SS/PBCH SSS EPRE	dBm/SCS	-91	-88	

Table 14.2.4.3.3.3.2-2: Power levels in FR2

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBCH SSS EPRE	dBm/ SCS	-82	-91	
T1	SS/PBCH SSS EPRE	dBm/ SCS	-91	-82

14.2.5 MBS Multicast/ Session management

14.2.5.1 MBS Multicast/ Session management / Network-requested PDU session modification

14.2.5.1.1 MBS Multicast/ Session management / Network-requested PDU session modification / Remove UE from multicast MBS session14.2.5.1.1.1 Test Purpose (TP)

(1)

```
with { UE is in 5GMM-REGISTERED state and has joined two MBS multicast session associated with a PDU
session. One MBS session Id is TMGI-1, and another MBS session Id is TMGI-2.}
ensure that {
  when { UE receives PDU SESSION MODIFICATION COMMAND message including Received MBS container IE
with MBS decision setting to " Remove UE from multicast MBS session" and Rejection cause setting to
"MBS session is released" for TMGI-1. }
    then { UE sends PDU SESSION MODIFICATION COMPLETE and UE shall consider the MBS session for
TMGI-1 as released and MBS session for TMGI-2 is not released. }
           }
```

14.2.5.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.6.2.2.1, 6.3.2.2 and 6.3.2.3. Unless otherwise stated these are Rel-17 requirements.

[TS 24.501, clause 6.3.2.2]

If:

a) the SMF wants to remove joined UE from one or more multicast MBS sessions; or

b) the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure and the UE has included the Requested MBS container IE in the PDU SESSION MODIFICATION REQUEST message with the MBS operation set to "Leave multicast MBS session",

the SMF shall include the multicast MBS session IDs that the UE is removed from, if any, in the Received MBS container IE in the PDU SESSION MODIFICATION COMMAND message and shall set the MBS decision to "Remove UE from multicast MBS session" for each of those Received MBS information. The SMF may include the updated MBS service area in each of the Received MBS information, if any. The SMF may delete the QoS flows associated for the multicast by including the Authorized QoS flow descriptions IE in the PDU SESSION MODIFICATION COMMAND message. If the UE is removed from multicast MBS session due to the multicast MBS session release, the SMF shall set the Rejection cause to "MBS session is released". The SMF shall include the Rejection cause for each of the Received MBS information, if any, and set its value with the reason of removing the UE from the corresponding multicast MBS session.

[TS 24.501, clause 6.3.2.3]

If the PDU SESSION MODIFICATION COMMAND message includes the Received MBS container IE, for each of the Received MBS information:

…

c) if the MBS decision is set to "Remove UE from multicast MBS session", the UE shall consider that it has successfully left the multicast MBS session, and if the received Rejection cause is set to "multicast MBS session is released", the UE shall consider the multicast MBS session as released. Then the UE shall indicate to lower layers to delete the stored TMGI;

[TS 24.501, clause 5.6.2.2.1]

If TMGI is used as paging identity and the TMGI matches with multicast MBS session which the has UE joined, the UE shall respond to the paging. Otherwise, the UE shall not respond to the paging.

14.2.5.1.1.3 Test description

14.2.5.1.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving Cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H and ‘000102’H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.5.1.1.3.2 Test procedure sequence

Table 14.2.5.1.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in two MBS Multicast session. One MBS session Id is TMGI-1, and another MBS session Id is TMGI-2.	-	-	-	-

(1)

```
with { UE is in 5GMM-REGISTERED state and UE is camping on a cell that is outside the received MBS
service area }
ensure that {
  when { UE receives PDU SESSION MODIFICATION COMMAND message including Received MBS container IE
with MBS decision setting to "MBS service area update" for including the current cell into MBS
servce area }
    then { UE sends PDU SESSION MODIFICATION COMPLETE and UE shall store the received MBS service
area associated with the received TMGI and replace the current MBS service area with the received
one }
            }
```

(2)

```
with { UE is in 5GMM-REGISTERED state and UE updates MBS service area associated with TMGI based on
received MBS service area in PDU SESSION MODIFICATION COMMAND message }
ensure that {
  when { UE is camping on a cell that is inside the received MBS service area associated with one
TMGI and join MBS session with this TMGI is still needed }
    then { UE sends PDU SESSION MODIFICATION REQUEST message to join MBS session with this TMGI }
            }
```

14.2.5.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.4.1.3 and 6.3.2.3. Unless otherwise stated these are Rel-17 requirements.

[TS 24.501, clause 6.3.2.2]

If the SMF wants to update the MBS service area of an multicast MBS session that the UE has joined, the SMF shall include the corresponding multicast MBS session ID and the updated MBS service area in the Received MBS container IE in the PDU SESSION MODIFICATION COMMAND message, and shall set the MBS decision to "MBS service area update" in the Received MBS information.

[TS 24.501, clause 6.3.2.3]

If the PDU SESSION MODIFICATION COMMAND message includes the Received MBS container IE, for each of the Received MBS information:

…

d) if the MBS decision is set to "MBS service area update", the UE shall store the received MBS service area associated with the received TMGI and replace the current MBS service area with the received one. Or

14.2.5.2 MBS Multicast/ Session management / UE-requested PDU session establishment / UE-requested PDU session modification

14.2.5.2.1 MBS Multicast/ Session management / UE-requested PDU session establishment / UE-requested PDU session modification / Join MBS multicast session / Accepted14.2.5.2.1.1 Test Purpose (TP)

(1)

```
with { UE is in 5GMM-REGISTERED state}
ensure that {
  when { UE requests to establish a new PDU session associated with MBS multicast sessions and the
UE at the same time intends to join two MBS multicast sessions }
    then { UE sends PDU SESSION ESTABLISHMENT REQUEST or PDU SESSION MODIFICATION REQUEST including
the Requested MBS container IE with MBS operation setting to "Join MBS session" }
            }
```

(2)

```
with { UE is in 5GMM-REGISTERED state and has sent PDU SESSION ESTABLISHMENT REQUEST or PDU SESSION
MODIFICATION REQUEST including the Requested MBS container IE with MBS operation setting to "Join
MBS session"}
ensure that {
  when { UE receives PDU SESSION ESTABLISHMENT ACCEPT or PDU SESSION MODIFICATION COMMAND message
including Received MBS container IE with MBS decision setting to "MBS join is accepted" }
    then { UE shall consider that it has successfully joined the MBS session and shall store the
received TMGI}
            }
```

14.2.5.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.4.1.2, 6.4.1.3, 6.4.2.2 and 6.3.2.2. Unless otherwise stated these are Rel-17 requirements.

[TS 24.501, clause 6.4.1.2]

If the UE requests to:

a) establish a new PDU session;

b) perform handover of an existing PDU session from non-3GPP access to 3GPP access;

c) transfer an existing PDN connection in the EPS to the 5GS according to subclause 4.8.2.3.1;

d) transfer an existing PDN connection in untrusted non-3GPP access connected to the EPC to the 5GS; or

e) establish user plane resources over 3GPP access of an MA PDU session established over non-3GPP access only;

and the UE at the same time intends to join one or more multicast MBS sessions that is associated to the PDU session, the UE should include the Requested MBS container IE in the PDU SESSION ESTABLISHMENT REQUEST message. In that case, the UE shall set the MBS operation to "Join multicast MBS session" and include the multicast MBS session information(s) and shall set the Type of multicast MBS session ID for each of the multicast MBS session information to either "Temporary Mobile Group Identity (TMGI)" or "Source specific IP multicast address" depending on the type of the multicast MBS session ID available in the UE. Then the remaining values of each of the multicast MBS session information shall be set as following:

a) if the Type of multicast MBS session ID is set to "Temporary Mobile Group Identity (TMGI)", the UE shall set the multicast MBS session ID to the TMGI; or

b) if the Type of multicast MBS session ID is set to "Source specific IP multicast address for IPv4" or " Source specific IP multicast address for IPv6", the UE shall set the Source IP address information and the Destination IP address information to the corresponding values.

[TS 24.501, clause 6.4.1.3]

If the PDU SESSION ESTABLISHMENT REQUEST included the Requested MBS container IE with the MBS operation set to "Join multicast MBS session", the SMF:

a) shall include the TMGI for the multicast MBS session IDs that the UE is allowed to join, if any, in the Received MBS container IE, shall set the MBS decision to "MBS join is accepted" for each of those Received MBS information, may include the MBS start time to indicate the time when the multicast MBS session starts and shall include the MBS security container in each of those Received MBS information if security protection is applied for that multicast MBS session and the control plane security procedure is used as specified in annex W.4.1.2 in 3GPP TS 33.501 [24], and shall use separate QoS flows dedicated for multicast by including the Authorized QoS flow descriptions IE if no separate QoS flows dedicated for multicast exist or if the SMF wants to establish new QoS flows dedicated for multicast;

[TS 24.501, clause 6.4.2.2]

If the UE requests to join or leave one or more multicast MBS sessions associated with a PDU session, the UE shall include the Requested MBS container IE in the PDU SESSION MODIFICATION REQUEST message and shall set the MBS operation to "Join multicast MBS session" for the join case or to "Leave multicast MBS session" for the leave case. The UE shall include the multicast MBS session information(s) and shall set the Type of multicast MBS session ID for each of the multicast MBS session information to either "Temporary Mobile Group Identity (TMGI)" or "Source specific IP multicast address" depending on the type of the multicast MBS session ID available in the UE. Then the remaining values of each of the multicast MBS session information shall be set as following:

a) if the Type of multicast MBS session ID is set to "Temporary Mobile Group Identity (TMGI)", the UE shall set the multicast MBS session ID to the TMGI; or

b) if the Type of multicast MBS session ID is set to "Source specific IP multicast address for IPv4" or " Source specific IP multicast address for IPv6", the UE shall set the Source IP address information and the Destination IP address information to the corresponding values.

[TS 24.501, clause 6.3.2.2]

If the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure and the UE has included the Requested MBS container IE in the PDU SESSION MODIFICATION REQUEST message with the MBS operation set to "Join multicast MBS session", the SMF:

a) shall include the TMGI for the multicast MBS session IDs that the UE is allowed to join, if any, in the Received MBS container IE, shall set the MBS decision to "MBS join is accepted" for each of those Received MBS information, may include the MBS start time to indicate the time when the multicast MBS session starts, and shall include the MBS security container in each of those Received MBS information if security protection is applied for that multicast MBS session and the control plane security procedure is used as specified in annex W.4.1.2 in 3GPP TS 33.501 [24], and shall use separate QoS flows dedicated for multicast by including the Authorized QoS flow descriptions IE if no separate QoS flows dedicated for multicast exist or if the SMF wants to establish new QoS flows dedicated for multicast;

14.2.5.2.2 MBS Multicast/ Session management / UE-requested PDU session establishment / UE-requested PDU session modification / Join MBS multicast session / Rejected / User is outside of local MBS service area14.2.5.2.2.1 Test Purpose (TP)

(1)

```
with { UE is in 5GMM-REGISTERED state and has sent PDU SESSION ESTABLISHMENT REQUEST or PDU SESSION
MODIFICATION REQUEST including the Requested MBS container IE with MBS operation setting to "Join
MBS session" }
ensure that {
```

```
  when { UE receives PDU SESSION ESTABLISHMENT ACCEPT or PDU SESSION MODIFICATION COMMAND message
including Received MBS container IE with MBS decision setting to "MBS join is rejected" and
Rejection cause setting to "User is outside of local MBS service area" }
    then { UE shall not request to join the same MBS session if the UE is camping on a cell that is
outside the received MBS service area }
            }
```

(2)

```
with { UE is in 5GMM-REGISTERED state and has received the "MBS join is rejected" with Rejection
cause setting to "User is outside of local MBS service area"}
ensure that {
  when { UE move to another cell that is inside the received MBS service area }
    then { UE could join the MBS session in the new cell if this MBS session is still needed }
            }
```

14.2.5.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.4.1.3 and 6.3.2.3. Unless otherwise stated these are Rel-17 requirements.

[TS 24.501, clause 6.4.1.3]

If the PDU SESSION ESTABLISHMENT ACCEPT message includes the Received MBS container IE, for each of the Received MBS information:

…

b) if MBS decision is set to "MBS join is rejected", the UE shall consider the requested join as rejected. The UE shall store the received MBS service area associated with the received TMGI, if any. If the received Rejection cause is set to "User is outside of local MBS service area", the UE shall not request to join the same multicast MBS session if neither current TAI nor CGI of the current cell is part of the received MBS service area.

…

[TS 24.501, clause 6.3.2.3]

If the PDU SESSION MODIFICATION COMMAND message includes the Received MBS container IE, for each of the Received MBS information:

…

b) if MBS decision is set to "MBS join is rejected", the UE shall consider the requested join as rejected. The UE shall store the received MBS service area associated with the received TMGI, if any. If the received Rejection cause is set to "User is outside of local MBS service area", the UE shall not request to join the same multicast MBS session if neither current TAI nor CGI of the current cell is part of the received MBS service area.

…

14.2.5.2.2.3 Test description

14.2.5.2.2.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving Cell and NR Cell 11 is the intra-frequency neighbour cell of NR Cell 1.
- NR Cell 1 "Serving cell"
- NR Cell 11 "Non-Suitable "Off" cell".
- System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.5.2.2.3.2 Test procedure sequence

Table 14.2.5.2.2.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
-	EXCEPTION: Step 1a1 to 1b12a1 describe behaviour that depends on the UE capability the “lower case letter” identifies a step sequence that take place.	-	-	-	-
1a1 - 1a14	Steps 1a1 to 1a14 of the generic procedures described in TS 38.508-1[4] subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and request to join a MBS Multicast session.	-	-	-	-
1a15	The SS transmits a PDU SESSION MODIFICATION COMMAND to reject MBS Multicast session UE requested to join. The reject cause is "User is outside of local MBS service area".	<--	NR RRC: DLInformationTransfer 5GMM: DL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMMAND	-	-
1a16	The UE transmits an ULInformationTransfer message and a PDU SESSION MODIFICATION COMPLETE message.	-->	NR RRC: ULInformationTransfer 5GMM: UL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMPLETE	-	-
1b1 - 1b12a1	Steps 1b1 to 1b12a1 of the generic procedures described in TS 38.508-1[4] subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and request to join a MBS Multicast session and MBS Multicast session is rejected with cause "User is outside of local MBS service area".	-	-	-	-
2	The SS transmits an *RRCRelease* message	<--	NR RRC: *RRCRelease*	-	-
3	Cause the UE to join MBS session with TMGI-1. (NOTE 1)	-	-	-	-
4	Check: Does the UE transmit an *RRCSetupRequest* message within 20s?	-->	NR RRC: *RRCSetupRequest*	1	F
5	The SS configures: - NR Cell 11 as "Serving cell" - NR Cell 1 as "Non-Suitable "Off" cell".	-	-	-	-
6-10	Steps 1 to 5 of the procedure in TS 38.508-1[4] Table 4.9.5.2.2-1 to complete mobility registration updating procedure on NR Cell 11.	-	-	-	-
11	The SS transmits an *RRCRelease* message. (NOTE 2)	<--	NR RRC: *RRCRelease*	-	-
12	Start Timer = 5 sec.	-	-	-	-
-	EXCEPTION: Steps 13a1-13b3 describe optional behaviour that depends on the UE implementation.	-	-	-	-
13a1	Check: Does the UE transmits an RRCSetupRequest message?	-->	NR RRC: *RRCSetupRequest*	2	P
13a2	Stop Timer = 5 sec.	-	-	-	-
13b1	Timer =5 sec expires.	-	-	-	-
13b2	Cause the UE to join MBS session with TMGI-1. (NOTE 1)	-	-	-	-
13b3	Check: Does the UE transmits an RRCSetupRequest message?	-->	NR RRC: *RRCSetupRequest*	2	P
14-19	Steps 3 to 8 of the procedure in TS 38.508-1 [4] Table 4.5.4.2-3 to complete service procedure.	-	-	-	-

20	The UE transmits a PDU SESSION MODIFICATION REQUEST message to join in MBS Multicast session.	-->	NR RRC: *ULInformationTransfer* 5GMM: UL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION REQUEST	2	P
21	The SS transmits an *RRCReconfiguration* message and a PDU SESSION MODIFICATION COMMAND to accept MBS Multicast session join request.	<--	NR RRC: *RRCReconfiguration* 5GMM: DL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMMAND	-	-
-	EXCEPTION: Depending upon UE implementation, steps 22 and 23 can occur in any order	-	-	-	-
22	The UE transmits an *RRCReconfigurationComplete* message.	-->	NR RRC: *RRCReconfigurationComplete*	-	-
23	The UE transmits a PDU SESSION MODIFICATION COMPLETE message.	-->	NR RRC: *ULInformationTransfer* 5GMM: UL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMPLETE	-	-
24	The SS transmits an *RRCRelease* message	<--	NR RRC: *RRCRelease*	-	-
25-39	Check: Does UE respond to paging with TMGI-1 and receive the MRB associated with TMGI-1 as specified in steps 1 to 15 of the procedure in TS 38.508-1[4] Table 4.9.38.2.2-1?	-	-	2	-
NOTE 1: This could be done by e.g. MMI or AT command. NOTE 2: SS ignore PDU SESSION MODIFICATION REQUEST which may send by UE before RRCRelease.

14.2.5.2.3 MBS Multicast/ Session management / UE-requested PDU session establishment / UE-requested PDU session modification / Join MBS multicast session / Rejected / MBS session has not started or will not start soon14.2.5.2.3.1 Test Purpose (TP)

(1)

```
with { UE is in 5GMM-REGISTERED state and has sent PDU SESSION ESTABLISHMENT REQUEST or PDU SESSION
MODIFICATION REQUEST including the Requested MBS container IE with MBS operation setting to "Join
MBS session" to join two MBS multicast sessions. One MBS session Id is TMGI-1 and the other MBS
session Id is TMGI-2 }
ensure that {
  when { UE receives PDU SESSION ESTABLISHMENT ACCEPT or PDU SESSION MODIFICATION COMMAND message
including Received MBS container IE with two Received MBS information. One Received MBS information
includes TMGI-1 and MBS decision setting to "MBS join is rejected" and Rejection cause setting to
"MBS session has not started or will not start soon" and MBS back-off timer setting to neither zero
nor deactivated, while another Received MBS information includes TMGI-2 and MBS decision setting to
"MBS join is accepted" }
    then { UE shall start a back-off timer T3587 with the value provided in the MBS back-off timer
value for the received TMGI-1, and shall not attempt to join the MBS session with the same TMGI-1
until the expiry of T3587, and shall consider that it has successfully joined the MBS session with
TMGI-2 and shall store the received TMGI-2. }
            }
```

(2)

```
with { UE is in 5GMM-REGISTERED state and UE has received the "MBS join is rejected" with non-zero
back-off timer }
ensure that {
  when { upon expiry of T3587 and join this MBS session is still needed }
    then { UE sends PDU SESSION MODIFICATION REQUEST including the Requested MBS container IE with
MBS operation setting to "Join MBS session" }
            }
```

(3)

```
with { UE is in 5GMM-REGISTERED state and has sent PDU SESSION MODIFICATION REQUEST including the
Requested MBS container IE with MBS operation setting to "Join MBS session" }
ensure that {
  when { UE receives PDU SESSION MODIFICATION COMMAND message including Received MBS container IE
with MBS decision  setting to "MBS join is rejected" and Rejection cause setting to "MBS session has
not started or will not start soon" and MBS back-off timer setting to deactivated }
    then { UE shall transport the PDU SESSION MODIFICATION COMPLETE message and shall not attempt to
join the MBS session with the same TMGI until the UE is switched off, the USIM is removed }
            }
```

(4)

```
with { UE is in 5GMM-REGISTERED state and UE has received the "MBS join is rejected" with MBS back-
off timer setting to deactivated and UE is switched off or the USIM is removed }
ensure that {
  when { UE switches on or inserts USIM again and join this MBS session is still needed }
    then { UE sends PDU SESSION ESTABLISHMENT REQUEST or PDU SESSION MODIFICATION REQUEST including
the Requested MBS container IE with MBS operation setting to "Join MBS session" }
            }
```

14.2.5.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.4.1.3, 6.3.2.3 and 10.3. Unless otherwise stated these are Rel-17 requirements.

[TS 24.501, clause 6.4.1.3]

If the PDU SESSION ESTABLISHMENT ACCEPT message includes the Received MBS container IE, for each of the Received MBS information:

…

b) if MBS decision is set to "MBS join is rejected", the UE shall consider the requested join as rejected. The UE shall store the received MBS service area associated with the received TMGI, if any. If the received Rejection cause is set to "User is outside of local MBS service area", the UE shall not request to join the same multicast MBS session if neither current TAI nor CGI of the current cell is part of the received MBS service area. If the received Rejection cause is set to "multicast MBS session has not started or will not start soon" and an MBS back-off timer value is included with value that indicates neither zero nor deactivated, the UE shall start a back-off timer T3587 with the value provided in the MBS back-off timer value for the received TMGI, and shall not attempt to join the multicast MBS session with the same TMGI until the expiry of T3587. If the MBS back-off timer value indicates that this timer is deactivated, the UE shall not attempt to join the multicast MBS session with the same TMGI, the Source IP address information of the TMGI, or the Destination IP address information of the TMGI until the UE is switched off, the USIM is removed, or the entry in the "list of subscriber data" for the current SNPN is updated. If the MBS back-off timer value indicates zero, the UE may attempt to join the multicast MBS session with the same TMGI.

[TS 24.501, clause 6.3.2.3]

If the PDU SESSION MODIFICATION COMMAND message includes the Received MBS container IE, for each of the Received MBS informations:

…

b) if MBS decision is set to "MBS join is rejected", the UE shall consider the requested join as rejected. The UE shall store the received MBS service area associated with the received TMGI, if any. If the received Rejection cause is set to "User is outside of local MBS service area", the UE shall not request to join the same multicast MBS session if neither current TAI nor CGI of the current cell is part of the received MBS service area. If the received Rejection cause is set to "multicast MBS session has not started or will not start soon" and an MBS back-off timer value is included with value that indicates neither zero nor deactivated, the UE shall start a back-off timer T3587 with the value provided in the MBS back-off timer value for the received TMGI, and shall not attempt to join the multicast MBS session with the same TMGI, the Source IP address information of the TMGI, or the Destination IP address information of the TMGI until the expiry of T3587. If the MBS back-off timer value indicates that this timer is deactivated, the UE shall not attempt to join the multicast MBS session with the same TMGI until the UE is switched off, the USIM is removed, or the entry in the "list of subscriber data" for the current SNPN is updated. If the MBS back-off timer value indicates zero, the UE may attempt to join the multicast MBS session with the same TMGI;

…

[TS 24.501, clause 10.3]

Table 10.3.1: Timers of 5GS session management – UE side

TIMER NUM.	TIMER VALUE	STATE	CAUSE OF START	NORMAL STOP	ON THE 1st, 2nd, 3rd, 4th EXPIRY (NOTE 1)
T3587	NOTE 8	PDU SESSION ACTIVE	PDU SESSION MODIFICATION COMMAND message or PDU SESSION ESTABLISHMENT ACCEPT message received with Received MBS information that includes MBS decision set to "MBS join is rejected" and Rejection cause set to "multicast MBS session has not started or will not start soon" and an MBS back-off timer value	None	Initiating a request to join the multicast MBS session associated with the PDU session if still needed
…					
NOTE 8: The value of this timer is provided by the network in the Received MBS container IE (see subclause 6.3.2.3, subclause 6.4.1.3 and subclause 9.11.4.31).					

14.2.5.2.3.3 Test description

14.2.5.2.3.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving Cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H and ‘000102H’.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.5.2.3.3.2 Test procedure sequence

Table 14.2.5.2.3.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1b1 to 1b12a1 of the generic procedures described in TS 38.508-1[4] subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and request to join two MBS Multicast session. One MBS Multicast session id is TMGI-1, the other MBS Multicast session id is TMGI-2. MBS Multicast session with TMGI-1 is rejected with cause "MBS session has not started or will not start soon" and back off timer setting to 1min. MBS Multicast session with TMGI-2 is accepted. Start Timer T3587= 1min at step 1a15 or step 1b10.	-	-	-	-
2	The SS transmits an *RRCRelease* message	<--	NR RRC: *RRCRelease*	-	-

3	Cause the UE to join MBS session with TMGI-1 (NOTE 1)	-	-	-	-
4	Check: Does the UE transmit an *RRCSetupRequest* message with 20s?	-->	NR RRC: *RRCSetupRequest*	1	F
5-19	Check: Does UE respond to paging with TMGI-2 and receive the MRB associated with TMGI-2 as specified in steps 1 to 15 of the procedure in TS 38.508-1[4] Table 4.9.38.2.2-1?	-	-	1	-
20	Timer T3587= 1min expires.	-	-	-	-
21	Cause the UE to join MBS session with TMGI-1 (NOTE 1)	-	-	-	-
22-28	Steps 2 to 8 of the procedure in TS 38.508-1[4] Table 4.5.4.2-3 to complete service procedure.	-	-	-	-
29	The UE transmits a PDU SESSION MODIFICATION REQUEST message to join MBS Multicast session with TMGI-1.	-->	NR RRC: *ULInformationTransfer* 5GMM: UL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION REQUEST	2	P
30	The SS transmits a PDU SESSION MODIFICATION COMMAND to reject MBS session join request with cause "MBS session has not started or will not start soon" and back off timer setting to deactivated.	<--	NR RRC: *DLInformationTransfer* 5GMM: DL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMMAND	-	-
31	The UE transmits a PDU SESSION MODIFICATION COMPLETE message.	-->	NR RRC: *ULInformationTransfer* 5GMM: UL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMPLETE	3	P
31A	The SS transmits an *RRCRelease* message	<--	NR RRC: *RRCRelease*	-	-
32	Cause the UE to join MBS session with TMGI-1 (NOTE 1)	-	-	-	-
33	Check: Does the UE transmit an *RRCSetupRequest* message within 20s?	-->	NR RRC: *RRCSetupRequest*	3	F
34	Switch off procedure in TS 38.508-1[4] Table 4.9.6.1-1 to perform in RRC_IDLE.	-	-	-	-
35	The UE is switched on or the USIM is inserted.	-	-	-	-
36-55a1	Steps 1-20a1 of the generic procedure for UE registration specified in TS 38.508-1 [4] table 4.5.2.2-2 are performed with Test Mode = *Off* AND Test Loop Function = *Off.*	-	-	-	-
56a1-56b12a1	Check: Does the UE establish an associated PDU Session to the MBS DNN and join a MBS Multicast session with TMGI-1 and a MBS Multicast session with TMGI-2 according to steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34?	-	-	4	-
NOTE 1: This could be done by e.g. MMI or AT command.

14.2.5.2.4 MBS Multicast/ Session management / UE-requested PDU session modification / Leave MBS multicast session / Accepted14.2.5.2.4.1 Test Purpose (TP)

(1)

```
with { UE is in 5GMM-REGISTERED state and UE has joined two MBS multicast session associated with a
PDU session. One MBS session Id is TMGI-1, and another MBS session Id is TMGI-2. }
ensure that {
  when { UE requests to leave MBS multicast session associated with TMGI-1 }
    then { UE sends PDU SESSION MODIFICATION REQUEST including the Requested MBS container IE with
MBS operation setting to "Leave MBS session" and multicast MBS session ID is TMGI-1 }
            }
```

(2)

```
with { UE is in 5GMM-REGISTERED state and has sent PDU SESSION MODIFICATION REQUEST including the
Requested MBS container IE with MBS operation setting to "Leave MBS session" and multicast MBS
session ID is TMGI-1 }
ensure that {
  when { UE receives PDU SESSION MODIFICATION COMMAND message including Received MBS container IE
with MBS decision setting to "Remove UE from MBS session" and TMGI setting to TMGI-1 }
    then { UE considers that multicast MBS session associated with TMGI-1 has successfully left the
MBS session and multicast MBS session associated with TMGI-2 has not successfully left the MBS
session, and deletes the stored TMGI-1, and sends PDU SESSION MODIFICATION COMPLETE }
            }
```

14.2.5.2.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.4.2.2, 6.3.2.2 and 6.3.2.3. Unless otherwise stated these are Rel-17 requirements.

[TS 24.501, clause 6.4.2.2]

If the UE requests to join or leave one or more multicast MBS sessions associated with a PDU session, the UE shall include the Requested MBS container IE in the PDU SESSION MODIFICATION REQUEST message and shall set the MBS operation to "Join multicast MBS session" for the join case or to "Leave multicast MBS session" for the leave case. The UE shall include the multicast MBS session information(s) and shall set the Type of multicast MBS session ID for each of the multicast MBS session information to either "Temporary Mobile Group Identity (TMGI)" or "Source specific IP multicast address" depending on the type of the multicast MBS session ID available in the UE. Then the remaining values of each of the multicast MBS session informations shall be set as following:

a) if the Type of multicast MBS session ID is set to "Temporary Mobile Group Identity (TMGI)", the UE shall set the multicast MBS session ID to the TMGI; or

b) if the Type of multicast MBS session ID is set to "Source specific IP multicast address for IPv4" or " Source specific IP multicast address for IPv6", the UE shall set the Source IP address information and the Destination IP address information to the corresponding values.

[TS 24.501, clause 6.3.2.2]

If:

…

b) the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure and the UE has included the Requested MBS container IE in the PDU SESSION MODIFICATION REQUEST message with the MBS operation set to "Leave multicast MBS session",

the SMF shall include the multicast MBS session IDs that the UE is removed from, if any, in the Received MBS container IE in the PDU SESSION MODIFICATION COMMAND message and shall set the MBS decision to "Remove UE from multicast MBS session" for each of those Received MBS information. The SMF may include the updated MBS service area in each of the Received MBS information, if any. The SMF may delete the QoS flows associated for the multicast by including the Authorized QoS flow descriptions IE in the PDU SESSION MODIFICATION COMMAND message.

…

[TS 24.501, clause 6.3.2.3]

If the PDU SESSION MODIFICATION COMMAND message includes the Received MBS container IE, for each of the Received MBS informations:

…

c) if the MBS decision is set to "Remove UE from multicast MBS session", the UE shall consider that it has successfully left the multicast MBS session, and if the received Rejection cause is set to "multicast MBS session is released", the UE shall consider the multicast MBS session as released. Then the UE shall indicate to lower layers to delete the stored TMGI;

14.2.5.2.4.3 Test description

14.2.5.2.4.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is the Serving cell.
- System information combination NR-1 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cell 1.

UE:

- UE is made interested in receiving MBS Multicast service with MBS Service ID ‘000101’H and ‘000102’H.

Preamble:

- The UE is in state 1N-A on NR Cell 1 (serving cell) according to TS 38.508-1 [4] Table 4.4A.2-1 with Test Mode = on to activate UE TEST MODE C and Test Loop Function = off.

14.2.5.2.4.3.2 Test procedure sequence

Table 14.2.5.2.4.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1a1 - 1b1 2a1	Steps 1a1 to 1b12a1 of the generic procedures described in TS 38.508-1 subclause 4.9.34 are performed on NR Cell 1 to establish an associated PDU Session to the MBS DNN and join in two MBS Multicast session. One MBS session Id is TMGI-1, and another MBS session Id is TMGI-2.	-	-	-	-
2	The SS transmits an *RRCRelease* message	<--	NR RRC: *RRCRelease*	-	-
3	Cause the UE to leave MBS session with TMGI-1. (NOTE 1)	-	-	-	-
4-10	Steps 2 to 8 of the procedure in TS 38.508-1[4] Table 4.5.4.2-3 to complete service procedure.	-	-	-	-
11	The UE transmits a PDU SESSION MODIFICATION REQUEST message to leave MBS Multicast session associated with TMGI-1.	-->	NR RRC: *ULInformationTransfer* 5GMM: UL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION REQUEST	1	P
12	The SS transmits a PDU SESSION MODIFICATION COMMAND to release MBS Session associated with TMGI-1.	<--	NR RRC: *DLInformationTransfer* 5GMM: DL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMMAND	-	-
13	The UE transmits a PDU SESSION MODIFICATION COMPLETE message.	-->	NR RRC: *ULInformationTransfer* 5GMM: UL NAS TRANSPORT 5GSM: PDU SESSION MODIFICATION COMPLETE	2	P
14	The SS transmits an *RRCRelease* message	<--	NR RRC: *RRCRelease*	-	-
15	The SS transmits a *Paging* message including TMGI-1.	<--	NR RRC: *Paging*	-	-
16	Check: Does the UE transmit an *RRCSetupRequest* message within 10s?	-->	NR RRC: *RRCSetupRequest*	2	F
17-31	Check: Does UE respond to paging with TMGI-2 and receive the MRB associated with TMGI-2 as specified in steps 1 to 15 of the procedure in TS 38.508-1[4] Table 4.9.38.2.2-1?	-	-	2	-
NOTE 1: This could be done by e.g. MMI or AT command.

2024-09	RAN#105	R5-245512	4496	1	F	Correction to CA MAC TC 7.1.1.12.4.1	17.8.0
2024-09	RAN#105	R5-245513	4551	1	F	Correction to NR MAC testcase 7.1.1.3.2b	17.8.0
2024-09	RAN#105	R5-245514	4600	1	F	Correction to NR MAC testcase 7.1.1.6.1	17.8.0
2024-09	RAN#105	R5-245515	4497	1	F	Correction to PDCP TC 7.1.3.5.4	17.8.0
2024-09	RAN#105	R5-245517	4655	-	F	Split of PDCP DAPS test cases	17.8.0
2024-09	RAN#105	R5-245518	4498	1	F	Correction to NR RRC TC 8.1.1.3.1 and 8.1.1.3.3	17.8.0
2024-09	RAN#105	R5-245520	4656	-	F	Split of RRC DAPS test case	17.8.0
2024-09	RAN#105	R5-245521	4552	1	F	Addition of a new test case for R16 IDC feature	17.8.0
2024-09	RAN#105	R5-245523	4553	1	F	Update of test case 8.1.6.1.2.14 for SON_MDT	17.8.0
2024-09	RAN#105	R5-245528	4511	1	F	Updates to MR-DC HO TC 8.2.3.14.1 and 8.2.3.14.2	17.8.0
2024-09	RAN#105	R5-245529	4514	1	F	Updates to EN-DC CHO TC 8.2.3.18.3	17.8.0
2024-09	RAN#105	R5-245531	4515	1	F	Correction to EN-DC CPC TC 8.2.3.18.4	17.8.0
2024-09	RAN#105	R5-245532	4516	1	F	Correction to NR-DC CPC TC 8.2.3.18.5	17.8.0
2024-09	RAN#105	R5-245533	4602	1	F	Update of message contents for 8.2.3.18.6 conditional PSCell change	17.8.0
2024-09	RAN#105	R5-245534	4467	1	F	Corrections to UAS test case 9.1.4.2	17.8.0
2024-09	RAN#105	R5-245535	4639	1	F	Editorial correction to NR TC 9.1.12.3	17.8.0
2024-09	RAN#105	R5-245536	4599	1	F	Addition of NR P-CSCF restoration test case 10.1.3.3	17.8.0
2024-09	RAN#105	R5-245537	4576	1	F	Correction of MBS Broadcast test case 14.1.1.3	17.8.0
2024-09	RAN#105	R5-245561	4479	1	F	Correction to NR NTN Idle mode TC 6.7.1.4	17.8.0
2024-09	RAN#105	R5-245562	4625	1	F	Addition of NR NTN HARQ feedback disabled test case	17.8.0

2024-09	RAN#105	R5-245564	4636	1	F	Correction to NR NTN TC 9.4.1.1	17.8.0
2024-09	RAN#105	R5-245565	4638	1	F	Correction to NR NTN TC 9.4.1.3	17.8.0
2024-09	RAN#105	R5-245566	4466	1	F	Corrections to NR NTN Conditional HO test case 8.1.4.4.5	17.8.0
2024-09	RAN#105	R5-245571	4528	1	F	Correction to V2X TC 13.2.3	17.8.0
2024-09	RAN#105	R5-245572	4529	1	F	Addition of new SL PDCP TC 12.1.10.1.1	17.8.0
2024-09	RAN#105	R5-245573	4556	1	F	Addition of NR SL SIG test case 12.2.1.1_mode2_idle	17.8.0
2024-09	RAN#105	R5-245574	4557	1	F	Correction to NR SL SIG test case 12.2.1.3_mode1	17.8.0
2024-09	RAN#105	R5-245575	4558	1	F	Addition of NR SL SIG test case 12.2.1.4_mode2_connected	17.8.0
2024-09	RAN#105	R5-245576	4559	1	F	Addition of NR SL SIG test case 12.2.6.2_SL_DRB_management	17.8.0
2024-09	RAN#105	R5-245579	4480	1	F	Correction to feMIMO TC 7.1.1.3.17.1 and 7.1.1.3.17.2	17.8.0
2024-09	RAN#105	R5-245583	4604	1	F	Addition of new test case 12.3.1.1.3 Sidelink Relay / L2 U2N / Remote UE / 5G ProSe Direct Discovery / Discoverer	17.8.0
2024-09	RAN#105	R5-245584	4606	1	F	Addition of new test case 12.3.1.1.12 Sidelink Relay / L2 U2N / Remote UE / Measurement configuration control and reporting / Event X1	17.8.0
2024-09	RAN#105	R5-245585	4607	1	F	Addition of new test case 12.3.1.1.13 Sidelink Relay / L2 U2N / Remote UE / Measurement configuration control and reporting / Event X2	17.8.0
2024-09	RAN#105	R5-245586	4608	1	F	Addition of new test case 12.3.1.1.14 Sidelink Relay / L2 U2N / Remote UE / Measurement configuration control and reporting / Event Y1	17.8.0
2024-09	RAN#105	R5-245587	4609	1	F	Addition of new test case 12.3.1.1.15 Sidelink Relay / L2 U2N / Remote UE / Measurement configuration control and reporting / Event Y2	17.8.0
2024-09	RAN#105	R5-245588	4610	1	F	Addition of new test case 12.3.1.2.2 Sidelink Relay / L2 U2N / Relay UE / 5G ProSe U2N Relay Discovery / Announcing	17.8.0
2024-09	RAN#105	R5-245589	4613	1	F	Addition of new test case 12.3.1.1.16 Sidelink Relay / L2 U2N / Remote UE / Measurement configuration control and reporting / Periodical reporting	17.8.0
2024-09	RAN#105	R5-245590	4614	1	F	Addition of new test case 12.3.1.2.4 Sidelink Relay / L2 U2N / Relay UE / Direct link establishment, reject and release	17.8.0
2024-09	RAN#105	R5-245595	4477	1	F	Add new test case 8.1.3.1.24	17.8.0
2024-09	RAN#105	R5-245596	4478	1	F	Add new test case 8.1.3.1.25	17.8.0
2024-09	RAN#105	R5-245658	4503	2	F	Correction to MDT enh. TC 8.1.6.1.4.9	17.8.0
2024-09	RAN#105	R5-245660	4619	1	F	Update UE pre-test configurations for test case 6.5.3.5	17.8.0
2024-09	RAN#105	R5-245663	4651	1	F	Correction to RACS test case 8.1.5.9.1	17.8.0
2024-09	RAN#105	R5-245665	4468	1	F	Corrections to UAS test case 9.1.5.2.11	17.8.0
2024-09	RAN#105	R5-245666	4469	1	F	Corrections to UAS test case 9.1.6.2.3	17.8.0
