Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Harmonised European Standard (EN) has been produced by ETSI Technical Committee Electromagnetic compatibility and Radio spectrum Matters (ERM).

The present document has been prepared under the Commission's standardisation request C(2015) 5376 final [i.4] to provide one voluntary means of conforming to the essential requirements of Directive 2014/53/EU on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC [i.2].

Once the present document is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of the present document given in table A.1 confers, within the limits of the scope of the present document, a presumption of conformity with the corresponding essential requirements of that Directive and associated EFTA regulations.

The present document is part 3-1 of a multi-part deliverable. Full details of the entire series can be found in part 1 [1].

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.
Introduction

The present document is part of a set of standards developed by ETSI and is designed to fit in a modular structure to cover all radio equipment within the scope of the Radio Equipment Directive (RED) [i.2].

The equipment to which the present document applies fall within the low duty cycle high reliability devices category.

NOTE 1: The low duty cycle/high reliability devices category is defined in Commission Decision 2013/752/EU [i.3] as:

"Category of short-range devices" means a group of short-range devices that use spectrum with similar technical spectrum access mechanisms or based on common usage scenarios.

and

The low duty cycle/high reliability device category covers radio devices that rely on low overall spectrum utilisation and low duty cycle spectrum access rules to ensure highly reliable spectrum access and transmissions in shared bands. Typical uses include alarm systems that use radio communication for indicating an alert condition at a distant location and social alarms systems that allow reliable communication for a person in distress.

It is recognized that the radio communications link alone does not determine the overall operation of a system, but that a functioning radio communications link is an essential foundation upon which a system may be built.

The present document sets out various means and features by which the performance of a radio communications link may be improved. These include:

1) Spectrum Access Rules - with the aim of reducing the probability of collisions between transmissions from different equipment.

2) Receiver Parameters - with the aim of reducing the probability of interference from equipment on other frequencies.

3) Bi-Directional Communications - with the aim of reducing the time and number of transmissions required to achieve a given level of confidence in successful communication.

Application of these features, separately or in combination, does not necessarily ensure successful radio communication. In addition, there are other features that may be considered, such as listen before talk or error correction, that may improve overall performance.

Clauses 1 and 3 provide a general description on the types of equipment covered by the present document and the definitions and abbreviations used.

Clause 4 specifies technical requirements to be met by all equipment.

Clause 5 specifies technical requirements for receivers in equipment with uni-directional communications.

Clause 6 specifies technical requirements for equipment with bi-directional communications.

Clause 7 specifies the methods for testing for compliance with the technical requirements.

Annex A summarizes the requirements relevant to the RE-Directive [i.2].
1 Scope

The present document applies to social alarm devices operating on designated frequencies.

Designated frequencies are those frequency bands identified in Commission Decision 2013/752/EU [i.3] as having a usage available only to social alarms.

Social alarms are defined in Commission Decision 2013/752/EU [i.3] as:

"Social alarm devices" are radio communications systems that allow reliable communication for a person in distress in a confined area to initiate a call for assistance. Typical uses of social alarm are to assist elderly or disabled people.

These radio equipment types are capable of operating, for transmission or reception, in all or part of the frequency bands given in table 1.

### Table 1: Frequency bands

<table>
<thead>
<tr>
<th>Frequency band</th>
</tr>
</thead>
<tbody>
<tr>
<td>869.200 MHz to 869.250 MHz</td>
</tr>
</tbody>
</table>

The present document contains requirements to demonstrate that radio equipment both effectively uses and supports the efficient use of radio spectrum in order to avoid harmful interference.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at https://docbox.etsi.org/Reference/.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

[1] ETSI EN 300 220-1 (V3.1.1) (11-2016): "Short Range Devices (SRD) operating in the frequency range 25 MHz to 1 000 MHz; Part 1: Technical characteristics and methods of measurement".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] ETSI EG 203 336: "Electromagnetic compatibility and Radio spectrum Matters (ERM); Guide for the selection of technical parameters for the production of Harmonised Standards covering article 3.1(b) and article 3.2 of Directive 2014/53/EU".
3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in the RE-Directive [i.2] and ETSI EN 300 220-1 [1] apply, unless otherwise ascribed herein.

**low duty cycle/high reliability**: category of device used in Commission Decision 2013/752/EU [i.3]

> NOTE: Note (15) in the Commission Decision states: "The low duty cycle/high reliability device category covers radio devices that rely on low overall spectrum utilisation and low duty cycle spectrum access rules to ensure highly reliable spectrum access and transmissions in shared bands. Typical uses include alarm systems that use radio communication for indicating an alert condition at a distant location and social alarms systems that allow reliable communication for a person in distress."

3.2 Symbols

For the purposes of the present document, the symbols given in ETSI EN 300 220-1 [1] apply.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI EN 300 220-1 [1] apply, unless otherwise ascribed herein.

4 Technical requirements specifications

4.1 Environmental profile

The technical requirements of the present document apply under the environmental profile for operation of the equipment, which shall be declared by the supplier. The equipment shall comply with all the technical requirements of the present document at all times when operating within the boundary limits of the declared operational environmental profile.

Normal and extreme test conditions are described in ETSI EN 300 220-1 [1], clauses 4.3.3 and 4.3.4.
4.2 Technical requirements for transmit mode

4.2.1 Applicability

The requirements in clause 4.2 apply to all EUT when operating in transmit mode, except where stated.

<table>
<thead>
<tr>

<td>10 mW</td>
<td>25 kHz</td>
</tr>
</tbody>
</table>

4.2.2 Operating Frequency and Channel

4.2.2.1 Description

The nominal operating frequency is the centre of a channel of width OCW.

4.2.2.2 Limits

The OCW shall be equal to the operating channel width listed in table 2. The channels shall lie on a raster formed by the operating channel width and the edges of the bands.

4.2.2.3 Conformance

There is no conformance test specified for this requirement.

The provider shall details of the operating frequency.

**NOTE 1:** More than one operating frequency on one or more channels may be declared.

**NOTE 2:** If the frequency error measurements in clause 4.2.6 cannot be performed, an alternative is to perform the adjacent channel power measurements in clause 4.2.5 under extreme test conditions.

4.2.3 Effective Radiated Power

4.2.3.1 Description

The effective radiated power (e.r.p.) is the power radiated in the direction of the maximum field strength under specified conditions of measurements for any condition of modulation. For equipment with a permanent or temporary antenna connection it may be taken as the power delivered from that connector.

4.2.3.2 Limits

The effective radiated power shall not be greater than the value shown in table 2.

4.2.3.3 Conformance

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.2.2.

Compliance shall be established under normal and extreme conditions for conducted measurements and under normal conditions for radiated measurements.
4.2.4 Duty Cycle

4.2.4.1 Description

The present document applies to equipment operating with low duty cycle. Equipment may be triggered manually, by internal timing or by external stimulus. Depending on the method of triggering the timing may be predictable or random.

4.2.4.2 Limits

<table>
<thead>
<tr>
<th>Band no.</th>
<th>Frequency Band</th>
<th>Duty Cycle</th>
<th>Observation Period $T_{obs}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>869.200 MHz to 869.250 MHz</td>
<td>0.1 %</td>
<td>1 hr</td>
</tr>
</tbody>
</table>

The observation bandwidth $F_{obs}$ is the operational frequency band.

4.2.4.3 Conformance

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.4.2.

Compliance shall be established under normal conditions.

4.2.5 Adjacent Channel Power

4.2.5.1 Description and Applicability

Adjacent channel power is power incidental to proper operation of a transmitter falling into the neighbouring channels.

If the frequency error measurements in clause 4.2.6 cannot be performed, the alternative is to perform the adjacent channel power measurements in this clause under extreme test conditions.

4.2.5.2 Limits

The power in the adjacent channels shall not exceed the reference limits defined in ETSI EN 300 220-1 [1], clause 5.11.2.

4.2.5.3 Conformance

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.11.3.

Compliance shall be established under normal conditions and also under extreme conditions if the conformance tests for Tx Frequency Error (clause 4.2.6) are not carried out.

4.2.6 Transmitter Frequency Error

4.2.6.1 Description and Applicability

Frequency error is the difference, under normal and extreme conditions, between the measured unmodulated carrier frequency and the nominal operating frequency.

Frequency error is normally measured with an unmodulated carrier. If the equipment is not capable of producing an unmodulated carrier, then this requirement does not apply. Instead the adjacent channel power (clause 4.2.5) requirements shall be met under extreme test conditions.
4.2.6.2  Limits
The frequency error shall not exceed:
\[ \pm 10 \% \text{ of OCW} \]

4.2.6.3  Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.7.2.
Compliance shall be established under normal and extreme conditions.

4.2.7  Transmitter Transient Power

4.2.7.1  Description
For the purpose of the present document, the description in ETSI EN 300 220-1 [1], clause 5.10.1 applies.

4.2.7.2  Limits
The EUT shall comply with reference limits defined in ETSI EN 300 220-1 [1], clause 5.10.2.

4.2.7.3  Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.10.3.
Compliance shall be established under normal conditions.

4.2.8  Tx Behaviour under Low Voltage Conditions

4.2.8.1  Description and Applicability
This requirement applies only to transmitters in battery operated equipment.
For the purpose of the present document, the description in ETSI EN 300 220-1 [1], clause 5.12.1 applies.

4.2.8.2  Limits
The equipment shall comply with the reference limits in ETSI EN 300 220-1 [1], clause 5.12.2.

4.2.8.3  Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.12.3.
Compliance shall be established under normal conditions.

4.3  Technical requirements for all EUT

4.3.1  Applicability
The requirements in clause 4.3 apply to all EUT.

4.3.2  Spurious Emissions

4.3.2.1  Description
Spurious emissions are unwanted emissions in the spurious domain radiated by the equipment or its antenna.
For transmitters, the spurious domain is all frequencies apart from the channel on which the transmitter is intended to operate and its adjacent and alternate adjacent channels.

For receivers, the spurious domain is all frequencies.

### 4.3.2.2 Limits

The EUT shall comply with reference limits defined in ETSI EN 300 220-1 [1], clause 5.9.2.

### 4.3.2.3 Conformance

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.9.3.

Compliance shall be established under normal conditions.

### 4.4 Receiver Parameters

#### 4.4.1 Applicability

The requirements in clause 4.4 apply to all receiving equipment that is part of a MI.

#### 4.4.2 Blocking

##### 4.4.2.1 Description

The description in ETSI EN 300 220-1 [1], clause 5.18.1 applies.

##### 4.4.2.2 Limits

The EUT shall comply with the reference limits for Rx Category 2 in ETSI EN 300 220-1 [1], clause 5.18.3.

##### 4.4.2.3 Conformance

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.18.6.

Compliance shall be established under normal conditions.

### 5 Technical Requirements for Uni-Directional Communication

#### 5.1 Mode A Applicability and Conformance Requirements

Clause 5 applies to equipment in systems using uni-directional communication.

**NOTE 1:** This clause forms a technical solution known as Mode A.

For Mode A, equipment shall meet the requirements of clause 4, plus the additional requirements of this clause 5.

**NOTE 2:** For some parameters, conformance with clause 5 will demonstrate conformance with clause 4.

#### 5.2 Communication method

No additional requirements.
5.3 **Transmitter Parameters**

No additional requirements.

5.4 **Receiver Parameters**

5.4.1 **Applicability**

The requirements in clause 5.4 shall apply to all receiving equipment that is part of a MR.

5.4.2 **Adjacent Channel Selectivity**

5.4.2.1 **Description**

The description in ETSI EN 300 220-1 [1], clause 5.15.1 applies.

5.4.2.2 **Limits**

The EUT shall comply with the reference limits for Rx Category 1 in ETSI EN 300 220-1 [1], clause 5.15.2.

5.4.2.3 **Conformance**

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.15.3. Compliance shall be established under normal conditions.

5.4.3 **Blocking**

5.4.3.1 **Description**

The description in ETSI EN 300 220-1 [1], clause 5.18.1 applies.

5.4.3.2 **Limits**

The EUT shall comply with the reference limits for Rx Category 1 in ETSI EN 300 220-1 [1], clause 5.18.5.

5.4.3.3 **Conformance**

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.18.6. Compliance shall be established under normal conditions.

5.4.4 **Adjacent Channel Saturation**

5.4.4.1 **Description**

The description in ETSI EN 300 220-1 [1], clause 5.16.1 applies.

5.4.4.2 **Limits**

The EUT shall comply with the reference limits for Rx Category 1 in ETSI EN 300 220-1 [1], clause 5.16.2.
5.4.4.3 Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.16.3.
Compliance shall be established under normal conditions.

5.4.5 Spurious Response Rejection

5.4.5.1 Description
The description in ETSI EN 300 220-1 [1], clause 5.17.1 applies.

5.4.5.2 Limits
The EUT shall comply with the reference limits for Rx Category 1 in ETSI EN 300 220-1 [1], clause 5.17.2.

5.4.5.3 Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.17.3.
Compliance shall be established under normal conditions.

5.4.6 Behaviour at high wanted signal level

5.4.6.1 Description
The description in ETSI EN 300 220-1 [1], clause 5.19.1 applies.

5.4.6.2 Limits
The EUT shall comply with the reference limits for Rx Category 1 in ETSI EN 300 220-1 [1], clause 5.19.2.

5.4.6.3 Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.19.3.
Compliance shall be established under normal conditions.

6 Bi-Directional Communication - Single Frequency

6.1 Mode B1 Applicability and Conformance Requirements
Clause 6 applies to equipment in systems using bi-directional communication on a single frequency.

NOTE 1: This clause forms an alternative technical solution to Mode A known as Mode B1.

For Mode B1, equipment shall meet the requirements of clause 4, plus the additional requirements of clause 6.

NOTE 2: For some parameters, conformance with clause 6 will demonstrate conformance with clause 4.

For the purposes of this section, the EUT will consist of two or more parts. The provider shall identify one part as the Message Initiator (MI) and one part as the Message Responder (MR). If only one part is being tested the other part may be replaced by a simulator if necessary.
6.2 Bi-directional Communication

6.2.1 Applicability

The requirements of clause 6.2 apply to the MI and the MR when working in conjunction.

6.2.2 Acknowledgement

6.2.2.1 Description

An acknowledgement (ACK) is a short message sent in the return direction to signal that a forward going message has been received successfully.

6.2.2.2 Limits

The EUT shall be able to demonstrate an acknowledgment (ACK) of message transfer, with a latency of no more than 5 seconds.

6.2.2.3 Conformance

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.22.2.

6.3 Transmitter Parameters

No additional requirements.

6.4 Receiver Parameters

6.4.1 Applicability

The requirements of clause 6.4 apply to all receiving equipment that is part of a MR.

6.4.2 Adjacent Channel Selectivity

6.4.2.1 Description

The description in ETSI EN 300 220-1 [1], clause 5.15.1 applies.

6.4.2.2 Limits

The adjacent channel selectivity shall be equal to or greater than the limit in table 4.

Table 4: Adjacent channel selectivity

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Adjacent Channel Selectivity</td>
<td>≥ -65 dBm</td>
</tr>
</tbody>
</table>

6.4.2.3 Conformance

The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.15.3. Compliance shall be established under normal conditions.
6.4.3  Blocking

6.4.3.1 Description
The description in ETSI EN 300 220-1 [1], clause 5.18.1 applies.

6.4.3.2 Limits
The EUT shall comply with the reference limits for Rx Category 1.5 in ETSI EN 300 220-1 [1], clause 5.18.4.

6.4.3.3 Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.18.6.
Compliance shall be established under normal conditions.

6.4.4  Adjacent Channel Saturation

6.4.4.1 Description
The description in ETSI EN 300 220-1 [1], clause 5.16.1 applies.

6.4.4.2 Limits
The receiver saturation at the adjacent channel shall be equal or greater than limit given in table 5.

Table 5: Receiver saturation at adjacent channel

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjacent channel saturation</td>
<td>≥ -35 dBm</td>
</tr>
</tbody>
</table>

6.4.4.3 Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.16.3.
Compliance shall be established under normal conditions.

6.4.5  Spurious Response Rejection

6.4.5.1 Description
The description in ETSI EN 300 220-1 [1], clause 5.17.1 applies.

6.4.5.2 Limits
The spurious response rejection of the equipment shall be equal to or greater than the limit in table 6.

Table 6: Spurious response rejection

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spurious response rejection</td>
<td>≥ -54 dBm</td>
</tr>
</tbody>
</table>

NOTE: For spurious response tests separated from the wanted signal by less than 0.1 % of the Operating Frequency, the limits are relaxed by 25 dB.
6.4.5.3 Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.17.3.
Compliance shall be established under normal conditions.

6.4.6 Behaviour at high wanted signal level

6.4.6.1 Description
The description in ETSI EN 300 220-1 [1], clause 5.19.1 applies.

6.4.6.2 Limits
The wanted performance criterion shall be met with a wanted signal at a level of -15 dBm.

6.4.6.3 Conformance
The conformance tests for this requirement shall be as defined in ETSI EN 300 220-1 [1], clause 5.19.3.
Compliance shall be established under normal conditions.

7 Testing for compliance with technical requirements

7.1 General
The provisions of ETSI EN 300 220-1 [1], clause 4, shall apply except as varied herein.

7.2 Presentation of equipment for testing purposes
The following information shall be stated by the provider in order to assist carrying out the test suites and/or to declare
compliance to technical requirements (e.g. technical requirements for which no conformance test is included in the
present document).

<p>| Table 7: Declarations to be made by the Provider |</p>

7.3 Wanted performance criteria

7.3.1 Receiver response

For the purpose of the performance tests involving a receiver, the wanted performance criterion is that the receiver shall produce an appropriate output as indicated below:

- after demodulation, a data signal with a bit error ratio of $10^{-3}$ without correction; or
- after demodulation, a message acceptance ratio of 90 %;
- an appropriate false alarm rate or sensing criteria as declared by the provider.

Where the indicated performance cannot be achieved, the performance criterion used to determine the performance of the receiver shall be declared and published by the provider.

The receiver measurements should be conducted with any Forward Error Correction (FEC) or Automatic Repeat reQuest (ARQ) function disabled. If it is not practical to disable such error correction, a suitable note shall be made in the test report, together with any alternative test method used.
Annex A (normative):
Relationship between the present document and the essential requirements of Directive 2014/53/EU

The present document has been prepared under the Commission’s standardisation request C(2015) 5376 final [i.4] to provide one voluntary means of conforming to the essential requirements of Directive 2014/53/EU on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC [i.2].

Once the present document is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of the present document given in table A.1 confers, within the limits of the scope of the present document, a presumption of conformity with the corresponding essential requirements of that Directive and associated EFTA regulations.

Key to columns:

Requirement:

- **No**: A unique identifier for one row of the table which may be used to identify a requirement.
- **Description**: A textual reference to the requirement.
- **Clause Number**: Identification of clause(s) defining the requirement in the present document unless another document is referenced explicitly.
Requirement Conditionality:

**U/C** Indicates whether the requirement shall be unconditionally applicable (U) or is conditional upon the manufacturer's claimed functionality of the equipment (C).

**Condition** Explains the conditions when the requirement shall or shall not be applicable for a requirement which is classified "conditional".

Presumption of conformity stays valid only as long as a reference to the present document is maintained in the list published in the Official Journal of the European Union. Users of the present document should consult frequently the latest list published in the Official Journal of the European Union.

Other Union legislation may be applicable to the product(s) falling within the scope of the present document.
Annex B (informative):
Selection of technical parameters

B.1 Introduction

ETSI EG 203 336 [i.1] lists candidate technical parameters to be included in a Harmonised Standard aimed at providing a presumption of conformity of radio equipment with the essential requirements in articles 3.1(b) and 3.2 of the Radio Equipment Directive 2014/53/EU [i.2].

Essential requirements are high level objectives described in European Directives. The purpose of the Harmonised Standard is to translate those high level objectives into detailed technical specifications.

This annex provides information regarding selected parameters that may be in or not in the present document.

B.2 Receiver sensitivity

Receiver sensitivity is not specified in the present document in order to allow providers the freedom to tailor equipment to specific circumstances.

For instance, equipment covered by the present document may have to operate in the presence of elevated background electromagnetic noise or in proximity to other transmitters. In such circumstances, specifying a high level of sensitivity may be counter productive to the aim of achieving reliable communications.

Providers should be aware of the situations in which equipment is likely to be used. In particular, it should be noted that frequency bands covered in the present document may be adjacent to bands used by mobile telephones. Other equipment operating in adjacent bands may have out of band emissions falling into bands covered by the present document. In such cases there is a possibility of in-band interference that may affect operation.

B.3 Other receiver parameters

Because sensitivity is not specified, it follows that co-channel rejection is not specified.

Many receiver requirements fall under the general heading of linearity and these are covered in the present document by requirements on blocking performance.

Intermodulation performance is not specified as it is not considered a major failure mechanism. The risk of failure due to second order intermodulation products is considered low because the blocking specification leads to the ability to handle strong out of band signals. The risk of failure due to third order intermodulation products is considered low when equipment is used in bands where low duty cycle is required.

B.4 Listen before talk

Listen before talk is a common spectrum sharing mechanism. It is important for high duty cycle use and/or in high occupancy spectrum. For the purposes of the present document it is considered optional for low duty cycle use in low occupancy spectrum, therefore no requirements have been specified.

Nevertheless, providers are reminded that listen before talk is likely to bring benefits to the equipment using it as well as to other equipment and therefore its use is recommended.
Annex C (informative):
