Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available **free of charge** from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/ipr>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Signalling Protocols and Switching (SPS), and is now submitted for the Voting phase of the ETSI standards Two-step Approval Procedure.

The present document is part 3 of a multi-part EN covering the Digital Subscriber Signalling System No. one (DSS1) protocol specification for the Integrated Services Digital Network (ISDN) telephony 7 kHz, videotelephony, audiographic conference and videoconference teleservices, as described below:

- Part 1: "Protocol specification";
- Part 2: "Protocol Implementation Conformance Statement (PICS) proforma specification";
- Part 3: "Test Suite Structure and Test Purposes (TSS&TP) specification for the user";**
- Part 4: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the user";
- Part 5: "Test Suite Structure and Test Purposes (TSS&TP) specification for the network";
- Part 6: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the network".

Proposed national transposition dates	
Date of latest announcement of this EN (doa):	3 months after ETSI publication
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	6 months after doa
Date of withdrawal of any conflicting National Standard (dow):	6 months after doa

Introduction

The present document is divided into seven clauses. Clauses 1 to 3 form the scope, references and abbreviations. Clause 4 contains the test suite structure. Clause 5 contains the complete list of test purposes. Clause 6 contains the list of combined test purposes, i.e. test purposes which can be tested together in one test case. Clause 7 contains the requirements for a generic or abstract test suite to comply with the present document.

It is been assumed that the Implementation Under Test (IUT) already complies with the conformance requirements associated with the ISDN basic call as defined in EN 300 403-1 [2]. This is specified as a requirement in EN 300 267-2 [6], clause 5. EN 300 267-1 [5], subclause 5.1, states that the additional generic requirements of clause 5 are defined to be compatible with the existing requirements of EN 300 403-1 [2].

The following approach is adopted with regard to specifying test purposes:

- resultant states of the IUT are not checked following receipt of messages which comply with EN 300 403-1 [2]. Resultant states of the IUT are checked following receipt of messages which do not comply with EN 300 403-1 [2], e.g. a CONNECT message which contains a Bearer capability information element.

In cases where EN 300 267-1 [5] specifies that requirements in EN 300 403-1 [2] shall apply, it is assumed that, because the IUT already complies with EN 300 403-1 [2], it also complies with these requirements. However, when specifying the abstract test cases, including test case selection, the requirements in EN 300 403-1 [2] need to be taken into account.

1 Scope

The present document is applicable to the stage three of the telephony 7 kHz, videotelephony, audiographic conference and videoconference teleservices for the pan-European Integrated Services Digital Network (ISDN) as provided by European public telecommunications operators at the T reference point or coincident S and T reference point (as specified in ITU-T Recommendation I.411 [11] by means of the Digital Subscriber Signalling System No. one (DSS1) protocol. EN 300 267-1 [5] provides the protocol specification and EN 300 267-2 [6] the Protocol Implementation Conformance Statement (PICS) proforma specification. Stage three identifies the protocol procedures and switching functions needed to support a telecommunications service (see ITU-T Recommendation I.130 [10]).

The present document provides the Test Suite Structure and Test Purposes (TSS&TP) for the user side. It covers the protocol requirements as defined in EN 300 267-1 [5] and provides test purposes for the additional generic requirements for basic telecommunication services not defined in EN 300 403-1 [2] (EN 300 267-1 [5], clause 5), for the telephony 7 kHz teleservice (EN 300 267-1 [5], clause 6), for the videotelephony teleservice (EN 300 267-1 [5], clause 7), for the audiographic conference teleservice (EN 300 267-1 [5], clause 8) and for the videoconference teleservice (EN 300 267-1 [5], clause 9).

Two types of implementations are covered:

- an implementation which supports user requirements at the coincident S and T reference point;
- an implementation which supports user requirements for interworking with private ISDNs at the T reference point.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.
- A non-specific reference to an ETS shall also be taken to refer to later versions published as an EN with the same number.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the definitions in EN 300 267-1 [5] apply in addition to the following definitions:

BC = speech: Bearer Capability information element with its information transfer capability field set to "speech" and its user information layer one protocol field set to "ITU-T Recommendation G.711 [9] A-law".

BC = UDI/TA: Bearer Capability information element with its information transfer capability field set to "UDI/TA" and its user information layer one protocol field set to "ITU-T Recommendations H.221 [15] and H.242 [16]".

BC = UDI: Bearer Capability information element with its information transfer capability field set to "UDI" and its user information layer one protocol field set to "ITU-T Recommendations H.221 [15] and H.242 [16]".

bit-rate allocation signal: bit position within the frame structure to transmit commands, control and indication signals, capabilities.

HLC = telephony: High Layer Compatibility information element with its high layer characteristics identification field set to "telephony".

HLC = videotelephony_ic: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0000 - videotelephony (ITU-T Recommendations F.720 [17] and F.721 [18])" and its extended audiovisual characteristics identification field set to "000 0001 - capability set of initial channel of ITU-T Recommendation H.221 [15]".

HLC = videotelephony_nex: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0000 - videotelephony (ITU-T Recommendations F.720 [17] and F.721 [18])" but not containing an extended audiovisual characteristics identification field.

HLC = videotelephony_sc: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0000 - videotelephony (ITU-T Recommendations F.720 [17] and F.721 [18])" and its extended audiovisual characteristics identification field set to "000 0010 - capability set of subsequent channel of ITU-T Recommendation H.221 [15]".

HLC = audiographic_ic: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0010 – audiographic conferencing (ITU-T Recommendations F.720 [17] and F.721 [18])" and its extended audiovisual characteristics identification field set to "000 0001 - capability set of initial channel of Recommendation H.221 [15]".

HLC = audiographic_nex: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0010 - audiographic conferencing (ITU-T Recommendations F.720 [17] and F.721 [18])" but not containing an extended audiovisual characteristics identification field.

HLC = audiographic_sc: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0010 - audiographic conferencing (ITU-T Recommendations F.720 [17] and F.721 [18])" and its extended audiovisual characteristics identification field set to "000 0010 - capability set of subsequent channel of ITU-T Recommendation H.221 [15]".

HLC = videoconf_ic: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0001 - videoconferencing (ITU-T Recommendations F.720 [17] and F.721 [18])" and its extended audiovisual characteristics identification field set to "000 0001 - capability set of initial channel of ITU-T Recommendation H.221 [15]".

HLC = videoconf_nex: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0001 - videoconferencing (ITU-T Recommendations F.720 [17] and F.721 [18])" but not containing an extended audiovisual characteristics identification field.

HLC = videoconf_sc: High Layer Compatibility information element with its high layer characteristics identification field set to "110 0001 - videoconferencing (ITU-T Recommendations F.720 [17] and F.721 [18])" and its extended audiovisual characteristics identification field set to "000 0010 - capability set of subsequent channel of ITU-T Recommendation H.221 [15]".

Implementation Under Test (IUT): component of the system under test (user terminal or private ISDN) providing the protocol specified in EN 300 267-1 [5] at the S/T or T reference point.

in-band signalling: signalling via the bit-rate allocation signal of the frame structure, as defined in ETS 300 144 [3].

mode 0F: transmission mode in which the initial channel contains framing, and 7-bit ITU-T Recommendation G.711 [9] audio signal is being transmitted.

mode 0U: transmission mode in which the initial channel does not contain framing, and 8-bit ITU-T Recommendation G.711 [9] audio signal is being transmitted.

PI = #1: Progress Indicator information element, with its progress description field set to #1 "Call is not end-to-end ISDN".

PI = #2: Progress Indicator information element, with its progress description field set to #2 "Destination address is non-ISDN".

PI = #4: Progress Indicator information element, with its progress description field set to #4 "Call has returned to the ISDN".

PI = #5: Progress Indicator information element, with its progress description field set to #5 "interworking has occurred and has resulted in a telecommunications service change".

PI = #8: Progress Indicator information element, with its progress description field set to #8 "In-band information or appropriate pattern now available".

telephony 7 kHz fallback allowed SETUP message: SETUP message containing two BCs, with the first BC = speech and the second BC = UDI/TA, a HLC = telephony, and not containing a LLC.

telephony 7 kHz fallback not allowed SETUP message: SETUP message containing a single BC = UDI/TA and a single HLC = telephony, and not containing a LLC.

videotelephony fallback allowed SETUP message: SETUP message containing two BCs, with the first BC = speech and the second BC = UDI/TA, and two HLCs, with the first HLC = telephony and the second HLC = videotelephony_ic, and not containing a LLC.

videotelephony fallback not allowed SETUP message: SETUP message containing a single BC = UDI/TA and a single HLC = videotelephony_ic, and not containing a LLC.

videotelephony SETUP message for CR2: SETUP message containing a single BC = UDI and a single HLC = videotelephony_sc. The SETUP message is used to establish the second connection in a videotelephony call requiring two connections.

audiographic conference fallback allowed SETUP message: SETUP message containing two BCs, with the first BC = speech and the second BC = UDI/TA, and two HLCs, with the first HLC = telephony and the second HLC = audiographic_ic, and not containing a LLC.

audiographic conference fallback not allowed SETUP message: SETUP message containing a single BC = UDI/TA and a single HLC = audiographic_ic, and not containing a LLC.

audiographic conference SETUP message for CR2: SETUP message containing a single BC = UDI and a single HLC = audiographic_sc. The SETUP message is used to establish the second connection in an audiographic conference call requiring two connections.

videoconference fallback allowed SETUP message: SETUP message containing two BCs, with the first BC = speech and the second BC = UDI/TA, and two HLCs, with the first HLC = telephony and the second HLC = videoconf_ic, and not containing a LLC.

videoconference fallback not allowed SETUP message: SETUP message containing a single BC = UDI/TA and a single HLC = videoconf_ic, and not containing a LLC.

videoconference SETUP message for CR2: SETUP message containing a single BC = UDI and a single HLC = videoconf_sc. The SETUP message is used to establish the second connection in a videoconference call requiring two connections.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ATS	Abstract Test Suite
BC	Bearer Capability information element
CR1	Call Reference for the first call
CR2	Call Reference for the second call
DSS1	Digital Subscriber Signalling System No. one
HLC	High Layer Compatibility information element
ISDN	Integrated Services Digital Network
IUT	Implementation Under Test
LLC	Low Layer Compatibility information element
PI	Progress Indicator information element
PICS	Protocol Implementation Conformance Statement
PIXIT	Protocol Implementation eXtra Information for Testing
TP	Test Purpose
TSS	Test Suite Structure
UDI	Unrestricted Digital Information
UDI/TA	Unrestricted Digital Information with Tones/Announcements

For TSS specific abbreviations, see clause 4.

4 Test Suite Structure (TSS)

The test suite is structured as a tree. Six test group levels are defined. The TSS is depicted in figure 1.

4.1 First test group level

The first test group level contains the name of the test suite:

- UT7VAC User side telephony 7 kHz, videotelephony teleservices, audiographic conference, videoconference and generic protocol.

4.2 Second test group level

The second test group level indicates whether the test purpose covers a requirement applicable to the generic protocol, the telephony 7 kHz protocol, the videotelephony protocol, the audiographic conference protocol or the videoconference protocol:

- GEN Generic requirements. The test purpose covers a requirement applicable for the generic part of EN 300 267-1 [5] (clause 5);
- TL7 Telephony 7 kHz teleservice. The test purpose covers a requirement applicable for the telephony 7 kHz part of EN 300 267-1 [5] (clause 6);
- VTL Videotelephony teleservice. The test purpose covers a requirement applicable for the videotelephony part of EN 300 267-1 [5] (clause 7);
- AGC Audiographic conference teleservice. The test purpose covers a requirement applicable for the audiographic conference part of EN 300 267-1 [5] (clause 8);
- VCF Videoconference teleservice. The test purpose covers a requirement applicable for the audiographic conference part of EN 300 267-1 [5] (clause 9).

The group for generic requirements does not appear in the TSS of the combined test purposes. None of the generic test purposes can be considered as testable.

4.3 Third test group level

The third test group level indicates whether the IUT is the calling or the called terminal:

- ORIG Calling User Interface;
- DEST Called User Interface.

4.4 Fourth test group level

The fourth test group level indicates whether the test purpose covers a requirement applicable to valid behaviour, to invalid behaviour or to inopportune behaviour:

- BV Valid behaviour test purpose;
- BO inOpportune Behaviour test purpose.

4.5 Fifth test group level

The fifth test group level indicates which kind of functionality is tested and, more precisely, whether the test purposes cover requirements applicable to fallback allowed, fallback not allowed or connection management. Three groups are defined:

- FBA FallBack Allowed: this group covers all tests where a fallback allowed SETUP message is sent to the IUT;
- FBN FallBack Not allowed: this group covers all tests where a fallback not allowed SETUP message is sent to the IUT;
- CMN Connection MaNagement: this group includes all other cases which do not test the response to or the sending of a fallback allowed or a fallback not allowed SETUP message. As a consequence, the clearing of a call and the establishment of a second connection for videotelephony is tested here.

4.6 Sixth test group level

The sixth test group level indicates the type of implementation to which the test purpose applies:

- ST An implementation which supports user requirements at the coincident S and T reference point;
- PT An implementation which supports user requirements for interworking with private ISDNs at the T reference point;
- ST_T An implementation which supports user requirements at the coincident S and T reference point or user requirements for interworking with private ISDNs at the T reference point.

This level group does not appear when only ST_T is included as a subgroup.

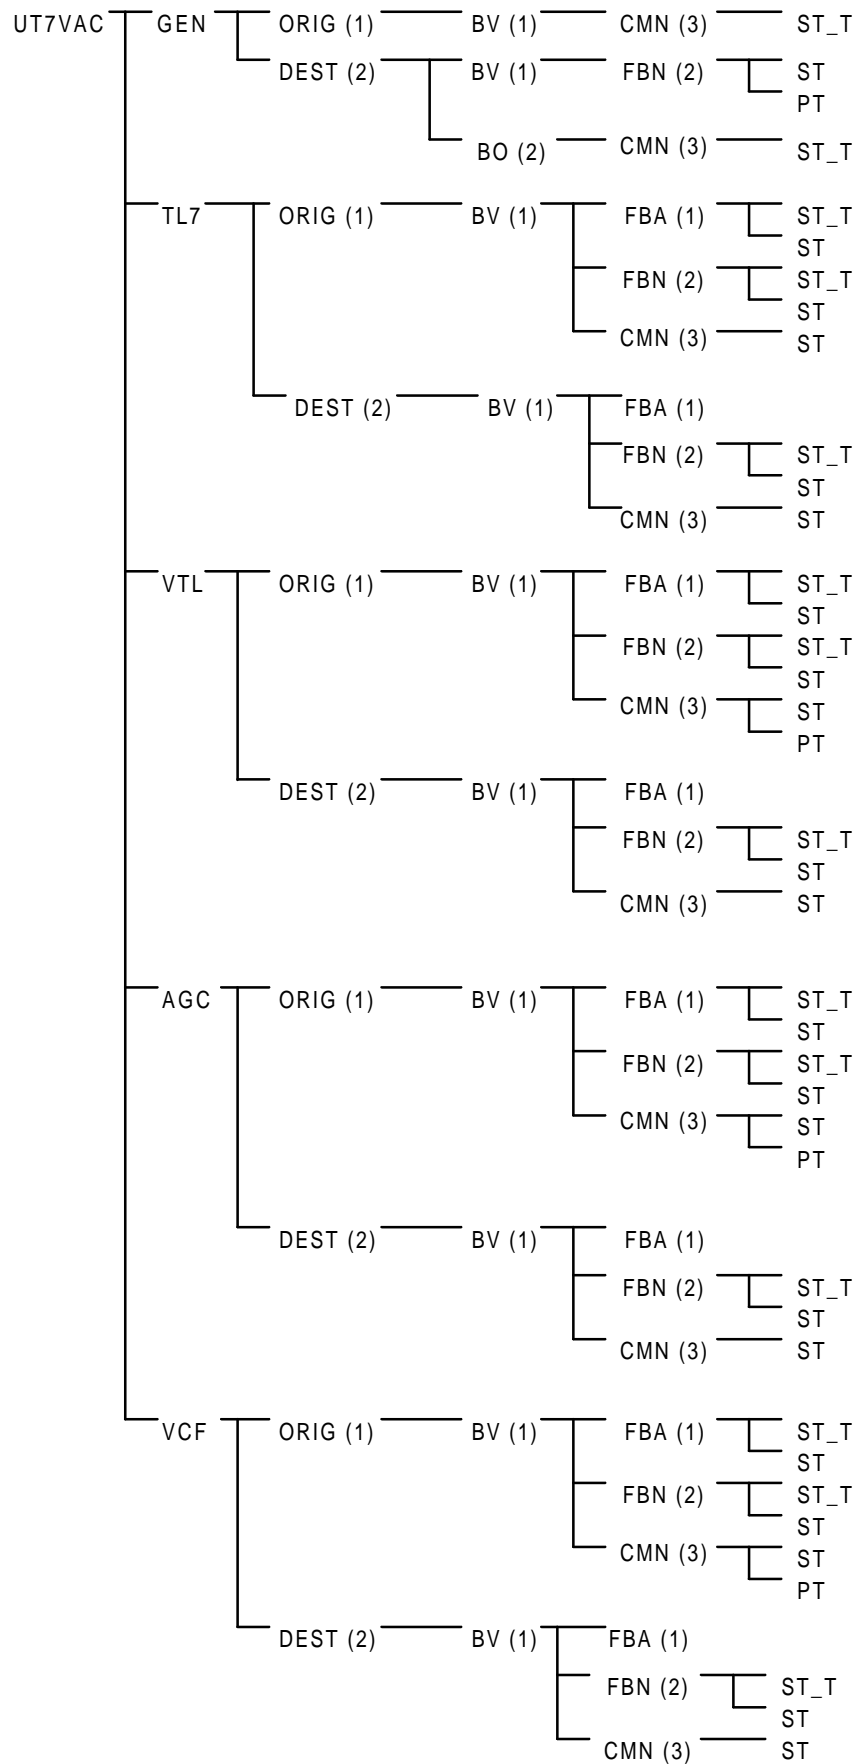

Figure 1: Test suite structure

5 Test purposes

5.1 Test purpose format

The structure of a test purpose identifier is defined in table 1.

Table 1: TP identifier naming convention

<requirement><nnn>_<nn>		
<requirement>	GTP	generic protocol requirement
	TTP	telephony 7 kHz requirement
	VTP	videotelephony requirement
	ATP	audiographic conference requirement
	CTP	videoconference requirement
<nnn>	1 st digit	1 Originating Interface; 2 Destination Interface
	2 nd digit	1 Valid; 2 Inopportune
	3 rd digit	1 Fallback Allowed; 2 Fallback Not Allowed; 3 Connection Management
<nn>	2 digits	sequential test case number

The test purposes are formatted as tables to increase readability. The table format is shown in table 2. Text in **bold** shows the text which is always present, normal text provides an explanation for each field.

Table 2: Structure of a single TP

Test purpose identifier	Reference to EN 300 267-1 [5]:	Other relevant reference:
TSS reference	The full test suite structure reference.	
Selection criteria	The criteria necessary in order to select the test. Unless otherwise specified, references are to EN 300 267-2 [6].	
Test purpose	Description of the test purpose.	
Cross reference	GTP/TTP/VTP/ATP/CTP cross reference data.	
Comments	Any relevant comments.	

The "Other relevant reference" field, where applicable, contains a reference to a specification document containing the whole, or part, of the requirement to be tested by the test purpose.

The "Selection criteria" field consists of a Boolean expression incorporating items from EN 300 267-2 [6] (in which case items are not prefixed by a reference number) and from EN 300 403-3 [8].

Some of the telephony 7 kHz, videotelephony, audiographic conference or videoconference test purposes are directly related, but not identical, to generic ones. Where such a relationship exists, the reference to the related generic test purpose is specified in the "Cross reference" field of the telephony 7 kHz, videotelephony, audiographic conference or videoconference test purpose. Generic test purposes test generic protocol requirements which define procedures that are additional to basic call requirements and also requirements which correspond to no particular IUT, but when parameterized with real values for bearer capability etc. give a test for a specific service.

5.2 Generic requirements

5.2.1 Calling user interface

5.2.1.1 Valid behaviour

5.2.1.1.1 Connection management

5.2.1.1.1.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

GTP113_01	Reference to EN 300 267-1 [5]: 5.5.1.1	Other relevant reference:
TSS reference	UT7VAC/GEN/ORIG/BV/CMN/ST_T	
Selection criteria	(R 3.1 AND MC 1.6) OR R 3.2	
Test purpose	Verify that the IUT, in the Null call state U0, when initiating a call which requires a second or subsequent connection, sends a SETUP message containing BC with a specification of an appropriate in-band signalling protocol.	
Cross reference		
Comments		

GTP113_02	Reference to EN 300 267-1 [5]: 5.5.1.1	Other relevant reference:
TSS reference	UT7VAC/GEN/ORIG/BV/CMN/ST_T	
Selection criteria	(R 3.1 AND MC 1.6) OR R 3.2	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and in the Null call state U0 for CR2, sends a SETUP message for CR2, containing BC with the same in-band signalling protocol specification as specified for the first connection CR1.	
Cross reference		
Comments		

GTP113_04	Reference to EN 300 267-1 [5]: 5.5.2	Other relevant reference:
TSS reference	UT7VAC/GEN/ORIG/BV/CMN/ST	
Selection criteria	R 3.1	
Test purpose	Verify that the IUT, in the Active call state U3, having sent a SETUP message, containing BC = UDI/TA, on receipt of tones and announcements from the network, presents the tones and announcements to the user in the B-channel.	
Cross reference		
Comments	Tones and announcements received from the network are as specified in ITU-T Recommendation G.711 [9]. Tones and announcements sent to the user are as specified in I-ETS 300 245-2 [1], clause 6.	

GTP113_05	Reference to EN 300 267-1 [5]: 5.5.2	Other relevant reference:
TSS reference	UT7VAC/GEN/ORIG/BV/CMN/ST	
Selection criteria	R 3.1	
Test purpose	Verify that the IUT, in the Active call state U10, having sent a SETUP message, containing BC = UDI/TA, on receipt of a DISCONNECT message containing PI = #8 and a tone or announcement from the network, presents the tones and announcements to the user in the B-channel.	
Cross reference		
Comments	Tones and announcements received from the network are as specified in ITU-T Recommendation G.711 [9]. Tones and announcements sent to the user are as specified in I-ETS 300 245-2 [1], clause 6.	

5.2.2 Called user interface

5.2.2.1 Valid behaviour

5.2.2.1.1 Fallback not allowed

5.2.2.1.1.1 User requirements at the coincident S and T reference point

GTP212_01	Reference to EN 300 267-1 [5]: 5.5.2	Other relevant reference: EN 300 403-1 [2] 5.2.6
TSS reference	UT7VAC/GEN/DEST/BV/FBN/ST	
Selection criteria	R 3.1	
Test purpose	Verify that the IUT, in the Null call state U0, on receipt of a SETUP message, containing BC = UDI/TA and PI = #1, connects to the B-channel.	
Cross reference		
Comments	Connection to the B-channel is in accordance with EN 300 403-1 [2] 5.2.8.	

5.2.2.1.1.2 User requirements for interworking with private ISDNs

GTP212_02	Reference to EN 300 267-1 [5]: 5.6.2, 5.5.2	Other relevant reference: EN 300 403-1 [2] 5.2.6
TSS reference	UT7VAC/GEN/DEST/BV/FBN/PT	
Selection criteria	R 3.2	
Test purpose	Verify that the IUT, in the Null call state U0, on receipt of a SETUP message, containing BC = UDI/TA, is capable of sending a CALL PROCEEDING, ALERTING, CONNECT or PROGRESS message containing PI = #1 or PI = #2 or PI = #4.	
Cross reference		
Comments	Sending of SETUP: interworking occurred within the IUT.	

5.2.2.2 Inopportune behaviour

5.2.2.2.1 Connection management

5.2.2.2.1.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

GTP223_01	Reference to EN 300 267-1 [5]: 5.6.6, 5.5.6.2	Other relevant reference: EN 300 403-1 [2] 5.3
TSS reference	UT7VAC/GEN/DEST/BO/CMN/ST_T	
Selection criteria	MC 1.6	
Test purpose	Verify that the IUT, in the Call received call state U7 for CR1 and in the Null call state U0 for CR2, on receipt of a videotelephony SETUP message for CR2, specifying a second videotelephony connection, rejects the SETUP message by sending a DISCONNECT or RELEASE COMPLETE message containing cause #21 "call rejected".	
Cross reference		
Comments	Rejection, by the destination IUT, of the establishment of a second connection when the first connection has not been established is in accordance with EN 300 403-1 [2], subclause 5.3.	

5.3 Telephony 7 kHz teleservice

5.3.1 Calling user interface

5.3.1.1 Valid behaviour

5.3.1.1.1 Fallback allowed

5.3.1.1.1.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

TTP111_01	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 a)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Null call state U0, when initiating a call and it allows fallback, sends a SETUP message containing two BCs, with the first BC = speech and the second BC = UDI/TA, HLC = telephony, and not containing LLC and enters the Call Initiated call state U1.	
Cross reference		
Comments		

TTP111_02	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 c), 6.5.1 e)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = UDI/TA, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (BC = UDI/TA): fallback allowed but did not occur. The IUT may send a connect acknowledge.	

TTP111_03	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 c), 6.5.1 e)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = UDI/TA, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (BC = UDI/TA): fallback allowed but did not occur. The IUT may send a connect acknowledge.	

TTP111_04	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 c), 6.5.1 f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = speech, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (BC = speech): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, at the destination user.	

TTP111_05	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 c), 6.5.1 f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = speech, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (BC = speech): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, at the destination user.	

TTP111_06	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 d), 6.5.1 f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Initiated call state U1, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CALL PROCEEDING message, containing PI = #5 and BC = speech, then on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, in the network.	

TTP111_07	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 d), 6.5.1 f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a telephony 7 kHz fallback allowed SETUP message, and having received a PROGRESS message, containing PI = #5 and BC = speech, on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, in the network.	

TTP111_08	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 d), 6.5.1 f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a telephony 7 kHz fallback allowed SETUP message, and having received an ALERTING message, containing PI = #5 and BC = speech, on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, in the network.	

TTP111_9	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 d), 6.5.1 f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/TL7/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Initiated call state U1, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CALL PROCEEDING message, containing PI = #5, but not containing BC, then on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, in the network.	

TTP111_10	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 d), 6.5.1. f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a telephony 7 kHz fallback allowed SETUP message, and having received a PROGRESS message, containing PI = #5, but not containing BC, on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, in the network.	

TTP111_11	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 d), 6.5.1. f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a telephony 7 kHz fallback allowed SETUP message, and having received an ALERTING message, containing PI = #5, but not containing BC, on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, in the network.	

TTP111_12	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 c), 6.5.1. f)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Initiated call state U1, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC): fallback allowed and occurred, to the telephony 3,1 kHz teleservice, at the destination user.	

5.3.1.1.1.2

User requirements at the coincident S and T reference point

TTP111_13	Reference to EN 300 267-1 [5]: 6.5.1 c), 6.5.1 e)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST	
Selection criteria	R 3.1 AND R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = UDI/TA, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (BC = UDI/TA): fallback allowed but did not occur.	

TTP111_14	Reference to EN 300 267-1 [5]: 6.5.1 c), 6.5.1 e)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBA/ST	
Selection criteria	R 3.1 AND R 1.1 AND MCu 21.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a telephony 7 kHz fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = UDI/TA, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (BC = UDI/TA): fallback allowed but did not occur.	

5.3.1.1.2 Fallback not allowed

5.3.1.1.2.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

TTP112_01	Reference to EN 300 267-1 [5]: 6.6, 6.5.1 1)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBN/ST_T	
Selection criteria	R 1.1	
Test purpose	Verify that the IUT, in the Null call state U0, to set up a telephony 7 kHz teleservice call for which fallback to 3,1 kHz is not allowed, sends a SETUP message containing a single BC = UDI/TA and HLC = telephony and enters the Call Initiated call state U1.	
Cross reference		
Comments		

TTP112_02	Reference to EN 300 267-1 [5]: 6.5.1 3)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBN/ST_T	
Selection criteria	R 1.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a SETUP message containing a single BC = UDI/TA and HLC = telephony, on receipt of a CONNECT message, not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

TTP112_03	Reference to EN 300 267-1 [5]: 6.5.1 3)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBN/ST_T	
Selection criteria	R 1.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a SETUP message containing a single BC = UDI/TA and HLC = telephony, on receipt of a CONNECT message not containing BC, enters the Active call state U10	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

5.3.1.1.2.2 User requirements at the coincident S and T reference point

TTP112_04	Reference to EN 300 267-1 [5]: 6.5.1 3)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBN/ST	
Selection criteria	R 3.1 AND R 1.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a SETUP message containing a single BC = UDI/TA and HLC = telephony, on receipt of a CONNECT message, not containing BC, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

TTP112_05	Reference to EN 300 267-1 [5]: 6.5.1 3)	Other relevant reference:
TSS reference	UT7VAC/TL7/ORIG/BV/FBN/ST	
Selection criteria	R 3.1 AND R 1.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a SETUP message containing a single BC = UDI/TA and HLC = telephony, on receipt of a CONNECT message, not containing BC, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

5.3.1.1.3 Connection management

5.3.1.1.3.1 User requirements at the coincident S and T reference point

TTP113_01	Reference to EN 300 267-1 [5]: 6.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.1
TSS reference	UT7VAC/TL7/ORIG/BV/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.1 AND MCu 6	
Test purpose	Verify that the IUT, in the Active call state U10, on request for call rearrangement by the user in a basic access configuration, before sending a SUSPEND message, switches to mode 0U (unframed), A-law in the B-channel.	
Cross reference		
Comments	Switching to mode 0U (unframed), A-law in the B-channel is specified in I-ETS 300 245-5 [7], I-ETS 300 281 [14], clause 7	

TTP113_02	Reference to EN 300 267-1 [5]: 6.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.4
TSS reference	UT7VAC/TL7/ORIG/BV/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.1 AND MCu 6	
Test purpose	Verify that the IUT, in the Resume request call state U17, on receipt of a RESUME ACKNOWLEDGE message, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments		

5.3.2 Called user interface

5.3.2.1 Valid behaviour

5.3.2.1.1 Fallback allowed

5.3.2.1.1.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

TTP211_01	Reference to EN 300 267-1 [5]: 6.6 b), 6.5.2.1 b)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.2	
Test purpose	Verify that the IUT, in the Null call state U0, receiving a telephony 7 kHz teleservice call for which fallback to 3,1 kHz is allowed, accepts a SETUP message containing two BCs, with the first BC = speech and the second BC = UDI/TA, HLC = telephony, and not containing LLC and continues with normal basic call handling.	
Cross reference		
Comments		

TTP211_02	Reference to EN 300 267-1 [5]: 6.6 b), 6.6 c), 6.5.2 b), 6.5.2 c)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.2	
Test purpose	Verify that the IUT, in the Call Present call state U6, having received a telephony 7 kHz fallback allowed SETUP message, when fallback does not occur, sends a CONNECT message containing BC = UDI/TA and enters the Connect Request call state U8.	
Cross reference	Related GTP: GTP211_01.	
Comments	Sending of CONNECT (BC = UDI/TA): fallback allowed but did not occur.	

TTP211_03	Reference to EN 300 267-1 [5]: 6.5.2 d)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.2	
Test purpose	Verify that the IUT, in the Connect Request call state U8, having received a telephony 7 kHz fallback allowed SETUP message and having sent a CONNECT message, containing BC = UDI/TA, on receipt of a CONNECT ACKNOWLEDGE message, enters the Active call state U10.	
Cross reference		
Comments	Sending of CONNECT (BC = UDI/TA): fallback allowed but did not occur.	

TTP211_04	Reference to EN 300 267-1 [5]: 6.6 b), 6.6 c), 6.5.2 c), 6.5.2 b)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBA/ST_T	
Selection criteria	R 1.1 AND MCu 21.2	
Test purpose	Verify that the IUT, in the Call Present call state U6, having received a telephony 7 kHz fallback allowed SETUP message, when fallback is allowed and occurs to 3,1 kHz, is capable of sending a CONNECT message containing BC = speech or does not contain BC and enters the Connect Request call state U8.	
Cross reference		
Comments	Sending of CONNECT (BC = speech): fallback allowed and occurred, to telephony 3,1 kHz (not within the private ISDN for T reference point).	

5.3.2.1.1.2

User requirements at the coincident S and T reference point

TTP211_05	Reference to EN 300 267-1 [5]: 6.5.2 d)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBA/ST	
Selection criteria	R 3.1 AND R 1.1 AND MCu 21.2	
Test purpose	Verify that the IUT, in the Connect Request call state U8, having received a telephony 7 kHz fallback allowed SETUP message and having sent a CONNECT message, containing BC = UDI/TA, on receipt of a CONNECT ACKNOWLEDGE message, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments		

5.3.2.1.1.3 User requirements for interworking with private ISDNs

TTP211_06	Reference to EN 300 267-1 [5]: 6.6 d)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBA/PT	
Selection criteria	R 3.2 AND R 1.1 AND MCu 21.2	
Test purpose	Verify that the IUT, in the Null call state U0, on receipt of a telephony 7 kHz fallback allowed SETUP message, when fallback is allowed and occurs to 3,1 kHz, is capable of sending a CALL PROCEEDING, PROGRESS or ALERTING message containing PI = #5 and BC = speech or does not contain BC and enters the relevant basic call state.	
Cross reference		
Comments	Sending of CALL PROCEEDING, PROGRESS or ALERTING: Fallback allowed and occurred, to telephony 3,1 kHz, within the private ISDN. PIXIT: How to configure the IUT to fallback within the private ISDN?	

5.3.2.1.2 Fallback not allowed

5.3.2.1.2.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

TTP212_01	Reference to EN 300 267-1 [5]: 6.6, 6.5.2.1 1)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBN/ST_T	
Selection criteria	R 1.1	
Test purpose	Verify that the IUT, in the Null call state U0, receiving a telephony 7 kHz teleservice call for which fallback to 3,1 kHz is not allowed, accepts a SETUP message containing a single BC = UDI/TA and HLC = telephony and continues with normal basic call handling.	
Cross reference		
Comments		

5.3.2.1.2.2 User requirements at the coincident S and T reference point

TTP212_02	Reference to EN 300 267-1 [5]: 6.5.2 2)	Other relevant reference:
TSS reference	UT7VAC/TL7/DEST/BV/FBN/ST	
Selection criteria	R 3.1 AND R 1.1	
Test purpose	Verify that the IUT, in the Connect Request call state U8, having received a telephony 7 kHz fallback not allowed SETUP message, and having sent a CONNECT message, on receipt of a CONNECT ACKNOWLEDGE message, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments		

5.4 Videotelephony teleservice

5.4.1 Calling user interface

5.4.1.1 Valid behaviour

5.4.1.1.1 Fallback allowed

5.4.1.1.1.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

ATP113_01	Reference to EN 300 267-1 [5]: 8.5.1.2, 5.5.1.1 b)	Other relevant reference: ETS 300 143 [3]
TSS reference	UT7VAC/AGC/ORIG/BV/AGC/CMN/ST	
Selection criteria	R 3.1 AND R 1.3 AND MC 1.6	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and in the Null call state U0 for CR2, when during the capability exchange in mode initialization in the first B-channel it has received and sent 2B and video capabilities, sends an audiographic conference SETUP message for CR2 and enters the Call Initiated call state U1.	
Cross reference	Related GTP: GTP113_02.	
Comments	Sending of audiographic conference SETUP for CR2.	

ATP113_02	Reference to EN 300 267-1 [5]: 8.5.1.2	Other relevant reference: ETS 300 144 [3]
TSS reference	UT7VAC/AGC/ORIG/BV/AGC/CMN/ST	
Selection criteria	R 3.1 AND R 1.3 AND MC 1.6	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and in the Outgoing Call Proceeding call state U3 for CR2, having sent an audiographic conference SETUP message for CR2, on receipt of a CONNECT message for CR2, sends multiframe structures and gains multiframe alignment and synchronization on both B-channels.	
Cross reference		
Comments	Receipt of CONNECT (no BC, no HLC): connection II established.	

ATP113_03	Reference to EN 300 267-1 [5]: 8.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.1
TSS reference	UT7VAC/AGC/ORIG/BV/AGC/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.3 AND MCu 6	
Test purpose	Verify that the IUT, in the Active call state U10, on request for call rearrangement by the user in a basic access configuration, before sending a SUSPEND message, switches to mode 0U (unframed), using procedure P in the B-channel.	
Cross reference		
Comments	Switching to mode 0U (unframed), A-law in the B-channel follows procedure P described in ETS 300 145 [4], subclause 6.3.1.	

ATP113_04	Reference to EN 300 267-1 [5]: 8.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.1
TSS reference	UT7VAC/AGC/ORIG/BV/AGC/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.3 AND MC 1.6 AND MCu 6	
Test purpose	Verify that the IUT in the Active call state U10 for CR1 and CR2, on request for call rearrangement by the user in a basic access configuration, before sending a SUSPEND message for CR1 and CR2, switches to mode 0U (unframed), using procedure P in the B-channel.	
Cross reference		
Comments	Switching to mode 0U (unframed), A-law in the B-channel follows procedure P described in ETS 300 145 [4], subclause 6.3.1.	

ATP113_05	Reference to EN 300 267-1 [5]: 8.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.1
TSS reference	UT7VAC/AGC/ORIG/BV/AGC/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.3 AND MC 1.6 AND MCu 6	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and CR2, on request for call rearrangement by the user in a basic access configuration, sends a SUSPEND message for CR1 and CR2, each containing a Call identity information element with its call identity field set to a different value and enters the Suspend Request call state U15.

TSS reference	UT7VAC/VCF/ORIG/BV/FBA/ST	
Selection criteria	R 3.1 AND R 1.4 AND MCu 21.1 AND MCu 22.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a videoconference fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = UDI/TA and HLC = videoconf_ic, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (BC = UDI/TA, HLC = videoconf_ic): fallback allowed but did not occur at the destination user.	

CTP111_16	Reference to EN 300 267-1 [5]: 9.5.1.1 c), 9.5.1.1 g), 6.5.1 e)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/FBA/ST	
Selection criteria	R 3.1 AND R 1.4 AND MCu 21.1 AND MCu 22.1	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a videoconference fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = UDI/TA and HLC = telephony, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (BC = UDI/TA, HLC = telephony): fallback allowed and occurred, to the telephony 7 kHz teleservice, at the destination user.	

CTP111_17	Reference to EN 300 267-1 [5]: 9.5.1.1 c), 9.5.1.1 g), 6.5.1 e)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/FBA/ST	
Selection criteria	R 3.1 AND R 1.4 AND MCu 21.1 AND MCu 22.1	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a videoconference fallback allowed SETUP message, on receipt of a CONNECT message, containing BC = UDI/TA and HLC = telephony, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (BC = UDI/TA, HLC = telephony): fallback allowed and occurred, to the telephony 7 kHz teleservice, at the destination user.	

5.6.1.1.2 Fallback not allowed

5.6.1.1.2.1 User requirements at the coincident S and T reference point or for interworking with private ISDNs

CTP112_01	Reference to EN 300 267-1 [5]: 9.6, 9.5.1.1 1)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/FBN/ST_T	
Selection criteria	R 1.4	
Test purpose	Verify that the IUT, in the Null call state U0, to set up a videoconference call for which fallback to 7 kHz is not allowed, sends a SETUP message containing a single BC = UDI/TA and a single HLC = videoconf_ic and enters the Call Initiated call state U1.	
Cross reference		
Comments		

CTP112_02	Reference to EN 300 267-1 [5]: 9.5.1.1 3)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/FBN/ST_T	
Selection criteria	R 1.4	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a videoconference fallback not allowed SETUP message, on receipt of a CONNECT message not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

CTP112_03	Reference to EN 300 267-1 [5]: 9.5.1.1 3)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/FBN/ST_T	
Selection criteria	R 1.4	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a videoconference fallback not allowed SETUP message, on receipt of a CONNECT message not containing BC, enters the Active call state U10.	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

5.6.1.1.2.2 User requirements at the coincident S and T reference point

CTP112_04	Reference to EN 300 267-1 [5]: 9.5.1.1 3)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/FBN/ST	
Selection criteria	R 3.1 AND R 1.4	
Test purpose	Verify that the IUT, in the Outgoing Call Proceeding call state U3, having sent a videoconference fallback not allowed SETUP message, on receipt of a CONNECT message, not containing BC, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

CTP112_05	Reference to EN 300 267-1 [5]: 9.5.1.1 3)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/FBN/ST	
Selection criteria	R 3.1 AND R 1.4	
Test purpose	Verify that the IUT, in the Call Delivered call state U4, having sent a videoconference fallback not allowed SETUP message, on receipt of a CONNECT message, not containing BC, sends multiframe structures and starts initialization procedure in the B-channel.	
Cross reference		
Comments	Receipt of CONNECT (no BC), fallback not allowed.	

5.6.1.1.3 Connection management

5.6.1.1.3.1 User requirements at the coincident S and T reference point

CTP113_01	Reference to EN 300 267-1 [5]: 9.5.1.2, 5.5.1.1 b)	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/CMN/ST	
Selection criteria	R 3.1 AND R 1.4 AND MC 1.6	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and in the Null call state U0 for CR2, when during the capability exchange in mode initialization in the first B-channel it has received and sent 2B and video capabilities, sends a videoconference SETUP message for CR2 and enters the Call Initiated call state U1.	
Cross reference	Related GTP: GTP113_02.	
Comments	Sending of videoconference SETUP for CR2.	

CTP113_02	Reference to EN 300 267-1 [5]: 9.5.1.2	Other relevant reference:
TSS reference	UT7VAC/VCF/ORIG/BV/CMN/ST	
Selection criteria	R 3.1 AND R 1.4 AND MC 1.6	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and in the Outgoing Call Proceeding call state U3 for CR2, having sent a videoconference SETUP message for CR2, on receipt of a CONNECT message for CR2, sends multiframe structures and gains multiframe alignment and synchronization on both B-channels.	
Cross reference		
Comments	Receipt of CONNECT (no BC, no HLC): connection II established.	

CTP113_03	Reference to EN 300 267-1 [5]: 9.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.1
TSS reference	UT7VAC/VCF/ORIG/BV/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.4 AND MCu 6	
Test purpose	Verify that the IUT, in the Active call state U10, on request for call rearrangement by the user in a basic access configuration, before sending a SUSPEND message, switches to mode 0U (unframed), A-law in the B-channel.	
Cross reference		
Comments	Switching to mode 0U (unframed), A-law in the B-channel follows procedure P described in ETS 300 145 [4], subclause 7.5.1	

CTP113_04	Reference to EN 300 267-1 [5]: 9.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.1
TSS reference	UT7VAC/VCF/ORIG/BV/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.4 AND MC 1.6 AND MCu 6	
Test purpose	Verify that the IUT in the Active call state U10 for CR1 and CR2, on request for call rearrangement by the user in a basic access configuration, before sending a SUSPEND message for CR1 and CR2, switches to mode 0U (unframed), A-law in the B-channel.	
Cross reference		
Comments	Switching to mode 0U (unframed), A-law in the B-channel follows procedure P described in ETS 300 145 [4], subclause 7.5.1.	

CTP113_05	Reference to EN 300 267-1 [5]: 9.5.6	Other relevant reference: EN 300 403-1 [2] 5.6.1
TSS reference	UT7VAC/VCF/ORIG/BV/CMN/ST	
Selection criteria	EN 300 403-3 [8] R 3.1 AND R 1.4 AND MC 1.6 AND MCu 6	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and CR2, on request for call rearrangement by the user in a basic access configuration, sends a SUSPEND message for CR1 and CR2, each containing a Call identity information element with its call identity field set to a different value and enters the Suspend Request call state U15.

Selection criteria	R 3.1 AND R 1.4 AND MC 1.6	
Test purpose	Verify that the IUT, in the Active call state U10 for CR1 and in the Connect Request call state U8 for CR2, having received a videoconference SETUP message for CR2 and having sent a CONNECT message, on receipt of a CONNECT ACKNOWLEDGE message, sends multiframe structures and gains multiframe alignment and synchronization on both B-channels.	
Cross reference		
Comments	Establishment of second connection at destination interface.	

6 Combined test purposes

Combined test purposes are used to enable the number of abstract test cases to be reduced by bringing together test purposes which are similar in their objective and which use the same preambles and PDUs. Even though some test purposes in the combined test purposes clause consist of only one test purpose, these still have a combined test purpose name associated with them to allow a one-to-one mapping between the test purposes and the corresponding test cases in the abstract test suite. Therefore, this clause contains the complete set of test purposes excluding the Generic ones.

6.1 Combined test purpose format

The structure of a combined test purpose identifier is defined in table 3. The digits correspond to the digits of the first TP included in the combined test purpose.

Table 3: Combined TP identifier naming convention scheme

CT<digit><digit><digit>_<digit><digit>	combined TP covering a telephony 7 kHz requirement.
CV<digit><digit><digit>_<digit><digit>	combined TP covering a videotelephony requirement.
CA<digit><digit><digit>_<digit><digit>	combined TP covering an audiographic conference requirement.
CC<digit><digit><digit>_<digit><digit>	combined TP covering a videoconference requirement.

The combined test purposes are formatted as tables to increase readability. The table format is shown in table 4. Text in **bold** shows the text which is always present, normal text provides an explanation for each field.

Table 4: Structure of a single combined TP

Combined Test purpose identifier	All included test purpose identifiers.	
Selection criteria	The criteria necessary in order to select the combined test.	
TSS reference	The full Test Suite Structure reference of the test purpose.	
First Test purpose identifier	Reference to EN 300 267-1 [5]:	Other relevant reference:

CTP211_03	Reference to EN 300 267-1 [5]: 9.5.2.1 d)	Other relevant reference: EN 300 403-1 [2] 5.2
TSS reference	UT7VAC/VCF/DEST/BV/FBA/ST_T	
Test purpose	Verify that the IUT, in the Connect Request call state U8, having received a videoconference fallback allowed SETUP message, and having sent a CONNECT message, containing BC = UDI/TA and HLC = videoconf_nex, on receipt of a CONNECT ACKNOWLEDGE message, enters the Active call state U10.	
CTP211_06	Reference to EN 300 267-1 [5]: 9.5.2.1 d)	Other relevant reference: EN 300 403-1 [2] 5.2
TSS reference	UT7VAC/VCF/DEST/BV/FBA/ST	
Selection criteria	R 3.1	
Test purpose	Verify that the IUT, in the Connect Request call state U8, having received a videoconference fallback allowed SETUP message, and having sent a CONNECT message, containing BC = UDI/TA and HLC = videoconf_nex, on receipt of a CONNECT ACKNOWLEDGE message, sends multiframe structures and starts initialization procedure in the B-channel.	
Comments	Sending of CONNECT: fallback allowed but did not occur.	

6.5.2.1.2 Fallback not allowed

CC212_01	CTP212_01, CTP212_02	
Selection criteria	R 1.4	
Combined TSS reference	UT7VAC/VCF/DEST/BV/FBN	
CTP212_01	Reference to EN 300 267-1 [5]: 9.5.2.1 1)	Other relevant reference: EN 300 403-1 [2] 5.2
TSS reference	UT7VAC/VCF/DEST/BV/FBN/ST_T	
Test purpose	Verify that the IUT, in the Null call state U0, receiving a videoconference call for which fallback is not allowed, accepts a SETUP message containing a single BC = UDI/TA and a single HLC = videoconf_ic and responds with a CALL PROCEEDING, ALERTING or CONNECT message and enters the relevant basic call state.	
CTP212_02	Reference to EN 300 267-1 [5]: 9.5.2.1 2)	Other relevant reference: EN 300 403-1 [2] 5.2
TSS reference	UT7VAC/VCF/DEST/BV/FBN/ST	
Selection criteria	R 3.1	
Test purpose	Verify that the IUT, in the Connect Request call state U8, having received a videoconference fallback not allowed SETUP message, and having sent a CONNECT message, on receipt of a CONNECT ACKNOWLEDGE message, sends multiframe structures and starts initialization procedure in the B-channel.	
Comments		

6.5.2.1.3 Connection management

CC213_01	CTP213_01
CC213_02	CTP213_02

7 Compliance

A generic or abstract test suite complying with this TSS&TP specification shall:

- consist of a set of test cases corresponding to the set or to a subset of the TPs specified in clauses 5 and 6;
- use a TSS which is an appropriate subset of the whole of the TSS specified in clause 4;
- use the same naming conventions for the test groups and test cases;
- maintain the relationship, specified in clauses 5 and 6, between the TPs and the entries in the PICS proforma, specified in EN 300 267-2 [6], to be used for test case selection;
- comply with ISO/IEC 9646-2 [12] and ISO/IEC 9646-3 [13].

Annex A (informative):

Cross reference: Generic, telephony 7 kHz, video telephony, audiographic conference and videoconference teleservices test purposes

A.1 Generic test purposes to telephony 7 kHz, videotelephony, audiographic conference and videoconference teleservices test purposes

Table A.1 lists all the generic test purposes. Each row shows the telephony 7 kHz, videotelephony, audiographic conference and videoconference teleservices test purpose(s) to which the indicated generic test purpose is related.

Table A.1

Generic TP	Telephony 7 kHz TP	Videotelephony TP	Audiographic conference TP	Videoconference TP
GTP113_01				
GTP113_02		VTP113_01	ATP113_01, ATP113_06	CTP113_01, CTP113_06
GTP212_01				
GTP212_02				
GTP233_01				

NOTE: The initial states specified for these test purposes are different to those in the related generic ones.

A.2 Telephony 7 kHz to videotelephony, audiographic conference and videoconference teleservices test purposes

Table A.2 lists all the telephony 7 kHz, videotelephony, audiographic conference and videoconference teleservices test purposes. Equivalent test purposes are listed on the same row: in some cases a telephony 7 kHz test purpose is equivalent to more than one videotelephony test purpose. The telephony 7 kHz group is a subset of the videotelephony group, with each telephony 7 kHz test purpose being a modified version of the equivalent videotelephony one(s) (e.g. compare TTP111_02 with VTP111_02).
