# EN 300 417-3-2 V1.1.4 (1999-05)

European Standard (Telecommunications series)

Transmission and Multiplexing (TM);
Generic requirements of transport functionality of equipment;
Part 3-2: Synchronous Transport Module-N (STM-N)
regenerator and multiplex section layer functions;
Implementation Conformance Statement (ICS)
proforma specification

## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available **free of charge** from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://www.etsi.org/ipr).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## **Foreword**

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Transmission and Multiplexing (TM).

The present document is one of a family of documents that has been produced in order to provide inter-vendor and inter-operator compatibility of Synchronous Digital Hierarchy (SDH) equipment.

The present document is part 3-2 of a multi-part EN covering the generic requirements of transport functionality of equipment, as identified below:

- Part 1-1: "Generic processes and performance".
- Part 1-2: "General information about Implementation Conformance Statement (ICS) proforma".
- Part 2-1: "Synchronous Digital Hierarchy (SDH) and Plesiochronous Digital Hierarchy (PDH) physical section layer functions".
- Part 2-2: "Synchronous Digital Hierarchy (SDH) and Plesiochronous Digital Hierarchy (PDH) physical section layer functions; Implementation Conformance Statement (ICS) proforma specification".
- Part 3-1: "Synchronous Transport Module-N (STM-N) regenerator and multiplex section layer functions".
- Part 3-2: "Synchronous Transport Module-N (STM-N) regenerator and multiplex section layer functions; Implementaion Conformance Statement (ICS) proforma specification".
- Part 4-1: "Synchronous Digital Hierarchy (SDH) path layer functions".
- Part 4-2: "Synchronous Digital Hierarchy (SDH) path layer functions; Implementation Conformance Statement (ICS) proforma specification".
- Part 5-1: "Plesiochronous Digital Hierarchy (PDH) path layer functions".
- Part 5-2: "Plesiochronous Digital Hierarchy (PDH) path layer functions; Implementation Conformance Statement (ICS) proforma specification".
- Part 6-1: "Synchronization layer functions".
- Part 6-2: "Synchronization layer functions; Implementation Conformance Statement (ICS) proforma specification".
- Part 7-1: "Auxiliary layer functions".
- Part 7-2: "Auxiliary layer functions; Implementation Conformance Statement (ICS) proforma specification".
- Parts 2 to 7 specify the layers and their atomic functions.
  - NOTE 1: The present document does not currently address configuration management.
  - NOTE 2: The SDH radio equipment functional blocks are addressed by ETSI WG TM4.

Various of the above parts have previously been published as parts of ETS 300 417.

They have been converted into parts of EN 300 417 without technical changes, but some editorial changes have been necessary (e.g. references). In particular:

- Parts 2-1, 2-2 and 3-2 have been modified to take account of editorial errors present in edition 1.
- Part 1-1 has had its title change of to align with other parts published at a later date.

Also note that in the meantime parts 8-1 and 8-2 together will all parts x-3 (Abstract Test Suites) have been stopped.

This version of the present document has been published because the previous two versions had incorrect dates in the transposition table.

National transposition dates	
Date of latest announcement of this EN (doa):	31 August 1999
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	29 February 2000
Date of withdrawal of any conflicting National Standard (dow):	29 February 2000

## Introduction

To evaluate conformance of a particular implementation, it is necessary to have a statement of which capabilities and options have been implemented for a telecommunication specification. Such a statement is called an Implementation Conformance Statement (ICS).

A client of a test laboratory who requests a conformance / approval test shall provide to the test laboratory a completed ICS proforma for each layer to be tested and a detailed system description of the implementation.

The ICS proforma is not another complete description of the related specification, but rather a compact form of its static conformance requirements, to be used by the test laboratory to identify which test shall be performed on a given implementation. Not every feature of a profile specification is contained in the related ICS proforma. For particular cases requiring specific information the ICS can refer to the appropriate clause of the related specification by means of references, notes and or comments.

The ICS proforma captures the implementation flexibility allowed by the related specification and details which option are left to the implementor, which are conditionally dependent on other option taken by the implementor.

## 1 Scope

The present document provides the Implementation Conformance Statement (ICS) proforma specification for the Synchronous Transport Module-1 (STM-1), STM-4 and STM-16 regenerator section and multiplex section layer functions defined in EN 300 417-3-1 [2] in compliance with the relevant requirements, and in accordance with the relevant guidance given in ISO/IEC 9646-7 [7] and ETS 300 406 [3].

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.
- A non-specific reference to an ETS shall also be taken to refer to later versions published as an EN with the same number.

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

- terms defined in EN 300 417-3-1 [2];
- terms defined in ISO/IEC 9646-1 [6] and in ISO/IEC 9646-7 [7].

In particular, the following terms defined in ISO/IEC 9646-1 [6] apply:

**Implementation Conformance Statement (ICS):** a statement made by the supplier of an implementation or system claimed to conform to a given specification, stating which capabilities have been implemented. The ICS can take several forms: protocol ICS, profile ICS, profile specific ICS, information object ICS, etc.

**ICS proforma:** a document, in the form of a questionnaire, which when completed for an implementation or system becomes an ICS.

### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

A	Adaptation function
AcTI	Accepted Trace Identifier
ADM	Add-Drop Multiplexer

## 4 Conformance to this ICS proforma specification

If it claims to conform to the present document, the actual ICS proforma to be filled in by a supplier shall be technically equivalent to the text of the ICS proforma given in the annexes of the present document, and shall preserve the numbering / naming and ordering of the proforma items.

An ICS which conforms to the present document shall be a conforming ICS proforma completed in accordance with the instructions for completion given in clause A.1.

For each layer instance, it is needed to fill a separate ICS Proforma depending on the layer instance.

# Annex A (normative): ICS proforma for EN 300 417-3-1

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

## A.1 Guidance for completing the ICS proforma

## A.1.1 Purposes and structure

The purpose of this ICS proforma is to provide a mechanism whereby a supplier of an implementation of the requirements defined in EN 300 417-3-1 [2] may provide information about the implementation in a standardized manner.

The ICS proforma is subdivided into subclauses for the following categories of information:

- instructions for completing the ICS proforma;
- identification of the implementation;
- identification of the EN;
- global statement of conformance.

#### A.1.2 Abbreviations and conventions

The ICS proforma contained in this annex is comprised of information in tabular form in accordance with the guidelines presented in ISO/IEC 9646-7 [7].

#### Item column

The item column contains a number which identifies the item in the table.

#### **Item description column**

The item description column describes in free text each respective item (e.g. parameters, timers, etc.). It implicitly means "is <item description> supported by the implementation?".

#### Status column

The following notations, defined in ISO/IEC 9646-7 [7], are used for the status column:

m	mandatory - the capability is required to be supported.
0	optional - the capability may be supported or not.
n/a	not applicable - in the given context, it is impossible to use the capability.
X	prohibited (excluded) - there is a requirement not to use this capability in the given context.
o.i	qualified optional - for mutually exclusive or selectable options from a set. "i" is an integer which identifies an unique group of related optional items and the logic of their selection which is defined immediately following the table.

ci

conditional - the requirement on the capability ("m", "o", "x" or "n/a") depends on the support of other optional or conditional items. "i" is an integer identifying an unique conditional status expression which is defined immediately following the table. For nested conditional expressions, the syntax "IF ... THEN (IF ... THEN ... ELSE...) ELSE ..." shall be used to avoid ambiguities.

#### Reference column

The reference column gives reference to EN 300 417-3-1 [2], except where explicitly stated otherwise.

#### Support column

The support column shall be filled in by the supplier of the implementation. The following common notations, defined in ISO/IEC 9646-7 [7], are used for the support column:

Y or y supported by the implementation.

N or n not supported by the implementation.

N/A, n/a or - no answer required (allowed only if the status is n/a, directly or after evaluation of a conditional

status).

If this ICS proforma is completed in order to describe a multiple-profile support in a system, it is necessary to be able to answer that a capability is supported for one profile and not supported for another. In that case, the supplier shall enter the unique reference to a conditional expression, preceded by "?" (e.g. ?3). This expression shall be given in the cell provided at the bottom of the table. It uses predicates defined in the SCS, each of which refers to a single profile and which takes the value TRUE if and only if that profile is to be used.

EXAMPLE 1: ?3: IF prof1 THEN Y ELSE N.

It is also possible to provide a comment to an answer in the space provided at the bottom of the table.

#### Values allowed column

The values allowed column contains the values or the ranges of values allowed.

#### Values supported column

The values supported column shall be filled in by the supplier of the implementation. In this column, the values or the ranges of values supported by the implementation shall be indicated.

#### Mnemonic column

The mnemonic column contains mnemonic identifiers for each item.

#### References to items

For each possible item answer (answer in the support column) within the ICS proforma exists a unique reference, used, for example, in the conditional expressions. It is defined as the table identifier, followed by a solidus character "/", followed by the item number in the table. If there is more than one support column in a table, the columns shall be discriminated by letters (a, b, etc.), respectively.

EXAMPLE 2: C.5/4 is the reference to the answer of item 4 in table 5 of annex C.

EXAMPLE 3: C.6/3b is the reference to the second answer (i.e. in the second support column) of item 3b in table 6 of annex C.

#### Prerequisite line

A prerequisite line takes the form: Prerequisite: cpredicate>.

A prerequisite line after a clause or table title indicates that the whole clause or the whole table is not required to be completed if the predicate is FALSE.

## A.1.3 Instructions for completing the ICS proforma

The supplier of the implementation shall complete the ICS proforma in each of the spaces provided. However, the tables containing in "user role" subclause shall only be completed for user implementations, and the tables containing in "network role" subclause shall only be completed for network implementations. If necessary, the supplier may provide additional comments separately.

More detailed instructions are given at the beginning of the different subclauses of the ICS proforma.

# Annex B (normative): ICS proforma for STM-1 regenerator section layer

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

## B.1 Identification of the implementation

Date of the statement

B 1 1

In the present document, an Implementation Under Test (IUT), and of course the identification of an IUT refers to an STM-1 Regenerator Section (RS1) layer instance implemented inside the System Under Test (SUT).

Identification of the IUT and the SUT in which it resides should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

<b>D.</b>

## B.2 Identification of the EN

This ICS proforma applies to the following standard:

EN 300 417-3-1: "Transmission and Multiplexing (TM); Generic requirements of transport functionality of equipment: STM-N regenerator and multiplex section layer functions".

# B.3 Global statement of conformance of STM-1 Regenerator Section (RS1) layer

Are all mandatory capabilities implemented (Yes/No) .....

NOTE: Answering "No" to this question indicates non-conformance to the EN specification. Non-supported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is non-conforming, on pages attached to the ICS proforma.

Answering "Yes" to this question indicates only that all the capabilities with the explicit status "m" are supported. It is not necessary to fill in the support column of the associated item.

## B.4 RS1 Layer function

## B.4.1 RS1 layer description

Table B.1: RS1 layer functions

Item	,	Reference	Status	Support
1	Regenerator section connection function (RS1_C).	4, figure 1	0	
2	Regenerator section trail termination source function (RS1_TT_So).	4, figure 1	o.101	
3	Regenerator section trail termination sink function (RS1_TT_Sk).	4, figure 1	o.101	
4	Regenerator Section to MS1 Layer Adaptation Source function (RS1/MS1_A_So).	4, figure 1	c101	
5	Regenerator Section to MS1 Layer Adaptation Sink function (RS1/MS1_A_Sk).	4, figure 1	c102	
6	Regenerator Section to DCC Layer Adaptation Source function (RS1/DCC_A_So).	4, figure 1	c103	
7	Regenerator Section to DCC Layer Adaptation Sink function (RS1/DCC_A_Sk).	4, figure 1	c104	
8	Regenerator Section to P0sP0s Layer Adaptation Source function (RS1/P0s_A_So-N).	4, figure 1	c103	
9	Regenerator Section to P0s Layer Adaptation Sink function (RS1/P0s_A_Sk-N).	4, figure 1	c104	
10	Regenerator Section to V0x Layer Adaptation Source function (RS1/V0x_A_So).	4, figure 1	c103	
11	Regenerator Section to V0x Layer Adaptation Sink function (RS1/V0x_A_Sk).	4, figure 1	c104	
12	This RS1 layer is part of an SDH Regenerator equipment.	EN 300 417-2-2 [17] table B.1/1	0	

o.101: It is mandatory to support at least one of these items -- at least one TT function present

c101: IF B.1/2 THEN m ELSE x

-- a TT\_So function should exist for A\_So function
c102: IF B.1/3 THEN m ELSE x

-- a TT\_Sk function should exist for A\_Sk function
c103: IF B.1/2 THEN o ELSE x

-- a TT\_So function should exist for A\_So function
c104: IF B.1/3 THEN o ELSE x

-- a TT\_Sk function should exist for A\_Sk function
-- a TT\_Sk function should exist for A\_Sk function

Comment: for a bi-directional layer both TT\_So and TT\_Sk functions are present, for a unidirectional layer just one of them can be present.

Item B.1/12 is the same as the one given in the reference column.

**Table B.2: Supervision processes** 

Item	Supervision process	Reference	Status	Support
1	Performance monitoring process.	EN 300 417-1-1 [1]	c201	
		subclauses 8.2-8.4		
2	Defect correlation process.	EN 300 417-1-1 [1]	c201	
		subclauses 8.2-8.3		

c201: IF B.1/3 THEN m ELSE n/a -- RS1\_TT\_Sk present

## B.4.2 RS1 layer transmission tables

Table B.3: Data stream structure

Item	Data stream structure	Reference	Status	Support
1	The CI at the RS1 connection point is	4	m	
	octet structured and 125 µs framed			
	with co-directional timing.			
	The RS1_CI is a fully formatted	4	m	
	STM-1 data stream.			
3		4, figure 2	m	
	(RS-OH) bytes are placed in rows 1 to			
	3 of columns 1 to 9 of the STM-1			
	frame.			

## B.4.2.1 RS1 connection function: RS1\_C

**Table B.4: Connection functionalities** 

Prerequisite: B.1/1 -- RS1\_C present

	Item	Connection functionalities	Reference	Status	Support
ĺ	1	For further study.	4.1	n/a	

## B.4.2.2 STM-1 regenerator section layer trail termination functions: RS1\_TT\_So and RS1\_TT\_Sk

#### B.4.2.2.1 Frame alignment signal

Table B.5: Frame Alignment Signal (FAS) byte location

Item	Frame Alignment Signal (FAS) byte location	Reference	Status	Support
1	The FAS is located in A1(1,1),	4.2.1, G.707 [14]	m	
	A1(1,2), A1(1,3), A2(1,4), A2(1,5),	subclause 9.2.2.1		
	A2(1,6) of the STM-1 frame.			

Table B.6: FAS byte structure

Iter	Frame Alignment Signal (FAS) byte structure	Reference	Status	Support
1		G.707 [14] subclause 9.2.2.1	m	

### B.4.2.2.2 FAS generation

**Table B.7: FAS insertion** 

Prerequisite: B.1/2 -- RS1\_TT\_So present

Item	Frame Alignment Signal (FAS) insertion	Reference	Status	Support
1	The RS1_TT_So inserts the STM-1	4.2.1, G.707 [14]	m	
	FAS A1A1A1A2A2A2 into the	subclause 9.2.2.1		
	RSOH.			

## B.4.2.2.3 Signal scrambling / descrambling

Table B.8: Scrambling / descrambling: principles

Item	Scrambling / descrambling: principles	Reference	Status	Support
	The operation of the scrambler / descrambler is functionally identical to that of a frame synchronous scrambler / descrambler of sequence length 127 operating at the line rate.	4.2.1, 4.2.2	m	
2	The generating polynomial is $1 + X^6 + X^7$ .	4.2.1, 4.2.2	m	

Table B.9: Scrambling process

Prerequisite: B.1/2 -- RS1\_TT\_So present

Item	Scrambling process	Reference	Status	Support
	on the Most Significant Bit (MSB) of	4.2.1	m	
	the byte (1,10) following the last byte of the STM-1 SOH in the first row.			
2	This bit and all subsequent bits to be scrambled are modulo 2 added to the output of the X <sup>7</sup> position of the scrambler.	4.2.1	m	
3	The scrambler runs continuously throughout the remaining STM-1 frame.	4.2.1	m	

**Table B.10: Descrambling process** 

Prerequisite: B.1/3 -- RS1\_TT\_Sk function present

ltem	Descrambling process	Reference	Status	Support
		4.2.2	m	
	incoming STM-1 signal except the first row of the RSOH.			

## B.4.2.2.4 In service error monitoring process

Table B.11: In service error monitoring: principles

Item	In service error monitoring:	Reference	Status	Support
	principles			
1	An Error Detection Code (EDC) is part of the characteristic information	EN 300 417-1-1 [1] subclause 7.3	m	
<u> </u>	for in service error monitoring.	0.707.[4.4]		
2	In service error monitoring parameter definition is block-based.	G.707 [14] subclause 9.2.2.4 note	m	
3	The block length is 2 430 bytes, corresponding to the STM-1 frame structure.		m	
4	The error monitoring is performed using Bit Interleaved Parity 8 (BIP-8).	4.2.1, G.707 [14] subclause 9.2.2.4	m	
5	The BIP-8 is calculated using even parity in such a manner that the bit in position x provides even parity over the x-bits of all the 8-bits sequences within the specified block.	G.707 [14] subclause 9.2.2.4 note	m	

Comments: The BIP-n is interpreted as checking 'n' separate interleaved parity check blocks. If any of the 'n' parity check fails (EDC Violation (EDCV)), the block is assumed to be in error.

**Table B.12: EDC location** 

ltem	Error Detection Code (EDC) location	Reference	Status	Support
	Regenerator Section EDC is located in byte B1(2,1) of the STM-1 frame.	4.2.1	m	

Table B.13: EDC processing: source direction

Prerequisite: B.1/2 -- RS1\_TT\_So present

Item	Error Detection Code (EDC) processing: source direction	Reference	Status	Support
	The BIP-8 is calculated over all bits of the previous STM-1 frame after scrambling.	4.2.1	m	
	BIP-8 code is inserted in B1 byte of the current STM-1 frame before scrambling.	4.2.1	m	

Table B.14: EDC processing: sink direction

Prerequisite: B.1/3 -- RS1\_TT\_Sk function present

Item	Error Detection Code (EDC) processing: sink direction	Reference	Status	Support
1	The incoming error monitoring byte B1 is recovered from the STM-1 signal after descrambling.	4.2.2	m	
2	The BIP-8 is calculated over all bits of the previous STM-1 frame before descrambling.	4.2.2	m	
3	Recovered B1 byte is compared with the calculated BIP-8.	4.2.2	m	
4	A difference between the computed and recovered B1 value is taken as evidence of one or more errors (nN_B) in the computation block.	4.2.2	m	

#### B.4.2.2.5 Trail Trace Identifier (TTI)

Table B.15: Trail Trace Identifier (TTI): principles

Item	Trail Trace Identifier (TTI): principles	Reference	Status	Support
1	A Trail Trace Identifier (TTI) is inserted by the termination source containing the local Access Point Identifier (APId) and TTI header (TxTI).	4.2.1, EN 300 417-1-1 [1] subclause 7.1	c150 1	
2	The content of the accepted TTI (AcTI) is compared by the trail termination sink function with the provisioned "expected TTI" (ExTI), identifying the expected remote AP.	4.2.2, EN 300 417-1-1 [1] subclauses 7.1and 8.2.1.3	c150 2	

c1501:IF B.1/2 THEN m ELSE n/a c1502: IF B.1/3 THEN m ELSE n/a -- RS1\_TT\_So present -- RS1\_TT\_Sk present

Table B.16: Trail Trace Identifier (TTI) byte location

Item	Trail Trace Identifier (TTI) byte location	Reference	Status	Support
	The Regenerator Section Trail trace Identifier (TTI) is located in byte	4.2.1	m	
	J0(1.7) of the STM-1 frame.			

Table B.17: Trail Trace Identifier (TTI) byte structure

Item	Trail Trace Identifier (TTI) byte structure	Reference	Status	Support
1	The RS TTI is a 16 byte string containing the 15 byte APId and a 1 byte header. The MSB of the header is a "1", the remaining 9 bits contain the CRC-7 value of the RS TTI. The MSB of the 15 APId bytes is "0".	EN 300 417-1-1 [1] subclause 7.1	m	
2	The CRC-7 word is the remainder after multiplication by $x^7$ and then division (modulo 2) by the generator polynomial $x^7 + x^3 + 1$ , of the polynomial representation of the RS TTI with the CRC bits set to binary zeroes.	EN 300 417-1-1 [1] subclause 7.1	m	
3	The 16 byte RS TxTI, is transferred via the Management Point to and from the trail termination function.	EN 300 417-1-1 [1] subclause 8.2.1.3	c1701	
4	The 16 byte RS ExTI and 16 byte RS AcTI are transferred via the Management Point to and from the trail termination function.	EN 300 417-1-1 [1] subclause 8.2.1.3	c1702	

c1701:IF B.1/2 THEN m ELSE n/a c1702:IF B.1/3 THEN m ELSE n/a

- -- RS1\_TT\_So present
- -- RS1\_TT\_Sk present

Table B.18: Trail Trace Identification: source direction

Prerequisite: B.1/2 -- RS1\_TT\_So present

Item	Trail Trace identification: source direction	Reference	Status	Support
1	The 16 byte RS TTI is transmitted	EN 300 417-1-1 [1]	m	
	continuously.	subclause 7.1		

Table B.19: Trail Trace identification: sink direction

Prerequisite: B.1/3 -- RS1\_TT\_Sk present

Item	Trail Trace Identification: sink direction	Reference	Status	Support
1	The RS1_TT_Sk supports mode 1	EN 300 417-1-1 [1] subclause 7.1	m	
2	The RS1_TT_Sk supports mode 2	EN 300 417-1-1 [1] subclause 7.1	m	
3	The TTI mode is provisionable by the EMF.	4.2.2	m	
	The RS1_TT_Sk recovers the 16 byte multiframe carried in byte J0 and assumes it as Received Trail Trace Identifier (RxTI). The RxTI is made available as AcTI for network management purposes.	4.2.2	m	

# B.4.2.3 RS1 layer to MS1 Layer adaptation functions: RS1/MS1\_A\_So and RS1/MS1\_A\_Sk

## B.4.2.3.1 RS1 layer to STM-1 Multiplex Section (MS1) layer multiplexing and demultiplexing processes

**Table B.20: Multiplexing** 

Prerequisite: B.1/4 -- RS1/MS1\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The RS1/MS1_A_So function	4.3.1	m	
	multiplexes the MS1_Cl data			
	(2 403 bytes / frame) into the STM-1			
	frame.			

**Table B.21: Demultiplexing** 

Prerequisite: B.1/5 -- RS1/MS1\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The RS1/MS1_A_Sk recovers the	4.3.2	m	
	MS1_CI data from the STM-1 frame.			

# B.4.2.4 RS1 layer to DCC Layer adaptation functions: RS1/DCC\_A\_So and RS1/DCC\_A\_Sk

### B.4.2.4.1 RS1 layer to DCC layer multiplexing and demultiplexing processes

**Table B.22: Multiplexing** 

Prerequisite: B.1/6 -- RS1/DCC\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	The DCC_CI data (192 kbit/s) are	4.3.3	m	
	multiplexed in D1, D2 and D3 bytes of			
	the STM-1 frame.			

Comments: DCC transmission can be "disabled" when the matrix connection in the connected DCC\_C function is removed.

**Table B.23: Demultiplexing** 

Prerequisite: B.1/7 -- RS1/DCC\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The DCC_CI data (192 kbit/s) are	4.3.4	m	
	demultiplexed from bytes D1 to D3.			

## B.4.2.5 RS1 layer to P0s layer adaptation functions: RS1/P0s\_A\_So-N and RS1/P0s\_A\_Sk-N

## B.4.2.5.1 RS1 layer to P0s layer multiplexing and demultiplexing processes

**Table B.24: Multiplexing** 

Prerequisite: B.1/8 -- RS1/P0s A So-N present

Item	Multiplexing	Reference	Status	Support
1	The RS1/P0s_A_So-E1 multiplexes a	4.3.5	o.2401	
	64 kbit/s orderwire information stream			
	into the RSOH byte E1.			
2	The RS1/P0s_A_So-F1 multiplexes a	4.3.5	o.2401	
	64 kbit/s user channel information			
	stream into the RSOH byte F1.			

o.2401: It is mandatory to support at least one of these items -- at least one RS1/P0s\_A\_So-N function present

**Table B.25: Demultiplexing** 

Prerequisite: B.1/9 -- RS1/P0s\_A\_Sk-N present

Item	Demultiplexing	Reference	Status	Support
	The RS1/P0s_A_Sk-E1 demultiplexes	4.3.6	o.2501	
	the P0s data from byte E1 of the RS			
	Overhead.			
2	The RS1/P0s_A_Sk-F1 demultiplexes	4.3.6	o.2501	
	the P0s data from byte F1 of the RS			
	Overhead.			

o.2501: It is mandatory to support at least one of these items -- at least one RS1/P0s\_A\_Sk-N function present

## B.4.2.5.2 RS1 layer to P0s layer frequency justification and bitrate adaptation processes

Table B.26: Frequency justification and bitrate adaptation: principles

Prerequisite: B.1/8 -- RS1/P0s\_A\_So-N present

lte	em	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
		The RS1/P0s_A_So-N function provides frequency justification and bitrate adaptation for a 64 kbit/s information stream. It takes P0s_CI as an unstructured bit-stream with a rate of 64 kbit/s ± 100 ppm and inserts it into the RSOH.	4.3.5	m	
	2	Frequency justification is performed by octet slip buffering.	4.3.5	m	

Table B.27: Frequency justification and bitrate adaptation: source direction

Prerequisite: B.1/8 -- RS1/P0s\_A\_So-N present

Item	Frequency justification and bitrate adaptation: source direction	Reference	Status	Support
1	The RS1/P0s_A_So- function provides for an elastic store (slip buffer) process. The are written into the store under control of the associated input clock. The data are read out of the store under control of the STM-1 clock, frame position and justification decision.	4.3.5	m	
2	Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification (slip) action, the reading of one 64 kbit/s octet (9 bits) is cancelled once. Upon a negative justification (slip) action, the same 64 kbit/s octet (9 bits) is read out a second time.	4.3.5	m	
3	The elastic store (slip buffer) accommodates at least 18 µs of wander without introducing errors.	4.3.5	m	

## B.4.2.6 RS1 layer to V0x layer adaptation functions: RS1/V0x\_A\_So and RS1/V0x\_A\_Sk

### B.4.2.6.1 RS1 layer to V0x layer multiplexing and demultiplexing processes

**Table B.28: Multiplexing** 

Prerequisite: B.1/10 -- RS1/V0x\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The RS1/V0x_A_So multiplexes the V0x_CI data (64 kbit/s) into the byte	4.3.7	m	
	location F1.			

**Table B.29: Demultiplexing** 

Prerequisite: B.1/11 -- RS1/V0x\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The RS1/V0x_A_Sk demultiplexes the	4.3.8	m	
	user channel data from RS Overhead			
	(byte F1).			

## B.4.3 Defect, fault and performance monitoring

## B.4.3.1 Trail termination point mode management

Table B.30: Trail termination point mode process

Prerequisite: B.1/3 -- RS1\_TT\_Sk function present

Item	Trail termination point status	Reference	Status	Support
	process			
1	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "not monitored" (NMON)	subclause 8.5		
	status.			
		EN 300 417-1-1 [1]	m	
	supports "monitored" (MON) status.	subclause 8.5		
3	The Trail Termination Point Mode	4.2.2	m	
	status is provisionable by the EMF.			

## B.4.3.2 Defect detection and clearance criteria

Table B.31: Trace Identifier Mismatch defect (dTIM)

Prerequisite: B.1/3 -- RS1\_TT\_Sk function present

Item	Trace Identifier Mismatch defect	Reference	Status	Support
	(dTIM)			
1	The RS1 dTIM defect is detected	EN 300 417-1-1 [1]	m	
	within a maximum period of 100 ms in	subclause 8.2.1.3		
	the absence of bit errors.			
2	The RS1 dTIM defect is cleared within	EN 300 417-1-1 [1]	m	
	a maximum period of 100 ms in the	subclause 8.2.1.3		
	absence of bit errors.			
3	The RS1 dTIM is suppressed during	EN 300 417-1-1 [1]	m	
	the reception of aSSF from the server	subclause 8.2.1.3		
	layer.			
4	The RS1 dTIM detection can be	EN 300 417-1-1 [1]	m	
	disabled (TIMdis).	subclause 8.2.1.3		

## B.4.3.3 Consequent action activation and clearance criteria

#### Table B.32: Alarm Indication Signal action (aAIS)

 $Prerequisite: B.1/3\ OR\ B.1/4\ OR\ B.1/9\ OR\ B.1/11\ --\ RS1\_TT\_Sk\ and/or\ RS1/MS1\_A\_So\ and/or\ RS1/P0s\_A\_Sk\ and/or\ RS1/V0X\_A\_Sk\ present$ 

Item	Alarm Indication Signal action (aAIS)	Reference	Status	Support
1	The RS1_TT_Sk outputs an all "1s" signal within 250 μs upon RS1 dTIM detection.	4.2.2	c3201	
2	The RS1_TT_Sk outputs an all "1"s signal within 250 μs upon CI_SSF reception.	4.2.2	c3201	
3	The RS1_TT_Sk outputs normal data within 250 μs when there is (are) no more defect(s) active.	4.2.2	c3201	
4	The RS1/MS1_A_So outputs an all "1"s signal within 250 μs upon CI_SSF reception.	4.2.2	c3202	
5	The frequency of the all "1s" signal is within the range of 155 520 kHz ± 20 ppm.	4.3.1	c3202	
6	The RS1/MS1_A_So outputs normal data within 250 µs when there is (are) no more defect(s) active.	4.3.1	c3202	
7	The RS1/P0s_A_Sk-N outputs an all "1s" signal within 1 ms upon Al_TSF reception.	4.3.6	c3203	
8	The frequency of the all "1s" signal is within the range of 64 kbit/s ± 20 ppm.	4.3.6	c3203	
9	The RS1/P0s_A_Sk-N outputs normal data within 1 ms when there is (are) no more defect(s) active.		c3203	
10	The RS1/V0x_A_Sk outputs an all "1s" signal within 1 ms upon AI_TSF reception.	4.3.8	c3204	
11	The frequency of the all "1s" signal is within the frequency limits for this signal.	4.3.8	c3204	
12	The RS1/V0x_A_Sk outputs normal data within 1 ms when there is (are) no more defect(s) active.	4.3.8	c3204	

c3201:IF B.1/3 THEN m ELSE n/a c3202:IF (B.1/4) THEN m ELSE n/a c3203:IF B.1/9 THEN m ELSE n/a c3204:IF B.1/11 THEN m ELSE n/a -- RS1\_TT\_Sk present -- RS1/MS1\_A\_So present

Table B.34: Trail Signal Fail action (aTSF)

Prerequisite: B.1/3 -- RS1\_TT\_Sk function present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The RS1_TT_Sk sets AI_TSF to	4.3.2	m	
	TRUE on RS1 dTIM detection.			
2	The RS1_TT_Sk sets AI_TSF to	4.3.2	m	
	TRUE on CI_SSF reception.			
3	The RS1_TT_Sk sets AI_TSF to	4.3.2	m	
	FALSE when there is (are) no more			
	defect(s) active.			

## B.4.3.4 Defect correlation

**Table B.35: Defect correlation** 

Prerequisite: B.2/2 -- Defect correlation process supported

Item	Defect correlation	Reference	Status	Support
	Under RS1 dTIM detection the RS1_TT_Sk generates a RS1 cTIM report if the port is in the monitoring state (MON).	4.2.2	c3501	
	All the generated fault cause (cXXX) are reported to the EMF.	EN 300 417-1-1 [1] subclause 8.1, figure 36	М	

c3501: IF B.1/3 THEN m ELSE n/a -- RS1\_TT\_Sk present

# Annex C (normative): ICS proforma for STM-1 multiplex section layer

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

## C.1 Identification of the implementation

In the present document, an Implementation Under Test (IUT), and of course the identification of an IUT refers to an STM-1 Multiplex Section (MS1) implemented inside the System Under Test (SUT).

Identification of the IUT and the SUT in which it resides should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

C.1.1	Date of the statement
C.1.2 IUT name:	Implementation Under Test (IUT) identification

# C.2 Identification of the EN

This ICS proforma applies to the following standard:

EN 300 417-3-1: "Transmission and Multiplexing (TM); Generic requirements of transport functionality of equipment: STM-N regenerator and multiplex section layer functions".

# C.3 Global statement of conformance of MS1 layer

Are all mandatory capabilities implemented (Yes/No) .....

NOTE: Answering "No" to this question indicates non-conformance to the EN specification. Non-supported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is non-conforming, on pages attached to the ICS proforma.

Answering "Yes" to this question indicates only that all the capabilities with the explicit status "m" are supported. It is not necessary to fill in the support column of the associated item.

# C.4 MS1 section layer function

# C.4.1 MS1 layer description

Table C.1: MS1 layer functions

Item	MS1 layer functions	Reference	Status	Support
1	Multiplex Section Connection function (MS1_C).	5, figure 16	0

# C.4.2 MS1 layer transmission tables

Table C.5: Data stream structure

Item	Data stream structure	Reference	Status	Support
1	The CI at the MS1 connection point is	5	m	
	octet structured and 125 µs framed			
	with co-directional timing.			
2	The MS1_CI is an STM-1 data stream	5	m	
	without the Regenerator Section			
	Overhead.			
		5, figure 17	m	
	(MS-OH) bytes are placed in rows 5			
	to 9 of columns 1 to 9 of the STM-1			
	frame.			

Table C.6: Payload composition

Item	Payload composition	Reference	Status	Support
1	The payload is composed of one	5	m	
	VC-4 of 150 336 kbit/s.			

# C.4.2.1 MS1 connection function: MS1\_C

**Table C.7: Connection functionalities** 

Prerequisite: C.1/1 -- MS1\_C present

Item	Connection functionalities	Reference	Status	Support
1	For further study.	5.1	n/a	

# C.4.2.2 MS1 layer trail termination functions: MS1\_TT\_So and MS1\_TT\_Sk

# C.4.2.2.1 In service error monitoring process

Table C.8: In service error monitoring: principles

Item	In service error monitoring:	Reference	Status	Support
	principles			
1	An EDC is part of the characteristic	EN 300 417-1-1 [1]	m	
	information for in service monitoring purposes.	subclause 7.3		
2	In service error monitoring parameter	G.707 [14]	m	
	definition is block-based.	subclause 9.2.2.4		
		note		
3	The block length is 2 403 bytes (the	G.707 [14]	m	
	STM-1 frame structure without the	subclause 9.2.2.4		
	Regenerator Section Overhead).			
4	The error monitoring is performed	5.2.1, G.707 [14]	m	
	using Bit Interleaved Parity 24	subclause 9.2.2.4		
	(BIP-24).	note		
5	The BIP-24 is calculated using even	G.707 [14]	m	
	parity in such a manner that the bit in	subclause 9.2.2.4		
	position x provides even parity over	note		
	the x-bits of all the 24-bits sequences			
	within the specified block.			

Comments: The BIP-n is interpreted as checking 'n' separate interleaved parity check blocks. If any of the 'n' parity check fails (EDC Violation (EDCV)), the block is assumed to be in error.

**Table C.9: EDC location** 

Item	Error Detection Code (EDC) location	Reference	Status	Support
	Multiplex Section EDC is located in bytes B2(5,1), B2(5,2), B2(5,3) of the STM-1 frame.	5, figure 17	m	

Table C.10: EDC processing: source direction

Item	Error Detection Code (EDC) processing: source direction	Reference	Status	Support
	The BIP-24 is calculated over all bits, except those in the RSOH bytes, of the previous STM-1 frame.	5.2.1	m	
	BIP-24 code is inserted in the 3 B2 bytes of the current STM-1 frame.	5.2.1	m	

Table C.11: EDC processing: sink direction

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	Error Detection Code (EDC) processing: sink direction	Reference	Status	Support
1	The incoming error monitoring bytes B2 are recovered from the MSOH signal.	5.2.2	m	
2	The BIP-24 is calculated over all bits, except of those in the RSOH bytes, of the previous STM-1 frame.	5.2.2	m	
3	Recovered B2 bytes are compared with the calculated BIP-24.	5.2.2	m	
4	A difference between the computed and recovered B2 values is taken as evidence of one or more errors (nN_B) in the computation block.	5.2.2	m	

# C.4.2.2.2 Server layer status monitoring process

# C.4.2.2.2.1 MS1 Alarm Indication Signal (MS1 AIS)

Table C.12: Alarm Indication Signal processing: sink direction

Prerequisite: C.1/3 -- MS1\_TT\_Sk present

Ite	Alarm Indication Signal processing: sink direction	Reference	Status	Support

# C.4.2.2.3 Remote indicators monitoring process

# C.4.2.2.3.1 MS1 Remote Defect Indication (MS1 RDI)

Table C.13: Remote Defect Indication (RDI) location

Prerequisite: C.1/2 AND C.1/3 -- bi-directional layer supported

Item	Remote Defect Indication (RDI) location	Reference	Status	Support
1	The MS RDI is located in bits 6,7 and	5.2.1, 5.2.2	m	
	8 of byte K2(5.7) of the STM-1 frame.			

Table C.14: Remote Defect Indication (RDI) processing: source direction

Prerequisite: C.1/2 AND C.1/3 -- bi-directional layer supported

Item	Remote Defect Indication (RDI) processing: source direction	Reference	Status	Support
1	MS1 RDI is set upon activation of MS1_RI_RDI determined by the associated MS1_TT_Sk.	5.2.1	m	
2	MS1 RDI is cleared upon deactivation of MS1_RI_RDI determined by the associated MS1_TT_Sk.	5.2.1	m	
3	MS1 RDI signal is coded as a '110' bit pattern.	5.2.1	m	
4	The '000' bit pattern is inserted if no MS1_RI_RDI signal is active.	5.2.1	m	

Table C.15: Remote Defect Indication (RDI) processing: sink direction

Prerequisite: C.1/3 -- MS1\_TT\_Sk present

Item	Remote Defect Indication (RDI) processing: sink direction	Reference	Status	Support
	MS1_TT_Sk extracts and monitors bits 6 to 8 of K2 byte in order to detect the '110' bit pattern as evidence of	5.2.2	m	
	MS RDI condition.			

# C.4.2.2.3.2 MS1 Remote Error Indication (REI) (MS1 REI)

Table C.16: Remote Error Indication (REI): principles

Prerequisite: C.1/2 AND C.1/3 -- bi-directional layer supported

Item	Remote Error Indication (REI):	Reference	Status	Support
	principles			
1	The REI signal contains the exact	G.707 [14]	m	
	number of Errored Block (EB)	subclause 9.2.2.12		
	detected in the trail signal at the			
	far-end trail termination.			
2	The block length is 801 bits. The EDC	G.707 [14]	m	
	is BIP-1.	subclause 9.2.2.12		

Table C.17: Remote Error Indication (REI) location

Prerequisite: C.1/2 AND C.1/3 -- -- bi-directional layer supported

Item	Remote Error Indication (REI) location	Reference	Status	Support
	The MS REI is located in bits 1 to 8 of M1(9,6) byte of the STM-1 frame.	G.707 [14] subclause 9.2.2.12	m	

Table C.18: Remote Error Indication (REI) processing: source direction

Prerequisite: C.1/2 AND C.1/3 -- -- bi-directional layer supported

Item	Remote Error Indication (REI) processing: source direction	Reference	Status	Support
	The MS1_TT_So sets REI to the equivalent binary value of the number of EDCV detected by the monitoring process.	G.707 [14] subclause 9.2.2.12	m	

Table C.19: Remote Error Indication (REI) processing: sink direction

Prerequisite: C.1/3 -- MS1\_TT\_Sk present

Item	Remote Error Indication (REI) processing: sink direction	Reference	Status	Support
	The MS1_TT_Sk extracts the MS1 REI from the incoming STM-1 signal.	5.2.2	m	
	The MS1_TT_Sk interprets the MS1 REI as given in G.707 [14] subclause 9.2.2.12.	G.707 [14] subclause 9.2.2.12	m	

# C.4.2.3 MS1 layer to S4 layer adaptation functions: MS1/S4\_A\_So and MS1/S4\_A\_Sk

**Table C.20: Adaptation process** 

Prerequisite: C.1/4 OR C.1/5 -- MS1/S4\_A\_So and/or MS1/S4\_A\_Sk present

Item	Adaptation process	Reference	Status	Support
1	The MS1/S4_A_So function provides	5.3.1	c2001	
	frequency justification and bitrate			
	adaptation for a VC-4 signal,			
	represented by a nominally			
	$(261 \times 9 \times 64) = 150 336 \text{ kbit/s}$			
	information stream and the related			
	frame phase with a frequency			
	accuracy within ± 4,6 ppm, to be			
	multiplexed into an STM-1 signal.			
2	The MS1/S4_A_Sk recovers the VC-4	5.3.2	c2002	
	data with frame phase information			
	from the STM-1 stream.			

c2001: IF C.1/4 THEN m ELSE n/a -- MS1/S4\_A\_So present c2002: IF C.1/5 THEN m ELSE n/a -- MS1/S4\_A\_Sk present

# C.4.2.3.1 MS1 layer to S4 Layer frequency justification and bitrate adaptation processes

Table C.21: Frequency justification and bitrate adaptation: principles

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
1	Frequency justification is performed	5.3.1	m	
	by pointer adjustments.			

Table C.22: Frequency justification and bitrate adaptation: source direction

Item		Reference	Status	Support
1	adaptation: source direction The MS1/S4_A_So function provides for an elastic store (buffer) process. The data and frame start signals are written into the store under control of the associated input clock. The data and frame start signals are read out of the store under control of the VC-4 clock, frame position and justification decision.	5.3.1	m	
2	Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification action, the reading of 24 data bits are cancelled once and no data written at the three positions H3+1. Upon a negative justification action, an extra 24 data bits are read out once into the three positions H3.	5.3.1	m	
3	Consecutive pointer operations shall be separated by at least three frames (i.e. every fourth frame) in which the pointer value remains constant.	5.3.1	m	
4	The buffer hysteresis is at least 12 bytes.	5.3.1	m	
5	The size of the buffer for the elastic store process is for further study.	5.3.1	n/a	

# C.4.2.3.2 MS1 layer to S4 layer alignment process

**Table C.23: Alignment process principles** 

Prerequisite: C.1/4 OR C.1/5 -- MS1/S4\_A\_So and/or MS1/S4\_A\_Sk present

	ltem	Alignment process principles	Reference	Status	Support
	1	The alignment process is carried out	G.707 [14]	m	
		by the processing of the AU-4 pointer	subclause 8.1		
		which is aligned in the STM-1 payload			
		in fixed position relative to the STM-1			
L		frame.			
	2	The location of the first byte of the	G.707 [14]	m	
		VC-4 with respect to the AU-4 pointer	subclause 8.1.2		
		is given by the related AU-4 pointer			
L		value in three bytes increment.			

Comments: The pointer value gives a measure of the phase offset between the VC-4 stream and the STM-1 frame.

#### Table C.24: AU-4 pointer and alignment byte location

Prerequisite: C.1/4 OR C.1/5 -- MS1/S4\_A\_So and/or MS1/S4\_A\_Sk present

Item	AU-4 pointer and alignment byte	Reference	Status	Support
	location			
1		5.3.1, G.707 [14]	m	
	in the STM-1 frame are allocated to	subclauses 8.1-8.1.1		
	the alignment process.			
	The AU-4 pointer is located into	5.3.1, G.707 [14]	m	
	H1(4,1) and H2(4,4) bytes of the	subclauses 8.1-8.1.1		
	STM-1 frame.			

Table C.25: AU-4 pointer and alignment byte structure

Prerequisite: C.1/4 OR C.1/5 -- MS1/S4\_A\_So and/or MS1/S4\_A\_Sk present

Item	· · ·       · · · ·   · · · · · · · ·	Reference	Status	Support
	structure			
1	The content of H1(4,1) and	G.707 [14]	m	
	H2(4,4) bytes is viewed as one	subclause 8.1.2		
	pointer word.			
2	Bits 1 through 4 of the pointer word	G.707 [14]	m	
	carry the New Data Flag (NDF).	subclause 8.1.2		
3	Bits 5 and 6 of the pointer word,	5.3.1, G.707 [14]	m	
	named ss bits, carry the AU-n type	subclause 8.1.2		
	code.			
	They are set to '10'.			
4	Bits 7 through 16 (last ten bits) of the	G.707 [14]	m	
	pointer word carry the pointer value.	subclause 8.1.2		
5	The AU-4 pointer value is a binary	G.707 [14]	m	
	number with a range of 0 to 782.	subclause 8.1.2		
6	Bytes (4,2) and (4,3) contain the fixed	5.3.1, G.707 [14]	m	
	stuff code $Y = 1001 \text{ ss}11$ .	subclause 8.1.2		
	Bits ss are undefined.			
7	Bytes (4,5) and (4,6) contain the fixed	5.3.1, G.707 [14]	m	
	stuff code '1' = 1111 1111.	subclause 8.1.2		
8	H3(4,7), H3(4,8), H3(4,9) bytes are	G.707 [14]	m	
	the negative justification	subclause 8.1.2		
	opportunity bytes.			
9	Bits 7,9,11,13,15 of the pointer word	G.707 [14]	m	
	(I bits) are the pointer incrementation	subclause 8.1.2		
	indication bits.			
10	Bits 8,10,12,14,16 of the pointer word	G.707 [14]	m	
	(D bits) are the pointer	subclause 8.1.2		
	decrementation indication bits.			

NOTE: Items C.25/3 and C.25/6 are contradictory but just reflect the base specification in ITU-T Recommendation G.707 [14] and EN 300 417-3-1 [2].

# C.4.2.3.2.1 AU-4 pointer generation

**Table C.26: Pointer generation principles** 

Prerequisite: C.1/4 -- MS1/S4\_A\_So present

Item	Pointer generation principles	Reference	Status	Support
1	The pointer is generated according to the pointer generation algorithm.	5.3.1, EN 300 417-1-1 [1]	m	
	une pointer generation algorithm.	annex A		
2	The pointer generation algorithm can be modelled by a finite state machine as shown in EN 300 417-1-1 [1] figure A.1. Four states can be identified:  NORM_state;  NDF_state;  INC_state;  DEC state.	EN 300 417-1-1 [1] annex A	m	
3	The transitions from the NORM state to the INC, DEC and NDF states are initiated by Elastic Store process events.	EN 300 417-1-1 [1] annex A	m	
4	The transitions from INC, DEC and NDF states to the NORM state occur autonomously under the generation of special pointer patterns.	EN 300 417-1-1 [1] annex A	m	
5	Definition of excessive pointer adjustments is for further study.	EN 300 417-1-1 [1] annex A	n/a	

**Table C.27: Pointer generation events** 

Item	Pointer generation events	Reference	Status	Support
1	thr_exc: elastic store filling exceeds	EN 300 417-1-1 [1]	m	
	an upper threshold.	annex A		
2	thr_und: elastic store filling falls	EN 300 417-1-1 [1]	m	
	below a lower threshold.	annex A		
3	FO_normal: normal frame offset.	EN 300 417-1-1 [1]	m	
		annex A		
4	FO_discont: frame offset	EN 300 417-1-1 [1]	m	
	discontinuity.	annex A		
5	A frame offset discontinuity occurs if	EN 300 417-1-1 [1]	m	
	an incoming NDF_enable or	annex A		
	3*new_point is received by the pointer			
	interpreter controlling the process of			
	writing into the elastic store.			
6	A frame offset discontinuity occurs if	EN 300 417-1-1 [1]	m	
	the Elastic Store overflow/underflow	annex A		
	condition is detected.			
7	The active offset is defined as the	EN 300 417-1-1 [1]	m	
	phase between the outgoing STM-1	annex A		
	and the VC-4.			
8	The active offset is undefined during a	EN 300 417-1-1 [1]	m	
	signal fail condition.	annex A		

Table C.28: Pointer generation actions

Item	Pointer generation actions	Reference	Status	Support
1	The norm_point action generates a	EN 300 417-1-1 [1]	m	
	transmitted pointer word with:	annex A		
	<ul> <li>NDF disabled (NDF bytes set to</li> </ul>			
	0110);			
	<ul> <li>pointer value set to active offset.</li> </ul>			
2	The inc_ind action generates a	EN 300 417-1-1 [1]	m	
	transmitted pointer word with:	annex A,		
	- NDF disabled (NDF bytes set to	G.707 [14]		
	0110);	subclause 8.1.5		
	- pointer value set to the active			
	offset and I-bits inverted.			
	After this action 3 stuffing bytes are			
	transmitted in the 3 bytes after the			
	third H3 byte of the AU-4 and the active offset is incremented by one			
	lunit.			
	If the previous pointer value is set to			
	its maximum value, the subsequent			
	pointer is set to zero.			
3	The <b>dec_ind action</b> generates a	EN 300 417-1-1 [1]	m	
	transmitted pointer word with:	annex A.		
	- NDF disabled (NDF bytes set to	G.707 [14]		
	0110);	subclause 8.1.5		
	- pointer value set to the active			
	offset and D-bits inverted.			
	After this action 3 data bytes are			
	transmitted in the 3 H3 bytes of the			
	AU-4 and the active offset is			
	decremented by one.			
	If the previous pointer value is zero,			
	the subsequent pointer is set to its			
	maximum value.			
4	The NDF_enable action generates a	EN 300 417-1-1 [1]	m	
	pointer word with:	annex A		
	- NDF enabled (NDF bytes set to			
	1001);			
	- pointer value set to the new offset.			
	After this action the active offset is			
	updated to the new offset value.		l	

Comments: I bits and D bits are, respectively, bits 7,9,11,13,15 and 8,10,12,14,16 of the pointer word.

Table C.29: Pointer generation: operation in NORM state

Item	Pointer generation: operation in NORM state	Reference	Status	Support
1	Reception: FO_normal. Transition to state: NORM. Action: norm_point.	EN 300 417-1-1 [1] annex A	m

# C.4.2.3.2.2 AU-4 pointer interpretation

**Table C.34: Pointer interpretation principles** 

Item	Pointer interpretation principles	Reference	Status	Support
1	The pointer is interpreted according to the pointer interpretation algorithm.	5.3.2, 5.3.4, EN 300 417-1-1 [1] annex B	m	
2	The pointer interpretation algorithm can be globally described by a state diagram as shown in EN 300 417-1-1 [1] figure C.1. Six states are defined:  NORMal_state (NORM);  AlS_state (AIS);  LOP_state (LOP);  INCrement_state (INC);  DECrement_state (DEC);  NDF_state (NDF).	EN 300 417-1-1 [1] annex B	m	
3	The transitions between the states will be initiated either by single or consecutive events.	EN 300 417-1-1 [1] annex B	m	
4	The kind and number of consecutive indications activating a transition is chosen such that the behaviour is stable and insensitive to signal degradations.	EN 300 417-1-1 [1] annex B	m	

**Table C.35: Pointer interpretation events** 

Item	Pointer interpretation events	Reference	Status	Support
1	NDF Enabled occurs when any of the	EN 300 417-1-1 [1]	m	
	following bit patterns is received:	annex B		
	"1001", "0001", "1101", "1011", "1000".			
2	NDF Disabled occurs when any of	EN 300 417-1-1 [1]	m	
	the following bit patterns is received:	annex B		
	"0110", "1110", <sup>"</sup> 0010", "0100",			
3	"0111". The norm_point event corresponds	EN 300 417-1-1 [1]	m	
٦	to a received pointer word with:	annex B	111	
	NDF disabled			
	AND ss-bits set to 10 (indicating			
	AU-4) AND received pointer offset value			
	equal to active offset value.			
4	The NDF_enable event corresponds	EN 300 417-1-1 [1]	m	
	to a received pointer word with:	annex B		
	NDF enabled AND ss-bits set to 10 (indicating			
	AU-4)			
	AND received pointer offset value in			
	range.	EN 200 447 4 4 [4]		
5	The <b>AIS_ind event</b> corresponds to a received pointer word set to	EN 300 417-1-1 [1] annex B	m	
	11111111 11111111 (FF FF Hex)			
6	The inc_ind event corresponds to a	EN 300 417-1-1 [1]	m	
	received pointer word with:	annex B		
	NDF disabled AND ss-bits set to 10 (indicating			
	AU-4)			
	AND majority of I-bits inverted			
7	AND no majority of D-bits inverted	EN 300 417-1-1 [1]	m	
′	The <b>inv_point event</b> corresponds to any other received pointer word:	annex B	111	
	NOT norm_point			
	AND NOT NDF_enable			
	AND NOT AIS_ind AND NOT ((inc_ind OR dec_ind) AND			
	NORM_state).			
8	The <b>new_point event</b> corresponds to		m	
	a received pointer word with: NDF disabled	annex B		
	AND ss-bits set to 10 (indicating			
	AU-4)			
	AND received pointer offset value in			
	range but not equal to active offset value.			
9	The remaining six <b>NDF codes</b>	EN 300 417-1-1 [1]	m	
	("0000", "0011", "0101", "1010",	annex B		
	"1100", "1111") result in an			
10	inv_pointer indication. The 8*NDF_enable event	EN 300 417-1-1 [1]	m	
10	corresponds to 8 consecutive	annex B	'''	
	NDF_enable events.			
11	The 3*AIS_ind corresponds to three	EN 300 417-1-1 [1]	m	
12	consecutive AIS_ind events. The 8*inv_point event corresponds	annex B EN 300 417-1-1 [1]	m	
12	to 8 consecutive inv_point events.	annex B	'''	
13	The <b>3*any_point</b> corresponds to the	EN 300 417-1-1 [1]	m	
	following combination of events:	annex B		
	3*NOT NDF_enable			
	AND NOT 3*AIS_ind AND NOT 3*new_point.			
		1	l	

Iter	Pointer interpretation events	Reference	Status	Support
14	The 3*new_point corresponds to	EN 300 417-1-1 [1]	m	
	three consecutive equal new_point events.	annex B		

Table C.36: Operation in NORM state

Item	Operation in NORM state	Reference	Status	Support

3	Reception: 8*inv_point.	EN 300 417-1-1 [1]	m	
	Transition to state: LOP.	annex B		
	Action: offset undefined.			
4	Reception: NDF_enable.	EN 300 417-1-1 [1]	m	
	Transition to state: NDF.	annex B		
	Action: accept new offset.			

**Table C.42: Pointer interpretation: complements** 

Item	Pointer interpretation: complements	Reference	Status	Support
1	Non-consecutive invalid indications do not activate the transition to the LOP_state.	EN 300 417-1-1 [1] annex B	m	
2	The pointer processor maintains its current phase on detection of an invalid pointer and searches in parallel for a new phase.	9.3.2, 9.3.4	m	
3	The reception of 3*new_point takes precedence over any other events.	EN 300 417-1-1 [1] annex B	m	
4	The second and third offset value received in 3*new_point needs to be identical with the first.	EN 300 417-1-1 [1] annex B	m	
5	The "consecutive new_point" counter is reset to zero on a change of state, except for transitions occurring among INC, DEC, NDF states and the NORM state.	EN 300 417-1-1 [1] annex B	m	
6	The "consecutive inv_point counter" can be incremented in all states. The "consecutive inv_point" counter is not reset on a change of state.	EN 300 417-1-1 [1] annex B	m	
7	The "consecutive AIS_ind" counter is not reset on a change of state.	EN 300 417-1-1 [1] annex B	m	
8	The "consecutive NDF_enable" counter is reset to zero on a change of AIS to NDF state; otherwise the counter is not reset.	EN 300 417-1-1 [1] annex B	m	

# C.4.2.3.3 MS1 layer to S4 layer multiplexing and demultiplexing processes

**Table C.43: Multiplexing** 

Prerequisite: C.1/4 -- MS1/S4\_A\_So present

Item	Multiplexing	Reference	Status	Support
	Bytes allocated to the AU-4 pointer are multiplexed into MS1_AI.	5.3.1	m	
2	-	5.3.1	m	

**Table C.44: Demultiplexing** 

Prerequisite: C.1/5 -- MS1/S4\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The AU-4 pointer is recovered from MS1 AI.	5.3.2	m	
2	The VC-4 is recovered from MS1_AI according to the pointer interpretation algorithm.	5.3.2	m	

# C.4.2.4 MS1 layer to DCC layer adaptation functions: MS1/DCC\_A\_So and MS1/DCC\_A\_Sk

# C.4.2.4.1 MS1 layer to DCC layer multiplexing and demultiplexing processes

**Table C.45: Multiplexing** 

Prerequisite: C.1/8 -- MS1/DCC\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	The DCC_CI data (576 kbit/s) are	5.3.3	m	
	multiplexed into D4(6,1), D5(6,4),			
	D6(6,7), D7(7,1), D8(7,4), D9(7,7),			
	D10(8,1), D11(8,4), D12(8,7) bytes of			
	the STM-1 frame.			

**Table C.46: Demultiplexing** 

Item	Demultiplexing	Reference	Status	Support
	The DCC_CI data (576 kbit/s) are demultiplexed from byte locations D4 to D12.	5.3.4	m	

# C.4.2.5 MS1 layer to P0s layer adaptation functions: MS1/P0s\_A\_So and MS1/P0s\_A\_Sk

# C.4.2.5.1 MS1 layer to P0s layer frequency justification and bitrate adaptation processes

Table C.47: Frequency justification and bitrate adaptation: principles

Prerequisite: C.1/10 -- MS1/P0s\_A\_So present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
1	The MS1/ P0s _A_So function provides frequency justification and bitrate adaptation for a 64 kbit/s orderwire information stream. It takes P0s_CI as an unstructured bit-stream with a rate of 64 kbit/s ± 100 ppm and inserts it into the MSOH.	5.3.5	m	

Table C.48: Frequency justification and bitrate adaptation

Prerequisite: C.1/10 -- MS1/P0s\_A\_So present

Item	Frequency justification and bitrate adaptation	Reference	Status	Support
1	The MS1/P0s_A_So function provides for an elastic store (slip buffer) process. The data and frame start signals are written into the store under control of the associated input clock. The data and frame start signals are read out of the store under control of the STM-1 clock, frame position and justification decision.	5.3.6	m	
2	Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification (slip) action, the reading of one 64 kbit/s octet (9 bits) is cancelled once. Upon a negative justification (slip) action, the same 64 kbit/s octet (9 bits) is read out a second time.	5.3.6	m	
3	The elastic store (slip buffer) size accommodates at least 18 μs of wander without introducing errors is at least 2 octets.	5.3.6	m	

# C.4.2.5.2 MS1 layer to P0s layer multiplexing and demultiplexing processes

**Table C.49: Multiplexing** 

Item	Multiplexing	Reference	Status	Support
1	The P0s_CI data (64 kbit/s) are	5.3.5	m	
	multiplexed into E2(9,7) byte of the			
	STM-1 frame.			

**Table C.50: Demultiplexing** 

Item	Demultiplexing	Reference	Status	Support
1	The P0s_ CI data (64 kbit/s) are	5.3.6	m	
	demultiplexed from byte location E2.			

# C.4.3 MS1 linear trail protection transmission tables

**Table C.51: Protection operation** 

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection supported

Item	Protection operation	Reference	Status	Support
1	The APS channel is a 13 bits channel carried into bits K1[1-8] and K2[1-5].	5.5.1.1, 5.5.1.2, A.1	c5101	
2	The signal switching procedure is started under Signal Fail (SF) or Signal Degrade (SD) conditions.	5.5.1.1, 5.5.1.2, A.1	m	
3	In revertive operation the available external commands are LO, FSw-#1, MSw-#1, CLR, EXER-#1.	5.5.1.1, 5.5.1.2, A.1	c5102	
4	In non-revertive operation the available external commands are LO or FSw, FSw-#i, MSw, MSw-#i, CLR, EXER-#i.	5.5.1.1, 5.5.1.2, A.1	c5103	
5	In revertive operation the available external commands are LO, FSw-#i, MSw-#i, CLR, EXER-#i.	5.5.1.1, 5.5.1.2, A.1	c5104	
6	Extra Traffic is supported.	5.5.1.2, A.1	c5105

c6601: IF (C.2/3 OR C.2/4 OR C.2/5)

THEN m ELSE o -- bi-directional switching supported

#### Table C.67: Automatically generated requests

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	Automatically generated requests	Reference	Status	Support
1	In the Wait-To-Restore (WTR) state	A.4	c6701	
	the operation is such that in the			
	revertive mode of operation, the			
	normal signal will be restored when			
	the working trail has recovered from			
	the fault.			
2	An SF or SD condition will override	A.4	c6701	
	the WTR.			
3	After the WTR period is completed, a	A.4	c6701	
	No Request state will be entered.			
4	In the Reverse Request state the	A.4	c6702	
	operation is such that for the case of			
	bi-directional switching, a reverse			
	request is returned for exerciser and			
L	for all other requests of higher priority.			
5	In unidirectional switching, Reverse	A.4	c6703	
	Request is never indicated.			
6	In the Do not Revert state the	A.4	c6704	
	operation is such that in the			
	non-revertive mode of operation,			
	assuming the normal signal is on			
	protection when the working trail is			
	repaired or a switch command is released, the tail end maintains the			
	selection and issues Do not Revert for			
	normal signal 1.			
7	For the case of bi-directional	A.4	c6705	
'	switching, the head end also	Λ. <del>Τ</del>	00703	
	maintains the selection and continues			
	indicating reverse request.			
8	The Do not Revert is removed when	A.4	c6704	
	pre-empted by a defect condition or		30,04	
	an external request.			
9	In the No Request state none of the	A.4	m	
	trail signal conditions is active, none		•••	
	of the external commands is active,			
	and none of the states described			
	above is active.

1	The ERSN is "0" (zero) if no normal	A.9	m	
	signal is indicated, "i" (1 ≤ i ≤ nmax)			
	for normal signal #i, and "nmax+1" for			
	the extra traffic signal.			
2	The ERT/ERN is generated as	A.9	m	
	specified in the clause "External			
	request (type and signal number)			
	processes" in clause A.9 of annex A			
	in EN 300 417-3-1 [2].			

Comments: The external request process transfers the external commands (EXTCMD) into an External Request Type (ERT) and External Request Signal Number (ERSN).

#### Table C.73: Local request priority process

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	Local request priority processes	Reference	Status	Support
1	The status of the protection and	A.9	m	
	working input signals (SRT/SRSN #0			
	to SRT/SRSN #n), the external			
	command (ERT/ERSN), and			
	protection parameters OPERtype and			
	EXTRAtraffic is evaluated by a three			
	step priority logic as specified in the			
	clause "Local request (type and signal			
	number) priority processes" in			
	clause A.9 of annex A in			
	EN 300 417-3-1 [2].			

Comments: The local request priority process determines the highest priority local request.

Table C.74: Global request priority process

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	Global request priority processes	Reference	Status	Support
1	The local request (LRT,LRSN) and the remote request (RRT,RRSN) are compared to decide which has priority, according to the descending order of priorities in table A.2 of annex A in EN 300 417-3-1 [2].	A.9	c7401	
2	A received reverse request is not considered in the comparison.	A.9	c7401	
3	The Global Request Type (GRT) and Global Request Signal Number (GRSN) is determined as specified in the clause "Global request (type and signal number) priority processes" in clause A.9 of annex A in EN 300 417-3-1 [2].	A.9	m	

c7401: IF (C.2/3 OR C.2/4 OR C.2/5)

THEN m ELSE n/a

-- bi-directional switching supported

Comments: The global request priority process determines the Global Request Type (GRT) and Global Request Signal Number (GRSN).

# Table C.75: Bridge control process

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	Bridge control process		Reference	Status	Support
1	The bridge control process is	A.9		m	
	performed as specified in the clause				
	"Bridge control process" in clause A.9				
	of annex A in EN 300 417-3-1 [2].				

Comments: The bridge control process controls which of the normal / extra traffic signals is bridged to the protection trail.

#### Table C.76: Control of the selector

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	Control of the selector		Reference	Status	Support
1	The control of the selector is	A.9		m	
	performed as specified in the clause				
	"Control of the selector" in clause A.9				
	of annex A in EN 300 417-3-1 [2].				

Comments: The control of the selector controls which of the normal / extra traffic signals is connected to / extracted from the protection trail.

# C.4.3.4.6 Automatic Protection Switching (APS) signal generation

#### Table C.77: APS generation process

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	APS generation process	Reference	Status	Support
1	The Global Request Type (GRT) is translated into the transmitted Request Type (TxRT) in accordance to table A.8 (clause A.9) of annex A in EN 300 417-3-1 [2].	A.9	c7701	
2	The transmitted Request Signal Number (TxRSN) equals the Global Request Signal Number (GRSN).	A.9	c7701	
3	The transmitted Local Bridged Signal Number (TxLBSN) is set to '0' if the Remote Request Signal Number (RRSN) equals '0' else it is set to the Local Bridged Signal Number (LBSN) value.	A.9	c7701	
4	The transmitted (TxARCH) is set to "1" (one) if the Architecture type (ARCHtype) is 1:n else it is set to "0" (zero).	A.9	c7701	

c7701: IF (C.2/3 OR C.2/4 OR C.2/5)

THEN m ELSE o

-- bi-directional switching supported

Comments: The APS generation process translates the signals Global Request Type (GRT), Global Request Channel Number (GRSN), Local Bridged Signal Number (LBSN) and local Architecture type (ARCHtype) into a transmitted APS signal.

# C.4.3.4.7 Automatic Protection Switching (APS) signal interpretation

#### Table C.78: APS interpretation process

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	APS interpretation process	Reference	Status	Support
1	The accepted Request Type (AcRT) is translated into the Remote Request Type (RRT) in accordance to table A.7 (clause A.9) of annex A in EN 300 417-3-1 [2].	A.9	c7801	
2	The Remote Request Signal Number (RRSN) equals the accepted Request Signal Number (AcRSN).	A.9	c7801	
3	The Remote Bridged Signal Number (RBSN) equals the accepted Local Bridged Signal Number (AcLBSN).	A.9	c7801	
4	The Remote Architecture type (RARCH) equals the accepted Architecture type (AcARCH).	A.9	c7801	

c7801:IF (C.2/3 OR C.2/4 OR C.2/5)

THEN m ELSE o -- bi-directions

-- bi-directional switching supported

Comments: The APS interpretation process translates the accepted APS signal into the signals Remote Request Type (RRT), Remote Request Signal Number (RRSN), Remote Bridged Signal Number (RBSN) and Remote Architecture type (RARCH).

#### Table C.79: Use of the accepted APS message

Prerequisite: C.1/14 OR C.1/15 -- STM-16 Linear Trail Protection supported

ltem	Use of the accepted APS message		Reference	Status	Support
1	The accepted Request Type, Remote	A.9		c7901	
	Request Signal Number, Remote				
	Bridged Signal Number and Remote				
	Architecture type are used for				
	protection switching operation.				

c7901:IF (C.2/3 OR C.2/4 OR C.2/5)

THEN m ELSE x -- bi-directional switching supported

# C.4.3.4.8 Automatic Protection Switching (APS) status report

#### Table C.80: APS reporting process

Prerequisite: C.1/12 OR C.1/13 -- STM-1 linear trail protection scheme supported

Item	APS reporting process	Reference	Status	Support
1	The active external request are reported to the Equipment Management Function (EMF).	A.9	m	
2	The active local request are reported to the Equipment Management Function (EMF).	A.9	m	
3	The active remote request are reported to the Equipment Management Function (EMF).	A.9	c8001	
4	The reason of denial of an external command are reported to the Equipment Management Function (EMF).	A.9	m	
5	The condition (SF,SD) of the working and protection trails are reported to the Equipment Management Function (EMF).	A.9	m	

c8001:IF (C.2/3 OR C.2/4 OR C.2/5)

THEN m ELSE o

-- bi-directional switching supported

# C.4.4 MS1 layer defect, fault and performance monitoring tables

# C.4.4.1 Port status management

Table C.81: Trail termination point mode process

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	Trail Termination point mode	Reference	Status	Support
	process			
1	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "not monitored" (NMON)	subclause 8.5		
	status.			
2	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "monitored" (MON) status.	subclause 8.5		
3	The Trail Termination Point Mode	5.2.2	m	
	status is provisionable by the EMF.			

# C.4.4.2 Defect detection and clearance criteria

#### Table C.82: MS1 Alarm Indication Signal defect (MS1 dAIS)

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	MS1 Alarm Indication Signal defect (MS1 dAIS)	Reference	Status	Support
	The MS1 dAIS is detected if at least <i>x</i> consecutive frames contain the '111' pattern in bits 6, 7 and 8 of the K2 byte.	5.2.2	m	
2	The MS1 dAIS is cleared if in at least <i>x</i> consecutive frames any pattern other than '111' is detected in bits 6, 7 and 8 of the K2 byte.	5.2.2	m	

Table C.83: MS1 dAIS parameters value

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Ite	em	MS1 dAIS parameters value	Reference	Status	Support	Values	
						Allowed	Supported
	1	MS1 dAIS threshold: x parameter	5.2.2	m		$3 \le x \le 5$	

Table C.84: Remote Defect Indication (RDI) defect (dRDI)

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	Remote Defect Indication (RDI) defect (dRDI)	Reference	Status	Support
1	The MS1 RDI defect is detected if 5 consecutive frames contain the '110' pattern in bits 6, 7 and 8 of the K2 byte.	EN 300 417-1-1 [1] subclause 8.2.1.5	m	
2	The MS1 RDI defect is cleared if in 5 consecutive frames any pattern other than '110' is detected in bits 6, 7 and 8 of the K2 byte.	EN 300 417-1-1 [1] subclause 8.2.1.5	m	
3	The MS1 RDI defect is cleared during reception of an RS1 aSSF.	EN 300 417-1-1 [1] subclause 8.2.1.5	m	

Table C.85: Trail performance monitoring

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	Trail performance monitoring	Reference	Status	Support
1	An MS1 near-end block is errored if	5.2.2	m	
	one or more EDC Violations (EDCV) -			
	BIP-24 parity - are detected.			
	The EDCV process assumes "zero"	5.2.2	m	
	EDCVs in the incoming all "1s" (AIS)			
	signal during reception of Server			
	Signal Fail (aSSF) from the server			
	layer.			

Table C.86: Degraded defect (dDEG)

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	Degraded defect (dDEG)	Reference	Status	Support
1	Once every second, MS1 pNEBC is	5.2.2	m	
	compared with DEGTHR.			
2	If MS1 pNEBC>=DEGTHR the	5.2.2	m	
	corresponding second is declared			
	BAD, otherwise it is declared GOOD.			
3	The MS1 dDEG is detected if M	5.2.2	m	
	consecutive BAD seconds have			
	occurred.			
4	The MS1 dDEG is cleared if M	5.2.2		
	consecutive GOOD seconds have			
	occurred.			
5	The MS1 dDEG is cleared during	5.2.2		
	reception of an RS1 aSSF.			
6	The DEGTHR parameter is	5.2.2	m	
	provisionable by the EMF.			
7	The DEGM parameter is	5.2.2	m	
	provisionable by the EMF.			

Table C.87: DEG defect parameters value

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	DEG defect parameters	Reference	Status	Support	Values	
					Allowed	Supported
1	MS1 dDEG DEGTHR parameter.	5.2.2	c8701		0< DEGTHR	
					≤ 192 000	
2	MS1 dDEG M parameter.	5.2.2	c8702		$2 \le M \le 10$

#### Table C.94: Trail Signal Fail action (aTSF)

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS1_TT_Sk sets AI_TSF to	5.2.2	m	
	TRUE on MS1 dAIS detection.			
2	The MS1_TT_Sk sets AI_TSF to	5.2.2	m	
	FALSE when there is (are) no more			
	defect(s) active.			

Table C.95: Trail Signal Degrade action (aTSD)

Prerequisite: C.1/3 -- MS1\_TT\_Sk function present

Item	Trail Signal Degrade action (aTSD)	Reference	Status	Support
1	If the dDEG is detected in the trail	EN 300 417-1-1 [1]	m	
	termination sink the aTSD is	subclause 8.2.2.6		
	performed.			
2	It ceases aTSD insertion after the	EN 300 417-1-1 [1]	m	
	dDEG defect is cleared.	subclause 8.2.2.6		
3	The aTSD is equivalent to send the	EN 300 417-1-1 [1]	m	
	Signal Degrade (SD) signal as	subclause 8.2.2.6		
	defined in the Automatic Protection			
	Switching (APS).			

#### C.4.4.4 Defect correlation

**Table C.96: Defect correlation** 

Prerequisite: C.4/5 -- Defect correlation process supported

Item		Reference	Status Support
1	Under MS1 dAIS detection the MS1_TT_Sk generates a MS1 cAIS report if the port is in the monitoring state (MON) and no CI_SSF is received from the server layer.	5.2.2	c9601
2	The MS1 cAIS is reported only if selected MS1 AIS_reported is set to TRUE by the NEM. By default MS1 AIS_reported is set to FALSE.	5.2.2	c9601
3	Under MS1 dAIS detection the MS1_TT_Sk generates a MS1 cSSF report if the port is in the monitoring state (MON).	5.2.2	c9601
4	The MS1 cSSF is reported only if selected MS1 SSF_reported is set to TRUE by the NEM. By default MS1 SSF_reported is set to FALSE.	5.2.2	c9601
5	Under MS1 dRDI detection the MS1_TT_Sk generates a MS1 cRDI report if the port is in the monitoring state (MON).	5.2.2	c9601
6	The MS1 cRDI is reported only if MS1 RDI_reported is set to TRUE by the NEM. By default MS1 RDI_reported is set to FALSE.	5.2.2	c9601
7	Under MS1 dDEG detection the MS1_TT_Sk generates a MS1 cDEG report if the port is in the monitoring state (MON).	5.2.2	c9601
8	Under AU4 dAIS detection the MS1/S4_A_Sk generates a AU4 cAIS report if the port is in the monitoring state (MON) and no AI_TSF is received from the MS1_TT_Sk.	5.3.2	c9602
9	The AU4 cAIS is reported only if AU4 AIS _reported is set to TRUE by the NEM. By default AU4 cAIS_reported is set to FALSE.	5.3.2	c9602
10	Under HO dLOP detection the MS1/S4_A_Sk generates a HO cLOP report.	5.3.2	c9602
11	All the generated fault cause (cXXX) are reported to the EMF.	EN 300 417-1-1 [1] subclause 8.1, figure 36	m

#### C.4.4.5 Performance monitoring

#### C.4.4.5.1 Near end performance monitoring

#### Table C.97: pN\_DS performance parameter

Prerequisite: C.4/1 -- Near-end performance monitoring process supported

Item	pN_DS performance parameter	Reference	Status	Support
	The MS1_TT_Sk indicates a MS1 pN_DS every second with at least one occurrence of MS1 aTSF or an	5.2.2	m	.,
	equipment defect (dEQ) and reports it to the EMF.			

#### Table C.98: pN\_EBC performance parameter

Prerequisite: C.4/1 -- Near-end performance monitoring process supported

Item	pN_EBC performance parameter	Reference	Status	Support
1	Every second the MS1_TT_Sk counts	5.2.2	m	
	the number of MS1 Near-end Errored			
	Block (MS1 N_Bs) within that second			
	as the MS1 pN_EBC (MS1 Near-end			
	Error Block Count) and reports it to			
	the EMF.			

Comments: A "Near-end Block" (N\_B) is errored if one or more BIP-24 violations are detected.

#### C.4.4.5.2 Far end performance monitoring

#### Table C.99: pF\_DS performance parameter

Prerequisite: C.4/2 -- Far-end performance monitoring process supported

Item	pF_DS performance parameter	Reference	Status	Support
1	The MS1_TT_Sk indicates a MS1	5.2.2	m	
	pF_DS every second with at least one occurrence of MS1 dRDI and reports it to the EMF.			

#### Table C.100: pF\_EBC performance parameter

Prerequisite: C.4/2 -- Far-end performance monitoring process supported

Item	pF_EBC performance parameter	Reference	Status	Support
1	Every second the MS1_TT_Sk counts	5.2.2	m	
	the number of MS1 Far-end Errored			
	Block (MS1 F_Bs) within that second			
	as the MS1 pF_EBC (MS1 Far-end			
	Error Block Count) and reports it to			
	the EMF.			

Comments: A "Far-end Block"  $(F\_B)$  is errored if the REI count indicates one or more errors.

#### C.4.4.5.3 Pointer performance monitoring

#### Table C.101: PJE performance parameter

Prerequisite: C.4/3 -- Pointer performance monitoring process supported

Item	PJE performance parameter	Reference	Status	Support
	Every second the number of generated HO pointer increments is counted as the HO pPJE+ and reported to the EMF.	5.3.1	m	
	Every second the number of generated HO pointer decrements within that second is counted as the HO pPJE- and reported to the EMF.	5.3.1	m	

# C.4.5 MS1 protection layer defect, fault and performance monitoring tables

#### C.4.5.1 Defect detection and clearance criteria

Table C.102: Protection Architecture Mismatch defect (dPAM)

The MS1P dPAM is cleared when the there is again a match between the received APS Architecture (RARCH) value and the local architecture type

Comments: This defect concerns the APS interpretation process.

Table C.103: Invalid Command defect (dINV)

Prerequisite: C.2/3 OR C.2/4 OR C.2/5 -- bi-directional switching supported

Item	Invalid Command defect (dINV)	Reference	Status	Support
1	The MS1P dINV is detected if the request type bits (RT) in the APS signal indicate an invalid request code, or the RSN or LBSC indicate a non-existing trail signal number for Y ms.	A.9	m	
2	The MS1P dINV is cleared when the RT indicates a valid code and the RSN or LBSN indicate an existing signal number.	A.9	m	

Comments: This defect concerns the APS interpretation process.

#### Table C.104: INV defect parameters value

Prerequisite: C.2/3 OR C.2/4 OR C.2/5 -- bi-directional switching supported

Item	INV defect parameters value	Reference	Status	Support	Values	
					Allowed	Supported
1	MS1P dINV parameter (Y).	A.9	m		TBD	

#### Table C.105: Acknowledge Timeout defect (dTMOUT)

Prerequisite: C.2/3 OR C.2/4 OR C.2/5 -- bi-directional switching supported

Item	Acknowledge Timeout defect (dTMOUT)	Reference	Status	Support
	The MS1P dTMOUT is detected if a head end response on a tail end request does not comply to the protocol within a period of 50 ms.	A.9	m	
	The MS1P dTMOUT is cleared when the head-end response complies again.	A.9	m	
3	The MS1P dTMOUT is cleared if the protection trail is in SF condition.	A.9	m	

Comments: This defect concerns the global request priority process.

#### Table C.106: Selector Control Mismatch defect (dSCM)

Prerequisite: C.2/3 OR C.2/4 OR C.2/5 -- bi-directional switching supported

Item	Selector Control Mismatch defect (dSCM)	Reference	Status	Support
	The MS1P dSCM is detected if a mismatch between RRSN and GRSN persists for Y ms.	A.9	m	
2	The MS1P dSCM is cleared when RRSN is identical to GRSN.	A.9	m	
3	The MS1P dSCM is cleared if the protection trail is in SF condition.	A.9	m	

Comments: This defect concerns the selector control.

#### Table C.107: SCM defect parameters value

Prerequisite: C.2/3 OR C.2/4 OR C.2/5 -- bi-directional switching supported

Item	INV defect parameters value	Reference	Status	Support	Values	
					Allowed	Supported
1	MS1P dSCM parameter (Y).	A.9	m		TBD	

#### C.4.5.2 Consequent action activation and clearance criteria

#### Table C.108: Null signal insertion

Prerequisite: C.1/13 -- 1:n MS Linear Trail Protection supported

Item	Null signal insertion	Reference	Status	Support
1	If neither the extra traffic nor a normal signal input is to be connected to the protection section output, the null signal is connected to the protection output.	5.5.1.2	m	
	If the extra traffic output (if applicable) is disconnected from the protection input it is set to all-ONEs signal (AIS).	5.5.1.2	10801	

c10801: IF 51/6 THEN m ELSE n/a -- Extra traffic channel supported

#### Table C.109: Server Signal Fail action (aSSF)

Prerequisite: C.1/13 -- 1:n MS Linear Trail Protection supported

Item	Server Signal Fail action (aSSF)	Reference	Status	Support
1	The MS1P1:n_C sets the CI_SSF to TRUE on the extra traffic connection point if the extra traffic output (if applicable) is disconnected from the protection input.	5.5.1.2	c10901	
	The MS1/MS1P_A_Sk sets CI_SSF to TRUE on AI_TSF reception.	5.5.3.2	c10902	
	The MS1/MS1P_A_Sk sets CI_SSF to FALSE when there is (are) no more defect(s) active.	5.5.3.2	c10902	

c10901: IF (C.1/13 AND C.51/6) THEN m ELSE n/a -- 1:n MS Linear Trail Protection and extra traffic channel present

c10902: IF C.3/5 THEN m ELSE n/a

-- MS1/MS1P\_A\_Sk present

#### Table C.110: Trail Signal Fail action (aTSF)

Prerequisite: C.3/4 -- MS1P\_TT\_Sk present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS1P_TT_Sk sets AI_TSF to	5.5.2.2	m	
	TRUE on CI_SSF reception.			
2	The MS1P_TT_Sk sets AI_TSF to	5.5.2.2	m	
	FALSE when there is (are) no more			
	defect(s) active.			

Table C.111: Server Signal Degrade action (aSSD)

Prerequisite: C.3/5 -- MS1/MS1P\_A\_Sk present

Item	Server Signal Degrade action (aSSD)	Reference	Status	Support
	The MS1/MS1P_A_Sk sets CI_SSD to TRUE on AI_TSD reception.	5.5.3.2	m	
	The MS1/MS1P_A_Sk sets CI_SSD to FALSE when there is (are) no more defect(s) active.	5.5.3.2	m	

Table C.112: Selector release

Prerequisite: C.2/3 OR C.2/4 OR C.2/5 -- bi-directional switching supported

Item	Selector release	Reference	Status	Support
	The selector is released if one or	A.9	m	
	more of the four defects dPAM, dSCM, dTMOUT, dINV is active.			

Comments: This consequent action concerns the selector control.

#### C.4.5.3 Defect correlation

**Table C.113: Defect correlation** 

Prerequisite: C.4/4 AND (C.1/12 OR C.1/13) -- Defect correlation process supported and STM-1 linear trail protection supported -- Defect correlation process supported

Item	Defect correlation	Reference	Status	Support
1	Under MS1P dSCM detection a MS1P cFOP (Failure Of Protocol) report is generated.	A.9	c1130 1	
2	Under MS1P dPAM detection a MS1P cFOP (Failure Of Protocol) report is generated.	A.9	c1130 1	
3	Under MS1P dTMOUT detection a MS1P cFOP (Failure Of Protocol) report is generated.	A.9	c1130 1	
4	Under MS1P dINV detection a MS1P cFOP (Failure Of Protocol) report is generated.	A.9	c1130 1	
5	Under MS1P CI_SSF reception a MS1P cSSF report is generated.	5.5.2.2	c1130 2	
6	The MS1P cSSF is reported only if selected MS1P SSF_reported is set to TRUE by the NEM. By default MS1P SSF_reported is set to FALSE.	5.5.2.2	c1130 2	
7	All the generated fault cause (cXXX) are reported to the EMF.	EN 300 417-1-1 [1] subclause 8.1, figure 36	m	

c11301: IF (C.2/3 OR C.2/4 OR C.2/5) THEN m ELSE n/a c11302: IF C.3/3 THEN m ELSE n/a

- -- bi-directional switching supported
- -- MS1P\_TT\_Sk present

### C.4.5.4 Performance monitoring

#### Table C.114: pPSC performance parameter

Prerequisite: C.4/4 AND (C.1/12 OR C.1/13) -- Protection performance monitoring process supported and STM-1 linear trail protection supported -- Defect correlation process supported

Item	pPSC performance parameter	Reference	Status	Support
1	Every second the MS1P1+1_C	A.9	c11401	
	indicates as MS1P pPSC (Protection			
	Switching Count) the number of			
	Protection Switching actions within			
	that second and reports it to the EMF.			
2	Every second the MS1P1:n_C	A.9	c11402	
	indicates as MS1P pPSC (Protection			
	Switching Count) the number of			
	Protection Switching actions within			
	that second and reports it to the EMF.			

c11401: IF C.1/12 THEN m ELSE n/a c11402: IF C.1/13 THEN m ELSE n/a

- -- 1+1 MS Linear Trail Protection supported
- -- 1:n MS Linear Trail Protection supported

#### Table C.115: pPSD performance parameter

Item	pPSD performance parameter	Reference	Status	Support
	Every second that the normal signal #i is not selected from the Working trail #i is reported as a pPSD/i (i≥1) to the EMF.	A.9	m	
	Every second that the normal signal is selected from the Protection trail is reported as a pPSD/0 to the EMF.	A.9	m	

# Annex D (normative): ICS proforma for STM-4 regenerator section layer

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

## D.1 Identification of the implementation

In the present document, an Implementation Under Test (IUT), and of course the identification of an IUT refers to an RS-4 regenerator section (RS4) instance implemented inside the System Under Test (SUT).

Identification of the IUT and the SUT in which it resides should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

### D.2 Identification of the EN

This ICS proforma applies to the following standard:

EN 300 417-3-1: "Transmission and Multiplexing (TM); Generic requirements of transport functionality of equipment: STM-N regenerator and multiplex section layer functions".

# D.3 Global statement of conformance of RS-4 regenerator section (RS4)

Are all mandatory capabilities implemented (Yes/No) .....

NOTE: Answering "No" to this question indicates non-conformance to the EN specification. Non-supported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is non-conforming, on pages attached to the ICS proforma.

Answering "Yes" to this question indicates only that all the capabilities with the explicit status "m" are supported. It is not necessary to fill in the support column of the associated item.

## D.4 RS4 section layer function

## D.4.1 STM-4 regenerator section layer description

Table D.1: RS4layer functions

Item	STM-4 regenerator section layer	Reference	Status	Support
1	Regenerator section connection function (RS4_C).	6, figure 36	0	
2	Regenerator section trail termination source function (RS4_TT_So).	6, figure 36	o.101	
3	Regenerator section trail termination sink function (RS4_TT_Sk).	6, figure 36	o.101	
4	Regenerator section to MS4 layer adaptation source function (RS4/MS4_A_So).	6, figure 36	c101	
5	Regenerator section to MS4 layer adaptation sink function (RS4/MS4_A_Sk).	6, figure 36	c102	
6	Regenerator section to DCC layer adaptation source function (RS4/DCC_A_So).	6, figure 36	c103	
7	Regenerator section to DCC Layer adaptation sink function (RS4/DCC_A_Sk).	6, figure 36	c104	
8	Regenerator section to P0s Layer adaptation source function (RS4/P0s_A_So-N).	6, figure 36	c103	
9	Regenerator section to P0s layer adaptation sink function (RS4/P0s_A_Sk-N).	6, figure 36	c104	
10	Regenerator section to V0x layer adaptation source function (RS4/V0x_A_So).	6, figure 36	c103	
11	Regenerator section to V0x layer adaptation sink function (RS4/V0x_A_Sk).	6, figure 36	c104	
	This RS4 layer is part of an SDH regenerator equipment.	EN 300 417-2-2 [17] table C.1/1	0	int Som A. S

Comment: for a bi-directional layer both TT\_So and TT\_Sk functions are present, for a unidirectional layer just one of them can be present.

Item D.1/12 is the same as the one given in the reference column.

**Table D.2: Supervision processes** 

Item	Supervision process	Reference	Status	Support
1	Performance monitoring process.	EN 300 417-1-1 [1]	c201	
		subclauses 8.2 to 8.4		
2	Defect correlation process.	EN 300 417-1-1 [1]	c201	
	•	subclauses 8.2 to 8.3		

c201: IF D.1/3 THEN m ELSE n/a -- RS4\_TT\_Sk present

### D.4.2 RS-4 regenerator section Layer Transmission Tables

Table D.3: Data stream structure

Item	Data stream structure	Reference	Status	Support
1	The CI at the RS4 connection point is	6	m	
	octet structured and 125 µs framed			
	with co-directional timing.			
2	The RS4_CI is a fully formatted	6	m	
	STM-4 data stream.			
3	Regenerator Section OverHead	6, figure 37	m	
	(RS-OH) bytes are placed in rows 1			
	to 3 of columns 1 to 36 of the STM-4			
	frame.			

### D.4.2.1 RS-4 regenerator section connection function: RS4\_C

**Table D.4: Connection functionalities** 

Prerequisite: D.1/1 -- RS4\_C present

Iten	Connection functionalities	Reference	Status	Support
1	For further study.	6.1	n/a	

## D.4.2.2 RS-4 regenerator section layer trail termination functions: RS4\_TT\_So and RS4\_TT\_Sk

#### D.4.2.2.1 FAS

Table D.5: FAS byte location

Item	Frame Alignment Signal (FAS) byte location	Reference	Status	Support
	The FAS is located in A1 from (1,1) to		m	
	(1,12) and A2 from (1,13) to (1,24) of	subclause 9.2.2.1		
	the STM-4 frame.			

Table D.6: FAS byte structure

Iter	Frame Alignment Signal (FAS) byte structure	Reference	Status	Support
1	1	G.707 [14] subclause 9.2.2.1	m	

#### D.4.2.2.2 FAS generation

Table D.7: FAS insertion

Prerequisite: D.1/2 -- RS4\_TT\_So present

Item	Frame Alignment Signal (FAS) insertion	Reference	Status	Support
1	The RS4_TT_So inserts the STM-4	6.2.1, G.707 [14]	m	
	FAS A1A1A2A2 into the RSOH.	subclause 9.2.2.1		

#### D.4.2.2.3 Signal scrambling / descrambling

Table D.8: Scrambling / descrambling: principles

Item	Scrambling / descrambling: principles	Reference	Status	Support
1	The operation of the scrambler / descrambler is functionally identical to that of a frame synchronous scrambler / descrambler of sequence length 127 operating at the line rate.	6.2.1, 6.2.2	m	
2	The generating polynomial is $1 + X^6 + X^7$ .	6.2.2	m	

**Table D.9: Scrambling process** 

Prerequisite: D.1/2 -- RS4\_TT\_So present

Item	Scrambling process	Reference	Status	Support
	The scrambler is reset to '1111 1111' on the MSB of the byte (1,37) following the last byte of the STM-4 SOH in the first row.	6.2.1	m	
2	This bit and all subsequent bits to be scrambled are modulo 2 added to the output of the X <sup>7</sup> position of the scrambler.	6.2.1	m	
3	The scrambler runs continuously throughout the remaining STM-4 frame.	6.2.1	m	

Table D. 10: Descrambling process

Prerequisite: D.1/3 -- RS4\_TT\_Sk function present

Item	Descrambling process	Reference	Status	Support
	The RS4_TT_Sk descrambles the incoming STM-4 signal except the first row of the RSOH.	6.2.2	m	

#### D.4.2.2.4 In service error monitoring process

Table D.11: In service error monitoring: principles

Item	In service error monitoring:	Reference	Status	Support
	principles			
1	An EDC is part of the characteristic information for in service error monitoring.	EN 300 417-1-1 [1] subclause 7.3	m	
2	In service error monitoring parameter definition is block-based.	G.707 [14] subclause 9.2.2.4 note	m	
3	The block length is 9 720 bytes, corresponding to the STM-4 frame structure.		m	
4	The error monitoring is performed using Bit Interleaved Parity 8 (BIP-8).	6.2.1, G.707 [14] subclause 9.2.2.4	m	
5	The BIP-8 is calculated using even parity in such a manner that the bit in position x provides even parity over the x-bits of all the 8-bits sequences within the specified block.	G.707 [14] subclause 9.2.2.4 note	m	

Comments: The BIP-n is interpreted as checking 'n' separate interleaved parity check blocks. If any of the 'n' parity check fails (EDC Violation), the block is assumed to be in error.

**Table D.12: EDC location** 

Item	Error Detection Code (EDC) location	Reference	Status	Support
	Regenerator section EDC is located in byte B1(2,1) of the STM-4 frame.	6.2.1	m	

Table D.13: EDC processing: source direction

Prerequisite: D.1/2 -- RS4\_TT\_So present

Item	Error Detection Code (EDC) processing: source direction	Reference	Status	Support
	The BIP-8 is calculated over all bits of the previous STM-4 frame after scrambling.	6.2.1	m	
	BIP-8 code is inserted in B1 byte of the current STM-4 frame before scrambling.	6.2.1	m	

Table D.14: EDC processing: sink direction

Prerequisite: D.1/3 -- RS4\_TT\_Sk function present

Item	Error Detection Code (EDC) processing: sink direction	Reference	Status	Support
1	The incoming error monitoring byte B1 is recovered from the STM-4 signal after descrambling.	6.2.2	m	
2	The BIP-8 is calculated over all bits of the previous STM-4 frame before descrambling.	6.2.2	m	
3	Recovered B1 byte is compared with the calculated BIP-8.	6.2.2	m	
4	A difference between the computed and recovered B1 value is taken as evidence of one or more errors (nN_B) in the computation block.	6.2.2	m	

#### D.4.2.2.5 Trail Trace Identifier (TTI)

Table D.15: Trail Trace Identifier (TTI): principles

Prerequisite: D.1/2 OR D.1/3 -- RS4\_TT\_So and/or RS4\_TT\_Sk present

Item	Trail Trace Identifier (TTI):	Reference	Status	Support
1	principles A Trail Trace Identifier (TTI) is inserted by the termination source containing the local Access Point Identifier (APId) and TTI header (TxTI).	6.2.1, EN 300 417-1-1 [1] subclause 7.1	c1501	
	The content of the accepted TTI (AcTI) is compared by the trail termination sink function with the provisioned "expected TTI" (ExTI), identifying the expected remote AP.	6.2.2, EN 300 417-1-1 [1] subclauses 7.1 and 8.2.1.3	c1502	

c1501:IF D.1/2 THEN m ELSE n/a -- RS4\_TT\_So present c1502:IF D.1/3 THEN m ELSE n/a -- RS4\_TT\_Sk present

Table D.16: Trail Trace Identifier (TTI) byte location

Item	Trail Trace Identifier (TTI) byte location	Reference	Status	Support
1	The Regenerato section trail trace	6.2.1	m	
	Identifier (TTI) is located in byte			
	J0(1,25) of the STM-4 frame.			

Table D.17: Trail Trace Identifier (TTI) byte structure

Item	Trail Trace Identifier (TTI) byte structure	Reference	Status	Support
1	The RS TTI is a 16 byte string containing the 15 byte APId and a 1 byte header. The MSB of the header is a "1", the remaining 9 bits contain the CRC-7 value of the RS TTI. The MSB of the 15 APId bytes is "0".	EN 300 417-1-1 [1] subclause 7.1	m	
2	The CRC-7 word is the remainder after multiplication by $x^7$ and then division (modulo 2) by the generator polynomial $x^7 + x^3 + 1$ , of the polynomial representation of the RS TTI with the CRC bits set to binary zeroes.	EN 300 417-1-1 [1] subclause 7.1	m	
3	The 16 byte RS TxTI is transferred via the Management Point to and from the trail termination function.	EN 300 417-1-1 [1] subclause 8.2.1.3	c1701	
4	The 16 byte RS ExTI and 16 byte RS AcTI are transferred via the Management Point to and from the trail termination function.	EN 300 417-1-1 [1] subclause 8.2.1.3	c1702	

c1701: IF D.1/2 THEN m ELSE n/a c1702: IF D.1/3 THEN m ELSE n/a

- -- RS4\_TT\_So present
- -- RS4\_TT\_Sk present

Table D.18: Trail Trace identification: source direction

Prerequisite: D.1/2 -- RS4\_TT\_So present

Item	Trail Trace identification: source direction	Reference	Status	Support
1	The16 byte RS TTI is transmitted	EN 300 417-1-1 [1]	m	
	continuously.	subclause 7.1		

Table D.19: Trail Trace identification: sink direction

Prerequisite: D.1/3 -- RS4\_TT\_Sk present

Item	Trail Trace identification: sink direction	Reference	Status	Support
1	The RS4_TT_Sk supports mode 1.	EN 300 417-1-1 [1] subclause 7.1	m	
2	The RS4_TT_Sk supports mode 2.	EN 300 417-1-1 [1] subclause 7.1	m	
3	The TTI mode is provisionable by the EMF.	6.2.2	m	
4	The RS4_TT_Sk recovers the 16 byte multiframe carried in byte J0 and assumes it as Received Trail Trace Identifier (RxTI). The RxTI is made available as AcTI for network management purposes.	6.2.2	m	

## D.4.2.3 STM-4 regenerator section layer to MS4 layer adaptation functions: RS4/MS4\_A\_So and RS4/MS4\_A\_Sk

#### D.4.2.3.1 RS4 layer to MS4 layer multiplexing and demultiplexing processes

Table D.20: Multiplexing

Prerequisite: D.1/4 -- RS4/MS4\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The RS4/MS4_A_So function multiplexes the MS4_CI data (9 612 bytes / frame) into the STM-4 frame.	6.3.1	m	

**Table D.21: Demultiplexing** 

Prerequisite: D.1/5 -- RS4/MS4\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The RS4/MS4_A_Sk recovers the	6.3.2	m	
	MS4_CI data from the STM-4 frame.			

## D.4.2.4 STM-4 regenerator section layer to DCC layer adaptation functions: RS4/DCC A So and RS4/DCC A Sk

#### D.4.2.4.1 RS4 layer to DCC layer multiplexing and demultiplexing processes

**Table D.22: Multiplexing** 

Prerequisite: D.1/6 -- RS4/DCC\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	The DCC_CI data (192 kbit/s) are	6.3.3	m	
	multiplexed in D1, D2 and D3 bytes of			
	the STM-4 frame.			

Comments: DCC transmission can be "disabled" when the matrix connection in the connected DCC\_C function is removed.

Table D.23: Demultiplexing

Prerequisite: D.1/7 -- RS4/DCC\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The DCC_CI data (192 kbit/s) are	6.3.4	m	
	demultiplexed from bytes D1 to D3.			

## D.4.2.5 STM-4 regenerator section layer to P0s layer adaptation functions: RS4/P0s A So-N and RS4/P0s A Sk-N

#### D.4.2.5.1 RS4 layer to P0s layer multiplexing and demultiplexing processes

**Table D.24: Multiplexing** 

Prerequisite: D.1/8 -- RS4/P0s\_A\_So-N present

Item	Multiplexing	Reference	Status	Support
1	The RS4/P0s_A_So-E1 multiplexes a	6.3.5	o.2401	
	64 kbit/s orderwire information stream			
	into the RSOH byte E1.			
2	The RS4/P0s_A_So-F1 multiplexes a	6.3.5	o.2401	
	64 kbit/s user channel information			
	stream into the RSOH byte F1.			

o.2401: It is mandatory to support at least one of these items -- at least one RS4/P0s\_A\_So-N function present

**Table D.25: Demultiplexing** 

Prerequisite: D.1/9 -- RS4/P0s\_A\_Sk-N present

Item	Demultiplexing	Reference	Status	Support
1	The RS4/P0s_A_Sk-E1 demultiplexes	6.3.6	o.2501	
	the P0s data from byte E1 of the RS			
	Overhead.			
2	The RS4/P0s_A_Sk-F1 demultiplexes	6.3.6	o.2501	
	the P0s data from byte F1 of the RS			
	Overhead.			

o.2501: It is mandatory to support at least one of these items -- at least one RS4/P0s\_A\_Sk-N function present

## D.4.2.5.2 RS4 layer to P0s layer frequency justification and bitrate adaptation processes

Table D.26: Frequency justification and bitrate adaptation: principles

Prerequisite: D.1/8 -- RS4/P0s\_A\_So-N present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
	The RS4/P0s_A_So-N function provides frequency justification and bitrate adaptation for a 64 kbit/s information stream. It takes P0s_CI as an unstructured bit-stream with a rate of 64 kbit/s ± 100 ppm and inserts it into the RSOH.	6.3.5	m	
	Frequency justification is performed by octet slip buffering.	6.3.5	m	

Table D.27: Frequency justification and bitrate adaptation: source direction

Prerequisite: D.1/8 -- RS4/P0s\_A\_So-N present

Item	Frequency justification and bitrate adaptation: source direction	Reference	Status	Support
1	The RS4/P0s_A_So-N function provides for an elastic store (slip buffer) process. The are written into the store under control of the associated input clock. The data are read out of the store under control of the STM-4 clock, frame position and justification decision.	6.3.5	m	
2	Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification (slip) action, the reading of one 64 kbit/s octet (9 bits) is cancelled once. Upon a negative justification (slip) action, the same 64 kbit/s octet (9 bits) is read out a second time.	6.3.5	m	
3	The elastic store (slip buffer) size accommodates at least 18 µs of wander without introducing errors is at least 2 octets.	6.3.5	m	

## D.4.2.6 STM-4 regenerator section layer to V0x layer adaptation functions: RS4/V0x\_A\_So and RS4/V0x\_A\_Sk

#### D.4.2.6.1 RS4 layer to V0x layer multiplexing and demultiplexing processes

**Table D.28: Multiplexing** 

Prerequisite: D.1/10 -- RS4/V0x\_A\_So present

Iten	Multiplexing	Reference	Status	Support
1	The RS4/V0x_A_So multiplexes the V0x_CI data (64 kbit/s) into the byte location F1.	6.3.7	m	

**Table D.29: Demultiplexing** 

Prerequisite: D.1/11 -- RS4/V0x\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The RS4/V0x_A_Sk demultiplexes the user channel data from RS Overhead	6.3.8	m	
	(byte F1).			

### D.4.3 Defect, fault and performance monitoring

## D.4.3.1 Trail termination point mode management

Table D.30: Trail termination point mode process

Prerequisite: D.1/3 -- RS4\_TT\_Sk function present

Item	Trail termination point status	Reference	Status	Support
	process			
1	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "not monitored" (NMON)	subclause 8.5		
	status.			
2	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "monitored" (MON) status.	subclause 8.5		
3	The Trail Termination Point Mode	6.2.2	m	
	status is provisionable by the EMF.			

#### D.4.3.2 Defect detection and clearance criteria

Table D.31: Trace Identifier Mismatch defect (dTIM)

Prerequisite: D.1/3 -- RS4\_TT\_Sk function present

Item	Trace Identifier Mismatch defect	Reference	Status	Support
	(dTIM)			
1	The RS4 dTIM defect is detected	EN 300 417-1-1 [1]	m	
	within a maximum period of 100 ms in	subclause 8.2.1.3		
	the absence of bit errors.			
2	The RS4 dTIM defect is cleared within	EN 300 417-1-1 [1]	m	
	a maximum period of 100 ms in the	subclause 8.2.1.3		
	absence of bit errors.			
3	The RS4 dTIM is suppressed during	EN 300 417-1-1 [1]	m	
	the reception of aSSF from the server	subclause 8.2.1.3		
	layer.			
4	The RS4 dTIM detection can be	EN 300 417-1-1 [1]	m	
	disabled (TIMdis).	subclause 8.2.1.3		

### D.4.3.3 Consequent action activation and clearance criteria

#### Table D.32: Alarm Indication Signal action (aAIS)

 $Prerequisite: C.1/3\ OR\ C.1/4\ OR\ C.1/9\ OR\ C.1/11\ --\ RS4\_TT\_Sk\ and/or\ RS4/MS1\_A\_So\ and/or\ RS4/P0s\_A\_Sk\ and/or\ RS4/V0X\_A\_Sk\ present$ 

Item	Alarm Indication Signal action (aAIS)	Reference	Status	Support
1	The RS4_TT_Sk outputs an all "1s" signal within 250 μs upon RS4 dTIM detection.	6.2.2	c3201	
2	The RS4_TT_Sk outputs an all "1s" signal within 250 μs upon CI_SSF reception.	6.2.2	c3201	
3	The RS4_TT_Sk outputs normal data within 250 μs when there is (are) no more defect(s) active.	6.2.2	c3201	
4	The RS4/MS4_A_So outputs an all "1s" signal within 250 μs upon CI_SSF reception.	6.2.2	c3202	
5	The frequency of the all "1s" signal is within the range of 622 080 kHz kbit/s ± 20 ppm.	6.3.1	c3202	
6	The RS4/MS4_A_So outputs normal data within 250 µs when there is (are) no more defect(s) active.	6.3.1	c3202	
7	The RS4/P0s_A_Sk-N outputs an all "1s" signal within 1 ms upon AI_TSF reception.	6.3.6	c3203	
8	The frequency of the all "1s" signal is within the range of 64 kbit/s ± 20 ppm.	6.3.6	c3203	
9	The RS4/P0s_A_Sk-N outputs normal data within 1 ms when there is (are) no more defect(s) active.		c3203	
10	The RS4/V0x_A_Sk outputs an all "1s" signal within 1 ms upon AI_TSF reception.	6.3.8	c3204	
11	The frequency of the all "1s" signal is within the frequency limits for this signal.	6.3.8	c3204	
12	The RS4/V0x_A_Sk outputs normal data within 1 ms when there is (are) no more defect(s) active.	6.3.8	c3204

# Annex E (normative): ICS proforma for STM-4 multiplex section layer

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

## E.1 Identification of the implementation

In the present document, an Implementation Under Test (IUT), and of course the identification of an IUT refers to an STM-4 Multiplex Section (MS4) layer instance implemented inside the System Under Test (SUT).

Identification of the IUT and the SUT in which it resides should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

E.1.1	Date of the statement
E.1.2 IUT name:	Implementation Under Test (IUT) identification
IUT version Hardware ve	rsion:
Software ver	sion:
Firmware ver	rsion:
E.1.3 SUT name:	System Under Test (SUT) identification

## E.2 Identification of the EN

This ICS proforma applies to the following standard:

EN 300 417-3-1: "Transmission and Multiplexing (TM); Generic requirements of transport functionality of equipment: STM-N regenerator and multiplex section layer functions".

# E.3 Global statement of conformance of STM-4 Multiplex Section (MS4) layer

Are all mandatory capabilities implemented (Yes/No) .....

NOTE: Answering "No" to this question indicates non-conformance to the EN specification. Non-supported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is non-conforming, on pages attached to the ICS proforma.

Answering "Yes" to this question indicates only that all the capabilities with the explicit status "m" are supported. It is not necessary to fill in the support column of the associated item.

## E.4 MS4 layer function

### E.4.1 MS4 layer Description

Table E.1: MS4 layer functions

MS4 layer functions	Reference	Status	Support
Multiplex Section Connection function (MS4_C).	7, figure 51	0	
Source function (MS4_TT_So).	7, figure 51	o.101	
Multiplex Section Trail Termination Sink function (MS4_TT_Sk).	7, figure 51	o.101	
Multiplex Section to S4 layer Adaptation Source function (MS4/S4_A_So-N).	7, figure 51	c101	
Multiplex Section to S4 layer Adaptation Sink function (MS4/S4_A_Sk-N).	7, figure 51	c102	
Multiplex Section to SD Layer Adaptation Source function (MS4/SD_A_So).	7, figure 51	c103	
Multiplex Section to SD Layer Adaptation Sink function (MS4/SD_A_Sk).	7, figure 51	c104

#### E.4.2.1 MS4 connection function: MS4\_C

**Table E.8: Connection functionalities** 

Prerequisite: E.1/1 -- MS4\_C present

Item	Connection functionalities	Reference	Status	Support
1	For further study.	7.1	n/a	

#### E.4.2.2 MS4 layer trail termination functions: MS4\_TT\_So and MS4\_TT\_Sk

#### E.4.2.2.1 In service error monitoring process

Table E.9: In service error monitoring: principles

Item	In service error monitoring: principles	Reference	Status	Support
1	An EDC is part of the characteristic information for in service monitoring purposes.	EN 300 417-1-1 [1] subclause 7.3	m	
2	In service error monitoring parameter definition is block-based.	G.707 [14] subclause 9.2.2.4 note	m	
3	The block length is 2 403 bytes (within an STM-16, the STM-1 frame structure without the Regenerator Section Overhead).	G.707 [14] subclause 9.2.2.4	m	
4	The error monitoring is performed using Bit Interleaved Parity 96 (BIP-96).	7.2.1, G.707 [14] subclause 9.2.2.4 note	m	
5	The BIP-96 is calculated using even parity in such a manner that the bit in position x provides even parity over the x-bits of all the 96-bits sequences within the specified block.	G.707 [14] subclause 9.2.2.4 note	m	

Comments: The BIP-n is interpreted as checking 'n' separate interleaved parity check blocks. If any of the 'n' parity check fails (EDC Violation), the block is assumed to be in error.

**Table E.10: EDC location** 

Item	Error Detection Code (EDC) location	Reference	Status	Support
	Multiplex Section EDC is located in bytes B2 from (5,1) to (5,12) of the	7, figure 52	m	
	STM-4 frame.			

Table E.11: EDC processing: source direction

Prerequisite: E.1/2 -- MS4\_TT\_So present

Item	Error Detection Code (EDC) processing: source direction	Reference	Status	Support
	The BIP-96 is calculated over all bits, except those in the RSOH bytes, of the previous STM-4 frame.	7.2.1	m	
	BIP-96 code is inserted in the 12 B2 bytes of the current STM-4 frame.	7.2.1	m	

Table E.12: EDC processing: sink direction

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	Error Detection Code (EDC) processing: sink direction	Reference	Status	Support
1	The incoming error monitoring bytes B2 are recovered from the MSOH signal.	7.2.2	m	
2	The BIP-96 is calculated over all bits, except of those in the RSOH bytes, of the previous STM-4 frame.	7.2.2	m	
3	Recovered B2 bytes are compared with the calculated BIP-96.	7.2.2	m	
4	A difference between the computed and recovered B2 values is taken as evidence of one or more errors (nN_B) in the computation block.	7.2.2	E	

#### E.4.2.2.2 Server layer status monitoring process

#### E.4.2.2.2.1 MS4 Alarm Indication Signal (MS4 AIS)

Table E.13: Alarm Indication Signal (AIS) processing: sink direction

Prerequisite: E.1/3 -- MS4\_TT\_Sk present

Item	Alarm Indication Signal (AIS) processing: sink direction	Reference	Status	Support
	MS4_TT_Sk extracts and monitors bits 6 to 8 of K2 byte in order to detect the '111' bit pattern as evidence of MS AIS condition.	7.2.2	E	

#### E.4.2.2.3 Remote indicators monitoring process

#### E.4.2.2.3.1 MS4 Remote Defect Indication (RDI) (MS4 RDI)

Table E.14: Remote Defect Indication (RDI) location

Prerequisite: E.1/2 AND E.1/3 -- bi-directional layer supported

Item	Remote Defect Indication (RDI)	Reference	Status	Support
	The MS RDI is located in bits 6,7 and 8 of byte K2(5,25) of the STM-4	7.2.1, 7.2.2	m	
	frame.			

Table E.15: Remote Defect Indication (RDI) processing: source direction

Prerequisite: E.1/2 AND E.1/3 -- bi-directional layer supported

Item	Remote Defect Indication (RDI) processing: source direction	Reference	Status	Support
1	MS4 RDI is set upon activation of MS4_RI_RDI determined by the associated MS4_TT_Sk.	7.2.1	m	
2	MS4 RDI is cleared upon deactivation of MS4_RI_RDI determined by the associated MS4_TT_Sk.	7.2.1	m	
3	MS4 RDI signal is coded as a '110' bit pattern.	7.2.1	m	
4	If MS4_RI_RDI is inactive bits 6 to 8 of byte K2 are passed through transparently except for incoming codes "111" and "110".	7.2.1	m	
5	The '000' bit pattern is inserted if no MS4_RI_RDI signal is active and the incoming content of bits 6 to 8 in byte K2 is "111" or "110".	7.2.1	m	

Table E.16: Remote Defect Indication (RDI) processing: sink direction

Prerequisite: E.1/3 -- MS4\_TT\_Sk present

Item	Remote Defect Indication (RDI) processing: sink direction	Reference	Status	Support
1	MS4_TT_Sk extracts and monitors bits 6 to 8 of K2 byte in order to detect the '110' bit pattern as evidence of MS RDI condition.	7.2.2	m	

#### E.4.2.2.3.2 MS4 Remote Error Indication (REI) (MS4 REI)

#### Table E.17: Remote Error Indication (REI): principles

Prerequisite: E.1/2 AND E.1/3 -- -- bi-directional layer supported

Item	Remote Error Indication (REI):	Reference	Status	Support
	principles			
1	The REI signal contains the exact	G.707 [14]	m	
		subclause 9.2.2.12		
	detected in the trail signal at the			
	far-end trail termination.			
2	The block length is 801 bits. The EDC	G.707 [14]	m	
	is BIP-1.	subclause 9.2.2.12		

Table E.18: Remote Error Indication (REI) location

Prerequisite: E.1/2 AND E.1/3 -- -- bi-directional layer supported

Item	Remote Error Indication (REI) location	Reference	Status	Support
1	The MS REI is located in bits 1 to 8 of	G.707 [14]	m	
	M1(9,15) byte of the STM-4 frame.	subclause 9.2.2.12		

Table E.19: Remote Error Indication (REI) processing: source direction

Prerequisite: E.1/2 AND E.1/3 -- -- bi-directional layer supported

Item	Remote Error Indication (REI) processing: source direction	Reference	Status	Support
	The MS4_TT_So sets REI to the equivalent binary value of the number of EDCV detected by the monitoring process.	G.707 [14] subclause 9.2.2.12	m	

Table E.20: Remote Error Indication (REI) processing: sink direction

Prerequisite: E.1/3 -- MS4\_TT\_Sk present

Item	Remote Error Indication (REI) processing: sink direction	Reference	Status	Support
	The MS4_TT_Sk extracts the MS4 REI from the incoming STM-4 signal.	7.2.2	m	
	The MS4_TT_Sk interprets the MS4 REI as given in G.707 [14] subclause 9.2.2.12.	G.707 [14] subclause 9.2.2.12	m	

## E.4.2.3 MS4 layer to S4 layer adaptation functions: MS4/S4\_A\_So and MS4/S4\_A\_Sk

**Table E.21: Adaptation process** 

Prerequisite: E.1/4 OR E.1/5 -- MS4/S4\_A\_So and/or MS4/S4\_A\_Sk present

Item	Adaptation process	Reference	Status	Support
1	The MS4/S4_A_So function provides frequency justification and bitrate adaptation for a VC-4 signal, represented by a nominally (261×9×64) = 150 336 kbit/s information stream and the related frame phase with a frequency accuracy within ± 4,6 ppm.	7.3.1	c2101	
2	The MS4/S4_A_So-N has access to a specific AU-4 of the MS4 access point. The AU-4 is defined by the parameter N (or AUnum) with N=1,,4.	7.3.1	c2101	
3	The MS4/S4_A_Sk recovers the VC-4 data with frame phase information.	7.3.2	c2102	
4	The MS4/S4_A_Sk-N has access to a specific AU-4 of the MS4 access point. The AU-4 is defined by the parameter N (or AUnum) with N=1,,4.	7.3.2	c2102	

c2101: IF E.1/4 THEN m ELSE n/a -- MS4/S4\_A\_So present c2102: IF E.1/5 THEN m ELSE n/a -- MS4/S4\_A\_Sk present

## E.4.2.3.1 MS4 layer to S4 layer frequency justification and bitrate adaptation processes

Table E.22: Frequency justification and bitrate adaptation: principles

Prerequisite: E.1/4 -- MS4/S4\_A\_So present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
	Frequency justification is performed by pointer adjustments.	7.3.1	m	

Table E.23: Frequency justification and bitrate adaptation: source direction

Prerequisite: E.1/4 -- MS4/S4\_A\_So present

Item	Frequency justification and bitrate	Reference	Status	Support
	adaptation: source direction			
1	The MS4/S4_A_So function provides for an elastic store (buffer) process. The data and frame start signals are written into the store under control of the associated input clock. The data and frame start signals are read out of the store under control of the STM-4 clock, frame position and justification decision.	7.3.1	m	
2	Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification action, the reading of 24 data bits are cancelled once and no data written at the three positions H3+1. Upon a negative justification action, an extra 24 data bits are read out once into the three positions H3.		m	
3	Consecutive pointer operations shall be separated by at least three frames (i.e. every fourth frame) in which the pointer value remains constant.	7.3.1	m	
4	The buffer hysteresis is at least 12 bytes.	7.3.1	m	
5	The size of the buffer for the elastic store process is [for further study].	7.3.1	n/a	

#### E.4.2.3.2 MS4 layer to S4 layer alignment process

Table E.24: Alignment process principles

Prerequisite: E.1/4 OR E.1/5 -- MS4/S4\_A\_So and/or MS4/S4\_Sk present

lt	em	Alignment process principles	Reference	Status	Support
	1	The alignment process is carried out by	G.707 [14]	m	
		the processing of the AU-4 pointer which	subclause 8.1		
		is aligned in the STM-4 payload in fixed			
		position relative to the STM-4 frame.			
	2	The location of the first byte of the VC-4	G.707 [14]	m	
		with respect to the STM-4 is given by the	subclause 8.1.2		
		related AU-4 pointer value.			

Comments: The pointer value gives a measure of the phase offset between the VC-4 stream and the STM-4 frame.

Table E.25: AU-4 pointer and alignment byte location

Prerequisite: E.1/4 OR E.1/5 -- MS4/S4\_A\_So and/or MS4/S4\_Sk present

Item	AU-4 pointer and alignment byte	Reference	Status	Support
	location			
	The 36 bytes at the beginning of row 4 in	5.3.1, G.707 [14]	m	
	the STM-4 frame are allocated to the	subclauses 8.1 to		
	alignment process.	8.1.1		
2	The AU-4 pointer is located into H1	5.3.1, G.707 [14]	m	
	(4,AUnum) and H2 (4,12+AUnum) of the	subclauses 8.1 to		
	STM-4 frame.	8.1.1		

Comments: The parameter AUnum (AUnum=1,..,4) indicates the Administrative Unit number within the STM-16 frame.

Table E.26: AU-4 Pointer and alignment byte structure

Prerequisite: E.1/4 OR E.1/5 -- MS4/S4\_A\_So and/or MS4/S4\_Sk present

Item	AU-4 Pointer and alignment byte	Reference	Status	Support
	structure			
1	The content of H1 (4,AUnum) and H2	G.707 [14]	m	
	(4,12+AUnum) bytes is viewed as one	subclause 8.1.2		
	pointer word.			
2	Bits 1 through 4 of the pointer word	G.707 [14]	m	
	carry the New Data Flag (NDF).	subclause 8.1.2		
3	Bits 5 and 6 of the pointer word,	7.3.1, G.707 [14]	m	
	named ss bits, carry the AU-n type	subclause 8.1.2		
	code. They are set to '10'.			
4	Bits 7 through 16 (last ten bits) of the	G.707 [14]	m	
	pointer word carry the pointer value.	subclause 8.1.2		
5	The AU-4 pointer value is a binary	G.707 [14]	m	
	number with a range of 0 to 782.	subclause 8.1.2		
6	Bytes from (4,5) to (4,12) contain the	7.3.1, G.707 [14]	m	
	fixed stuff code Y = 1001 ss11.	subclause 8.1.2		
	Bits ss are undefined.			
7	Bytes from (4,17) to (4,24) contain the		m	
	fixed stuff code '1' = 1111 1111.	subclause 8.1.2		
8	H3(4,24+AUnum), H3(4,28+AUnum),	G.707 [14]	m	
	H3(4,32+AUnum) bytes are the	subclause 8.1.2		
	negative justification			
	opportunity bytes.			
9	Bits 7,9,11,13,15 of the pointer word	G.707 [14]	m	
	(I bits) are the pointer incrementation	subclause 8.1.2		
	indication bits.			
10	Bits 8,10,12,14,16 of the pointer word	G.707 [14]	m	
	(D bits) are the pointer	subclause 8.1.2		
	decrementation indication bits.			

Comments: The parameter AUnum (AUnum=1,..,4) indicates the Administrative Unit number within the STM-16 frame.

NOTE: Items E.26/3 and E.26/6 are contradictory but just reflect the base specification in ITU–T Recommendation G.707 [14] and EN 300 417-3-1 [2].

#### E.4.2.3.2.1 AU pointer generation

#### **Table E.27: Pointer generation principles**

 $Prerequisite: E.1/4\ OR\ E.1/12 --\ MS4/S4\_A\_So\ and/or\ MS4/S4-4c\_A\_So\ present$ 

Item	Pointer generation principles	Reference	Status	Support
1	The pointer is generated according to the pointer generation algorithm.	7.3.1, EN 300 417-1-1 [1]	m	
	une pointer generation algorithm.	annex A		
2	The pointer generation algorithm can be modelled by a finite state machine as shown in EN 300 417-1-1 [1] figure A.1. Four states can be identified:  NORM_state;  NDF_state;  INC_state;  DEC_state.	EN 300 417-1-1 [1] annex A	m	
3	The transitions from the NORM state to the INC, DEC and NDF states are initiated by Elastic Store process events.	EN 300 417-1-1 [1] annex A	m	
4	The transitions from INC, DEC and NDF states to the NORM state occur autonomously under the generation of special pointer patterns.	EN 300 417-1-1 [1] annex A	m	
5	Definition of excessive pointer adjustments is for further study.	EN 300 417-1-1 [1] annex A	n/a	

#### **Table E.28: Pointer generation events**

 $Prerequisite: E.1/4\ OR\ E.1/12 --\ MS4/S4\_A\_So\ and/or\ MS4/S4-4c\_A\_So\ present$ 

Item	Pointer generation events	Reference	Status	Support
1	thr_exc: elastic store filling exceeds	EN 300 417-1-1 [1]	m	
	an upper threshold.	annex A		
2	thr_und: elastic store filling falls	EN 300 417-1-1 [1]	m	
	below a lower threshold.	annex A		
3	FO_normal: normal frame offset.	EN 300 417-1-1 [1]	m	
		annex A		
4	FO_discont: frame offset	EN 300 417-1-1 [1]	m	
	discontinuity.	annex A		
5	A frame offset discontinuity occurs if	EN 300 417-1-1 [1]	m	
	an incoming NDF_enable or	annex A		
	3*new_point is received by the pointer			
	interpreter controlling the process of			
	writing into the elastic store.			
6	A frame offset discontinuity occurs if	EN 300 417-1-1 [1]	m	
	the Elastic Store overflow / underflow	annex A		
	condition is detected.			
7	The active offset is defined as the	EN 300 417-1-1 [1]	m	
	phase between the outgoing STM-4	annex A		
	and the VC-4 (or VC-4-4c).			
8	The active offset is undefined during a	EN 300 417-1-1 [1]	m	
	signal fail condition.	annex A		

#### Table E.29: Pointer generation actions

 $Prerequisite: E.1/4\ OR\ E.1/12 --\ MS4/S4\_A\_So\ and/or\ MS4/S4-4c\_A\_So\ present$ 

Item	Pointer generation actions	Reference	Status	Support
1	The <b>norm_point action</b> generates a	EN 300 417-1-1 [1]	m	
	transmitted pointer word with:	annex A		
	<ul> <li>NDF disabled (NDF bytes set to</li> </ul>			
	0110);			
	<ul> <li>pointer value set to active offset.</li> </ul>			
2	The inc_ind action generates a	EN 300 417-1-1 [1]	m	
	transmitted pointer word with:	annex A, G.707 [14]		
	- NDF disabled (NDF bytes set to	subclause 8.1.5		
	0110);			
	<ul> <li>pointer value set to the active offset and I-bits inverted.</li> </ul>			
	onset and i-bits inverted.			
	After this action 3 (or 12)			
	stuffing bytes are transmitted in the 3			
	(or 12) H3+1 byte positions (see			
	figure 53 in EN 300 417-3-1) of the			
	AU-4 (or AU-4-4c) and the active			
	offset is incremented by one unit.			
	If the previous pointer value is set to			
	its maximum value, the subsequent			
	pointer is set to zero.			
3	The dec_ind action generates a	EN 300 417-1-1 [1]	m	
	transmitted pointer word with:	annex A, G.707 [14] subclause 8.1.5		
	<ul> <li>NDF disabled (NDF bytes set to 0110);</li> </ul>	Subclause 6.1.5		
	- pointer value set to the active			
	offset and D-bits inverted.			
	After this action 3 (or 12) data bytes			
	are transmitted in the 3 ( or 12)			
	H3 byte positions of the AU-4 (or			
	AU-4-4c) and the active offset is			
	decremented by one.			
	If the previous pointer value is zero,			
	the subsequent pointer is set to its			
<u></u>	maximum value.			
4	The NDF_enable action generates a	EN 300 417-1-1 [1]	m	
	pointer word with:	annex A		
	- NDF enabled (NDF bytes set to			
	1001);			
	<ul> <li>pointer value set to the new offset.</li> </ul>			
	After this action the active offset is			
	updated to the new offset value.			

Comments: I bits and D bits are, respectively, bits 7,9,11,13,15 and 8,10,12,14,16 of the pointer word.

#### Table E.30: Pointer generation: operation in NORM state

Prerequisite: E.1/4 OR E.1/12 -- MS4/S4\_A\_So and/or MS4/S4-4c\_A\_So present

Item	Pointer generation:	Reference	Status	Support
	operation in NORM state			
1	Reception: FO_normal.	EN 300 417-1-1 [1]	m	
	Transition to state: NORM.	annex A		
	Action: norm_point.			
2	Reception: thr_exc.	EN 300 417-1-1 [1]	m	
	Transition to state: DEC.	annex A		
	Action: dec_ind.			
3	Reception: thr_und.	EN 300 417-1-1 [1]	m	
	Transition to state: INC.	annex A		
	Action: inc_ind.			
4	Reception: FO_discont.	EN 300 417-1-1 [1]	m	
	Transition to state: NDF.	annex A		
	Action: NDF_enable.			

Table E.31: Pointer generation: operation in INC state

Prerequisite: E.1/4 OR E.1/12 -- MS4/S4\_A\_So and/or MS4/S4-4c\_A\_So present

Item	Pointer generation: operation in INC state	Reference	Status	Support
1	Reception: FO_normal.	EN 300 417-1-1 [1]	m	
	Transition to state: INC.	annex A		
	Action: norm_point.			
2	Reception: 3*FO_normal.	EN 300 417-1-1 [1]	m	
	Transition to state: NORM.	annex A		
	Action: norm_point.			
3	Reception: FO_discont.	EN 300 417-1-1 [1]	m	
	Transition to state: NDF.	annex A		
	Action: NDF_enable.			

Table E.32: Pointer generation: operation in DEC state

Item	Pointer generation: operation in DEC state	Reference	Status	Support
1	Reception: FO_normal. Transition to state: DEC. Action: norm_point.	EN 300 417-1-1 [1] annex A	m	
2	Reception: 3*FO_normal. Transition to state: NORM. Action: norm_point.	EN 300 417-1-1 [1] annex A	m	
3	Reception: FO_discont. Transition to state: NDF. Action: NDF_enable.	EN 300 417-1-1 [1] annex A	m	

Table E.33: Pointer generation: operation in NDF state

Prerequisite: E.1/4 OR E.1/12 -- MS4/S4\_A\_So and/or MS4/S4-4c\_A\_So present

Item	Pointer generation: operation in NDF state	Reference	Status	Support
1	Reception: FO_normal. Transition to state: NDF.	EN 300 417-1-1 [1] annex A	m	
	Action: norm_point.	annex A		
2	Reception: FO_discont.	EN 300 417-1-1 [1]	m	
	Transition to state: NDF.	annex A		
	Action: NDF_enable.			
3	Reception: 3*FO_normal.	EN 300 417-1-1 [1]	m	
	Transition to state: NORM.	annex A		
	Action: norm_point.			

## E.4.2.3.2.2 AU pointer interpretation

#### **Table E.34: Pointer interpretation principles**

Item	Pointer interpretation	principles	Reference	Status	Support
1	The pointer is interpreted	0	, ,	m	
	the pointer interpretation	algorithm.	EN 300 417-1-1 [1]		
			annex B		
2	The pointer interpretation	•	EN 300 417-1-1 [1]	m	
	can be globally described	d by a state	annex B		
	diagram as shown in	5.4			
	EN 300 417-1-1 [1] figure	e B.1.			
	Six states are defined:	(110011)			
	<del>-</del>	(NORM);			
	_	(AIS);			
	<ul><li>LOP_state</li></ul>	(LOP);			
	<ul><li>INCrement_state</li></ul>	(INC);			
	<ul> <li>DECrement_state</li> </ul>	(DEC);			
	<ul><li>NDF_state</li></ul>	(NDF).			
3	The transitions between	the states will	EN 300 417-1-1 [1]	m	
	be initiated either by sing	gle or	annex B		
	consecutive events.				
4	The kind and number of		EN 300 417-1-1 [1]	m	
	indications activating a tr		annex B		
	chosen such that the bel				
	stable and insensitive to	signai			
	degradations.				

## **Table E.35: Pointer interpretation events**

Item	Pointer interpretation events	Reference	Status	Support
1	NDF Enabled occurs when any of the		m	
	following bit patterns is received:	annex B		
	"1001", "0001", "1101", "1011",			
	"1000".	EN 000 447 4 4 541		
2	NDF Disabled occurs when any of	EN 300 417-1-1 [1] annex B	m	
	the following bit patterns is received: "0110", "1110", "0010", "0100",	annex b		
	"0111".			
3	The norm_point event corresponds	EN 300 417-1-1 [1]	m	
	to a received pointer word with:	annex B		
	NDF disabled			
	AND ss-bits set to 10 (indicating			
	AU-4) AND received pointer offset value			
	equal to active offset value.			
4	The NDF_enable event corresponds	EN 300 417-1-1 [1]	m	
	to a received pointer word with:	annex B		
	NDF enabled			
	AND ss-bits set to 10 (indicating			
	AU-4) AND received pointer offset value in			
	range.			
5	The AIS_ind event corresponds to a	EN 300 417-1-1 [1]	m	
	received pointer word set to	annex B		
	11111111 11111111 (FF FF Hex).			
6	The inc_ind event corresponds to a	EN 300 417-1-1 [1]	m	
	received pointer word with: NDF disabled	annex B		
	AND ss-bits set to 10 (indicating			
	AU-4)			
	AND majority of I-bits inverted			
	AND no majority of D-bits inverted.			
7	The inv_point event corresponds to	EN 300 417-1-1 [1]	m	
	any other received pointer word:	annex B		
	NOT norm_point AND NOT NDF enable			
	AND NOT AIS ind			
	AND NOT [(inc_ind OR dec_ind) AND			
	NORM_state].			
8	The <b>new_point event</b> corresponds to		m	
	a received pointer word with:	annex B		
	NDF disabled AND ss-bits set to 10 (indicating			
	AU-4)			
	AND received pointer offset value in			
	range but not equal to active offset			
	value.	EN 200 447 4 4 54		
9	The remaining six <b>NDF codes</b>	EN 300 417-1-1 [1] annex B	m	
	("0000", "0011", "0101", "1010", "1100", "1111") result in an	ailiex D		
	inv_pointer indication.			
10	The 8*NDF_enable event	EN 300 417-1-1 [1]	m	
	corresponds to 8 consecutive	annex B		
	NDF_enable events.			
11	The 3*AIS_ind corresponds to three	EN 300 417-1-1 [1]	m	
40	consecutive AIS_ind events.	annex B		
12	The 8* inv_point event corresponds	EN 300 417-1-1 [1]	m	
	to 8 consecutive inv_point events.	annex B		

Item	Pointer interpretation events	Reference	Status	Support
13	The 3*any_point corresponds to the	EN 300 417-1-1 [1]	m	
	following combination of events:	annex B		
	3*NOT NDF_enable			
	AND NOT 3*AIS_ind			
	AND NOT 3*new_point.			
14	The 3*new_point corresponds to	EN 300 417-1-1 [1]	m	
	three consecutive equal new_point	annex B		
	events.			

Table E.36: Operation in NORM state

Prerequisite: E.1/5 OR E.1/13 -- MS4/S4\_A\_Sk and/or MS4/S4-4c\_A\_Sk present

Item	Operation in NORM state	Reference	Status	Support
1	Reception: inc_ind.	EN 300 417-1-1 [1]	m	
	Transition to state: INC.	annex B		
	Action: increment active offset.			
2	Reception: dec_ind.	EN 300 417-1-1 [1]	m	
	Transition to state: DEC.	annex B		
	Action: decrement active offset.			
3	Reception: NDF_enable.	EN 300 417-1-1 [1]	m	
	Transition to state: NDF.	annex B		
	Action: accept new offset.

	Transition to state: LOP.	annex B		
	Action: offset undefined.			
4	Reception: NDF_enable.	EN 300 417-1-1 [1]		
	Transition to state: NDF.	annex B		
	Action: accept new offset.			

**Table E.42: Pointer interpretation: complements** 

Item	Pointer interpretation: complements	Reference	Status	Support
1	Non-consecutive invalid indications do not activate the transition to the LOP_state.	EN 300 417-1-1 [1] annex B	m	
2	The pointer processor maintains its current phase on detection of an invalid pointer and searches in parallel for a new phase.	9.3.2, 9.3.4	m	
3	The reception of 3*new_point takes precedence over any other events.	EN 300 417-1-1 [1] annex B	m	
4	The second and third offset value received in 3*new_point needs to be identical with the first.	EN 300 417-1-1 [1] annex B	m	
5	The "consecutive new_point" counter is reset to zero on a change of state, except for transitions occurring among INC, DEC, NDF states and the NORM state.	EN 300 417-1-1 [1] annex B	m	
6	The "consecutive inv_point counter" can be incremented in all states. The "consecutive inv_point" counter is not reset on a change of state.	EN 300 417-1-1 [1] annex B	m	
7	The "consecutive AIS_ind" counter is not reset on a change of state.	EN 300 417-1-1 [1] annex B	m	
8	The "consecutive NDF_enable" counter is reset to zero on a change of AIS to NDF state; otherwise the counter is not reset.	EN 300 417-1-1 [1] annex B	m	

#### E.4.2.3.3 MS4 layer to S4 layer multiplexing and demultiplexing processes

#### **Table E.43: Multiplexing**

Prerequisite: E.1/4 -- MS4/S4\_A\_So present

Item	Multiplexing	Reference	Status	Support
	Bytes allocated to the AU-4 pointer are multiplexed into MS4_AI at the AU tributary location indicated by MI_AUnum.	7.3.1	m	
	The VC-4 is multiplexed into MS4_AI according to the pointer generation algorithm.	7.3.1	m	

**Table E.44: Demultiplexing** 

Prerequisite: E.1/5 -- MS4/S4\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The AU-4 pointer is recovered from MS4_AI from the AU pointer location of the STM-4 stream indicated by MI_AUnum.	7.3.2	m	
2	The VC-4 is recovered from MS4_AI according to the pointer interpretation algorithm.	7.3.2	m	

# E.4.2.4 MS4 layer to S4-4c layer adaptation functions: MS4/S4-4c\_A\_So and MS4/S4-4c\_A\_Sk

**Table E.45: Adaptation process** 

 $Prerequisite: E.1/12\ OR\ E.1/13 --\ MS4/S4-4c\_A\_So\ and/or\ MS4/S4-4c\_A\_Sk\ present$ 

lt	tem	Adaptation process	Reference	Status	Support
		The MS4/S4-4c_A_So function provides frequency justification and bitrate adaptation for a VC-4-4c signal, represented by a nominally $(1\ 044 \times 9 \times 64) = 601\ 344$ kbit/s information stream and the related frame phase with a frequency accuracy within $\pm$ 4,6 ppm.	7.3.3	c4501	
		The MS4/S4-4c_A_Sk recovers the VC-4-4c data with frame phase information.	7.3.4	c4502	

c4501: IF E.1/12 THEN m ELSE n/a c4502: IF E.1/13 THEN m ELSE n/a -- MS4/S4-4c\_A\_So present

-- MS4/S4-4c\_A\_Sk present

## E.4.2.4.1 MS4 layer to S4-4c layer frequency justification and bitrate adaptation processes

Table E.46: Frequency justification and bitrate adaptation: principles

Prerequisite: E.1/12 -- MS4/S4-4c\_A\_So present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
	Frequency justification is performed by pointer adjustments.	7.3.3	m	

Table E.47: Frequency justification and bitrate adaptation: source direction

Prerequisite: E.1/12 -- MS4/S4-4c\_A\_So present

Item	Frequency justification and bitrate	Reference	Status	Support
	adaptation: source direction			
1	The MS4/S4-4c_A_So function	7.3.3	m	
	provides for an elastic store (buffer)			
	process. The data and frame start			
	signals are written into the store			
	under control of the associated input			
	clock. The data and frame start			
	signals are read out of the store			
	under control of the STM-4 clock,			
	frame position and justification			
	decision.			
2	Each justification decision results in a	7.3.3	m	
	corresponding negative / positive			
	justification action. Upon a positive			
	justification action, the reading of 96			
	data bits are cancelled once and no			
	data written at the twelve positions			
	H3+1. Upon a negative justification			
	action, an extra 96 data bits are read			
	out once into the twelve positions H3.			
3	Consecutive pointer operations shall	7.3.3	m	
	be separated by at least three frames			
	(i.e. every fourth frame) in which the			
	pointer value remains constant.			

#### E.4.2.4.2 MS4 layer to S4-4c layer alignment process

Table E.48: Alignment process principles

Prerequisite: E.1/12 OR E.1/13 -- MS4/S4-4c\_A\_So and/or MS4/S4-4c\_A\_Sk present

Item	Alignment process principles	Reference	Status	Support
	The alignment process is carried out by the processing of the AU-4-4c pointer which is aligned in the STM-4 payload in fixed position relative to the STM-4 frame.	G.707 [14] subclause 8.1	m	
2	The location of the first byte of the VC-4-4c with respect to the STM-4 is given by the related AU-4-4c pointer value.	G.707 [14] subclause 8.1.2	m	

Comments: The pointer value gives a measure of the phase offset between the VC-4-4c stream and the STM-4 frame.

#### Table E.49: AU-4-4c pointer and alignment byte location

Prerequisite: E.1/12 OR E.1/13 -- MS4/S4-4c\_A\_So and/or MS4/S4-4c\_A\_Sk present

Item		Reference	Status	Support
	byte location			
1	The 36 bytes at the beginning of row	7.3.3, G.707 [14]	m	
	4 in the STM-4 frame are allocated to	subclauses 8.1 to		
	the alignment process.	8.1.1		
		7.3.3, G.707 [14]	m	
		subclauses 8.1 to		
	(4,13) to (4,16) of the STM-4 frame.	8.1.1		

#### Table E.50: AU-4-4c pointer and alignment byte structure

 $Prerequisite: E.1/12\ OR\ E.1/13--\ MS4/S4-4c\_A\_So\ and/or\ MS4/S4-4c\_A\_Sk\ present$ 

Item	byte structure	Reference	Status	Support
1	The content of H1 (4,1) and H2	G.707 [14]	m	
	(4,13) bytes is viewed as one pointer	subclauses 8.1.2		
	word.	and 8.1.7.1		
2	Bits 1 through 4 of the pointer word	G.707 [14]	m	
	carry the New Data Flag (NDF).	subclause 8.1.2		
		and 8.1.7.1		
3	Bits 5 and 6 of the pointer word,	7.3.3, G.707 [14]	m	
	named ss bits, carry the AU-n type	subclause 8.1.2		
	code. They are set to '10'.	and 8.1.7.1		
4	Bits 7 through 16 (last ten bits) of the	G.707 [14]	m	
	pointer word carry the pointer value.	subclause 8.1.2		
		and 8.1.7.1		
5	The AU-4-4c pointer value is a binary	G.707 [14]	m	
	number with a range of 0 to 782.	subclause 8.1.2		
		and 8.1.7.1		
6	The pointer locations H1 (4,2) to (4,4)	7.3.3, G.707 [14]	m	
	and H2 (4,14) to (4,16) carry the	subclause 8.1.2		
	concatenation indicator, defined as	and 8.1.7.1		
	1001ss11 11111111, with ss being			
	undefined bits.			
7	Bytes from (4,5) to (4,12) contain the	7.3.3, G.707 [14]	m	
	fixed stuff code Y = 1001 ss11.	subclause 8.1.2		
	Bits ss are undefined.	and 8.1.7.1		
8	Bytes from (4,17) to (4,24) contain the	7.3.3, G.707 [14]	m	
	fixed stuff code '1' = 1111 1111.	subclause 8.1.2		
		and 8.1.7.1		
9	Bytes H3 from (4,25) to (4,36) are the	G.707 [14]	m	
	negative justification	subclause 8.1.2		
	opportunity bytes.	and 8.1.7.1		
10	Bits 7,9,11,13,15 of the pointer word	G.707 [14]	m	
	(I bits) are the pointer incrementation	subclause 8.1.2		
	indication bits.	and 8.1.7.1		
11	Bits 8,10,12,14,16 of the pointer word	G.707 [14]	m	
	(D bits) are the pointer	subclause 8.1.2		
	decrementation indication bits.	and 8.1.7.1		

#### E.4.2.4.2.1 Concatenation indicator recovery process

Table E.51: Concatenation indicator recovery process: principles

Prerequisite: E.1/13 -- MS4/S4-4c\_A\_Sk present

Item	Concatenation Indicator recovery process: principles	Reference	Status	Support
1	The Concatenation Indicator recovery algorithm can be globally described by a state diagram as shown in EN 300 417-1-1 [1] figure B.2. Three states are defined:  - CONCatenated_state (CONC);  - AIS_state (AISC);  - LOP_state (LOPC).	EN 300 417-1-1 [1] annex B	m	

Table E.52: Concatenation indicator recovery process events

Prerequisite: E.1/13 -- MS4/S4-4c\_A\_Sk present

Item	Concatenation Indicator recovery	Reference	Status	Support
	events			
1	The conc_ind event corresponds to a received word (in bytes [4,2] and [4,14], [4,3] and [4,15], [4,4] and [4,16]) with: NDF enabled AND dd 11 11111111. Bits indicated as 'dd' are undefined.	EN 300 417-1-1 [1] annex B	m	
2	The <b>AIS_ind event</b> corresponds to a received word (in bytes [4,2] and [4,14], [4,3] and [4,15], [4,4] and [4,16]) with: 1111111 11111111.	EN 300 417-1-1 [1] annex B	m	
3	The inv_point event corresponds to a received word (in bytes [4,2] and [4,14], [4,3] and [4,15], [4,4] and [4,16]) with:  NOT conc_ind AND NOT AIS_ind.	EN 300 417-1-1 [1] annex B	m	
4	The <b>3*AIS_ind</b> corresponds to three consecutive AIS_ind events.	EN 300 417-1-1 [1] annex B	m	
5	The <b>8</b> * <b>inv_point</b> corresponds to eight consecutive inv_point events.	EN 300 417-1-1 [1] annex B	m	
6	The <b>3*conc_ind</b> corresponds to three consecutive conc_ind events.	EN 300 417-1-1 [1] annex B	m	

**Table E.53: Operation in CONC state** 

Prerequisite: E.1/13 -- MS4/S4-4c\_A\_Sk present

Item	Operation in CONC state	Reference	Status	Support
	Reception: 3*AIS_ind	EN 300 417-1-1 [1]	m	
	Transition to state: AISC.	annex B		
2	Reception: 8*inv_ipoint	EN 300 417-1-1 [1]	m	
	Transition to state: LOPC.	annex B

6	Operation condition LOPX: NOT AISX AND NOT NORMX AND NOT INCX AND NOT DECX AND NOT NDFX.	EN 300 417-1-1 [1] annex B	m	

NOTE: Some ambiguities about this functionality seem to appear in the base specification.

#### E.4.2.4.3 MS4 layer to S4-4c layer multiplexing and demultiplexing processes

#### **Table E.57: Multiplexing**

Prerequisite: E.1/12 -- MS4/S4-4c\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	Bytes allocated to the AU-4-4c pointer	7.3.3	m	
	are multiplexed into MS4_AI.			
2	The VC-4-4c is multiplexed into	7.3.3	m	
	MS4_AI according to the pointer			
	generation algorithm.			

#### **Table E.58: Demultiplexing**

Prerequisite: E.1/13 -- MS4/S4-4c\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The AU-4-4c pointer is recovered	7.3.4	m	
	from MS4_AI.			
2	The VC-4-4c is recovered from	7.3.4	m	
	MS4_AI according to the pointer			
	interpretation algorithm.			

## E.4.2.5 MS4 layer to DCC Layer adaptation functions: MS4/DCC\_A\_So and MS4/DCC\_A\_Sk

#### E.4.2.5.1 MS4 layer to DCC layer multiplexing and demultiplexing processes

**Table E.59: Multiplexing** 

Prerequisite: E.1/8 -- MS4/DCC\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	The DCC_CI data (576 kbit/s) are	7.3.5	m	
	multiplexed into D4(6,1), D5(6,13),			
	D6(6,25), D7(7,1), D8(7,13),			
	D9(7,25), D10(8,1), D11(8,13),			
	D12(8,25) bytes of the STM-4 frame.			

Table E.60: Demultiplexing

Prerequisite: E.1/9 -- MS4/DCC\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The DCC_CI data (576 kbit/s) are demultiplexed from byte locations D4 to D12.	7.3.6	m	

# E.4.2.6 MS4 layer to P0s layer adaptation functions: MS4/P0s\_A\_So and MS4/P0s\_A\_Sk

## E.4.2.6.1 MS4 layer to P0s layer frequency justification and bitrate adaptation processes

Table E.61: Frequency justification and bitrate adaptation: principles

Prerequisite: E.1/8 -- MS4/P0s\_A\_So present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
	The MS4/ P0s _A_So function provides frequency justification and bitrate adaptation for a 64 kbit/s orderwire information stream. It takes P0s_CI as an unstructured bit-stream with a rate of 64 kbit/s ± 100 ppm and inserts it into the MSOH.	7.3.7	m	

Table E.62: Frequency justification and bitrate adaptation

Prerequisite: E.1/8 -- MS4/P0s\_A\_So present

Item	Frequency justification and bitrate	Reference	Status	Support
	adaptation			
1	The MS4/P0s_A_So function provides	7.3.7	m	
	for an elastic store (slip buffer)			
	process. The data and frame start			
	signals are written into the store			
	under control of the associated input			
	clock. The data and frame start			
	signals are read out of the store			
	under control of the STM-4 clock,			
	frame position and justification			
	decision.			
2	Each justification decision results in a	7.3.7	m	
	corresponding negative / positive			
	justification action. Upon a positive			
	justification (slip) action, the reading			
	of one 64 kbit/s octet (9 bits) is			
	cancelled once. Upon a negative			
	justification (slip) action, the same			
	64 kbit/s octet (9 bits) is read out a			
	second time.	707		
3	The elastic store (slip buffer) size	7.3.7	m	
	accommodates at least 18 μs of			
	wander without introducing errors is at			
	least 2 octets.			

#### E.4.2.6.2 MS4 layer to P0s layer multiplexing and demultiplexing processes

**Table E.63: Multiplexing** 

Prerequisite: E.1/8 -- MS4/P0s\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	The P0s_CI data (64 kbit/s) are	7.3.7	m	
	multiplexed into E2(9,25) byte of the			
	STM-4 frame.			

**Table E.64: Demultiplexing** 

Prerequisite: E.1/9 -- MS4/P0s\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The P0s_ CI data (64 kbit/s) are	7.3.8	m	
	demultiplexed from byte location E2.			

#### MS4 Linear Trail Protection Transmission Tables E.4.3

**Table E.65: Protection operation** 

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Protection operation	Reference	Status	Support
1	The APS channel is a 13 bits channel carried into bits K1[1-8] and K2[1-5].	7.5.1.1, 7.5.1.2, A.1	c6501	
2	The signal switching procedure is started under Signal Fail (SF) or Signal Degrade (SD) conditions.	7.5.1.1, 7.5.1.2, A.1	m	
3	In revertive operation the available external commands are LO, FSw-#1, MSw-#1, CLR, EXER-#1.	7.5.1.1, 7.5.1.2, A.1	c6502	
4	In non-revertive operation the available external commands are LO or FSw, FSw-#i, MSw, MSw-#i, CLR, EXER-#i.	7.5.1.1, 7.5.1.2, A.1	c6503	
5	In revertive operation the available external commands are LO, FSw-#i, MSw-#i, CLR, EXER-#i.	9.5.1.1, 9.5.1.2, A.1	c6504	
6	Extra Traffic is supported.	7.5.1.2, A.1	c6505	
7	The Wait-To-Restore (WTR) time is provisionable.	7.5.1.1, 7.5.1.2	c6506

	transported in K2[1-4] bits of the APS			
	channel.			
4	The architecture type is transported in	A.7.2, figure A.3	m	
	K1[5] bit of the APS channel.			

Table E.68: APS signal fields

Prerequisite: E.65/1 -- APS channel supported

Item	APS signal fields	Reference	Status	Support
1	The content of the request type field	A.7.1, table A.5	m	
	conforms to table A.3			
	(subclause A.7.1) of annex A in			
_	EN 300 417-3-1 [2].			
2	The content of the request signal	A.7.1, table A.6	m	
	number field conforms to table A.4			
	(subclause A.7.1) of annex A in			
	EN 300 417-3-1 [2].			
3	The content of local bridge signal	A.7.1, table A.7	m	
	number field conforms to table A.5			
	(subclause A.7.1) of annex A in			
	EN 300 417-3-1 [2].			
4	The content of the architecture type	A.7.1, table A.8	m	
	field conforms to table A.6			
	(subclause A.7.1) of annex A in			
	EN 300 417-3-1 [2].			

## E.4.3.1 MS4 Linear Trail Protection Connection Functions: MS4P1+1\_C and MS4P1:n\_C

#### Table E.69: Connectivity functionalities: generalities

Prerequisite: E.4/1-- MS Protection Connection function present

Item	Connectivity functionalities: generalities	Reference	Status Support
1	The MS4P1+1_C connection function	7.5.1.1	c6901
	performs the STM-4 linear multiplex section		
	protection process for 1+1 protection		
	architectures.		
2	The MS4P1+1_C connection function	7.5.1.1	c6901
	performs the bridge and selector		
	functionality.		
3	The MS4P1:n_C connection function	7.5.1.2	c6902
	performs the STM-4 linear multiplex section		
	protection process for 1:n protection		
	architectures.		
4	The MS4P1:n_C connection function	7.5.1.2	c6902
	performs the bridge and selector		
	functionality.		
5	Provided no protection switching action is	7.5.1.1, 7.5.1.2	c6903
	activated / required it is possible to change		
	between switching types without disturbing		
	the CI passing the connection.		
6	Provided no protection switching action is	7.5.1.1, 7.5.1.2	c6904
	activated / required it is possible to change		
	between operation types without disturbing		
	the CI passing the connection.		
7	Provided no protection switching action is	7.5.1.1, 7.5.1.2	c6905
	activated / required it is possible to change	,	
	the WTR time without disturbing the CI		
	passing the connection.		
8	The priority associated to SD for both	7.5.1.1	c6901
	protection and working sections is fixed		
	high.		
9	The priority associated to SF for both	7.5.1.1	c6901
	protection and working sections is fixed		
	high.		
10	The switching type (uni- or bi-directional) is	7.5.1.1	c6901
	provisionable from the EMF.	-	
11	The priority associated to SD (high or low)	7.5.1.2	c6902
	for each working section is provisionable		
	from the EMF. The priority associated to SD		
	for the protection section is fixed high.		
12	The priority associated to SF (high or low)	7.5.1.2	c6902
-	for each working section is provisionable		
	from the EMF. The priority associated to SF		
	for the protection section is fixed high.		
13	The switching type (uni- or bi-directional) is	7.5.1.2	c6902
'	provisionable from the EMF.		
14	The operation type (revertive or non	7.5.1.1	c6904
1	revertive) is provisionable from the EMF.	7.0	
15	The use of extra traffic (true or false) is	7.5.1.2	c6906
.	provisionable from the EMF.	7.0.1.2

## E.4.3.2 MS4 Linear Protection Trail Termination Functions: MS4P\_TT\_So and MS4P\_TT\_Sk

**Table E.72: Trail termination process** 

Prerequisite: E.4/2 OR E.4/3 -- MS4P\_TT\_So and/or MS4P\_TT\_Sk function present

Item	Trail termination process	Reference	Status	Support
1	The MS4_AI at the output of the	7.5.2.1	c7201	
	MS4P_TT_So is identical to the			
	MS4P_CI at its input.			
	The MS4P_TT_Sk function reports	7.5.2.2	c7202	
	the state of the protected MS4 trail.			
3	In case all connections are	7.5.2.2	c7202	
	unavailable the MS4P_TT_Sk			
	reports the signal fail condition of			
	the protected trail.			

- -- MS4P\_TT\_So function supported
- c7201: IF E.4/2 THEN m ELSE n/a c7202: IF E.4/3 THEN m ELSE n/a
- -- MS4P\_TT\_Sk function supported

## E.4.3.3 MS4 Linear Trail Protection Adaptation Functions: MS4/MS4P\_A\_So and MS4/MS4P\_A\_Sk

## E.4.3.3.1 MS4 layer to MS4 Protection layer multiplexing and demultiplexing processes

Table E.73: Multiplexing

Prerequisite: E. 4/4 -- MS4/MS4P\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The MS4/MS4P_A_So multiplexes the MS4 APS signal and MS4 data signal into the MS4_Al of the Protection Section.	7.5.3.1	m	

#### **Table E.74: Demultiplexing**

Prerequisite: E. 4/5 -- MS4/MS4P\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The MS4/MS4P_A_Sk extracts the MS4P_CI_D signal from the MS4_AI_D signal.	7.5.3.2	m	
	The MS4/MS4P_A_Sk extracts the MS4 APS signal from the MS4_AI.	7.5.3.2	m	

#### Table E.75: APS channel processing: sink direction

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Item	APS channel processing: sink direction	Reference	Status	Support
1	A new value for the APS message is accepted when the value of the 13 APS bits is identical for three consecutive frames. This value is output via MS4P_CI_APS.	7.5.3.2	m	
2	The APS signal processing is performed only on the Protection Section.	7.5.3.2	m	

## E.4.3.4 MS4 Linear Trail Protection processes

#### E.4.3.4.1 Automatic Protection Switching (APS) externally initiated commands

#### **Table E.76: Issuing of External Switching Commands**

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Issuing of External Switching Commands	Reference	Status	Support
1	The external commands are received	ETS 300 746 [15]	m	
	from the EMF.	subclause 5.1.2.1		

## Table E.77: Transmission of External Switching Requests

Prerequisite: E.76/1 -- External Switching Command issuing is supported

Item	Transmission of External Switching Requests	Reference	Status	Support
	The external requests are issued via the APS bytes.	ETS 300 746 [15] subclause 5.1.2.1	c7701	
	The external requests are issued via the EMF.	ETS 300 746 [15] subclause 5.1.2.1	c7701	

o.7701: It is mandatory to support exactly one of these items

-- Transmission of external bridge request is supported by one of the allowed ways.

c7701:IF (E.3/3 OR E.3/4 OR E.3/5) THEN o.7701 ELSE o

-- bi-directional switching supported

**Table E.78: External Switching Commands** 

Prerequisite: E.76/1 OR E.76/2 -- External Switching Command issuing is supported

Item	External Switching Commands	Reference	Status	Support
1	The external command Clear (CLR) conforms to the definition given in the whole point 1) clause A.2 of annex A in EN 300 417-3-1 [2].	A.2	m	
2	The external command Lockout of Protection (LO) conforms to the definition given in the whole point 2) clause A.2 of annex A in EN 300 417-3-1 [2].	A.2	m	
3	The external command Forced Switch #i (FSw-#i) conforms to the definition given in the whole point 3) of clause A.2 of annex A in EN 300 417-3-1 [2].	A.2	m	
4	The external command Manual Switch #i (MSw-#i) conforms to the definition given in the whole point 4) clause A.2 of annex A in EN 300 417-3-1 [2].	A.2	m	
5	The external command Exercise #i (EXER #i) conforms to the definition given in the whole point 5) clause A.2 of annex A in EN 300 417-3-1 [2].	A.2	m	
6	The descending order of priority for external switching commands is: CLR, LO, FSw-#i, MSw-#i, EXER #i.	A.2	m	

### E.4.3.4.2 Automatic Protection Switching (APS) automatically initiated commands

#### **Table E.79: Automatic Generation of Requests**

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection scheme supported

Item	<b>Automatic Generation of Requests</b>	Reference	Status	Support
	The NE initiates the following	ETS 300 746 [15]	m	
	automatic requests: Signal Failure	subclause 5.1.2.2		
	(SF), Signal Degrade (SD).			
	The NE initiates the following	ETS 300 746 [15]	c7901	
	automatic requests: Reverse Request	subclause 5.1.2.2		
	(RR).			
	The NE initiates the following	ETS 300 746 [15]	c7902	
	automatic requests: Wait To Restore	subclause 5.1.2.2		
	(WTR).			

c7901:IF (E.3/3 OR E.3/4 OR E.3/5) THEN m ELSE x c7902:IF (E.3/1 OR E.3/3 OR E.3/5) THEN m ELSE x

- -- dual-ended switching supported
- -- revertive switching supported

Table E.80: Transmission of automatically generated requests

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Ī	tem	Transmission of Automatically Generated Requests	Reference	Status	Support
		The automatically generated requests are issued via the APS bytes.	ETS 300 746 [15] subclause 5.1.2.2	c8001	

c8001: IF (E.3/3 OR E.3/4 OR E.3/5)

THEN m ELSE o

-- bi-directional switching supported

#### Table E.81: Automatically generated requests

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	<b>Automatically Generated Requests</b>	Reference	Status	Support
	In the Wait-To-Restore (WTR) state the operation is such that in the revertive mode of operation, the normal signal will be restored when the working trail has recovered from the fault.	A.4	c8101	
2	An SF or SD condition will override the WTR.	A.4	c8101	
3	After the WTR period is completed, a No Request state will be entered.	A.4	c8101	
4	In the Reverse Request state the operation is such that for the case of bi-directional switching, a reverse request is returned for exerciser and for all other requests of higher priority.	A.4	c8102	
5	In unidirectional switching, Reverse Request is never indicated.	A.4	c8103	
6	In the Do not Revert state the operation is such that in the non-revertive mode of operation, assuming the normal signal is on protection when the working trail is repaired or a switch command is released, the tail end maintains the selection and issues Do not Revert for normal signal 1.	A.4	c8104	
7	For the case of bi-directional switching, the head end also maintains the selection and continues indicating reverse request.	A.4	c8105	
8	The Do not Revert is removed when pre-empted by a defect condition or an external request.	A.4	c8104	
9	In the No Request state none of the trail signal conditions is active, none of the external commands is active, and none of the states described above is active.	A.4	m	

c8101: IF (E.3/1 OR E.3/3 OR E.3/5) THEN m ELSE n/a c8102: IF (E.3/3 OR E.3/4 OR E.3/5) THEN m ELSE n/a

c8103:IF (E.3/1 OR E.3/2) THEN m ELSE n/a c8104:IF (E.3/2 OR E.3/4) THEN m ELSE n/a

c8105: IF E.3/4 THEN m ELSE n/a

- -- revertive operation supported
- -- bi-directional switching supported
- -- unidirectional operation supported
- -- non-revertive operation supported
- -- non-revertive and bi-directional switching supported

#### E.4.3.4.3 Automatic Protection Switching (APS) generalities

Table E.82: Allocation of extra traffic

Item	Allocation of extra traffic	Reference	Status	Support
	Extra traffic is allocated to the protection trail when this one is not transporting a normal signal and the protection trail is not "locked out".	A.5	c8201	

c8201: IF E.65/6 THEN m ELSE n/a -- Extra traffic supported

#### Table E.83: Priority of request types

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Priority of request types	Reference	Status	Support
	The priority of request types conforms	A.6, table A.4	m	
	to the priority order given in table A.2 (clause A.6) of annex A in			
	EN 300 417-3-1 [2].			

#### E.4.3.4.4 Automatic Protection Switching (APS) switch performance

#### Table E.84: Switch completion time

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Switch completion time	Reference	Status	Support
1	The switch completion time is less	A.8	m	
	than 50 ms.			

#### E.4.3.4.5 Automatic Protection Switching (APS) subprocesses

#### Table E.85: Signal request process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Signal request processes	Reference	Status	Support
1	The SRSN is "0" (zero) for the	A.9	m	
	protection trail and "i" $(1 \le i \le n)$ for			
	working trail #i.			
	The SRT is generated based on the	A.9	m	
	inputs SF, SD, SFpriority, SDpriority,			
	as specified in the clause "Signal			
	request (type and signal number)			
	processes" in clause A.9 of annex A			
	in EN 300 417-3-1 [2].			

Comments: The signal request process transfers the input SF and SD signals from a trail into a Signal Request Type (SRT) and Signal Request Signal Number (SRSN).

Table E.86: External request process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	External request processes	Reference	Status	Support
1	The ERSN is "0" (zero) if no normal signal is	A.9	m	
	indicated, "i" $(1 \le i \le nmax)$ for normal signal			
	#i, and "nmax+1" for the extra traffic signal.			
	· · · · · = · · · ·   — · · · · · · · · · · · · · ·	A.9	m	
	the clause "External request (type and			
	signal number) processes" in clause A.9 of			
	annex A in EN 300 417-3-1 [2].			

Comments: The external request process transfers the external commands (EXTCMD) into an External Request Type (ERT) and External Request Signal Number (ERSN).

#### Table E.87: Local request priority process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Local request priority processes	Reference	Status	Support
1	The status of the protection and	A.9	m	
	working input signals (SRT/SRSN #0			
	to SRT/SRSN #n), the external			
	command (ERT/ERSN), and			
	protection parameters OPERtype and			
	EXTRAtraffic is evaluated by a three			
	step priority logic as specified in the			
	clause "Local request (type and signal			
	number) priority processes" in			
	clause A.9 of annex A in			
	EN 300 417-3-1 [2].			

Comments: The local request priority process determines the highest priority local request.

Table E.88: Global request priority process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Global request priority processes	Reference	Status	Support
1	The local request (LRT,LRSN) and the remote request (RRT,RRSN) are compared to decide which has priority, according to the descending order of priorities in table A.2 of annex A in EN 300 417-3-1 [2].	A.9	c8801	
2	A received reverse request is not considered in the comparison.	A.9	c8801	
3	The Global Request Type (GRT) and Global Request Signal Number (GRSN) is determined as specified in the clause "Global request (type and signal number) priority processes" in clause A.9 of annex A in EN 300 417-3-1 [2].	A.9	m	

c8801:IF (E.3/3 OR E.3/4 OR E.3/5)

THEN m ELSE n/a -- bi-directional switching supported

Comments: The global request priority process determines the Global Request Type (GRT) and Global Request Signal Number (GRSN).

#### Table E.89: Bridge control process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Bridge control process		Reference	Status	Support
1	The bridge control process is	A.9		m	
	performed as specified in the clause				
	"Bridge control process" in clause A.9				
	of annex A in EN 300 417-3-1 [2].				

Comments: The bridge control process controls which of the normal / extra traffic signals is bridged to the protection trail.

#### Table E.90: Control of the selector

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	Control of the selector	Reference	Status	Support
	The control of the selector is performed as specified in the clause	A.9	m	
	"Control of the selector" in clause A.9 of annex A in EN 300 417-3-1 [2].			

Comments: The control of the selector controls which of the normal / extra traffic signals is connected to / extracted from the protection trail.

#### E.4.3.4.6 Automatic Protection Switching (APS) signal generation

#### Table E.91: APS generation process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	APS generation process	Reference	Status	Support
1	The Global Request Type (GRT) is translated into the transmitted Request Type (TxRT) in accordance to table EA.8 (clause A.9) of annex A in EN 300 417-3-1 [2].	A.9	c9101	
2	The transmitted Request Signal Number (TxRSN) equals the Global Request Signal Number (GRSN).	A.9	c9101	
3	The transmitted Local Bridged Signal Number (TxLBSN) is set to '0' if the Remote Request Signal Number (RRSN) equals '0' else it is set to the Local Bridged Signal Number (LBSN) value.	A.9	c9101	
4	The transmitted (TxARCH) is set to "0" (zero) if the Architecture type (ARCHtype) is 1+1 else it is set to "1" (one).	A.9	c9101	

c9101: IF (E.3/3 OR E.3/4 OR E.3/5)

THEN m ELSE o

-- bi-directional switching supported

Comments: The APS generation process translates the signals Global Request Type (GRT), Global Request Channel Number (GRSN), Local Bridged Signal Number (LBSN) and local Architecture type (ARCHtype) into a transmitted APS signal

### E.4.3.4.7 Automatic Protection Switching (APS) signal interpretation

#### Table E.92: APS interpretation process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	APS interpretation process	Reference	Status	Support
1	The accepted Request Type (AcRT) is translated into the Remote Request Type (RRT) in accordance to table A.7 (clause A.9) of annex A in EN 300 417-3-1 [2].	A.9	c9201	
2	The Remote Request Signal Number (RRSN) equals the accepted Request Signal Number (AcRSN).	A.9	c9201	
3	The Remote Bridged Signal Number (RBSN) equals the accepted Local Bridged Signal Number (AcLBSN).	A.9	c9201	
4	The Remote Architecture type (RARCH) equals the accepted Architecture type (AcARCH).	A.9	c9201	

c9201: IF (E.3/3 OR E.3/4 OR E.3/5)

THEN m ELSE o

-- bi-directional switching supported

Comments: The APS interpretation process translates the accepted APS signal into the signals Remote Request Type (RRT), Remote Request Signal Number (RRSN), Remote Bridged Signal Number (RBSN) and Remote Architecture type (RARCH).

#### Table E.93: Use of the accepted APS message

Prerequisite: E.1/14 OR E.1/15 -- STM-16 Linear Trail Protection supported

Item	Use of the accepted APS message		Reference	Status	Support
1	The accepted Request Type, Remote	A.9		c9301	
	Request Signal Number, Remote				
	Bridged Signal Number and Remote				
	Architecture type are used for				
	protection switching operation.				

c9301:IF (E.3/3 OR E.3/4 OR E.3/5)

THEN m ELSE x -- bi-directional switching supported

#### E.4.3.4.8 Automatic Protection Switching (APS) status report

#### Table E.94: APS reporting process

Prerequisite: E.1/14 OR E.1/15 -- STM-4 Linear Trail Protection supported

Item	APS reporting process	Reference	Status	Support
1	The active external request are reported to the Equipment Management Function (EMF).	A.9	m	
2	The active local request are reported to the Equipment Management Function (EMF).	A.9	m	
3	The active remote request are reported to the Equipment Management Function (EMF).	A.9	c9401	
4	The reason of denial of an external command are reported to the Equipment Management Function (EMF).	A.9	m	
5	The condition (SF,SD) of the working and protection trails are reported to the Equipment Management Function (EMF).	A.9	m	

c9401:IF (E.3/3 OR E.3/4 OR E.3/5)

THEN m ELSE o -- bi-directional switching supported

## E.4.4 MS4 layer defect, fault and performance monitoring tables

## E.4.4.1 Port status management

Table E.95: Trail termination point mode process

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present.

Item	Trail termination point mode	Reference	Status	Support
	process			
1	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "not monitored" (NMON)	subclause 8.5		
	status.			
2	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "monitored" (MON) status.	subclause 8.5		
3	The Trail Termination Point Mode	7.2.2	m	
	status is provisionable by the EMF.			

## E.4.4.2 Defect detection and clearance criteria

#### Table E.96: MS4 Alarm Indication Signal defect (MS4 dAIS)

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	MS4 Alarm Indication Signal defect (MS4 dAIS)	Reference	Status	Support
	The MS4 dAIS is detected if at least <i>x</i> consecutive frames contain the '111' pattern in bits 6, 7 and 8 of the K2 byte.	7.2.2	m	
	The MS4 dAIS is cleared if in at least <i>x</i> consecutive frames any pattern other than '111' is detected in bits 6, 7 and 8 of the K2 byte.	7.2.2	m	

Table E.97: MS4 dAIS parameters value

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	MS4 dAIS parameters value	Reference	Status	Support	Values	
					Allowed	Supported
1	MS4 dAIS threshold: x parameter.	7.2.2	m		$3 \le x \le 5$	

Table E.98: Remote Defect Indication (RDI) defect (dRDI)

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	Remote Defect Indication (RDI) defect (dRDI)	Reference	Status	Support
1	The MS4 RDI defect is detected if 5 consecutive frames contain the '110' pattern in bits 6, 7 and 8 of the K2 byte.	EN 300 417-1-1 [1] subclause 8.2.1.5	m	
2	The MS4 RDI defect is cleared if 5 consecutive frames any pattern other than '110' is detected in bits 6, 7 and 8 of the K2 byte.	EN 300 417-1-1 [1] subclause 8.2.1.5	m	
3	The MS4 RDI defect is cleared during reception of an RS4 aSSF.	EN 300 417-1-1 [1] subclause 8.2.1.5	m	

Table E.99: Trail performance monitoring

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	Trail performance monitoring	Reference	Status	Support
1	An MS4 near-end block is errored if one or more EDC Violations (EDCV) - BIP-24 parity - are detected.	7.2.2	m	
2	The EDCV process assumes "zero" EDCVs in the incoming all "1s" (AIS) signal during reception of Server Signal Fail (aSSF) from the server layer.	7.2.2	m	
3	Every second the number of MS4 Near-end Errored Block (MS4 N_Bs) within that second is counted as the MS4 Near-end Error Block Count (MS4 pN_EBC).	7.2.2	m	

Table E.100: Degraded defect (dDEG)

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	Degraded defect (dDEG)	Reference	Status	Support
1	Once every second, MS4 pNEBC is	7.2.2	m	
	compared with DEGTHR.			
2	If MS4 pNEBC>=DEGTHR the	7.2.2	m	
	corresponding second is declared			
	BAD, otherwise it is declared GOOD.			
3	The MS4 dDEG is detected if M	7.2.2	m	
	consecutive BAD seconds have			
	occurred.			
4	The MS4 dDEG is cleared if M	7.2.2	m	
	consecutive GOOD seconds have			
	occurred.			
5	The MS4 dDEG is cleared during	7.2.2	m	
	reception of an RS1 aSSF.			
6	The DEGTHR parameter is	7.2.2	m	
	provisionable by the EMF.			
7	The DEGM parameter is	7.2.2	m	
	provisionable by the EMF.			

Table E.101: DEG defect parameters value

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	DEG defect parameters	Reference	Status	Support	Values	
					Allowed	Supported
1	MS4 dDEG DEGTHR parameter.	7.2.2	c10101		0< DEGTHR	
					≤ 768 000	
2	MS4 dDEG M parameter.	7.2.2	c10102		$2 \le M \le 10$	

c10101: IF E.100/6 THEN m ELSE n/a -- DEGTHR programmable c10102: IF E.100/7 THEN m ELSE n/a -- DEGM programmable

Table E.102: AU-4 Alarm Indication Signal defect (AU4 dAIS)

Prerequisite: E.1/5 -- MS4/S4\_A\_Sk function present

Item	AU-4 Alarm Indication Signal defect (AU4 dAIS)	Reference	Status	Support
	The AU4 dAIS is detected if the pointer interpreter enters the AIS_state.	7.3.2	m	
	The AU4 dAIS is cleared if the pointer interpreter exits the AIS_state.	7.3.2	m	

Table E.103: AU-4-4c Alarm Indication Signal defect (AU4-4c dAIS)

Prerequisite: E.1/13 -- MS4/S4-4c\_A\_Sk function present

Item	AU-4-4c Alarm Indication Signal defect (AU4-4c dAIS)	Reference	Status	Support
	The AU4-4c dAIS is detected if the pointer interpreter enters the AISX_state.	7.3.4	m	
	The AU4-4c dAIS is cleared if the pointer interpreter exits in the AISX_state.	7.3.4	m	

## Table E.104: Loss of AU-4 Pointer defect (AU4 dLOP)

Prerequisite: E.1/5 -- MS4/S4\_A\_Sk function present

Item	Loss of AU-4 Pointer defect (AU4	Reference	Status	Support
	dLOP)			
1	The High Order Path dLOP (related to an AU-4 pointer) is detected if the pointer interpreter enters the LOP_state.	7.3.2	E	
	The High Order Path dLOP (related to an AU-4 pointer) is cleared if the pointer interpreter exits the LOP_state.	7.3.2	m	

Table E.105: Loss of AU-4-4c Pointer defect (AU4-4c dLOP)

Prerequisite: E.1/13 -- MS4/S4-4c\_A\_Sk function present

Item	Loss of AU-4-4c Pointer defect	Reference	Status	Support
	(AU4-4c dLOP)			
	The High Order Path dLOP (related to an AU-4-4c pointer) is detected if the pointer interpreter enters the LOPX_state.	7.3.4	E	
	The High Order Path dLOP (related to an AU-4-4c pointer) is cleared if the pointer interpreter exits the LOPX_state.	7.3.4	m	

## E.4.4.3 Consequent action activation and clearance criteria

Table E.106: Alarm Indication Signal action (aAIS)

Item	Alarm Indication Signal action (aAIS)	Reference	Status	Support
1	The MS4_TT_Sk outputs an all "1s" signal within 250 μs upon MS4 dAIS detection.	7.2.2	c10601	
2	The MS4_TT_Sk outputs normal data within 250 μs when there is (are) no more defect(s) active.	7.2.2	c10601	
3	signal within 250 μs upon CI_SSF reception.	7.3.1	c10602	
4	The MS4/S4_A_So outputs normal data within 250 μs when there is (are) no more defect(s) active.	7.3.1	c10602	
5	The MS4/S4-4c_A_So outputs an all "1s" signal within 250 μs upon CI_SSF reception.	7.3.3	c10603	
6	The MS4/S4-4c_A_So outputs normal data within 250 μs when there is (are) no more defect(s) active.	7.3.3	c10603	
7	The MS4/S4_A_Sk outputs an all "1s" signal within 250 μs upon AU4 dAIS detection.	7.3.2	c10604	
8	The MS4/S4_A_Sk outputs an all "1s" signal within 250 μs upon HO dLOP detection.	7.3.2	c10604	
9	The MS4/S4_A_Sk outputs normal data within 250 µs when there is (are) no more defect(s) active.	7.3.2	c10604	
10	The MS4/S4-4c_A_Sk outputs an all "1s" signal within 250 μs upon AU4-4c dAIS detection.	7.3.4	c10605	
11	The MS4/S4-4c_A_Sk outputs an all "1s" signal within 250 μs upon HO dLOP detection.	7.3.4	c10605	
12	The MS4/S4-4c_A_Sk outputs normal data within 250 μs when there is (are) no more defect(s) active.		c10605	
13	The MS4/P0s_A_Sk outputs an all "1s" signal within 1 ms upon Al_TSF reception.	7.3.8	c10606	
	The MS4/P0s_A_Sk outputs normal data within 1 ms when there is (are) no more defect(s) active.	7.3.8	c10606	

 c10601:
 IF E.1/3 THEN m ELSE n/a
 -- MS4\_TT\_Sk present

 -- MS4/S4-4c\_A\_Sk present

 c10606:
 IF E.1/11 THEN m ELSE n/a
 -- MS4/P0s\_A\_Sk present

Table E.107: Remote Defect Indication (RDI) defect action (aRDI)

Prerequisite: E.1/2 AND E.1/3 -- MS4\_TT\_So and MS4\_TT\_Sk function present

Item	Remote Defect Indication (RDI) defect action (aRDI)	Reference	Status	Support
1	The MS4_TT_Sk outputs an RDI request generation (RI_RDI) on MS4 dAIS detection.	7.2.2	m	
2	The MS4_TT_Sk clears the RDI request when there is (are) no more defect(s) active.	7.2.2	m	
3	The MS4_TT_So inserts the RDI code within 250 μs upon RI_RDI reception.	7.2.1	m	
4	The MS4_TT_So outputs normal data within 250 µs upon RI_RDI clearing.	7.2.1	m	

Table E.108: Remote Error Indication (REI) action (aREI)

Prerequisite: E.1/2 AND E.1/3 -- MS4\_TT\_So and MS4\_TT\_Sk function present

Item	Remote Error Indication (REI) action (aREI)	Reference	Status	Support
	The MS4_TT_So inserts the REI value in the next REI bits.	7.2.1	m	

Table E.109: Server Signal Fail action (aSSF)

Prerequisite: E.1/5 OR E.1/13 OR E.1/9 --  $MS4/S4\_A\_Sk$  and /or  $MS4/S4-4c\_A\_Sk$  and /or  $MS4/DCC\_A\_Sk$  function present.

Item	Server Signal Fail action (aSSF)	Reference	Status	Support
1	The MS4/S4_A_Sk sets CI_SSF to TRUE on AU4 dAIS detection.	7.3.2	c10901	
2	The MS4/S4_A_Sk sets CI_SSF to TRUE on HO dLOP detection.	7.3.2	c10901	
3	The MS4/S4_A_Sk sets CI_SSF to FALSE when there is (are) no more defect(s) active.	7.3.2	c10901	
4	The MS4/S4-4c_A_Sk sets CI_SSF to TRUE on AU4-4c dAIS detection.	7.3.4	c10902	
5	The MS4/S4-4c_A_Sk sets CI_SSF to TRUE on HO dLOP detection.	7.3.4	c10902	
6	The MS4/S4-4c_A_Sk sets CI_SSF to FALSE when there is (are) no more defect(s) active.	7.3.4	c10902	
7	The MS4/DCC_A_Sk sets CI_SSF to TRUE on AI_TSF reception.	7.3.6	c10903	
8	The MS4/ DCC _A_Sk sets CI_SSF to FALSE when there is (are) no more defect(s) active.	7.3.6	c10903	
9	The MS4/P0s_A_Sk sets CI_SSF to TRUE on AI_TSF reception.	7.3.8	c10904	
10	The MS4/P0s _A_Sk sets CI_SSF to FALSE when there is (are) no more defect(s) active.	7.3.8	c10904	

c10901: IF E.1/5 THEN m ELSE n/a -- MS4/S4\_A\_Sk present c10902: IF E.1/13 THEN m ELSE n/a -- MS4/S4-4c\_A\_Sk present c10903: IF E.1/9 THEN m ELSE n/a -- MS4/DCC\_A\_Sk present c10904: IF E.1/11 THEN m ELSE n/a -- MS4/P0s\_A\_Sk present

## Table E.110: Trail Signal Fail action (aTSF)

Prerequisite: E.1/3 -- MS4\_TT\_Sk function present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS4_TT_Sk sets AI_TSF to	7.2.2	m	
	TRUE on MS4 dAIS detection.			
2	The MS4_TT_Sk sets AI_TSF to	7.2.2	m	
	FALSE when there is (are) no more			
	defect(s) active.			

Table E.111: Trail Signal Degrade action (aTSD)

Prerequisite: E.1/3 OR E.1/9 -- MS4\_TT\_Sk and /or MS4/DCC\_A\_Sk function present

Item	Trail Signal Degrade action (aTSD)	Reference	Status	Support
1	If the dDEG is detected in the trail	EN 300 417-1-1 [1]	m	
	termination sink the aTSD is	subclause 8.2.2.6		
	performed.			
2	It ceases aTSD insertion after the	EN 300 417-1-1 [1]	m	
	dDEG defect is cleared.	subclause 8.2.2.6		
3	The aTSD is equivalent to send the	EN 300 417-1-1 [1]	m	
	Signal Degrade (SD) signal as	subclause 8.2.2.6		
	defined in the Automatic Protection			
	Switching (APS).			

## E.4.4.4 Defect correlation

**Table E.112: Defect correlation** 

Prerequisite: E.4/5 -- Defect correlation process supported

Item	Defect correlation	Reference	Status	Support
1	Under MS4 dAIS detection the	7.2.2	c11201	• •
-	MS4_TT_Sk generates a MS4 cAIS			
	report if the port is in the monitoring			
	state (MON) and no CI_SSF is received			
	from the server layer.			
2	The MS4 cAIS is reported only if	7.2.2	c11201	
	selected MS4 AIS_reported is set to			
	TRUE by the NEM. By default			
	MS4 AIS_reported is set to FALSE.			
3	Under MS4 dAIS detection the	7.2.2	c11201	
	MS4_TT_Sk generates a MS4 cSSF			
	report if the port is in the monitoring			
	state (MON).			
4	The MS4 cSSF is reported only if	7.2.2	c11201	
	selected MS4 SSF_reported is set to			
	TRUE by the NEM. By default			
	MS4 SSF_reported is set to FALSE.			
5	Under MS4 dRDI detection the	7.2.2	c11201	
	MS4_TT_Sk generates a MS4 cRDI			
	report if the port is in the monitoring			
	state (MON).			
6	The MS4 cRDI is reported only if	7.2.2	c11201	
	MS4 RDI_reported is set to TRUE by the			
	NEM. By default MS4 RDI_reported is			
	set to FALSE.			
7	Under MS4 dDEG detection the	7.2.2	c11201	
	MS4_TT_Sk generates a MS4 cDEG			
	report if the port is in the monitoring			
	state (MON).			
8	Under AU4 dAIS detection the	7.3.2	c11202	
	MS4/S4_A_Sk generates a AU4 cAIS			
	report if the port is in the monitoring			
	state (MON) and no AI_TSF is received			
	from the MS4_TT_Sk.			
9	The AU4 cAIS is reported only if	7.3.2	c11202	
	AU4 AIS _reported is set to TRUE by the			
	NEM. By default AU4 cAIS_reported is			
40	set to FALSE.	7.0.0	-44000	
10	Under HO dLOP detection the	7.3.2	c11202	
	MS4/S4_A_Sk generates a HO cLOP			
11	report. Under AU4-4c dAIS detection the	7 2 4	011202	
1.1	MS4/S4-4c_A_Sk generates a AU4 cAIS	7.3.4	c11203	
	report if the port is in the monitoring state (MON) and no AI_TSF is received			
12	from the MS4_TT_Sk. The AU4-4c cAIS is reported only if	7.3.4	c11203	
14	AU4-4c AIS _reported is set to TRUE by	7.5.4	011203	
	the NEM. By default AU4-4c			
	cAIS_reported is set to FALSE.			
13	Under HO dLOP detection the	7.3.4	c11202	
13	MS4/S4-4c_A_Sk generates a HO cLOP	1.3.4	c11203	
1.4	report.	EN 300 417-1-1 [1]		
14	All the generated fault cause (cXXX) are reported to the EMF.	subclause 8.1,	m	
	reported to the EIVIF.	figure 36		
		Ingule 30	1	

c11201: IF E.1/3 THEN m ELSE n/a -- MS4\_TT\_Sk present c11202: IF E. 1/5 THEN m ELSE n/a -- MS4/S4\_A\_Sk present c11203: IF E. 1/13 THEN m ELSE n/a -- MS4/S4-4c\_A\_Sk present

## E.4.4.5 Performance monitoring

#### E.4.4.5.1 Near end performance monitoring

#### Table E.113: pN\_DS performance parameter

Prerequisite: E.4/1 -- Near-end performance monitoring process supported

Item	pN_DS performance parameter	Reference	Status	Support
	The MS4_TT_Sk indicates a MS4 pN_DS every second with at least one occurrence of MS4 aTSF or an	7.2.2	m	.,
	equipment defect (dEQ) and reports it to the EMF.			

#### Table E.114: pN\_EBC performance parameter

Prerequisite: E.4/1 -- Near-end performance monitoring process supported

Item	pN_EBC performance parameter	Reference	Status	Support
1	Every second the MS4_TT_Sk counts	7.2.2	m	
	the number of MS4 Near-end Errored			
	Block (MS4 N_Bs) within that second			
	as the MS4 pN_EBC (MS4 Near-end			
	Error Block Count) and reports it to			
	the EMF.			

Comments: A "Near-end Block" (N\_B) is errored if one or more BIP-24 violations are detected.

#### E.4.4.5.2 Far end performance monitoring

#### Table E.115: pF\_DS performance parameter

Prerequisite: E.4/2 -- Far-end performance monitoring process supported

Item	pF_DS performance parameter	Reference	Status	Support
1	The MS4_TT_Sk indicates a MS4	7.2.2	m	
	pF_DS every second with at least one occurrence of MS4 dRDI and reports it to the EMF.			

#### Table E.116: pF\_EBC performance parameter

Prerequisite: E.4/2 -- Far-end performance monitoring process supported

Item	pF_EBC performance parameter	Reference	Status	Support
1	Every second the MS4_TT_Sk counts	7.2.2	m	
	the number of MS4 Far-end Errored			
	Block (MS4 F_Bs) within that second			
	as the MS4 pF_EBC (MS4 Far-end			
	Error Block Count) and reports it to			
	the EMF.			

Comments: A "Far-end Block" (F\_B) is errored if the REI count indicates one or more errors.

#### E.4.4.5.3 Pointer performance monitoring

#### Table E.117: PJE performance parameter

Prerequisite: E.5/3 -- Pointer performance monitoring process supported

Item	PJE performance parameter	Reference	Status	Support
1	Every second the number of generated AU-4 pointer increments is counted as the HO pPJE+ and reported to the EMF.	7.3.1	c11701	
2	Every second the number of generated AU-4-4c pointer increments is counted as the HO pPJE+ and reported to the EMF.	7.3.3	c11702	
3	Every second the number of generated AU-4 pointer decrements within that second is counted as the HO pPJE- and reported to the EMF.	7.3.1	c11701	
4	Every second the number of generated AU-4-4c pointer decrements within that second is counted as the HO pPJE- and reported to the EMF.	7.3.3	c11702	

c11701: IF E.1/4 THEN m ELSE n/a -- MS4/S4\_A\_So present

- c11702: IF E.1/12 THEN m ELSE n/a
- -- MS4/S4-4c\_A\_So present

#### E.4.5 MS4 linear trail protection defect, fault and performance monitoring tables

#### E.4.5.1 Defect detection and clearance criteria

Table E.118: Protection Architecture Mismatch defect (dPAM)

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Item		Reference	Status	Support
	defect (dPAM)			
1	The MS4P dPAM is detected if the received APS Architecture (RARCH) value differs from the local architecture type (ARCHtype) for a period of 50 ms.	A.9	m	
	The MS4P dPAM is cleared when the there is again a match between the received APS Architecture (RARCH) value and the local architecture type (ARCHtype).	A.9	m	

Comments: This defect concerns the APS interpretation process.

### Table E.119: Invalid Command defect (dINV)

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Item	Invalid Command defect (dINV)	Reference	Status	Support
1	The MS4P dINV is detected if the request type bits (RT) in the APS signal indicate an invalid request code, or the RSN or LBSC indicate a non-existing trail signal number for Y ms.	A.9	m	
	The MS4P dINV is cleared when the RT indicates a valid code and the RSN or LBSN indicate an existing signal number.	A.9	m	

Comments: This defect concerns the APS interpretation process.

### Table E.120: INV defect parameters value

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Ite	n INV defect parameters value	Reference	Status	Support	Values	
					Allowed	Supported
1	MS4P dINV parameter (Y).	A.9	m		TBD	

#### Table E.121: Acknowledge Timeout defect (dTMOUT)

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Item		Reference	Status	Support
	(dTMOUT)			
1	The MS4P dTMOUT is detected if a	A.9	m	
	head end response on a tail end			
	request does not comply to the			
	protocol within a period of 50 ms.			
2	The MS4P dTMOUT is cleared when	A.9	m	
	the head-end response complies			
	again.			
3	The MS4P dTMOUT is cleared if the	A.9	m	
	protection trail is in SF condition.			

Comments: This defect concerns the global request priority process.

#### Table E.122: Selector Control Mismatch defect (dSCM)

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Item	Selector Control Mismatch defect (dSCM)	Reference	Status	Support
	The MS4P dSCM is detected if a mismatch between RRSN and GRSN persists for Y ms.	A.9	E	
2	The MS4P dSCM is cleared when RRSN is identical to GRSN.	A.9	m	
3	The MS4P dSCM is cleared if the protection trail is in SF condition.	A.9	m	

Comments: This defect concerns the selector control.

#### Table E.123: SCM defect parameters value

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Item	INV defect parameters value	Reference	Status	Support	Values	
					Allowed	Supported
1	MS4P dSCM parameter (Y).	A.9	m		TBD	

## E.4.5.2 Consequent action activation and clearance criteria

#### Table E.124: Null Signal insertion

Prerequisite: E.1/15 -- 1:n MS Linear Trail Protection supported

Item	Null Signal insertion	Reference	Status	Support
	If neither the extra traffic nor a normal signal input is to be connected to the protection section output, the null signal is connected to the protection output.	7.5.1.2	m	
	If the extra traffic output (if applicable) is disconnected from the protection input it is set to all-ONEs signal (AIS).	7.5.1.2	c12401	

c12401: IF E.65/6 THEN m ELSE n/a -- Extra traffic channel supported

### Table E.125: Server Signal Fail action (aSSF)

Prerequisite: E.1/15-- 1:n MS Linear Trail Protection supported

Item	Server Signal Fail action (aSSF)	Reference	Status	Support
1	The MS4P1:n_C sets the CI_SSF to	7.5.1.2	c12501	
	TRUE on the extra traffic connection			
	point if the extra traffic output (if			
	applicable) is disconnected from the			
	protection input.			
2	The MS4/MS4P_A_Sk sets CI_SSF	7.5.3.2	c12502	
	to TRUE on AI_TSF reception.			
3	The MS4/MS4P_A_Sk sets CI_SSF	7.5.3.2	c12502	
	to FALSE when there is (are) no more			
	defect(s) active.			

c12501: IF (E.1/15 AND E.65/6) THEN m ELSE n/a -- 1:n MS Linear Trail Protection and extra traffic channel present

c12502: IF E.4/5 THEN m ELSE n/a -- MS4/MS4P\_A\_Sk present

#### Table E.126: Trail Signal Fail action (aTSF)

Prerequisite: E.4/3 -- MS4P\_TT\_Sk present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS4P_TT_Sk sets AI_TSF to	7.5.2.2	m	
	TRUE on CI_SSF reception.			
2	The MS4P_TT_Sk sets AI_TSF to	7.5.2.2	m	
	FALSE when there is (are) no more			
	defect(s) active.			

Table E.127: Server Signal Degrade action (aSSD)

Prerequisite: E.4/5 -- MS4/MS4P\_A\_Sk present

Item	Server Signal Degrade action (aSSD)	Reference	Status	Support
	The MS4/MS4P_A_Sk sets CI_SSD to TRUE on AI_TSD reception.	7.5.3.2	m	
	The MS4/MS4P_A_Sk sets CI_SSD to FALSE when there is (are) no more defect(s) active.	7.5.3.2	m	

Table E.128: Selector release

Prerequisite: E.3/3 OR E.3/4 OR E.3/5 -- -- bi-directional switching supported

Item	Selector release	Reference	Status	Support
	The selector is released if one or	A.9	m	
	more of the four defects dPAM,			
	dSCM, dTMOUT, dINV is active.			

Comments: This consequent action concerns the selector control.

## E.4.5.3 Defect correlation

Table E.129: Defect correlation

 $Prerequisite: E.5/5\ AND\ (E.1/14\ OR\ E.1/15) -- \ Defect\ correlation\ process\ supported\ and\ STM-4\ Linear\ Trail\ Protection\ supported$ 

Item	Defect correlation	Reference	Status	Support
1	Under MS4P dSCM detection a MS4P cFOP (Failure Of Protocol) report is generated.	A.9	c12901	
2	Under MS4P dPAM detection a MS4P cFOP (Failure Of Protocol) report is generated.	A.9	c12901	
3	Under MS4P dTMOUT detection a MS4P cFOP (Failure Of Protocol) report is generated.	A.9	c12901	
4	Under MS4P dINV detection a MS4P cFOP (Failure Of Protocol) report is generated.	A.9	c12901	
5	Under MS4P CI_SSF reception a MS4P cSSF report is generated.	7.5.2.2	c12902	
6	The MS4P cSSF is reported only if selected MS4P SSF_reported is set to TRUE by the NEM. By default MS4P SSF_reported is set to FALSE.	7.5.2.2	c12902	
7	All the generated fault cause (cXXX) are reported to the EMF.	EN 300 417-1-1 [1] subclause 8.1, figure 36	m	

c12901: IF (E.3/3 OR E.3/4 OR E.3/5) THEN m ELSE n/a -- bi-directional switching supported

c12901: IF E.4/3 THEN m ELSE n/a -- MS4P\_TT\_Sk present

## E.4.5.4 Performance monitoring

### Table E.130: pPSC performance parameter

Prerequisite: E.4/4 AND (E.1/14 OR E.1/15) -- Protection performance monitoring process supported and STM-4 Linear Trail Protection supported.

Item	pPSC performance parameter	Reference	Status	Support
	Every second the MS4P1+1_C	A.9	c13001	
	indicates as MS4P pPSC (Protection			
	Switching Count) the number of			
	Protection Switching actions within			
	that second and reports it to the EMF.			
2	Every second the MS4P1:n_C	A.9	c13002	
	indicates as MS4P pPSC (Protection			
	Switching Count) the number of			
	Protection Switching actions within			
	that second and reports it to the EMF.			

c13001: IF E.1/14 THEN m ELSE n/a -- 1+1 MS Linear Trail Protection supported c13002: IF E.1/15 THEN m ELSE n/a -- 1:n MS Linear Trail Protection supported

### Table E.131: pPSD performance parameter

 $Prerequisite: E.4/3\ AND\ (E.3/1\ OR\ E.3/3\ OR\ E.3/5) -- \ Protection\ performance\ monitoring\ process\ supported\ and\ revertive\ protection\ supported$ 

Item	pPSD performance parameter	Reference	Status	Support
	Every second that the normal signal #i is not selected from the Working trail #i is reported as a pPSD/i (i≥1) to the EMF.	A.9	m	
	Every second that the normal signal is selected from the Protection trail is reported as a pPSD/0 to the EMF.	A.9	m	

# Annex F (normative): ICS proforma for STM-16 regenerator section layer

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

## F.1 Identification of the implementation

In the present document, an Implementation Under Test (IUT), and of course the identification of an IUT refers to an STM 16 Regenerator Section (RS16) layer instance implemented inside the System Under Test (SUT).

Identification of the IUT and the SUT in which it resides should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

F.1.1	Date of the statement
F.1.2 IUT name:	Implementation Under Test (IUT) identification

## F.2 Identification of the EN

This ICS proforma applies to the following standard:

EN 300 417-3-1: "Transmission and Multiplexing (TM); Generic requirements of transport functionality of equipment: STM-N regenerator and multiplex section layer functions".

# F.3 Global statement of conformance of STM-16 Regenerator Section (RS16) layer

Are all mandatory capabilities implemented (Yes/No) .....

NOTE: Answering "No" to this question indicates non-conformance to the EN specification. Non-supported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is non-conforming, on pages attached to the ICS proforma.

Answering "Yes" to this question indicates only that all the capabilities with the explicit status "m" are supported. It is not necessary to fill in the support column of the associated item.

## F.4 RS16 Section Layer function

## F.4.1 RS16 layer description

Table F.1: RS16 layer functions

Item	STM-16 Regenerator section layer	Reference	Status	Support
1	Regenerator section connection function (RS16_C).	8, figure 74	0	
2	Regenerator section trail termination source function (RS16_TT_So).	8, figure 74	o.101	
3	Regenerator section trail termination sink function (RS16_TT_Sk).	8, figure 74	o.101	
4	Regenerator Section to MS46 Layer Adaptation Source function (RS16/MS46_A_So).	8, figure 74	c101	
5	Regenerator Section to MS46 Layer Adaptation Sink function (RS16/MS46_A_Sk).	8, figure 74	c102	
6	Regenerator Section to DCC Layer Adaptation Source function (RS16/DCC_A_So).	8, figure 74	c103	
7	Regenerator Section to DCC Layer Adaptation Sink function (RS16/DCC_A_Sk).	8, figure 74	c104	
8	Regenerator Section to P0s Layer Adaptation Source function (RS16/P0s_A_So-N).	8, figure 74	c103	
9	Regenerator Section to P0s Layer Adaptation Sink function (RS16/P0s_A_Sk-N).	8, figure 74	c104	
10	Regenerator Section to V0x Layer Adaptation Source function (RS16/V0x_A_So).	8, figure 74	c103	
11	Regenerator Section to V0x Layer Adaptation Sink function (RS16/V0x_A_Sk).	8, figure 74	c104	
12	This RS16 layer is part of an SDH Regenerator equipment.	EN 300 417-2-2 [17] table D.1/1	0	

c101: IF F.1/2 THEN m ELSE x
-- a TT\_So function should exist for A\_So function
c102: IF F.1/3 THEN m ELSE x
-- a TT\_Sk function should exist for A\_Sk function
c103: IF F.1/2 THEN o ELSE x
-- a TT\_So function should exist for A\_So function
c104: IF F.1/3 THEN o ELSE x
-- a TT\_Sk function should exist for A\_Sk function

o.101: It is mandatory to support at least one of these items -- at least one TT function present

Comment: for a bi-directional layer both TT\_So and TT\_Sk functions are present, for a unidirectional layer just one of them can be present.

Item F.1/12 is the same as the one given in the reference column.

**Table F.2: Supervision processes** 

Item	Supervision process	Reference	Status	Support
1	Performance monitoring process.	EN 300 417-1-1 [1]	c201	
		subclauses 8.2 to 8.4		
2	Defect correlation process.	EN 300 417-1-1 [1]	c201	
		subclauses 8.2 to 8.3		

c201: IF F.1/3 THEN m ELSE n/a -- RS16\_TT\_Sk present

## F.4.2 STM-16 regenerator section layer transmission tables

Table F.3: Data stream structure

Item	Data stream structure	Reference	Status	Support
1	The CI at the RS16 connection point is octet structured and 125 µs framed with co-directional timing.	8	m	
2	The RS16_CI is a fully formatted STM-16 data stream.	8	m	
3	Regenerator Section OverHead (RS-OH) bytes are placed in rows 1 to 3 of columns 1 to 144 of the STM-16 frame.	8, figure 75	m	

## F.4.2.1 STM-16 Regenerator section connection function: RS16\_C

**Table F.4: Connection functionalities** 

Prerequisite: F.1/1 -- RS16\_C present

ltem	Connection functionalities	Reference	Status	Support
1	For further study.	8.1	n/a	

## F.4.2.2 RS16 layer trail termination functions: RS16\_TT\_So and RS16\_TT\_Sk

#### F.4.2.2.1 FAS

Table F.5: FAS byte location

Item	Frame Alignment Signal (FAS) byte location	Reference	Status	Support
	The FAS is located in A1 from (1,1) to		m	
	(1,48) and A2 from (1,49) to (1,96) of	subclause 9.2.2.1		
	the STM-16 frame.			

Table F.6: FAS byte structure

Iter	Frame Alignment Signal (FAS) byte structure	Reference	Status	Support
1		G.707 [14] subclause 9.2.2.1	m	

## F.4.2.2.2 Frame Alignment Signal generation

Table F.7: FAS insertion

Prerequisite: F.1/2 -- RS16\_TT\_So present

Iten	Frame Alignment Signal (FAS) insertion	Reference	Status	Support
1	The RS16_TT_So inserts the STM-16 FAS A1A1A2A2 into the RSOH.	8.2.1, G.707 [14] subclause 9.2.2.1	m	

## F.4.2.2.3 Signal scrambling / descrambling

Table F.8: Scrambling / descrambling: principles

Item	Scrambling / descrambling: principles	Reference	Status	Support
	The operation of the scrambler / descrambler is functionally identical to that of a frame synchronous scrambler / descrambler of sequence length 127 operating at the line rate.	8.2.1, 8.2.2	m	
2	The generating polynomial is $1 + X^6 + X^7$ .	8.2.1, 8.2.2	m	

**Table F.9: Scrambling process** 

Prerequisite: F.1/2 -- RS16\_TT\_So present

Item	Scrambling process	Reference	Status	Support
	The scrambler is reset to '1111 1111' on the MSB of the byte (1,145) following the last byte of the STM-16 SOH in the first row.	8.2.1	m	
2	This bit and all subsequent bits to be scrambled are modulo 2 added to the output of the X <sup>7</sup> position of the scrambler.	8.2.1	m	
3	The scrambler runs continuously throughout the remaining STM-16 frame.	8.2.1	m	

**Table F.10: Descrambling process** 

Prerequisite: F.1/3 -- RS16\_TT\_Sk function present

Item	Descrambling process	Reference	Status	Support
		8.2.2	m	
	incoming STM-16 signal except the			
	first row of the RSOH.			

## F.4.2.2.4 In service error monitoring process

Table F.11: In service error monitoring: principles

Item	In service error monitoring:	Reference	Status	Support
	principles			
1	An EDC is part of the characteristic information for in service error monitoring.	EN 300 417-1-1 [1] subclause 7.3	m	
2	In service error monitoring parameter definition is block-based.	G.707 [14] subclause 9.2.2.4 note	m	
3	The block length is 38 880 bytes, corresponding to the STM-16 frame structure.		m	
4	The error monitoring is performed using Bit Interleaved Parity 8 (BIP-8).	8.2.1, G.707 [14] subclause 9.2.2.4	m	
5	The BIP-8 is calculated using even parity in such a manner that the bit in position x provides even parity over the x-bits of all the 8-bits sequences within the specified block.	G.707 [14] subclause 9.2.2.4 note	m	

Comments: The BIP-n is interpreted as checking 'n' separate interleaved parity check blocks. If any of the 'n' parity check fails (EDC Violation), the block is assumed to be in error.

**Table F.12: EDC location** 

Item	Error Detection Code (EDC) location	Reference	Status	Support
	Regenerator Section EDC is located in byte B1(2,1) of the STM-16 frame.	8.2.1	m	

Table F.13: EDC processing: source direction

Prerequisite: F.1/2 -- RS16\_TT\_So present

Item	Error Detection Code (EDC) processing: source direction	Reference	Status	Support
1	The BIP-8 is calculated over all bits of the previous STM-16 frame after scrambling.	8.2.1	m	
2	BIP-8 code is inserted in B1 byte of the current STM-16 frame before scrambling.	8.2.1	М	

Table F.14: EDC processing: sink direction

Prerequisite: F.1/3 -- RS16\_TT\_Sk function present

Item	Error Detection Code (EDC) processing: sink direction	Reference	Status	Support
1	The incoming error monitoring byte B1 is recovered from the STM-16 signal after descrambling.	8.2.2	m	
2	The BIP-8 is calculated over all bits of the previous STM-16 frame before descrambling.	8.2.2	m	
3	Recovered B1 byte is compared with the calculated BIP-8.	8.2.2	m	
4	A difference between the computed and recovered B1 value is taken as evidence of one or more errors (nN_B) in the computation block.	8.2.2	m	

## F.4.2.2.5 Trail Trace Identifier (TTI)

Table F.15: Trail Trace Identifier (TTI): principles

Item	Trail Trace Identifier (TTI):	Reference	Status	Support
	principles			
1	A Trail Trace Identifier (TTI) is inserted by the termination source containing the local Access Point Identifier (APId) and TTI header (TxTI).	8.2.1, EN 300 417-1-1 [1] subclause 7.1	c1501	
	The content of the accepted TTI (AcTI) is compared by the trail termination sink function with the provisioned "expected TTI" (ExTI), identifying the expected remote AP.	8.2.2, EN 300 417-1-1 [1] subclause 7.1 and 8.2.1.3	c1502	

c1501:IF F.1/2 THEN m ELSE n/a -- RS16\_TT\_So present c1502:IF F.1/3 THEN m ELSE n/a -- RS16\_TT\_Sk present

Table F.16: Trail Trace Identifier (TTI) byte location

Item	Trail Trace Identifier (TTI) byte location	Reference	Status	Support
	The Regenerato Section Trail trace	8.2.1	m	
	Identifier (TTI) is located in byte J0(1,97) of the STM-16 frame.			

Table F.17: Trail Trace Identifier (TTI) byte structure

Item	Trail Trace Identifier (TTI) byte	Reference	Status	Support
	structure			
1	The RS TTI is a 16 byte string containing the 15 byte APId and a 1 byte header. The MSB of the header is a "1", the remaining 9 bits contain the CRC-7 value of the RS TTI. The MSB of the 15 APId bytes is "0".	EN 300 417-1-1 [1] subclause 7.1	m	
2	The CRC-7 word is the remainder after multiplication by $x^7$ and then division (modulo 2) by the generator polynomial $x^7 + x^3 + 1$ , of the polynomial representation of the RS TTI with the CRC bits set to binary zeroes.	EN 300 417-1-1 [1] subclause 7.1	m	
3	The 16 byte RS TxTI is transferred via the Management Point to and from the trail termination function.	EN 300 417-1-1 [1] subclause 8.2.1.3	c1701	
4	The 16 byte RS ExTI and 16 byte RS AcTI are transferred via the Management Point to and from the trail termination function.	EN 300 417-1-1 [1] subclause 8.2.1.3	c1702	

c1701:IF F.1/2 THEN m ELSE n/a -- RS16\_TT\_So present c1702:IF F.1/3 THEN m ELSE n/a -- RS16\_TT\_Sk present

Table F.18: Trail Trace identification: source direction

Prerequisite: F.1/2 -- RS16\_TT\_So present

Item	Trail Trace identification: source direction	Reference	Status	Support
1	The 16 byte RS TTI is transmitted	EN 300 417-1-1 [1]	m	
	continuously.	subclause 7.1		

Table F.19: Trail Trace identification: sink direction

Prerequisite: F.1/3 -- RS16\_TT\_Sk present

Item	Trail Trace identification: sink direction	Reference	Status	Support
1	The RS16_TT_Sk supports mode 1.	EN 300 417-1-1 [1] subclause 7.1	m	
2	The RS16_TT_Sk supports mode 2.	EN 300 417-1-1 [1] subclause 7.1	m	
3	The TTI mode is provisionable by the EMF.	8.2.2	m	
4	The RS16_TT_Sk recovers the 16 byte multiframe carried in byte J0 and assumes it as Received Trail Trace Identifier (RxTI). The RxTI is made available as AcTI for network management purposes.	8.2.2	m	

## F.4.2.3 STM-16 regenerator section layer to MS16 Layer adaptation functions: RS16/MS16\_A\_So and RS16/MS16\_A\_Sk

### F.4.2.3.1 RS16 layer to MS16 layer multiplexing and demultiplexing processes

Table F.20: Multiplexing

Prerequisite: F.1/4 -- RS16/MS16\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The RS16/MS16_A_So function multiplexes the MS16_CI data (38 448 bytes / frame) into the STM-16 frame.	8.3.1	m	

**Table F.21: Demultiplexing** 

Prerequisite: F.1/5 -- RS16/MS16\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The RS16/MS16_A_Sk recovers the MS16_CI data from the STM-16 frame.	8.3.2	m	

## F.4.2.4 RS16 layer to DCC layer adaptation functions: RS16/DCC\_A\_So and RS16/DCC\_A\_Sk

## F.4.2.4.1 RS16 layer to DCC layer multiplexing and demultiplexing processes

**Table F.22: Multiplexing** 

Prerequisite: F.1/6 -- RS16/DCC\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	The DCC_CI data (192 kbit/s) are	8.3.3	m	
	multiplexed in D1, D2 and D3 bytes of			
	the STM-16 frame.			

**Table F.23: Demultiplexing** 

Prerequisite: F.1/7 -- RS16/DCC\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The DCC_CI data (192 kbit/s) are	8.3.4	m	
	demultiplexed from bytes D1 to D3.			

## F.4.2.5 RS16 layer to P0s layer adaptation functions: RS16/P0s\_A\_So-N and RS16/P0s A Sk-N

### F.4.2.5.1 RS16 layer to P0s layer multiplexing and demultiplexing processes

**Table F.24: Multiplexing** 

Prerequisite: F.1/8 -- RS16/P0s\_A\_So-N present

Item	Multiplexing	Reference	Status	Support
	The RS16/P0sP0x_A_So-N multiplexes either a 64 kbit/s	8.3.5	m	
	orderwire or a 64 kbit/s user channel			
	information stream into the			
	RSOH byte E1or F1.			
2	The RS16/P0sP0x_A_So-N function	8.3.5	m	
	has access to a specific 64 kbit/s of			
	the RS access point. The specific			
	64 kbit/s channel is defined by the			
	parameter N (N = E1, F1).			

o.2401: It is mandatory to support at least one of these items -- at least one RS16/P0s\_A\_So-N function present

**Table F.25: Demultiplexing** 

Prerequisite: F.1/9 -- RS16/P0s\_A\_Sk-N present

Item	Demultiplexing	Reference	Status	Support
1	The RS16/P0s_A_Sk-E1	8.3.6	o.2501	
	demultiplexes the P0s data from byte			
	E1 of the RS Overhead.			
2	The RS16/P0s_A_Sk-F1	8.3.6	o.2501	
	demultiplexes the P0s data from byte			
	F1 of the RS Overhead.			

o.2501: It is mandatory to support at least one of these items -- at least one RS16/P0s\_A\_Sk-N function present

## F.4.2.5.2 RS16 layer to P0s layer frequency justification and bitrate adaptation processes

Table F.26: Frequency justification and bitrate adaptation: principles

Prerequisite: F.1/8 -- RS16/P0s\_A\_So-N present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
1	The RS16/P0s_A_So-N function provides frequency justification and bitrate adaptation for a 64 kbit/s information stream. It takes P0s_CI as an unstructured bit-stream with a rate of 64 kbit/s ± 100 ppm and inserts it into the RSOH.	8.3.5	m	
2	Frequency justification is performed by octet slip buffering.	8.3.5	m	

Table F.27: Frequency justification and bitrate adaptation: source direction

Prerequisite: F.1/8 -- RS16/P0s\_A\_So-N present

Item	Frequency justification and bitrate adaptation: source direction	Reference	Status	Support
1	The RS16/P0s_A_So-N function provides for an elastic store (slip buffer) process. The are written into the store under control of the associated input clock. The data are read out of the store under control of the STM-16 clock, frame position and justification decision.	8.3.5	m	
2	Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification (slip) action, the reading of one 64 kbit/s octet (9 bits) is cancelled once. Upon a negative justification (slip) action, the same 64 kbit/s octet (9 bits) is read out a second time.	8.3.5	m	
3	The elastic store (slip buffer) size accommodates at least 18 μs of wander without introducing errors is at least 2 octets.	4.3.5	m	

## F.4.2.6 RS16 layer to V0x layer adaptation functions: RS16/V0x\_A\_So and RS16/V0x\_A\_Sk

## F.4.2.6.1 RS16 layer to V0x layer multiplexing and demultiplexing processes

**Table F.28: Multiplexing** 

Prerequisite: F.1/10 -- RS16/V0x\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The RS16/V0x_A_So multiplexes the V0x_CI data (64 kbit/s) into the byte location F1.	8.3.7	Э	

**Table F.29: Demultiplexing** 

Prerequisite: F.1/11 -- RS16/V0x\_A\_Sk-N present

Item	Demultiplexing	Reference	Status	Support
	The RS16/V0x_A_Sk demultiplexes the user channel data from RS Overhead (byte F1).	8.3.7	m	

## F.4.3 Defect, fault and performance monitoring

## F.4.3.1 Trail termination point mode management

Table F.30: Trail termination point mode process

Prerequisite: F.1/3 -- RS16\_TT\_Sk function present

Item	Trail Termination Point Status	Reference	Status	Support
	process			
1	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "not monitored" (NMON)	subclause 8.5		
	status.			
2	The Trail Termination Point Mode	EN 300 417-1-1 [1]	m	
	supports "monitored" (MON) status.	subclause 8.5		
3	The Trail Termination Point Mode	8.2.2	m	
	status is provisionable by the EMF.			

## F.4.3.2 Defect detection and clearance criteria

Table F.31: Trace Identifier Mismatch defect (dTIM)

Prerequisite: F.1/3 -- RS16\_TT\_Sk function present

Item	Trace Identifier Mismatch defect	Reference	Status	Support
	(dTIM)			
1	The RS16 dTIM defect is detected	EN 300 417-1-1 [1]	m	
	within a maximum period of 100 ms in	subclause 8.2.1.3		
	the absence of bit errors.			
2	The RS16 dTIM defect is cleared	EN 300 417-1-1 [1]	m	
	within a maximum period of 100 ms in	subclause 8.2.1.3		
	the absence of bit errors.			
3	The RS16 dTIM is suppressed during	EN 300 417-1-1 [1]	m	
	the reception of aSSF from the server			
	layer.			
4	The RS16 dTIM detection can be	EN 300 417-1-1 [1]	m	
	disabled (TIMdis).	subclause 8.2.1.3		

## F.4.3.3 Consequent action activation and clearance criteria

## Table F.32: Alarm Indication Signal action (aAIS)

 $Prerequisite: F.1/3\ OR\ F.1/4\ OR\ F.1/9\ OR\ F.1/11\ --\ RS16\_TT\_Sk\ and/or\ RS16/MS1\_A\_So\ and/or\ RS16/P0s\_A\_Sk\ and/or\ RS16/V0X\_A\_Sk\ present$ 

Item	Alarm Indication Signal action (aAIS)	Reference	Status	Support
1	The RS16_TT_Sk outputs an all "1s" signal within 250 μs upon RS16 dTIM detection.	8.2.2	c3201	
2	The RS16_TT_Sk outputs an all "1s" signal within 250 μs upon CI_SSF reception.	8.2.2	c3201	
3	The RS16_TT_Sk outputs normal data within 250 µs when there is (are) no more defect(s) active.	8.2.2	c3201	
4	The RS16/MS16_A_So outputs an all "1s" signal within 250 μs upon CI_SSF reception.	8.2.2	c3202	
5	The frequency of the all "1s" signal is within the range of 2 488 320 kHz kbit/s ± 20 ppm.	8.3.1	c3202	
6	The RS16/MS16_A_So outputs normal data within 250 µs when there is (are) no more defect(s) active.	8.3.1	c3202	
7	The RS16/P0s_A_Sk-N outputs an all "1s" signal within 1 ms upon AI_TSF reception.	8.3.6	c3203	
8	The frequency of the all "1s" signal is within the range of 64 kbit/s ± 20 ppm.	8.3.6	c3203	
9	The RS16/P0s_A_Sk-N outputs normal data within 1 ms when there is (are) no more defect(s) active.	8.3.6	c3203	
10	The RS16/V0x_A_Sk outputs an all "1s" signal within 1 ms upon AI_TSF reception.	8.3.8	c3204	
11	The frequency of the all "1s" signal is within the frequency limits for this signal.	8.3.8	c3204

# Annex G (normative): ICS proforma for STM-16 multiplex section layer

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

## G.1 Identification of the implementation

In the present document, an Implementation Under Test (IUT), and of course the identification of an IUT refers to an STM-16 Multiplex Section (MS16) layer instance implemented inside the System Under Test (SUT).

Identification of the IUT and the SUT in which it resides should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

G.1.1	Date of the statement

## G.2 Identification of the EN

This ICS proforma applies to the following standard:

EN 300 417-3-1: "Transmission and Multiplexing (TM); Generic requirements of transport functionality of equipment: STM-N regenerator and multiplex section layer functions".

# G.3 Global statement of conformance of STM-16 Multiplex Section (MS16) layer

Are all mandatory capabilities implemented (Yes/No) .....

NOTE: Answering "No" to this question indicates non-conformance to the EN specification. Non-supported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is non-conforming, on pages attached to the ICS proforma.

Answering "Yes" to this question indicates only that all the capabilities with the explicit status "m" are supported. It is not necessary to fill in the support column of the associated item.

## G.4 MS16 Section Layer function

## G.4.1 MS16 layer description

Table G.1: MS16 layer functions

Item	STM-16 Multiplex Section Layer functions	Reference	Status	Support
1	Multiplex Section Connection function (MS16_C).	9, figure 89	0

## G.4.2.1 MS16 connection function: MS16\_C

**Table G.10: Connection functionalities** 

Prerequisite: G.1/1 -- MS16\_C present

Item	Connection functionalities	Reference	Status	Support
1	For further study.	9.1	n/a	

## G.4.2.2 MS16 layer trail termination functions: MS16\_TT\_So and MS16\_TT\_Sk

### G.4.2.2.1 In service error monitoring process

Table G.11: In service error monitoring: principles

Item	In service error monitoring: principles	Reference	Status	Support
1	An EDC is part of the characteristic information for in service monitoring purposes.	EN 300 417-1-1 [1] subclause 7.3	m	
2	In service error monitoring parameter definition is block-based.	G.707 [14] subclause 9.2.2.4 note	m	
3	The block length is 2 403 bytes (within an STM-16, the STM-1 frame structure without the Regenerator Section Overhead).	G.707 [14] subclause 9.2.2.4	m	
4	The error monitoring is performed using Bit Interleaved Parity 384 (BIP-384).	9.2.1, G.707 [14] subclause 9.2.2.4 note	m	
5	The BIP-384 is calculated using even parity in such a manner that the bit in position x provides even parity over the x-bits of all the 384-bits sequences within the specified block.	G.707 [14] subclause 9.2.2.4 note	m	

NOTE: The BIP-n is interpreted as checking 'n' separate interleaved parity check blocks. If any of the 'n' parity check fails (EDC Violation), the block is assumed to be in error.

**Table G.12: EDC location** 

Item	Error Detection Code	Reference	Status	Support
	(EDC) location			
	Multiplex Section EDC is located in bytes B2 from (5,1) to (5,48) of the STM-16 frame.	9, figure 90	m	

Table G.13: EDC processing: source direction

Prerequisite: G.1/2 -- MS16\_TT\_So present

Item	Error Detection Code (EDC) processing: source direction	Reference	Status	Support
	The BIP-384 is calculated over all bits, except those in the RSOH bytes, of the previous STM-16 frame.	9.2.1	m	
	BIP-384 code is inserted in the 48 B2 bytes of the current STM-16 frame.	9.2.1	m	

Table G.14: EDC processing: sink direction

Prerequisite: G.1/3 -- MS16\_TT\_Sk function present

Item	Error Detection Code (EDC) processing: sink direction	Reference	Status	Support
1	The incoming error monitoring bytes B2 are recovered from the MSOH signal.	9.2.2	m	
2	The BIP-384 is calculated over all bits, except of those in the RSOH bytes, of the previous STM-16 frame.	9.2.2	m	
3	Recovered B2 bytes are compared with the calculated BIP-384.	9.2.2	m	
4	A difference between the computed and recovered B2 values is taken as evidence of one or more errors (nN_B) in the computation block.	9.2.2	m	

## G.4.2.2.2 Server layer status monitoring process

### G.4.2.2.2.1 MS16 Alarm Indication Signal (MS16 AIS)

Table G.15: Alarm Indication Signal processing: sink direction

Prerequisite: G.1/3 -- MS16\_TT\_Sk present

Item	Alarm Indication Signal processing: sink direction	Reference	Status	Support
1	MS16_TT_Sk extracts and monitors	9.2.2	m	
	bits 6 to 8 of K2 byte in order to detect			
	the '111' bit pattern as evidence of			
	MS AIS condition.			

## G.4.2.2.3 Remote indicators monitoring process

## G.4.2.2.3.1 MS16 Remote Defect Indication (RDI) (MS16 RDI)

#### Table G.16: Remote Defect Indication (RDI) location

Prerequisite: G.1/2 AND G.1/3 -- bi-directional layer supported

Item	Remote Defect Indication (RDI) location	Reference	Status	Support
	The MS RDI is located in bits 6,7 and 8 of byte K2(5,97) of the STM-16	9.2.1, 9.2.2	m	
	frame.			

Table G.17: Remote Defect Indication (RDI) processing: source direction

Prerequisite: G. 1/2 AND G.1/3 -- bi-directional layer supported

Item	Remote Defect Indication (RDI) processing: source direction	Reference	Status	Support
1	MS16 RDI is set upon activation of MS16_RI_RDI determined by the associated MS16_TT_Sk.	9.2.1	m	
2	MS16 RDI is cleared upon deactivation of MS16_RI_RDI determined by the associated MS16_TT_Sk.	9.2.1	m	
3	MS16 RDI signal is coded as a '110' bit pattern.	9.2.1	m	
4	If MS16_RI_RDI is inactive bits 6 to 8 of byte K2 are passed through transparently except for incoming codes "111" and "110".	9.2.1	m	
5	The '000' bit pattern is inserted if no MS16_RI_RDI signal is active and the incoming content of bits 6 to 8 in byte K2 is "111" or "110".	9.2.1	m	

Table G.18: Remote Defect Indication (RDI) processing: sink direction

Prerequisite: G.1/3 -- MS16\_TT\_Sk present

Item	Remote Defect Indication (RDI) processing: sink direction	Reference	Status	Support
	MS16_TT_Sk extracts and monitors bits 6 to 8 of K2 byte in order to detect the '110' bit pattern as evidence of MS RDI condition.	9.2.2	m	

### G.4.2.2.3.2 MS16 Remote Error Indication (REI) (MS16 REI)

### Table G.19: Remote Error Indication (REI): principles

Prerequisite: G. 1/2 AND G.1/3 -- bi-directional layer supported

Item	Remote Error Indication (REI):	Reference	Status	Support
	principles			
	The REI signal contains the exact	G.707 [14]	m	
		subclause 9.2.2.12		
	detected in the trail signal at the			
	far-end trail termination sink.			
2	The block length is 801 bits. The EDC	G.707 [14]	m	
	is BIP-1.	subclause 9.2.2.12		

### Table G.20: Remote Error Indication (REI) location

Prerequisite: G. 1/2 AND G.1/3 -- bi-directional layer supported

Item	Remote Error Indication (REI) location	Reference	Status	Support
1	The MS REI is located in bits 1 to 8 of	G.707 [14]	m	
	M1(9,51) byte of the STM-16 frame.	subclause 9.2.2.12		

Table G.21: Remote Error Indication (REI) processing: source direction

Prerequisite: G. 1/2 AND G.1/3 -- bi-directional layer supported

Item	Remote Error Indication (REI) processing: source direction	Reference	Status	Support
		G.707 [14]	m	
	equivalent binary value of the number	subclause 9.2.2.12		
	of EDCV, truncated to 255, detected			
	by the monitoring process.			

Table G.22: Remote Error Indication (REI) processing: sink direction

Prerequisite: G.1/3 -- MS16\_TT\_Sk present

Item	Remote Error Indication (REI) processing: sink direction	Reference	Status	Support
	The MS16_TT_Sk extracts the MS16 REI from the incoming STM-16 signal.		m	
	The MS16_TT_Sk interprets the MS16 REI as given in G.707 [14] subclause 9.2.2.12.	G.707 [14] subclause 9.2.2.12	m	

## G.4.2.3 MS16 layer to S4 layer adaptation functions: MS16/S4\_A\_So and MS16/S4\_A\_Sk

**Table G.23: Adaptation process** 

 $Prerequisite: G.1/4\ OR\ G.1/5 --\ MS16/S4\_A\_So\ and/or\ MS16/S4\_A\_Sk\ present$ 

Item	Adaptation process	Reference	Status	Support
1	The MS16/S4_A_So function provides frequency justification and bitrate adaptation for a VC-4 signal, represented by a nominally (261×9×64) = 150 336 kbit/s information stream and the related frame phase with a frequency accuracy within ± 4,6 ppm.	9.3.1	c2301	
2	The MS16/S4_A_So-N has access to a specific AU-4 of the MS16 access point. The AU-4 is defined by the parameter N (or AUnum) with N=1,,16.	9.3.1	c2301	
3	The MS16/S4_A_Sk recovers the VC-4 data with frame phase information.	9.3.2	c2302	
4	The MS16/S4_A_Sk-N has access to a specific AU-4 of the MS16 access point. The AU-4 is defined by the parameter N (or AUnum) with N=1,,16.	9.3.2	c2302	

c2301: IF G.1/4 THEN m ELSE n/a -- MS16/S4\_A\_So present c2302: IF G.1/5 THEN m ELSE n/a -- MS16/S4\_A\_Sk present

Table G.24: Activation / deactivation of adaptation to S4 and S4-4c layer functions

Prerequisite: (G.1/4 AND G.1/12) OR (G.1/5 AND G.1/13) -- adaptation So functions to S4 and S4-4c layers present at the same time and/or adaptation Sk functions to S4 and S4-4c layers present

Item	Activation / deactivation of adaptation to S4 and S4-4c layer functions	Reference	Status	Support
1	The MS16/S4_A_So-N and MS16/S4-4c_A_So-N can be activated or deactivated when multiple payload adaptation functions are connected to the access point. Only one adaptation source function may have access to a specific AU timeslot. Access to the same AU timeslot by other adaptation source functions is denied.	9.3.1, 9.3.3	c2401	
2	Each of the MS16/S4_A_So-N accesses the access point when it is activated (MI_Active is true). Otherwise, it does not access the access point.	9.3.1	c2402	
3	Each of the MS16/S4-4c_A_So-N accesses the access point when it is activated (MI_Active is true). Otherwise, it does not access the access point.	9.3.3	c2403	
4	The MS16/S4_A_Sk-N can be activated or deactivated to connect to the access point. In contradiction with the source direction, adaptation sink functions may be activated all together.	9.3.2	c2404	
5	The MS16/S4-4c_A_Sk-N can be activated or deactivated to connect to the access point. In contradiction with the source direction, adaptation sink functions may be activated all together.	9.3.4	c2404	
6	Each of the MS16/S4_A_Sk-N performs its tasks when it is activated (MI_Active is true). Otherwise, it transmits the all-ONEs signal at its output (CI_D) and does not report its status via its management point.	9.3.2	c2405	
7	Each of the MS16/S4-4c_A_Sk-N performs its tasks when it is activated (MI_Active is true). Otherwise, it transmits the all-ONEs signal at its output (CI_D) and does not report its status via its management point.	9.3.4	c2406	

c2401: IF G.3/5 AND [(j1+4\*j3)>16] THEN m ELSE x

c2402: IF G.24/1 THEN m ELSE x c2403: IF G.24/1 THEN m ELSE x c2404: IF G.3/6 AND [(j2+4\*j4)>16] THEN m ELSE x

c2405: IF G.24/4 THEN m ELSE x c2406: IF G.24/5 THEN m ELSE x

-- the total capacity of MS16/S4\_A\_So and MS16/S4-4c\_A\_So exceeds the 16 AU timeslots available in an STM-16 frame

-- MS16/S4\_A\_So present and activation / deactivation supported

-- MS16/S4-4c\_A\_So present and activation / deactivation supported

-- the total capacity of MS16/S4\_A\_Sk and MS16/S4-4c\_A\_Sk exceeds the 16 AU timeslots available in an STM-16 frame

-- activation / deactivation of adaptation Sk functions to S4 layer supported

-- activation / deactivation of adaptation Sk functions to S4-4c layer supported

Comment to c2401: in c2401 the values of j1 and j3, if supported, are those given respectively in G.3/1 and G.3/3.

## G.4.2.3.1 MS16 layer to S4 layer frequency justification and bitrate adaptation processes

Table G.25: Frequency justification and bitrate adaptation: principles

Prerequisite: G.1/4 -- MS16/S4\_A\_So present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
	Frequency justification is performed by pointer adjustments.	9.3.1	m	

Table G.26: Frequency justification and bitrate adaptation: source direction

Prerequisite: G.1/4 -- MS16/S4\_A\_So present

Item		Reference	Status	Support
	adaptation: source direction			
1	The MS16/S4_A_So function provides for an elastic store (buffer) process. The data and frame start signals are written into the store under control of the associated input clock. The data and frame start signals are read out of the store under control of the STM-16 clock, frame position and	9.3.1	m	
2	justification decision.  Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification action, the reading of 24 data bits are cancelled once and no data written at the three positions H3+1. Upon a negative justification action, an extra 24 data bits are read out once into the three positions H3.		m	
3	Consecutive pointer operations shall be separated by at least three frames (i.e. every fourth frame) in which the pointer value remains constant.	9.3.1	m	
4	The buffer hysteresis is at least 12 bytes.	9.3.1	m	
5	The size of the buffer for the elastic store process is [for further study].	9.3.1	n/a	

## G.4.2.3.2 MS16 layer to S4 layer alignment process

Table G.27: Alignment process principles

Prerequisite: G.1/4 OR G.1/5 -- MS16/S4\_A\_So and/or MS16/S4\_Sk present

Item	Alignment process principles	Reference	Status	Support
	The alignment process is carried out by the processing of the AU-4 pointer which is aligned in the STM-16 payload in fixed position relative to the STM-16 frame.	G.707 [14] subclause 8.1	m	
	The location of the first byte of the VC-4 with respect to the STM-16 is given by the related AU-4 pointer value.	G.707 [14] subclause 8.1.2	m	

Comments: The pointer value gives a measure of the phase offset between the VC-4 stream and the STM-16 frame.

#### Table G.28: AU-4 pointer and alignment byte location

Prerequisite: G.1/4 OR G.1/5 -- MS16/S4\_A\_So and/or MS16/S4\_Sk present

Item	AU-4 pointer and alignment byte	Reference	Status	Support
	location			
	The 144 bytes at the beginning of row 4 in the STM-16 frame are allocated to the alignment process.	9.3.1, G.707 [14] subclauses 8.1-8.1.1	m	
2		9.3.1, G.707 [14] subclauses 8.1-8.1.1	m	

Comments: The parameter AUnum (AUnum=1,..,16) indicates the Administrative Unit number within the STM-16 frame.

Table G.29: AU-4 pointer and alignment byte structure

Prerequisite: G.1/4 OR G.1/5 -- MS16/S4\_A\_So and/or MS16/S4\_Sk present

Item	AU-4 Pointer and alignment byte	Reference	Status	Support
	structure			
1	The content of H1 (4,AUnum) and H2	G.707 [14]	m	
	(4,48+AUnum) bytes is viewed as one	subclause 8.1.2		
	pointer word.			
2	Bits 1 through 4 of the pointer word	G.707 [14]	m	
	carry the New Data Flag (NDF).	subclause 8.1.2		
3	Bits 5 and 6 of the pointer word,	9.3.1, G.707 [14]	m	
	named ss bits, carry the AU-n type	subclause 8.1.2		
	code.			
	They are set to '10'.			
4	Bits 7 through 16 (last ten bits) of the	G.707 [14]	m	
	pointer word carry the pointer value.	subclause 8.1.2		
5	The AU-4 pointer value is a binary	G.707 [14]	m	
	number with a range of 0 to 782.	subclause 8.1.2		
6	Bytes from (4,17) to (4,48) contain the	9.3.1, G.707 [14]	m	
	fixed stuff code Y = 1001 ss11.	subclause 8.1.2		
	Bits ss are undefined.			
7	Bytes from (4,65) to (4,96) contain the		m	
	fixed stuff code '1' = 1111 1111.	subclause 8.1.2		
8	H3(4,96+AUnum),	G.707 [14]	m	
	H3(4,112+AUnum),	subclause 8.1.2		
	H3(4,128+AUnum) bytes are the			
	negative justification			
	opportunity bytes.			
9	Bits 7,9,11,13,15 of the pointer word	G.707 [14]	m	
	(I bits) are the pointer incrementation	subclause 8.1.2		
	indication bits.			
10	Bits 8,10,12,14,16 of the pointer word	G.707 [14]	m	
	(D bits) are the pointer	subclause 8.1.2		
	decrementation indication bits.			

Comments: The parameter AUnum (AUnum=1,..,16) indicates the Administrative Unit number within the STM-16 frame.

NOTE: Items G.29/3 and G.29/6 are contradictory but just reflect the base specification in ITU-T Recommendation G.707 [14] and EN 300 417-3-1 [2].

## G.4.2.3.2.1 AU pointer generation

Table G.30: Pointer generation principles

 $Prerequisite: G.1/4\ OR\ G.1/12--\ MS16/S4\_A\_So\ and/or\ MS16/S4-4c\_A\_So\ present$ 

Item	Pointer generation principles	Reference	Status	Support
1	The pointer is generated according to the pointer generation algorithm.	9.3.1, EN 300 417-1-1 [1] annex A	m	
2	The pointer generation algorithm can be modelled by a finite state machine as shown in EN 300 417-1-1 [1] figure A.1. Four states can be identified:  NORM_state;  NDF_state;  INC_state;  DEC_state.	EN 300 417-1-1 [1] annex A	m	
3	The transitions from the NORM state to the INC, DEC and NDF states are initiated by Elastic Store process events.	EN 300 417-1-1 [1] annex A	m	
4	The transitions from INC, DEC and NDF states to the NORM state occur autonomously under the generation of special pointer patterns.	EN 300 417-1-1 [1] annex A	m	
5	Definition of excessive pointer adjustments is for further study.	EN 300 417-1-1 [1] annex A	n/a	

**Table G.31: Pointer generation events** 

Prerequisite: G.1/4 OR G.1/12 -- MS16/S4\_A\_So and/or MS16/S4-4c\_A\_So present

Item	Pointer generation events	Reference	Status	Support
1	thr_exc: elastic store filling exceeds	EN 300 417-1-1 [1]	m	
	an upper threshold.	annex A		
2	thr_und: elastic store filling falls	EN 300 417-1-1 [1]	m	
	below a lower threshold.	annex A		
3	FO_normal: normal frame offset.	EN 300 417-1-1 [1]	m	
		annex A		
4	FO_discont: frame offset	EN 300 417-1-1 [1]	m	
	discontinuity.	annex A		
5	A frame offset discontinuity occurs if	EN 300 417-1-1 [1]	m	
	an incoming NDF_enable or	annex A		
	3*new_point is received by the pointer			
	interpreter controlling the process of			
	writing into the elastic store.			
6	A frame offset discontinuity occurs if	EN 300 417-1-1 [1]	m	
	the Elastic Store overflow / underflow	annex A		
	condition is detected.			
7	The active offset is defined as the	EN 300 417-1-1 [1]	m	
	phase between the outgoing STM-16	annex A		
	and the VC-4 (or VC-4-4c).			
8	The active offset is undefined during a		m	
	signal fail condition.	annex A		

## **Table G.32: Pointer generation actions**

 $Prerequisite: G.1/4\ OR\ G.1/12--\ MS16/S4\_A\_So\ and/or\ MS16/S4-4c\_A\_So\ present$ 

Item	Pointer generation actions	Reference	Status	Support
1	The norm_point action generates a transmitted pointer word with: - NDF disabled (NDF bytes set to 0110);	EN 300 417-1-1 [1] annex A	m	
2	- pointer value set to active offset.  The inc_ind action generates a transmitted pointer word with: - NDF disabled (NDF bytes set to 0110); - pointer value set to the active offset and I-bits inverted.  After this action 3 (or 12) stuffing bytes are transmitted in the 3 (or 12) H3+1 byte positions (see figure 93 in EN 300 417-3-1) of the AU-4 (or AU-4-4c) and the active offset is incremented by one unit. If the previous pointer value is set to its maximum value, the subsequent pointer is set to zero.	EN 300 417-1-1 [1] annex A, G.707 [14] subclause 8.1.5	m	
3	The dec_ind action generates a transmitted pointer word with: - NDF disabled (NDF bytes set to 0110); - pointer value set to the active offset and D-bits inverted. After this action 3 ( or 12) data bytes are transmitted in the 3 ( or 12) H3 byte positions of the AU-4 (or AU-4-4c) and the active offset is decremented by one. If the previous pointer value is zero, the subsequent pointer is set to its maximum value.	EN 300 417-1-1 [1] annex A, G.707 [14] subclause 8.1.5	m	
4	The NDF_enable action generates a pointer word with: - NDF enabled (NDF bytes set to 1001); - pointer value set to the new offset. After this action the active offset is updated to the new offset value.	EN 300 417-1-1 [1] annex A	m	

Comments: I bits and D bits are, respectively, bits 7,9,11,13,15 and 8,10,12,14,16 of the pointer word.

Table G.33: Pointer generation: operation in NORM state

 $Prerequisite: G.1/4\ OR\ G.1/12 --\ MS16/S4\_A\_So\ and/or\ MS16/S4-4c\_A\_So\ present$ 

Item	Pointer generation: operation in NORM state	Reference	Status	Support

4	Reception: NDF_enable.	EN 300 417-1-1 [1]	m	
	Transition to state: NDF.	annex B		
	Action: accept new offset.			

Table G.45: Pointer interpretation: complements

Prerequisite: G.1/5 OR G.1/13 --  $MS16/S4\_A\_Sk$  and/or  $MS16/S4-4c\_A\_Sk$  present

Item	Pointer interpretation:	Reference	Status	Support
	complements			
1	Non-consecutive invalid indications do not activate the transition to the LOP_state.	EN 300 417-1-1 [1] annex B	m	
2	The pointer processor maintains its current phase on detection of an invalid pointer and searches in parallel for a new phase.	9.3.2, 9.3.4	m	
3	The reception of 3*new_point takes precedence over any other events.	EN 300 417-1-1 [1] annex B	m	
4	The second and third offset value received in 3*new_point needs to be identical with the first.	EN 300 417-1-1 [1] annex B	m	
5	The "consecutive new_point" counter is reset to zero on a change of state, except for transitions occurring among INC, DEC, NDF states and the NORM state.	EN 300 417-1-1 [1] annex B	m	
6	The "consecutive inv_point counter" can be incremented in all states. The "consecutive inv_point" counter is not reset on a change of state.	EN 300 417-1-1 [1] annex B	m	
7	The "consecutive AIS_ind" counter is not reset on a change of state.	EN 300 417-1-1 [1] annex B	m	
8	The "consecutive NDF_enable" counter is reset to zero on a change of AIS to NDF state; otherwise the counter is not reset.	EN 300 417-1-1 [1] annex B	m	

#### G.4.2.3.3 MS16 layer to S4 layer multiplexing and demultiplexing processes

#### **Table G.46: Multiplexing**

Prerequisite: G.1/4 -- MS16/S4\_A\_So present

Item	Multiplexing	Reference	Status	Support
	Bytes allocated to the AU-4 pointer are multiplexed into MS16_AI at the AU tributary location indicated by MI_AUnum.	9.3.1	m	
	The VC-4 is multiplexed into MS16_AI according to the pointer generation algorithm.	9.3.1	m	

**Table G.47: Demultiplexing** 

Prerequisite: G.1/5 -- MS16/S4\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The AU-4 pointer is recovered from MS16_AI from the AU pointer location of the STM-16 stream indicated by MI_AUnum.	9.3.2	m	
	The VC-4 is recovered from MS16_AI according to the pointer interpretation algorithm.	9.3.2	m	

# G.4.2.4 MS16 layer to S4-4c layer adaptation functions: MS16/S4-4c\_A\_So and MS16/S4-4c\_A\_Sk

**Table G.48: Adaptation process** 

 $Prerequisite: G.1/12\ OR\ G.1/13--MS16/S4-4c\_A\_So\ and/or\ MS16/S4-4c\_A\_Sk\ present$ 

Item	Adaptation process	Reference	Status	Support
1	The MS16/S4-4c_A_So function provides frequency justification and bitrate adaptation for a VC-4-4c signal, represented by a nominally $(1\ 044 \times 9 \times 64) = 601\ 344$ kbit/s information stream and the related frame phase with a frequency accuracy within $\pm$ 4,6 ppm.	9.3.3	c4801	
2	The MS16/S4-4c_A_So-N has access to a specific AU-4-4c of the MS16 access point. The AU-4-4c is defined by the parameter N with N=1, 5, 9 or 13.	9.3.3	c4801	
3	The MS16/S4-4c_A_Sk recovers the VC-4-4c data with frame phase information.	9.3.4	c4802	
4	The MS16S4-4c_A_Sk-N has access to a specific AU-4 of the MS16 access point. The AU-4 is defined by the parameter N with N=1, 5, 9 or 13.	9.3.4	c4802	

c4801: IF G.1/12 THEN m ELSE n/a c4802: IF G.1/13 THEN m ELSE n/a

-- MS16/S4-4c\_A\_So present -- MS16/S4-4c\_A\_Sk present

## G.4.2.4.1 MS16 layer to S4-4c layer frequency justification and bitrate adaptation processes

Table G.49: Frequency justification and bitrate adaptation: principles

Prerequisite: G.1/12 -- MS16/S4-4c\_A\_So present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
	Frequency justification is performed by pointer adjustments.	9.3.3	m	

Table G.50: Frequency justification and bitrate adaptation: source direction

Prerequisite: G.1/12 -- MS16/S4-4c\_A\_So present

Item	Frequency justification and bitrate adaptation: source direction	Reference	Status	Support
1	The MS16/S4-4c_A_So function provides for an elastic store (buffer) process. The data and frame start signals are written into the store under control of the associated input clock. The data and frame start signals are read out of the store under control of the STM-16 clock, frame position and justification decision.	9.3.3	m	
2	Each justification decision results in a corresponding negative / positive justification action. Upon a positive justification action, the reading of 96 data bits are cancelled once and no data written at the twelve positions H3+1. Upon a negative justification action, an extra 96 data bits are read out once into the twelve positions H3.	9.3.3	m	
3	Consecutive pointer operations shall be separated by at least three frames (i.e. every fourth frame) in which the pointer value remains constant.	9.3.3	m	

#### G.4.2.4.2 MS16 layer to S4-4c layer alignment process

Table G.51: Alignment process principles

Prerequisite: G.1/12 OR G.1/13 -- MS16/S4-4c\_A\_So and/or MS16/S4-4c\_A\_Sk present

Item	Alignment process principles	Reference	Status	Support
	The alignment process is carried out by the processing of the AU-4-4c pointer which is aligned in the STM-16 payload in fixed position relative to the STM-16 frame.	G.707 [14] subclause 8.1	m	
2	The location of the first byte of the VC-4-4c with respect to the STM-16 is given by the related AU-4-4c pointer value.	G.707 [14] subclause 8.1.2	m	

Comments: The pointer value gives a measure of the phase offset between the VC-4-4c stream and the STM-16 frame.

### Table G.52: AU-4-4c pointer and alignment byte location

Prerequisite: G.1/12 OR G.1/13 -- MS16/S4-4c\_A\_So and/or MS16/S4-4c\_A\_Sk present

Item	AU-4-4c pointer and alignment byte location	Reference	Status	Support
1	The 144 bytes at the beginning of row 4 in the STM-16 frame are allocated to the alignment process.	9.3.3, G.707 [14] subclauses 8.1 to 8.1.1	m	
	The AU-4-4c pointer (associated to MS16/S4-4c_A_So-N and/or MS16/S4-4c_A_Sk-N) is located into bytes from (4,N) to (4,N+3) and from (4,N+48) to (4,N+51) of the STM-16 frame.	9.3.3, G.707 [14] subclauses 8.1 to 8.1.1	m	

Comments: The value of N can be 1, 5, 9 or 13.

#### Table G.53: AU-4-4c Pointer and alignment byte structure

 $Prerequisite: G.1/12\ OR\ G.1/13--\ MS16/S4-4c\_A\_So\ and/or\ MS16/S4-4c\_A\_Sk\ present$ 

Item	AU-4-4c Pointer and alignment byte structure	Reference	Status	Support
1	Referring to the AU-4-4c pointer associated to MS16/S4-4c_A_So-N and/or MS16/S4-4c_A_Sk-N, the content of H1 (4,N) and H2 (4,N+48) bytes is viewed as one pointer word.	G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
2	Bits 1 through 4 of the pointer word carry the New Data Flag (NDF).	G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
3	Bits 5 and 6 of the pointer word, named ss bits, carry the AU-n type code. They are set to '10'.	9.3.3, G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
4	Bits 7 through 16 (last ten bits) of the pointer word carry the pointer value.	G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
5	The AU-4-4c pointer value is a binary number with a range of 0 to 782.	G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
6	The pointer locations H1 (4,N+1) to (4,N+3) and H2 (4,N+49) to (4,N+51) carry the concatenation indicator, defined as 1001ss11 11111111, with ss being undefined bits.	9.3.3, G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
7	Bytes from (4,17) to (4,48) contain the fixed stuff code Y = 1001 ss11. Bits ss are undefined.	9.3.3, G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
8	Bytes from (4,65) to (4,96) contain the fixed stuff code '1' = 1111 1111.	9.3.3, G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
9	Bytes H3 from (4,96+N) to (4,99+N), (4,112+N) to (4,115+N), (4,128+N) to (4,131+N) are the negative justification opportunity bytes.	G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
10	Bits 7,9,11,13,15 of the pointer word (I bits) are the pointer incrementation indication bits.	G.707 [14] subclause 8.1.2 and 8.1.7.1	m	
11	Bits 8,10,12,14,16 of the pointer word (D bits) are the pointer decrementation indication bits.	G.707 [14] subclause 8.1.2 and 8.1.7.1	m	

Comments: The value of N can be 1, 5, 9 or 13.

#### G.4.2.4.2.1 Concatenation indicator recovery process

Table G.54: Concatenation indicator recovery process: principles

Prerequisite: G.1/13 -- MS16/S4-4c\_A\_Sk present

Item		ery	Reference	Statu	Support
	process: principles			S	
1	The Concatenation Indicator recov	ery	EN 300 417-1-1 [1]	m	
	algorithm can be globally describe	d by	annex B		
	a state diagram as shown in				
	EN 300 417-1-1 [1] figure B.2.				
	Three states are defined:				
	<ul> <li>CONCatenated_state (CON</li> </ul>	C);			
	- AIS_state (AISC	);			
	- LOP_state (LOPC	C).			

Table G.55: Concatenation indicator recovery process events

Prerequisite: G.1/13 -- MS16/S4-4c\_A\_Sk present

Item	Concatenation indicator recovery	Reference	Status	Support
	events			
1	The <b>conc_ind event</b> corresponds to a received word (in bytes [4,N+1] and [4,N+49], [4,N+2] and [4,N+50], [4,N+3] and [4,N+51]) with:  NDF enabled AND dd 11 11111111.  Bits indicated as 'dd' are undefined.	EN 300 417-1-1 [1] annex B	m	
2	The <b>AIS_ind event</b> corresponds to a received word (in bytes [4,N+1] and [4,N+49], [4,N+2] and [4,N+50], [4,N+3] and [4,N+51]) with: 11111111 11111111.	EN 300 417-1-1 [1] annex B	m	
3	The <b>inv_point event</b> corresponds to a received word (in bytes [4,N+1] and [4,N+49], [4,N+2] and [4,N+50], [4,N+3] and [4,N+51]) with:  NOT conc_ind  AND NOT AIS_ind.	EN 300 417-1-1 [1] annex B	m	
4	The <b>3*AIS_ind</b> corresponds to three consecutive AIS_ind events.	EN 300 417-1-1 [1] annex B	m	
5	The <b>8</b> * <b>inv_point</b> corresponds to eight consecutive inv_point events.	EN 300 417-1-1 [1] annex B	m	
6	The <b>3*conc_ind</b> corresponds to three consecutive conc_ind events.	EN 300 417-1-1 [1] annex B	m	

Comments: The value of N can be 1, 5, 9 or 13.

**Table G.56: Operation in CONC state** 

Prerequisite: G.1/13 -- MS16/S4-4c\_A\_Sk present

NOTE: Some ambiguities about this functionality seem to appear in the base specification.

#### G.4.2.4.3 MS16 layer to S4-4c layer multiplexing and demultiplexing processes

#### **Table G.60: Multiplexing**

Prerequisite: G.1/12 -- MS16/S4-4c\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	Bytes allocated to the AU-4-4c pointer	9.3.3	m	
	are multiplexed into MS16_AI.			
2	The VC-4-4c is multiplexed into	9.3.3	m	
	MS16_AI according to the pointer			
	generation algorithm.			

**Table G.61: Demultiplexing** 

Prerequisite: G.1/13 -- MS16/S4-4c\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The AU-4-4c pointer is recovered	9.3.4	m	
	from MS16_AI.			
2	The VC-4-4c is recovered from	9.3.4	m	
	MS16_AI according to the pointer			
	interpretation algorithm.			

# G.4.2.5 MS16 layer to DCC layer adaptation functions: MS16/DCC\_A\_So and MS16/DCC\_A\_Sk

#### G.4.2.5.1 MS16 layer to DCC layer multiplexing and demultiplexing processes

**Table G.62: Multiplexing** 

Prerequisite: G.1/8 -- MS16/DCC\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The DCC_CI data (576 kbit/s) are	9.3.5	m	
	multiplexed into D4(6,1), D5(6,49),			
	D6(6,97), D7(7,1), D8(7,49),			
	D9(7,97), D10(8,1), D11(8,49),			
	D12(8,97) bytes of the STM-16 frame.			

**Table G.63: Demultiplexing** 

Prerequisite: G.1/9 -- MS16/DCC\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
	The DCC_CI data (576 kbit/s) are demultiplexed from byte locations D4 to D12.	9.3.6	m	

## G.4.2.6 STM-16 Multiplex section layer to P0s layer adaptation functions: MS16/P0s\_A\_So and MS16/P0s\_A\_Sk

## G.4.2.6.1 MS16 layer to P0s layer frequency justification and bitrate adaptation processes

Table G.64: Frequency justification and bitrate adaptation: principles

Prerequisite: G.1/10 -- MS16/P0s\_A\_So present

Item	Frequency justification and bitrate adaptation: principles	Reference	Status	Support
	The MS16/ P0s _A_So function provides frequency justification and bitrate adaptation for a 64 kbit/s orderwire information stream. It takes P0s_CI as an unstructured bit-stream with a rate of 64 kbit/s ± 100 ppm and inserts it into the MSOH.	9.3.7	m	

Table G.65: Frequency justification and bitrate adaptation

Prerequisite: G.1/10 -- MS16/P0s\_A\_So present

Item	Frequency justification and bitrate	Reference	Status	Support
	adaptation			
1	The MS16/P0s_A_So function	9.3.7	m	
	provides for an elastic store (slip			
	buffer) process. The data and frame			
	start signals are written into the store			
	under control of the associated input			
	clock. The data and frame start			
	signals are read out of the store			
	under control of the STM-16 clock,			
	frame position and justification			
	decision.	0.0.7		
2	Each justification decision results in a	9.3.7	m	
	corresponding negative / positive			
	justification action. Upon a positive justification (slip) action, the reading			
	of one 64 kbit/s octet (9 bits) is			
	cancelled once. Upon a negative			
	justification (slip) action, the same			
	64 kbit/s octet (9 bits) is read out a			
	second time.			
3	The elastic store (slip buffer) size	9.3.7	m	
	accommodates at least 18 µs of			
	wander without introducing errors is at			
	least 2 octets.			

#### G.4.2.6.2 MS16 layer to P0s layer multiplexing and demultiplexing processes

**Table G.66: Multiplexing** 

Prerequisite: G.1/10 -- MS16/P0s\_A\_So present

Item	Multiplexing	Reference	Status	Support
1	The P0s_CI data (64 kbit/s) are	9.3.7	m	
	multiplexed into E2(9,97) byte of the			
	STM-16 frame.			

**Table G.67: Demultiplexing** 

Prerequisite: G.1/11 -- MS16/P0s\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The P0s_ CI data (64 kbit/s) are	9.3.8	m	
	demultiplexed from byte location E2.			

## G.4.3 MS16 linear trail protection transmission tables

**Table G.68: Protection operation** 

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Protection operation	Reference	Status	Support
1	The APS channel is a 13 bits channel carried into bits K1[1-8] and K2[1-5].	9.5.1.1, 9.5.1.2, A.1	c6801	
2	The signal switching procedure is started under Signal Fail (SF) or Signal Degrade (SD) conditions.	9.5.1.1, 9.5.1.2, A.1	m	
	In revertive operation the available external commands are LO, FSw-#1, MSw-#1, CLR, EXER-#1.	9.5.1.1, 9.5.1.2, A.1	c6802	
4	In non-revertive operation the available external commands are LO or FSw, FSw-#i, MSw, MSw-#i, CLR, EXER-#i.	9.5.1.1, 9.5.1.2, A.1	c6803	
5	In revertive operation the available external commands are LO, FSw-#i, MSw-#i, CLR, EXER-#i.	9.5.1.1, 9.5.1.2, A.1	c6804	
6	Extra Traffic is supported.	9.5.1.2, A.1	c6805	
7	The Wait-To-Restore (WTR) time is provisionable.	9.5.1.1, 9.5.1.2	c6806

Table G.70: APS channel bits structure

Prerequisite: G./1 -- APS channel supported

Item	APS channel bits structure	Reference	Status	Support
1	The request type is transported in	A.7.2, figure A.3	m	
	K1[1-4] bits of the APS channel.			
2	The request signal number is	A.7.2, figure A.3	m	
	transported in K1[4-8] bits of the APS			
	channel.			
3	The local bridged signal number is	A.7.2, figure A.3	m	
	transported in K2[1-4] bits of the APS			
	channel.			
4	The architecture type is transported in	A.7.2, figure A.3	m	
	K1[5] bit of the APS channel.			

Table G.71: APS signal fields

Prerequisite: G./1 -- APS channel supported

Item	APS signal fields	Reference	Status	Support
1	The content of the request type field	A.7.1, table A.5	m	
	conforms to table A.3 (subclause A.7.1) of annex A in			
	EN 300 417-3-1 [2].			
2	The content of the request signal	A.7.1, table A.6	m	
	number field conforms to table A.4			
	(subclause A.7.1) of annex A in			
	EN 300 417-3-1 [2].			
3	The content of local bridged signal	A.7.1, table A.7	m	
	number field conforms to table A.5			
	(subclause A.7.1) of annex A in			
	EN 300 417-3-1 [2].			
4	The content of the architecture type	A.7.1, table A.8	m	
	field conforms to table A.6			
	(subclause A.7.1) of annex A in			
	EN 300 417-3-1 [2].			

## G.4.3.1 MS16 linear trail protection connection functions: MS16P1+1\_C and MS16P1:n\_C

Table G.72: Connectivity functionalities: generalities

Prerequisite: G.5/1-- MS Protection Connection function present

Item	Connectivity functionalities: generalities	Reference	Status	Support
1	The MS16P1+1_C connection function performs the STM-16 linear multiplex section protection process for 1+1 protection architectures.	9.5.1.1	c7201	
2	The MS16P1+1_C connection function performs the bridge and selector functionality.	9.5.1.1	c7201	
3	The MS16P1:n_C connection function performs the STM-16 linear multiplex section protection process for 1:n protection architectures.	9.5.1.2	c7202	
4	The MS16P1:n_C connection function performs the bridge and selector functionality.	9.5.1.2	c7202	
5	Provided no protection switching action is activated / required it is possible to change between switching types without disturbing the CI passing the connection.	9.5.1.1, 9.5.1.2	c7203	
6	Provided no protection switching action is activated / required it is possible to change between operation types without disturbing the CI passing the connection.	9.5.1.1, 9.5.1.2	c7204	
7	Provided no protection switching action is activated / required it is possible to change the WTR time without disturbing the CI passing the connection.	9.5.1.1, 9.5.1.2	c7205	
8	The priority associated to SD for both protection and working sections is fixed high.	9.5.1.1	c7201	
9	The priority associated to SF for both protection and working sections is fixed high.	9.5.1.1	c7201	
10	The switching type (uni- or bi-directional) is provisionable from the EMF.	9.5.1.1	c7201	
11	The priority associated to SD (high or low) for each working section is provisionable from the EMF. The priority associated to SD for the protection section is fixed high.	9.5.1.2	c7202	
12	The priority associated to SF (high or low) for each working section is provisionable from the EMF. The priority associated to SF for the protection section is fixed high.	9.5.1.2	c7202	
13	The switching type (uni- or bi-directional) is provisionable from the EMF.	9.5.1.2	c7202	
14	The operation type (revertive or non revertive) is provisionable from the EMF.	9.5.1.1	c7204	
15	The use of extra traffic (true or false) is provisionable from the EMF.	9.5.1.2	c7206

c7204:IF (G.4/1 OR G.4/3) AND (G.4/2 OR G.4/4)

THEN m ELSE n/a -- both revertive and non- revertive operation supported

c7205: IF G.68/7 THEN m ELSE n/a -- WTR time programmable

c7206: IF G.68/6 THEN m ELSE n/a -- 1:n architecture with extra traffic supported

Comment: item G.72/7 is relevant for all the implemented protection schemes.

Table G.73: Connectivity functionalities: source direction

Prerequisite: G.5/1-- MS Protection Connection function present

Item	Connectivity functionalities: source direction	Reference	Status	Support
1	The working outputs are connected to the associated normal inputs for 1+1 protection.	9.5.1.1	c7301	
2	The protection output is connected to the normal #1 input.	9.5.1.1	c7301	
3	The working outputs are connected to the associated normal inputs for 1:n protection.	9.5.1.2	c7302	
4	The protection output is unsourced (no input connected), connected to the extra traffic input, or connected to any normal input.	9.5.1.2	c7302	

c7301: IF G.1/14 THEN m ELSE n/a c7302: IF G.1/15 THEN m ELSE n/a

-- 1+1 protection architecture supported

-- 1:n protection architecture supported

Table G.74: Connectivity functionalities: sink direction

Prerequisite: G.5/1-- MS Protection Connection function present

Item	Connectivity functionalities: sink direction	Reference	Status	Support
1	The signal output at the normal #1 reference point can be the signal received via either the associated working #1 section or the protection section for 1+1 protection.	9.5.1.1	c7401	
2	The signal output at the normal #i reference point can be the signal received via either the associated working #i section or the protection section for 1:n protection.	9.5.1.2	c7402	

c7401:IF G.1/14 THEN m ELSE n/a -- 1+1 protection architecture supported c7402: IF G.1/15 THEN m ELSE n/a  $\,$  -- 1:n protection architecture supported

## G.4.3.2 MS16 linear protection trail termination functions: MS16P\_TT\_So and MS16P\_TT\_Sk

**Table G.75: Trail termination process** 

Prerequisite: G.5/2 OR G. 5/3 -- MS16P\_TT\_So and/or MS16P\_TT\_Sk function present

Item	Trail termination process	Reference	Status	Support
1	The MS16_AI at the output of the	9.5.2.1	c7501	
	MS16P_TT_So is identical to the			
	MS16P_CI at its input.			
	The MS16P_TT_Sk function reports	9.5.2.2	c7502	
	the state of the protected MS16 trail.			
3	In case all connections are unavailable the MS16P_TT_Sk	9.5.2.2	c7502	
	reports the signal fail condition of the protected trail.			
	protected trail.			

c7501: IF G. 5/2 THEN m ELSE n/a

-- MS16P\_TT\_So function supported

c7502: IF G. 5/3 THEN m ELSE n/a

-- MS16P\_TT\_Sk function supported

# G.4.3.3 MS16 linear trail protection adaptation functions: MS16/MS16P\_A\_So and MS16/MS16P\_A\_Sk

## G.4.3.3.1 MS16 layer to MS16 protection layer multiplexing and demultiplexing processes

**Table G.76: Multiplexing** 

Prerequisite: G.5/4 -- MS16/MS16P\_A\_So present

Item	Multiplexing	Reference	Status	Support
	The MS16/MS16P_A_So multiplexes the MS16 APS signal and MS16 data signal into the MS16_AI of the	9.5.3.1	m	
	Protection Section.			

**Table G.77: Demultiplexing** 

Prerequisite: G.5/5 -- MS16/MS16P\_A\_Sk present

Item	Demultiplexing	Reference	Status	Support
1	The MS16/MS16P_A_Sk extracts the	9.5.3.2	m	
	MS16P_CI_D signal from the			
	MS16_AI_D signal.			
2	The MS16/MS16P_A_Sk extracts the	9.5.3.2	m	
	MS16 APS signal from the MS16_AI.			

Table G.78: APS channel processing: sink direction

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- -- bi-directional switching supported

Item	APS channel processing: sink direction	Reference	Status	Support
1	A new value for the APS message is accepted when the value of the 13 APS bits is identical for three consecutive frames. This value is output via MS16P_CI_APS.	9.5.3.2	m	
2	The APS signal processing is performed only on the Protection Section.	9.5.3.2	m	

## G.4.3.4 MS16 linear trail protection processes

#### G.4.3.4.1 Automatic Protection Switching (APS) externally initiated commands

#### Table G.79: Issuing of external switching commands

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Issuing of External Switching Commands	Reference	Status	Support
1	The external commands are received	ETS 300 746 [15]	m	
	from the EMF.	subclause 5.1.2.1		

#### **Table G.80: Transmission of External Switching Requests**

Prerequisite: G.79/1 -- External Switching Command issuing is supported

Item	Transmission of External Switching Requests	Reference	Status	Support
	The external requests are issued via the APS bytes.	ETS 300 746 [15] subclause 5.1.2.1	c8001	
	The external requests are issued via the EMF.	ETS 300 746 [15] subclause 5.1.2.1	c8001	

c8001: IF (G.4/3 OR G.4/4 OR G.4/5)

THEN 0.8001 ELSE o

-- bi-directional switching supported

o.8001: It is mandatory to support exactly one of these items

-- Transmission of external bridge request is supported by one of the allowed ways.

Table G.81: External switching commands

Prerequisite: G.79/1 -- External Switching Command issuing is supported

Item	External switching commands	Reference	Status	Support
1	The external command Clear (CLR)	A.2	m	
	conforms to the definition given in the			
	whole point 1) clause A.2 of annex A in			
	EN 300 417-3-1 [2].			
2	The external command Lockout of	A.2	m	
	Protection (LO) conforms to the definition			
	given in the whole point 2) clause A.2 of			
3	annex A in EN 300 417-3-1 [2]. The external command Forced Switch #i	Λ Ω		
3	(FSw-#i) conforms to the definition given	A.Z	m	
	in the whole point 3) of clause A.2 of			
	annex A in EN 300 417-3-1 [2].			
4	The external command Manual Switch #i	Α 2	m	
	(MSw-#i) conforms to the definition given	7 (.2		
	in the whole point 4) clause A.2 of			
	annex A in EN 300 417-3-1 [2].			
5	The external command Exercise #i	A.2	m	
	(EXER #i) conforms to the definition			
	given in the whole point 5) clause A.2 of			
	annex A in EN 300 417-3-1 [2].			
6	The descending order of priority for	A.2	m	
	external switching commands is: CLR,			
	LO, FSw-#i, MSw-#i, EXER #i.			

#### G.4.3.4.2 Automatic Protection Switching (APS) automatically initiated commands

#### Table G.82: Automatic generation of requests

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	<b>Automatic Generation of Requests</b>	Reference	Status	Support
1	The NE initiates the following	ETS 300 746 [15]	m	
	automatic requests: Signal Failure	subclause 5.1.2.2		
	(SF), Signal Degrade (SD).			
2	The NE initiates the following	ETS 300 746 [15]	c8201	
	automatic requests: Reverse Request	subclause 5.1.2.2		
	(RR).			
3	The NE initiates the following	ETS 300 746 [15]	c8202	
	automatic requests: Wait To Restore	subclause 5.1.2.2		
	(WTR).			

c8201:IF (G.4/3 OR G.4/4 OR G.4/5) THEN m ELSE x c8202:IF (G.4/1 OR G.4/3 OR G.4/5) THEN m ELSE x

- -- dual-ended switching supported
- -- revertive switching supported

#### Table G.83: Transmission of automatically generated requests

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Iten	Transmission of automatically generated requests	Reference	Status	Support
1	The automatically generated requests are issued via the APS bytes.	ETS 300 746 [15] subclause 5.1.2.2	c8301	

c8301:IF (G.4/3 OR G.4/4 OR G.4/5)

THEN m ELSE o

-- bi-directional switching supported

#### Table G.84: Automatically generated requests

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Automatically generated requests	Reference	Status	Support
1	In the Wait-To-Restore (WTR) state the operation is such that in the revertive mode of operation, the normal signal will be restored when the working trail has recovered from the fault.	A.4	c8401	
2	An SF or SD condition will override the WTR.	A.4	c8401	
3	After the WTR period is completed, a No Request state will be entered.	A.4	c8401	
4	In the Reverse Request state the operation is such that for the case of bi-directional switching, a reverse request is returned for exerciser and for all other requests of higher priority.	A.4	c8402	
5	In unidirectional switching, Reverse Request is never indicated.	A.4	c8403	
6	In the Do not Revert state the operation is such that in the non-revertive mode of operation, assuming the normal signal is on protection when the working trail is repaired or a switch command is released, the tail end maintains the selection and issues Do not Revert for normal signal 1.	A.4	c8404	
7	For the case of bi-directional switching, the head end also maintains the selection and continues indicating reverse request.	A.4	c8405	
8	The Do not Revert is removed when pre-empted by a defect condition or an external request.	A.4	c8404	
9	In the No Request state none of the trail signal conditions is active, none of the external commands is active, and none of the states described above is active.	A.4	m	

c8401: IF (G.4/1 OR G.4/3 OR G.4/5) THEN m ELSE n/a -- revertive operation supported

c8402: IF (G.4/3 OR G.4/4 OR G.4/5) THEN m ELSE n/a -- bi-directional operation supported c8403: IF (G.4/1 OR G.4/2) THEN m ELSE n/a

c8404: IF (G.4/2 OR G.4/4) THEN m ELSE n/a

c8405: IF G.4/4 THEN m ELSE n/a

-- unidirectional operation supported

-- non-revertive operation supported

-- non-revertive and bi-directional operation supported

#### G.4.3.4.3 Automatic Protection Switching (APS) generalities

Table G.85: Allocation of extra traffic

Item	Allocation of extra traffic		Reference	Status	Support
	Extra traffic is allocated to the	A.5		c8501	
	protection trail when this one is not				
	transporting a normal signal and the				
	protection trail is not "locked out".				

c8501: IF G./6 THEN m ELSE n/a -- Extra traffic supported

#### Table G.86: Priority of request types

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Priority of request types	Reference	Status	Support
	The priority of request types conforms	A.6, table A.4	m	
	to the priority order given in table A.2			
	(clause A.6) of annex A in			
	EN 300 417-3-1 [2].			

#### G.4.3.4.4 Automatic Protection Switching (APS) switch performance

#### Table G.87: Switch completion time

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Switch completion time	Reference	Status	Support
1	The switch completion time is less	A.8	m	
	than 50 ms.			

#### G.4.3.4.5 Automatic Protection Switching (APS) subprocesses

#### Table G.88: Signal request process

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Signal request processes	Reference	Status	Support
1	The SRSN is "0" (zero) for the	A.9	m	
	protection trail and "i" $(1 \le i \le n)$ for			
	working trail #i.			
	The SRT is generated based on the inputs SF, SD, SFpriority, SDpriority, as specified in the clause "Signal request (type and signal number) processes" in clause A.9 of annex A in EN 300 417-3-1 [2].	A.9	m	

Comments: The signal request process transfers the input SF and SD signals from a trail into a Signal Request Type (SRT) and Signal Request Signal Number (SRSN).

#### Table G.89: External request process

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	External request processes	Reference	Status	Support
1	The ERSN is "0" (zero) if no normal	A.9	m	
	signal is indicated, "i" (1 ≤ i ≤ nmax)			
	for normal signal #i, and "nmax+1" for			
	the extra traffic signal.			
2	The ERT/ERN is generated as	A.9	m	
	specified in the clause "External			
	request (type and signal number)			
	processes" in clause A.9 of annex A			
	in EN 300 417-3-1 [2].			

Comments: The external request process transfers the external commands (EXTCMD) into an External Request Type (ERT) and External Request Signal Number (ERSN).

Table G.90: Local request priority process

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Local request priority processes	Reference	Status	Support
1	The status of the protection and	A.9	m	
	working input signals (SRT/SRSN #0			
	to SRT/SRSN #n), the external			
	command (ERT/ERSN), and			
	protection parameters OPERtype and			
	EXTRAtraffic is evaluated by a three			
	step priority logic as specified in the			
	clause "Local request (type and signal			
	number) priority processes" in			
	clause A.9 of annex A in			
	EN 300 417-3-1 [2].			

Comments: The local request priority process determines the highest priority local request.

Table G.91: Global request priority process

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Global request priority processes	Reference	Status	Support
1	The local request (LRT,LRSN) and	A.9	c9101	
	the remote request (RRT,RRSN) are			
	compared to decide which has			
	priority, according to the descending			
	order of priorities in table A.2 of			
	annex A in EN 300 417-3-1 [2].			
2	A received reverse request is not	A.9	c9101	
	considered in the comparison.			
3	The Global Request Type (GRT) and	A.9	m	
	Global Request Signal Number			
	(GRSN) is determined as specified in			
	the clause "Global request (type and			
	signal number) priority processes" in			
	clause A.9 of annex A in			
	EN 300 417-3-1 [2].			

c9101:IF (G.4/3 OR G.4/4 OR G.4/5)

THEN m ELSE n/a -- bi-directional switching supported

Comments: The global request priority process determines the Global Request Type (GRT) and Global Request Signal Number (GRSN).

#### Table G.92: Bridge control process

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Bridge control process	Reference	Status	Support
1	The bridge control process is	A.9	m	
	performed as specified in the clause			
	"Bridge control process" in clause A.9			
	of annex A in EN 300 417-3-1 [2].			

Comments: The bridge control process controls which of the normal / extra traffic signals is bridged to the protection trail.

Table G.93: Control of the selector

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	Control of the selector	Reference	Status	Support
1	The control of the selector is	A.9	m	
	performed as specified in the clause			
	"Control of the selector" in clause A.9			
	of annex A in EN 300 417-3-1 [2].			

Comments: The control of the selector controls which of the normal / extra traffic signals is connected to / extracted from the protection trail.

#### G.4.3.4.6 Automatic Protection Switching (APS) signal generation

#### Table G.94: APS generation process

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	APS generation process	Reference	Status	Support
1	The Global Request Type (GRT) is translated into the transmitted Request Type (TxRT) in accordance to table A.8 (clause A.9) of annex A in EN 300 417-3-1 [2].	A.9	c9401	
	The transmitted Request Signal Number (TxRSN) equals the Global Request Signal Number (GRSN).	A.9	c9401	
3	The transmitted Local Bridged Signal Number (TxLBSN) is set to '0' if the Remote Request Signal Number (RRSN) equals '0' else it is set to the Local Bridged Signal Number (LBSN) value.	A.9	c9401	
4	The transmitted (TxARCH) is set to "0" (zero) if the Architecture type (ARCHtype) is 1+1 else it is set to "1" (one).	A.9	c9401	

c9401:IF (G.4/3 OR G.4/4 OR G.4/5)

THEN m ELSE o -- bi-directional switching supported

Comments:. the APS generation process translates the signals Global Request Type (GRT), Global Request Channel Number (GRSN), Local Bridged Signal Number (LBSN) and local Architecture type (ARCHtype) into a transmitted APS signal

### G.4.3.4.7 Automatic Protection Switching (APS) signal interpretation

#### **Table G.95: APS interpretation process**

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	APS interpretation process	Reference	Status	Support
1	The accepted Request Type (AcRT)	A.9	c9501	
	is translated into the Remote Request			
	Type (RRT) in accordance to			
	table A.7 (clause A.9) of annex A in			
	EN 300 417-3-1 [2].			
2	The Remote Request Signal Number	A.9	c9501	
	(RRSN) equals the accepted Request			
	Signal Number (AcRSN).			
3	The Remote Bridged Signal Number	A.9	c9501	
	(RBSN) equals the accepted Local			
	Bridged Signal Number (AcLBSN).			
4	The Remote Architecture type	A.9	c9501	
	(RARCH) equals the accepted			
	Architecture type (AcARCH).			

c9501: IF (G.4/3 OR G.4/4 OR G.4/5)

THEN m ELSE o

-- bi-directional switching supported

Comments: The APS interpretation process translates the accepted APS signal into the signals Remote Request Type (RRT), Remote Request Signal Number (RRSN), Remote Bridged Signal Number (RBSN) and Remote Architecture type (RARCH).

#### Table G.96: Use of the accepted APS message

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

ltem	Use of the accepted APS message		Reference	Status	Support
1	The accepted Request Type, Remote	A.9		c9601	
	Request Signal Number, Remote				
	Bridged Signal Number and Remote				
	Architecture type are used for				
	protection switching operation.				

c9601: IF (G.4/3 OR G.4/4 OR G.4/5)

THEN m ELSE x

-- bi-directional switching supported

#### Automatic Protection Switching (APS) status report G.4.3.4.8

#### Table G.97: APS reporting process

Prerequisite: G.1/14 OR G.1/15 -- STM-16 Linear Trail Protection supported

Item	APS reporting process	Reference	Status	Support
1	The active external request are reported to the Equipment Management Function (EMF).	A.9	m	
2	The active local request are reported to the Equipment Management Function (EMF).	A.9	m	
3	The active remote request are reported to the Equipment Management Function (EMF).	A.9	c9701	
4	The reason of denial of an external command are reported to the Equipment Management Function (EMF).	A.9	m	
5	The condition (SF,SD) of the working and protection trails are reported to the Equipment Management Function (EMF).	A.9	m	

c9701:IF (G.4/3 OR G.4/4 OR G.4/5)

THEN m ELSE o -- bi-directional switching supported

## G.4.4 MS16 two-fibre shared protection ring transmission tables

**Table G.98: Protection operation** 

Item	Protection operation	Reference	Status	Support
1	The switching type is bi-directional.	TS 101 009 [16]	m	
		subclause 6.2.2		
2	The operation type is revertive.	TS 101 009 [16]	m	
		subclause 6.2.2		
3	The APS channel is a 16 bits channel	ETS 300 746 [15]	m	
	carried into bytes K1 and K2.	subclause 5.2.3		
4	The signal switching procedure is	ETS 300 746 [15]	m	
	started under Signal Fail (SF) or	subclause 5.2.2.2		
	Signal Degrade (SD) conditions.			
5	The available external commands are	ETS 300 746 [15]	m	
	LO, FS-R, MS-R, CLR, EXER-R.	subclause 5.2.2.1		
6	Extra Traffic channels are present.	9.6.1	0	
7	The WTR time value is provisionable	9.6.1	m	
	from the EMF.			

Table G.99: Protection architecture characteristic parameters

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Protection architecture	Reference	Status	Support	Values	
	characteristic parameters				Allowed	Supported
1	Wait-To-Restore (WTR) time: X	A.1	m		$0 \le X \le 12$	
	value.				minutes	
2	Switching time: Y value.	A.1	m		0 ≤ Y ≤	
					50 ms	

Comments: The requirement for the switching time applies to a ring without secondary traffic or with secondary traffic and no previous switch request, and less than 1 200 km of fibre.

Table G.100: APS channel bits structure

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	APS channel bits structure	Reference	Status	Support
1	The Bridged Request Code is	ETS 300 746 [15]	m	
	transported in K1[1-4] bits of the APS channel.	subclause 5.2.3.1		
2	The Destination Node Identification is	ETS 300 746 [15]	m	
	transported in K1[5-8] bits of the APS channel.	subclause 5.2.3.1		
3	The Source Node Identification	ETS 300 746 [15]	m	
	number is transported in K2[1-4] bits of the APS channel.	subclause 5.2.3.2	""	
4	The Path Code (short / long) is	ETS 300 746 [15]	m	
	transported in K2[5] bit of the APS	subclause 5.2.3.2		
	channel.			
5	The Status is transported in K2[6-8]	ETS 300 746 [15]	m	
	bit of the APS channel.	subclause 5.2.3.2		

Table G.101: APS signal fields

Item	APS signal fields	Reference	Status	Support
1	The content of Bridged Request Code field conforms to table 5.5 (subclause 5.2.3.1) of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.3.1	m	
2	The content of the Destination Node Identification field conforms to table 5.5 (subclause 5.2.3.1) of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.3.1	m	
3	The content of the Source Node Identification number field conforms to table 5.6 (subclause 5.2.3.2) of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.3.2	m	
4	The content of the Path Code field conforms to table 5.6 (subclause 5.2.3.2) of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.3.2	m	
5	The content of the Status field conforms to table 5.6 (subclause 5.2.3.2) of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.3.2	m	

# G.4.4.1 MS16 two-fibre shared protection ring connection functions: MS16P2fsh\_C

Table G.102: Connectivity functionalities: generalities

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Connectivity functionalities: generalities	Reference	Status	Support
1	The MS16P2fsh_C connection function routes the Working and Protection group signals between its connection points (inputs / outputs).	9.6.1	m	
2	The MS16P2fsh_C connection function is able to perform the matrix connections indicated in table 87 (subclause 9.6.1) of EN 300 417-3-1 [2].	9.6.1	m	
3	The ring map is provisionable from the EMF.	9.6.1	m	
4	The ring node identifier is provisionable from the EMF.	9.6.1	m	
5	The use of extra traffic (true or false) is provisionable from the EMF.	9.6.1	c10201	

c10201: IF G.98/6 THEN m ELSE n/a -- extra traffic supported

Table G.103: Connectivity functionalities: source direction

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Connectivity functionalities:	Reference	Status	Support
	source direction			
1	Depending on the status of the ring (no failure, single point failure, nodal failure, multiple failure,) the working B, protection B and extra traffic B inputs are connected to the working A and protection A outputs as indicated in figures 114 to 117 in subclause 9.6.1 of EN 300 417-3-1 [2].	9.6.1, figure 114, figure 115, figure 116, figure 117	m	
2	Depending on the status of the ring (no failure, single point failure, nodal failure, multiple failure,) the West APS incoming (outgoing) channel and the East APS outgoing (incoming) channel are connected as indicated in figures 114 to 117 in subclause 9.6.1 of EN 300 417-3-1 [2].	9.6.1, figure 114, figure 115, figure 116, figure 117	m	
3	Protection A outputs source VC-4 unequipped signals when not connected to working or extra traffic B inputs.	9.6.1, figure 114, figure 115, figure 116, figure 117	m	

Comments: The working, protection and extra traffic inputs and outputs, both on A and B side of the MS16P2fsh connection function, are shown in figure 113 (subclause 9.6.1) of EN 300 417-3-1 [2]. Item 2 deals both with the source and sink direction of the MS16P2fsh connection function.

#### Table G.104: Connectivity functionalities: sink direction

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Connectivity functionalities: sink direction	Reference	Status	Support
	Depending on the status of the ring (no failure, single point failure, nodal failure, multiple failure,) the working A and protection A inputs are connected to the working B, protection B and extra traffic B outputs as indicated in figures 114 to 117 in subclause 9.6.1 of EN 300 417-3-1 [2].	9.6.1, figure 114, figure 115, figure 116, figure 117	m	

Comments: Working, protection and extra traffic inputs and outputs, both on A and B side of the MS16P2fsh connection function, are shown in figure 113 (subclause 9.6.1) of EN 300 417-3-1 [2].

# G.4.4.2 MS16 two-fibre Shared Protection Ring trail termination functions: MS16P2fsh\_TT\_So and MS16P2fsh\_TT\_Sk

Table G.105: Trail termination process

Item	Trail termination process	Reference	Status	Support
	The MS16_AI at the output of the	9.6.2.1	m	
	MS16P2fsh_TT_So is identical to the			
	MS16P2fsh_CI at its input.			
2	The MS16P2fsh_TT_Sk function	9.6.2.2	m	
	reports the state of the protected			
	MS16 trail.			
3	When all connections are unavailable	9.6.2.2	m	
	each MS16P2fsh_TT_Sk, belonging			
	to the working capacity, reports the			
	signal fail condition of the protected			
	trail.			

# G.4.4.3 MS16 to MS16 two-fibre Shared Protection Ring adaptation functions: MS16/MS16P2fsh\_A\_So and MS16/MS16P2fsh\_A\_Sk

## G.4.3.3.1 MS16 to MS16 two-fibre Shared Protection Ring multiplexing and demultiplexing processes

**Table G.106: Multiplexing** 

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Multiplexing	Reference	Status	Support
1	The MS16/MS16P2fsh_A_So multiplexes two groups of signals (CI_D working, CI_D protection) into the MS16 payload (16 AU-4 timeslots).	9.6.3.1	m	
2	The MS16/MS16P2fsh_A_So multiplexes the working group signal into AU-4 timeslots 1 to 8 and the protection group signal into AU-4 timeslots 9 to 16.	9.6.3.1	m	
3	The MS16/MS16P2fsh_A_So maps the MS16 two-fibre shared protection ring APS signal into bytes K1 and K2.	9.6.3.1	m	

#### **Table G.107: Demultiplexing**

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Demultiplexing	Reference	Status	Support
1	The MS16/MS16P2fsh _A_Sk splits	9.6.3.2	m	
	the MS16 payload (i.e. 16 AU-4			
	timeslots) into two groups; the			
	working group contains AU-4			
	timeslots 1 to 8 and the protection			
	group contains AU-4 timeslots 9 to			
	16.			
2	The MS16/MS16P2fsh _A_Sk outputs	9.6.3.2	m	
	the working group as the			
	MS16P2fsh_CI_Dw and the			
	protection group as the			
	MS16P2fsh_CI_Dp.			
3	The MS16/MS16P2fsh _A_Sk	9.6.3.2	m	
	extracts the 16 APS bits K1[1-8] and			
	K2[1-8] from the MS16_AI_D signal.			

#### Table G.108: APS channel processing: sink direction

Item	APS channel processing: sink direction	Reference	Status	Support
	A new value for the APS message is accepted when the value of the 16 APS bits is identical for three consecutive frames. This value is output via MS16P2fsh_CI_APS.	9.6.3.2	m	

### G.4.4.4 MS16 two-fibre shared protection ring processes

#### G.4.4.4.1 Automatic Protection Switching (APS) externally initiated commands

Table G.109: Issuing of external switching commands

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Issuing of external switching commands	Reference	Status	Support
1	The external commands are received via the EMF.	ETS 300 746 [15] subclause 5.2.2.1	m	

Table G.110: Transmission of external switching requests

Prerequisite: G.1/16 -- STM-16 two-fibre shared protection ring supported

Item	Transmission of external switching requests	Reference	Status	Support
	The external bridge requests are issued via the APS bytes.	ETS 300 746 [15] subclause 5.2.2.1	o.11001	
	The external bridge requests are issued via the EMF.	ETS 300 746 [15] subclause 5.2.2.1	o.11001	

o.11001: It is mandatory to support exactly one of these items

**Table G.111: External Switching Commands** 

Item	External Switching Commands	Reference	Status	Support
1	The external command CLEAR conforms to the definition given in subclause 5.2.2.1.1 of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.2.1.1	m	
2	The external command LOCKOUT OF WORKING CHANNELS- RING SWITCH conforms to the definition given in subclause 5.2.2.1.1 of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.2.1.1	m	
3	The external command Forced SWITCH OF WORKING TO PROTECTION (FS-R) conforms to the definition given in subclause 5.2.2.1.2 of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.2.1.2	m	
4	The external command MANUAL SWITCH OF WORKING TO PROTECTION - RING (MS-R) conforms to the definition given in subclause 5.2.2.1.2 of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.2.1.2	m	
5	The external command EXERCISE - RING (EXER-R) conforms to the definition given in subclause 5.2.2.1.2 of ETS 300 746 [15].	ETS 300 746 [15] subclause 5.2.2.1.2	m	
6	The descending order of priority for external switching commands is: CLEAR, LOCK OUT of PROTECTION, FS-R, MS-R, EXER-R.	ETS 300 746 [15] subclause 5.2.3.1 table 5.5	m	

<sup>--</sup> Transmission of external bridge request is supported by one of the allowed ways.

### G.4.4.4.2 Automatic Protection Switching (APS) automatically initiated commands

#### Table G.112: Automatic generation of bridge requests

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Automatic generation of bridge requests	Reference	Status	Support
	The NE initiates the following automatic bridge requests: Signal Failure (SF), Signal Degrade (SD), Reverse Request (RR), Wait-To-Restore (WTR).	ETS 300 746 [15] subclause 5.2.2.2	m	

Table G.113: Transmission of Automatically Generated Bridge Requests

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Transmission of Automatically Generated Bridge Requests	Reference	Status	Support
	, , ,	ETS 300 746 [15] subclause 5.2.2.2	m	

Table G.114: Automatically generated bridge requests

Item	Automatically generated	Reference	Status	Support
	bridge requests			
1	The Wait-To-Restore (WTR)	ETS 300 746 [15]	m	
	command is issued when working	subclause 5.2.2.2		
	channels meet the restoral threshold			
	after, and only after, an SD or SF			
2	condition.	CTC 200 746 [4 <i>E</i> ]		
	The Wait-To-Restore (WTR) command is used to maintain the	ETS 300 746 [15] subclause 5.2.2.2	m	
	state during the WTR period unless it	Subclause 5.2.2.2		
	is pre-empted by a higher priority			
	bridge request.			
3	The Reverse Request - Ring (RR-R)	ETS 300 746 [15]	m	
	command is transmitted to the	subclause 5.2.2.2		
	tail-end NE on the short path as an			
	acknowledgement for receiving the			
	short path ring bridge request.	FT0 000 740 1451		
4	In the No Request state none of the	ETS 300 746 [15]	m	
	trail signal conditions is active, none	subclause 5.2.2.2		
	of the external commands is active, and none of the states described			
	above is active.			
5	The Signal Fail (SF-R) command is	ETS 300 746 [15]	m	
	used to request ring switching for	subclause 5.2.2.2		
	signal failures.			
6	The Signal Degrade (SD-R)	ETS 300 746 [15]	m	_
	command is used to request ring	subclause 5.2.2.2		
	switching for signal degradation.			

#### G.4.4.4.3 Ring node Automatic Protection Switching (APS) generalities

#### Table G.115: Allocation of the extra traffic signals

Prerequisite: G.98/6 -- Extra traffic channel(s) supported

Item	Allocation of the extra traffic signals	Reference	Status	Support
	The extra traffic is allocated to the protection trails.	9.6.1	m	

#### Table G.116: Priority of request types

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Priority of request types	Reference	Status	Support
1	The priority of request types conforms	ETS 300 746 [15]	m	
	to the priority order given in table 5.5	subclause 5.2.3.1		
	(subclause 5.2.3.1) in	table 5.5		
	ETS 300 746 [15].			

### G.4.4.4.4 Ring node Automatic Protection Switching (APS) states

Table G.117: Idle state rules

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Idle state rules	Reference	Status	Support
	Any node in the idle state sources the		m	
	K1 and K2 bytes as given in table 5.7	subclause 5.2.4.1.1		
	(subclause 5.2.4.1.2) in			
	ETS 300 746 [15].			
2	Any node in the idle state terminates	ETS 300 746 [15]	m	
	the K1 and K2 bytes in both	subclause 5.2.4.1.1		
	directions.			

Comments: A node is in the IDLE STATE when it is not generating, detecting, or passing through bridge request information.

### Table G.118: Switching state rules

Item	Switching state rules	Reference	Status	Support
1	Any node in the switching state	ETS 300 746 [15]	m	
		subclause 5.2.4.1.2		
	in table 5.8 (subclause 5.2.4.1.2) in			
	ETS 300 746 [15].			
2	Any node in the switching state	ETS 300 746 [15]	m	
	sources a bridge request code on the	subclause 5.2.4.1.2		
	short path and a bridge request code			
	on the long path. Both bridge			
	requests have the same priority (or one of them is a Reverse Request),			
	and protect the same span.			
3	Whenever a node in the switching	ETS 300 746 [15]	m	
3	state terminates a new short path	subclause 5.2.4.1.2	111	
	K-byte bridge request from an	000010000 0.2. 1. 1.2		
	adjacent node, of equal or higher			
	priority than the bridge request it is			
	currently executing, over the same			
	span, it sources a bridge request of			
	the same priority on the			
	corresponding long path. This			
	requirement takes precedence over			
	the one given in the ICS item G.118/2			
	in case of multiple bridge requests at			
4	the same node.	ETC 200 740 (45)		
4	Whenever a node receives ring bridge requests on both short paths	ETS 300 746 [15] subclause 5.2.4.1.2	m	
	from its adjacent nodes, indicating	Subclause 5.2.4.1.2		
	that both signals it is sending are			
	failed (SF), the long path bridge			
	request takes precedence over the			
	short path Reverse Requests. This			
	requirement takes precedence over			
	the one given in the ICS item G.118/2			
	in case of multiple bridge requests at			
	the same node.			
5	Whenever a node detects an	ETS 300 746 [15]	m	
	incoming failure on the working and	subclause 5.2.4.1.2		
	on the protection channels, it always			
	sources over the short path a short path ring bridge request, even in the			
	case of multiple failures, as long as			
	the ring bridge request is not			
	pre-empted by a higher priority bridge			
	request. This requirement takes			
	precedence over those given in the			
	ICS items G.118/3 and G.118/3.			
6	Whenever a node receives in one	ETS 300 746 [15]	m	
	direction a ring bridge request on the	subclause 5.2.4.1.2		
	short path, (indicating that the signal it			
	is sending has failed) and detects on			
	the other side an incoming failure on			
	the working and on the protection channels, it signals the detected			
	failure over both the short and the			
	long paths. This requirement takes			
	precedence over those given in the			
	ICS items G.118/3 and G.118/3.			
7	Any node in the switching state	ETS 300 746 [15]	m	
	terminates K1 and K2 in both	subclause 5.2.4.1.2		
	directions.			

Item	Switching state rules	Reference	Status	Support
8	As soon as it receives a bridge request, the node to which it is addressed acknowledges the bridge request by changing K1 bits 1-4 to the Reverse Request code on the short path, and to the received bridge request priority on the long path.	ETS 300 746 [15] subclause 5.2.4.1.2	m	
9	The following switches are allowed to co-exist: - FS-R with FS-R; - SF-R with SF-R; - FS-R with SF-R.	ETS 300 746 [15] subclause 5.2.4.1.2	m	
10	When multiple equal priority bridge requests over different spans of SD-R, MS-R, or EXER-R exist at the same time, no bridge or switch is executed and existing switches and bridges is dropped.	ETS 300 746 [15] subclause 5.2.4.1.2	m	
11	If a node executing a ring bridge and switch no longer receives a valid bridge request on the long path, it drops its bridge and switch, and signals and acts on its highest priority input.	ETS 300 746 [15] subclause 5.2.4.1.2	m	

Comments: A node is in a SWITCHING STATE when it is either sourcing a bridge request (automatically or externally), or terminating a bridge request.

Table G.119: Pass-through state rules

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Pass-through state rules	Reference	Status	Support
1	When a node is in full pass-through, it		m	
	transmits on one side all the K1 and	subclause 5.2.4.1.3		
	K2 bytes which it receives from the			
	other side.			
2	When a node that is in the full	ETS 300 746 [15]	m	
	pass-through state receives a long	subclause 5.2.4.1.3		
	path ring bridge request destined to			
	itself, and another long path ring			
	bridge request of the same priority			
	destinated to another node, the node			
	does not transit to another state.			

Comments: A node is in the FULL PASS-THROUGH state when it transmits on one side, all the K1 and K2 bytes and the protection channels, which it receives on the other side. The full pass-through is bi-directional.

## G.4.4.4.5 Ring node Automatic Protection Switching (APS) state transitions

### Table G.120: Transitions between the idle and full pass-through state

Item	Transitions between the idle and	Reference	Status	Support
	full pass-through state			
1	The transition to the full pass-through state is triggered by a valid K-byte change, in any direction, from the No Request code to any other bridge request code, as long as the new bridge request is not destinated for the node itself.	ETS 300 746 [15] subclause 5.2.4.2.1	m	
2	For any ring bridge request, the intermediate nodes on the long path go from idle state into full pass-through state.	ETS 300 746 [15] subclause 5.2.4.2.1	m	
3	A node reverts from full pass-through state to the idle state when it detects No Request codes in K1 bits 1-4 and Idle codes in K2 bits 6-8, from both directions. Both directions revert simultaneously from the full pass-through state to the idle state.	ETS 300 746 [15] subclause 5.2.4.2.1	m	

### Table G.121: Transitions between the idle and switching state

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Transitions between the idle and switching state	Reference	Status	Support
1	Transition of an NE from the idle state to the switching state is triggered by one of the following conditions: - a valid K-byte change from the No Request (NR) code to any ring bridge request code received on either the long path or the short path and destinated to that NE;		m	
	<ul> <li>an externally initiated command for that NE;</li> <li>the detection of a failure at that NE.</li> </ul>			
2	A ring switch is put up or brought down only with long path bridge requests.	ETS 300 746 [15] subclause 5.2.4.2.2	m	
3	Actions taken at a switching NE upon receiving a valid bridge request are:  for FS-R bridge requests, the node checks if there is any need for squelching and squelches accordingly, execute a bridge and insert the Bridged code in K2 bits 6-8 in both directions (with MS-RDI and MS-AIS exceptions). Upon receiving a Bridged code in byte K2 bits 6-8 on the bridge request path, the NE executes a switch and update K2 bits 6-8 on both paths accordingly.  for SF-R bridge requests, the node checks if there is any need for squelching and squelches accordingly, execute a bridge and switch, and insert in byte K2 bits 6-8 the Bridged and Switched code on both the long and the short path (with MS-RDI and MS-AIS exceptions).  for SD-R and MS-R bridge requests the node executes a bridge and insert the Bridged code in byte K2 bits 6-8 in both directions (with MS-RDI and MS-AIS exceptions). Upon receiving a Bridged code in byte K2 bits 6-8 on the bridge request path, the NE executes a switch and update K2 bits 6-8 on both paths accordingly.  for EXER, the node signals as for any other bridge request, but does not	ETS 300 746 [15] subclause 5.2.4.2.2	m	
4	execute the bridge or switch.  A node reverts from the switching state to the idle state when it detects NR codes in byte K1 bits 1-4 and idle codes in byte K2.	ETS 300 746 [15] subclause 5.2.4.2.2	m	
5	In those cases in which no bridge or switch is to be dropped (e.g. for EXER, or switches that could not be executed due to other conditions on the ring). In these cases, the NE that initiated the request (i.e. tail-end) signals the No Request code. Upon reception of the No Request code, the head-end also sources the Idle code.	ETS 300 746 [15] subclause 5.2.4.2.2	m	

Item	Transitions between the idle	Reference	Status	Support
	and switching state		3.4.40	- appoin
6	A node transmits the default APS code (i.e.: the transmitted K1 and K2 bytes have the source node ID equal to the destination node ID.) until it is capable of proper APS signaling in accordance with the current state of the ring. The default APS code is used to indicate that the node can not properly signal APS bytes, therefore cannot properly execute protection switching.		m	
7	A ring switching node receiving the default APS code on the short path does not change its signaling or take any action associated with that path until proper APS codes are received. A ring switching node receiving default APS code on the long path drops its bridge and switch.	ETS 300 746 [15] subclause 5.2.4.2.2	m	
8	A node receiving long path ring bridge requests destinated to itself from both of its neighbours takes no action based on these bridge requests.	ETS 300 746 [15] subclause 5.2.4.2.2	m	
9	A node receiving the APS bytes which it is sourcing in both directions reverts to the idle state.	ETS 300 746 [15] subclause 5.2.4.2.2	m	
10	When a node receives a Reverse Request code over the span which it is protecting, and when that same node is sending a Reverse Request code, it drops its bridge and switch except for bridge requests of signal failure and signal degrade priority. For signal failure and signal degrade, the node drops the switch and the bridge after the expiration of the WTR time according.	ETS 300 746 [15] subclause 5.2.4.2.2	m	

### Table G.122: Transitions between switching states

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Transitions between	Reference	Status	Support
iteiii	switching states	Kelelelice	Status	Support
1	When an NE that is currently	ETS 300 746 [15]	m	
'	executing an SF-R switch receives another SF-R bridge request over the	subclause 5.2.4.2.3	""	
	long path or an FS-R bridge request			
	over the long path, not destinated to that NE, the NE checks if there is any			
	need for squelching and squelches accordingly. The NE stops squelching			
	when the bridge and switch are dropped.			
2	When an NE that is currently	ETS 300 746 [15]	m	
	executing an FS-R switch receives	subclause 5.2.4.2.3		
	another FS-R bridge request over the			
	long path or an SF-R bridge request over the long path, not destinated to			
	that NE, the NE checks if there is any			
	need for squelching and squelches			
	accordingly. The NE stops squelching			
	when the bridge and switch are			
	dropped.			
3	When an NE that is currently	ETS 300 746 [15]	m	
	executing any ring switch receives a higher priority ring bridge request	subclause 5.2.4.2.3		
	(due to a locally detected failure, an			
	externally initiated command or a ring			
	bridge request destinated to it) for the			
	same span, it upgrades the priority of			
	the ring switch it is executing to the			
	priority of the received ring bridge			
4	request. When a NE that is currently executing	ETS 300 746 [15]	m	
-	a ring switch receives a ring bridge	subclause 5.2.4.2.3		
	request (due to a locally detected			
	failure, an externally initiated			
	command or a ring bridge request			
	destinated to it) of greater priority for an adjacent span that the ring switch			
	it is executing, it:			
	<ul> <li>drops the ring bridge and switches</li> </ul>			
	immediately			
	<ul> <li>executes the higher priority ring</li> </ul>			
	bridge request.			
5	When a failure condition affecting	ETS 300 746 [15]	m	
	only one span clears at a node, the node enters Wait-To-Restore and	subclause 5.2.4.2.3		
	remain in Wait-To-Restore for the			
	appropriate time-out interval, unless			
	(1) a different bridge request of higher			
	priority than WTR is received, or (2)			
	another failure is detected, or (3) an			
	externally initiated command becomes active. The node sends out			
	a WTR code on both the long and			
	short paths.			
6	As soon as a node which was	ETS 300 746 [15] subclause 5.2.4.2.3	m	
	requested to bridge, but did not actually detect the failure, receives a	3.2.4.2.3		
	Wait-To-Restore code (unidirectional			
	failure case), it continues to send out			
	Reverse Request on the short path,			
	and it sends out WTR on the long			
	path.			

Item	Transitions between switching states	Reference	Status	Support
	A node receiving long path ring bridge requests destinated to itself from both of its neighbours drops its bridge and switches.		m	

Table G.123: Transitions between switching and full pass-through state

Prerequisite: G.1/16 -- STM-16 two-fibre Shared Protection Ring supported

Item	Transitions between switching and	Reference	Status	Support
	full pass-through state			
1	When a node that is currently executing a ring switch receives a long path ring bridge request for a non adjacent span of greater priority than the ring switch it is executing, it drops its bridge and switches immediately, then enters full pass-through state.	ETS 300 746 [15] subclause 5.2.4.2.4		
2	When a node that is currently executing a ring switch has as its highest priority input long path ring bridge requests not destinated to itself from both directions, it drops its bridge and switches immediately, then enters full pass-through state.	ETS 300 746 [15] subclause 5.2.4.2.4		
3	The transition of a node from full pass-through to switching state is triggered by: - an equal, higher priority or allowed coexisting externally initiated command, - the detection of an equal, higher priority or allowed coexisting failure, - the receipt of an equal, higher priority or allowed coexisting bridge request destinated to that NE.	ETS 300 746 [15] subclause 5.2.4.2.4		
4	If a node that was in the pass-through state due to a SF-R or FS-R request on the ring is now sourcing a SF-R or FS-R bridge request the node:  determines if there is any need for squelching and squelch accordingly, executes the ring bridge and switches.	ETS 300 746 [15] subclause 5.2.4.2.4		

### G.4.5 MS16 layer defect, fault and performance monitoring tables

### G.4.5.1 Port status management

Table G.124: Trail termination point mode process

### Table G.131: AU-4 Alarm Indication Signal defect (AU4 dAIS)

Prerequisite: G.1/5 -- MS16/S4\_A\_Sk function present

Item	AU-4 Alarm Indication Signal defect (AU4 dAIS)	Reference	Status	Support
	The AU4 dAIS is detected if the pointer interpreter enters the AIS_state.	9.3.2	m	
	The AU4 dAIS is cleared if the pointer interpreter exits the AIS_state.	9.3.2	m	

### Table G.132: AU-4-4c Alarm Indication Signal defect (AU4-4c dAIS)

Prerequisite: G.1/13 -- MS16/S4-4c\_A\_Sk function present

Item	AU-4-4c Alarm Indication Signal defect (AU4-4c dAIS)	Reference	Status	Support
	The AU4-4c dAIS is detected if the pointer interpreter enters the AISX_state.	9.3.4	m	
	The AU4-4c dAIS is cleared if the pointer interpreter exits the AISX_state.	9.3.4	m	

Table G.133: Loss of AU-4 Pointer defect (AU-4 dLOP)

Prerequisite: G.1/5 -- MS16/S4\_A\_Sk function present

Item	Loss of AU-4 Pointer defect (AU-4 dLOP)	Reference	Status	Support
1	The High Order Path dLOP (related to an AU-4 pointer) is detected if the pointer interpreter enters the LOP_state.	9.3.2	m	
2	The High Order Path dLOP (related to an AU-4 pointer) is cleared if the pointer interpreter exits the LOP_state.	9.3.2	m	

### Table G.134: Loss of AU-4-4c Pointer defect (AU-4-4c dLOP)

Prerequisite: G.1/13 -- MS16/S4-4c\_A\_Sk function present

Item	Loss of AU-4-4c Pointer defect (AU-4-4c dLOP)	Reference	Status	Support
	The High Order Path dLOP (related to an AU-4-4c pointer) is detected if the pointer interpreter enters the LOPX_state.	9.3.4	m	
	The High Order Path dLOP (related to an AU-4-4c pointer) is cleared if the pointer interpreter exits the LOPX_state.	9.3.4	m	

### G.4.5.3 Consequent action activation and clearance criteria

Table G.135: Alarm Indication Signal action (aAIS)

Item	Alarm Indication Signal action (aAIS)	Reference	Status	Support
1	The MS16_TT_Sk outputs an all "1s"	9.2.2	c13501	
	signal within 250 μs upon MS16 dAIS			
	detection.			
2	The MS16_TT_Sk outputs normal data	9.2.2	c13501	
	within 250 μs when there is (are) no			
	more defect(s) active.			
3	The MS16/S4_A_So outputs an all "1s"	9.3.1	c13502	
	signal within 250 μs upon CI_SSF			
	reception.			
4	The MS16/S4_A_So outputs normal	9.3.1	c13502	
	data within 250 µs when there is (are) no			
	more defect(s) active.			
5	The MS16/S4-4c_A_So outputs an all	9.3.3	c13503	
	"1s" signal within 250 μs upon CI_SSF			
	reception.			
6	The MS16/S4-4c_A_So outputs normal	9.3.3	c13503	
	data within 250 μs when there is (are) no			
	more defect(s) active.			
7	The MS16/S4_A_Sk outputs an all "1s"	9.3.2	c13504	
	signal within 250 μs upon AU4 dAIS			
	detection.			
8	The MS16/S4_A_Sk outputs an all "1s"	9.3.2	c13504	
	signal within 250 μs upon HO dLOP			
	detection.			
9	The MS16/S4_A_Sk outputs normal data	9.3.2	c13504	
	within 250 μs when there is (are) no			
	more defect(s) active.			
10	The MS16/S4-4c_A_Sk outputs an all	9.3.4	c13505	
	"1s" signal within 250 μs upon AU4-4c			
	dAIS detection.			
11	The MS16/S4-4c_A_Sk outputs an all	9.3.4	c13505	
	"1s" signal within 250 μs upon HO dLOP			
	detection.			
12	The MS16/S4-4c_A_Sk outputs normal	9.3.4	c13505	
	data within 250 µs when there is (are) no			
	more defect(s) active.			
13	The MS16/P0s_A_Sk outputs an all "1s"	9.3.8	c13506	
	signal within 1 ms upon AI_TSF			
4.4	reception.	0.0.0	-40500	
14	The MS16/P0s_A_Sk outputs normal	9.3.8	c13506	
	data within 1 ms when there is (are) no			
	more defect(s) active.		l

### Table G.139: Trail Signal Fail action (aTSF)

Prerequisite: G.1/3 -- MS16\_TT\_Sk function present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS16_TT_Sk sets AI_TSF to	9.2.2	m	
	TRUE on MS16 dAIS detection.			
2	The MS16_TT_Sk sets AI_TSF to	9.2.2	m	
	FALSE when there is (are) no more			
	defect(s) active.			

Table G.140: Trail Signal Degrade action (aTSD)

Prerequisite: G.1/3 -- MS16\_TT\_Sk function present

Item	Trail Signal Degrade action (aTSD)	Reference	Status	Support
	If the dDEG is detected in the trail termination sink the aTSD is performed.	EN 300 417-1-1 [1] subclause 8.2.2.6	m	
2	It ceases aTSD insertion after the dDEG defect is cleared.	EN 300 417-1-1 [1] subclause 8.2.2.6	m	
3	The aTSD is equivalent to send the Signal Degrade (SD) signal as defined in the Automatic Protection Switching (APS).	EN 300 417-1-1 [1] subclause 8.2.2.6	m	

### G.4.5.4 Defect correlation

**Table G.141: Defect correlation** 

Prerequisite: G.7/5 -- Defect correlation process supported

Item	Defect correlation	Reference	Status	Support
1	Under MS16 dAIS detection the	9.2.2	c14101	
	MS16_TT_Sk generates a MS16 cAIS			
	report if the port is in the monitoring state			
	(MON) and no CI_SSF is received from the			
2	server layer. The MS16 cAIS is reported only if selected	9.2.2	c14101	
-	MS16 AIS_reported is set to TRUE by the	9.2.2	614101	
	NEM. By default MS16 AIS_reported is set			
	to FALSE.			
3	Under MS16 dAIS detection the	9.2.2	c14101	
	MS16_TT_Sk generates a MS16 cSSF			
	report if the port is in the monitoring state			
L.	(MON).	0.00	11101	
4	The MS16 cSSF is reported only if selected	9.2.2	c14101	
	MS16 SSF_reported is set to TRUE by the NEM. By default MS16 SSF_reported is set			
	to FALSE.			
5	Under MS16 dRDI detection the	9.2.2	c14101	
	MS16_TT_Sk generates a MS16 cRDI			
	report if the port is in the monitoring state			
<u> </u>	(MON).			
6	The MS16 cRDI is reported only if	9.2.2	c14101	
	MS16 RDI_reported is set to TRUE by the NEM. By default MS16 RDI_reported is set			
	to FALSE.			
7	Under MS16 dDEG detection the	9.2.2	c14101	
'	MS16_TT_Sk generates a MS16 cDEG			
	report if the port is in the monitoring state			
	(MON).			
8	Under AU4 dAIS detection the	9.3.2	c14102	
	MS16/S4_A_Sk generates a AU4 cAIS			
	report if the port is in the monitoring state (MON) and no AI_TSF is received from the			
	MS16_TT_Sk.			
9	The AU4 cAIS is reported only if AU4 AIS	9.3.2	c14102	
	_reported is set to TRUE by the NEM. By			
	default AU4 cAIS_reported is set to FALSE.			
10	Under HO dLOP detection the	9.3.2	c14102	
	MS16/S4_A_Sk generates a HO cLOP			
11	report. Under AU4-4c dAIS detection the	0.2.4	c14103	
11	MS16/S4-4c_A_Sk generates a AU4 cAIS	9.3.4	014103	
	report if the port is in the monitoring state			
	(MON) and no AI_TSF is received from the			
	MS16_TT_Sk.			
12	The AU4-4c cAIS is reported only if	9.3.4	c14103	
	AU4-4c AIS _reported is set to TRUE by the			
	NEM. By default AU4-4c cAIS_reported is			
13	set to FALSE. Under HO dLOP detection the	9.3.4	c14103	+
13	MS16/S4-4c_A_Sk generates a HO cLOP	J.J.4	014103	
	report.			
14	All the generated fault cause (cXXX) are	EN 300 417-1-1 [1]	m	
	reported to the EMF.	subclause 8.1,

### G.4.5.5 Performance monitoring

### G.4.5.5.1 Near end performance monitoring

#### Table G.142: pN\_DS performance parameter

Prerequisite: G.7/1 -- Near-end performance monitoring process supported

Item	pN_DS performance parameter	Reference	Status	Support
1		9.2.2	m	
	pN_DS every second with at least			
	one occurrence of MS16 aTSF or an			
	equipment defect (dEQ) and reports it			
	to the EMF.			

#### Table G.143: pN\_EBC performance parameter

Prerequisite: G.7/1 -- Near-end performance monitoring process supported

Item	pN_EBC performance parameter	Reference	Status	Support
1	Every second the MS16_TT_Sk	9.2.2	m	
	counts the number of MS16 Near-end			
	Errored Block (MS16 N_Bs) within			
	that second as the MS16 pN_EBC			
	(MS16 Near-end Error Block Count)			
	and reports it to the EMF.			

Comments: A "Near-end Block" (N\_B) is errored if one or more BIP-24 violations are detected.

### G.4.5.5.2 Far end performance monitoring

#### Table G.144: pF\_DS performance parameter

Prerequisite: G.7/2 -- Far-end performance monitoring process supported

Item	pF_DS performance parameter	Reference	Status	Support
	The MS16_TT_Sk indicates a MS16 pF_DS every second with at least one occurrence of MS16 dRDI and reports it to the EMF.		m	

#### Table G.145: pF\_EBC performance parameter

Prerequisite: G.7/2 -- Far-end performance monitoring process supported

Item	pF_EBC performance parameter	Reference	Status	Support
1	Every second the MS16_TT_Sk	9.2.2	m	
	counts the number of MS16 Far-end			
	Errored Block (MS16 F_Bs) within			
	that second as the MS16 pF_EBC			
	(MS16 Far-end Error Block Count)			
	and reports it to the EMF.			

Comments: A "Far-end Block" (F\_B) is errored if the REI count indicates one or more errors.

#### G.4.5.5.3 Pointer performance monitoring

#### **Table G.146: PJE performance parameter**

Prerequisite: G.7/3 -- Pointer performance monitoring process supported

Item	PJE performance parameter	Reference	Status	Support
1	Every second the number of generated AU-4 pointer increments is counted as the HO pPJE+ and reported to the EMF.	9.3.1	c14601	
2	Every second the number of generated AU-4-4c pointer increments is counted as the HO pPJE+ and reported to the EMF.	9.3.3	c14602	
3	Every second the number of generated AU-4 pointer decrements within that second is counted as the HO pPJE- and reported to the EMF.	9.3.1	c14601	
4	Every second the number of generated AU-4-4c pointer decrements within that second is counted as the HO pPJE- and reported to the EMF.	9.3.3	c14602	

c14601: IF G.1/4 THEN m ELSE n/a c14602: IF G.1/12 THEN m ELSE n/a

- -- MS16/S4\_A\_So present
  - -- MS16/S4-4c\_A\_So present

### G.4.6 MS16 linear trail protection defect, fault and performance monitoring tables

### G.4.6.1 Defect detection and clearance criteria

Table G.147: Protection Architecture Mismatch defect (dPAM)

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- bi-directional switching supported

Item		Reference	Status	Support
	defect (dPAM)			
1	The MS16P dPAM is detected if the received APS Architecture (RARCH) value differs from the local architecture type (ARCHtype) for a period of 50 ms.	A.9	m	
	The MS16P dPAM is cleared when the there is again a match between the received APS Architecture (RARCH) value and the local architecture type (ARCHtype).	A.9	m	

Comments: This defect concerns the APS interpretation process.

Table G.148: Invalid Command defect (dINV)

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- bi-directional switching supported

Iten	Invalid Command defect (dINV)	Reference	Status	Support
1	The MS16P dINV is detected if the request type bits (RT) in the APS signal indicate an invalid request code, or the RSN or LBSC indicate a non-existing trail signal number for Y ms.	A.9	m	
2	The MS16P dINV is cleared when the RT indicates a valid code and the RSN or LBSN indicate an existing signal number.	A.9	m	

Comments: This defect concerns the APS interpretation process.

Table G.149: INV defect parameters value

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- bi-directional switching supported

Ite	n INV defect parameters value	Reference	Status	Support	Values	
1					Allowed	Supported
1	MS16P dINV parameter (Y).	A.9	m		TBD	

Table G.150: Acknowledge Timeout defect (dTMOUT)

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- bi-directional switching supported

Item		Reference	Status	Support
	(dTMOUT)			
1	The MS16P dTMOUT is detected if a	A.9	m	
	head end response on a tail end			
	request does not comply to the			
	protocol within a period of 50 ms.			
2	The MS16P dTMOUT is cleared when	A.9	m	
	the head-end response complies			
	again.			
3	The MS16P dTMOUT is cleared if the	A.9	m	
	protection trail is in SF condition.			

Comments: This defect concerns the global request priority process.

Table G.151: Selector Control Mismatch defect (dSCM)

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- bi-directional switching supported

Item	Selector Control Mismatch defect (dSCM)	Reference	Status	Support
1	The MS16P dSCM is detected if a mismatch between RRSN and GRSN persists for Y ms.	A.9	E	
2	The MS16P dSCM is cleared when RRSN is identical to GRSN.	A.9	m	
3	The MS16P dSCM is cleared if the protection trail is in SF condition.	A.9	m	

Comments: This defect concerns the selector control.

#### Table G.152: SCM defect parameters value

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- bi-directional switching supported

Item	INV defect parameters value	Reference	Status	Support	Values	
					Allowed	Supported
1	MS16P dSCM parameter (Y).	A.9	m		TBD	

### G.4.6.2 Consequent action activation and clearance criteria

Table G.153: Null signal insertion

Prerequisite: G.1/15 -- 1:n MS Linear Trail Protection supported

Item	Null signal insertion	Reference	Status	Support
	If neither the extra traffic nor a normal signal input is to be connected to the protection section output, the null signal is connected to the protection output.	9.5.1.2	m	
	If the extra traffic output (if applicable) is disconnected from the protection input it is set to all-ONEs signal (AIS).	9.5.1.2	c15301	

c15301: IF /6 THEN m ELSE n/a -- Extra traffic channel supported

### Table G.154: Server Signal Fail action (aSSF)

Prerequisite: G.1/15 -- 1:n MS Linear Trail Protection supported

Item	Server Signal Fail action (aSSF)	Reference	Status	Support
1	The MS16P1:n_C sets the CI_SSF to TRUE on the extra traffic connection	9.5.1.2	c15401	
	point if the extra traffic output (if			
	applicable) is disconnected from the			
	protection input.			
2	The MS16/MS16P_A_Sk sets	9.5.3.2	c15402	
	CI_SSF to TRUE on AI_TSF			
	reception.			
3	The MS16/MS16P_A_Sk sets	9.5.3.2	c15402	
	CI_SSF to FALSE when there is (are)			
	no more defect(s) active.			

c15401: IF (G.1/15 AND G.68/6) THEN m ELSE n/a -- 1:n MS Linear Trail Protection and extra traffic channel present

c15402: IF G.5/5 THEN m ELSE n/a -- MS16/MS16P\_A\_Sk present

#### Table G.155: Trail Signal Fail action (aTSF)

Prerequisite: G.5/3 -- MS16P\_TT\_Sk present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS16P_TT_Sk sets AI_TSF to	9.5.2.2	m	
	TRUE on CI_SSF reception.			
2	The MS16P_TT_Sk sets AI_TSF to	9.5.2.2	m	
	FALSE when there is (are) no more			
	defect(s) active.			

Table G.156: Server Signal Degrade action (aSSD)

Prerequisite: G.5/5 -- MS16/MS16P\_A\_Sk present

Item	Server Signal Degrade action (aSSD)	Reference	Status	Support
	The MS16/MS16P_A_Sk sets CI_SSD to TRUE on AI_TSD reception.	9.5.3.2	m	
	The MS16/MS16P_A_Sk sets CI_SSD to FALSE when there is (are) no more defect(s) active.	9.5.3.2	m	

Table G.157: Selector release

Prerequisite: G.4/3 OR G.4/4 OR G.4/5 -- -- bi-directional switching supported

Item	Selector release	Reference	Status	Support
1	The selector is released if one or	A.9	m	
	more of the four defects dPAM,			
	dSCM, dTMOUT, dINV is active.			

Comments: This consequent action concerns the selector control.

### G.4.6.3 Defect correlation

**Table G.158: Defect correlation** 

Prerequisite: G.7/5 AND (G.1/14 OR G.1/15) -- Fault management process supported and STM-16 Linear Trail Protection supported

Item	Defect correlation	Reference	Status	Support
1	Under MS16P dSCM detection a MS16P cFOP (Failure Of Protocol) report is generated.	A.9	c15801	
2	Under MS16P dPAM detection a MS16P cFOP (Failure Of Protocol) report is generated.	A.9	c15801	
3	Under MS16P dTMOUT detection a MS16P cFOP (Failure Of Protocol) report is generated.	A.9	c15801	
4	Under MS16P dINV detection a MS16P cFOP (Failure Of Protocol) report is generated.	A.9	c15801	
5	Under MS16P CI_SSF reception a MS16P cSSF report is generated.	9.5.2.2	c15802	
6	The MS16P cSSF is reported only if selected MS16P SSF_reported is set to TRUE by the NEM. By default MS16P SSF_reported is set to FALSE.	9.5.2.2	c15802	
7	All the generated fault cause (cXXX) are reported to the EMF.	EN 300 417-1-1 [1] subclause 8.1, figure 36	m	

c15801: IF (G.4/3 OR G.4/4 OR G.4/5) THEN m ELSE n/a -- bi-directional switching supported

c15802: IF G.5/3 THEN m ELSE n/a

-- MS16P\_TT\_Sk present

### G.4.6.4 Performance monitoring

#### Table G.159: pPSC performance parameter

Prerequisite: G.7/4 AND (G.1/14 OR G.1/15) -- Protection performance monitoring process supported and STM-16 Linear Trail Protection supported

Item	pPSC performance parameter	Reference	Status	Support
1	Every second the MS16P1+1_C	A.9	c15901	
	indicates as MS16P pPSC (Protection			
	Switching Count) the number of			
	Protection Switching actions within			
	that second and reports it to the EMF.			
2	Every second the MS16P1:n_C	A.9	c15902	
	indicates as MS16P pPSC (Protection			
	Switching Count) the number of			
	Protection Switching actions within			
	that second and reports it to the EMF.			

c15901: IF G.1/14 THEN m ELSE n/a c15902: IF G.1/15 THEN m ELSE n/a

- -- 1+1 MS Linear Trail Protection supported
- -- 1:n MS Linear Trail Protection supported

#### Table G.160: pPSD performance parameter

Prerequisite: G.4/3 AND (G.4/1 OR G.4/3 OR G.4/5) -- Protection performance monitoring process supported and revertive protection supported

Item	pPSD performance parameter	Reference	Status	Support
	Every second that the normal signal #i is not selected from the Working trail #i is reported as a pPSD/i (i≥1) to the EMF.	A.9	m	
	Every second that the normal signal is selected from the Protection trail is reported as a pPSD/0 to the EMF.	A.9	m	

# G.4.7 MS16 two-fibre shared protection ring defect, fault and performance monitoring tables

### G.4.7.1 Defect detection and clearance criteria

NOTE: Currently none of the two-fibre Shared Protection Ring functions has to detect defects. The MS16P2fsh\_C has to detect some defects which are for further study.

### G.4.7.2 Consequent action activation and clearance criteria

Table G.161: Server Signal Fail action (aSSF)

Prerequisite: G.6/5 -- MS16/MS16P2fsh\_A\_Sk present

Item	Server Signal Fail action (aSSF)	Reference	Status	Support
1	The MS16/MS16P2fsh_A_Sk sets	9.6.3.2	m	
	CI_SSF to TRUE on AI_TSF			
	reception.			
2	The MS16/MS16P2sh_A_Sk sets	9.6.3.2	m	
	CI_SSF to FALSE when there is (are)			
	no more defect(s) active.			

### Table G.162: Trail Signal Fail action (aTSF)

Prerequisite: G.6/3 -- MS16P2fsh\_TT\_Sk present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS16P2fsh_TT_Sk sets AI_TSF	9.6.2.2	m	
	to TRUE on CI_SSF reception.			
2	The MS16P2fsh_TT_Sk sets AI_TSF	9.6.2.2	m	
	to FALSE when there is (are) no more			
	defect(s) active.			

Table G.163: Server Signal Degrade action (aSSD)

Prerequisite: G.6/5 -- MS16/MS16P2fsh\_A\_Sk present

Item	Server Signal Degrade action (aSSD)	Reference	Status	Support
	The MS16/MS16P2fsh_A_Sk sets CI_SSD to TRUE on AI_TSD reception.	9.6.3.2	В	
	The MS16/MS16P2fsh_A_Sk sets CI_SSD to FALSE when there is (are) no more defect(s) active.	9.6.3.2	m	

Table G.164: Insertion of unequipped signals

Prerequisite: G.6/1 -- MS16P2fsh\_C present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS16P2fsh_C function	9.6.1	m	
	generates a VC-4 [VC-4-Xc]			
	unequipped signal (plus valid			
	AU-4 [AU-4-Xc] pointer) for each			
	protection timeslot when this			
	protection timeslot is not in use.			

Table G.165: Insertion of all-ONEs signals (AIS), squelching

Prerequisite: G.6/1 -- MS16P2fsh\_C present

Item	Trail Signal Fail action (aTSF)	Reference	Status	Support
1	The MS16P2fsh_C function inserts	9.6.1	m	
	all-ONEs signal (AIS) for an			
	AU-4 [AU-4-xc] within protection			
	timeslots that would otherwise be			
	misconnected.			

### G.4.7.3 Defect correlation

**Table G.166: Defect correlation** 

Prerequisite: G.7/4 AND G.6/3 -- Fault management process supported and MS16P2fsh\_TT\_Sk present

Item	Defect correlation	Reference	Status	Support
1	Under MS16P2fsh CI_SSF reception a MS16P2fsh cSSF report is generated.	9.6.2.2	m	
	The MS16P2fsh cSSF is reported only if selected MS16P2fsh SSF_reported is set to TRUE by the NEM. By default MS16P2fsh SSF_reported is set to FALSE.	9.6.2.2	m	
3	All the generated fault cause (cXXX) are reported to the EMF.	EN 300 417-1-1 [1] subclause 8.1, figure 36	m	

NOTE: Currently for the MS16P2fsh\_C fault management processes are for further study.

### G.4.7.4 Performance monitoring

NOTE: Currently none of the two-fibre Shared Protection Ring functions has to monitor any performance parameter, with the exception of the MS16P2fsh\_C, for which the performance monitoring processes are for further study.
