## Foreword

This European Standard (Telecommunications series) has been produced by ETSI Project Digital Enhanced Cordless Telecommunications (DECT), and is now submitted for the ETSI standards One-step Approval Procedure.

The present document is part 2 of a multi-part deliverable. Full details of the entire series can be found in EN 300 474-1 [9].

Annex A contains the requirement lists for the Fixed radio Termination (FT) Generic Access Profile.

Annex B contains the profile-specific ICS proforma for the FT Generic Access Profile.

<b>Proposed national transposition dates</b>

## 1 Scope

The present document provides the profile Requirement List and profile-specific Implementation Conformance Statement (profile ICS) proforma for the Digital Enhanced Cordless Telecommunications (DECT) Generic Access Profile (GAP) at the Fixed radio Termination (FT) as defined in EN 300 444 [2] in compliance with the relevant requirements and in accordance with the relevant guidance given in ISO/IEC 9646-7 [8].

The supplier of an implementation which is claimed to conform to EN 300 444 [2] is required to complete a copy of the Protocol Implementation Conformance Statement (PICS) proforma EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] and EN 300 476-7 [6] with the replacements from annex A of the present document, as well as, a copy of the and profile-specific ICS proforma provided in the annex B of the present document.

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in ISO/IEC 9646-7 [8], EN 300 444 [2] and ISO/IEC 9646-1 [7] apply.

### 3.2 Abbreviations

For the purposes of the present document, the abbreviations defined in ISO/IEC 9646-1 [7] and EN 300 444 [2] apply.

## 4 Conformance requirement concerning profile ICS

The supplier of a protocol implementation which is claimed to conform to the portable termination specific requirements of EN 300 444 [2] shall verify that his protocol implementation meets the profile Requirements Lists (RLs) for each DECT protocol layer, contained in annex A of the present document, and shall complete a copy of the profile-specific ICS proforma provided in annex B and shall provide the information necessary to identify both the supplier and the implementation.

---

## Annex A (normative): Requirement Lists for DECT FT

### A.1 General

The supplier of a protocol implementation which is claimed to conform to the portable termination specific requirements of EN 300 444 [2] shall verify that his particular (NWK, DLC and MAC) layer protocol implementation meets the profile RL for this layer. For this, he shall complete a copy of the corresponding layer PICS proforma contained in annex A of EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] and EN 300 476-7 [6] updated with the requirements from this annex.

#### A.1.1 Profile Requirement List (profile RL)

The profile Requirement List (profile RL) for the NWK, DLC, MAC and PH layer as defined in this clause is based on EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] and EN 300 476-7 [6]. For every capability listed in EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] and EN 300 476-7 [6], the profile requirements are expressed by restriction upon allowed support answers in EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] and EN 300 476-7 [6] depending on whether the implementation is to work in Residential/Business (R/B) or Public (P) environment. The profile RL is produced by copying selected tables from EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] and EN 300 476-7 [6], removing the column(s) to be completed by the supplier, and adding a new set of columns giving the new profile requirements, both in terms of the status and allowed values. The tables are referenced by preceding it with EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] or EN 300 476-7 [6] as relevant.

##### **Profile status column:**

Where it has been seen as necessary two profile status columns are provided one for Residential/Business (R/B) environment and one for Public (P) environment.

The standardized symbols for the status column are as follows:

- m or M mandatory - the capability is required to be supported;
- o or O optional - the capability may be supported or not;
- n/a or N/A not applicable - in the given context, it is impossible to use the capability;
- x or X prohibited (excluded) - there is a requirement not to use this capability in the given context;
- o.i or O.i qualified optional - for mutually exclusive or selectable options from a set. "i" is an integer which identifies a unique group of related optional items and the logic of their selection which is defined immediately following the table;
- ci or Ci conditional - the requirement on the capability ("m", "o", "x" or "n/a") depends on the support of other optional or conditional items. "i" is an integer identifying a unique conditional status expression which is defined immediately following the table or which is defined in the general condition table below;
- i or I out-of-scope - this capability is outside the scope of the given specification, and hence irrelevant and not subject to conformance testing. This status is in particular applicable for data fields which are reserved for future use. The structure of such fields has to be supported, but the value is undefined and thus to be ignored.

##### **Reference column:**

The reference column gives reference to EN 300 444 [2], except where explicitly stated otherwise.

## A.1.2 General conditions

The note in table A.1 is generally defined to apply to the tables in the following clauses where indicated.

**Table A.1: General condition table**

Condition identifier	Condition definition
NOTE A	The status of the relevant item is exactly as the status of this item in EN 300 476-4 [3], EN 300 476-5 [4], EN 300 476-6 [5] and EN 300 476-7 [6]. The item has been included as the profile reference column includes reference to the profile that describes the item more in details.

## A.2.3 Information elements

To express the profile requirements of EN 300 444 [2], the following tables indicate the change of status for support and values allowed of NWK layer information elements. The support of each information element itself is dependent on the support of the information element in each particular message as stated in clause A.2.2.

### A.2.3.1 Fixed length information element support

### B.1 Introduction for completing the profile-specific ICS proforma

#### B.1.1 Purposes and structure

The purpose of this profile-specific ICS proforma is to provide a mechanism whereby a supplier of an implementation of the portable termination specific requirements of EN 300 444 [2]: DECT: Generic Access Profile (GAP) may provide information about the implementation in a standardized manner.

The profile-specific ICS proforma is subdivided into clauses for the following categories of information:

- instructions for completing the ICS proforma;
- identification of the implementation;
- identification of the EN 300 444 [2]: DECT: Generic Access Profile (GAP);
- ICS proforma tables:
  - global statement of conformance;
  - functional groups and procedures;
  - timers and protocol parameters;
  - messages;
  - information elements;
  - negotiation capabilities;
  - protocol error handling;
  - multilayer dependencies.

The ICS proforma contained in this annex is comprised of information in tabular form in accordance with the guidelines presented in ISO/IEC 9646-7 [8].

**Item column:**

The item column contains a number which identifies the item in the table.

**Item description column:**

The item description column describes in free text each respective item (e.g. parameters, timers, etc.). It implicitly means "is <item description> supported by the implementation?".

**Status column:**

The following notations, defined in ISO/IEC 9646-7 [8], are used for the status column:

- m or M mandatory - the capability is required to be supported;
- o or O optional - the capability may be supported or not;
- n/a or N/A not applicable - in the given context, it is impossible to use the capability;
- x or X prohibited (excluded) - there is a requirement not to use this capability in the given context;
- o.i or O.i qualified optional - for mutually exclusive or selectable options from a set. "i" is an integer which identifies a unique group of related optional items and the logic of their selection which is defined immediately following the table;
- ci or Ci conditional - the requirement on the capability ("m", "o", "x" or "n/a") depends on the support of other optional or conditional items. "i" is an integer identifying a unique conditional status expression which is defined immediately following the table or which is defined in the general condition table below;
- i or I out-of-scope - this capability is outside the scope of the given specification, and hence irrelevant and not subject to conformance testing. This status is in particular applicable for data fields which are reserved for future use. The structure of such fields has to be supported, but the value is undefined and thus to be ignored.

**Reference column:**

The reference column gives reference to EN 300 444 [2], except where explicitly stated otherwise.

**Support column:**

The support column shall be filled in by the supplier of the implementation. The following common notations, defined in ISO/IEC 9646-7 [8], are used for the support column:

- Y or y supported by the implementation;
- N or n not supported by the implementation;
- N/A, n/a no answer required (allowed only if the status is n/a, directly or after evaluation of a conditional status).

In each context, the kind of "non-support" which is implemented at the receipt may be additionally indicated such as:

- Err the item is treated as a protocol error;
- lg the item is received and ignored (i.e. processed syntactically, but not semantically);
- rj the item is received and rejected.

**NOTE:** As stated in ISO/IEC 9646-7 [8], support for a PDU requires the ability to parse all valid parameters of that PDU. Supporting a PDU while having no ability to parse a valid parameter is non-conformant. Support for a parameter on a PDU means that the semantics of that parameter are supported.

**Values allowed column:**

The values allowed column contains the values or the ranges of values allowed.

**Values supported column:**

The values supported column shall be filled in by the supplier of the implementation. In this column, the values or the ranges of values supported by the implementation shall be indicated.

**Prerequisite line:**

A prerequisite line takes the form: Prerequisite: <predicate>.

A prerequisite line before a clause or table title indicates that the whole clause or the whole table is not required to be completed if the predicate is FALSE.

## B.1.2 Instructions for completing the profile-specific ICS proforma

The supplier of the implementation shall complete the profile-specific ICS proforma in each of the spaces provided using the notation described in clause B.1.2. Specific instruction is provided in the text which precedes each table.

## B.2 Identification of the implementation

### B.2.1 Date of statement

Identification of the Implementation Under Test (IUT) and the system in which it resides (the System Under Test (SUT)) should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

**Table B.1: Date of statement**

Date of statement		
Day	Month	Year

### B.2.2 Implementation Under Test (IUT) identification

The supplier of the implementation shall enter information necessary to uniquely identify the IUT in table B.2.

**Table B.2: IUT identification**

IUT identification	
IUT name	
IUT version	

### B.2.3 System Under Test (SUT) identification

The supplier of the implementation shall enter information necessary to uniquely identify the SUT in table B.3.

**Table B.3: SUT identification**

SUT identification	
SUT name	
Hardware configuration	
Operating system	

## B.2.4 Product supplier

**Table B.4: Product supplier**

<b>Product supplier</b>	
Name	
Address	
Phone No.	
Fax No.	
E-mail address	
Additional information	

## B.2.5 Client identification

The product supplier information and client information should both be filled in if they are different.

**Table B.5: Client identification**

<b>Client</b>	
Name	
Address	
Phone No.	
Fax No.	
E-mail address	
Additional information	

## B.2.6 Contact person identification

A person who can answer queries regarding information supplied in the profile ICS should be named as the contact person.

**Table B.6: Contact person identification**

<b>Contact person</b>	
Name	
Address	
Phone No.	
Fax No.	
E-mail address	
Additional information	

## B.3 Identification of the profile

The supplier of the implementation shall enter the date of the publication of the EN DECT-GAP Specification to which conformance is claimed, in table B.7.

**Table B.7: Identification of profile**

<b>Identification of profile</b>	
Title of specification	Digital Enhanced Cordless Telecommunications (DECT); Generic Access Profile (GAP)
Reference no.	EN 300 444 [2]
Date of Publication	

### B.3.1 Defect report numbers and amendments implemented

The supplier of the implementation shall enter the reference number of implementation defect reports or corresponding amendment documents which modify the specification to EN 300 444 [2], in table B.8.

**Table B.8: Defect report and amendments number**

<b>Modification of specification</b>	
<b>Defect report no.</b>	<b>Amendment no.</b>

### B.3.2 Addenda implemented

The supplier of the implementation shall enter the titles and the reference number of implemented addenda to EN 300 444 [2], in table B.9.

**Table B.9: Addenda implemented**

<b>Addenda implemented</b>	
<b>Title</b>	<b>Reference no.</b>

## B.4 Global statement of conformance

An explicit answer shall be entered, in each of the support or supported column boxes provided, using the notation described in clause B.1.2.

**Table B.10: Global statement of conformance**

<b>Global statement of conformance</b>	
Are all mandatory capabilities implemented?	

NOTE: Answering "No" to this question indicates non-conformance to the <reference specification type> specification. Non-supported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is non-conforming, on pages attached to the ICS proforma.

## B.5 Capabilities

### B.5.1 NWK profile-specific ICS proforma for FT

#### B.5.1.1 General requirements

**Table B.11: General requirements supported**

Item	Requirement	Profile reference	Profile status R/B/P	Support
1	Transaction identifier assignment	6.9.2	m	
2	Length of NWK layer message	6.9.3	m	
3	Handling of error and exception conditions	6.9.4	m	
4	Codings of information elements	6.9.7	m	

#### B.5.1.2 Application features

The supplier of the implementation shall state the support of the implementation for all of the following application features.

**Table B.12: Application features supported**

Item	Name of feature	Profile reference	Profile status R/B	Profile status P	Support
1	AC_bitstring_mapping	6.6	c.b1201	m	
c.b1201: IF A.7/3 OR A.7/4 OR A.7/5 OR A.7/12 THEN m ELSE i.					

#### B.5.1.3 Application procedures

The supplier of the implementation shall state the support of the implementation for all of the following procedures.

**Table B.13: Application procedures supported**

Prerequisite: table B.12					
Item	Name of procedure	Profile reference	Profile status R/B	Profile status P	Support
1	AC_bitstring_mapping	14.2	c.b1301	m	
c.b1301: IF B.12/1 THEN m ELSE n/a.					

### B.5.1.4 Management procedures

The supplier of the implementation shall state the support of the implementation for all of the following management procedures.

**Table B.14: Management procedure support**

Item	Name of procedure	Profile reference	Profile status R/B	Profile status P	Support
1	Location registration initiation	13.2	c.b1401	m	
2	Assigned individual TPUI management	13.3	c.b1401	m	
3	PMID management	13.4	m	m	
4	Broadcast attributes management	13.6	m	m	
5	Storage of subscription related data	13.7	m	m	
6	DCK management	13.5	c.b1402	m	
c.b1401: IF A.4/11 THEN m ELSE i.					
c.b1402: IF A.4/4 OR A.4/5 OR A.4/6 OR A.4/7 THEN m ELSE					

### B.5.2 DLC profile-specific ICS proforma for FT

#### B.5.2.1 Services

No specific DLC services are defined.

### B.5.3 MAC profile-specific ICS proforma for FT

#### B.5.3.1 Services

##### B.5.3.1.1 Extended frequency allocation service

The supplier of the implementation shall state the support of the implementation for all of the following requirements.

**Table B.15: Extended frequency allocation supported**

Item	Service	Profile reference	Profile status R/B/P	Support
1	Extended frequency allocation	5.2	o	

## B.5.4 PHY Profile-specific ICS proforma for FT

### B.5.4.1 Requirements

The supplier of the implementation shall state the support of the implementation for all of the following requirements.

**Table B.16: GAP specific PHY requirements**

Item	Requirement	Profile reference	Profile status R/B/P	Support	Allowed values	Supported values
1	Full slots shall be used	11.1, 12.1	m		n/a	
2	Minimum Normal Transmit Power (NTP)	11.2	m		> 80 mW per simultaneously active transmitter	
3	Radio receiver sensitivity	11.3	m		at least - 86 dBm	
4	Physical channel availability	11.6	m		n/a
