Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETR 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available **free of charge** from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.fr/ipr> or <http://www.etsi.org/ipr>).

Pursuant to the ETSI Interim IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETR 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This European Standard (Telecommunication series) has been produced by ETSI Technical Committee Signalling Protocols and Switching (SPS) and is now submitted for the Public Enquiry phase of the ETSI standards Two-step Approval Procedure.

The present document is part 5 of a multi-part standard covering the Digital Subscriber Signalling System No. one (DSS1) protocol specification for the Integrated Services Digital Network (ISDN) generic functional protocol for the support of supplementary services for Virtual Private Network (VPN) applications, as described below:

- Part 1: "Protocol specification";
- Part 2: "Protocol Implementation Conformance Statement (PICS) proforma specification";
- Part 3: "Test Suite Structure and Test Purposes (TSS&TP) specification for the user";
- Part 4: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the user";
- Part 5: "Test Suite Structure and Test Purposes (TSS&TP) specification for the network";**
- Part 6: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the network".

Proposed national transposition dates	
Date of latest announcement of this EN (doa):	3 months after ETSI publication
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	6 months after doa
Date of withdrawal of any conflicting National Standard (dow):	6 months after doa

1 Scope

This fifth part of EN 301 061 specifies the Test Suite Structure and Test Purposes (TSS&TP) for the network side of the T reference point (as defined in ITU-T Recommendation I.411 [9]) of implementations conforming to the stage three standard for the generic functional protocol for the support of supplementary services for Virtual Private Network (VPN) applications for the pan-European Integrated Services Digital Network (ISDN) by means of the Digital Subscriber Signalling System No. one (DSS1) protocol, EN 301 061-1 [2].

2 Normative references

References may be made to:

- a) specific versions of publications (identified by date of publication, edition number, version number, etc.), in which case, subsequent revisions to the referenced document do not apply; or
- b) all versions up to and including the identified version (identified by "up to and including" before the version identity); or
- c) all versions subsequent to and including the identified version (identified by "onwards" following the version identity); or
- d) publications without mention of a specific version, in which case the latest version applies.

A non-specific reference to an ETS shall also be taken to refer to later versions published as an EN with the same number.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following definitions apply:

3.1.1 Definitions related to conformance testing

Abstract Test Suite (ATS): Refer to ISO/IEC 9646-1 [5].

Implementation Under Test (IUT): Refer to ISO/IEC 9646-1 [5].

Protocol Implementation Conformance Statement (PICS): Refer to ISO/IEC 9646-1 [5].

PICS proforma: Refer to ISO/IEC 9646-1 [5].

Protocol Implementation eXtra Information for Testing (PIXIT): Refer to ISO/IEC 9646-1 [5].

PIXIT proforma: Refer to ISO/IEC 9646-1 [5].

Test Purpose (TP): Refer to ISO/IEC 9646-1 [5].

3.1.2 Definitions related to EN 301 061-1

component: See EN 300 196-1 [1], subclause 11.2.2.1.

invoke component: See EN 300 196-1 [1], subclause 11.2.2.1.

return error component: See EN 300 196-1 [1], subclause 11.2.2.1.

return result component: See EN 300 196-1 [1], subclause 11.2.2.1.

T: The DSS1 protocol entity at the User side of the user-network interface where a T reference point applies (User is a private ISDN).

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

APDU	Application Protocol Data Unit
ATM	Abstract Test Method
ATS	Abstract Test Suite
GFT	Generic Functional Transport
IE	Information Element
ISDN	Integrated Services Digital Network
IUT	Implementation Under Test
NCICS	Networked Call Independant Connection oriented Signalling
PICS	Protocol Implementation Conformance Statement
PINX	Private Integrated services Network eXchange
PIXIT	Protocol Implementation eXtra Information for Testing
ROSE	Remote Operations Service Element
TP	Test Purpose
TSS	Test Suite Structure
VPN	Virtual Private Network
VPN-GFP	Generic Functional Protocol for the support of supplementary services for VPN

4 Test Suite Structure (TSS)

5.2.5.	Flow control	N17

Figure 1: Test suite structure

5 Test Purposes (TP)

5.1 Introduction

For each test requirement a TP is defined.

5.1.1 TP naming convention

TPs are numbered, starting at 001, within each group. Groups are organized according to the TSS. Additional references are added to identify the actual test suite and whether it applies to the network or the user (see table 1).

Table 1: TP identifier naming convention scheme

Identifier: <ps>_<iut><group>_<nnn>			
<ps>	=	protocol specification:	"GFP"
<iut>	=	type of IUT:	U User N Network
<group>	=	group	2 digit field representing group reference according to TSS
<nnn>	=	sequential number	(001-999)

5.1.2 Source of TP definition

The TPs are based on EN 301 061-1 [2].

5.1.3 TP structure

Each TP has been written in a manner which is consistent with all other TPs. The intention of this is to make the TPs more readable and checkable. A particular structure has been used and this is illustrated in table 2. This table should be read in conjunction with any TP, i.e. use a TP as an example to fully understand the table.

Table 2: Structure of a single TP for Generic Functional Protocol for the support of supplementary services for VPN (VPN-GFP)

TP part	Text	Example
Header	<Identifier> <i>tab</i> <paragraph number in base ETS> <i>tab</i>	see table 1 subclause 0.0.0
Stimulus	Ensure that the Implementation Under Test (IUT) in the <basic call state> ... <trigger> <i>see below for message structure</i> <i>or</i> <goal>	N10 etc. receiving a XXXX message to request a ...
Reaction	<action> <conditions> <i>if the action is sending</i> <i>see below for message structure</i> <next action>, <i>etc.</i> and remains in the same state <i>or</i> and enters state <state>	sends, saves, does, etc. using en bloc sending, ...
Message structure	<message type> message containing a a) <info element> IE with b) a <field name> encoded as <i>or</i> including <coding of the field> and <i>back to a or b,</i>	SETUP, FACILITY, CONNECT, ... Bearer capability, Facility, ...
NOTE 1: TP are always applicable. Optional TPs are applicable according to the configuration options of the IUT. If the configuration option is covered by a Protocol Implementation Conformance Statement (PICS) item, a selection criteria is indicated, else the selection of the corresponding test cases will depend on test suite parameters Protocol Implementation eXtra Information for Testing (PIXIT) in the Abstract Test Suite (ATS).		
NOTE 2: Text in italics will not appear in TPs and text between <> is filled in for each TP and may differ from one TP to the next.		

5.1.4 Test strategy

As the base standard EN 301 061-1 [2] contains no explicit requirements for testing, the TPs were generated as a result of an analysis of the base standard and the Protocol Implementation Conformance Statement (PICS) specification EN 301 061-2 [3].

The TPs are only based on conformance requirements related to the externally observable behaviour of the IUT, and are limited to conceivable situations to which a real implementation is likely to be faced (ETS 300 406 [4]).

5.2 Network TPs for VPN-GFP

All PICS items referred to in this subclause are as specified in EN 301 061-2 [3] unless indicated otherwise by another numbered reference.

Unless specified, the messages and IEs indicated are valid and contain at least the mandatory parameters and possibly optional parameters.

5.2.1 Common IE approach

Selection: IUT supports the common IE category. PICS: Mcn 1.

In all the TPs of this subclause, the call reference is to be considered in a Virtual Private Network (VPN) context.

The following TPs are testing the procedures associated with the transport of components using the messages for the establishment and clearing of calls.

The primitives exchanged between the different entities are not observable. Only the PDU exchanged between peer implementations can be observed.

So to check that the component is properly transmitted to the Generic Functional Transport (GFT) entity, it shall provoke a reaction from Remote Operations Service Element (ROSE) entity that will request the transmission of the corresponding component as response. This component will be transmitted in a call related message with the same call reference, which is observable.

To provoke a reaction from the ROSE entity, a return result component, with an invokeID not related to a currently active invocation, can be sent.

5.2.1.1 Bearer related transport mechanism

Selection: IUT supports the bearer related transport mechanism. PICS: MCn 1.1.

In all the TPs of this subclause, the call reference is in a VPN context.

5.2.1.1.1 Protocol control

In the TPs of this subclause, no NFE shall be included so that the Private Integrated services Network eXchange (PINX) entity will be the addressed PINX and can treat the received component.

5.2.1.1.1.1 Outgoing call

GFP_N01_001 subclause 7.2.1.1.1

Ensure that the IUT in the call state N0, on receipt of a SETUP message containing a VPN indicator IE and a Facility IE with a component requiring an answer, sends a Facility IE with a component, included in a SETUP ACKNOWLEDGE, CALL PROCEEDING or FACILITY message and enters respectively the N2, N3 or N1 call state.

GFP_N01_002 subclause 7.2.1.1.1

Ensure that the IUT in the call state N10, having sent a CONNECT messages, on receipt of a CONNECT ACKNOWLEDGE message containing a Facility IE with a component requiring an answer, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

GFP_N01_003 subclause 7.2.1.1.1

Ensure that the IUT in the call state N10, on receipt of a DISCONNECT message containing a Facility IE with a component requiring an answer, sends a Facility IE with a component included in the RELEASE or a FACILITY message and enters the call state N19.

GFP_N01_004 subclause 7.2.1.1.1

Ensure that the IUT in the call state N12, on receipt of a RELEASE message containing a Facility IE with a component requiring an answer, sends a Facility IE with a component included in the RELEASE COMPLETE or a FACILITY message and enters the call state N0.

5.2.1.1.1.2 Incoming call

GFP_N02_001 subclause 7.2.1.1.1

Ensure that the IUT in the call state N0, in order to transmit a component during the establishment of a bearer related call, sends a SETUP message containing a VPN indicator IE and a Facility IE with a component and enters the call state N6.

GFP_N02_002 subclause 7.2.1.1.1

Ensure that the IUT in the call state N6, on receipt of a SETUP ACKNOWLEDGE message containing a Facility IE with a component requiring an answer, sends a FACILITY message containing a Facility IE with a component and enters the call state N25.

GFP_N02_003 subclause 7.2.1.1.1

Ensure that the IUT in the call state N6, on receipt of a CALL PROCEEDING message containing a Facility IE with a component requiring an answer, sends a FACILITY message containing a Facility IE with a component and enters the call state N9.

GFP_N02_004 subclause 7.2.1.1.1

Ensure that the IUT in the call state N6, on receipt of an ALERTING message containing a Facility IE with a component requiring an answer, sends a FACILITY message containing a Facility IE with a component and enters the call state N7.

GFP_N02_005 subclause 7.2.1.1.1

Ensure that the IUT in the call state N6, on receipt of a CONNECT message containing a Facility IE with a component requiring an answer, sends a Facility IE with a component in the CONNECT ACKNOWLEDGE or a FACILITY message, and enters respectively the call state N8 or N10.

GFP_N02_006 subclause 7.2.1.1.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

GFP_N02_007 subclause 7.2.1.1.1

Ensure that the IUT in the call state N10, on receipt of a DISCONNECT message containing a Facility IE with a component requiring an answer, sends a Facility IE with a component included in the RELEASE or a FACILITY message and enters the call state N19.

GFP_N02_008 subclause 7.2.1.1.1

Ensure that the IUT in the call state N12, on receipt of a RELEASE message containing a Facility IE with a component requiring an answer, sends a Facility IE with a component included in the RELEASE COMPLETE or a FACILITY message and enters the call state N0.

5.2.1.1.2 GFT-Control

Selection: IUT supports the termination of the GFT-Control protocol. PICS: MCn 1.1.2.

The TPs in this subclause refer to ISO/IEC 11582 [8], subclause 7.1.2, as referenced by subclause 7.2.1.1.2 of EN 301 061-1 [2].

GFP_N03_001 subclause 7.1.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, not including a NFE, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 1: The PINX entity becomes the destination entity for that Facility IE.

GFP_N03_002 subclause 7.1.2.2.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with no destinationEntityAddress element, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 2: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N03_003 subclause 7.1.2.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with no destinationEntityAddress element, sends a FACILITY message containing the same Facility IE at the interface to the next PINX, and remains in the call state N10.

NOTE 3: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N03_004 subclause 7.1.2.2.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with no destinationEntityAddress element, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 4: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N03_005 subclause 7.1.2.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with no destinationEntityAddress element, either sends a FACILITY message containing a Facility IE with a component, or sends a FACILITY message containing the same Facility IE at the interface to the next PINX, and remains in the call state N10.

NOTE 5: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N03_006 subclause 7.1.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element matching the IUT address, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 6: The PINX entity becomes the destination entity for that Facility IE.

GFP_N03_007 subclause 7.1.2.2.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element matching the IUT address, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 7: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N03_008 subclause 7.1.2.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element matching the IUT address, sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 8: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N03_009 subclause 7.1.2.2.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element not matching the IUT address, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 9: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N03_010 subclause 7.1.2.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element not matching the IUT address, sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 10: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N03_011 subclause 7.1.2.2.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element not matching the IUT address, sends no message and remains in the call state N10.

NOTE 11: The PINX discards the Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N03_012 subclause 7.1.2.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element not matching the IUT address, sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 12: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N03_013 subclause 7.1.2.2.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including an invalid NFE (coding or structure not as specified in clause 11 of ISO/IEC 11582 [8]), sends no message and remains in the call state N10.

NOTE 13: The PINX discards the Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N03_014 subclause 7.1.2.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including an invalid NFE (coding or structure not as specified in clause 11 of ISO/IEC 11582 [8]), sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 14: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N03_015 subclause 7.1.2.2.1

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing two Facility IEs with a component requiring an answer, and including a NFE encoded with a destinationEntity element indicating "endPINX" and with no destinationEntityAddress element for the first Facility IE, and with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element not matching the IUT address for the second Facility IE, sends a FACILITY message containing a Facility IE with a component corresponding to the first Facility IE received and remains in the call state N10.

NOTE 15: The PINX entity becomes the destination entity for the first Facility IE and discards the second Facility IE. The components of the two Facility IEs can be distinguished against their invoke_ID.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

5.2.1.2 Connection oriented bearer independant transport mechanism

Selection: IUT supports the connection oriented bearer independant transport mechanism. PICS: MCn 1.2.

In all the TPs of this subclause, the call reference is related to a Networked Call Independant Connection oriented Signalling (NCICS) connection in a VPN context.

5.2.1.2.1 Protocol control

5.2.1.2.1.1 Originating interface

GFP_N04_001 subclause 7.2.1.2.1.1.3

Ensure that the IUT in the null call state N0, on receipt of a SETUP message requesting a NCICS connection and including a VPN indicator, sends a CALL PROCEEDING message and enters the outgoing call proceeding N3.

GFP_N04_002 subclause 7.2.1.2.1.1.2

Ensure that the IUT in the null call state N0, on receipt of a SETUP message requesting a NCICS connection and including a VPN indicator, and the request is invalid or cannot be accepted sends a RELEASE COMPLETE message with a cause value #63 "service option not available, unspecified" and remains in the call state N0.

GFP_N04_003 subclause 7.2.1.2.1.1.4

Ensure that the IUT in the call state N3, to indicate that the NCICS connection has been accepted by the remote entity, sends a CONNECT message and either enter the call state N10 or the call state N8.

GFP_N04_004 subclause 7.2.1.2.1.1.4

Ensure that the IUT in the connect request call state N8, on receipt of a CONNECT ACKNOWLEDGE message, sends no messages the call state N10.

5.2.1.2.1.2 Destination interface

GFP_N05_001 subclause 7.2.1.2.1.2.1

Ensure that the IUT in the call state N0, to indicate that a NCICS connection has been requested, sends a SETUP message requesting a NCICS connection and including a VPN indicator, and enters the call state N6.

GFP_N05_002 subclause 7.2.1.2.1.2.2

Ensure that the IUT in the Call present call state N6, on receipt of a CALL PROCEEDING message, sends no message and enters the Call state N9.

GFP_N05_003 subclause 7.2.1.2.1.2.3

Ensure that the IUT in the Call present call state N6, on receipt of a RELEASE message, sends a RELEASE COMPLETE message, enters the call state N0, and sends a RELEASE or RELEASE COMPLETE on the originating interface using the same cause value as received.

GFP_N05_004 subclause 7.2.1.2.1.2.6

Ensure that the IUT in the call state N9, on receipt of a CONNECT message sends a CONNECT ACKNOWLEDGE message, and enters the call state N10.

5.2.1.2.1.3 Connection clearing

GFP_N06_001 subclause 7.2.1.2.1.3.2

Ensure that the IUT in the call state N10, to indicate that a clearing of NCICS connection has been requested, sends a RELEASE message and enters the call state N19.

GFP_N06_002 subclause 7.2.1.2.1.3.2

Ensure that the IUT in the call state N10, on receipt of a RELEASE message, sends a RELEASE COMPLETE message and enters the call state N0.

GFP_N06_003 subclause 7.2.1.2.1.3.4

Ensure that the IUT in the call state N19, on receipt of a RELEASE message, sends no message and enters the call state N0.

5.2.1.2.1.4 Exchange of FACILITY messages**GFP_N07_001 subclause 7.2.1.2.1.1.1, 7.2.1.2.1.2.6**

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, sends a FACILITY message including a Facility IE with a component and remains in the call state N10.

5.2.1.2.1.5 Interaction**GFP_N08_001 subclause 7.2.1.2.1.4**

Ensure that the IUT in the call state N10, and in the Restart call state R00, on receipt of a RESTART message with a restart indicator "all interfaces" or "single interface" indicating channel-D, sends a RELEASE message and enters in the call state N19.

GFP_N08_002 subclause 7.2.1.2.1.5

Ensure that the IUT in the Call present call state N6, on receipt of a SUSPEND message, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the call state N6.

GFP_N08_003 subclause 7.2.1.2.1.5

Ensure that the IUT in the Call present call state N6, on receipt of a RESUME message, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the call state N6.

GFP_N08_004 subclause 7.2.1.2.1.5

Ensure that the IUT in the Call present call state N3, on receipt of a SUSPEND message, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the call state N3.

GFP_N08_005 subclause 7.2.1.2.1.5

Ensure that the IUT in the Call present call state N3, on receipt of a RESUME message, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the call state N3.

GFP_N08_006 subclause 7.2.1.2.1.5

Ensure that the IUT in the Call present call state N10, on receipt of a SUSPEND message, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the call state N10.

GFP_N08_007 subclause 7.2.1.2.1.5

Ensure that the IUT in the Call present call state N10, on receipt of a RESUME message, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the call state N10.

5.2.1.2.1.6 Handling of error conditions

GFP_N09_001 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N0, on receipt of a SETUP message indicating a NCICS request, with a call reference flag bit set to 1, sends no message and remains in the call state N0.

GFP_N09_002 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N0, on receipt of a SETUP message indicating a NCICS request, with a duplicated Called party number IE (repetition not permitted), ignores the second occurrence of that IE and processes the remaining contents of the message as valid.

GFP_N09_003 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N0, on receipt of a SETUP message indicating a NCICS request, with an erroneous protocol discriminator, coded other than '08'H, sends no message and remains in the call state N0.

GFP_N09_004 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N0, on receipt of a message which is too short, sends no message and remains in the call state N0.

GFP_N09_005 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N0, on receipt of a SETUP message indicating a NCICS request, with an invalid call reference format (octet 1, bits 4 to 1, length value too high), sends no message and remains in the call state N0.

GFP_N09_006 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N0, on receipt of a SETUP message indicating a NCICS request, with a mandatory IE content error, sends a RELEASE COMPLETE message with a Cause IE indicating the cause value 100 "invalid IE contents" and remains in the call state N0.

GFP_N09_007 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N0, on receipt of a SETUP message indicating a NCICS request with an unrecognized IE (coded comprehension required), sends a RELEASE COMPLETE message with a Cause IE indicating the cause value 96 "mandatory IE missing" and remains in the call state N0.

GFP_N09_008 subclause 7.2.1.2.1.6

Ensure that the IUT in the call state N3 for a NCICS connection in a VPN context, on receipt of a message with an unrecognized message type, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 97 "message type non-existent or not implemented" or a STATUS ENQUIRY message and remains in the call state N3.

GFP_N09_009 subclause 7.2.1.2.1.6

Ensure that the IUT in the Call Present call state N6 for a NCICS connection in a VPN context, on receipt of an inopportune message (CONNECT ACKNOWLEDGE), sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the Call Present call state N6.

GFP_N09_010 subclause 7.2.1.2.1.6

Ensure that the IUT in the Incoming call proceeding N9 for a NCICS connection in a VPN context, on receipt of a SETUP ACKNOWLEDGE message, sends either a STATUS message with a Cause IE indicating the cause value 98 "message type not compatible with call state or message type non-existent or not implemented" or 101 "message not compatible with call state" or a STATUS ENQUIRY message and remains in the Incoming call proceeding N9.

5.2.1.2.1.7 Timers

GFP_N10_001 subclause 7.2.1.2.1.2.1

Ensure that the IUT in the Call present call state N6, on first expiry of the timer T303, retransmits the SETUP message and remains in the Call present call state N6.

GFP_N10_002 subclause 7.2.1.2.1.2.4

Ensure that the IUT in the Call present call state N6, after the second expiry of the timer T303, sends a RELEASE message with cause value # 102 "recovery on timer expiry", enters the call state N19 and sends a RELEASE message on the originating interface with a cause value #18 "no user responding".

GFP_N10_003 subclause 7.2.1.2.1.7

Ensure that the IUT in the Release Request call state N19, on the first expiry of the mandatory timer T308, sends a RELEASE message and remains in the Release Request call state N19.

GFP_N10_004 subclause 7.2.1.2.1.7

Ensure that the IUT in the Release Request call state N19, for a NCICS connection in VPN context on the second expiry of the mandatory timer T308, sends no message and enters the call state N0.

GFP_N10_005 subclause 7.2.1.2.1.7

Ensure that the IUT in the Call proceeding call state N9, on the first expiry of the mandatory timer T310, sends a CALL PROCEEDING message and remains in the Call proceeding call state N9.

GFP_N10_006 subclause 7.2.1.2.1.7

Ensure that the IUT in the Call proceeding call state N9, on the second expiry of the mandatory timer T310, sends no message and enters the call state N0.

GFP_N10_007 subclause 7.2.1.2.1.1.4

Ensure that the IUT in the connect request call state N8, on expiry of timer T313, send a RELEASE message with cause value #102 "recovery on timer expiry" and enters the call state N19.

GFP_N10_008 subclause 7.2.1.2.1.7

Ensure that the IUT in the Release Request call state N19, on the second expiry of the mandatory timer T313, sends no message and enters the call state N0.

5.2.1.2.2 GFT-Control requirement

Selection: IUT supports the termination of the GFT-Control protocol. PICS: MCn 1.2.2.

The TPs in this subclause refer to ISO/IEC 11582 [8], subclause 7.3.3, as referenced by subclause 7.2.1.2.2 of EN 301 061-1 [2].

5.2.1.2.2.1 Control of the Facility IE

GFP_N11_001 subclause 7.1.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, not including a NFE, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 1: The PINX entity becomes the destination entity for that Facility IE.

GFP_N11_002 subclauses 7.1.2.2.1, 7.3.3.1.2, 7.3.3.3.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with no destinationEntityAddress element, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 2: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N11_003 subclauses 7.1.2.2.2, 7.3.3.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with no destinationEntityAddress element, sends a FACILITY message containing the same Facility IE at the interface to the next PINX, and remains in the call state N10.

NOTE 3: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N11_004 subclauses 7.1.2.2.1, 7.3.3.1.2, 7.3.3.3.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with no destinationEntityAddress element, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 4: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N11_005 subclauses 7.1.2.2.2, 7.3.3.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with no destinationEntityAddress element, either sends a FACILITY message containing a Facility IE with a component, or sends a FACILITY message containing the same Facility IE at the interface to the next PINX, and remains in the call state N10.

NOTE 5: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N11_006 subclause 7.1.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element matching the IUT address, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 6: The PINX entity becomes the destination entity for that Facility IE.

GFP_N11_007 subclauses 7.1.2.2.1, 7.3.3.1.2, 7.3.3.3.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element matching the IUT address, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 7: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N11_008 subclauses 7.1.2.2.2, 7.3.3.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element matching the IUT address, sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 8: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N11_009 subclauses 7.1.2.2.1, 7.3.3.1.2, 7.3.3.3.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element not matching the IUT address, sends a FACILITY message containing a Facility IE with a component and remains in the call state N10.

NOTE 9: The PINX entity becomes the destination entity for that Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N11_010 subclauses 7.1.2.2.2, 7.3.3.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "endPINX" and with a destinationEntityAddress element not matching the IUT address, sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 10: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N11_011 subclauses 7.1.2.2.1, 7.3.3.1.2, 7.3.3.3.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element not matching the IUT address, sends no message and remains in the call state N10.

NOTE 11: The PINX discards the Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N11_012 subclauses 7.1.2.2.2, 7.3.3.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including a NFE with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element not matching the IUT address, sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 12: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N11_013 subclauses 7.1.2.2.1, 7.3.3.1.2, 7.3.3.3.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including an invalid NFE (coding or structure not as specified in clause 11 of ISO/IEC 11582 [8]), sends no message and remains in the call state N10.

NOTE 13: The PINX discards the Facility IE.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

GFP_N11_014 subclauses 7.1.2.2.2, 7.3.3.2.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing a Facility IE with a component requiring an answer, including an invalid NFE (coding or structure not as specified in clause 11 of ISO/IEC 11582 [8]), sends a FACILITY message containing the same Facility IE at the interface to the next PINX and remains in the call state N10.

NOTE 14: The PINX entity passes the Facility IE to the next PINX.

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N11_015 subclauses 7.1.2.2.1, 7.3.3.1.2, 7.3.3.3.2

Ensure that the IUT in the call state N10, on receipt of a FACILITY message containing two Facility IEs with a component requiring an answer, and including a NFE encoded with a destinationEntity element indicating "endPINX" and with no destinationEntityAddress element for the first Facility IE, and with a destinationEntity element indicating "anyTypeOfPINX" and with a destinationEntityAddress element not matching the IUT address for the second Facility IE, sends a FACILITY message containing a Facility IE with a component corresponding to the first Facility IE received and remains in the call state N10.

NOTE 15: The PINX entity becomes the destination entity for the first Facility IE and discards the second Facility IE.
The components of the two Facility IEs can be distinguished against their invoke_ID.

Selection: PICS: IUT supports End PINX functionalities: TIn 1 OR TIn 2 [8].

5.2.1.2.2.2 Control of the NCICS connection

5.2.1.2.2.2.1 Transit PINX

Selection: PICS: IUT supports Transit PINX functionalities: TIn 3 [8].

GFP_N12_001 subclause 7.3.3.2.1

Ensure that the IUT in the call state N0, on receipt of a SETUP message containing a Called Party Number IE of another PINX to which connection is possible, sends a CALL PROCEEDING message and enters the Call state N3, and sends a SETUP message at the interface to the subsequent PINX.

NOTE: The IUT request to send a SETUP to the subsequent PINX.

GFP_N12_002 subclause 7.3.3.2.1

Ensure that the IUT in the call state N0, on receipt of a SETUP message containing a Called Party Number IE with insufficient information to enable routing to a further PINX, sends a RELEASE message and enters the Call state N19.

GFP_N12_003 subclause 7.3.3.2.2

Ensure that the IUT in the call state N3, to indicate the receipt of a CONNECT message at the interface of the subsequent PINX, sends a CONNECT message and enters the Call state N10.

GFP_N12_004 subclause 7.3.3.2.2

Ensure that the IUT in the call state N3, to indicate the receipt of a RELEASE message at the interface of the subsequent PINX, sends a RELEASE message and enters the Call state N19.

GFP_N12_005 subclause 7.3.3.2.2

Ensure that the IUT in the call state N3, to indicate the receipt of a RELEASE COMPLETE message at the interface of the subsequent PINX, sends a RELEASE message and enters the Call state N19.

GFP_N12_006 subclause 7.3.3.2.2

Ensure that the IUT in the call state N3, on receipt of a RELEASE message, sends a RELEASE COMPLETE message, enters the Call state N0, and sends a RELEASE message at the interface to the subsequent PINX

GFP_N12_007 subclause 7.3.3.2.3

Ensure that the IUT in the call state N10, to indicate the receipt of a RELEASE message at the interface of the subsequent PINX, sends a RELEASE message and enters the Call state N19.

GFP_N12_008 subclause 7.3.3.2.3

Ensure that the IUT in the call state N10, on receipt of a RELEASE message, sends a RELEASE COMPLETE message, enters the Call state N0, and sends a RELEASE message at the interface to the subsequent PINX.

5.2.2 Generic notification procedures

The TPs in this subclause refer to ISO/IEC 11582 [8], subclause 7.4, as referenced by subclause 8.1 of EN 301 061-1 [2].

5.2.2.1 Protocol control

GFP_N13_016 subclause 7.4.2

Ensure that the IUT in the call state N0, in order to initiate a call in a VPN context with a notification information, sends a SETUP message with a notification IE included and enter in the Call state N6.

GFP_N13_017 subclause 7.4.2

Ensure that the IUT in the call state N1 in a VPN context, in order to transmit a notification information, sends an ALERTING or a NOTIFY message with a notification IE included and enters respectively in the call state N4 or N1.

GFP_N13_018 subclause 7.4.2

Ensure that the IUT in the call state N3 in a VPN context, in order to transmit a notification information, sends an ALERTING or a NOTIFY message with a notification IE included and enters respectively in the call state N4 or N3.

GFP_N13_019 subclause 7.4.2

Ensure that the IUT in the call state N1, N4, or N3 in a VPN context, in order to transmit a notification information, sends a CONNECT or a NOTIFY message with a notification IE included and enters in the call state U8, or remains in the same state.

GFP_N13_020 subclause 7.4.2

Ensure that the IUT in the call state N10 in a VPN context, in order to release the call with a notification information, sends a DISCONNECT message with a notification IE included and enters the call state N12.

GFP_N13_021 subclause 7.4.2

Ensure that the IUT in the call state N10 for a NCICS connection in a VPN context, in order to release the NCICS connection with a notification information, sends a RELEASE message with a notification IE included and enters the call state N19.

5.2.2.2 GFT-control

GFP_N14_022 subclause 7.4.3

Ensure that the IUT in the call state N9 as a transit PINX in a VPN context, on receipt of a notify indication included in a NOTIFY, ALERTING, CONNECT, FACILITY or PROGRESS message, sends a NOTIFY, ALERTING, CONNECT, FACILITY or PROGRESS message with the notification indicator IE included to the next PINX entity.

GFP_N14_023 subclause 7.4.3

Ensure that the IUT in the call state N10 as a transit PINX in a VPN context, on receipt of a notify indication included in a NOTIFY or FACILITY message, sends an NOTIFY, or FACILITY message with the notification indicator IE included to the next PINX entity

GFP_N14_024 subclause 7.4.3

Ensure that the IUT in the call state N9 as a end PINX in a VPN context, on receipt of a notify indication included in a NOTIFY, ALERTING, CONNECT, FACILITY or PROGRESS message, sends a NOTIFY, ALERTING, CONNECT, FACILITY, or PROGRESS message with the notification indicator IE included to the end user destination interface.

GFP_N14_025 subclause 7.4.3

Ensure that the IUT in the call state N10 as a end PINX in a VPN context, on receipt of a notify indication included in a NOTIFY or FACILITY message, sends an NOTIFY or FACILITY message with the notification indicator IE included to the end user destination interface.

GFP_N14_026 subclause 7.4.3

Ensure that the IUT in the Disconnect request state N12 in a VPN context, on receipt of a notify indication included in a NOTIFY or FACILITY message, sends no message and remains in the call state N12.

GFP_N14_027 subclause 7.4.3

Ensure that the IUT in the call state N19 in a VPN context, on receipt of a notify indication included in a NOTIFY or FACILITY message, sends no message and remains in the call state N19.

5.2.3 Co-ordination function

The TPs in this subclause refer to ISO/IEC 11582 [8], subclause 8.1, as referenced by subclause 9.1 of EN 301 061-1 [2].

GFP_N15_009 subclause 8.1.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an Application Protocol Data Unit (APDU) with a Protocol profile not indicating ROSE operation, sends no message and remains in the call state N10.

GFP_N15_010 subclause 8.1.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an interpretation APDU encoded as "rejectUnrecognisedInvokePdu" and an APDU of type InvokePDU with an unrecognized operation value, sends a Facility IE with a component included in a FACILITY message containing an APDU of type RejectPDU and remains in the call state N10.

GFP_N15_011 subclause 8.1.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing no interpretation APDU and an APDU of type InvokePDU with an unrecognized operation value, sends a Facility IE with a component included in a FACILITY message containing an APDU of type RejectPDU and remains in the call state N10.

GFP_N15_012 subclause 8.1.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an interpretation APDU encoded as "clearCallIfAnyInvokePduNotRecognised" and an APDU of type InvokePDU with an unrecognized operation value, sends a Facility IE with a component included in a RELEASE message containing an APDU of type RejectPDU and enters in the call state N19.

GFP_N15_013 subclause 8.1.2

Ensure that the IUT in the call state N10 for a NCICS connection in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an interpretation APDU encoded as "clearCallIfAnyInvokePduNotRecognised" and an APDU of type InvokePDU with an unrecognized operation value, sends a Facility IE with a component included in a RELEASE message containing an APDU of type RejectPDU and enters in the all state N19.

GFP_N15_014 subclause 8.1.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an interpretation APDU encoded as "discardAnyUnrecognisedInvokePdu" and an APDU of type InvokePDU with an unrecognized operation value, sends no message and remains in the call state N10.

GFP_N15_015 subclause 8.1.2

Ensure that the IUT in the call state N10 for a NCICS connection in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an interpretation APDU encoded as "discardAnyUnrecognisedInvokePdu" and an APDU of type InvokePDU with an unrecognized operation value, sends no message and remains in the call state N10.

5.2.4 ROSE requirements

The TPs in this subclause refer to ISO/IEC 11582 [8], subclause 8.2, as referenced by subclause 9.2 of EN 301 061-1 [2].

GFP_N16_001 subclause 8.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an APDU with an unrecognized tag (ie. Interpretation APDU), sends a Facility IE with a component included in a FACILITY message containing an APDU of type RejectPDU with the "problem" field encoded as "unrecognisedPDU" and remains in the call state N10.

GFP_N16_002 subclause 8.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an APDU with an undefined tag, sends a Facility IE with a component included in a FACILITY message containing an APDU of type RejectPDU with the "problem" field encoded as "unrecognisedPDU" and remains in the call state N10.

GFP_N16_003 subclause 8.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an APDU of type InvokePDU with an unrecognized operation value, sends a Facility IE with a component included in a FACILITY message containing an APDU of type RejectPDU with the InvokeID as received and with the "problem" field encoded as "unrecognisedOperation" and remains in the call state N10.

GFP_N16_004 subclause 8.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an APDU of type ReturnResultPDU with an unrecognized InvokeID, sends a Facility IE with a component included in a FACILITY message containing an APDU of type RejectPDU with the "problem" field encoded as "unrecognisedInvocation" and remains in the call state N10.

GFP_N16_005 subclause 8.2

Ensure that the IUT in the call state N10 in a VPN context, on receipt of a FACILITY message containing a Facility IE with a component containing an APDU of type ReturnErrorPDU with an unrecognized InvokeID, sends a Facility IE with a component included in a FACILITY message containing an APDU of type RejectPDU with the InvokeID as received and with the "problem" field encoded as "unrecognisedInvocation" and remains in the call state N10.

5.2.5 Flow control

Selection: IUT supports the flow control procedure. PICS: MCn4.

GFP_N17_001 annex C

Ensure that the IUT in the call state N10 in VPN context, having already received (N) FACILITY message containing a Facility IE with a component requiring an answer within the period (T), on receipt of a FACILITY message, sends no message and remains in the call state N10.

GFP_N17_002 annex C

Ensure that the IUT in the call state N10 in VPN context, having already received (N) FACILITY message containing a Facility IE with a component requiring an answer within the period (T), on receipt of a FACILITY message after expiry of timer (T), sends a FACILITY message and remains in the call state N10.

GFP_N17_028 annex C

Ensure that the IUT in the call state N10 in a VPN context, having already received (N) NOTIFY message, on receipt of a NOTIFY message, sends no message and remains in the call state N10.

GFP_N17_029 annex C

Ensure that the IUT in the call state N10 as a transit PINX in a VPN context, having already received (N) NOTIFY message, on receipt of a NOTIFY message after expiry of timer (T), sends an NOTIFY to the next PINX entity and remains in the same state.

GFP_N17_030 annex C

Ensure that the IUT in the call state N10 as a end PINX in a VPN context, having already received (N) NOTIFY message, on receipt of a NOTIFY message after expiry of timer (T), sends an NOTIFY message with the notification indicator IE included to the end user destination interface.

6 Compliance

An ATS which complies with this TSS&TP specification shall:

- a) consist of a set of test cases corresponding to the set or to a subset of the TPs specified in clause 6;
- b) use a TSS which is an appropriate subset of the whole of the TSS specified in clause 4;
- c) use the same naming conventions for the test groups and test cases;
- d) maintain the relationship specified in clause 5 between the test groups and TPs and the entries in the PICS proforma to be used for test case deselection;
- e) comply with ISO/IEC 9646-2 [6].

In the case of a) or b), a subset shall be used only where a particular Abstract Test Method (ATM) makes some TPs untestable. All testable TPs from clause 5 shall be included in a compliant ATS.

7 Requirements for a comprehensive testing service

As a minimum the Remote test method, as specified in ISO/IEC 9646-2 [6], shall be used by any organization claiming to provide a comprehensive testing service for network equipment claiming conformance to EN 301 061-1 [2].
