# Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

This ETSI Standard (ES) has been produced by ETSI Technical Committee Telecommunications and Internet converged Services and Protocols for Advanced Networking (TISPAN), and is now submitted for the ETSI standards Membership Approval Procedure.

The present document is part 12 of a multi-part deliverable covering Open Service Access (OSA); Parlay X Web Services, as identified below:

- Part 1: "Common";
- Part 2: "Third Party Call";
- Part 3: "Call Notification";
- Part 4: "Short Messaging";
- Part 5: "Multimedia Messaging";
- Part 6: "Payment";
- Part 7: "Account Management";
- Part 8: "Terminal Status";
- Part 9: "Terminal Location";
- Part 10: "Call Handling";
- Part 11: "Audio Call";
- Part 12: "Multimedia Conference";**
- Part 13: "Address List Management";
- Part 14: "Presence".

The present document has been defined jointly between ETSI, The Parlay Group (<http://www.parlay.org>) and the 3GPP.

**The present document forms part of the Parlay X 2.2 set of specifications.**

**The present document is equivalent to 3GPP TS 29.199-12 V6.6.0 (Release 6).**

---

# 1 Scope

The present document is part 12 of the Stage 3 Parlay X 2 Web Services specification for Open Service Access (OSA).

The OSA specifications define an architecture that enables application developers to make use of network functionality through an open standardized interface, i.e. the OSA APIs.

The present document specifies the Multimedia Conference Web Service. The following are defined here:

- Name spaces.
- Sequence diagrams.
- Data definitions.
- Interface specification plus detailed method descriptions.
- Fault definitions.
- Service Policies.
- WSDL Description of the interfaces.

---

# 2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific.

- For a specific reference, subsequent revisions do not apply.
- Non-specific reference may be made only to a complete document or a part thereof and only in the following cases:
  - if it is accepted that it will be possible to use all future changes of the referenced document for the purposes of the referring document;
  - for informative references.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

For online referenced documents, information sufficient to identify and locate the source shall be provided. Preferably, the primary source of the referenced document should be cited, in order to ensure traceability. Furthermore, the reference should, as far as possible, remain valid for the expected life of the document. The reference shall include the method of access to the referenced document and the full network address, with the same punctuation and use of upper case and lower case letters.

NOTE: While any hyperlinks included in this clause were valid at the time of publication ETSI cannot guarantee their long term validity.

## 2.1 Normative references

The following referenced documents are indispensable for the application of the present document. For dated references, only the edition cited applies. For non-specific references, the latest edition of the referenced document (including any amendments) applies.

[1] W3C Recommendation (2 May 2001): "XML Schema Part 2: Datatypes".

NOTE: Available at <http://www.w3.org/TR/2001/REC-xmlschema-2-20010502/>.

[2] ETSI ES 202 391-1: "Open Service Access (OSA); Parlay X Web Services; Part 1: Common (Parlay X 2)".

---

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in ES 202 391-1 [2] apply.

### 3.2 Abbreviations

For the purposes of the present document, the abbreviations given in ES 202 391-1 [2] apply.

---

## 4 Detailed service description

The Multimedia Conferencing is a simple Web Service that allows the creation of a multimedia conference and the dynamic management of the participants and the media involved.

The underlying model of the service is based on the following entities:

- **Conference:** a "context" (uniquely identified) to which participants can be added/removed.
- **Participant:** each of the parties involved in the conference. Media can be added/removed for each participant. There may exist a participant that is also the "owner" of the conference, i.e. the user who can end the call and/or be the reference user for billing purposes.
- **Media:** the conference can utilize multiple media streams to support the participants' communication. In particular both audio and video streams are available, including the specific stream direction (i.e. in, out, bidirectional).

An application setting up a multimedia conference must initially invoke the **createConference** operation. The result of such invocation is the creation of a "context" that represents a "virtual" room where users can "meet". A unique identifier is assigned to the just-created conference. At this stage no participant is connected.

Subsequently the application may wish to add participants to the conference. In order to do so the operation **inviteParticipant** can be used. The result of such an operation is to alert the user of the incoming connection request (e.g. the user's terminal rings).

If the application wishes to check whether the user has accepted the invitation (i.e. is connected) it can invoke (at a later time) the **getParticipantInfo** operation.

Note that:

- As soon as the first participant connects, the conference becomes "active". The duration of the conference is then measured starting from the moment the conference has become active.
- The initial media set utilized by the participant will depend on the conference type and the media actually supported by the participant's terminal.

During the conference session the application is able to:

- Add (or remove) a specific media stream to a single participant: e.g. adding a video bidirectional stream to a participant that has an audio connection to the conference. This can be obtained by invoking the **addMediaForParticipant** and the **deleteMediaForParticipant** operations.
- Disconnect a participant from the conference, by invoking the **disconnectParticipant** operation.

- Retrieve information related to the conference and its status, by invoking **getConferenceInfo** and **getParticipants**.

There are different conditions that can determine the end of the conference:

- 1) The application may invoke the method **endConference**, that "forces" the termination of the conference and the disconnection of all participants.
- 2) The owner of the conference (if defined) leaves the conference. If the owner is not defined this condition will apply when all the participants have left the conference (disconnected).
- 3) The conference duration exceeds a maximum value (specified during the conference creation step).

---

## 5 Namespaces

The Multimedia Conference interface uses the namespace:

[http://www.csapi.org/wsdl/parlayx/multimedia\\_conference/v2\\_3](http://www.csapi.org/wsdl/parlayx/multimedia_conference/v2_3)

The data types are defined in the namespace:

[http://www.csapi.org/schema/parlayx/multimedia\\_conference/v2\\_2](http://www.csapi.org/schema/parlayx/multimedia_conference/v2_2)

The "xsd" namespace is used in the present document to refer to the XML Schema data types defined in XML Schema [1]. The use of the name "xsd" is not semantically significant.

---

## 6 Sequence diagrams

The following sequence diagrams illustrate typical scenarios of interaction between an application and the Multimedia Conferencing Web Service.

### 6.1 Setting up a conference

Set up a multimedia conference call.

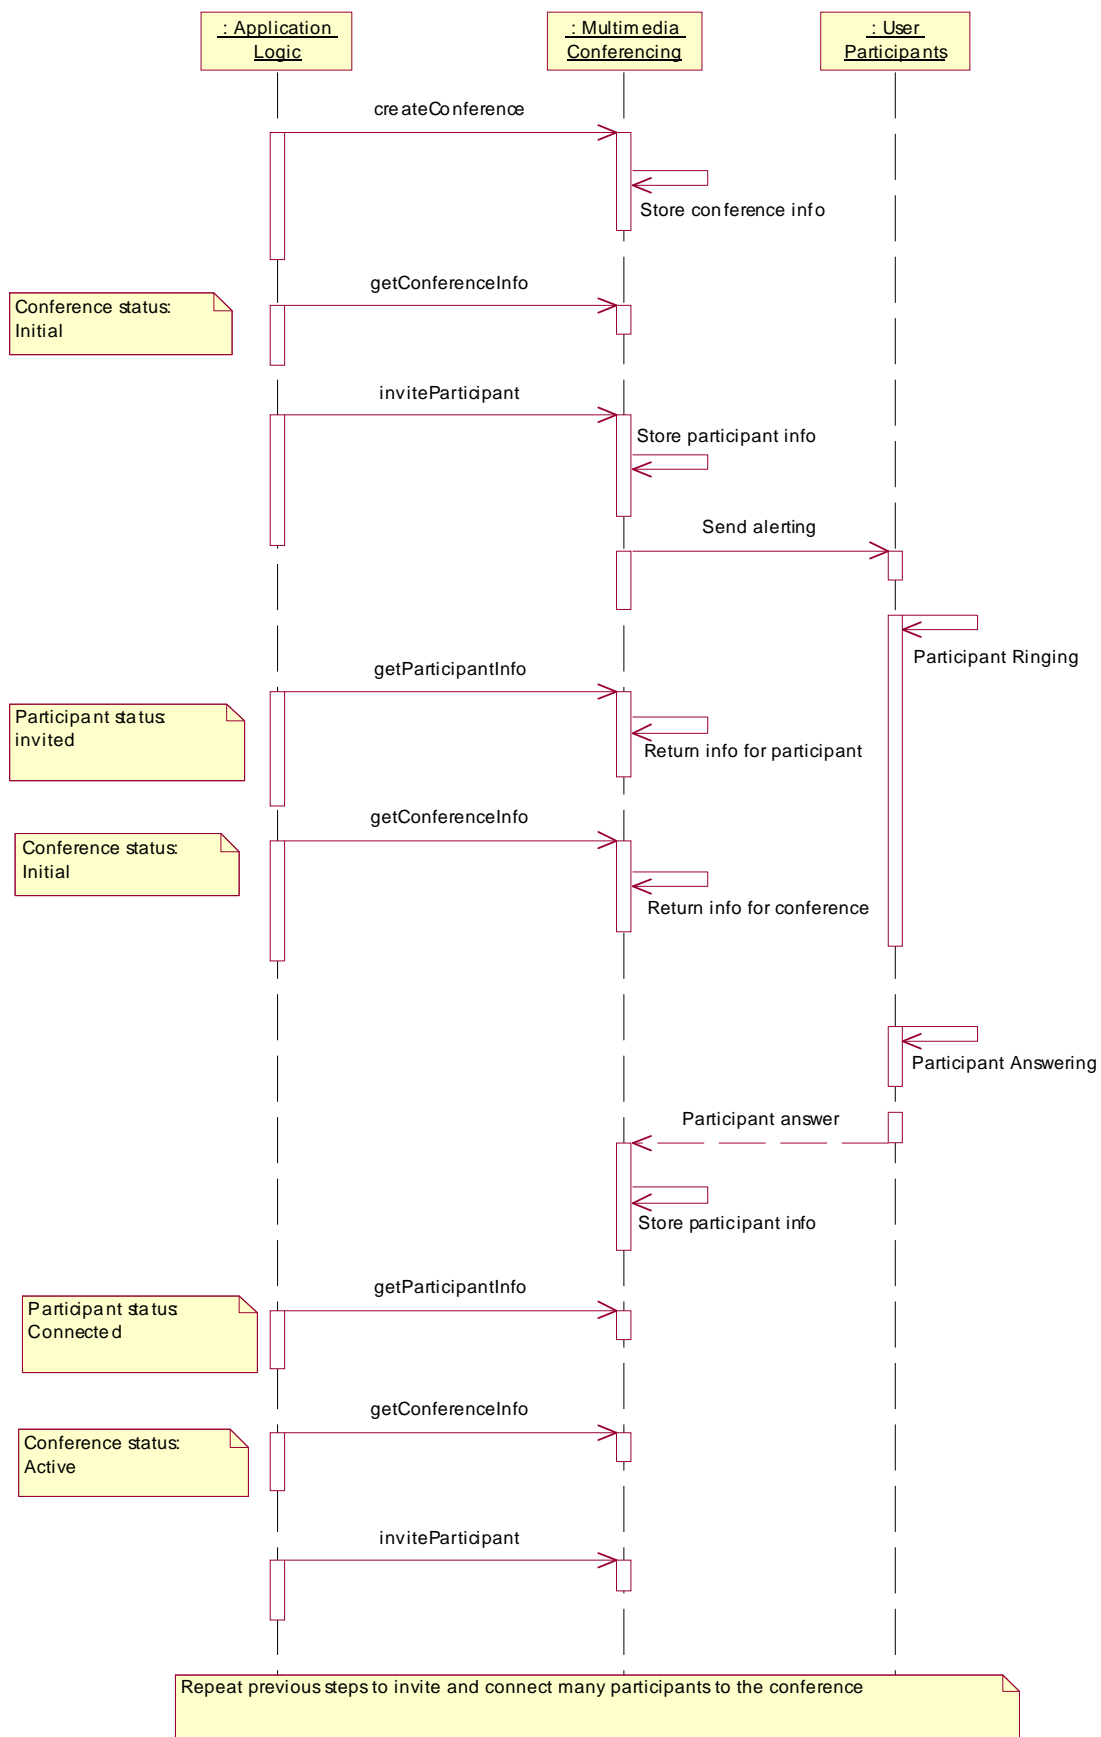

Figure 1

## 6.2 Adding and Removing Media

On an existing conference call, add media to, or remove media from, a participant.

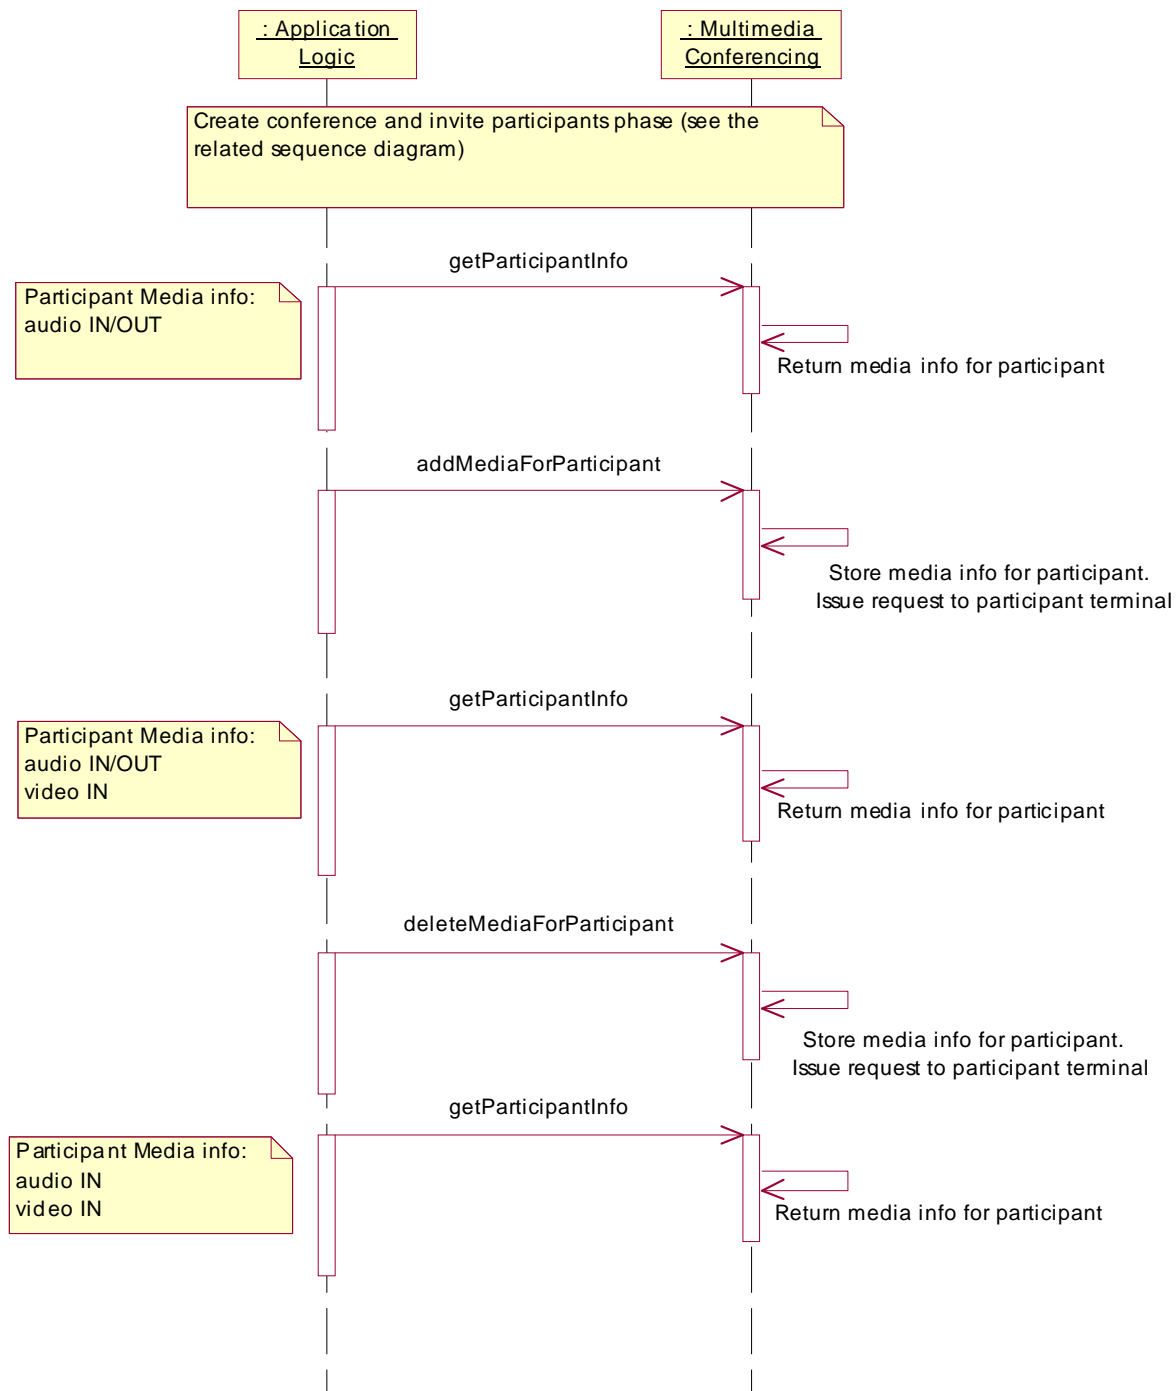

Figure 2

### 6.3 Conference owner disconnects

During a conference call, the conference owner disconnects.

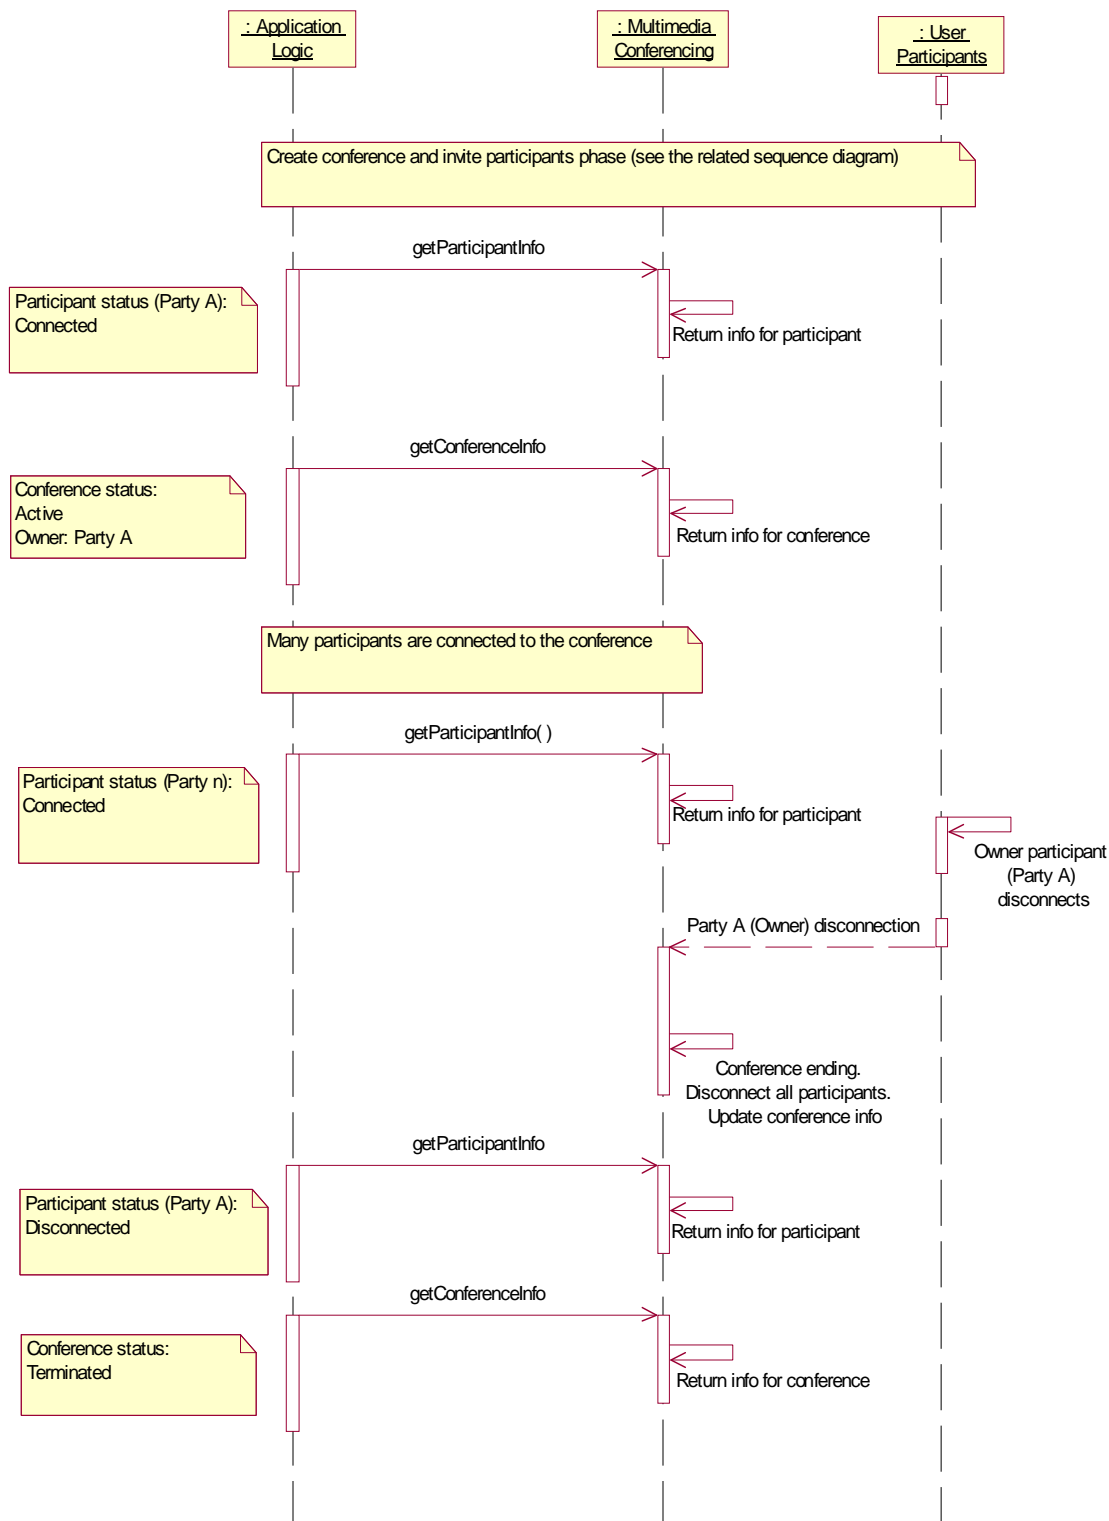

Figure 3

## 6.4 All participants disconnect

End of conference call processing when all participants disconnect.

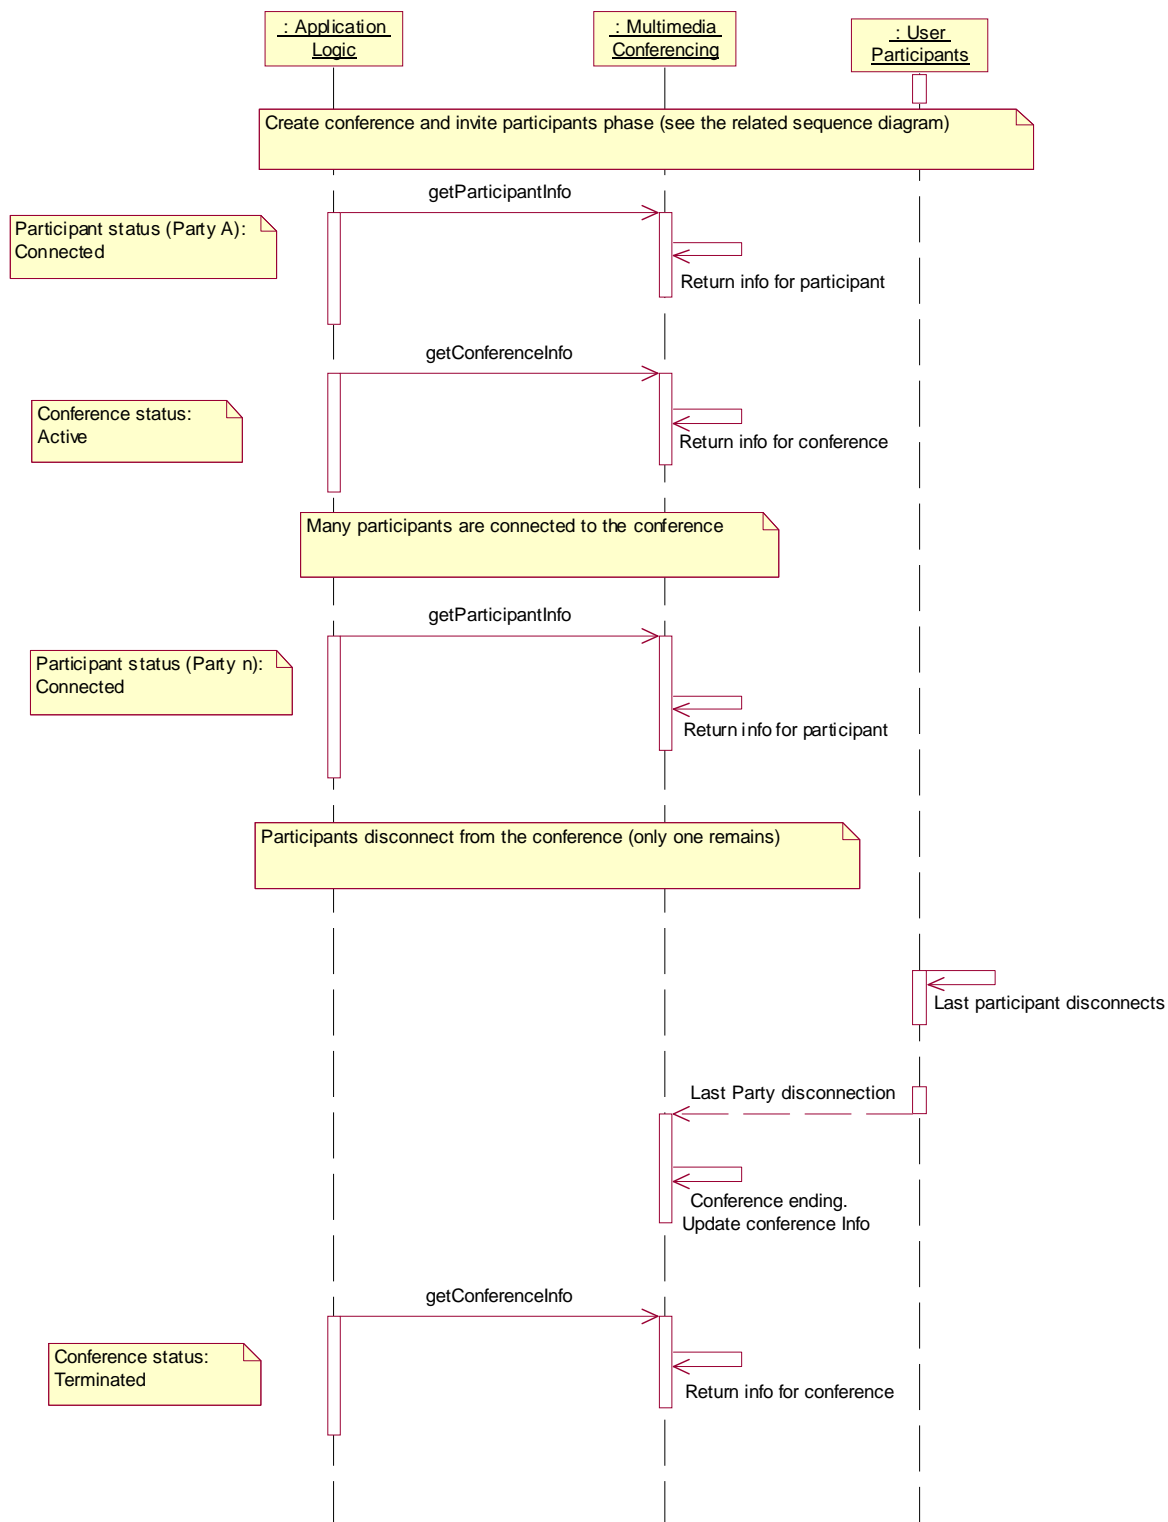

Figure 4

## 6.5 Conference ended by application

End of conference call processing when the conference is ended by the application.

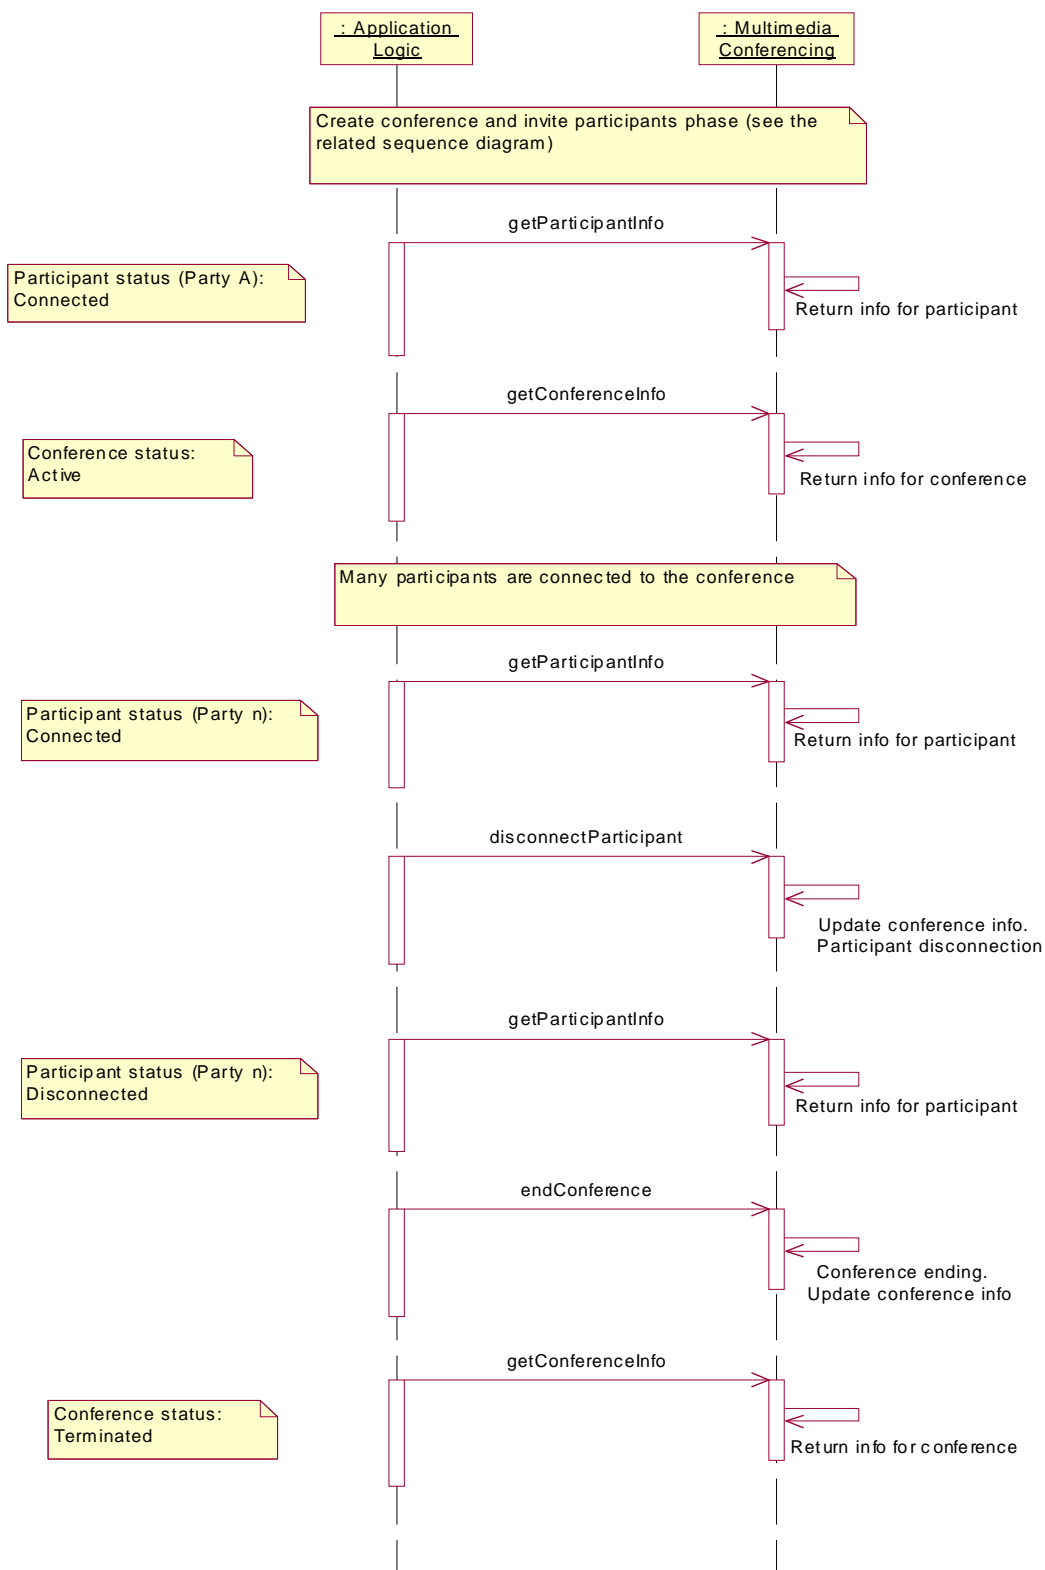

Figure 5

## 7 XML Schema data type definition

### 7.1 ConferenceStatus enumeration

Enumeration value	Description
Initial	The conference has been created but no participant is connected yet
Active	The conference is active, i.e. at least one user has connected
Terminated	The conference was terminated

### 7.2 ConferenceInfo structure

Element name	Element type	Optional	Description
status	ConferenceStatus	No	Status of the conference
startTime	xsd:dateTime	No	The time at which the conference was created
duration	xsd:int	No	The duration of the conference so far (in seconds)
owner	xsd:anyURI	No	Conference owner
numberOfParticipants	xsd:int	No	Current number of connected participants
maximumNumberOfParticipants	xsd:int	No	Maximum number of participants
conferenceIdentifier	xsd:string	No	Conference identifier
conferenceDescription	xsd:string	No	Conference description

### 7.3 ParticipantInfo structure

Element name	Element type	Optional	Description
participant	xsd:anyURI	No	Participant identifier
mediaInfo	MediaInfo[1..unbounded]	No	Media information currently used
startTime	xsd:dateTime	No	Time this participant joined the conference
status	ParticipantStatus	No	Status of participant

### 7.4 ParticipantStatus enumeration

Enumeration value	Description
Invited	Participant invited but not connected yet
Connected	Participant connected
Disconnected	Participant disconnected

### 7.5 Media enumeration

Enumeration value	Description
Audio	Audio media type
Video	Video media type
Chat	Chat media type
Data	Other media type

## 7.6 MediaDirection enumeration

Enumeration value	Description
In	Incoming
Out	Outgoing
InOut	Bidirectional

## 7.7 MediaInfo structure

Element name	Element Type	Optional	Description
mediaType	Media	No	Type of media information
mediaDirection	MediaDirection	No	Direction of media
value	xsd:string	No	Specifies audio or video codec, or data or chat encoding, for example G.723. In case there is no specific encoding (e.g. binary data) this may be an empty string.

---

# 8 Web Service interface definition

## 8.1 Interface: MultimediaConference

The MultimediaConference interface can be used by an application for creating a multimedia conference call and for dynamically managing the participants and the media involved in the call.

### 8.1.1 Operation: createConference

The invocation of **createConference** requests to create a multi-media conference with initially no participants connected. The reference to the new multimedia conference is returned in the output parameter.

The conference termination can be driven either by a user action or by the expiring of a maximum duration. In particular, three possible situations are considered. In the first scenario, the concept of the "conference owner" is used. This user that has the control of the call and when the conference owner leaves the conference, all users are disconnected (such a user could be for instance the reference for the conference billing). In this scenario, the optional part **conferenceOwner** is present in the request message.

In the second scenario, the conference is terminated when the last participant abandons (in this case the part **conferenceOwner** is not present).

A third case is when the optional part **maximumDuration** is present: in this situation, when the maximum duration is reached, the conference is terminated.

The selection of the scenario depends on the presence of the optional parts; if no optional part is present, the conference end condition is the disconnection of the last user in conference, if both are present, the conference is terminated when the duration expires (this case could happen if the information concerning the conference owner is needed for billing purposes).

The values of the **maximumDuration** and **maximumNumberOfParticipants** parts must not exceed the corresponding service policies otherwise a policy exception is raised.

### 8.1.1.1 Input message: createConferenceRequest

Part name	Part type	Optional	Description
conferenceType	xsd:string	Yes	Conference type, i.e. one of a list of operator-specific identifiers that indicates how the conference is rendered on the terminals
conferenceDescription	xsd:string	No	A text describing the conference
charging	common:Charging Information	Yes	If present, defines the charge per unit of time consumed on the conference call. If the service does not support charging, a PolicyException (POL0008) will be returned.
maximumDuration	xsd:int	Yes	If present it represents the maximum duration of the multimedia conference in seconds. If this part is present, it represents the end condition of the conference.
maximumNumberOfParticipants	xsd:int	No	Maximum number of participants allowed
conferenceOwner	xsd:anyURI	Yes	It is the address of the multimedia conference owner. If this part is present, and the maximumDuration is not present, the conference is terminated when this user disconnects, else this information can be used for billing or other purpose

### 8.1.1.2 Output message: createConferenceResponse

Part name	Part type	Optional	Description
result	xsd:string	No	Conference identifier

### 8.1.1.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.
- POL0008: Charging not supported.
- POL0240: Too many participants.
- POL0242: Maximum duration exceeded.

## 8.1.2 Operation: getConferenceInfo

The invocation of **getConferenceInfo** requests the information concerning the current status of the multi-media conference call identified by **conferenceIdentifier**.

### 8.1.2.1 Input message: getConferenceInfoRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier

### 8.1.2.2 Output message: getConferenceInfoResponse

Part name	Part type	Optional	Description
result	ConferenceInfo	No	Status of the conference

### 8.1.2.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.

## 8.1.3 Operation: endConference

The invocation of **endConference** requests to terminate the multi-media conference call identified by **conferenceIdentifier**.

### 8.1.3.1 Input message: endConferenceRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier

### 8.1.3.2 Output message: endConferenceResponse

Part name	Part type	Optional	Description
None			

### 8.1.3.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.

## 8.1.4 Operation: inviteParticipant

The invocation of **inviteParticipant** requests to add a new participant specified by **participant** to the multi-media conference call identified by **conferenceIdentifier**. The media used for the initial connection of the new participant depends on the conference type and the participant's supported media.

The operation will fail if the conference has already reached the maximum number of participants (as specified in the creation operation).

### 8.1.4.1 Input message: inviteParticipantRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier
participant	xsd:anyURI	No	New participant invited

### 8.1.4.2 Output message: inviteParticipantResponse

Part name	Part type	Optional	Description
None			

### 8.1.4.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.
- POL0240: Too many participants.

## 8.1.5 Operation: disconnectParticipant

The invocation of **disconnectParticipant** requests to disconnect the participant specified by **participant** from the multi-media conference call identified by **conferenceIdentifier**.

### 8.1.5.1 Input message: disconnectParticipantRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier
participant	xsd:anyURI	No	Participant

### 8.1.5.2 Output message: disconnectParticipantResponse

Part name	Part type	Optional	Description
None			

### 8.1.5.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.

## 8.1.6 Operation: getParticipantInfo

The invocation of **getParticipantInfo** requests information concerning the current status of the participant specified by **participant**, in the multi-media conference call identified by **conferenceIdentifier**.

### 8.1.6.1 Input message: getParticipantInfoRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier
participant	xsd:anyURI	No	Participant

### 8.1.6.2 Output message: getParticipantInfoResponse

Part name	Part type	Optional	Description
result	ParticipantInfo	No	Status of the participant

### 8.1.6.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.

## 8.1.7 Operation: getParticipants

The invocation of **getParticipants** requests information concerning the current status of each participant of the multi-media conference call identified by **conferenceIdentifier**. The output includes participants already disconnected from the conference (if any).

### 8.1.7.1 Input message: getParticipantsRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier

### 8.1.7.2 Output message: getParticipantsResponse

Part name	Part type	Optional	Description
result	ParticipantInfo [0..unbounded]	Yes	Array containing status information for each participant

### 8.1.7.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.

## 8.1.8 Operation: addMediaForParticipant

The invocation of **addMediaForParticipant** requests to add a **media** stream to the media set used by **participant**. The operation is executed on a single participant connected to the multi-media conference call identified by **conferenceIdentifier**. The new media has to be compatible with the type of multimedia conference and the set of media supported by the participant terminal, otherwise the operation will fail. If the participant has already the requested media stream, the operation will fail and throw ServiceException SVC0210.

### 8.1.8.1 Input message: addMediaForParticipantRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier
participant	xsd:anyURI	No	Participant
media	Media	No	It identifies the new media stream the participant will receive/send
mediaDirection	MediaDirection	No	It indicates the direction of the media stream to add (in, out, etc.)

### 8.1.8.2 Output message: addMediaForParticipantResponse

Part name	Part type	Optional	Description
None			

### 8.1.8.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.
- SVC0210: Duplicate media stream.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.
- POL0241: Unavailable media.

## 8.1.9 Operation: deleteMediaForParticipant

The invocation of **deleteMediaForParticipant** requests to remove a **media** stream from the media set used by **participant**. The operation is executed on a single participant connected to the multi-media conference call identified by **conferenceIdentifier**. If the participant does not have the requested media stream, the operation will fail and throw ServiceException SVC0211.

### 8.1.9.1 Input message: deleteMediaForParticipantRequest

Part name	Part type	Optional	Description
conferenceIdentifier	xsd:string	No	Conference identifier
participant	xsd:anyURI	No	Participant
media	Media	No	It identifies the media the user is not enabled to use any more
mediaDirection	MediaDirection	No	It indicates the direction of the media stream to remove (in, out, etc.)

### 8.1.9.2 Output message: deleteMediaForParticipantResponse

Part name	Part type	Optional	Description
None			

### 8.1.9.3 Referenced faults

ServiceException from ES 202 391-1 [2]:

- SVC0001: Service error.
- SVC0002: Invalid input value.

- SVC0211: Media stream does not match.

PolicyException from ES 202 391-1 [2]:

- POL0001: Policy error.

## 9 Fault definitions

### 9.1 PolicyException

#### 9.1.1 POL0240: Too many participants

Too many participants.

Name	Description
messageId	POL0240
text	Too many participants
variables	None

#### 9.1.2 POL0241: Unavailable media

Name	Description
messageId	POL0241
text	Unavailable media
variables	None

#### 9.1.3 POL0242: Maximum duration exceeded

Name	Description
messageId	POL0242
text	Maximum duration exceeded. Maximum allowed is %1 seconds
variables	%1 - maximum duration set by service policy

### 9.2 ServiceException

#### 9.2.1 SVC0210: Duplicate media stream

Name	Description
messageId	SVC0210
text	Duplicate media stream
variables	None

#### 9.2.2 SVC0211: Media stream does not match

Name	Description
messageId	SVC0211
text	Media stream does not match
variables	None

---

## 10 Service policies

Service policies for this service.

<b>Name</b>	<b>Type</b>	<b>Description</b>
MaximumDuration	xsd:int	Maximum duration (in seconds) a conference may be set up for
MaximumParticipants	xsd:int	Maximum number of participants a conference may be set up for
ChargingSupported	xsd:boolean	Indicates whether charging is supported for the <b>createConference</b> operation

---

## Annex A (normative): WSDL for Multimedia Conference

The document/literal WSDL representation of this interface specification is compliant to ES 202 391-1 [2] and is contained in text files (contained in archive es\_20239112v010301m0.zip) which accompany the present document.
