Multi-access Edge Computing (MEC);
UE Identity API

Disclaimer

The present document has been produced and approved by the Multi-access Edge Computing (MEC) ETSI Industry Specification Group (ISG) and represents the views of those members who participated in this ISG.
It does not necessarily represent the views of the entire ETSI membership.
Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: “Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards”, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Group Specification (GS) has been produced by ETSI Industry Specification Group (ISG) Multi-access Edge Computing (MEC).

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.
1 Scope

The present document focuses on the UE Identity functionality. It describes the related application policy information (including authorization, access control and traffic rule pattern format), information flows, required information and service aggregation patterns. The present document specifies the necessary API, data model and data format, considering existing API(s) if applicable.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at https://docbox.etsi.org/Reference.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

[2] ETSI GS MEC 002: "Multi-access Edge Computing (MEC); Phase 2: Use Cases and Requirements".
[3] ETSI GS MEC 009: "Multi-access Edge Computing (MEC); General principles, patterns and common aspects of MEC Service APIs".
[4] ETSI GS MEC 011: "Multi-access Edge Computing (MEC); Edge Platform Application Enablement".
NOTE 2: Obsoleted by IETF RFC 8446.
2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] OpenAPI Specification.

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in ETSI GS MEC 001 [i.2] apply.

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI GS MEC 001 [i.2] and the following apply:

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Definition</th>

</thead>
<tbody>
<tr>
<td>API</td>
<td>Application Programming Interface</td>
</tr>
<tr>
<td>HTTP</td>
<td>Hypertext Transfer Protocol</td>
</tr>
<tr>
<td>IETF</td>
<td>Internet Engineering Task Force</td>
</tr>
<tr>
<td>JSON</td>
<td>JavaScript Object Notation</td>
</tr>
<tr>
<td>TLS</td>
<td>Transport Layer Security</td>
</tr>
<tr>
<td>UE</td>
<td>User Equipment</td>
</tr>
<tr>
<td>URI</td>
<td>Uniform Resource Indicator or Uniform Resource Identifier</td>
</tr>
</tbody>
</table>

4 Overview

The present document specifies the API for the UE Identity feature to support the corresponding requirements defined for the Multi-access Edge Computing in ETSI GS MEC 002 [2].

Clause 5 contains the description of the feature and the information flows of the procedures. Clause 6 describes the data model and data format applied in the UE Identity API. Clause 7 is the actual API definition of the UE Identity feature.
5 Description of the feature (informative)

5.1 Introduction

The purpose of the UE Identity feature is to allow UE specific traffic rules in the MEC system.

When the MEC system supports the UE Identity feature, the MEC platform provides the functionality for a MEC application to register a tag (representing a UE) or a list of tags. Each tag has been mapped into a specific UE in the mobile network operator's system. The MEC platform is provided with the mapping information. How the mapping is realized is outside the scope of the present document. The UE Identity tag registration triggers the MEC platform to activate the corresponding traffic rule(s) linked to the tag. Later, if the application does not wish to use the traffic rule for that user, it may de-register the UE Identity tag by invoking the de-registration procedure.

5.2 Sequence diagrams

5.2.1 General

The following clauses describe how MEC applications can register and de-register tags as part of UE Identity feature. The related sequence diagrams are presented.

5.2.2 UE Identity tag registration

Figure 5.2.2-1 illustrates the message flow for the UE Identity tag registration procedure. The tag is used in UE Identity feature.

![Sequence diagram](image)

**Figure 5.2.2-1: UE Identity tag registration**

The UE Identity tag registration procedure consists of the following steps:

1) The MEC application instance sends a PUT request with the message body containing the UeIdentityTagInfo data structure with the state set to REGISTERED to the MEC platform. The variable {appId} is set to the application instance identifier assigned to the MEC application instance.

2) The MEC platform sends "200 OK" response with the message body containing the UeIdentityTagInfo data structure with the state set to REGISTERED.

Once the tag or the list of tags, is successfully registered in the MEC platform the related traffic rules can then be activated.

NOTE: It is out of the scope of the present document how the MEC application obtains the UE Identity tag(s).
5.2.3 UE Identity tag de-registration

Figure 5.2.3-1 illustrates the message flow for the UE Identity tag deregistration procedure.

The UE Identity tag deregistration procedure consists of the following steps:

1) The MEC application instance sends a PUT request with the message body containing the UeIdentityTagInfo data structure with the state set to UNREGISTERED to the MEC platform. The variable \{appId\} is set to the application instance identifier assigned to the MEC application instance.

2) The MEC platform sends "200 OK" response with the message body containing the UeIdentityTagInfo data structure with the state set to UNREGISTERED.

Once the tag or the list of tags is successfully deregistered in the MEC platform the related traffic rules are then deactivated.

6 Data model & Data format (normative)

6.1 Introduction

The following clauses specify the data types that are used to implement the UE Identity feature, for which the relevant sequence diagrams are described in clauses 5.2.2 and 5.2.3.

6.2 Resource data types

6.2.1 Introduction

This clause defines data structures to be used in resource representations.

6.2.2 Type: UeIdentityTagInfo

This type represents the information of UE Identity tag used in the UE Identity feature.

</tr>
</tbody>
</table>
6.3 Subscription types
In the present document, no subscription data types are defined.

6.4 Notifications types
In the present document, no notifications data types are defined.

6.5 Referenced structured data types
In the present document, no referenced structured data types are defined.

6.6 Referenced simple data types
In the present document, no referenced simple data types are defined.

7 API definition (normative)

7.1 Introduction
This clause defines the resources and operations of the UE identity API.

7.2 Global definitions and resource structure
All resource URIs of this API shall have the following root:

\{apiRoot\}/\{apiName\}/\{apiVersion\}/

The "apiRoot" is discovered using the service registry. The "apiName" shall be set to "ui" and the "apiVersion" shall be set to "v1" for the present document. It includes the scheme ("https"), host and optional port, and an optional prefix string. The API shall support HTTP over TLS (also known as HTTPS) using TLS version 1.2 (as defined by IETF RFC 5246 [5]). TLS 1.3 (including the new specific requirements for TLS 1.2 implementation) defined by IETF RFC 8446 [6] should be supported. HTTP without TLS shall not be used. Versions of TLS earlier than 1.2 shall neither be supported nor used. All resource URIs in the clauses below are defined relative to the above root URI.

The content format JSON shall be supported.

The JSON format is signalled by the content type "application/json".

This API shall require the use of the OAuth 2.0 client credentials grant type according to IETF RFC 6749 [7] with bearer tokens according to IETF RFC 6750 [8]. See clause 6.16 of ETSI GS MEC 009 [3] for more information. The token endpoint can be discovered as part of the service availability query procedure defined in ETSI GS MEC 011 [4]. How the client credentials are provisioned into the MEC application is out of scope of the present document.

This API supports additional application-related error information to be provided in the HTTP response when an error occurs. See clause 6.15 of ETSI GS MEC 009 [3] for more information.

Figure 7.2-1 illustrates the resource URI structure of this API.
Table 7.2-1 provides an overview of the resources defined by the present document, and the applicable HTTP methods.

### Table 7.2-1: Resources and methods overview

<table>
<thead>
<tr>
<th>Resource name</th>
<th>Resource URI</th>
<th>HTTP method</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Individual UeIdentityTagInfo</td>
<td>.../{appInstanceId}/ue_identity_tag_info</td>
<td>GET</td>
<td>Retrieve information about specific UeIdentityTagInfo</td>
</tr>
<tr>
<td></td>
<td></td>
<td>PUT</td>
<td>Register/De-register the information about specific UeIdentityTagInfo</td>
</tr>
</tbody>
</table>

### 7.3 Resource: individual UeIdentityTagInfo

#### 7.3.1 Description

This resource is used to represent the information of a single UE Identity tag resource, which follows the resource data type of “UeIdentityTagInfo” as specified in clause 6.2.2.

#### 7.3.2 Resource definition

Resource URI: `{apiRoot}/ui/v1/{appInstanceId}/ue_identity_tag_info`

Resource URI Variables for this resource are defined in table 7.3.2-1.

#### Table 7.3.2-1: Resource URI Variables for resource "individual UeIdentityTagInfo"

<table>
<thead>
<tr>
<th>Name</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>apiRoot</td>
<td>See clause 7.2</td>
</tr>
<tr>
<td>appInstanceId</td>
<td>Represents a MEC application instance</td>
</tr>
</tbody>
</table>

### 7.3.3 Resource Methods

#### 7.3.3.1 GET

This method retrieves information about a UeIdentityTagInfo resource.

This method shall comply with the URI query parameters, request and response data structures, and response codes, as specified in the tables 7.3.3.1-1 and 7.3.3.1-2.

#### Table 7.3.3.1-1: URI query parameters supported by the GET method on this resource

<table>
<thead>
<tr>
<th>Name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>ueIdentityTag</td>
<td>String</td>
<td>1..N</td>
<td>Represents one or more UEs</td>
</tr>
</tbody>
</table>
### Table 7.3.3.1-2: Data structures supported by the GET request/response on this resource

<table>
<thead>
<tr>
<th>Request body</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Response codes</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Request</td>
<td>UeIdentityTagInfo</td>
<td>1</td>
<td>200 OK</td>
<td>It is used to indicate nonspecific success. The response body contains a representation of the UeIdentityTagInfo resource.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>400 Bad Request</td>
<td>It is used to indicate that incorrect parameters were passed to the request. In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>404 Not Found</td>
<td>It is used when a client provided a URI that cannot be mapped to a valid resource URI. In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>1</td>
<td>403 Forbidden</td>
<td>The operation is not allowed given the current status of the resource. More information shall be provided in the &quot;detail&quot; attribute of the &quot;ProblemDetails&quot; structure.</td>
</tr>
</tbody>
</table>

### 7.3.3.2 PUT

This method registers/deregisters one or more UE Identity tags. It has "replace" semantics.

This method is typically used in "UE Identity tag registration" procedure as described in clause 5.2.2 and "UE Identity tag de-registration" procedure as described in clause 5.2.3.

This method shall comply with the URI query parameters, request and response data structures, and response codes, as specified in the tables 7.3.3.2-1 and 7.3.3.2-2.

### Table 7.3.3.2-1: URI query parameters supported by the PUT method on this resource

<table>
<thead>
<tr>
<th>Name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>n/a</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Table 7.3.3.2-2: Data structures supported by the PUT request/response on this resource

<table>
<thead>
<tr>
<th>Request body</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>UeIdentityTagInfo</td>
<td>1</td>
<td>The updated &quot;state&quot; for each included UE Identity tag is included in the entity body of the request.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Response body</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Response codes</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>UeIdentityTagInfo</td>
<td>1</td>
<td>200 OK</td>
<td>It is used to indicate success. The response body contains a representation of the UeIdentityTagInfo resource.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>400 Bad Request</td>
<td>It is used to indicate that incorrect parameters were passed to the request.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>404 Not Found</td>
<td>It is used when a client provided a URI that cannot be mapped to a valid resource URI.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>1</td>
<td>403 Forbidden</td>
<td>The operation is not allowed given the current status of the resource.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>More information shall be provided in the &quot;detail&quot; attribute of the &quot;ProblemDetails&quot; structure.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>412 Precondition Failed</td>
<td>It is used when a condition has failed during conditional requests, e.g. when using ETags to avoid write conflicts.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
</tbody>
</table>

#### 7.3.3.3 PATCH
Not supported.

#### 7.3.3.4 POST
Not supported.

#### 7.3.3.5 DELETE
Not supported.
Annex A (informative):
Complementary material for API utilization

To complement the definitions for each method and resource defined in the interface clauses of the present document, ETSI MEC ISG is providing for the UE identity API a supplementary description file compliant to the OpenAPI Specification [i.1].

In case of discrepancies between the supplementary description file and the related data structure definitions in the present document, the data structure definitions take precedence.

The supplementary description file, relating to the present document, is located at:
