Foreword

This European Telecommunication Standard (ETS) has been produced by the Signalling Protocols and Switching (SPS) Technical Committee of the European Telecommunications Standards Institute (ETSI).

This ETS is part 34 of a multi-part standard covering the ISDN User Part (ISUP) version 2 for the international interface, as described below:

Part 1: "Basic services";
Part 2: "ISDN supplementary services";
Part 3: "Calling Line Identification Presentation (CLIP) supplementary service";
Part 4: "Calling Line Identification Restriction (CLIR) supplementary service";
Part 5: "Connected Line Identification Presentation (COLP) supplementary service";
Part 6: "Connected Line Identification Restriction (COLR) supplementary service";
Part 7: "Terminal Portability (TP) supplementary service";
Part 8: "User-to-User Signalling (UUS) supplementary service";
Part 9: "Closed User Group (CUG) supplementary service";
Part 10: "Subaddressing (SUB) supplementary service";
Part 11: "Malicious Call Identification (MCID) supplementary service";
Part 12: "Conference call, add-on (CONF) supplementary service";
Part 14: "Explicit Call Transfer (ECT) supplementary service";
Part 15: "Diversion supplementary services";
Part 16: "Call Hold (HOLD) supplementary service";
Part 17: "Call Waiting (CW) supplementary service";
Part 18: "Completion of Calls to Busy Subscriber (CCBS) supplementary service";
Part 19: "Three party (3PTY) supplementary service";
Part 31: "Protocol Implementation Conformance Statement (PICS) proforma specification for basic services";
Part 32: "Test Suite Structure and Test Purposes (TSS&TP) specification for basic services";
Part 33: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for basic services";
Part 34: "Protocol Implementation Conformance Statement (PICS) proforma specification for supplementary services";
Part 35: "Test Suite Structure and Test Purposes (TSS&TP) specification for supplementary services";
Part 36: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for supplementary services".

1 Scope

This thirty-fifth part of ETS 300 356 provides the Test Suite Structure and Test Purposes (TSS&TP) for the ISDN User Part (ISUP) version 2 supplementary services defined in ETS 300 356-2 [2] to ETS 300 356-19 [18] in compliance with the relevant requirements and in accordance with the relevant guidance given in ISO/IEC 9646-1 [22].

2 Normative references

This ETS incorporates by dated and undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this ETS only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

An ETS is referenced where it (partly) overrides the corresponding ITU-T Recommendation or where a corresponding ITU-T Recommendation does not exist (yet). For convenience, the respective section of an ITU-T Recommendation is referenced when it is not overridden by a corresponding ETS.

5 Test Purposes (TP)

5.1 Introduction

For each test requirement a TP is defined.

5.1.1 TP naming convention

TPs are numbered ascending within each group. Groups are organized according to the TSS down to the last but one level. The classification in the V/I groups is done by the inclusion of V or I in the test case name. Additional qualifiers, in form of lower case letters, are added to identify variants within one generic test case (see table 1).

Table 1: TP Identifier naming convention scheme

Identifier:		**ISS_{<TC>}_<group>_<N>_<n>_{<n>}_{<a>}**
ISS	**=**	**ISUP version 2 Supplementary Services**
{<TC>}	=	Designation used for ASE test cases (e.g. CCBS): TC: Transaction Capabilities
<group>	=	One character representing the test group: V: Valid stimulus I: Inopportune stimulus
<N>	=	Sequence number for supplementary services according to the test suite structure
<n>	=	Sequence number used within the group
{<n>}	=	Optional additional number used (e.g. for UUS)
{<a>}	=	Optional lower-case character distinguishing tests with same reference number

5.1.2   Source of TP definition

The TPs cover validation testing aspects and are based on the ISUP version 2 supplementary service reference specifications [2-18].

5.1.3   TP structure

The TP structure overlaps with the TSS.

TPs that test normal behaviour are grouped in the **V** (Valid behaviour) group.

TPs that test the IUT behaviour in situations that are not normal operation are grouped in the **I** (Inopportune stimulus) group.

TPs for the Application Service Entity (ASE) defined for some supplementary services (e.g. CCBS) have been marked with the **TC** (Transaction Capabilities) designation.

5.2   TPs for the supplementary services

All of the following TPs belong to the main group ISUP_v2_Suppl_Services. Each TP is presented in a separate table.

The first row of the table contains the following items:

TSS: identifier in the test suite structure (test group/subgroup identifier);

TP: identifier of the test purpose;

ISUP v2 reference: the reference to the requirement in the ISUP standard (ITU-T Recommendation supplemented if necessary by the modifying ETS), which led to the TP;

Selection expression: selection criterion for the TP taking into account the exchange's role and the answers to the specified PICS questions. If the PICS questions refer to features of the basic call control procedures (see ETS 300 356-31 [19]) they are preceded by the identifier "BCall". All other PICS questions refer to supplementary services specific features (see ETS 300 356-34 [20]). If there is no selection expression specified, the TP is valid for all roles of exchanges;

Q.788 reference: if there is a test purpose defined in ITU-T Recommendation Q.788 [21] which covers the expected behaviour of the TP, then the reference to that test is given here. Because the TPs defined in ITU-T Recommendation Q.788 [21] describe end-to-end tests, it is possible that one single Q.788 test is referenced by several TPs within this ETS. Some TPs do not have any reference to ITU-T Recommendation Q.788 [21] and are marked by "None" in the Q.788 reference box.

The next row defines the TP itself, each having a *title* in *italics* and a text body.

ISUP **messages** and **parameter** names are highlighted **bold** to ease the readability.

In order to check the specified behaviour for some TPs a special prerequisite test condition has to be fulfilled. If such a condition is needed, it is presented after the TP under the heading "Pre-test conditions".

To verify that the IUT, where the served user with two active calls is located, can successfully join these calls to form a three-way conversation, and notify the implied remote parties accordingly.

The IUT should send **CPG** messages with the **generic notification indicator** set to "conference established" to both implied parties. The **event indicator** in the **CPG** should be set to "progress".

The notification should be independent of the call set up direction of the two calls; i.e. it should apply to all of the following scenarios:
A -->B;   A<-- B;   A -->B;   A<-- B
A -->C;   A -->C;   A<--C;   A<-- C

6   Test coverage

The TPs defined in this ETS cover most main capabilities of the ISUP version 2 reference specifications for supplementary services. A list containing the number of TPs for each supplementary service is provided in table 2.

Whenever it was possible, the TPs have been described such that they bundle related requirements of the respective base standard. Due to this fact, a TP may lead to implementing several test cases for the ATS.

NOTE: The majority of TPs (over 80%) concentrate on valid behaviour. The number of invalid behaviour TPs is limited. An expansion of the invalid behaviour TPs is left for further study.
