Foreword

This final draft European Telecommunication Standard (ETS) has been produced by the Radio Equipment and Systems (RES) Technical Committee of the European Telecommunications Standards Institute (ETSI), and is now submitted for the Voting phase of the ETSI standards approval procedure.

The DECT Test Specification multipart ETS comprises nine parts, as follows:

- Part 1: "Part 1: Test Suite Structure (TSS) and Test Purposes (TP) for Medium Access Control (MAC) layer".
- Part 2: "Part 2: Abstract Test Suite (ATS) for Medium Access Control (MAC) layer - Portable radio Termination (PT)".
- Part 3:** **"Part 3: Abstract Test Suite (ATS) for Medium Access Control (MAC) layer - Fixed radio Termination (FT)".**
- Part 4: "Part 4: Test Suite Structure (TSS) and Test Purposes (TP) - Data Link Control (DLC) layer".
- Part 5: "Part 5: Abstract Test Suite (ATS) - Data Link Control (DLC) layer".
- Part 6: "Part 6: Test Suite Structure (TSS) and Test Purposes (TP) - Network (NWK) layer - Portable radio Termination (PT)".
- Part 7: "Part 7: Abstract Test Suite (ATS) for Network (NWK) layer - Portable radio Termination (PT)".
- Part 8: "Part 8: Test Suite Structure (TSS) and Test Purposes (TP) - Network (NWK) layer - Fixed radio Termination (FT)".
- Part 9: "Part 9: Abstract Test Suite (ATS) for Network (NWK) layer - Fixed radio Termination (FT)".

Proposed transposition dates	
Date of latest announcement of this ETS (doa):	3 months after ETSI publication
Date of latest publication of new National Standard or endorsement of this ETS (dop/e):	6 months after doa
Date of withdrawal of any conflicting National Standard (dow):	6 months after doa

Blank page

1 Scope

This final draft European Telecommunication Standard (ETS) contains the Abstract Test Suite (ATS) to test the DECT FP MAC layer.

The objective of this test specification is to provide a basis for approval tests for DECT equipment giving a high probability of air interface inter-operability between different manufacturer's DECT equipment. This part contains the ATS specification for testing of the MAC layer at the FT.

The ISO standard for the methodology of conformance testing (ISO/IEC 9646 [21] to [27]) as well as the ETSI rules for conformance testing (ETS 300 406 [29]) are used as basis for the test methodology.

Test specifications for the Physical Layer (PHL) are provided in other DECT standards.

Annex A provides the Tree and Tabular Combined Notation (TTCN) part of this ATS.

Annex B provides the specification of the parallel test component LT_MAC.

Annex C provides the Partial Protocol Implementation eXtra Information for Testing (PIXIT) Proforma of this ATS.

Annex D provides the Protocol Conformance Test Report (PCTR) Proforma of this ATS.

2 Normative references

This ETS incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this ETS only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of this part of this ETS, the definitions given in ISO/IEC 9646-1 [21] and ETS 300 175-1 [1] apply.

3.2 DECT abbreviations

For the purpose of this part of this ETS, the following abbreviations apply:

AC	Authentication Code
CC	Call Control
CI	Common Interface
CLMS	Connectionless Message Services (CL)
CM	Co-ordination Message
COMS	Connection Oriented Message Services (CO)
CTS	Conformance Testing Services
DECT	Digital Enhanced Cordless Telecommunication
DLC	Data Link Control
DSAA	DECT Standard Authentication Algorithm
DSCA	DECT Standard Cipher Algorithm 1
ETS	European Telecommunication Standard
ISO	International Organisation for Standardisation
ETSI	European Telecommunications Standards Institute
FT	Fixed radio Termination
IPUI	International Portable User Identity
IPEI	International Portable Equipment Identity
IWU	InterWorking Unit
LC	Link Control entity
MAC	Medium Access Control
ME	Management Entity
MM	Mobility Management
NWK	Network
PAP	Public Access Profile
PARK	Portable Access Rights Key
PHL	Physical Layer
PT	Portable radio Termination
RPN	Radio Fixed Part Number
SAP	Service Access Point
SARI	Secondary access rights identity
SDU	Service data unit
UAK	User Authentication Key

3.3 ISO 9646 abbreviations

For the purposes of this ETS the following ISO abbreviations apply:

ASP	Abstract Service Primitive
ATM	Abstract Test Method
ATS	Abstract Test Suite
BI	Invalid Behaviour
BO	InOpportune Behaviour
BV	Valid Behaviour
CA	Capability tests
CP	Co-ordination Point
IUT	Implementation Under Test
LT	Lower Tester
MTC	Main Test Component
PCO	Point of Control and Observation
PDU	Protocol Data Unit
PICS	Protocol Implementation Conformance Statements
PIXIT	Protocol Implementation eXtra Information for Testing

PTC	Parallel Test Component
SUT	System Under Test
TP	Test Purpose
TSS	Test Suite Structure
TTCN	Tree and Tabular Combined Notation
UT	Upper Tester

4 Abstract Test Method (ATM)

This clause describes the ATM used to test the DECT MAC layer protocol at the Fixed radio Termination (FT).

4.1 Description of ATM

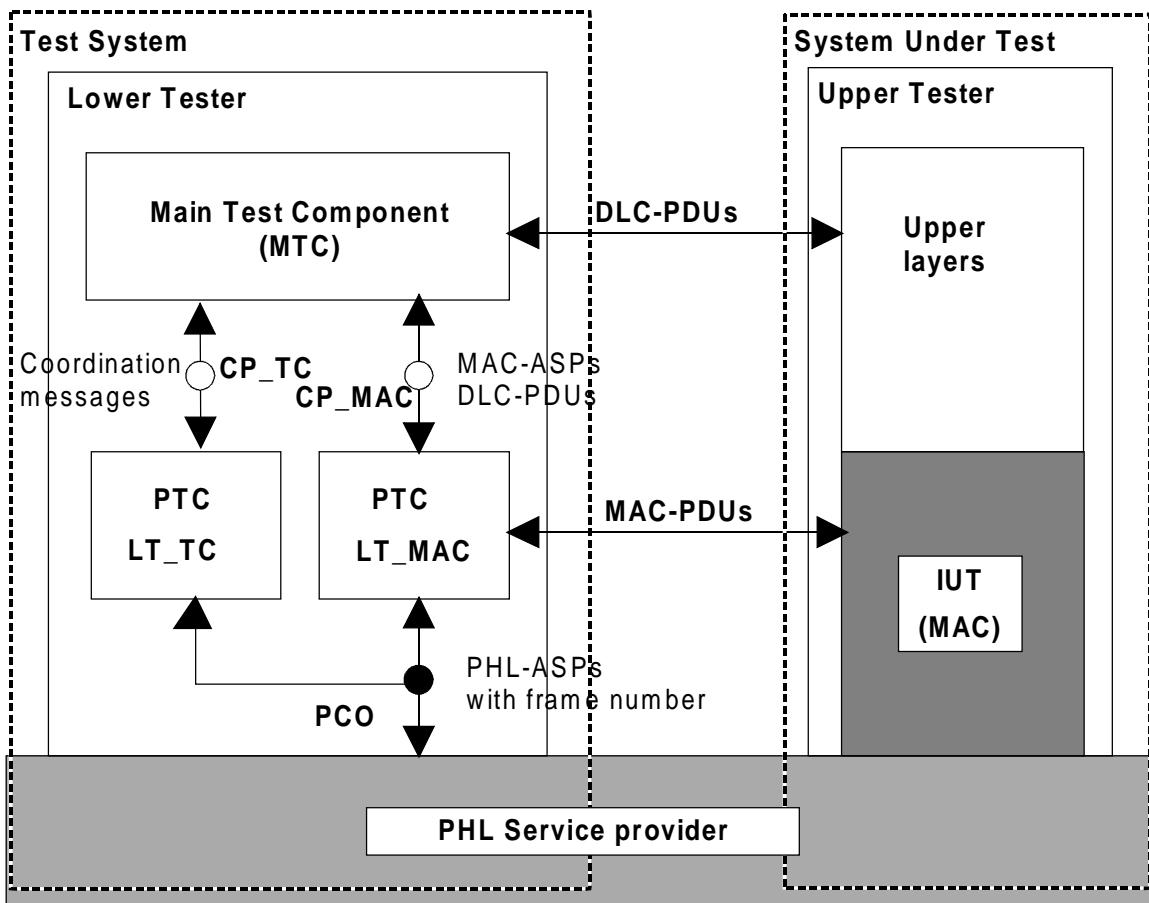

Figure 1: Remote test method, embedded variant

A single-party testing concept is used, which consists of the following abstract testing functions:

PCO: the PCO for MAC Layer testing is located at the D-SAP between the MAC layer and the Physical layer. All test events at the PCO are specified in terms of PHL-ASPs (frame number parameter added).

CP_TC: co-ordination Point Test Case (CP_TC) is located between the MTC and PTC LT_TC in the test system. It is used for passing co-ordination messages between these two testing functions.

CP_MAC: co-ordination Point MAC (CP_MAC) is located between the MTC and PTC LT_MAC in the test system. It is equivalent to the PCO used for DLC layer testing in part 6 of this ETS. All co-ordination messages at this CP are specified in terms of MAC-ASPs and DLC-PDUs.

PTC_LT_TC: the Lower Tester Parallel Test Component LT_TC (PTC_LT_TC) is located in the test system. It makes restricted use of the PCO by only observing the test events in both directions. It assigns preliminary verdicts (the MTC assigns the final verdict).

NOTE: This restricted use of the PCO is a non-ISO 9646-2 [22] application of the PCO.

PTC_LT_MAC: the Lower Tester Parallel Test Component LT_MAC (PTC_LT_MAC) is located in the test system. It provides indirect control and observation of the IUT during test execution, via the underlying service-provider. It does not assign any verdicts.

MTC: the Main Test Component (MTC) is located in the test system. It is responsible for creating and terminating the PTCs, managing the co-ordination points CP_TC and CP_MAC, and computation of the final test case verdict.

Upper layers: no explicit upper tester (UT) exists in the test system. However, the SUT (upper layers) needs to carry out some UT functions to achieve some effects of test co-ordination procedures.

The primitives used at the PCO (physical SAP - DSAP) are defined according to ETS 300 175-2 [2], clause 7 and associated subclauses.

The co-ordination messages used at CP_MAC co-ordination point are abstract primitives including protocol data units and frames. The abstract primitives (MAC ASPs) are defined according to ETS 300 175-3 [3], clause 8 and associated subclauses. Two abstract primitives for starting and stopping the synchronisation between the main test component and the parallel test component LT_MAC are added for the needs of the tester. The protocol data units (DLC C-plane PDUs) are defined according to ETS 300 175-4 [4], clause 7 and associated subclauses. The frames (DLC U-plane frames) are defined according to ETS 300 175-4 [4], clause 12 and associated subclauses.

4.2 Test strategy

The ATM defined in subclause 4.1 requires the use of concurrent TTCN, which is specified in Amendment 1 of ISO 9646-3 [23]. The parallel test components PTC_TC and PTC_MAC is, however, seen as two independent entities. This means that there is no communication or synchronisation between the two PTCs during the test.

PTC_TC is specified in TTCN (annex A). Since PTC_TC is only observing at the PCO, this ATS does not contain any send statements. Once the test purpose (TP) is fulfilled, the PTC_TC terminates, i.e. there are no postambles, unless required by the TP. No explicit co-ordination messages is exchanged at CP_TC. To simplify the TTCN test cases, the underlying service provider has been assigned the task of frame numbering. Consequently, a frame parameter has been added to some of the PHL-ASPs.

The requirements for PTC_MAC (annex B) are specified using ETS 300 474 [48].

The Main Test Component (MTC) creates the two PTCs (using CREATE operation), stimulates the PTC_MAC (using MAC ASPs at CP_MAC) and then waits for the two PTCs to terminate (using the DONE event). The final verdict is computed as follows:

- a PASS is assigned if PTC_TC returns a PASS verdict and the expected event is received from PTC_MAC at CP_MAC;
- a FAIL verdict is assigned if PTC_TC returns a FAIL verdict independently of what is received from PTC_MAC at CP_MAC;
- an INCONC verdict is assigned if PTC_TC returns an INCONC verdict and the expected event is received from PTC_MAC at CP_MAC; or returns a PASS verdict and an unexpected event is received from PTC_MAC at CP_MAC.

5 Untestable Test Purposes (TPs)

This clause gives a list of TPs which are not implemented in the ATS for PTC LT_TC (annex A) due to the chosen abstract test method or other restrictions.

Table 1: Untestable TPs

Test purpose	Reason
TP/PG/BV-00	No procedure can be defined to verify that the FT manages correctly the paging Extended Flag when it transmit pages.

6 ATS Conventions (only applicable for PTC LT_TC)

The ATS conventions are intended to give a better understanding of the ATS but they also describe the conventions made for the development of the ATS. These conventions shall be considered during any later maintenance or further development of the ATS.

The ATS conventions contain two clauses, the naming conventions and the implementation conventions. The naming conventions describe the structure of the naming of all ATS elements. The implementation conventions describe the functional structure of the ATS.

To define the ATS, the guidelines of the documents ETS 300 406 [29] and ETR 141 were considered.

6.1 Naming conventions

6.1.1 Declarations part

This subclause describes the naming conventions chosen for the elements of the ATS declarations part.

6.1.1.1 General

The following general rules apply for name giving in the declarations part. All type definitions (Simple type definitions, Structured type definitions, ASP type definitions and PDU type definitions) shall be written in uppercase.

All element names (Structured type definition), parameter names (ASP type definition) and field names (PDU type definition) shall be written in lowercase.

Predefined types (e.g. BITSTRING[8]) are never used in structured type definitions, ASP type definitions or PDU type definitions. Simple types are used instead.

All declarations in the test suite are listed in alphabetical order. A different order of listing should be used for only maintenance reason.

6.1.1.2 Test suite operations definition

The test suite operation identifiers are composed of substrings in lowercase letters, except for standard prefix "TSO_". Each substring is separated by an underscore character ("_").

EXAMPLE: TSO_substring.

6.1.1.3 Test suite parameter declarations

The test suite parameter identifiers are composed of substrings in lowercase letters, except for the standard prefix "TSP_". Each substring is separated by an underscore character ("_").

EXAMPLE 1: TSP_t_wait

If the test suite parameter references a PICS item, the letter "C" is added to the standard prefix.

EXAMPLE 2: TSPC_extended_rf_carriers

If the test suite parameter references a PIXIT item, the letter "X" is added to the standard prefix.

EXAMPLE 3: TSPX_pmid

Complete names as defined in the specifications are used.

6.1.1.4 Test case selection expression definition

The test case selection expression identifiers are composed of substrings in lowercase letters, beginning with the prefix "TCS_". Each substring is separated by an underscore character ("_").

6.1.1.5 Test suite constant declarations

The test suite constant identifiers are composed of substrings in lowercase letters, except for the prefix "TSC_". Each substring is separated by an underscore character ("_").

If the test suite constant represents a system parameter, the complete name defined in the protocol standard is used.

EXAMPLE: TSC_n200

6.1.1.6 Test suite variable declarations

The test suite variable identifiers are composed of substrings in lowercase letters, except for the prefix "TSV_". Each substring is separated by an underscore character ("_").

Complete names as defined in the protocol standard are used.

6.1.1.7 Test case variable declarations

The test case variable identifiers are composed of substrings in lowercase letters, except for the prefix "TCV_". Each substring is separated by an underscore character ("_").

Complete names as defined in the protocol standard are used.

6.1.1.8 Timer declarations

Two type of timers can be identified:

1) standardised:

those defined in the protocol standard, e.g. T201. They use exactly the same name as in the standard;

As there is a tolerance margin accepted for these timers, three values are needed:

- the maximum value allowed, which will use the suffix "_max";
- the minimum value allowed, which will use the suffix "_min";
- the value actually implemented, with no suffix;

EXAMPLE 1: T201_max, T201_min, and T201;

2) not standardised:

those not defined in the protocol standard, i.e. for execution use, e.g. a timer waiting for a response. These timers begin with the prefix "T_", followed by a string in lowercase letters;

EXAMPLE 2: T_resp represents a timer for controlling the response time of the IUT.

6.1.1.9 ASP type definitions

The general conventions in subclause 6.1.1.1 applies.

The identifier of an ASP type uses the same name as the name defined in the protocol standard.

EXAMPLE: PL_TX_REQ for an ASP containing a MAC layer PDU to the peer MAC layer (the IUT).

6.1.1.10 PDU type definitions

The general conventions in subclause 6.1.1.1 applies.

The PDU type identifier shall identify the related structure or type as defined in the protocol standard.

EXAMPLE: A_MT_BASIC_CONNECTION_CONTROL.

6.1.1.11 CM type definitions

The CM types are copied from the ASP types in Part 5 of this ETS without modifications.

6.1.1.12 Alias definitions

Alias definitions are not used.

6.1.2 Constraints part

This subclause describes the naming conventions chosen for the elements of the ATS constraints part.

6.1.2.1 General

Constraints shall be written with the first letter in uppercase, and the rest in lowercase.

The first part of the constraint declaration identifier name is equivalent to the corresponding type identifier used in the declaration part. The second part of the name describes the content of this constraint.

EXAMPLE: Declaration part: HEADER_FIELD;
Constraint part: Header_field_nt_no_b.

All constraints shall be listed in alphabetical order. If a different order of listing is maintained, the reason for doing so shall be specified.

6.1.3 Dynamic part

This subclause describes the naming conventions used for the elements of the ATS dynamic part.

6.1.3.1 General

All test cases shall be listed in the order in which they appear in the TSS and TP document.

6.1.3.2 Test Case identifier

The identifier of the test case is built in the same way as for the test purpose described in ETS 300 497-1 [47], subclause 5.1.1, with the exception that "TP" is replaced by "TC_FT" ("FT" for Fixed radio Termination). The identifier of a Test Case is built according table 2.

Table 2: TC naming convention

Identifier:	TC_FT_<fm>_<x>_<nn>		
<fm>	= functional module	DB PG NB DC UC BS CM BH BR DT LM TM	Down-link Broadcast Paging services Non Continuous Broadcast Down-link Connectionless Up-link Connectionless Bearer setup Connection modification Bearer handover Bearer release Data transfer Layer Management Test Messages
x	= Type of testing	CA BV BI	Capability Tests Valid Behaviour Tests Invalid Behaviour Tests
<nn>	= sequential number	(00-99)	Test purpose Number

EXAMPLE: TP identifier: TP/BS/CA-00;

TC identifier: TC_FT_BS_CA_00.

6.1.3.3 Test step identifier

The test step identifier is built of substrings in lowercase letters, preceded by a string of uppercase letters. The substrings are joined by underscore characters. The first substring indicates the main function of the Test Step; e.g. PR for preamble, PO for postamble, LTS for local tree and STP for general test step. The remaining substrings indicates the purpose of the step.

EXAMPLE: PO_release_bearer.

6.1.3.4 Default identifier

The default identifiers begin with the prefix "DF_", followed by a string in lowercase letters.

6.1.3.5 Label identifier

The identifiers in the label column is built according to table 3:

Table 3: Naming convention for verdict assignment identifier

Identifier:	<Table><nn>		
	<Table> = type of table	TB	Test Body
		CS	Check State test step
		DF	DeFault
		PO	POstamble
		PR	PReamble
		TS	TestStep
	<nn> = sequential number	(00-99)	Label number

6.1.3.6 ATS abbreviations

These abbreviations are used to shorten identifier names:

addr	address
ack	acknowledgement
bear	bearer
cap	capability
cfm	confirm
chn	channel
con	connection
ctrl	control
est	establish
ext	extension
id	identification
ind	indication
info	information
max	maximum
min	minimum
par	parameter
prop	proprietary
rel	release
req	request
rsp	response
std	standard
sys	system

6.2 Implementation conventions

6.2.1 Declaration part

The comment line of single element TTCN tables (e.g. test suite constants) is used to give a reference where the format and content of the element is described in the relevant protocol standards. Any particularity of the element format or content is described in the comment line.

The comment line in the header of multi element TTCN tables (e.g. ASPs) is used to reference to the protocol standard.

The detailed comments are used to describe any particularity of the table.

In the ASP, PDU, and CM declarations, the comments column is used to identify if a parameter (in ASPs) or field (in PDUs) is mandatory or optional:

- M: mandatory;
- O: optional.

In the ASP and PDU declarations the comments column is further used to give information about the parameter/field value, in particular if the parameter/field contains a fixed spare value.

6.2.2 Constraint part

The ASPs and PDUs are defined in a way that all relevant parameters/fields are parametrized. That improves the transparency of the constraints in the dynamic part, as all values which are relevant for the test are always present.

Generally no modified constraints are used. This allows an easier reuse and adaptation of constraints if they are reused in other test specifications.

The Comment line of a constraint always contains a reference to the relevant protocol standard.

The detailed comments footer is used to describe any particularity of the table.

6.2.3 Dynamic part

All events which are defined as a conformance requirement by the TP, causes a preliminary verdict PASS if the requirement is met.

All invalid events are handled in the default tree. Only FAIL or INCONC verdicts are assigned in the default tree.

The preamble, the test body and the postamble have different defaults, which allows a specific verdict handling, e.g. only INCONC verdicts are assigned in the preamble.

Except for local trees, test steps do not contain a default. Then there is no restrictions regarding the error handling.

All verdict assignments are labelled. According to ISO 9646-3 [23], annex E, clause E.2, labels should be written to the conformance log. This allows, for example, to identify where the test failed. To allow an exact identification of the table in which the verdict was assigned, the convention described in subclause 6.1.3.5 is applied.

To avoid deadlocks, the Parallel Test Components (PTC) LT_TC and LT_MAC shall always terminate.

TPs which are listed in the untestable TP list in clause 5 are not considered in the ATS, thus these TC identifiers are missing in the ATS and the numbering of the TCs is not always continuous.

Annex A (normative): Abstract test suite (ATS), PTC LT_TC

The ATS is written in TTCN according to ISO/IEC 9646-3 [23].

As the ATS was developed on a separate TTCN tool the TTCN tables are not completely referenced in the contents table. The ATS itself contains a Test Suite Overview part which provides additional information and references about the ATS.

NOTE: According to ISO/IEC 9646-3 [23], in case of a conflict in interpretation of the operational semantics of TTCN.GR and TTCN.MP, the operational semantics of the TTCN.GR representation takes precedence.

A.1 The machine processable ATS (TTCN.MP)

The electronic form of the machine processable file (TTCN MP format) corresponding to this ATS is contained in an ASCII text file (DEV04973.MP¹) associated with this ETS.

A.2 The graphical ATS (TTCN.GR)

The graphical ATS is provided in this annex on the following pages.

1) This file is located in a compressed archive file named DEV04973.LZH. Other file formats are available on request.

I

Test Suite Overview

Test Suite Structure			
Test Group Reference	Selection Ref	Test Group Objective	Page Nr
FT/	MANDATORY	Verify the correct implementation of the FT (IUT) MAC layer.	100
FT/BH/	MANDATORY	Verify the correct implementation of connection oriented bearer handover procedures.	100
FT/BH/BV/	MANDATORY	To test the behaviour of the IUT concerning connection oriented bearer handover procedures in relation to syntactically and contextual correct behaviour of the test system.	100
FT/BH/CA/	MANDATORY	Limited testing that the observable capabilities of the IUT concerning connection oriented bearer handover procedures are in accordance with the static requirements.	104
FT/BR/	MANDATORY	Verify the correct implementation of connection oriented bearer release procedures.	106
FT/BR/CA/	MANDATORY	Limited testing that the observable capabilities of the IUT concerning connection oriented bearer release procedures are in accordance with the static requirements.	106
FT/BS/	MANDATORY	Verify the correct implementation of connection oriented bearer setup procedures.	108
FT/BS/BV/	MANDATORY	To test the behaviour of the IUT concerning connection oriented bearer setup procedures in relation to syntactically and contextual correct behaviour of the test system.	108
FT/BS/CA/	MANDATORY	Limited testing that the observable capabilities of the IUT concerning connection oriented bearer setup procedures are in accordance with the static requirements.	109
FT/DB/	MANDATORY	Verify the correct implementation of the downlink broadcast services.	110
FT/DB/BV/	MANDATORY	To test the behaviour of the IUT concerning the downlink broadcast services in relation to syntactically and contextual correct behaviour of the test system.	110

Test Suite Structure			
Test Group Reference	Selection Ref	Test Group Objective	Page Nr
FT/DB/CA/	MANDATORY	Limited testing that the observable capabilities of the IUT concerning the downlink broadcast services are in accordance with the static requirements.	111
FT/DT/	MANDATORY	Verify the correct implementation of connection oriented data transfer procedures.	119
FT/DT/BI/	MANDATORY	To check the behaviour of the IUT concerning connection oriented data transfer procedures in response to invalid messages.	119
FT/DT/BV/	MANDATORY	To test the behaviour of the IUT concerning connection oriented data transfer procedures in relation to syntactically and contextual correct behaviour of the test system.	123
FT/DT/CA/	MANDATORY	Limited testing that the observable capabilities of the IUT concerning connection oriented data transfer procedures are in accordance with the static requirements.	125
FT/LM/	MANDATORY	Verify the correct implementation of the LLME MAC layer management procedures.	133
FT/LM/CA/	MANDATORY	Limited testing that the observable capabilities of the IUT concerning the MAC layer management are in accordance with the static requirements.	133
FT/PG/	MANDATORY	Verify the correct implementation of the paging services.	134
FT/PG/BV/	MANDATORY	To test the behaviour of the IUT concerning the paging services in relation to syntactically and contextual correct behaviour of the test system.	134
FT/PG/CA/	MANDATORY	Limited testing that the observable capabilities of the IUT concerning the paging services are in accordance with the static requirements.	135

Detailed Comments :

Test Case Index				
Test Group Reference	Test Case Id	Selection Ref	Description	Page Nr
FT/BH/BV/	TC_FT_BH_BV_00	Intracell_supported	Check that the IUT responds rightly to a PT initiated intracell bearer handover procedure when encryption is enabled.	100
FT/BH/BV/	TC_FT_BH_BV_01	Intercell_supported	Check that the IUT responds rightly to a PT initiated intercell bearer handover procedure when encryption is enabled.	102
FT/BH/CA/	TC_FT_BH_CA_00	Intracell_supported	Check that the IUT responds rightly to a PT initiated intracell bearer handover procedure.	104
FT/BH/CA/	TC_FT_BH_CA_01	Intercell_supported	Check that the IUT responds rightly to a PT initiated intercell bearer handover procedure.	105
FT/BR/CA/	TC_FT_BR_CA_00	MANDATORY	Check that the IUT manages rightly a release of a basic duplex bearer with an unacknowledged release procedure when receiving a release message.	106
FT/BS/BV/	TC_FT_BS_BV_00	MANDATORY	Check that the IUT releases a duplex bearer in case the timer T201 expires during the time a basic bearer exists.	108
FT/BS/CA/	TC_FT_BS_CA_00	MANDATORY	Check that the IUT manages rightly the PT initiated (single) basic bearer setup procedure.	109
FT/DB/BV/	TC_FT_DB_BV_03	MANDATORY	Check that once a SARI is introduced into the FT, the E-bit within the NT message is indicating SARI list available.	110
FT/DB/CA/	TC_FT_DB_CA_00	MANDATORY	Check that the IUT transmits constantly at least in frame 14 of each multiframe, the correct NT message.	111
FT/DB/CA/	TC_FT_DB_CA_01	MANDATORY	Check that the IUT transmits constantly at least once every T205 seconds in frame 0, the correct NT message.	112
FT/DB/CA/	TC_FT_DB_CA_02	MANDATORY	Check that the IUT transmits constantly one correct QT message in frame 8 of each multiframe.	113

Test Case Index				
Test Group Reference	Test Case Id	Selection Ref	Description	Page Nr
FT/DB/CA/	TC_FT_DB_CA_03	MANDATORY	Check that the IUT transmits constantly at least one static system information QT message in each interval of 8 multiframe and that all such messages are correct.	114
FT/DB/CA/	TC_FT_DB_CA_04	MANDATORY	Check that the IUT transmits constantly at least one fixed part capabilities QT message in each interval of 8 multiframe and that all such messages are correct.	115
FT/DB/CA/	TC_FT_DB_CA_05	Encryption_supported	Check that the IUT transmits constantly at least one multiframe number QT message in each interval of 8 multiframe and that all such messages are correct.	116
FT/DB/CA/	TC_FT_DB_CA_06	Sari_supported	Check that the IUT transmits constantly at least one SARI list content QT message in each interval of 4 multiframe and that all such messages are correct.	117
FT/DB/CA/	TC_FT_DB_CA_07	Extended_rf_supported	Check that the IUT transmits the correct "Extended RF carrier information" QT message in the multi-frame following the "Static system information" QT message with the Extended RF carrier bit set.	118
FT/DT/BI/	TC_FT_DT_BI_00	MANDATORY	Check that the IUT, when receiving IN minimum delay data, is capable to detect A-field R-CRC error and to respond with the correct Q2 bit setting (Q2 = 0).	119
FT/DT/BI/	TC_FT_DT_BI_01	MANDATORY	Check that the IUT sets the Q1 & Q2 bits correctly when it receives data with Z-field error during IN minimum delay transfer.	121

Test Case Index				
Test Group Reference	Test Case Id	Selection Ref	Description	Page Nr
FT/DT/BV/	TC_FT_DT_BV_00	MANDATORY	Check that the IUT releases the basic connection when it cannot conclude the procedure to switch from clear mode to encrypt mode.	123
FT/DT/BV/	TC_FT_DT_BV_01	Encryption_deactivation_supported	Check that the IUT releases the basic connection when it cannot conclude the procedure to switch from encrypt mode to clear mode.	124
FT/DT/CA/	TC_FT_DT_CA_00	MANDATORY	Check that the IUT re-transmits Cs segment until it receives an acknowledgement in the same ARQ window.	125
FT/DT/CA/	TC_FT_DT_CA_01	MANDATORY	Check that the IUT does not transmit another Cs segment until the successful transmission of the current segment.	127
FT/DT/CA/	TC_FT_DT_CA_02	MANDATORY	Check that the IUT manages correctly the one bit numbering of the Cs segments.	129
FT/DT/CA/	TC_FT_DT_CA_03	Encryption_supported	Check that the IUT manages correctly the procedure to switch the basic connection from clear mode to encrypt mode.	131
FT/DT/CA/	TC_FT_DT_CA_04	Encryption_deactivation_supported	Check that the IUT manages correctly the procedure to switch the basic connection from encrypt mode to clear mode.	132
FT/LM/CA/	TC_FT_LM_CA_05	MANDATORY	Check that the IUT, after the establishment of a new bearer during bearer handover, releases one of the two bearers within a time interval of T203 seconds.	133
FT/PG/BV/	TC_FT_PG_BV_01	Blind_slot_supported	Check that the IUT periodically announces (at least every 10s) its blind slots.	134
FT/PG/CA/	TC_FT_PG_CA_00	Blind_slot_supported	Check that the IUT can transmit (FT part normal paging mode) a short page message.	135
FT/PG/CA/	TC_FT_PG_CA_01	Blind_slot_or_not_fully_b_handover_supported	Check that the FT can transmit a correct zero length page message.	136

Test Suite Operation Definition	
Operation Name : TSO_cimft_checksum	
Result Type	: OCTETSTRING
Comments	:
	Description
Calculate Checksum of DLC FA frame	
Detailed Comments :	

Test Suite Operation Definition	
Operation Name : TSO_cimft_emulate_mac	
Result Type	: BOOLEAN
Comments	: To implement the parallel test component (PTC) LT_MAC.
	Description
TSO_cimft_emulate_mac is a test suite operation which returns a BOOLEAN value to the calling tree. When this operation is called, the Lower Tester shall emulate a MAC layer until stopped by action TSC_action, as required in Annex B. If the emulation has stopped successfully (by action TSC_stop) TRUE shall be returned, otherwise a FALSE shall be returned.	
TSO_cimft_emulate_mac = TRUE when emulation has stopped successfully by action TSC_stop. TSO_cimft_emulate_mac = FALSE when emulation has stopped un-successfully.	
Detailed Comments :	

Test Suite Operation Definition	
Operation Name : TSO_cimft_fill(chn : BOOLEAN; length:INTEGER)	
Result Type	: FILLSTRING
Comments	: Fill 0 to 7 octets with the fill field '11110000'B according to the channel (Cs or Cf) and the parameter length.
	Description
IF (chn = TRUE) THEN /* Cf channel */ BEGIN fill (8 – (length MOD 8)) number of octet with value '11110000'B END ELSE /* Cs channel */ BEGIN fill (5 – (length MOD 5)) number of octet with value '11110000'B END	
Detailed Comments :	

Test Suite Operation Definition	
Operation Name	: TSO_cimft_return_cr_value(iut_type,frame_type:BOOLEAN)
Result Type	: INTEGER
Comments	: Determine the value of the CR_bit for C plane FA frame according to the type of the IUT (FT or PT) and the wanted type of frame (Command or Response).
Description	
<pre> IF (iut_type =TRUE) THEN BEGIN /* IUT is a PT */ IF (frame_type = TRUE) THEN RETURN 0 /* this is a command frame */ ELSE RETURN 1 /* this is a response frame */ END ELSE BEGIN /* IUT is a FT */ IF (frame_type = TRUE) THEN RETURN 1 /* this is a command frame */ ELSE RETURN 0 /* this is a response frame */ END </pre>	
Detailed Comments :	

Test Suite Operation Definition	
Operation Name	: TSO_cimft_substring(source:BITSTRING;start_index,length:INTEGER)
Result Type	: BITSTRING
Comments	:
Description	
<p>TSO_cimft_substring(source,start_index,length) is the bitstring of length 'length' starting from index 'start_index' of the source bitstring 'source'.</p> <p>EXAMPLES: TSO_cimft_substring('01010011'B,1,4)='0101'B TSO_cimft_substring('01010011'B,4,5)='10011'B</p>

TSPX_blind_slot	BOOLEAN	PIXIT item C.9.1	TRUE for IUT that have blind slot
TSPX_encryption	BOOLEAN	PIXIT item C.9.2	TRUE for IUT that support encryption
TSPX_deactivation	BOOLEAN	PIXIT item C.9.3	TRUE for IUT that support encryption and encryption deactivation
TSPX_extended_rf	BOOLEAN	PIXIT item C.9.4	TRUE for IUT that support extended RF carrier
TSPX_sari	BOOLEAN	PIXIT item C.9.5	TRUE for IUT that support SARI list
TSPX_intercell_handover	BOOLEAN	PIXIT item C.9.6	TRUE for IUT that support intercell handover
TSPX_intracell_handover	BOOLEAN	PIXIT item C.9.7	TRUE for IUT that support intracell handover

Detailed Comments :

Test Case Selection Expression Definitions		
Expression Name	Selection Expression	Comments
MANDATORY	TRUE	For all mandatory tests.
Blind_slot_supported	TSPX_blind_slot	For IUT that have blind slot
Blind_slot_or_not_fully_b_handover_supported	TSPX_blind_slot OR (NOT TSPX_bearer_handover)	For IUT that have blind slot or does not support bearer handover within the whole FT
Encryption_supported	TSPX_encryption	For IUT that support encryption
Encryption_deactivation_supported	TSPX_encryption AND TSPX_deactivation	For IUT that support encryption and encryption deactivation
Extended_rf_supported	TSPX_extended_rf	For IUT that support extended RF carrier
Sari_supported	TSPX_sari	For IUT that support SARI list
Intercell_supported	TSPX_intercell_handover	For IUT that support intercell handover
Intracell_supported	TSPX_intracell_handover	For IUT that support intracell handover
Detailed Comments :		

Test Suite Constant Declarations			
Constant Name	Type	Value	Comments
TSC_T201_value	INTEGER	5000	The period of T201 in ms
TSC_T205_value	INTEGER	10000	The period of T205 in ms
TSC_1_frame_value	INTEGER	10000	The period of one frame in us
TSC_1_mf_value	INTEGER	16 * TSC_1_frame_value	The period of one multiframe
TSC_4_mf_value	INTEGER	4 * 16 * TSC_1_frame_value	The period of 4 multiframe
TSC_8_mf_value	INTEGER	8 * 16 * TSC_1_frame_value	The period of 8 multiframe
TSC_cm_c_only	INTEGER	2	MAC connection with C channel only. For use in CM MAC_CON_REQ.
TSC_cm_cs	INTEGER	1	Number of CS channel
TSC_cm_in	INTEGER	3	MAC connection with IN channel. For use in CM MAC_CON_REQ.
TSC_cm_fs	INTEGER	1	Full slot. For use in CM MAC_CON_REQ.
TSC_cm_sbcon	INTEGER	2	Symmetric single bearer connection. For use in CM MAC_CON_REQ.
TSC_command	BOOLEAN	TRUE	For command frame
TSC_connection_sapi	INTEGER	0	Connection oriented SAPI
TSC_fmid1	B_12	TSO_cimft_substring(TSPX_rfp1,29,12)	FMID for RFP number 1. ETS 300 175-3 [3], subclause 11.7.1.
TSC_fmid2	B_12	TSO_cimft_substring(TSPX_rfp2,29,12)	FMID for RFP number 2. ETS 300 175-3 [3], subclause 11.7.1.
TSC_lln_ca	INTEGER	1	Class A LLN
TSC_response	BOOLEAN	FALSE	For response frame
TSC_rpn1	RPN	1	RFP number 1.
TSC_rpn2	RPN	2	RFP number 2
TSC_start	INTEGER	0	0. Start test case synchronisation
TSC_stop	INTEGER	1	1. Stop test case synchronisation
TSC_action2	INTEGER	2	2. generate A field CRC error
TSC_action3	INTEGER	3	3. pass to phical layer a request for generating Z field error
TSC_action4	INTEGER	4	4. Generate an incorrect message for RFPI handshake. Change the RFPI transmitted by the Lower Tester on all traffic bearers to the IUT by inverting bit a47.
TSC_action5	INTEGER	5	5. Acknowledge received Cs segment only after three receipt.
TSC_action16	INTEGER	16	16. Don't send the GRANT message

Continued from previous page

Test Suite Constant Declarations			
Constant Name	Type	Value	Comments
TSC_action17	INTEGER	17	17. Initiate and perform an intracell bearer handover procedure.
TSC_action18	INTEGER	18	18. Initiate and perform an intercell bearer handover procedure.
Detailed Comments : Actions TSC_6 to TSC_15 and TSC_action19 to TSC_action21 are only used when testing a PT.			

Test Case Variable Declarations			
Variable Name	Type	Value	Comments
TCV_bool	BOOLEAN	FALSE	General purpose boolean
TCV_cm_mcei1	INTEGER	1	For use in coordination messages at CP_MAC.
TCV_count	INT_8	1	General purpose counter
TCV_frame	FRAME_NUMBER		1.
TCV_frame1	FRAME_NUMBER		For use in computation.
TCV_rf	RF_CHANNEL_NUMBER		2.
TCV_slot	SLOT_NUMBER		3.
TCV_slot_pair	SLOT_NUMBER		4.

Detailed Comments : 1. Local variable for frame number.
 2. Local variable for rf channel number.
 3. Local variable for slot number.
 4. Local variable for slot number of TDMA pair (0,12 – 1,13 – 2,14).

PCO Declarations			
PCO Name	PCO Type	Role	Comments
PHL	D_SAP	LT	PCO between MAC and Physical layer.
Detailed Comments :			

Coordination Point Declarations	
CP Name	Comments
CP_MAC	Coordination point between MTC and PTC_MAC
CP_TC	Coordination point between MTC and PTC_TC
Detailed Comments :	

Timer Declarations			
Timer Name	Duration	Unit	Comments
T201	$TSC_T201_value + (5 * (TSC_T201_value / 100))$	ms	The period of T201 + 5%
T203	$(TSC_1_mf_value + (5 * (TSC_1_mf_value / 100)) / 1000)$	ms	The period of T203
T205	$TSC_T205_value + (5 * (TSC_T205_value / 100))$	ms	The period of T205 + 5%
T_DL07	2	s	Class A link establishment timer
T_10s	10	s	FT that have blind slot shall announces periodically blind slot information (at least every T_10s)
T_1_frame	$TSC_1_frame_value + (5 * (TSC_1_frame_value / 100))$	us	The period of one frame + 5%
T_1_mf	$(TSC_1_mf_value + (5 * (TSC_1_mf_value / 100))) / 1000$	ms	The period of one multiframe + 5%
T_4_mf	$(TSC_4_mf_value + (5 * (TSC_4_mf_value / 100))) / 1000$	ms	The period of 4 multiframe + 5%
T_8_mf	$(TSC_8_mf_value + (5 * (TSC_8_mf_value / 100))) / 1000$	ms	The period of 8 multiframe 5%
T_implicit_send	TSPX_t_implicit_send	s	Max. time to wait after request for invocation of an implicit send event.
T_wait_ptc_mac	10	s	Max. time to wait for a PHL-ASP at the PHL PCO after issuing a MAC-ASP to the PTC_MAC at the CP_MAC CP.
T_wait_mtc_mac	60	s	Max. time to wait for a MAC response in the MTC.

ASP Type Definition		
ASP Name : PL_FREQ_ADJ_REQ		
PCO Type : D_SAP		
Comments : ETS 300 175-2 [2], subclause 7.1.3.		
Parameter Name	Parameter Type	Comments
frequency_adjust	B_8	1.
Detailed Comments : 1. The frequency error may be encoded as specified in ETS 300 175-3 [3], subclause 7.2.5.5.		

ASP Type Definition		
ASP Name : PL_RX_CFM		
PCO Type : D_SAP		
Comments : For D-field receptions. See ETS 300 175-2 [2], subclause 7.1.2.		
Parameter Name	Parameter Type	Comments
valid_synch_word	BOOLEAN	1.
d_field	PDU	Data field
frequency_error	B_8	2.
sliding_collision_info	BOOLEAN	3.
n	RPN	4.
frame	FRAME_NUMBER	5.
slotpair	SLOT_NUMBER	6.
Detailed Comments : 1. TRUE if synchronisation word is valid, else FALSE. 2. The frequency error may be encoded as specified in ETS 300 175-3 [3], subclause 7.2.5.5 (not required for GAP). 3. TRUE if sliding collision is detected, else FALSE. 4. The number, Radio fixed Part Number (RPN), of the radio fixed part using the physical channel 5. Non-standardised parameter indicating the frame number in which the PDU was received. 6. Number of the slotpair for access_request		

ASP Type Definition		
ASP Name : PL_RX_REQ		
PCO Type : D_SAP		
Comments : PL-RX.Req ASP. See ETS 300 175-2 [2], subclause 7.1.2.		
Parameter Name	Parameter Type	Comments
a	PHYSICAL_PACKET_TYPE	Physical packet type
k	SLOT_NUMBER	1.
l	PACKET_START	2.
m	RF_CHANNEL_NUMBER	3.
n	RPN	4.
Detailed Comments : 1. The number of the full-slot in which transmission of the packet starts. 2. If l=0 the packet starts at bit interval f0. If l=1 then packet starts at bit interval f240. 3. The number of the RF channel used to transmit the physical packet. 4. The number, Radio fixed Part Number (RPN), of the radio fixed part using the physical channel		

ASP Type Definition		
ASP Name : PL_TX_REQ		
PCO Type : D_SAP		
Comments : For D-field transmissions. See ETS 300 175-2 [2], subclause 7.1.1.		
Parameter Name	Parameter Type	Comments
d_field	PDU	Data field
a	PHYSICAL_PACKET_TYPE	Physical packet type
k	SLOT_NUMBER	1.
l	PACKET_START	2.
m	RF_CHANNEL_NUMBER	3.
n	RPN	4.
add_z_field	BOOLEAN	Z-field is added if TRUE.
frame	FRAME_NUMBER	5.

- Detailed Comments :**
1. The number of the full-slot in which transmission of the packet starts.
 2. If $l=0$ the packet starts at bit interval f_0 . If $l=1$ then packet starts at bit interval f_{240} .
 3. The number of the RF channel used to transmit the physical packet.
 4. The number, Radio fixed Part Number (RPN), of the radio fixed part using the physical channel.
 5. Non-standardised parameter indicating the frame number used for transmission of the PDU.

Parameter Name	Parameter Type	Comments
action	INTEGER	Action required (see detailed comments)
Detailed Comments : Action required:		
00. Start test case synchronisation, 01. Stop test case synchronisation, 02. generate A field CRC error, 03. pass to phicical layer a request for generating Z field error, 04. stop generating NT message for RFPI handshake, 05. Acknowledge received Cs segment only after three receipt, 06. generate poor carrier on this connection to force intracell handover, 07. generate poor carrier on this connection to force intercell handover, 08. Dont terminate PT initiated bearer setup with "other message" (setup failure for testing N200), 09. Repeat "WAIT message " until T200 reached on PT initiated bearer setup (setup failure for testing T200), 10. Transmit forever incorrect A field CRC in frame 0 (Timer T207 testing), 11. Transmit blind slot information with only one slot available, 12. Transmit "other bearer" and "dummy or CL bearer position" to provide only one slot pair available for the PT for initiating setup, 13. Transmit the extended RF carrier information QT message, 14. Dont acknowledge Start Encryption request when received, 15. Dont acknowledge Stop Encryption request when received, 16. Dont send the GRANT message, 17. Initiate and perform an intracell bearer handover procedure. 18. Initiate and perform an intercell bearer handover procedure. 19. Ignore any received bearer handover request messages.

Test Case Dynamic Behaviour

Test Case Name	: TC_FT_BH_CA_00
Group	: FT/BH/CA/
Purpose	: Only for FT supporting intracell bearer handover. Initial state: Active_traffic or Active_traffic_and_idle. Check that the IUT responds rightly to a PT initiated intracell bearer handover procedure.
Configuration	: Mac_config
Default	: DF_mtc_bearer_setup
Comments	: ETS 300 175-3 [3]: 10.6 C/O bearer handover and subclauses. The behaviour of PTC_MAC (LTS_mac) is specified in Annex B.

Test Case Dynamic Behaviour	
Detailed Comments : ... 10. First RELEASE message. 11. Second RELEASE message in next frame. 12. The IUT did not release the channel. 13. The IUT have released the channel. 14. Second RELEASE not received.	

Test Case Dynamic Behaviour

Test Case Name	: TC_FT_BS_BV_00
Group	: FT/BS/BV/
Purpose	: Initial state: Active_traffic or Active_traffic_and_idle. Check that the IUT releases a duplex bearer in case the timer T201 expires during the time a basic bearer exists.
Configuration	: Mac_config
Default	: DF_mtc_bearer_setup
Comments	: ETS 300 175-3 [3]: 10.5.1.1 Basic bearer setup procedure – 11.5.1 RFPI handshake. The behaviour of PTC_MAC (LTS_mac) is specified in Annex B.

Nr	Label	Behaviour Description	Constraints Ref	Verdict	Comments
1		CREATE(LT_MAC:LTS_mac, LT_TC:LTS_tc)			
2		CP_MAC ! MAC_CMD	Mac_cmd(TSC_start)		1.

Test Case Dynamic Behaviour

- Detailed Comments :**
1. Activate PTC_MAC (see Annex B for a specification of the behaviour).
 2. Request the PTC_MAC to establish a symmetric single bearer connection of the specified type.
 3. Bearer successfully established.
 4. Request PTC_MAC to send Class A establishment request.
 5. Received data from PTC_MAC. Acknowledgement of Class A establishment (RR).
 6. Request PTC_MAC to send Class A re-establishment request.
 7. Wait for PTC_TC to terminate.
 8. Request PTC_MAC to release any established bearer.
 9. Request the PTC_MAC to stop.
 10. Wait for PTC_MAC to terminate.
 11. Timer T_wait_ptc_mac is used to make sure that PTC_TC always terminates.
 12. Verify the basic bearer setup procedure.
 13. Start Class A establishment timer.
 14. First CS segment received containing RR Class A establishment acknowledgement.
 15. Expected event: Second CS segment received containing RR Class A re-establishment acknowledgement.
 16. No response received for the link re-establishment.
 17. No response received for the link establishment.

Test Case Dynamic Behaviour

Test Case Name : TC_FT_DT_CA_03
Group : FT/DT/CA/
Purpose : Only for FT supporting encryption.
 Initial state: Active_traffic or Active_traffic_and_idle.
 Check that the IUT manages correctly the procedure to switch the basic connection from clear mode to encrypt mode.
Configuration : Mac_config
Default : DF_mtc_bearer_setup
Comments : ETS 300 175-7 [7]: 6.4.6 Encryption mode control – 6.4.6.3 Procedures for switching to encrypt mode. The behaviour of PTC_MAC (LTS_mac) is specified in Annex B.

		+STP_emulate_mac			
Detailed Comments : <ol style="list-style-type: none"> 1. Activate PTC_MAC (see Annex B for a specification of the behaviour). 2. Request the PTC_MAC to establish a symmetric single bearer connection of the specified type. 3. Bearer successfully established. 4. Request the PTC_MAC to initiate and perform an intracell bearer handover procedure. 5. Wait for PTC_TC to terminate. 6. Request PTC_MAC to release any established bearer. 7. Request the PTC_MAC to stop. 8. Wait for PTC_MAC to terminate. 9. Timer T_wait_ptc_mac is used to make sure that PTC_TC always terminates. 10. Verify the basic bearer setup procedure. 11. Verify the PT initiated bearer handover procedure. 12. Start timer T203 immediately after the bearer handover is completed ("other" message received). 13. RELEASE message received. 					

Test Case Dynamic Behaviour

Test Case Name	: TC_FT_PG_BV_01
Group	: FT/PG/BV/
Purpose	: Only for FT that shall transmit blind slot information. Initial state: Active_idle. Check that the IUT periodically announces (at least every 10s) its blind slots.
Configuration	: Mac_config
Default	: DF_mtc_downlink_broadcast
Comments	: ETS 300 175-3 [3]: 11.8 RFP idle receiver scan sequence. The test is passed if the expected page is received in two consecutive periods of 10 seconds. The behaviour of PTC_MAC (LTS_mac) is specified in Annex B.

Annex B (normative): Specification of PTC LT_MAC

B.1 General requirements

The PTC LT_MAC (MAC emulation) shall, as a minimum, fulfil all requirements with profile status M in the profile Requirement List (profile RL) in ETS 300 474 [48], clause 7.

B.2 Additional requirements

A number of commands have been defined to control the behaviour of PTC LT_MAC (the MAC emulation). In the annex A, these are implemented as a co-ordination message with a parameter to specify the required action. The test system shall support the actions specified in table B.1.

Table B.1: Actions to be supported by the test system

Action	Ref. to ETS 300 175-3 [3]	Requirement
TSC_action2	6.2.5.1	Corrupt the A-field R-CRC in the next transmitted A-field.
TSC_action3	ETS 300 175-2 [2]: 4.8	Corrupt the Z-field in the next transmitted A-field.
TSC_action4	11.5.1	Generate an incorrect message for RFPI handshake. Change the RFPI transmitted by the Lower Tester on all traffic bearers to the IUT by inverting bit a47.
TSC_action5	10.8.1.1	Do not acknowledge until CS segment have been received three times.
TSC_action16	ETS 300 175-7 [7]: 6.4.6	Do not acknowledge receipt of the START.CONF or STOP.CONF MT message, i.e. do not send corresponding START.GRANT or STOP.GRANT MT message.
TSC_action17	10.5.1 - 10.6.2	Initiate bearer handover to the same RFP (intracell)
TSC_action18	10.5.1 - 10.6.2	Initiate bearer handover to a different RFP (intercell)
TSC_start	11.3.2	Try to enter state Idle_Locked.
TSC_stop	11.5.1	1) Stop all transmission; and then 2) Wait T201 seconds.

NOTE: These actions are defined as Test Suite Constants in the ATS (annex A).

Annex C (normative): Partial PIXIT proforma for DECT MAC

Notwithstanding the provisions of the copyright clause related to the text of this ETS, ETSI grants that users of this ETS may freely reproduce the PIXIT proforma in this annex so that it can be used for its intended purposes and may further publish the completed PIXIT.

The PIXIT Proforma is based on ISO/IEC 9646-6 [26]. Any additional information needed can be found in this international standard document.

Table C.7: Addresses

Item	Parameter	Parameter Type	Explanation	Value
1	TSPX_pmid	B_20 - (Bitstring[20])	PMID for RFP	
2	TSPX_rfpi1	B_40 - (Bitstring[40])	RFPI for RFP number 1 (ETS 300 175-6 [6])	
3	TSPX_rfpi2	B_40 - (Bitstring[40])	RFPI for RFP number 2 (ETS 300 175-6 [6])	

Table C.8: Timer values

Item	Parameter	Parameter Type	Explanation	Value
1	TSPX_t_implicit_send	INT_0_99 - INTEGER (0..99)	Max. time to wait after request for invocation of an implicit send event (In second).	

Table C.9: Procedural information

Item	Parameter	Parameter Type	Explanation	Value
1	TSPX_blind_slot	BOOLEAN	TRUE for IUT that have blind slot.	TRUE FALSE
2	TSPX_encryption	BOOLEAN	Does the IUT support encryption process.	TRUE FALSE
3	TSPX_deactivation	BOOLEAN	Does the IUT support encryption deactivation process.	TRUE FALSE
4	TSPX_extended_rf	BOOLEAN	Does the IUT support extended RF carrier.	TRUE FALSE
5	TSPX_sari	BOOLEAN	Does the IUT support SARI list.	TRUE FALSE
6	TSPX_intercell_handover	BOOLEAN	Does the IUT support intercell handover.	TRUE FALSE
7	TSPX_intracell_handover	BOOLEAN	Does the IUT support intracell handover.	TRUE FALSE
8	TSPX_in_pdu	OCTETSTRING	Indicate in the following lines an acceptable information field for a FU1 frame sent by the tester.	
9	TSPX_bearer_handover	BOOLEAN	Does the IUT support bearer handover withing the whole FT?	TRUE FALSE

Table C.10: Implicit send events

Item	PIXIT (see Note)	Parameter Type	Indication how the implicit send event can be invoked
1	TSPX_invoke_short_page	Implicit Send	Indicate in the following lines the procedure to force the IUT to transmit a paging message in short page format.
2	TSPX_invoke_zero_page	Implicit Send	Indicate in the following lines the procedure to force the IUT to transmit a paging message in zero page format.
3	TSPX_invoke_sari_message	Implicit Send	Indicate in the following lines the procedure to force the IUT to transmit the NT message with E bit set (A SARI is introduced).

NOTE: The PIXIT names are related to the test steps where the Implicit send events are handled, e.g. the PIXIT TSPX_invoke_abnormal_release is related to the test step STP_invoke_abnormal_release.

Annex D (normative): Protocol Conformance Test Report (PCTR) Proforma For DECT MAC

Notwithstanding the provisions of the copyright clause related to the text of this ETS, ETSI grants that users of this ETS may freely reproduce the PCTR proforma in this annex so that it can be used for its intended purposes and may further publish the completed PCTR.

The PCTR Proforma is based on ISO/IEC 9646-6 [26]. Any additional information needed can be found in this international standard document.

D.1.4 Limits and reservation

Additional information relevant to the technical contents or further use of the test report, or the rights and obligations of the test laboratory and the client, may be given here. Such information may include restriction on the publication of the report.

D.1.5 Comments

Additional comments may be given by either the client or the test laboratory on any of the contents of the PCTR, for example, to note disagreement between the two parties.

D.2 IUT Conformance status

This IUT has or has not been shown by conformance assessment to be non conforming to the specified protocol specification.

Strike the appropriate words in this sentence. If the PICS for this IUT is consistent with the static conformance requirements (as specified in clause 3 in this report) and there are no "FAIL" verdicts to be recorded (in clause 6) strike the words "has or". otherwise strike the words "or has not".

D.3 Static conformance summary

The PICS for this IUT is or is not consistent with the static conformance requirements in the specified protocol.

Strike the appropriate words in this sentence.

D.4 Dynamic conformance summary

The test campaign did or did not reveal errors in the IUT.

Strike the appropriate words in this sentence. If there are no "FAIL" verdicts to be recorded (in clause 6 of this report) strike the words "did or". otherwise strike the words "or did not".
