**Detailed Comments:**

1. 1 cell, default parameters.
2. New ciphering key sequence number and new ciphering key L.
3. New SDCCH4 subchannel different from the one in use, start ciphering.
4. Load new key L, no ciphering.
5. New SDCCH4 subchannel different from the one in use, start ciphering.
6. New SDCCH4 subchannel different from the one in use, start ciphering.
7. New SDCCH4 subchannel different from the one in use, no ciphering.
8. To generate new ciphering key M.
9. New SDCCH4 subchannel different from the one in use, start ciphering.
10. New SDCCH4 subchannel different from the one in use, no ciphering, new channel not activated.
11. New SDCCH4 subchannel different from the one in use, no ciphering, new channel not activated.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4.
2. The power capability is the one with RF amplification.
3. To setup a physical channel as full rate traffic channel for full rate bearer capability.
4. To setup a physical channel as half rate traffic channel for half rate bearer capability.
5. The power capability is the original one without RF amplification.
6. The power capability is the one with RF amplification.
7. The power capability is the original one without RF amplification.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To set a physical channel as hopping SDCCH8 channel, hopping parameters defined by PIXIT.
3. To setup the before time and after time channels for ASSIGNMENT COMMAND.
4. To assign the hopping SDCCH8 channel.
5. To calculate the STARTING TIME.
6. To check whether the after time frequency hopping is correct at the RF burst level.
7. If the selected channel type is TCH/F, setup a physical channel as full rate channel for before time.
8. If the selected channel type is TCH/F, setup a physical channel as full rate channel for after time.
9. If the selected channel type is TCH/H, setup a physical channel as half rate channel for before time.
10. If the selected channel type is TCH/H, setup a physical channel as half rate channel for after time.
11. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for before time.
12. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for after time.

| <b>Purpose:</b>             |       | To verify that the MS, after receiving a FREQUENCY REDEFINITION message and then an ASSIGNMENT COMMAND message with a starting time and channel descriptions both for before and after the starting time, failing the assignment and returning on the old channel, and ready to access before the time indicated in the FREQUENCY REDEFINITION, resumes transmission on the channels used at the time of the reception of the FREQUENCY REDEFINITION message and eventually starts using the frequency parameters at the time indicated in the FREQUENCY REDEFINITION message. |                                                                             |   |                         |

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To set two physical channels, one as hopping channel for immediate assignment another one as hopping channel for after time channel, parameters defined by PIXIT.
3. To calculate the starting time for frequency redefinition.
4. To send FREQUENCY REDIFINITION message.
5. To calculate the starting time and send the ASSIGNMENT COMMAND on special frame TCV\_Fn. The assigned channel not activated in the tester.
6. To check whether the after time frequency hopping is correct at the RF burst level.
7. If the selected channel type is TCH/F, setup a physical channel as full rate channel for immediate assignment.
8. If the selected channel type is TCH/H, setup a physical channel as half rate channel for immediate assignment.
9. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for immediate assignment.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH for cell A.
2. To setup a physical channel as BCCH, CCCH for cell B.
3. To setup a physical channel as SDCCH8 in cell A and setup 2 physical channels as hopping channels in cell B.
4. To get the future frame number for sending HANDOVER COMMAND and calculate starting time.
5. If the required channel is full rate channel, setup the after time full rate hopping channel.
6. If the required channel is full rate channel, setup the before time full rate hopping channel.
7. If the required channel is half rate channel, setup the after time half rate hopping channel.
8. If the required channel is half rate channel, setup the before time half rate hopping channel.
9. If the required channel is SDCCH8 channel, setup the after time SDCCH8 hopping channel.
10. If the required channel is SDCCH8 channel, setup the before time SDCCH8 hopping channel.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To set a physical channel as BCCH, CCCH for Cell B.
3. To setup a physical channel for immediate assignment.
4. To calculate the starting time for frequency redefinition.
5. To send FREQUENCY REDIFINITION message.
6. To calculate the starting time and send the HANDOVER COMMAND on special frame TCV\_Fn.  
The assigned channel not activated in the tester.
7. To check whether the after time frequency hopping is correct at the RF burst level.
8. If the selected channel type is TCH/F, setup a physical channel as full rate channel for immediate assignment.
9. If the selected channel type is TCH/H, setup a physical channel as half rate channel for immediate assignment.
10. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for immediate assignment.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To set a physical channel as BCCH, CCCH for Cell B.
3. To setup a physical channel for immediate assignment.
4. To calculate the starting time for frequency redefinition.
5. To send FREQUENCY REDIFINITION message.
6. To calculate the starting time and send the HANOVER COMMAND on special frame TCV\_Fn.  
The assigned channel not activated in the tester.
7. The HANOVER FAILURE message received on the channel using the after time hopping parameters of the frequency redefinition message.
8. If the selected channel type is TCH/F, setup a physical channel as full rate channel for immediate assignment.
9. If the selected channel type is TCH/H, setup a physical channel as half rate channel for immediate assignment.
10. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for immediate assignment.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To setup a physical channel for immediate assignment.
3. To calculate the starting time for frequency parameters change.
4. To inform the test system to change frequency parameters after starting time.
5. To check whether the MS transmitting on the after time frequency parameters.
6. If the selected channel type is TCH/F, setup a physical channel as full rate channel for immediate assignment before time.
7. If the selected channel type is TCH/H, setup a physical channel as half rate channel for immediate assignment before time.
8. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for immediate assignment before time.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To setup a physical channel for immediate assignment.
3. To calculate the starting time for immediate assignment.
4. To paging response message received on the channel with after time frequency parameters.
5. If the selected channel type is TCH/F, setup a physical channel as full rate channel for immediate assignment after time.
6. If the selected channel type is TCH/H, setup a physical channel as half rate channel for immediate assignment after time.
7. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for immediate assignment after time.

| <b>Purpose:</b> To verify that the MS is able to receive and acknowledge a new TMSI by means of an explicit TMSI reallocation procedure. To verify that the MS has stored the TMSI in a non-volatile memory. The implicit reallocation procedure is tested in section 26.7.4.1.                                                                    |       |                                                                                                                                                                                                                                                                                                                                |      |   |          |

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_7\_2\_2  
**Group:** GSM\_L3\_MS\_v4150/MM/  
**Purpose:** 1) To check that ,after reception of an Authentication Reject message, the Mobile Station:  
1.1 does not perform normal location updating  
1.2 does not perform periodic location updating  
1.3 does not respond to paging with TMSI  
1.4 rejects any request from CM entity for MM connection except for emergency call  
1.5 does not perform IMSI detach if deactivated  
  
2) To check that, after reception of an Authentication Reject message the Mobile Station, if it supports speech, accepts a request for an emergency call by sending a CHANNEL REQUEST message with the establishment cause set to "emergency call" and includes an IMEI as mobile identity in the CM SERVICE REQUEST message.  
  
3) To check that, after reception of an Authentication Reject message and after having been deactivated and reactivated, the MS performs location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN.  
**Default:** OtherEventsFail  
**Comments:** Initial Conditions of MS:  
The MS has valid TMSI, CKSN2 and Kc. It is "idle updated" on cell B.  
  
Foreseen final state of the MS:  
The MS has valid TMSI, CKSN and Kc. It is "idle updated" on cell A.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_7\_3\_2  
**Group:** GSM\_L3\_MS\_v4150/MM/  
**Purpose:** To check that the MS behaves correctly when activated with an IMSI of length less than the maximum length. In this condition, the MS shall:

1. perform location updating
2. answer to paging with IMSI
3. give the correct IMSI when asked by an IDENTITY REQUEST
4. attempt CM connection establishment when requested to
5. attempt call re-establishment when needed
6. attempt IMSI detach when needed
7. erase its TMSI when the IMSI is sent by the network in a LOCATION UPDATING ACCEPT or a TMSI REALLOCATION COMMAND message.

**Default:** OtherEventsFail  
**Comments:** Initial Conditions of MS:  
The MS has no valid TMSI. It is "idle updated" on the cell. The IMSI has the value '001011234'.  
This test case shall use the SIM Card 2 with 'IMSI=001011234' and HPLMN\_search\_period=6min.  
Foreseen final state of the MS:  
The MS has no valid TMSI. It is "idle updated" on the cell.

**Detailed Comments:**

- 0) Initial condition: no valid TMSI, test body starts here.
- 1) check of purpose 2. and 3.
- 2) check of purpose 5.
- 3) check of purpose 7.
- 4) check of purpose 6.
- 5) check of purpose 1.
- 6) check of purpose 1. and 7.
- 7) check of purpose 4.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_7\_4\_1  
**Group:** GSM\_L3\_MS\_v4150/MM/  
**Purpose:** To test the behaviour of the MS if the network accepts the location updating of the MS. For the network response three different cases are identified:  
1) TMSI is allocated,  
2) Location updating accept contains neither TMSI nor IMSI,  
3) Location updating accept contains IMSI.  
**Default:** OtherEventsFail  
**Comments:** Initial Conditions of MS:  
The MS has valid TMSI(TMSI1), CKSN(CKSN1) and Kc. It is "idle updated" on cell A.  
  
Foreseen final state of the MS:  
The MS has no valid TMSI and no CKSN. It is "idle updated" on cell B.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_7\_4\_2\_4\_2  
**Group:** GSM\_L3\_MS\_v4150/MM/  
**Purpose:** Test purpose 2  
To test that if no cell is available, the MS does not answer to paging with TMSI, rejects a request from CM entity except other than emergency calls.  
**Default:** OtherEventsFail  
**Comments:** This testcase includes only the procedure of part 2 of GSM 11.10-1, section 26.7.4.2.4.

Initial Conditions of MS:  
The MS has valid TMSI, CKSN and Kc. It is "idle updated" on cell B.

Foreseen final state of the MS:  
The MS has no valid TMSI and no CKSN. It is in the "limited service" state on cell A.

**Detailed Comments:** 1) Reject of Location Updating with the cause Roaming is not allowed.

MS shall

2) perform normal updating when a new location area is entered.

3a) not respond to paging with TMSI in cell a.

3b) not respond to paging with TMSI in cell b.

4) reject any request from CM entity for MM connection other than for emergency call.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_7\_4\_2\_4\_4  
**Group:** GSM\_L3\_MS\_v4150/MM/  
**Purpose:** Test purpose 4  
To test that if a cell of the Home PLMN is available then the MS returns to it in preference to any other available cell.  
**Default:** OtherEventsFail  
**Comments:** This testcase includes only the procedure of part 4 of GSM 11.10-1, section 26.7.4.2.4.

Initial Conditions of MS:  
The MS has valid TMSI, CKSN and Kc. It is "idle updated" on cell A.

Foreseen final state of the MS:  
The MS has no valid TMSI and no CKSN. It is "idle updated" on cell C.

**Detailed Comments:**  
1) Periodic Updating in cell A.  
2) LAI change to HPLMN  
3) Reject of Periodic Location Updating with the cause Roaming is not allowed in cell A.  
4) MS shall periodically search to Home PLMN.

| 2) To send Max-Retrans+1 times Channel Requests in cell A                                                                                                                                                                                                                                                               |       |                                                                                                            |          |     |          |
| 3) MS shall not try to establish a connection during a period of a cell reselection (4 seconds).                                                                                                                                                                                                                        |       |                                                                                                            |          |     |          |
| 4) MS shall perform a normal location updating procedure as it is necessary.                                                                                                                                                                                                                                            |       |                                                                                                            |          |     |          |

- 5) Cell A is not available and MS shall switch to cell B
- 6) To send Max-Retrans+1 times Channel Requests in cell B
- 7) Cell A is available again.
- 8) MS shall not repeat the complete procedure if the original cause of the normal location updating procedure has disappeared.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_7\_4\_3\_2  
**Group:** GSM\_L3\_MS\_v4150/MM/  
**Purpose:** To verify that the MS performs normal location updating procedures when its attempt counter is smaller than 4. To check that the MS does not perform the IMSI detach procedure when "idle not updated". To verify that when "idle not updated" the MS can perform an emergency call. To verify that when "idle not updated" the MS uses requests from CM layer other than emergency call as triggering of a normal location updating procedure. To verify that the MS performs a normal location updating procedure if it enters a new cell while being "idle not updated".  
**Default:** OtherEventsFail  
**Comments:** Initial Conditions of MS:  
The MS has valid TMSI and CKSN. It is "idle updated" on cell A.  
  
Foreseen final state of the MS:  
The MS has valid TMSI and CKSN. It is "idle updated" on cell A.

| <b>Detailed Comments:</b> 1) Test of Conformance Requirement 1 |                                                                                                     |                                                                                              |     |                         |

- 1.1) Reject of Location Updating in cell B
- 1.2) MS shall wait the period of T3211 and restart the normal location updating procedure when the attempt counter is smaller than 4.
- 1.3) Radio Link Failure extends the period of delay for next location updating.
  
- 2) Test of Conformance Requirement 2
  - 2.1) Reject of Location Updating in cell A
  - 2.2) MS shall not answer to paging
  - 2.3) All of location updating requests shall be rejected.
  - 2.4) MS shall not perform the IMSI detach procedure.
  
- 3) Test of Conformance Requirement 3
  - 3.1) Failure during Location Updating in cell A
  - 3.2) MS shall support emergency call.
  - 3.3) MS shall wait at most 15 sec. for location updating
  
- 4) Test of Conformance Requirement 4
  - 4.1) Failure during Location Updating Procedure
  - 4.2) MS shall use a request from Cm entity other than emergency call as a trigger for a normal location updating procedure.
  - 4.3) After the Location Updating Procedure MS can (optional) start automatically the Cm entity service again. It is optional and shall be observed only 15 sec.
  
- 6) Test of Conformance Requirement 6
  - 6.1) Failure during Location Updating Procedure
  - 6.2) MS shall start the location Updating Procedure as soon as it enters a new cell.

**Detailed Comments:**

- 1.) To test conformance requirement 1
  - 1.1) Attempt counter is now equal to 4
  - 1.2) MS shall perform periodic location updating after T3212
  - 1.3) MS shall initiate location updating procedure, if the periodic updating was unsuccessful.
- 2.) To test conformance requirement 2
  - 2.1) Attempt counter is now equal to 4
  - 2.2) MS shall perform request for emergency call
  - 2.3) MS shall not perform an IMSI detach procedure

- 3.) To test conformance requirement 3 and 4
- 3.1) Attempt counter is now equal to 4
- 3.2) MS shall use a request from CM entity for MM connection for a service other than emergency call as a trigger for a normal location updating procedure.
- 3.3) MS shall reset the attempt counter after successful location updating procedure.
- 3.4) Attempt counter is now equal to 4
- 3.5) MS shall perform the normal location updating procedure after entering a new cell.
- 3.6) If the location updating procedure unsuccessful, the MS shall trigger the location updating after T3211 again.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_7\_4\_5\_4\_1  
**Group:** GSM\_L3\_MS\_v4150/MM/  
**Purpose:** To verify that when a cell of the HPLMN becomes available, following the successful location request on the VPLMN of the home country and after the first search the mobile has failed to find its HPLMN, that the MS shall perform a location update request on the HPLMN after time T. Where T is the HPLMN Search Period stored in the SIM.  
**Default:** OtherEventsFail  
**Comments:** Initial Conditions of MS:  
The MS is switched off. The HPLMN Search Period on the SIM shall be set to 6 minutes.  
The Location Area Information on the SIM is deleted.  
  
Foreseen final state of the MS:  
The MS has valid TMSI and CKSN. It is "idle updated" on cell A.

**Detailed Comments:**

1. To setup 2 physical channels one as BCCH, CCCH and SDCCH4, another as full rate traffic channel.
2. To bring the MS into the state U10 for speech.
3. To check the character set of "0-9, #, \*".
4. To check the character set of "A, B, C, D" if it is supported by the MS.
5. To test the DTMF tone being rejected.
6. To verify that the MS is still in the state U10.
7. The DTMF indication is not correct.
8. The DTMF indication is correct.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_4\_2\_1  
**Group:** GSM\_L3\_MS\_v4150/CC/  
**Purpose:** To verify that a CC entity of a MS in CC-state U10, "active", upon receiving of a NOTIFY message remains in the active state.  
**Default:** OtherEventsFail

**Detailed Comments:**

1. To setup 2 physical channels one as BCCH, CCCH and SDCCH4, another as full rate traffic channel.
2. To bring the MS into the state U10 for speech by generic call setup procedure.
3. To send the NOTIFY message to the MS.
4. To verify whether the MS is still in the state U10, the verdict is assigned in the test step.

| <b>Detailed Comments:</b>   |       | 1. To setup a physical channel as BCCH, CCCH and SDCCH4 used as cell B.                                                                                                       |                                                         |     |                                                                                                       |

2. The expected HANDOVER FAILURE message received on the old channel.
3. To check whether the MS is still in the state U10, if no test case fails in the test step.
4. The expected ASSIGNMENT FAILURE message received on the old channel.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_4\_4\_1  
**Group:** GSM\_L3\_MS\_v4150/CC/  
**Purpose:** 1) To verify that an MS supporting the network originated in-call modification procedure, after having received a MODIFY message with a new mode which is not the actual one and cannot be supported by the MS, rejects it by sending a MODIFY REJECT.  
2) To verify that an MS not supporting the network originated in-call modification procedure, after having received a MODIFY message, responds with a STATUS message.  
**Default:** OtherEventsFail  
**Comments:** The generic MT call setup procedure is used to bring the MS into U10 state.

| <b>Purpose:</b>             |       | <p>1) To verify that the procedure is initiated by the MS in the "active" state of the call. It sends a MODIFY message including the new mode to be changed to; and enters the "mobile originating modify" state. The new mode given in the MODIFY message is one of those already negotiated and agreed during the establishment phase of the call. The MODIFY originating side stops sending Bm-channel information.</p> <p>2) To verify that upon receipt of the MODIFY COMPLETE message the MS starts sending channel information according to the new call mode and enters the "active" state.</p> |                                                                                               |     |          |

| <b>Purpose:</b>                    | <p>1) To verify that the MS in MM state "idle, updated" with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.</p> <p>2) To verify that the MS in MM state "idle, updated" and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.</p> <p>3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.</p> <p>4) To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCH, after having completed the traffic channel early assignment procedure by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.</p> <p>5) To verify that subsequently the MS has attached the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)</p> <p>6) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.</p> <p>7) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.</p> <p>These test purposes are tested for all rates supported by the MS (full rate/half rate).</p> |
| <b>Default:</b>                    | OtherEventsFail                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Detailed Comments:**

1. To perform the test on full rate channel.
2. To perform the test on half rate channel.
3. To setup two physical channels, one for combined BCCH, CCch and SDCHH4, another one for full rate traffic channel.
4. To enter the called party number.
5. To check whether the MS displays the called party number correctly.
6. To initiate the call.
7. To setup the previous full rate traffic channel into half rate traffic channel.
8. Early assignment.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_9\_3  
**Group:** GSM\_L3\_MS\_v4150/StructureProc/  
**Purpose:**

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.
- 2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.
- 3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.
- 4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)

These test purposes are tested for all rates supported by the MS (full rate/half rate).

**Default:** OtherEventsFail
