| <b>Comments:</b> The calling tree shall prepare three variables for the step: TCV_ChRate for the type of the channel, TCV_Rr with the request reference from the channel request and TCV_Fn with the frame number of the channel request. TCV_chTch contains the identifier for the traffic channel and TCV_chtype the channel type. |       |                                                                                                                             |                                                                            |   |          |

**Detailed Comments:** The lower layer emulator shall send these SYNCHRONIZATION INFORMATION and SYSTEM INFORMATION's repeatedly.

1. To send SYNCHRONIZATION INFORMATION message with default parameter for cell A.
2. To send SYSTEM INFORMATION TYPE 2 and 5 messages for GSM900 testing.
3. To send SYSTEM INFORMATION TYPE 2 and 5 messages for DCS1800 testing.

**Test Step Dynamic Behaviour**

**Test Step Name:** SysInfoSending\_1(att:INTEGER; babr, cch\_con, bpm:B\_3; t3212:OCTETSTRING)  
**Group:** GSM\_L3\_MS\_v4160/Miscellaneous/SysInfo/  
**Objective:** To send SYNCHRONIZATION CHANNEL INFORMATION and SYSTEM INFORMATION messages in cell A for idle mode test  
**Default:** OtherEvents  
**Comments:** The values of SYSTEM INFORMATION messages are also controlled by test suite parameters TSPC\_GSM and TSPC\_DCS.

Detailed Comments:

**Test Step Dynamic Behaviour**

**Test Step Name:** PreEnterIdleState\_r03(actype:BITSTRING; slot:SN; tsc:TSC; ta:TA; att:INTEGER; babr, cch\_con, bpm:B\_3; t3212:OCTETSTRING)  
**Group:** GSM\_L3\_MS\_v4160/Preambles/  
**Objective:** To broadcast SYSTEM INFORMATION messages 2, 3, 4, 5 and 6 containing default parameters in cell A with the following exception :  
 - radio-link-timeout = 64.  
 The test system is then waiting for the SUT (MS) entering the Idle updated state.  
**Default:** OtherEvents  
**Comments:** The preamble is used for the RR tests.

This is used in CC testing.                                                                                                                                                                                                                   |                                             |   |          |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                      |                                             |   |          |
| <b>Comments:</b>            |       | TCV_TI0 contains the transaction identifier from the MS, and TCV_TI contains the transaction identifier for test system to send CC message. The values of them are used in test body. The calling tree shall prepare two variables for the step: TCV_ch for the SDCCH4 subchannel; TCV_CphKey for ciphering key. |                                             |   |          |

| <b>Objective:</b>           |       | To bring the MS into CC state U9 by procedure in table 26.8.1.3/3. This is used in CC testing.                                                                                                                                                                        |                                      |   |          |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                           |                                      |   |          |
| <b>Comments:</b>            |       | The state U9 is a transient state when the signal IE is included in the SETUP message. The calling tree shall prepare three variables for the test step: TCV_ChRate for the type of the channel, TCV_CphKey for the ciphering key and TCV_ChMod for the channel mode. |                                      |   |          |

| <b>Objective:</b> To establish a mobile terminating call for the supported bearer capability and put the MS under test in the CC state U10.                                                                                                                                                                                                                                                                          |       |                                                                 |                                    |     |          |
| <b>Default:</b> OtherEvents                                                                                                                                                                                                                                                                                                                                                                                          |       |                                                                 |                                    |     |          |
| <b>Comments:</b> The supported bearer capability is specified in the input partameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for SDCCH4 subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. This test step is used for non RR testing. |       |                                                                 |                                    |     |          |

| <b>Objective:</b>           |       | To establish a mobile terminating call for the supported bearer capability and put the MS under test in the CC state U10.                                                                                                                                                                                                                                                                          |                                 |     |          |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                                                                                                        |                                 |     |          |
| <b>Comments:</b>            |       | The supported bearer capability is specified in the input parameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for SDCCH4 subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. This test step is used for non RR testing. |                                 |     |          |

| <b>Objective:</b>           |       | To establish a mobile terminating call for the supported bearer capability and put the MS in the CC state U10.                                                                                                                                                                                                                                                                                            |                                                             |   |                         |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                                                                                                               |                                                             |   |                         |
| <b>Comments:</b>            |       | The supported bearer capability is specified in the input partameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for SDCCH4 subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. The timing advance is parameter. For RR testing. |                                                             |   |                         |

| <b>Objective:</b>           |       | To establish a mobile terminating call for the supported bearer capability and put the MS in the CC state U10.                                                                                                                                                                                                                                                                               |                                                         |   |                         |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                                                                                                  |                                                         |   |                         |
| <b>Comments:</b>            |       | The supported bearer capability is specified in the input partameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for SDCCH4 subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. The power level is TSPX_MSTxpwrMax. |                                                         |   |                         |

| <b>Objective:</b>           |       | To establish a mobile terminating call for the supported bearer capability and put the MS in the CC state U10.                                                                                                                                                                                                                                                   |                                                             |   |                         |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                                                                      |                                                             |   |                         |
| <b>Comments:</b>            |       | The supported bearer capability is specified in the input parameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for TSPX_SDCCH4SubA subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. |                                                             |   |                         |

| <b>Objective:</b>           |       | To establish a mobile terminating call for the supported bearer capability in cell N7 and put the MS in the CC state U10.                                                                                                                                                                                                                                        |                                                             |   |                         |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                                                                      |                                                             |   |                         |
| <b>Comments:</b>            |       | The supported bearer capability is specified in the input parameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for TSPX_SDCCH4SubA subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. |                                                             |   |                         |

| <b>Objective:</b>           |       | To establish a mobile terminating call for the supported bearer capability and put the MS in the CC state U10.                                                                                                                                                                                                                                                   |                                                             |   |                         |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                                                                      |                                                             |   |                         |
| <b>Comments:</b>            |       | The supported bearer capability is specified in the input partameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID = 0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for TSPX_SDCCH4SubA subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphing key. |                                                             |   |                         |

| <b>Objective:</b> To bring the MS into CC state U11 by procedure in table 26.8.1.2/3. This is used in CC testing.                                                                                                                                                                                                                 |       |                                                                                                       |                                                               |   |          |
| <b>Default:</b> OtherEvents                                                                                                                                                                                                                                                                                                       |       |                                                                                                       |                                                               |   |          |
| <b>Comments:</b> TCV_TIO contains the transaction identifier from the MS, and TCV_TI contains the transaction identifier for test system to send CC message. The values of them are used in test body. The calling tree shall prepare two variables for the step: TCV_ch for the SDCCH4 subchannel; TCV_CphKey for ciphering key. |       |                                                                                                       |                                                               |   |          |

| <b>Objective:</b>           |       | To bring the MS into CC state U12 by procedure in table 26.8.1.2/3. This is used in CC testing.                                                                                                                                                                                                                                                                           |                     |    |          |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                                                                               |                     |    |          |
| <b>Comments:</b>            |       | The DISCONNECT message containing progress indicator #8. TCV_TI0 contains the transaction identifier from the MS, and TCV_TI contains the transaction identifier for test system to send CC message. The values of them are used in test body. The calling tree shall prepare two variables for the step: TCV_ch for the SDCCH4 subchannel; TCV_CphKey for ciphering key. |                     |    |          |

| <b>Objective:</b>           |       | To setup a physical channel as combined BCCH, CCCH and SDCCH4. CBCH replaces SDCCH number 2 for the CBSMS. Then broadcast SYSTEM INFORMATION messages 2, 3, 4, 5 and 6 with default parameters of cell A. |                                                                                                                                                               |   |                        |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                               |                                                                                                                                                               |   |                        |
| <b>Comments:</b>            |       | Default parameter.<br>IMSI attach detach is not allowed. Cell A is belonging to PLMN1.                                                                                                                    |                                                                                                                                                               |   |                        |

Detailed Comments:

**Test Step Dynamic Behaviour**

**Test Step Name:** StartCellA\_2(acttype:BITSTRING; slot:SN; tsc:TSC; ta:TA; att:INTEGER; babr, cch\_con, bpm:B\_3; t3212:OCTETSTRING)  
**Group:** GSM\_L3\_MS\_v4160/Preambles/  
**Objective:** To setup a physical channel as combined BCCH, CCCH and SDCCH4 then broadcast SYSTEM INFORMATION messages 2, 3, 4, 5 and 6 with default parameters of cell A.  
**Default:** OtherEvents  
**Comments:** IMSI attach/detach not allowed (ATT=0).
