**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To set a physical channel as hopping SDCCH8 channel, hopping parameters defined by PIXIT.
3. To setup the after time channels for ASSIGNMENT COMMAND.
4. To assign the hopping SDCCH8 channel.
5. To calculate the STARTING TIME.
6. To check whether the after time frequency hopping is correct at the RF burst level.
7. If the selected channel type is TCH/F, setup a physical channel as full rate channel for after time.
8. If the selected channel type is TCH/H, setup a physical channel as half rate channel for after time.
9. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for after time.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH.
2. To set two physical channels, one as hopping channel for immediate assignment another one as hopping channel for after time channel, parameters defined by PIXIT.
3. To calculate the starting time for frequency redefinition.
4. To send FREQUENCY REDIFINITION message.
5. To calculate the starting time and send the ASSIGNMENT COMMAND on special frame TCV\_Fn. The assigned channel not activated in the tester.
6. To check whether the after time frequency hopping is correct at the RF burst level.
7. If the selected channel type is TCH/F, setup a physical channel as full rate channel for immediate assignment.
8. If the selected channel type is TCH/H, setup a physical channel as half rate channel for immediate assignment.
9. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for immediate assignment.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH for cell A.
2. To setup a physical channel as BCCH, CCCH for cell B.
3. To setup a physical channel as SDCCH8 in cell A and setup 2 physical channels as hopping channels in cell B.

4. To get the future frame number for sending HANOVER COMMAND and calculate starting time.
5. If the required channel is full rate channel, setup the after time full rate hopping channel.
6. If the required channel is full rate channel, setup the before time full rate hopping channel.
7. If the required channel is half rate channel, setup the after time half rate hopping channel.
8. If the required channel is half rate channel, setup the before time half rate hopping channel.
9. If the required channel is SDCCH8 channel, setup the after time SDCCH8 hopping channel.
10. If the required channel is SDCCH8 channel, setup the before time SDCCH8 hopping channel.

**Test Case Name:** TC\_26\_7\_3\_1  
**Group:** GSM\_L3\_MS\_v4160/MM/  
**Purpose:** 1) To verify that the MS sends identity information as requested by the system in the following cases: IMSI and TMSI are requested in non-ciphered mode, IMEI is requested in ciphered mode.  
 2) To verify that the MS sends its IMEI, when requested to do so, in non-ciphered mode.  
 3) To verify that the MS sends its IMEISV, when requested to do so, in non-ciphered mode.  
**Default:** OtherEventsFail  
**Comments:** Initial Conditions of MS:  
 The MS has valid TMSI. It is "idle updated" on the cell.  
  
 Foreseen final state of the MS:  
 The MS has valid TMSI. It is "idle updated" on the cell.  
 In the 11.10 there are two test sequences. In TTCN they are combined to only one.

| <b>Group:</b>          | GSM_L3_MS_v4160/MM/                                                                                                                                                                                                                                                                          |
| <b>Purpose:</b>        | To test the behaviour of the MS if the network accepts the location updating of the MS. For the network response three different cases are identified:<br>1) TMSI is allocated,<br>2) Location updating accept contains neither TMSI nor IMSI,<br>3) Location updating accept contains IMSI. |
| <b>Default:</b>        | OtherEventsFail                                                                                                                                                                                                                                                                              |
| <b>Comments:</b>       | Initial Conditions of MS:<br>The MS has valid TMSI(TMSI1), CKSN(CKSN1) and Kc.It is "idle updated" on cell A.<br><br>Foreseen final state of the MS:<br>The MS has no valid TMSI and no CKSN. It is "idle updated" on cell B.                                                                |

**Detailed Comments:**

1) Location updating rejected with cause = PLMN not allowed.

MS shall

- 2) not perform periodic updating
- 3) not perform IMSI detach when switched off.
- 4) not perform normal location updating after switching to a new LAC in the same PLMN and when that PLMN is not selected manually.
- 5) reject any request from CM entity for MM connection other than for emergency call.
- 6) switch to a new cell with a new PLMN.
- 7) perform normal location updating after entering in a new PLMN

- MS shall
- 2) perform normal updating when a new location area is entered.
  - 3) not perform periodic updating

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_7\_4\_2\_4\_4  
**Group:** GSM\_L3\_MS\_v4160/MM/  
**Purpose:** Test purpose 4  
 To test that if a cell of the Home PLMN is available then the MS returns to it in preference to any other available cell.  
**Default:** OtherEventsFail  
**Comments:** This testcase includes only the procedure of part 4 of GSM 11.10-1, section 26.7.4.2.4.

Initial Conditions of MS:  
 The MS has valid TMSI, CKSN and Kc.It is "idle updated" on cell A.

Foreseen final state of the MS:  
 The MS has no valid TMSI and no CKSN. It is "idle updated" on cell C.

**Detailed Comments:**

- 1) Periodic Updating in cell A.
- 2) LAI change to HPLMN
- 3) Reject of Periodic Location Updating with the cause Roaming is not allowed in cell A.
- 4) MS shall periodically search to Home PLMN.

| 1) MS shall selects cell A, cell B is not available.                                                                                                                                                                                                                                                                    |       |                                                                                                            |          |     |          |
| 2) To send Max-Retrans+1 times Channel Requests in cell A                                                                                                                                                                                                                                                               |       |                                                                                                            |          |     |          |

- 3) MS shall not try to establish a connection during a period of a cell reselection (4 seconds).
- 4) MS shall perform a normal location updating procedure as it is necessary.
- 5) Cell A is not available and MS shall switches to cell B
- 6) To send Max-Retrans+1 times Channel Requests in cell B
- 7) Cell A is available again.
- 8) MS shall not repeat the complete procedure if the original cause of the normal location updating procedure has disappeared.

| <b>Purpose:</b> To verify that the MS performs normal location updating procedures when its attempt counter is smaller than 4. To check that the MS does not perform the IMSI detach procedure when "idle not updated". To verify that when "idle not updated" the MS can perform an emergency call. To verify that when "idle not updated" the MS uses requests from CM layer other than emergency call as triggering of a normal location updating procedure. To verify that the MS performs a normal location updating procedure if it enters a new cell while being "idle not updated". |       |                                                                                                            |      |   |          |

| <b>Detailed Comments:</b> 1) Test of Conformance Requirement 1<br>1.1) Reject of Location Updating in cell B |                                                                                                     |                                                                                              |     |                         |

- 1.2) MS shall wait the period of T3211 and restart the normal location updating procedure when the attempt counter is smaller than 4.
- 1.3) Radio Link Failure extends the period of delay for next location updating.
  
- 2) Test of Conformance Requirement 2
  - 2.1) Reject of Location Updating in cell A
  - 2.2) MS shall not answer to paging
  - 2.3) All of location updating requests shall be rejected.
  - 2.4) MS shall not perform the IMSI detach procedure.
  
- 3) Test of Conformance Requirement 3
  - 3.1) Failure during Location Updating in cell A
  - 3.2) MS shall support emergency call.
  - 3.3) MS shall wait at most 15 sec. for location updating
  
- 4) Test of Conformance Requirement 4
  - 4.1) Failure during Location Updating Procedure
  - 4.2) MS shall use a request from Cm entity other than emergency call as a trigger for a normal location updating procedure.
  - 4.3) After the Location Updating Procedure MS can (optional) start automatically the Cm entity service again. It is optional and shall be observed only 15 sec.
  
- 6) Test of Conformance Requirement 6
  - 6.1) Failure during Location Updating Procedure
  - 6.2) MS shall start the location Updating Procedure as soon as it enters a new cell.

**Detailed Comments:**

- 1.) To test conformance requirement 1
  - 1.1) Attempt counter is now equal to 4
  - 1.2) MS shall perform location updating after T3212
  - 1.3) MS shall initiate location updating procedure, if the updating was unsuccessful.
- 2.) To test conformance requirement 2
  - 2.1) Attempt counter is now equal to 4
  - 2.2) MS shall perform request for emergency call
  - 2.3) MS shall not perform an IMSI detach procedure

- 3.) To test conformance requirement 3 and 4
- 3.1) Attempt counter is now equal to 4
- 3.2) MS shall use a request from CM entity for MM connection for a service other than emergency call as a trigger for a normal location updating procedure.
- 3.3) MS shall reset the attempt counter after successful location updating procedure.
- 3.4) Attempt counter is now equal to 4
- 3.5) MS shall perform the normal location updating procedure after entering a new cell.
- 3.6) If the location updating procedure unsuccessful, the MS shall trigger the location updating after T3211 again.

| <b>Purpose:</b>             |       | To verify that in the case when the attempt counter is smaller than 4 and the broadcast LAI is equal to the stored LAI, the MS is in the MM-IDLE state and NORMAL SERVICE substate. To verify that timer T3211 is stopped after a MM connection establishment. To verify that the MS uses the T3211 timer. and that it enters the MM-IDLE state and NORMAL SERVICE substate when its attempt counter reaches value |            |     |          |

| <b>Detailed Comments:</b>   |       | 1. To setup a physical channel as BCCH, CCCH and SDCCH4 used as cell B.                                                                                    |                                                         |     |                                                                                                       |

2. The expected HANDOVER FAILURE message received on the old channel.
3. To check whether the MS is still in the state U10, if no test case fails in the test step.
4. The expected ASSIGNMENT FAILURE message received on the old channel.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_4\_4\_1  
**Group:** GSM\_L3\_MS\_v4160/CC/  
**Purpose:**

- 1) To verify that an MS supporting the network originated in-call modification procedure, after having received a MODIFY message with a new mode which is not the actual one and cannot be supported by the MS, rejects it by sending a MODIFY REJECT.
- 2) To verify that an MS not supporting the network originated in-call modification procedure, after having received a MODIFY message, responds with a STATUS message.

**Default:** OtherEventsFail  
**Comments:** The generic MT call setup procedure is used to bring the MS into U10 state.

| <b>Purpose:</b>             |       | 1. To verify that a CC-entity of the MS in CC-state U26, "Mobile Originating Modify", after successful completion of a channel assignment procedure remains in the call state U26.<br>2. To verify that upon receipt of the MODIFY COMPLETE message the MS starts sending channel information according to the new call mode and enters the "active" state. |                                                           |   |          |

| <b>Purpose:</b>        | <p>1) To verify that the MS in MM state "idle, updated" with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.</p> <p>2) To verify that the MS in MM state "idle, updated" and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.</p> <p>3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.</p> <p>4) To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCH, after having completed the traffic channel early assignment procedure by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.</p> <p>5) To verify that subsequently the MS has attached the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)</p> <p>6) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.</p> <p>7) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.</p> <p>These test purposes are tested for all rates supported by the MS (full rate/half rate).</p> |

**Detailed Comments:**

1. To perform the test on full rate channel.
2. To perform the test on half rate channel.
3. To setup two physical channels, one for combined BCCH, CCCh and SDCHH4, another one for full rate traffic channel.
4. To enter the called party number.
5. To check whether the MS displays the called party number correctly.
6. To initiate the call.
7. To setup the previous full rate traffic channel into half rate traffic channel.
8. Early assignment.

### Test Case Dynamic Behaviour

| <b>Purpose:</b>        | <p>1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.</p> <p>2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.</p> <p>3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.</p> <p>4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)</p> <p>These test purposes are tested for all rates supported by the MS (full rate/half rate).</p> |

To setup the previous full rate traffic channel into half rate traffic channel.</li> <li>8. Later assignment</li> </ol> |                                           |     |  |

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_9\_4  
**Group:** GSM\_L3\_MS\_v4160/StructureProc/  
**Purpose:**

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having sent a PAGING RESPONSE message on the allocated SDCCH, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message not containing a signal information element, returns a CALL CONFIRMED message.
- 2) To verify that subsequently, the SS sending an ASSIGNMENT COMMAND message, the MS successfully continues a mobile terminating call establishment with early assignment of traffic channel
  - a) by replying to the ASSIGNMENT command with an ASSIGNMENT COMPLETE message, and
  - b) by continuing the call establishment by either sending one or two CONNECT messages (with equal N(SD)) or sending an ALERTING message, steps a) and b) being performed in any permitted interleaving.
- 3) To verify that if after sending a CALL PROCEEDING message, the MS sends an ALERTING message during MTC establishment with early assignment, it generates an alerting indication.
- 4) To verify that if an ALERTING had been sent, subsequently, when the user accepts the call (possibly internal action as declared in PICS/PIXIT statement), the MS returns a CONNECT message.
- 5) To verify that the MS:
  - if the call is a speech call: after sending the CONNECT message has through connected the TCH in both directions (this is checked by verifying that after transmission of the first L2 frame containing the (complete) CONNECT message, the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
  - if the call is a data call: after receipt of a subsequent CONNECT ACKNOWLEDGE message through connects the TCH in both directions (this is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT ACKNOWLEDGE message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
- 6) To verify that subsequently, the MS can initiate call clearing by sending a DISCONNECT message.
- 7) To verify that the MS in this phase of call release, upon receipt of a RELEASE message, returns a RELEASE COMPLETE message.
- 8) To verify that subsequently the MS, upon receipt of a CHANNEL RELEASE message, disconnects the main signalling link.

**Default:** OtherEventsFail

**Detailed Comments:**

1. To perform the test on full rate channel.
2. To perform the test on half rate channel.
3. To setup two physical channels, one for combined BCCH, CCCh and SDCHH4, another one for full rate traffic channel.
4. To setup the previous full rate channel into half rate channel.
5. Authentication is OK.
6. SETUP message without signal IE.
7. Early assignment.
8. Alerting indication not correct.
9. To accept the call at the MS.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_9\_5  
**Group:** GSM\_L3\_MS\_v4160/StructureProc/  
**Purpose:**

- 1) To verify that the MS in "Idle, Updated" state with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having established the main signalling link, after having sent a PAGING RESPONSE message, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message containing a signal information element, returns a CALL CONFIRMED message followed by
  - an ALERTING message
  - or a CONNECT message.
- 2) To verify that in the situation of test purpose 1, if the MS sends an ALERTING message, the MS generates an alerting indication in the way described in a PICS/PIXIT statement.
- 3) To verify that subsequently the MS, if it had not yet sent a CONNECT message, upon acceptance of the call, sends a CONNECT message.
- 4) To verify that subsequently after receipt of an ASSIGNMENT COMMAND, the MS sends an ASSIGNMENT COMPLETE message.
- 5) To verify that subsequently the MS
  - if the call is a speech call: after sending the ASSIGNMENT COMPLETE message has through connected the TCH in both directions (this is checked by verifying that after transmission of the first L2 frame containing the (complete) ASSIGNMENT COMPLETE message, the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
  - if the call is a data call: after receipt of a subsequent CONNECT ACKNOWLEDGE message through connects the TCH in both directions (this is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT ACKNOWLEDGE message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)

These test purposes are tested for all rates supported by the MS (full rate/half rate).

**Default:** OtherEventsFail
