Detailed Comments:

1. The TI value of the DISCONNECT message does not refer to the active call.
2. The TI value of the RELEASE COMPLETE message does not refer to the active call ('0000'B).
3. The TI flag of the SETUP message is set to 1 and TI value refers to the active call.
4. This SETUP contains TI refers to the active call ('0000'B).
5. The TI value of the DISCONNECT message is '111'B.

This is tested in the special case of an IDENTITY REQUEST message in which the (mandatory) identity type IE specifies a reserved value for the type of identity; that the MS otherwise ignores the message is checked by means of the status enquiry procedure. | | | |

Test Case Dynamic Behaviour

Test Case Name: TC_26_6_2_5
Group: GSM_L3_MS_v4170/RR/
Purpose: 1) To test that the MS is able to determine its CCCH group and paging group correctly in the case of a CCCH configuration on more than one timeslot when it is paged on a timeslot other than 0. The MS is addressed with a PAGING REQUEST TYPE 1 message when the page mode is set to normal paging. The MS is paged with its IMSI in the 1st Mobile Identity field, the optional Mobile Identity field being not present, is the only way of addressing tested.
 2) To test that in such conditions the MS answers to the paging message on the timeslot on which the paging message was sent.
Default: OtherEventsFail
Comments: The configuration is Tx-integer = 5, Max-Retrans = 1 and CCCH-CONF, BS-AG-BLKS-RES and BS-PA-MFRMS are from PIXIT parameters.
 In the PIXITs CCCH-CONF is set to 3, BS-AG-BLKS-RES = 2 and BS-PA-MFRMS = 3.
 For this test to be useful, we need
 $((\text{IMSI mod } 10000) \bmod ((9 - \text{bsagres}) * \text{bspamfrms})) > (9 - \text{bsagres}) * \text{bspamfrms}$
 ie. $((\text{IMSI mod } 1000) \bmod 3 * 7 * 9) > 7 * 9$
 thus if the last 3 digits of the IMSI are 065 then this test will work.
 When the CCCHs that are not on timeslot zero are set, the SYNC channel must not be started on them. The SYNC channel is used by mobiles to identify TS zero. (the FCCH is supposed to be excluded as well)

Test Case Dynamic Behaviour

| | |
|------------------------|--|
| Test Case Name: | TC_26_6_4_1 |
| Group: | GSM_L3_MS_v4170/RR/ |
| Purpose: | <p>1. To verify that upon receipt of an ASSIGNMENT COMMAND, the MS switches to the channel defined in the ASSIGNMENT COMMAND, establishes the link and sends an ASSIGNMENT COMPLETE message. This is tested for an MS supporting TCH in the special cases of a transition</p> <p>1.1 from non-hopping SDCCH to hopping TCH/F using a different timeslot</p> <p>1.2 from hopping TCH/F to non-hopping TCH/F using a different timeslot</p> <p>1.3 from non-hopping TCH/F to non-hopping TCH/F using a different timeslot</p> <p>1.4 from non-hopping TCH/F to hopping TCH/H using a different timeslot; this test purpose is only applicable if the MS supports TCH/H</p> <p>1.5 from hopping TCH/H to non-hopping TCH/H using a different timeslot; this test purpose is only applicable if the MS supports TCH/H</p> <p>1.6 from non-hopping TCH/H to hopping TCH/F using a different timeslot; this test purpose is only applicable if the MS supports TCH/H.</p> <p>2. To verify that an MS supporting TCH, having sent an MM- or CM message which was not acknowledged on L2 before the channel assignment procedure was initiated and before the MS has left the old channel, repeats that message after completion of the assignment procedure without incrementing N(SD). This is tested in the special case of MM message AUTHENTICATION RESPONSE.</p> <p>3. To verify that, if an MS supporting TCH has received an ASSIGNMENT COMMAND message which contains only the description of a channel to be used after the starting time, and if the starting time has not already elapsed, the mobile station shall wait up to the starting time before accessing the channel.</p> <p>4. To verify that an MS supporting TCH, having received an ASSIGNMENT COMMAND, having sent an SABM frame to establish the main signalling link on the assigned channel, reports the power level specified in the ASSIGNMENT COMMAND message, in the uplink SACCH L1 header of the SACCH message sent in the SACCH period following the transmission of the SABM frame.</p> |

Detailed Comments:

1. To setup BCCH, CCCH, SDCCH4 and a full rate traffic channel for cell A.
2. To setup BCCH, CCCH, SDCCH4 and a full rate traffic channel for cell B.
3. To bring the MS into the U10 state.
4. Pre-synch handover without TA IE.
5. The received timing advance is 1 bit period, pass.
6. The received handover reference is correct.
7. The power level is correct.

Detailed Comments:

1. Cell A with BCCH, CCCH, SDCCH4 and a traffic channel.
2. Cell B with BCCH, CCCH, SDCCH4 and a traffic channel.
3. In cell A the timing advance = TSPX_y2.
4. pseudo-synch, rot = 1, nc1, = 0, real time difference = 2*TSPX_k2 + 10., handover reference = TSPX_horfH.
5. The Mobile Time Difference = (2*TSPX_k2 + TSPX_y2) mod 2 097 152 with tolerance of 2.
6. The time advance is correct.

Detailed Comments:

1. To setup a physical channel as BCCH, CCCH.
2. To set a physical channel as hopping SDCCH8 channel, hopping parameters defined by PIXIT.
3. To setup the before time and after time channels for ASSIGNMENT COMMAND.
4. To assign the hopping SDCCH8 channel.
5. To calculate the STARTING TIME.
6. To check whether the after time frequency hopping is correct at the RF burst level.
7. If the selected channel type is TCH/F, setup a physical channel as full rate channel for before time.
8. If the selected channel type is TCH/F, setup a physical channel as full rate channel for after time.
9. If the selected channel type is TCH/H, setup a physical channel as half rate channel for before time.
10. If the selected channel type is TCH/H, setup a physical channel as half rate channel for after time.
11. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for before time.
12. If the selected channel type is SDCCH8, setup a physical channel as SDCCH8 channel for after time.

| Purpose: To verify that the MS is able to receive and acknowledge a new TMSI by means of an explicit TMSI reallocation procedure. To verify that the MS has stored the TMSI in a non-volatile memory. The implicit reallocation procedure is tested in section 26.7.4.1. | | | | | |
| Default: OtherEventsFail | | | | | |
| Comments: Initial Conditions of MS: The MS has valid TMSI(TMSI_01), CKSN and Kc. It is "idle updated" on cell B. The initial conditions will be arrived in procedures of PREAMBLE. Required SIM card: default Foreseen final state of the MS: The MS has valid TMSI(TMSI_01), CKSN and Kc. It is "idle updated" on cell A. | | | | | |

Test Case Dynamic Behaviour

Test Case Name: TC_26_7_4_2_4_2
Group: GSM_L3_MS_v4170/MM/
Purpose: Test purpose 2
 To test that if no cell is available, the MS does not answer to paging with TMSI, rejects a request from CM entity except other than emergency calls.
Default: OtherEventsFail
Comments: This testcase includes only the procedure of part 2 of GSM 11.10-1, section 26.7.4.2.4.

Initial Conditions of MS:
 The MS has valid TMSI, CKSN and Kc. IT is "idle updated" on cell B.

Foreseen final state of the MS:
 The MS has no valid TMSI and no CKSN. It is in the "limited service" state on cell A.

Detailed Comments:

- 1) Test of Conformance Requirement 1
 - 1.1) Reject of Location Updating in cell B
 - 1.2) MS shall wait the period of T3211 and restart the normal location updating procedure when the attempt counter is smaller than 4.
 - 1.3) Radio Link Failure extends the period of delay for next location updating.
- 2) Test of Conformance Requirement 2
 - 2.1) Reject of Location Updating in cell A
 - 2.2) MS shall not answer to paging
 - 2.3) All of location updating requests shall be rejected.
 - 2.4) MS shall not perform the IMSI detach procedure.
- 3) Test of Conformance Requirement 3
 - 3.1) Failure during Location Updating in cell A

- 3.2) MS shall support emergency call.
- 3.3) MS shall wait at most 15 sec. for location updating

- 4) Test of Conformance Requirement 4
- 4.1) Failure during Location Updating Procedure
- 4.2) MS shall use a request from Cm entity other than emergency call as a trigger for a normal location updating procedure.
- 4.3) After the Location Updating Procedure MS can (optional) start automatically the Cm entity service again. It is optional and shall be observed only 15 sec.

- 6) Test of Conformance Requirement 6
- 6.1) Failure during Location Updating Procedure
- 6.2) MS shall start the location Updating Procedure as soon as it enters a new cell.

| Purpose: | To verify that the MS performs normal location updating after T3212 expiry when its attempt counter has reached value 4 and that the MS reset its attempt counter after a timer T3212 expiry. To verify that the MS still follows the MM-IDLE ATTEMPTING TO UPDATE state requirements after its attempt counter has reached value 4. To verify that the attempt counter is reset in the cases where it has to be done. |
| Default: | OtherEventsFail |
| Comments: | Initial Conditions of MS: The MS has valid TMSI and CKSN. It is "idle updated" on cell B. Foreseen final state of the MS: The MS has valid TMSI and CKSN. It is "idle updated" on cell A. |

| Detailed Comments: | | 1.) To test conformance requirement 1 1.1) Attempt counter is now equal to 4 1.2) MS shall perform location updating after T3212 1.3) MS shall initiate location updating procedure, if the updating was unsuccessful. | | | |

- 2.) To test conformance requirement 2
 - 2.1) Attempt counter is now equal to 4
 - 2.2) MS shall perform request for emergency call
 - 2.3) MS shall not perform an IMSI detach procedure

- 3.) To test conformance requirement 3 and 4
 - 3.1) Attempt counter is now equal to 4
 - 3.2) MS shall use a request from CM entity for MM connection for a service other than emergency call as a trigger for a normal location updating procedure.
 - 3.3) MS shall reset the attempt counter after successful location updating procedure.
 - 3.4) Attempt counter is now equal to 4
 - 3.5) MS shall perform the normal location updating procedure after entering a new cell.
 - 3.6) If the location updating procedure unsuccessful, the MS shall trigger the location updating after T3211 again.

| 1) Test of Conformance Requirement 1 | | | | |
| 1.1) failure during a periodic location updating procedure | | | | |
| 1.2) - then the MS shall be able to establish an MM connection | | | | |
| 1.3) - then the MS shall not attempt a location updating procedure | | | | |
| 2) Test of Conformance Requirement 2 | | | | |
| 2.1) failure during imsi attach procedure | | | | |

- 2.2) - then the MS shall be able to establish an MM connection
- 2.3) - then the MS shall not attempt a location updating procedure

3) Test of Conformance Requirement 3

3.1) When a failure during a periodic location updating procedure and the attempt counter is smaller than 4 then the MS shall execute a periodic location updating procedure after T3211 expiry.

3.2) When the attempt counter reaches 4 after T3212 expiry the MS shall make a LUP any type.

4) Test of Conformance Requirement 4

4.1) The attempt counter reaches the value 4

4.2) then the MS shall use a request from CM layer for an emergency call as a trigger for a LUP.

4.3) this part is optional

5) Test of Conformance Requirement 5

5.1) When a failure during an imsi attach procedure and the attempt counter is smaller than 4 then

the MS shall execute a location updating procedure(imsi attach) after T3211 expiry.

5.2) Attempt Counter reaches the value 4

5.3) When the attempt counter reaches 4 after T3212 expiry the MS shall make a normal LUP.

6) Test of Conformance Requirement 6

6.1) Failure during an imsi attach procedure and the attempt counter reaches the value 4.

6.2) then the MS shall use a request from CM layer for an emergency call as a trigger for a LUP.

Detailed Comments:

1. To perform the test on full rate channel.
2. To perform the test on half rate channel.
3. To setup two physical channels, one for combined BCCH, CCCh and SDCHH4, another one for full rate traffic channel.
4. To enter the called party number.
5. To check whether the MS displays the called party number correctly.
6. To initiate the call.
7. To setup the previous full rate traffic channel into half rate traffic channel.
8. Early assignment.

Test Case Dynamic Behaviour

Test Case Name: TC_26_9_4

Group: GSM_L3_MS_v4170/StructureProc/

Purpose:

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having sent a PAGING RESPONSE message on the allocated SDCCH, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message not containing a signal information element, returns a CALL CONFIRMED message.
- 2) To verify that subsequently, the SS sending an ASSIGNMENT COMMAND message, the MS successfully continues a mobile terminating call establishment with early assignment of traffic channel
 - a) by replying to the ASSIGNMENT command with an ASSIGNMENT COMPLETE message, and
 - b) by continuing the call establishment by either sending one or two CONNECT messages (with equal N(SD)) or sending an ALERTING message, steps a) and b) being performed in any permitted interleaving.
- 3) To verify that if after sending a CALL PROCEEDING message, the MS sends an ALERTING message during MTC establishment with early assignment, it generates an alerting indication.
- 4) To verify that if an ALERTING had been sent, subsequently, when the user accepts the call (possibly internal action as declared in PICS/PIXIT statement), the MS returns a CONNECT message.
- 5) To verify that the MS:
 - if the call is a speech call: after sending the CONNECT message has through connected the TCH in both directions (this is checked by verifying that after transmission of the first L2 frame containing the (complete) CONNECT message, the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
 - if the call is a data call: after receipt of a subsequent CONNECT ACKNOWLEDGE message through connects the TCH in both directions (this is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT ACKNOWLEDGE message, where the MS is sending appropriate speech or data frames whenever it does not have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
- 6) To verify that subsequently, the MS can initiate call clearing by sending a DISCONNECT message.
- 7) To verify that the MS in this phase of call release, upon receipt of a RELEASE message, returns a RELEASE COMPLETE message.
- 8) To verify that subsequently the MS, upon receipt of a CHANNEL RELEASE message, disconnects the main signalling link.

Detailed Comments:

1. To perform the test on full rate channel.
2. To perform the test on half rate channel.
3. To setup two physical channels, one for combined BCCH, CCCh and SDCHH4, another one for full rate traffic channel.
4. To setup the previous full rate channel into half rate channel.

5. Authentication is OK.
6. SETUP message without signal IE.
7. Late assignment.
8. Alerting indication not correct.
9. To accept the call at the MS.

Test Case Dynamic Behaviour

Test Case Name: TC_26_9_6_2_2

Group: GSM_L3_MS_v4170/StructureProc/

Purpose:

- 1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message in which the cipher key sequence number IE indicates "no key is available", the CM service type IE indicates "emergency call establishment", and the mobile identity IE specifies the IMEI of the MS.
- 3) To verify that after receipt of a CM SERVICE REJECT message from the SS, the MS abandons the emergency call establishment.

Default: OtherEventsFail

Comments: For this test case the SIM card shall be removed from the MS.

Detailed Comments:

1. To setup a physical channel as BCCH CCCH and SDCCH4.
2. CHANNEL REQUEST with "emergency call" received.
3. CM SERVICE REQUEST with "emergency call establishment", IMEI, "no key available" and classmark received.
4. To check whether the MS sends any L 3 messages, the test case fails in the default tree if the MS does.
5. To check whether the MS initiates an RR connection establishment, the test case fails in the default tree if the MS does.

Test Case Dynamic Behaviour

Test Case Name: TC_26_10_3_2

Group: GSM_L3_MS_v4170/EGSMsignalling/

Purpose:

- 1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".
- 3) To verify that after receipt of a CM SERVICE ACCEPT message from the SS, the MS sends an EMERGENCY SETUP message.
- 4) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure, the MS performs correctly that assignment procedure.
- 5) To verify subsequent correct performance of a connect procedure.
- 6) To verify that subsequently the MS has through connected the TCH in both directions.
- 7) To verify that the call is cleared correctly.

Detailed Comments:

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate an EraseSS operation of call forwarding service for CFC (all facsimile).
3. To initiate an EraseSS operation of call forwarding service for CFNRc (all basic services).
4. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. The user indication is correct.
7. The user indication is wrong.

Test Case Dynamic Behaviour

Test Case Name: TC_31_8_1_1

Group: GSM_L3_MS_v4170/SS/

Purpose:

- 1) To check that the MS correctly requests a supplementary service transaction for registration of a password for all call restriction services in CHANNEL REQUEST message.
- 2) To check that the MS correctly requests a supplementary service transaction for registration of a password for all call restriction services in the subsequent CM-SERVICE REQUEST.
- 3) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all barring services.
- 4) To check that when the mobile subscriber wants to register a new password, the old password the new and the repeat of the new password shall be entered into the MS before the MS sends to the network a CHANNEL REQUEST..
- 5) To check that the MS is able to send a password by sending a FACILITY message in accordance to the user request (MMI actions).
- 6) To check that upon receipt of the result of the procedure, contained in RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the manufacturer).

These checks are done for:
all barring services, the result of the operation being sent in a RELEASE COMPLETE message

Default: OtherEventsFail

Detailed Comments:

1. To set up physical channel as BCCH, CCCH and SDCCH4.
2. To initiate the Registration of password supplementary service.
3. Received the old password.
4. Received the new password.
5. Received the repeat of new password.

Test Case Dynamic Behaviour

Test Case Name: TC_31_8_1_2_1

Group: GSM_L3_MS_v4170/SS/

Purpose:

- 1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of registration of a password for all call restriction services, sending a CM-SERVICE REQUEST.
- 2) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all call restriction services.
- 3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.
- 4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:
 all call restriction services, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".

Detailed Comments:

1. To setup physical channels as BCCH, CCCH, SDCCH4 and full rate traffic channel.
2. To establish a mobile originating call to bring the MS into state U10.
3. To initiate the ActivateSS for BOIC.
4. To send ReturnError for the invocation of ActivateSS.
5. The user indication is correct, pass.

Test Case Name: TC_31_8_4_2_2

Group: GSM_L3_MS_v4170/SS/

Purpose:

- 1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of deactivation of a group of call restriction services, sending a CM-SERVICE REQUEST.
- 2) To check that the MS sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for deactivation of a group of call restriction service.
- 3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.
- 4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for :

BOICExHC, the RELEASE COMPLETE message being sent at the end of the procedure with a facility IE containing a return_error(error) where error is "NegativePasswordCheck".

Test Case Dynamic Behaviour

Test Case Name: TC_31_9_1_1
Group: GSM_L3_MS_v4170/SS/
Purpose: 1) To verify that the mobile station invokes an USSD request by sending a REGISTER message to the network containing a ProcessUnstructuredSS-Request invoke component. This message will contain the alphabet indicator set to "SMS default alphabet" and the language indicator set to "language unspecified". The ussd-string parameter shall contain the following digits and symbols depending on the operation initiated:

Activation *NN(N)# (no supplementary information included)
 *NN(N)*SI#(one field of supplementary information included)
 *NN(N)*SIA*SIB#(two fields of supplementary information included)

Deactivation #NN(N)# (no supplementary information included)
 #NN(N)*SI#(one field of supplementary information included)
 #NN(N)*SIA*SIB#(two fields of supplementary information included)

Interrogation *#NN(N)# (no supplementary information included)
 *#NN(N)*SI#(one field of supplementary information included)
 *#NN(N)*SIA*SIB#(two fields of supplementary information included)

Registration **NN(N)# (no supplementary information included)
 **NN(N)*SI#(one field of supplementary information included)
 **NN(N)*SIA*SIB#(two fields of supplementary information included)

Erasure ##NN(N)# (no supplementary information included)
 ##NN(N)*SI#(one field of supplementary information included)
 ##NN(N)*SIA*SIB#(two fields of supplementary information included)

Operations not yet defined in GSM 02.30 (see 2)

NN(N) features a set of service codes which have not yet been allocated for GSM supplementary services (see GSM 02.30 for service codes already specified).
 N is a digit within 1..9 and SI, SIA, SIB strings of characters.

2) To check that the entry of 1 or 2 characters defined in the GSM 03.38 default alphabet followed by "SEND" shall be interpreted by the MS as an USSD request unless the MS is not engaged in a call and the first of the two character entry followed by "SEND" is a "1".

3) To verify that, for supplementary service procedures independent of any call, the initiating side must establish a MM-connection between the network and the mobile station according to the rules in TS GSM 4.07 and 4.08.

4) To verify that, within a call the MS shall transmit a USSD request if any. See TS GSM 4.07 and 4.08 for the handling of multiple MM connections.

5) To check that upon receipt of the RELEASE COMPLETE message, the MS shall display the information contained to the user in a way described by the manufacturer.

| Purpose: 1)To verify that if a mobile initiated USSD request using protocole version 2 is rejected by the network, and the reason for the rejection is indicated either by the problem code "unrecognized operation" or a cause "facility rejected", the mobile station shall assume that the network only supports protocole version 1 of USSD operation. The mobile station shall re-attempt the request by using the appropriate protocole version 1 USSD operation without a SS version indicator if the unstructured data entered by the user can be coded as an IA5 string. 2)To check that, upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer). If ussd-string information is included this shall be given to the user (in a way described by the manufacturer). | | | | | |

Test Case Dynamic Behaviour

Test Case Name: TC_31_9_2_3

Group: GSM_L3_MS_v4170/SS/

Purpose:

- 1) To verify that for a USSD notification, the MS shall display the text provided and await user input. If the user enters a response, the MS shall return the response to the network, maintaining the transaction.
- 2) To verify that the MS includes alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".
- 3) To check that the MS is able to process the operation during a call or out of a call.

Default: OtherEventsFail

| Purpose: | | To verify that the MS acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the SIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network. There are 2 cases. (1) If the MS supports storing of short messages in the SIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the SIM, the error cause shall be "protocol error, unspecified". (2) If the MS supports storing of short message in the SIM and not in the ME and short message cannot be stored in the SIM, the error cause shall be "memory capacity exceeded". | | | |

Test Step Dynamic Behaviour

Test Step Name: IdleState_3cellIMMA(acttype:BITSTRING; slot:SN; tsc:TSC; ta:TA; att:INTEGER; babr, cch_con, bpm:B_3; t3212:OCTETSTRING)

Group: GSM_L3_MS_v4170/Preambles/

Objective: To start the cells A, B and C with default parameters except power level of cell A = -40 dB = 73 dBuVemf, power level of cell B = -50 dB = 63 dBuVemf and power level of cell C = -60 dB = 53 dBuVemf and to bring the MS in Idle updated state on cell A.

Signal level (dBuVemf) = P (dBm) + 113

A, B and C are from same PLMN which differs from HPLMN with 3 different location area codes.

IMSI attach detach is allowed in both cells.

T3212 value is 1/10 in both cells.

Default: OtherEvents

Annex B: Partial IXIT proforma

Notwithstanding the provisions of the copyright clause related to the text of this ETS, ETSI grants that users of this ETS may freely reproduce the PIXIT proforma in this annex so that it can be used for its intended purposes and may further publish the completed PIXIT.

Introduction

This partial IXIT proforma contained in this ETS, after augmented by the Test Realizer, is proposed to be provided to the client for completion, when the related Abstract Test Suite is to be used against client's Implementation Under Test (IUT).

Text in *italics* is comments for guidance for the production of a IXIT, and is not to be included in the actual IXIT.

The completed IXIT will normally be used in conjunction with the completed ICS, as it adds precision to the information provided by the ICS.

B.1 Identification Summary

This table is completed by the test laboratory. The item "Contract References" is optional.

B.6 Ancillary Protocols

This clause is completed by the client in conjunction with the test laboratory.

In the following tables, the client identifies relevant information concerning each ancillary protocol in the SUT other than the IUT itself. One table for one ancillary protocol

Based on the MOT the test laboratory should create question proformas for each ancillary protocol in the blank space following each table. The information required is dependent on the MOT and the SUT, and covers all the addressing, parameter values, timer values and facilities (relevant to ETSs) as defined by the ICS for the ancillary protocol.

B.7.2 Parameter Values

B.7.2.1 Parameters related to Physical Resources

B.7.2.1.1 Parameter TSPX_AltNb

In the default test condition, there are two set of ARFCNs for neighbour cells BCCH/CCCH carriers available, one set is {10, 80, 90, 100, 110, 120} for GSM900 or {520, 600, 700, 780, 810, 870} for DCS1800, an alternative is {15, 85, 95, 105, 115, 122} for GSM 900 or {530, 610, 710, 790, 820, 880} for DCS1800. The value of TRUE selects the alternative set.

B.7.2.1.3 Parameter TSPX_BCCHcarrierB

In invalid/inopportune test, Idle mode test, and CC test group, an emulation of two cells, cell A and cell B, is needed. The parameter TSPX_BCCHcarrierB specifies the ARFCN used for BCCH/CCCH carrier of cell B. the value of TSPX_BCCHcarrierB can be selected from {10, 80, 90, 100, 110,120} for GSM900 or {520, 600, 700, 780, 810, 870} for DCS1800 when the TSPX_AltNb = FALSE, or form {15, 85, 95, 105, 115, 122} for GSM900 or {530, 610, 710, 790, 820, 880} for DCS!800 when the TSPX_AltNb = TRUE.

B.7.2.1.6 Parameter TSPX_TCHcarrierA

If there is no special requirement indicated, the carrier for traffic channel or SDCCH channel of cell A could be one of the following ARFCNs 30, 50 and 70 for GSM900 or one of the following ARFCNs 650, 750 and 850 for DCS1800. The parameter TSPX_TCHcarrierA specifies which one is used in the cell A for the test.

B.7.2.1.7 Parameter TSPX_TCHcarrierA_ho

The parameter TSPX_TCHcarrierA_ho specifies TCH and SDCCH channel frequency number of cell A for HO cases. Its value is arbitrarily selected from cell allocation of cell A but not the carrier for BCCH. For GSM testing the cell allocation is 10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114. For DCS testing the cell allocation is 734, 741, 747, 754, 759, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844.

B.7.2.1.9 Parameter TSPX_TCHcarrierB_ho

The parameter TSPX_TCHcarrierB_ho specifies the ARFCN used for the carrier of traffic channel or SDCCH channel of cell B for handover test cases. Its value is arbitrarily selected from the cell allocation of cell B but not the carrier for BCCH. For GSM testing the cell allocation is 14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114. For DCS testing the cell allocation is 739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844.

B.7.2.1.10 Parameter TSPX_TCHcarrierB2_ho

The parameter TSPX_TCHcarrierB2_ho specifies the ARFCN used for the carrier of traffic channel or SDCCH channel of cell B for handover test cases. It can be any value selected from cell allocation for cell B, but not BCCH carrier. For GSM testing the cell allocation is 14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114. For DCS testing the cell allocation is 739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844.

B.7.2.1.11 Parameters for Time Slot

Parameters in the following table represent the Time Slot used. The item 1 to item 8 are used in test cases where the Time Slot values are arbitrarily selected but controllable. The parameters can have any valid values but they shall be different from each other. Item 1 is the default Time Slot used in the test cases where the Time Slot is not specifically indicated. Item 9 can be any valid value but not zero.

B.7.2.2 Parameters related logical channel**B.7.2.2.1 Parameters for SDDCH4 Subchannels**

The parameters TSPX_SDCCH4Sub's indicate the TDMA offset of SDCCH4 subchannels. The item 1 to item 4 in the table are used in test cases where the subchannels are arbitrarily selected but controllable. The parameters can have valid values but they shall be different from each other. Item 1 is the default TDMA offset of SDCCH4 subchannel used in the test cases where the subchannel of SDCCH4 is not specifically indicated.

B.7.2.2.2 Parameters for SDDCH8 Subchannels

The parameters TSPX_SDCCH8Sub's indicate the TDMA offset of SDCCH8 subchannels. The item 1 to item 8 in the table are used in test cases where the subchannels are arbitrarily selected but controllable. The parameters can have any valid values but they shall be different from each other. Item 1 is the default TDMA offset of SDCCH8 subchannel used in the test cases where the subchannel of SDCCH8 is not specifically indicated.

B.7.2.3 Parameters related to Mobile Station**B.7.2.3.1 Parameter TSPX_ChModeA**

In CC test group, it is required to initiate a mobile originating call for a selected basic service supported by the MS under test. During the call setup, a CHANNEL MODE MODIFY message is used to set the channel compatible with the basic service. The parameter TSPX_ChModeA specifies the compatible Channel Mode information element for basic service TSPX_BscSrvA.

B.7.2.3.12 Parameters for selection of a circuit switched basic services

In CC test group, it is required that for each test, unless otherwise specified, a circuit switched basic service among those supported by the MS shall be chosen arbitrarily (but controllable). The TSPX_BscSvc's in the following tables represent 10 circuit switched basic services supported by the MS under test. If the number of circuit switched basic services supported by the MS is less than 10 duplicated values shall be used for the rest part of the table.

The possible values are as following:

- "C_Telephony" : telephony teleservice (TS11),
- "C_EmgCallSvc" : emergency call teleservice (TS12),
- "C_AltSpchG3" : alternate speech and G3 fax teleservice (TS61),
- "C_AutoG3" : automatic G3 fax teleservice (TS62),
- "C_300cda" : data circuit duplex asynchronous 300 bit/s bearer service (BS21),
- "C_1200cda" : data circuit duplex asynchronous 1200 bit/s bearer service (BS22),
- "C_120075cda" : data circuit duplex asynchronous 120075 bit/s bearer service (BS23),
- "C_2400cda" : data circuit duplex asynchronous 2400 bit/s bearer service (BS24),
- "C_4800cda" : data circuit duplex asynchronous 4800 bit/s bearer service (BS25),
- "C_9600cda" : data circuit duplex asynchronous 9600 bit/s bearer service (BS26),
- "C_1200cda" : data circuit duplex asynchronous 1200 bit/s bearer service (BS31),
- "C_2400cda" : data circuit duplex synchronous 2400 bit/s bearer service (BS32),
- "C_4800cda" : data circuit duplex synchronous 4800 bit/s bearer service (BS33),
- "C_9600cda" : data circuit duplex synchronous 9600 bit/s bearer service (BS34),
- "C_PAD300" : PAD access 300 bit/s bearer service (BS41),
- "C_PAD1200" : PAD access 1200 bit/s bearer service (BS42),
- "C_PAD120075" : PAD access 120075 bit/s bearer service (BS43),
- "C_PAD2400" : PAD access 2400 bit/s bearer service (BS44),
- "C_PAD4800" : PAD access 4800 bit/s bearer service (BS45),
- "C_PAD9600" : PAD access 9600 bit/s bearer service (BS46),
- "C_Pkt2400" : packet access 2400 bit/s bearer service (BS51),
- "C_Pkt4800" : packet access 4800 bit/s bearer service (BS52),
- "C_Pkt9600" : packet access 9600 bit/s bearer service (BS53),
- "C_AltSpchData" : alternate speech/data bearer service (BS61),
- "C_SpchData" : speech followed data bearer service (BS81),

B.7.2.3.13 Parameters of Bearer Capability

For some non CC testing a full rate bearer capability IE supported by the MS is needed, and if the MS supports dual rate a half rate bearer capability IE supported by the MS is also needed.

B.7.2.3.13.1 Parameter TSPX_BCa

The value of the bearer capability in this table shall be any full rate bearer capability supported. The contents of this IE can be copied from the section "Parameters for Setup message".

B.7.2.3.15 Parameters for Low Layer Compatibility

The Lower Layer Compatibility IE which is appropriate for the corresponding BC, shall also included in the call SETUP message. The parameter TSPX_LLCmp's specify the values of the information elements. If no Low Layer Compatibility IE available for the corresponding BC the box "omitted?" shall be filled with OMIT and the rest are skipped, otherwise the box "omitted?" shall be skipped. The information element shall be omitted from the setup message when the box "omitted?" is filled with OMIT.

B.7.2.3.15.1 Parameter TSPX_LLCmpA

TSPX_LLCmpA is the value of the low layer compatibility appropriate for the bearer capability TSPX_BC_a.

B.7.2.3.16 Parameters for High Layer Compatibility

The High Layer Compatibility IE which is appropriate for the corresponding BC, shall also included in the call SETUP message. The parameter TSPX_HLComp's specify the values of the information elements. If no High Layer Compatibility IE available for the corresponding BC the box "omitted?" shall be filled with OMIT and the rest are skipped, otherwise the box "omitted?" shall be skipped. The information element shall be omitted from the setup message when the box "omitted?" is filled with OMIT.

B.7.2.3.17 Parameter TSPX_IMSI

Parameter TSPX_IMSI is the default value of IMSI which will be stored in the test SIM card. The parameter shall be a 18 Hex digits long value, the most significant 8 HEX digits shall be 08091010 the rest 10 HEX digits can any value from 0 to 9 except that IMSI mod 1000 shall lie in one of the following ranges: 063-125, 189-251, 315-377, 441-503, 567-629, 693-755, 819-881, 945-999.

B.7.2.3.24 Parameters for Basic service selection

In the CC test group, it is required that a circuit switched basic service among those supported by the MS is selected arbitrarily for each test case, and the test is against that selected basic service. Parameters in the table are used by the test laboratory to control which test cases use which basic service for testing. The test laboratory fills in the following table according to ICS answers of which circuit switched basic services are supported. If the number of supported circuit switched basic services is more than 10, select 10 of them to put in the following table. If the number of supported circuit switched basic services is less than 10, repeat some of them in the following table. The possible values for the following table are :

- C_Telephony represents teleservice "telephony"
- C_EmgCallSRV represents teleservice "emergency call"
- C_SMSMTTP represents teleservice "short message MT/PP"
- C_SMSMOPP represents teleservice "short message MO/PP"
- C_SMSCellBRD represents teleservice "SMS cell broadcast"
- C_SpchAltG3 represents teleservice "alternative speech and G3 fax"
- C_AutoG3 represents teleservice "automatic G3 fax"
- C_300cda represents bearer service "data circuit duplex async. 300 bit/s"
- C_1200cda represents bearer service "data circuit duplex async. 1200 bit/s"
- C_120075cda represents bearer service "data circuit duplex async. 1200/75 bit/s"
- C_2400cda represents bearer service "data circuit duplex async. 2400 bit/s"

B.7.2.4 Test Case related Parameters

B.7.2.4.1 Parameters for extended assignment test

In the extended assignment test (TC_26_1_2), the following 6 parameters are arbitrarily chosen but controllable:

- TSPX_nPara: indicates the n'th CHANNEL REQUEST after which the test system sends IMMEDIATE ASSIGNMENT EXTENDED message in first part of the test case.

- TSPX_i1Para: indicates the i'th CHANNEL REQUEST within the last 3 CHANNEL REQUEST's which are received before the IMMEDIATE ASSIGNMENT EXTENDED.

- TSPX_kPara: indicates the k'th CHANNEL REQUEST after which the test system sends IMMEDIATE ASSIGNMENT EXTENDED message in second part of the test case.

- TSPX_i2Para: indicates the i'th CHANNEL REQUEST which is not within the last 3 CHANNEL REQUEST's which are received before the IMMEDIATE ASSIGNMENT EXTENDED.

- TSPX_rPara: indicates the r'th CHANNEL REQUEST after which the test system sends IMMEDIATE ASSIGNMENT EXTENDED message in third part of the test case.

- TSPX_i3Para: indicates the i'th CHANNEL REQUEST within the last 3 CHANNEL REQUEST's which are received before the IMMEDIATE ASSIGNMENT EXTENDED.

Table 59: Parameters for Extended assignment test

| Item | Name | Type | value | allowed range |
|------|-------------|---------|-------|--|
| 1 | TSPX_nPara | INTEGER | | (1 .. 8) |
| 2 | TSPX_i1Para | INTEGER | | (max(1,TSPX_nPara-2) .. TSPX_nPara) |
| 3 | TSPX_kPara | INTEGER | | (4 .. 8) |

B.7.2.4.2 Parameters for assignment rejection test

In the assignment rejection test (TC_26_1_3), the following 3 parameters are arbitrarily chosen but controllable:

- TSPX_n1Para: indicates the n'th CHANNEL REQUEST after which the test system sends IMMEDIATE ASSIGNMENT EXTENDED message.

- TSPX_i4Para: indicates the i'th CHANNEL REQUEST within the last 3 CHANNEL REQUEST's which are received before the IMMEDIATE ASSIGNMENT EXTENDED.

- TSPX_xPara: indicates the value of wait indication (T3122).

B.7.2.4.3 Parameters for paging re-organization test 1

In the paging re-organization test 1 (TC_26_2_3_1), the following 3 parameters are arbitrarily chosen but controllable:

- TSPX_AGBLKS1: indicates the value of BS-AG-BLKS-RES.

- TSPX_PAMFRMS1: indicates the value of BS-PA-MFRMS.

- TSPX_PgSubch: indicates the paging subchannel.

Table 61: Parameters for paging re-organization test 1

| Item | Name | Type | value | allowed range |
|------|---------------|---------|-------|---------------|
| 1 | TSPX_AGBLKS1 | INTEGER | | (0 .. 7) |
| 2 | TSPX_PAMFRMS1 | INTEGER | | (2 .. 8) |
| 3 | TSPX_PgSubch | INTEGER | | (0 .. N) |

References: Used in the test case TC_26_2_3_1,

NOTE: The value of N in the above table = (9 - TSPX_AGBLKS1) * TSPX_PAMFRMS1 - 1

B.7.2.4.4 Parameters for paging re-organization test 2

In the paging re-organization test 2 (TC_26_2_3_2), the following 3 parameters are arbitrarily chosen but controllable:

- TSPX_AGBLKS2: indicates the value of BS-AG-BLKS-RES.

- TSPX_PAMFRMS2: indicates the value of BS-PA-MFRMS.

- TSPX_CcchConf2: indicates the configuration of CCCH channel.

Table 62: Parameters for paging re-organization test 2

| Item | Name | Type | value | allowed range |
|------|----------------|-----------|-------|--|
| 1 | TSPX_AGBLKS2 | INTEGER | | (1 .. 2) or (1 .. 7) |
| 2 | TSPX_PAMFRMS2 | INTEGER | | (2 .. 9) |

NOTE: The allowed range for TSPX_AGBLKS2 is (1 .. 2) if the TSPX_CcchConf2 is '001'B, otherwise is (1 .. 7).

B.7.2.4.5 Parameters for paging as before test

In the paging re-organization test 2 (TC_26_2_4), the following 3 parameters are arbitrarily chosen but controllable:

- TSPX_AGBLKS3: indicates the value of BS-AG-BLKS-RES.
- TSPX_PAMFRMS3: indicates the value of BS-PA-MFRMS.
- TSPX_CcchConf3: indicates the configuration of CCCH channel.

Table 63: Parameters for paging as before test

| Item | Name | Type | value | allowed range |
|------|----------------|-----------|-------|--|
| 1 | TSPX_AGBLKS3 | INTEGER | | (0 .. 2) or (0 .. 7) |
| 2 | TSPX_PAMFRMS3 | INTEGER | | (2 .. 9) |
| 3 | TSPX_CcchConf3 | BITSTRING | | ('000'B, '001'B, '010'B, '100'B, '110'B) |

References: Used in the test case TC_26_2_4,

NOTE: The allowed range for TSPX_AGBLKS3 is (0 .. 2) if the TSPX_CcchConf3 is '001'B, otherwise is (0 .. 7).

B.7.2.4.6 Parameters for paging multi CCCH test

In the paging re-organization test 2 (TC_26_2_5), the following 3 parameters are arbitrarily chosen but controllable:

- TSPX_AGBLKS4: indicates the value of BS-AG-BLKS-RES.
- TSPX_PAMFRMS4: indicates the value of BS-PA-MFRMS.
- TSPX_CcchConf4: indicates the configuration of CCCH channel.

Table 64: Parameters for paging multi CCCH test

| Item | Name | Type | value | allowed range |
|------|----------------|-----------|-------|--------------------------|
| 1 | TSPX_AGBLKS4 | INTEGER | | (0 .. 7) |

B.7.2.4.8 Parameters for pre-synch handover with TA test

In the pre-synch handover with TA test (TC_26_6_5_5_2), the following 2 parameters are arbitrarily chosen but controllable:

- TSPX_k: indicates the timing difference between the BCCH of cell A and cell B.
- TSPX_y: indicates the value of the timing advance IE used in cell A.

B.7.2.4.9 Parameters for pseudo-synch handover test

In the pseudo-synch handover test (TC_26_6_5_6), the following 2 parameters are arbitrarily chosen but controllable:

- TSPX_k2: indicates the timing difference between the BCCH of cell A and cell B.
- TSPX_y2: indicates the value of the timing advance IE used in cell A.

Table 67: Parameters for pseudo-synch handover test

B.7.2.4.10 Parameters for non-synch handover test

In the non-synch handover test (TC_26_6_5_7) the following 2 parameters are arbitrarily chosen but controllable:

- TSPX_k3: indicates the timing difference between the BCCH of cell A and cell B, the unit of it is bit.
- TSPX_y3: indicates the value of the timing advance IE used in cell A.

Table 68: Parameters for non-synch handover test

B.7.2.4.11 Parameters for TC_26_6_4_1

In TC_26_6_4_1, it is required to assign a full rate traffic channel with a channel mode supported by the MS. The parameter TSPX_ChModF specifies the compatible Channel Mode information element.

Table 69: Parameter TSPX_ChModF

| Parameter Name: TSPX_ChModF | | | |

B.7.2.4.12 Parameters for TC_26_6_13_1

In the TC_26_6_13_1, the following parameters are arbitrary and controllable:

- The hopping parameters for SDCCH8 channel used in IMMEDIATE ASSIGNMENT message,
- The channel description for the channel used in ASSIGNMENT COMMAND message after time,
- The channel description for the channel used in ASSIGNMENT COMMAND message before time.

Table 71: Parameters for SDCCH8 of TC_26_6_13_1

B.7.2.4.19 Parameters for TC_26_6_13_8

In the TC_26_6_13_8, the following parameters are arbitrary and controllable:

- The hopping parameters for the channel used in IMMEDIATE ASSIGNMENT message,
- The hopping parameters for FREQUENCY REDEFINITION message,
- The channel description for the channel used in HANDOVER COMMAND message after time,
- The channel description for the channel used in HANDOVER COMMAND message before time.

NOTE: 1. The cell allocation is ARFCNs 10, 80, 100, 120 for GSM and ARFCNs 520, 600, 700, 870 for DCS. ARFCNs 10 and 520 are the BCCH frequency for GSM and DCS respectively. The four empty positions in TSPX_Ma24 represent (from left to right) 120 (870), 100 (700), 80 (600) and 10 (520). The TSPX_Ma24 shall include at least one frequency. If TSPX_Ma24 includes only one frequency, the frequency shall not be BCCH carrier.
2. The TSPX_Maio24 is dependent on TSPX_Ma24. Its value is from 0 to the number of frequencies in TSPX_Ma24 - 1

2. The TSPX_Maio26 is dependent on TSPX_Ma26. Its value is from 0 to the number of frequencies in TSPX_Ma26 - 1.
3. The TSPX_Chtp12 is channel type and TDMA offset (T bits indicates subchannel in binary):
 - '00001'B full rate traffic channel,
 - '0001T'B half rate traffic channel,
 - '01TTT'B SDCCH8 channel
4. The TSPX_ChMod7 is the channel mode:
 - '00000000'B signalling only,
 - '00000001'B full rate speech,
 - '00000101'B half rate speech,
 - '00000011'B data 12.0 kbit/s,

B.7.2.5 Parameters for Setup message

The following tables are used by the test laboratory to control the setup message used in testing. they shall be filled by the test lab according to the ICS answers from the mobile station manufacturer.

For each basic service, there are three setup messages: TSPX_Setup????_1, TSPX_Setup????_2 and TSPX_Setup????_3.

- If the MS under test supports that basic service, TSPX_Setup????_1 shall be filled. If the MS supports more than one bearer capabilities, the TSPX_????more shall be filled with TRUE and TSPX_Setup????_2 shall also be filled. Parameters in TSPX_Setup????_2 shall be different from TSPX_Setup????_1 as many as possible. The TSPX_Setup????_3 is skipped.

- If the MS does not support the basic service, TSPX_Setup????_1 and TSPX_Setup????_2 are skipped. TSPX_Setup????_3 shall be filled with values which are arbitrarily selected among those defined in GSM07.01 Annex B for the basic service.

B.7.2.6.3 Parameters for Ciphering Key Sequence Number

The parameters TSPX_CKSN's represent the CKSN. The item 1 to item 7 are used in test cases where the CKSN are arbitrarily selected but controllable. The parameters can be any valid values but they shall be different from each other. Item 7 is the default CKSN used in the test cases where the CKSN is not specifically indicated, and used in all CC test cases. The default ciphering key sequence number (TSPX_CKSNDef) will be stored in the test SIM card together with the corresponding default ciphering key (Kc).

B.7.2.6.4 Parameter TSPX_Txint

In test case TC_26_2_1_2, it is required to use a arbitrarily selected but controllable value for Tx-Integer. The parameters TSPX_Txint is the value of the Tx-Integer. The value shall be in the set {6, 7, 8, 9, 10, 11, 12, 14, 16, 20, 25, 32, 50}.

TSPX_horfJ is used in: TC_26_6_5_2_10.

B.7.2.6.7 Parameters for the number of Handover accesses

The parameters TSPX_hoaccess's represent the number of handover accesses occurred in an asynchronous handover. They are used in test cases where the number of handover accesses are arbitrarily selected but controllable. The parameters can have any values between 5 and 15 but they shall be different from each other.

Table 204: Parameters for Handover access

B.7.2.6.9 Parameters for RAND

The parameters TSPX_RAND's represent the values of the RAND. These parameters can have any valid values but they shall be different from each other. The item 1 to item 4 are used in test cases where the RAND are arbitrarily selected but controllable. Item 5 is the default RAND used in the test cases where the RAND is not specifically indicated, and used in all CC test cases. The default challenge RAND (TSPX_RANDDef) is used to generate the default ciphering key (Kc) which, together with the default ciphering key sequence number (TSPX_CKSNDf), shall be stored in the test SIM card.

B.7.2.6.14 Parameters for Cipherring Algorithm

The parameters TSPX_CphAlg's represent the Cipherring Algorithm. The item 1 to item 6 are used in test cases where the Algorithm are arbitrarily selected but controllable. The parameters can have any valid values supported by the MS under test without duplication. If the number of values supported by the MS is less than 7, duplicated values can be used for some of the items, but the item 4 and the item 5 shall be different (when the number of the supported values is greater than 1). Item 7 is the default Algorithm used in the test cases where the algorithm is not specifically indicated. the meaning of the values is as following:

- '000'B represents the A5/1 algorithm;
- '001'B represents the A5/2 algorithm;
- '010'B represents the A5/3 algorithm;
- '011'B represents the A5/4 algorithm;
- '100'B represents the A5/5 algorithm;

- '101'B represents the A5/6 algorithm;
- '110'B represents the A5/7 algorithm;

B.7.2.6.15 Parameters for Training Sequence Code

The parameters TSPX_Tsc's represent the Training Sequence Code (TSC). The item 1 to item 8 are used in test cases where the TSC are arbitrarily selected but controllable. The parameters can have any valid values but they shall be different from each other. Item 1 is the default TSC used in the test cases where the TSC is not specifically indicated.

B.7.2.6.17 Parameter TSPX_WaitForFac

In test case TC_31_6_1_2, after the test system sends FACILITY message containing facility IE there are two possible execution paths, one is that the test system sends CONNECT ACKNOWLEDGE, another is that the test system waits for the FACILITY message from the MS. The parameter TSPX_WaitForFac controls the execution path. If TSPX_WaitForFac = FALSE the test system sends CONNECT ACKNOWLEDGE.

B.7.2.6.19 Parameter TSPX_PathH1

In test case TC_31_6_1_7, after the second call (call C) established there are two possible execution paths, one is that the test system disconnects the call B (path I), another is that the test system disconnects the call C (path H). The parameter TSPX_PathH1 controls the execution path. If TSPX_PathH1 = FALSE the test system disconnects the call B.

B.7.2.7.10 Parameter TSPX_ClassMark2Amp

The parameter TSPX_ClassMark2 specifies the value of Class Mark 2 IE used in the test.

Table 227: Parameter TSPX_ClassMark2Amp

| Parameter Name: TSPX_ClassMark2Amp | | | |
|---|----------------|---------|--------------------------------------|
| Field | Type | Value | Comments |
| iei | BITSTRING[8] | OMIT | |
| iel | OCTETSTRING[1] | | length of the IE in unit of OCTET |

B.7.2.7.11 Parameter TSPX_ClassMark3

The parameter TSPX_ClassMark3 specifies the value of Class Mark 3 IE used in the test..

Table 228: Parameter TSPX_ClassMark3

| Parameter Name: TSPX_ClassMark3 | | | |
|---|-----------------|-------------|-----------------------------------|
| Field | Type | Value | Comments |
| iei | BITSTRING[8] | '00100000'B | '00100000'B |
| iel | OCTETSTRING[1] | '_'O | length of the IE in unit of OCTET |

B.7.2.8 Test Suite Timer Values

The client shall specify the values for the following timers based on the explanation below.

Table 229: Test Suite Timer Values

| Item | Name | Value | Comments |
|---|---------------|-------|---|
| 1 | TSPX_T3122 | | value is coded in HEXSTRING[2] |
| 2 | TSPX_T3210 | | value for timer T3210 in INTEGER |
| 3 | TSPX_T3211min | | 90% of the value for timer T3211 in INTEGER |
| 4 | TSPX_T3211_80 | | 80% of the value for timer T3211 in INTEGER |
| 5 | TSPX_T3213min | | 90% of the value for timer T3213 in INTEGER |
| 6 | TSPX_T3230min | | 90% of the value for timer T3230 in INTEGER |
| 7 | TSPX_T3240min | | 90% of the value for timer T3240 in INTEGER |
| 8 | TSPX_T3240tol | | tolerance of timer T3240 in INTEGER |
| 9 | TSPX_TC1M | | value for timer TC1M in INTEGER |
| NOTE: The unit of the above parameters is second. | | | |

B.7.2.9 Man machine interface

The manufacturer shall describe the man machine interface in the following tables:

- Description of manual entry and display of a called number:

- Description of the basic way to send a call manually:

- Description of the basic way to take a call manually:

- Description of the basic way to end a call manually:

- Description of the basic way to send an emergency call manually:

- Description of the basic way to send DTMF manually:

- Description of the manual PLMN selector:

- Description of the automatic PLMN selector:

- Description of the indication of the country:

- Description of the indication of the available PLMN:

- Description of the indication of the automatic registration to a PLMN:

- Description of the service indicator:

- Description of the management of the SIM by the user:
 - . keying PIN and changing PIN,
 - . indication of acceptance or rejection of keyed PIN,
 - . indication of blocked SIM,
 - . indication of successful unblocking of the SIM,
 - . storing an abbreviated number,
 - . displaying an abbreviated number.

- Description of the selection of the hands free:

- Description of the volume control:

- Description of local barring of outgoing calls:

- Description of prevention of unauthorized calls:

- Description of the auto calling management:
 - . selection of the auto calling,
 - . indication that the call failed and a re-try is attempted,
 - . indication that the call finally failed.

- Description of the way in which the MS generates an MS originated NOTIFY, if supported:

- Description of the basic procedure to display a MT SM:

- Description of the basic procedure to send a MO SM:

- Description of the basic procedure to display a cell broadcasted SM:

- Description of the user's commands and of display of the answers from the network for call forwarding:

- Description of the method of reading ACM from the SIM via the ME:

- Description of type of user indication when ACMM exceeded:

- Description of the user's commands and of display of the answers from the network for call barring:

- Description of the way to empty short message storage:

- Description of the way to control the MS so that the class 1 short message will be stored in the ME:
