**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate an ActivateSS operation of call forwarding service for CF (all synchronous services).
3. To initiate an ActivateSS operation of call forwarding service for CFU (all basic services).
4. To return the ReturnResult of SSoperation by FACILITY message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. To check whether the user indication is correct.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate a DeactivateSS operation of call forwarding service for CFC (speech).
3. To initiate a DeactivateSS operation of call forwarding service for CFNRc (all facsimile).
4. To return the ReturnResult of SSoperation by FACILITY message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. To check whether the user indication is correct.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate a InterrogateSS operation of call forwarding service for CFB (all basic services).
3. To initiate a InterrogateSS operation of call forwarding service for CFNRy (Speech).
4. To return the ReturnResult of SSoperation by FACILITY message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. To check whether the user indication is correct.

### Test Case Dynamic Behaviour

**Detailed Comments:**

1. To setup traffic channel.
2. To establish a mobile originating call.
3. To initiate an interrogation of call forwarding service for CFNRc (all basic services).
4. To initiate an interrogation of call forwarding service for CFB (all facsimile).

| <b>Purpose:</b>             |       | <p>1) To check that when an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification, the MS correctly reaches CC state U4. This is tested for CFU.</p> <p>2) As an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification, the MS provides the appropriate user indication (which is to be described by the manufacturer). This is tested for CFU.</p> <p>3) As an outgoing call is being established, if the CONNECT message is received with the facility information element containing an SS notification, the MS normally sends a CONNECT ACK message and enter CC state U10. This is tested for CFC.</p> <p>4) As an outgoing call is being established, if the CONNECT message is received with the facility information element containing an SS notification (for CFU or CFC), the MS provides the appropriate user indication (which is to be described by the manufacturer). This is tested for CFC.</p> |                                                                                                                                               |   |                         |

**Detailed Comments:**

1. To setup traffic channel.
2. To send an ALERTING message containing NotifySS invocation while the MS is in U4 state.
3. To send a CONNECT message containing NotifySS invocation while the MS is in U10 state.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4.
2. To send a setup message containing facility IE (notification, forwarded call).

**Detailed Comments:**

1. To read and note the value of ACM on SIM at the beginning of the test,
2. To send Facility IE of ForwardChargeAdvice using definite form mixed with indefinite form.
3. To check whether the increment of the value of ACM on SIM is the expected value.

**Detailed Comments:**

1. To read and note the value of ACM on SIM at the beginning of the test,
2. To send Facility IE of ForwardChargeAdvice using definite form mixed with indefinite form.
3. The expected FACILITY message does not return, fail.
4. To check whether the increment of the value of ACM on SIM is correct.
5. Get the first frame number for transmitting of FACILITY message containing AOC information.
6. TCV\_Fn1 contains the first frame number of the received FACILITY message with AOC acknowledge from mobile.

**Detailed Comments:**

1. To read and note the value of ACM on SIM at the beginning of the test,
2. To send second CAI.
3. To check whether the increment of the value of ACM on SIM is 65.

**Detailed Comments:**

1. To read and note the value of ACM on SIM at the beginning of the test,
2. To send Facility IE of ForwardChargeAdvice using definite form mixed with indefinite form.
3. The expected FACILITY message received, pass.
4. To check whether the increment of the value of ACM on SIM is 20.

6.

**Detailed Comments:**

1. To read and note the value of ACM on SIM at the beginning of the test,
2. To send Facility IE of ForwardChargeAdvice using definite form mixed with indefinite form.
3. To hold the first call and make a second call.
4. To send CAI for the second call.
5. To build the multi party call.
6. To check whether the increment of the value of ACM on SIM is 134.

| <b>Detailed Comments:</b>   |       | 1. To read and note the value of ACM on SIM at the beginning of the test,<br>2. To send Facility IE of ForwardChargeAdvice using definite form mixed with indefinite form.                                                                                                                                                                                                                                                                                                                                                                                            |                                                  |     |          |

3. To remove the SIM without power off and 90 seconds after CAI sent.
4. To check whether the increment of the value of ACM on SIM is 30.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_31\_6\_2\_2  
**Group:** GSM\_L3\_MS\_v4180/SS/  
**Purpose:** To verify that when the power supply of the MS is removed during an active AOCC call the ME has written the total charge up to that point in the call to the ACM field of the SIM.  
**Default:** OtherEventsFail

| Nr | Label | Behaviour Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | CRef | V   | Comments |

**Detailed Comments:**

1. To read and note the value of ACM on SIM at the beginning of the test,
2. To send Facility IE of ForwardChargeAdvice using definite form mixed with indefinite form.
3. To switch off the MS 90 seconds after CAI sent.
4. To check whether the increment of the value of ACM on SIM is 30.
5. To switch on the MS and wait for the MS back to idle state.
6. To remove battery pack 90 seconds after CAI sent.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_31\_6\_2\_4

**Group:** GSM\_L3\_MS\_v4180/SS/

**Purpose:**

- 1) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum value, the ACMM, any outgoing calls in progress for which a non-zero CAI exists are terminated by the ME, once the chargeable interval determined by the CAI has elapsed, with an appropriate indication given to the user.
- 2) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMM, the making of non-emergency calls is inhibited
- 3) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMM, the making of emergency calls is uninhibited

**Default:** OtherEventsFail

**Comments:** The ACM is reset to zero and the ACMmax is set to 2 units before starting the test

**Detailed Comments:**

1. To reset the ACM = 0 and set the ACMmax to 2.
2. To send Facility IE of ForwardChargeAdvice using definite form mixed with indefinite form.
3. The call is terminated when the ACM reaches the ACMmax.
4. To check whether the time duration is 90 +- 2 seconds.
5. To check whether the ACM increment is 2.
6. The call is unsuccessful.
7. To send Facility IE of ForwardChargeAdvice with zero CAI.
8. To check whether the value of ACM is still 2.
9. The time duration is 120 seconds.

### Test Case Dynamic Behaviour

| <b>Purpose:</b>        | <p>1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of registration of a password for all call restriction services, sending a CM-SERVICE REQUEST.</p> <p>2) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all call restriction services.</p> <p>3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.</p> <p>4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).</p> <p>Those checks are performed with a call transaction already established for:<br/> all call restriction services, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".</p> |

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_31\_8\_1\_2\_3

**Group:** GSM\_L3\_MS\_v4180/SS/

**Purpose:**

- 1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of registration of a password for all call restriction services, sending a CM-SERVICE REQUEST.
- 2) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all call restriction services.
- 3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.
- 4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for :

all call restriction services, the RELEASE COMPLETE message being sent at the end of the procedure with a facility IE containing a return\_error(error) where error is "PasswordRegistrationFailure" with diagnostic "new password mismatch".

**Default:** OtherEventsFail

**Detailed Comments:**

1. To set up traffic channel.
2. To establish a mobile originating call, bring the MS into state U10.
3. To initiate the Registration of password supplementary service.
4. Received the old password.
5. Received the new password.
6. TReceived a different new password.
7. New password mismatch.

| <b>Purpose:</b>        | <p>1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of specific call barring service, sending a CM-SERVICE REQUEST.</p> <p>2) To check that the MS sends a REGISTER message containing the invoke of the ActivateSS operation with the expected parameter values for specific call barring service.</p> <p>3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.</p> <p>4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).</p> <p>Those checks are performed with a call transaction already established for :<br/>BOIC, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".</p> |

| <b>Purpose:</b>        | <p>1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of a group of call barring services, sending a CM-SERVICE REQUEST.</p> <p>2) To check that the MS sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for a group of call barring services.</p> <p>3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.</p> <p>4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).</p> <p>These checks are performed with a call transaction already established for :<br/> BI, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".</p> |

**Detailed Comments:**

1. To setup traffic channel.
2. To establish a mobile originating call to bring the MS into state U10.
3. To initiate the DeactivateSS for BI.
4. To send ReturnError for the invocation of DeactivateSS.
5. The user indication is correct, pass.

**Detailed Comments:**

1. To setup physical channel as BCCH, CCCH and SDCCH4.
2. To initiate Interrogation for BAIC.
3. To initiate Interrogation for BOICExHC.
4. To send GetPassword invocation to the MS.
5. To enter password at the MMI.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_31\_9\_1\_1  
**Group:** GSM\_L3\_MS\_v4180/SS/  
**Purpose:** 1)To verify that the mobile station invokes an USSD request by sending a REGISTER message to the network containing a ProcessUnstructuredSS-Request invoke component. This message will contain the alphabet indicator set to "SMS default alphabet" and the language indicator set to "language unspecified". The used-string parameter shall contain the following digits and symbols depending on the operation initiated:

Activation \*NN(N)# (no supplementary information included)  
 \*NN(N)\*SI#(one field of supplementary information included)  
 \*NN(N)\*SIA\*SIB#(two fields of supplementary information included)

Deactivation #NN(N)# (no supplementary information included)  
 #NN(N)\*SI#(one field of supplementary information included)  
 #NN(N)\*SIA\*SIB#(two fields of supplementary information included)

Interrogation \*#NN(N)# (no supplementary information included)  
 \*#NN(N)\*SI#(one field of supplementary information included)  
 \*#NN(N)\*SIA\*SIB#(two fields of supplementary information included)

Registration \*\*NN(N)# (no supplementary information included)  
 \*\*NN(N)\*SI#(one field of supplementary information included)  
 \*\*NN(N)\*SIA\*SIB#(two fields of supplementary information included)

Erasure ##NN(N)# (no supplementary information included)  
 ##NN(N)\*SI#(one field of supplementary information included)  
 ##NN(N)\*SIA\*SIB#(two fields of supplementary information included)

Operations not yet defined in GSM 02.30 (see 2)

NN(N) features a set of service codes which have not yet been allocated for GSM supplementary services (see GSM 02.30 for service codes already specified).  
 N is a digit within 1..9 and SI, SIA, SIB strings of characters.

2)To check that the entry of 1 or 2 characters defined in the GSM 03.38 default alphabet followed by "SEND" shall be interpreted by the MS as an USSD request unless the MS is not engaged in a call and the first of the two character entry followed by "SEND " is a "1".

3) To verify that, for supplementary service procedures independent of any call, the initiating side must establish a MM-connection between the network and the mobile station according to the rules in TS GSM 4.07 and 4.08.

4) To verify that, within a call the MS shall transmit a USSD request if any. See TS GSM 4.07 and 4.08 for the handling of multiple MM connections.

5) To check that upon receipt of the RELEASE COMPLETE message, the MS shall display the information contained to the user in a way described by the manufacturer.

**Default:** OtherEventsFail

| <b>Purpose:</b>             |       | <p>1)To verify that if a mobile initiated USSD request using protocol version 2 is rejected by the network, and the reason for the rejection is indicated either by the problem code "unrecognized operation" or a cause "facility rejected", the mobile station shall assume that the network only supports protocol version 1 of USSD operation. The mobile station shall re-attempt the request by using the appropriate protocol version 1 USSD operation without a SS version indicator if the unstructured data entered by the user can be coded as an IA5 string.</p> <p>2)To check that, upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer). If ussd-string information is included this shall be given to the user (in a way described by the manufacturer).</p> |                                                                                                                                                             |     |                                                  |

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_31\_9\_2\_3

**Group:** GSM\_L3\_MS\_v4180/SS/

**Purpose:**

- 1) To verify that for a USSD notification, the MS shall display the text provided and await user input. If the user enters a response, the MS shall return the response to the network, maintaining the transaction.
- 2) To verify that the MS includes alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".
- 3) To check that the MS is able to process the operation during a call or out of a call.

**Default:** OtherEventsFail

| <b>Purpose:</b>             |       | 1. To verify that the MS sends the correct acknowledgement when its memory in the SIM becomes full.<br>2. To verify that the MS sends the correct acknowledgement when its memory in the ME and the SIM becomes full, and sets the "memory exceeded" notification flag in the SIM.<br>3. To verify that the MS performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.                                                                                                                                                        |                                                                                                                                               |   |                                |

| <b>Group:</b>          | GSM_L3_MS_v4180/SM/                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Purpose:</b>        | To verify that the MS acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the SIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network. There are 2 cases. (1) If the MS supports storing of short messages in the SIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the SIM, the error cause shall be "protocol error, unspecified". (2) If the MS supports storing of short message in the SIM and not in the ME and short message cannot be stored in the SIM, the error cause shall be "memory capacity exceeded". |
