### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_2\_5\_5  
**Group:** GSM\_L3\_MS\_v4200/CC/  
**Purpose:** 1) To verify that a CC-entity of the MS in CC-state U4, "Call Delivered", upon receipt of the RELEASE message will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null"  
 2) To verify that the MS on returning the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".  
**Default:** OtherEventsFail

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_2\_6\_5  
**Group:** GSM\_L3\_MS\_v4200/CC/  
**Purpose:** 1) To verify that a CC entity of the MS in CC-state U10, "Call active" upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".  
 2) To verify that in returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".  
**Default:** OtherEventsFail

| Nr | Label | Behaviour Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | CRef                                        | V | Comments |

Select a MT service supported by the MS, The SETUP_PDU will be stored in TCV_Setup_mt.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                |     |          |
|                             |            | 2. To setup a physical channel as BCCH, CCCH and SDCCH4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                |     |          |
|                             |            | 3. To bring the MS into the state U10 of a MO call.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                |     |          |

4. a) add signal IE with "call waiting tone on" - b) Set TI value same as MO call and TI flag for MT.
5. To establish a second transaction for MT call with the same TI value as that in the MO call
6. Call waiting not supported.
7. To check whether the MS is still in the state U10.
8. Call waiting supported.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_2\_7\_1  
**Group:** GSM\_L3\_MS\_v4200/CC/  
**Purpose:** To verify that the a CC-entity of the MS in CC-state U11, "Disconnect Request", upon receipt of a DISCONNECT message, returns to its peer entity the RELEASE message and enters the CC-state U19, "Release Request".  
**Default:** OtherEventsFail

| Nr | Label      | Behaviour Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | CRef                                                                                       | V   | Comments |

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4.
2. To bring the MS into the state U11.
3. The expected RELEASE message received.
4. To check whether the MS enters the state U19.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_2\_8\_2  
**Group:** GSM\_L3\_MS\_v4200/CC/  
**Purpose:** 1) To verify that a CC-entity of the MS in CC-state U12, "Disconnect Indication", upon receipt of a RELEASE message returns to its peer entity the RELEASE COMPLETE message and enters the CC-state U0, "Null"  
 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".  
**Default:** OtherEventsFail

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCH4, and wait for the MS in service.
2. To bring the MS into the state U12. Within the step a physical channel as appropriate traffic channel is setup.
3. The expected RELEASE COMPLETE message received.
4. To check whether the CC entities related to the seven mobile originating transaction is in the state U0.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_2\_9\_2  
**Group:** GSM\_L3\_MS\_v4200/CC/  
**Purpose:** 1) To verify that a CC-entity of the MS in CC-state U19, "Release Request", upon the 2nd expiry of the timer T308, enters the CC-state U0, "Null".  
 2) To verify that subsequently the MS proceeds with releasing the MM-connection and enters the idle mode with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".  
**Default:** OtherEventsFail

**Detailed Comments:**

1. To select a circuit switched basic service for testing.
2. To setup BCCH, CCCH and traffic channels.
3. First timeout of T308, release with any cause value accepted.
4. Second timeout of T308 (30 seconds), timeout of T3240 (10 seconds) and 10 seconds for the MS to return to listening to paging.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_3\_4\_4  
**Group:** GSM\_L3\_MS\_v4200/CC/  
**Purpose:** 1) To verify that a CC entity of a MS in CC-state U7, "Call Received", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".  
 2) To verify that the MS on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".  
**Default:** OtherEventsFail

| Nr | Label | Behaviour Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | CRef                                          | V | Comments |

**Detailed Comments:**

1. To select a basic service. if the MS supports telephony the selected basic service is telephony.
2. To setup a physical channels as BCCH, CCCH and SDCCH4.
3. To send RELEASE message with cause "Normal, unspecified".
4. The expected RELEASE COMPLETE message received.
5. To check that the CC entity has returned to state U0 with all transaction identifiers.

To check whether the MS remains in the state U7.                                                                                                                                                                                                                                                                                                                                                                                                               |      |   |          |

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_8\_1\_3\_4\_8  
**Group:** GSM\_L3\_MS\_v4200/CC/  
**Purpose:** 1) To verify that a CC entity of the MS in CC-state U7, "Call received", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".  
 2) To verify that in returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".  
**Default:** OtherEventsFail

**Detailed Comments:**

1. To setup a physical channels as full rate traffic channel or half traffic channel.
2. To setup a physical channel as second full rate traffic channel.
3. To setup a physical channel as the second half rate traffic channel.
4. To bring the MS into U10 state by MT call generic setup procedure.
5. The assignment procedure succeeds.
6. The handover procedure succeeds.
7. To check whether the MS is still in the state U10.

## Test Case Dynamic Behaviour

|                        |                                                                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Test Case Name:</b> | TC_26_8_1_4_3_2                                                                                                                                            |
| <b>Group:</b>          | GSM_L3_MS_v4200/CC/                                                                                                                                        |
| <b>Purpose:</b>        | To verify that the MS, when returning to the old channel after handover failure and establishing correctly the link, will remain in the call active state. |
| <b>Default:</b>        | OtherEventsFail_01, RcvHdOvAcc                                                                                                                             |
| <b>Comments:</b>       | bearer capability TSPX_BCd is used in the test case. The generic MT call setup procedure is used.                                                          |

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 used as cell B.
2. The expected HANDOVER FAILURE message received on the old channel.
3. To check whether the MS is still in the state U10, if no test case fails in the test step.
4. The expected ASSIGNMENT FAILURE message received on the old channel.

## Test Case Dynamic Behaviour

| 1) To verify that the procedure is initiated by the MS in the "active" state of the call. It sends a MODIFY message including the new mode to be changed to; and enters the "mobile originating modify" state. The new mode given in the MODIFY message is one of those already negotiated and agreed during the establishment phase of the call. The MODIFY originating side stops sending Bm-channel information. |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                 |     |          |
| 2) To verify that upon receipt of the MODIFY COMPLETE message the MS starts sending channel information according to the new call mode and enters the "active" state.                                                                                                                                                                                                                                               |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                 |     |          |

| <b>Purpose:</b>             |       | <p>1) To verify that the MS in MM state "idle, updated" with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.</p> <p>2) To verify that the MS in MM state "idle, updated" and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.</p> <p>3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.</p> <p>4) To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCH, after having completed the traffic channel early assignment procedure by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.</p> <p>5) To verify that subsequently the MS has attached the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an L frame on layer 2 of the FACCH.)</p> <p>6) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.</p> <p>7) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.</p> <p>These test purposes are tested for all rates supported by the MS (full rate/half rate).</p> |         |   |          |

**Detailed Comments:**

1. To perform the test on full rate telephony service.
2. To perform the test on half rate telephony.
3. To perform the test on TS62 service.
4. To enter the called party number.
5. To check whether the MS displays the called party number correctly.
6. To initiate the call.
7. To setup the previous full rate traffic channel into half rate traffic channel.
8. Early assignment.

### Test Case Dynamic Behaviour

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Purpose:</b>        | <p>1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.</p> <p>2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.</p> <p>3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.</p> <p>4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)</p> <p>These test purposes are tested for all rates supported by the MS (full rate/half rate).</p> |

**Detailed Comments:**

1. To perform the test on full rate telephony service.
2. To perform the test on half rate telephony.
3. To perform the test on TS62 service.
4. To enter the called party number.
5. To check whether the MS displays the called party number correctly.
6. To initiate the call.
7. To setup the previous full rate traffic channel into half rate traffic channel.
8. Later assignment

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_9\_4

**Group:** GSM\_L3\_MS\_v4200/StructureProc/

**Purpose:**

- 1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having sent a PAGING RESPONSE message on the allocated SDCCH, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message not containing a signal information element, returns a CALL CONFIRMED message.
- 2) To verify that subsequently, the SS sending an ASSIGNMENT COMMAND message, the MS successfully continues a mobile terminating call establishment with early assignment of traffic channel
  - a) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and
  - b) by continuing the call establishment by either sending a CONNECT message and through connecting the TCH in both directions, or, sending an ALERTING message.
- 3) To verify that if after sending a CALL PROCEEDING message, the MS sends an ALERTING message during MTC establishment with early assignment, it generates an alerting indication.
- 4) To verify that if an ALERTING had been sent, subsequently, when the user accepts the call (possibly internal action as declared in PICS/PIXIT statement), the MS returns a CONNECT message.
- 5) To verify that the MS:
  - if the call is a speech call: after sending the CONNECT message has through connected the TCH in both directions (this is checked by verifying that after transmission of the first L2 frame containing the (complete) CONNECT message, the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
  - if the call is a data call: after receipt of a subsequent CONNECT ACKNOWLEDGE message through connects the TCH in both directions (this is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT ACKNOWLEDGE message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)
- 6) To verify that subsequently, the MS can initiate call clearing by sending a DISCONNECT message.
- 7) To verify that the MS in this phase of call release, upon receipt of a RELEASE message, returns a RELEASE COMPLETE message.
- 8) To verify that subsequently the MS, upon receipt of a CHANNEL RELEASE message, disconnects the main signalling link.

**Default:** OtherEventsFail

**Detailed Comments:**

1. To perform the test on full rate telephony service.
2. To perform the test on half rate telephony.
3. To perform the test on TS62 service.
4. To setup the previous full rate channel into half rate channel.
5. Authentication is OK.
6. SETUP message without signal IE.
7. Late assignment.
8. Alerting indication not correct.
9. To accept the call at the MS.

**Test Case Dynamic Behaviour**

**Test Case Name:** TC\_26\_9\_6\_1\_1  
**Group:** GSM\_L3\_MS\_v4200/StructureProc/  
**Purpose:**

- 1) To verify that an MS supporting speech in the MM state "idle, updated", when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment" .
- 3) To verify that authentication and cipher mode setting are performed successfully.
- 4) To verify that after cipher mode setting acceptance by the SS, the MS sends an EMERGENCY SETUP message.
- 5) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure of an appropriate speech traffic channel, which, if the MS supports both TCH/FS and TCH/HS, is at the preferred rate, the MS performs correctly that assignment procedure.
- 6) To verify subsequent correct performance of a connect procedure.
- 7) To verify that subsequently the MS has through connected the TCH in both directions.
- 8) To verify that the call is cleared correctly.

**Default:** OtherEventsFail

| <b>Purpose:</b>        | <p>1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".</p> <p>2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".</p> <p>3) To verify that after receipt of a CM SERVICE ACCEPT message from the SS, the MS sends an EMERGENCY SETUP message.</p> <p>4) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure of an appropriate speech traffic channel, which, if the MS supports both TCH/F5 and TCH/HS, is at the non-preferred rate, the MS performs correctly that assignment procedure.</p> <p>5) To verify subsequent correct performance of a connect procedure.</p> <p>6) To verify that subsequently the MS has through connected the TCH in both directions.</p> <p>7) To verify that the call is cleared correctly.</p> |

**Detailed Comments:**

1. To setup a physical channels as BCCH CCCH and SDCCH4 combined channel.
2. CHANNEL REQUEST with "emergency call establishment" cause received.
3. CM SERVICE REQUEST with "emergency call establishment" service type received.
4. Authentication failed.

5. Authentication passed.
6. EMERGENCY SETUP with a BC indicating "dual rate/half rate preferred" or "dual rate/full rate preferred" received.
7. dual rate / half rate preferred" case. setup a physical channel as full rate traffic channel and the non-preferred full rate channel is to be assigned.
8. dual rate / full rate preferred" case. setup a physical channel as half rate traffic channel and the non-preferred half rate channel is to be assigned.
9. The TCH channel is not through connected, fail.
10. The TCH channel is through connected.

| <b>Purpose:</b>        | <p>1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".</p> <p>2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message in which the cipher key sequence number IE indicates "no key is available", the CM service type IE indicates "emergency call establishment", and the mobile identity IE specifies the IMEI of the MS.</p> <p>3) To verify that after receipt of a CM SERVICE ACCEPT message from the SS, the MS sends an EMERGENCY SETUP message.</p> <p>4) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure of an appropriate speech traffic channel, which, if the MS supports both TCH/FS and TCH/HS, is at the preferred rate, the MS performs correctly that assignment procedure.</p> <p>5) To verify subsequent correct performance of a connect procedure.</p> <p>6) To verify that subsequently the MS has through connected the TCH in both directions.</p> <p>7) To verify that the call is cleared correctly.</p> |

**Detailed Comments:**

1. To setup a physical channel as BCCH CCCH and SDCCH4 combined channel.
2. CHANNEL REQUEST with "emergency call establishment" cause received.
3. CM SERVICE REQUEST with "emergency call establishment" service type received and the mobile identity IE specifies the IMEI of the MS, the classmark IE has the value specified in PIXIT.
4. EMERGENCY SETUP with BC indicating or without BC received.
5. To assign the traffic channel.
6. The TCH channel is not through connected, fail.
7. The TCH channel is through connected.
8. Main signalling link is released.

### Test Case Dynamic Behaviour

**Test Case Name:** TC\_26\_9\_6\_2\_2  
**Group:** GSM\_L3\_MS\_v4200/StructureProc/  
**Purpose:** 1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".

2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message in which the cipher key sequence number IE indicates "no key is available", the CM service type IE indicates "emergency call establishment", and the mobile identity IE specifies the IMEI of the MS.

3) To verify that after receipt of a CM SERVICE REJECT message from the SS, the MS abandons the emergency call establishment.

**Default:** OtherEventsFail  
**Comments:** For this test case the SIM card shall be removed from the MS.

**Detailed Comments:**

- To setup a physical channel as BCCH CCCH and SDCCH4.
- CHANNEL REQUEST with "emergency call" received.
- CM SERVICE REQUEST with "emergency call establishment", IMEI, "no key available" and classmark received.
- To check whether the MS sends any L 3 messages, the test case fails in the default tree if the MS does.
- To check whether the MS initiates an RR connection establishment, the test case fails in the default tree if the MS does.

| <b>Purpose:</b>        | <p>1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.</p> <p>2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.</p> <p>3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.</p> <p>4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radion path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)</p> |

| <b>Purpose:</b>        | <p>1) To verify that the MS in the "idle, no IMSI" state (no SIM inserted) when made to call the number 112, sends a CHANNEL REQUEST message with establishment cause "emergency call".</p> <p>2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".</p> <p>3) To verify that after receipt of a CM SERVICE ACCEPT message from the SS, the MS sends an EMERGENCY SETUP message.</p> <p>4) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure, the MS performs correctly that assignment procedure.</p> <p>5) To verify subsequent correct performance of a connect procedure.</p> <p>6) To verify that subsequently the MS has through connected the TCH in both directions.</p> <p>7) To verify that the call is cleared correctly.</p> |

**Detailed Comments:**

1. To setup a physical channel
2. CHANNEL REQUEST with "emergency call establishment" cause received.
3. CM SERVICE REQUEST with "emergency call establishment" service type correct TMSI and CKSN received.
4. To setup aphysical channel as full rate traffic channel.
5. To setup aphysical channel as half rate traffic channel.
6. The TCH channel is not through connected, fail.
7. The TCH channel is through connected.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate a registration of call forwarding service for CFNRy (speech).
3. The user indication is correct.
4. The user indication is wrong.
5. To initiate a registration of call forwarding service for CFU (all facsimile).
6. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.

### Test Case Dynamic Behaviour

**Detailed Comments:**

1. To setup traffic channel.
2. To establish a mobile originating call.
3. To initiate a registration of call forwarding service for CFB (all asynchronous service).
4. To initiate a registration of call forwarding service for CF (all facsimile).

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate an EraseSS operation of call forwarding service for CFC (all facsimile).
3. To initiate an EraseSS operation of call forwarding service for CFNRc (all basic services).
4. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. The user indication is correct.
7. The user indication is wrong.

### Test Case Dynamic Behaviour

**Detailed Comments:**

1. To setup traffic channel.
2. To establish a mobile originating call.
3. To initiate an erasure of call forwarding service for CFU (speech).
4. To initiate an erasure of call forwarding service for CFNRy (all facsimile).

### Test Case Dynamic Behaviour

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate an ActivateSS operation of call forwarding service for CF (all synchronous services).
3. To initiate an ActivateSS operation of call forwarding service for CFU (all basic services).
4. To return the ReturnResult of SSoperation by FACILITY message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. To check whether the user indication is correct.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate a DeactivateSS operation of call forwarding service for CFC (speech).
3. To initiate a DeactivateSS operation of call forwarding service for CFNRc (all facsimile).
4. To return the ReturnResult of SSoperation by FACILITY message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. To check whether the user indication is correct.

**Detailed Comments:**

1. To setup a physical channel as BCCH, CCCH and SDCCH4 with default parameters.
2. To initiate a InterrogateSS operation of call forwarding service for CFB (all basic services).
3. To initiate a InterrogateSS operation of call forwarding service for CFNRy (Speech).
4. To return the ReturnResult of SSoperation by FACILITY message.
5. To return the ReturnResult of SSoperation by RELEASE COMPLETE message.
6. To check whether the user indication is correct.

### Test Case Dynamic Behaviour

| <b>Purpose:</b>        | <p>1) To check that when an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification, the MS correctly reaches CC state U4. This is tested for CFU.</p> <p>2) As an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification, the MS provides the appropriate user indication (which is to be described by the manufacturer). This is tested for CFU.</p> <p>3) As an outgoing call is being established, if the CONNECT message is received with the facility information element containing an SS notification, the MS normally sends a CONNECT ACK message and enter CC state U10. This is tested for CFC.</p> <p>4) As an outgoing call is being established, if the CONNECT message is received with the facility information element containaining an SS notification (for CFU or CFC), the MS provides the appropriate user indication (which is to be described by the manufacturer). This is tested for CFC.</p> |

**Detailed Comments:**

1. To setup traffic channel.
2. To send an ALERTING message containing NotifySS invocation while the MS is in U4 state.
3. To send a CONNECT message containing NotifySS invocation while the MS is in U10 state.
