    }
    return(logch);
}
    
```

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OC\_SubchOfSacch4(subch: B\_2; cell:CellID)  
**Result Type:** LOGICCH  
**Comments:**

#### Description

OC\_SubchOfSacch4 operation returns a logic channel identifier for SACCH4 subchannel indicated by the input parameters `subch` and `cell`, where `subch` is the TDMA offset, `cell` is the cell identifier which the channel belongs to.

for example:

```

OC_SubchOfSacch4('00'B, C_CellA) = C_SACCHC40_A;
OC_SubchOfSacch4('01'B, C_CellA) = C_SACCHC41_A;
OC_SubchOfSacch4('10'B, C_CellA) = C_SACCHC42_A;
OC_SubchOfSacch4('11'B, C_CellA) = C_SACCHC43_A;
OC_SubchOfSacch4('00'B, C_CellB) = C_SACCHC40_B;
OC_SubchOfSacch4('01'B, C_CellB) = C_SACCHC41_B.
    
```

pseudo C code definition for the operation as following :

```

OC_SubchOfSacch4(subch, cell)
BITSTRING subch;
CellID cell;
{
    LOGICCH logch;
    if (cell == C_CellA)
        switch (subch)
        {
            case '00'B : logch = C_SACCHC40_A; break;
            case '01'B : logch = C_SACCHC41_A; break;
            case '10'B : logch = C_SACCHC42_A; break;
            case '11'B : logch = C_SACCHC43_A; break;
        }
    if (cell == C_CellB)
        switch (subch)
        {
            case '00'B : logch = C_SACCHC40_B; break;
            case '01'B : logch = C_SACCHC41_B; break;
            case '10'B : logch = C_SACCHC42_B; break;
            case '11'B : logch = C_SACCHC43_B; break;
        }
    if (cell == C_CellC)
        switch (subch)
        {
            case '00'B : logch = C_SACCHC40_C; break;
            case '01'B : logch = C_SACCHC41_C; break;
            case '10'B : logch = C_SACCHC42_C; break;
            case '11'B : logch = C_SACCHC43_C; break;
        }
    return(logch);
}
    
```

| <p>OM_2Msgs puts the layer 2 emulator into a special operation mode then returns. In this special mode the layer 2 emulator sends the next two consecutive messages in the following way:</p> <ul style="list-style-type: none"> <li>- send the first message on the paging subchannel indicated by the `pgg` and `ch`;</li> <li>- if the `mode` = C_NxtButOne, send the second message in the next but one paging sub block;</li> <li>- if the `mode` = C_FmrAGB, send the second message in a former access grant block;</li> <li>- if the `mode` = C_BfReOcc, send the second message before the MS's original paging subchannel re-occurs but later than the next paging block of that CCCH (paging block not belong to the MS);</li> <li>- if the `mode` = C_NxtButOneNxt, nothing is sent in the next but one paging sub block, then send the second message in the next paging subblock of the MS's paging subchannel.</li> </ul> |                                                 |

| <p>OM_Assoc operation associates the sub logic channel identifiers `sublgch1` to `sublgch8` and `sublgch9` to `sublgch16` with the generic "parent" channel identifier `lgch1` and `lgch2` respectively, therefore the subchannel identifiers can refer to the corresponding channels configured by OM_ChConf operation.</p> <p>The `lgch1` can be an identifier for SDCCH4, SDCCH8, FACCH and the `lgch2` can be SACCHC4, SACCHC8, and SACCHH.</p> <p>"dummy" in the actual parameter list means the corresponding parameter is not used.</p> <p>Naming convention for logical channel constants:</p> <p style="text-align: center;">C_&lt;channel type&gt;[&lt;rate&gt;][&lt;subchannel&gt;][_&lt;cell&gt;][_&lt;instance&gt;]</p> <p>e.g.: C_FACCH H 0 _C _3 =&gt; C_FACCH0_C_3</p> <p>channel type: FCCH, SCH, BCCH, CBCH, PCH, RACH, FACCH, SACCH, SDCCH, DCCH</p> <p>rate: F(ull), H(alf), 4 (fourths, C4 for SACCHC4), 8 (eighths, C8 for SACCHC8).</p> <p>subchannel: H: 0, 1<br/>(C)4: 0, ..., 3<br/>(C)8: 0, ..., 7</p> <p>cell: A, ..., H</p> <p>instance: 1, ..., 3 When several channels of the same type can exist in one cell simultaneously (in different time slots and / or on different frequencies) they are identified by their instance. The parameters of ChConf are used to specify the frequency and slot of this instance of the channel type.</p> <p>Not all possible combinations of this naming syntax have been used. According to the elements that are used / omitted the name can have a special meaning.</p> <p>Examples:                      Comments:</p> <p>C_FCCH_A                      FCCH of cell A.<br/> C_SCH_A                        SCH of cell A.<br/> C_BCCH_A_1                    First instance of a BCCH in cell A.<br/> C_CBCH_A                      CBCH of cell A.<br/> C_PCH_A_1                     First instance of a PCH in cell A (there is one instance of the PCH per BCCH in the cell).<br/> C_AGCH_A_1                    First instance of a AGCH in cell A (there is one instance of the AGCH per BCCH in the cell).<br/> C_RACH_A_1                    First instance of a RACH in cell A.<br/> C_FACCHF_A_1                 First instance of a full rate FACCH in cell A.<br/> C_FACCHH_A_1                 First instance of a half rate FACCH in cell A (all subchannels).<br/> C_FACCHH0_A_1                Subchannel 0 of the first instance of a half rate FACCH in cell A.<br/> C_SACCHF_A_1                 First instance of a full rate SACCH in cell A.<br/> C_SACCHH_A_1                 First instance of a half rate SACCH in cell A (all subchannels).<br/> C_SACCHH1_A_1                Subchannel 1 of the first instance of a half rate SACCH in cell A.<br/> C_SACCHC4_A                  SACCH/4 of cell A (all subchannels).<br/> C_SACCHC43_A                 Subchannel 3 of the SACCH/4 of cell A.<br/> C_SACCHC8_A_1                First instance of a SACCH/8 in cell A (all subchannels).<br/> C_SACCHC87_A_1               Subchannel 7 of the first instance of a SACCH/8 in cell A.<br/> C_SDCCH4_A                    SDCCH/4 of cell A (all subchannels).<br/> C_SDCCH42_A                  Subchannel 2 of the SDCCH/4 of cell A.<br/> C_SDCCH87_A_1                First instance of a SDCCH/8 in cell A (all subchannels).<br/> C_SDCCH87_A_1                Subchannel 7 of the first instance of a SDCCH/8 in cell A.</p> |                                                                                                                                                                                                                                                                                                                                                 |

This list covers all types of combinations used in the TTCN for the time being.

When the meaning refers to 'all' subchannels of a channel (eg. C\_FACCHH\_A\_1), it means that all active subchannels of this channel activated previously by OM\_ChConf, are associated with a logical channel identifier in the OM\_Assoc.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_BmInfo(ch:LOGICCH; mode:B\_8)  
**Result Type:** BOOLEAN  
**Comments:** mode is of type BITSTRING[8], imode is a part of the channel mode IE

#### Description

OM\_BmInfo operation checks whether the MS starts transmitting Bm channel information according to the new channel mode 'mode'. The operation returns TRUE if the result of the check is correct otherwise the TSO returns FALSE.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_ChangeRFOf2Cells( cellid1:CellID; bspwr1:INTEGER; cellid2:CellID; bspwr2:INTEGER)  
**Result Type:** BOOLEAN  
**Comments:**

#### Description

This TSO is used to change the RF level of the cell 'cellid1' to the RF level 'bspwr1' and the RF level of the cell 'cellid2' to the RF level 'bspwr2' [dBuVemf], then the TSO returns TRUE.

The main use of this TSO is to force the Mobile Station (MS) to select a new cell according to the GSM 05.08 and GSM 03.22.

For the MS to select the new cell then the path loss criterion parameter (C1) of the old will have to be less than zero (C1 < 0). This criterion is defined as:

$$C1 = (A - \max(B,0))$$

when A - Received Level Average - (RXLEV ACCESS MIN)  
 B - MS TXPWR MAX CCH - P {non DCS 1800}  
           - MS TXPWR MAX XXH + POWEROFFSET - P {DCS 1800}  
 RXLEV ACCESS MIN - Minimum received level at the MS required for access to the system.  
 MS TCPWR MAX CCH - Maximum TX power level an MS may use when accessing the system until otherwise commanded.  
 POWER OFFSET - The power offset to be used in conjunction with the MS TCPWR MAX CCH parameter by the class 3 DCS 1800 MS.  
 P - Maximum RF output power of the MS.

All values are expressed in dBm.

In most test cases MS TXPWR MAX CCH and the POWER OFFSET will be set at their minimum values thus C1 = A (B always being negative). Suitable levels of cells will be either 63 dBuV(C\_E\_default), 53 dBuV(C\_E\_neighbourdefault) or 45 dBuV(C\_E\_suitable). Assuming that the MS uses a RXLEV ACCESS MIN between -110 and -115 dBm then to ensure that C1 < 0 the test system's output needs to be set to ensure the level input detected by the MS is less than -123 dBm or lower (-115 plus an 8 dB for discrimination between C1 and C2 values and 0, GSM 11.10-1 section 20). At or below -123 dBm the MS is not expected to calculate C1. this value of -123 dBm corresponds to -10 dBuV (C\_E\_notsuitable).

| Description                                                                                                                                                                              |                                       |
| OM_ChMdModi operation passes channel mode IE for channel `ch` to lower layer emulator and requests the emulator to set the `ch` to the mode `chmod`. After the mode changed, it returns. |                                       |

| OM_ComingFn operation returns the frame number (FN modulo 42432) which is about 5 seconds later than current frame number and is able to carry L3 message on the channel `ch`. |                                                                                                                                                                                                                      |
| <b>Detailed Comments:</b>                                                                                                                                                      | The delay of about 5 seconds ensures that there is still enough time left for higher layer controller to prepare next TTCN send event after the OM_ComingFn returns. the exact delay value is up to the implementor. |

| <p>OM_Deactivate operation deactivates the logical channels `ch1` and `ch2`, then returns TRUE.</p> <p>The ch1 can be a DCCH or a TCH, the ch2 is the associated SACCH.</p> <p>Deactivation of an active SDCCH channel can be done by stopping transmission; this means that for the bursts on the BCCH carriers, dummy bursts shall be transmitted, for other bursts nothing shall be transmitted. Alternatively the deactivation of a SDCCH can be done by transmitting bad blocks on the SACCH with the parity bits set incorrectly. This will lead to a radio link failure in the MS.</p> <p>Deactivation of a TCH channel can be done by stopping transmission if it is non-BCCH.</p> <p>Deactivation of a SACCH_T can be done by transmitting bad blocks on the SACCH_T with the parity bits set incorrectly. The wrong channel coding on the SACCH will lead to a radio link failure in the MS after several seconds depending on the system information messages..</p> |                                                                                                                                                                                                                                                          |

| <p>OM_FreqDef operation passes the frequency hopping parameters for channel `ch` to lower layer emulator. The emulator starts using these frequency parameters at the frame number indicated by starting time `st`. The parameter 'frmn' indicates a reference frame number at which the first burst of the message, FREQUENCY REDEFINITION, ASSIGNMENT COMMAND or HANDOVER COMMAND, containing starting time is sent in the concerned cell.</p> <p>If <math>0 \leq (st - frmn) \bmod 42432 \leq 31623</math>, the indicated time is the next time when frame number mod 42432 is equal to st.</p> <p>If <math>32024 \leq (st - frmn) \bmod 42432 \leq 42431</math>, the indicated time has already elapsed. After completely sending out the message containing the parameter starting time the tester starts frequency hopping.</p> |                                                                      |

| <p>OM_GetHoaccPara instructs the lower layer emulator to return the total number of the handover access bursts received on channel `ch`, the observed minimum and maximum power levels in dBm modulo 256 and the observed minimum and maximum timing advance in bits modulo 256. The lower layer emulator starts the observation of handover access bursts as soon as sending out a HANDOVER COMMAND message. The TSO returns an accumulative result of the observation when it is called.</p> |                             |

| <p>OM_PgFill operation sets up the contents of paging filling frame to be sent on all paging subchannels continuously. If the contents of paging filling frame in cell 'cellid' have not been set up, the operation sets the contents to 'msg'. If paging filling frame in cell 'cellid' has been set up, the operation changes the paging filling message to 'msg'. After the required action has been taken it returns.</p> |                                                   |

| <b>Description</b>                                                                                                                                                                                              |                                                                                                                   |
| The TSO OM_Reactivate reactivates the logical channels `ch1` and `ch2` which were previously deactivated by the OM_Deactivate. Then the TSO returns TRUE. The ch1 is an SDCCH, the ch2 is the associated SACCH. |                                                                                                                   |
| Reactivation of deactivated SDCCH/SACCH channels means to restart normal transmissions both on the SDCCH and the associated SACCH as specified in the ETS 300 574 (GSM 05.02).                                  |                                                                                                                   |

| OM_SendNextOn operation sets the lower layer emulator into a special operation mode then returns. In the special mode the lower layer emulator sends the next L3 message on the indicated frame number `fn` on the `ch` channel. After the next L3 message is sent, the lower layer resumes normal operation automatically. |                                  |

| This operation first requests (e.g. from the control console of the test system) the test operator to check whether the called party number `num` is the one that was entered into the MS. If the operator informs (e.g. from the control console of the test system) the test system that the number is correct, the operation returns TRUE. If the operator informs the test system that the number is wrong, the operation returns FALSE. |                              |

| This operation requests (e.g. from the control console of the test system) the test operator to check whether the MS under test has correctly received the cell broadcast short message represented by 'msg' . Then the TSO returns<br>TRUE: if the CBSM has been correctly received,<br>FALSE: if non or an incorrect CBSM has been received.<br>The TSO needs to convert the 'msg' into IA5 string according to the packing character rules specified in the section 6.1.2 of ETS 300 628 (GSM 03.38). The 'NumbOfIA5chara' indicates the number of IA5 characters in the 'msg'. |                                                              |

| This operation requests (e.g. from the control console of the test system) the test operator to check if the mobile station under test indicates that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the message contents represented by 'msg' is correctly displayed. Then the operation returns<br>TRUE: if the MS indicates SM reception (and displays correct message),<br>FALSE: if the MS does not indicate SM reception (or displays incorrect message).<br>The TSO needs to convert the 'msg' into IA5 string according to the packing character rules specified in the section 6.1.2 of ETS 300 628 (GSM 03.38). The 'NumOfIA5chara' indicates the number of IA5 characters in the 'msg'. |                                                                  |

| <p>This operation requests (e.g. from the control console of the test system) the test operator to display the 'n'-th short message received in the arriving order and to check whether the short message contents represented by 'msg' is correctly displayed.<br/> Then the TSO asks the operator to send a reply short message from the mobile.<br/> After the operator finishes the action, the operation returns with the message contents sent in OCTETSTRING.<br/> The TSO needs to convert the 'msg' into IA5 string and the IA5 text entered by the operator into OCTETSTRING according to the packing character rules specified in the section 6.1.2 of ETS 300 628 (GSM 03.38). The 'NumbOfIA5chara' indicates the number of IA5 characters in the 'msg'.</p> |                                                                         |

| <p>This operation first requests (e.g. from the control console of the test system) the test operator to check whether the 'character' is indicated by the DTMF indicator of the MS. If the operator informs (e.g. from the control console of the test system) the test system that the MS does not give the indication of 'character', the operation returns FALSE. If the operator informs the test system that the MS gives the indication, the operation returns TRUE.</p> |                                    |

| <p>This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or configuration of the MS in such a way that the MS is able to successfully receive the call for telephony service. If the MS supports both telephony without immediate connection mode and telephony with immediate connection mode, set the MS in telephony without immediate connection mode. After the operator finishes the required action and informs the test system, the TSO returns with value TRUE.</p> <p>This TSO is used in MO call test cases except TC_11_2, where this TSO is call for single-numbering scheme MT testing.</p> |                        |

| Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                               |
| <p>This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or the MS configuration in such a way that the MS, when triggered, is able to initiate the call for the BS2x or BS3x service `srv` with the specified itc, sacp, ce values. After the operator finishes the required action and informs the test system, the TSO returns with value TRUE.</p> <p>This TSO is used in MO call test cases except TC_11_2, where this TSO is call for single-numbering scheme MT testing.</p> <p>Three negotiable parameters, number of stop bit, number of data bit, parity information, are asked as global IXIT paramters for all TE configurations. If necessary, the test operator refers to the manual provided by manufacturer to configure the MS.</p> <p>The possible values are:</p> <p>1) srv ----- basic service</p> <ul style="list-style-type: none"> <li>- C_Async300            Basic Service 21, Asynchronous 300 bps</li> <li>- C_Async1200         Basic Service 22, Asynchronous 1.2 kbps</li> <li>- C_Async120075       Basic Service 23, Asynchronous 1200/75 bps</li> <li>- C_Async2400         Basic Service 24, Asynchronous 2.4 kbps</li> <li>- C_Async4800         Basic Service 25, Asynchronous 4.8 kbps</li> <li>- C_Async9600         Basic Service 26, Asynchronous 9.6 kbps</li> <li>- C_Sync1200           Basic Service 31, Synchronous 1.2 kbps</li> <li>- C_Sync2400           Basic Service 32, Synchronous 2.4 kbps</li> <li>- C_Sync4800           Basic Service 33, Synchronous 4.8 kbps</li> <li>- C_Sync9600           Basic Service 34, Synchronous 9.6 kbps</li> </ul> <p>2) itc ----- information transfer capability</p> <ul style="list-style-type: none"> <li>- '001'B                unrestricted digital information</li> <li>- '010'B                3.1 kHz audio, ex PLMN</li> </ul> <p>3) sacp ---- signalling access protocol</p> <ul style="list-style-type: none"> <li>- '001'B                I.440/450</li> <li>- '010'B                X.21</li> <li>- '101'B                X.28 - non dedicated PAD</li> <li>- '110'B                X.32</li> </ul> <p>4) ce ----- connection element</p> <ul style="list-style-type: none"> <li>- '00'B                 transparent</li> <li>- '01'B                 non transparent</li> </ul> <p>5) rate ----- channel rate</p> <ul style="list-style-type: none"> <li>- C_Full                full rate channel</li> <li>- C_Half                half rate channel</li> </ul> |                                                                               |

| <p>This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or the MS configuration in such a way that the MS, when triggered, is able to initiate the call for the BS4x service `srv` with specified ur and ce values. After the operator finishes the required action and informs the test system, the TSO returns with value TRUE.</p> <p>Three negotiable parameters, number of stop bit, number of data bit, parity information, are asked as global IXIT parameters for all TE configurations. If necessary, the test operator refers to the manual provided by manufacturer to configure the MS.</p> <p>The possible values are:</p> <p>1) srv ----- basic service</p> <ul style="list-style-type: none"> <li>- C_PAD300            Basic Service 41, PAD access 300 bps</li> <li>- C_PAD1200         Basic Service 42, PAD access 1.2 kbps</li> <li>- C_PAD120075      Basic Service 43, PAD access 1200/75 bps</li> <li>- C_PAD2400         Basic Service 44, PAD access 2.4 kbps</li> <li>- C_PAD4800         Basic Service 45, PAD access 4.8 kbps</li> <li>- C_PAD9600         Basic Service 46, PAD access 9.6 kbps</li> </ul> <p>2) ce ----- connection element</p> <ul style="list-style-type: none"> <li>- '00'B                transparent</li> <li>- '01'B                non transparent</li> </ul> <p>3) rate ----- channel rate</p> <ul style="list-style-type: none"> <li>- C_Full                full rate channel</li> <li>- C_Half                half rate channel</li> </ul> |                                                          |

| <p>This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or the MS configuration in such a way that the MS, when triggered, is able to initiate the call for the BS5x service `srv` with the specified ur value. After the operator finishes the required action and informs the test system, the TSO returns with value TRUE.</p> <p>Three negotiable parameters, number of stop bit, number of data bit, parity information, are asked as global IXIT parameters for all TE configurations. If necessary, the test operator refers to the manual provided by manufacturer to configure the MS.</p> <p>The possible values are:</p> <p>1) srv ----- basic service</p> <ul style="list-style-type: none"> <li>- C_Packet2400        Basic Service 51, Packet access 2.4 kbps</li> <li>- C_Packet4800        Basic Service 52, Packet access 4.8 kbps</li> <li>- C_Packet9600        Basic Service 53, Packet access 9.6 kbps</li> </ul> <p>2) ur ----- user rate</p> <ul style="list-style-type: none"> <li>- '0011'B              2400 bit/s</li> <li>- '0100'B              4800 bit/s</li> <li>- '0101'B              9600 bit/s</li> </ul> <p>3) rate ----- channel rate</p> <ul style="list-style-type: none"> <li>- C_Full                full rate channel</li> <li>- C_Half                half rate channel</li> </ul> |                                                          |

| <p>This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or the MS configuration in such a way that the MS, when triggered, is able to initiate the call for BS61 or BS81 with the specified ur, ce and sa values, and the first bearer capability is speech. After the operator finishes the required action and informs the test system, the TSO returns with value TRUE.</p> <p>This TSO is used in MO call test cases except TC_11_2, where this TSO is call for single-numbering scheme MT testing.</p> <p>Three negotiable parameters, number of stop bit, number of data bit, parity information, are asked as global IXIT parameters for all TE configurations. If necessary, the test operator refers to the manual provided by manufacturer to configure the MS.</p> <p>The possible values are:</p> <p>1) srv ----- basic service</p> <ul style="list-style-type: none"> <li>- C_AltSpchData      Basic Service 61, Alternatie Speech/data</li> <li>- C_SpchData         Basic Service 81, Speech followed by data</li> </ul> <p>2) ur ----- user rate</p> <ul style="list-style-type: none"> <li>- '0001'B            300 bit/s</li> <li>- '0010'B            1200 bit/s</li> <li>- '0111'B            1200/75 bit/s</li> <li>- '0011'B            2400 bit/s</li> <li>- '0100'B            4800 bit/s</li> <li>- '0101'B            9600 bit/s</li> </ul> <p>3) sa ----- synchronous/asynchronous</p> <ul style="list-style-type: none"> <li>- '0'B                synchronous</li> <li>- '1'B                asynchronous</li> </ul> <p>4) ce ----- connection element</p> <ul style="list-style-type: none"> <li>- '00'B               transparent</li> <li>- '01'B               non transparent</li> </ul> <p>5) rate ----- channel rate</p> <ul style="list-style-type: none"> <li>- C_Full              full rate channel</li> <li>- C_Half              half rate channel</li> </ul> |                                                                                |

| <p>This operation requests (e.g. from the control console of the test system) the test operator to initiate a in-call modification at the Mobile Station under test, which is triggered by the calling tone identification (CNG) received by the MS, for the basic service 'srv', then returns TRUE. The calling test step can pass the 'srv' value either as TSPX or constant to the TSO.</p> <p>The possible service values include (see also test suite constant declarations):</p> <p>1) Teleservices</p> <ul style="list-style-type: none"> <li>- C_Telephony</li> <li>- C_EmgCall</li> <li>- C_AltSpchFax</li> <li>- C_AutoFax</li> </ul> <p>2) Bearer services</p> <ul style="list-style-type: none"> <li>- C_Async300, C_Async1200, C_Async120075, C_Async2400, C_Async4800, C_Async9600</li> <li>- C_Sync1200, C_Sync2400, C_Sync4800, C_Sync9600</li> <li>- C_PAD300, C_PAD1200, C_PAD120075, C_PAD2400, C_PAD4800, C_PAD9600</li> <li>- C_Packet2400, C_Packet4800, C_Packet9600</li> <li>- C_AltSpchData</li> <li>- C_SpchData</li> </ul> |                             |

| <p>This operation requests (e.g. from the control console of the test system) the test operator to initiate an MS originating call for the basic service `srv`, then returns TRUE. The calling test step can pass the 'srv' value either as TSPX or constant to the TSO. The necessary MS configuration has been done in the corresponding TSO OO_IFsetup_xx...xx_MO before this TSO is called.</p> <p>The possible service values include (see also test suite constant declarations):</p> <p>1) Teleservices</p> <table border="0"> <tr><td>- C_Telephony</td><td>-----</td><td>TS11</td></tr> <tr><td>- C_EmgCall</td><td>-----</td><td>TS12</td></tr> <tr><td>- C_AltSpchFax</td><td>-----</td><td>TS61</td></tr> <tr><td>- C_AutoFax</td><td>-----</td><td>TS62</td></tr> </table> <p>2) Bearer services</p> <table border="0"> <tr><td>- C_Async300</td><td>-----</td><td>BS21</td></tr> <tr><td>- C_Async1200</td><td>-----</td><td>BS22</td></tr> <tr><td>- C_Async120075</td><td>-----</td><td>BS23</td></tr> <tr><td>- C_Async2400</td><td>-----</td><td>BS24</td></tr> <tr><td>- C_Async4800</td><td>-----</td><td>BS25</td></tr> <tr><td>- C_Async9600</td><td>-----</td><td>BS26</td></tr> <tr><td>- C_Sync1200</td><td>-----</td><td>BS31</td></tr> <tr><td>- C_Sync2400</td><td>-----</td><td>BS32</td></tr> <tr><td>- C_Sync4800</td><td>-----</td><td>BS33</td></tr> <tr><td>- C_Sync9600</td><td>-----</td><td>BS34</td></tr> <tr><td>- C_PAD300</td><td>-----</td><td>BS41</td></tr> <tr><td>- C_PAD1200</td><td>-----</td><td>BS42</td></tr> <tr><td>- C_PAD120075</td><td>-----</td><td>BS43</td></tr> <tr><td>- C_PAD2400</td><td>-----</td><td>BS44</td></tr> <tr><td>- C_PAD4800</td><td>-----</td><td>BS45</td></tr> <tr><td>- C_PAD9600</td><td>-----</td><td>BS46</td></tr> <tr><td>- C_Packet2400</td><td>-----</td><td>BS51</td></tr> <tr><td>- C_Packet4800</td><td>-----</td><td>BS52</td></tr> <tr><td>- C_Packet9600</td><td>-----</td><td>BS53</td></tr> <tr><td>- C_AltSpchData</td><td>-----</td><td>BS61</td></tr> <tr><td>- C_SpchData</td><td>-----</td><td>BS81</td></tr> </table> |                           | - C_Telephony | ----- | TS11 | - C_EmgCall | ----- | TS12 | - C_AltSpchFax | ----- | TS61 | - C_AutoFax | ----- | TS62 | - C_Async300 | ----- | BS21 | - C_Async1200 | ----- | BS22 | - C_Async120075 | ----- | BS23 | - C_Async2400 | ----- | BS24 | - C_Async4800 | ----- | BS25 | - C_Async9600 | ----- | BS26 | - C_Sync1200 | ----- | BS31 | - C_Sync2400 | ----- | BS32 | - C_Sync4800 | ----- | BS33 | - C_Sync9600 | ----- | BS34 | - C_PAD300 | ----- | BS41 | - C_PAD1200 | ----- | BS42 | - C_PAD120075 | ----- | BS43 | - C_PAD2400 | ----- | BS44 | - C_PAD4800 | ----- | BS45 | - C_PAD9600 | ----- | BS46 | - C_Packet2400 | ----- | BS51 | - C_Packet4800 | ----- | BS52 | - C_Packet9600 | ----- | BS53 | - C_AltSpchData | ----- | BS61 | - C_SpchData | ----- | BS81 |

| This operation first requests (e.g. from the control console of the test system) the test operator to check whether the Mobile Station under test is in normal service state ("Idle, updated")-- listening to CCCH and BCCH and with U1 UPDATED status. If the operator informs (e.g. from the control console of the test system) the test system that the MS does not give any service indication, the operation returns FALSE. If the operator informs the test system that the MS gives service indication, the operation returns TRUE. |                 |

| This operation requests (e.g. from the control console of the test system) the test operator to setup the MS under test to store class 1 SM in the ME memory (by way of MMI, as described in PICS/PIXIT statement). |                                   |
| After the operator finishes the action, he informs the test system and the operation returns with the value TRUE.                                                                                                   |                                   |

| This operation first requests (e.g. from the control console of the test system) the test operator to check whether the Mobile Station presents a list of available PLMNs. The list shall include the MNC and MCC of cells 1 to 7, but not cell 8 (for GSM900) or cells 1 to 6, but not cell 7 (for DCS1800). If the operator informs (e.g. from the control console of the test system) the test system that the MS correctly presents the list, the operation returns TRUE. If the operator informs the test system that the list is incorrect, the operation returns FALSE. |             |

| This operation requests (e.g. from the control console of the test system) the test operator to recall and display an SM stored in the ME of the MS under test e.g. by means of the MMI. Then the operator checks whether the short message contents represented by 'msg' is correctly displayed. The TSO returns<br>TRUE: if SM can be recalled and displayed correctly in comparison with the 'msg',<br>FALSE: if SM can not be recalled or displayed, or displayed incorrectly in comparison with the 'msg'.<br>The TSO needs to convert the 'msg' into IA5 string according to the packing character rules specified in the section 6.1.2 of ETS 300 628 (GSM 03.38). The 'NumbOfIA5chara' indicates the number of IA5 characters in the 'msg'. |                                                                  |

| This operation requests (e.g. from the control console of the test system) the test operator to remove one of the SM from the message store and then to inform the test system. It does not matter which short message has been removed. After that the operation returns with value TRUE. The returned value is not used in the ATS. |                |

| This operation first requests (e.g. from the control console of the test system) the test operator to check whether the Mobile Station produces any RF output. If the operator informs (e.g. from the control console of the test system) the test system that the MS does not produce any RF output, the operation returns FALSE. If the operator informs the test system that the MS produces RF output, the operation returns TRUE. |                |

| <b>Description</b>                                                                                                                                                                                                                                                                                  |                  |
| This operation first requests (e.g. from the control console of the test system) the test operator to enable call refusal on the MS. After the operator completes the action and informs (e.g. from the control console of the test system) the test system, the operation returns with value TRUE. |                  |

| This operation requests (e.g. from the control console of the test system) the test operator to cause a DTMF tone to be generated, e.g. by short depression of the key `ch` on the Mobile Station under test. The operation waits for the operator to acknowledge the request which may be done before or after generating the DTMF tone, and then returns the value TRUE. |                               |

| This operation first requests (e.g. from the control console of the test system) the test operator to check whether the TCH is through connected. The SS has to generate a noise pattern so that the operator can check this. If the operator informs (e.g. from the control console of the test system) the test system that the TCH is through connected, the operation returns TRUE. If the operator informs the test system that the TCH is not through connected, the operation returns FALSE. |                   |

| <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                              |                |
| This operation first requests (e.g. from the control console of the test system) the test operator to check whether the MS stops the tone generation. If the operator informs (e.g. from the control console of the test system) the test system that the MS does not stop tone generation, the operation returns FALSE. If the operator informs the test system that the MS stops tone generation, the operation returns TRUE. |                |
| Definition of "tone generation":                                                                                                                                                                                                                                                                                                                                                                                                |                |
| -During MO call: MS generates alerting tone/presents inband information sent by the network.                                                                                                                                                                                                                                                                                                                                    |                |
| -During MT call: MS generates ringing tone.                                                                                                                                                                                                                                                                                                                                                                                     |                |

| 1) In order to give to the lower tester enough time to dequeue and to send out the call SETUP and the other call establishment related messages in the sending buffer before starting sending of ASSIGNMENT COMMAND message, the default value 5s is used in the test step AssCh_complete. In the test step AssCh_failure the timer value is set to 4s. For the TC_26_6_4_1, 600ms is used. |                |      |                             |

| 1. The values of t1, t2 and t3_ shall be correctly set by the L2 simulation module when this message is sent to air on the synchronization channel. It is assumed that there is a set of timebase counters in the L2 module, these counters run continuously and keep the correct timeslot number SN and TDMA frame number FN as long as the test system is poweron , the T1, T2, T3' (values for t1, t2 and t3_) can be derived from these counters. |                              |          |

**Detailed Comments:** HO from TCH/F\_FH sv2 of cell A to TCH/F\_nonFH sv2 in cell B

**Notes:**

1. PhyInfo is dequeued from the sending buffer, but held through OM\_SendNextOnHO at the lower layers of the tester for sending till having received TCV\_Cntref access bursts.

**Detailed Comments:** HandOver from TCH/F\_nonFH sv1 of cell A to TCH/F\_nonFH sv2 in cell B

**Notes:**

1. PhyInfo is dequeued from the sending buffer, but held through OM\_SendNextOnHO at the lower layers of the tester for sending till having received TCV\_Cntref access bursts.
