### Test Step Dynamic Behaviour

**Test Step Name:** SysInfoSending\_fh( sch, bcch:LOGICCH; t, retr, neci, att:INTEGER; babr, cch\_con, bpm:B\_3; t3212:OCTETSTRING; ci:CI; mcc, mnc, lac:OCTETSTRING; co:CO; cchdgsms, cchddcs:CCHD; crh, mtmcgsm, mtmcdcs:INTEGER; bcchflgsm, bcchfldcs:NCD; Re:B\_1; bcc:BCC; ncc:NCC; nccp:NCCP)

**Group:** GSM\_L3\_MS\_v4220/Miscellaneous/

**Objective:** To send system information messages for the L3 tests. The following parameters specified by input parameters:

- bcch: BCCH
- sch: SCH
- bcchfl: BCCH frequency list
- ci: Cell identity
- lai: Location area identification
- ccd: Control channel description
- csp: Cell selection parameters
- cchd: Cell channel description
- rachcpar: RACH controll paramenters
- nccp: NCC permitted.

**Default:** OtherEvents

**Detailed Comments:** The algorithm for derivation of BS2x Bearer Capabilities :

The Bearer Capability for 1st SETUP ( used for an MT call):

```

itc= TSPX_BS_2x_itc1
IF itc=3.1kHz
  IF TSPX_BS_2x_T_MT OR ( NOT TSPX_BS_2x_T_MT AND (TSPX_BS_2x_ce = NT))
    use coding of sec. 11.8.1.1.1.2 with (ce=NT)
  ELSE IF NOT TSPX_BS_2x_T_MT AND (TSPX_BS_2x_ce = T)
    use coding of sec. 11.8.1.1.1.1 with (ce=T)
ELSE IF itc=udi
  IF TSPX_BS_2x_T_MT OR ( NOT TSPX_BS_2x_T_MT AND (TSPX_BS_2x_ce = NT))
    use coding of sec. 11.8.1.1.1.4 with (ce=NT)
  ELSE IF NOT TSPX_BS_2x_T_MT AND (TSPX_BS_2x_ce = T)
    use coding of sec. 11.8.1.1.1.3 with (ce=T)

```

The derived 2nd Bearer Capability for 2nd SETUP: (used for TC\_11\_1\_1)

```

IF TSPX_BS_2x_more_itc
  itc=TSPX_BS_2x_itc2
ELSE
  itc= TSPX_BS_2x_itc1
  IF TSPX_BS_2x_T_NT
    IF itc=3.1kHz use coding of sec. 11.8.1.1.1.1 with (ce=T)
    IF itc=udi use coding of sec. 11.8.1.1.1.3 with (ce=T)
  ELSE
    IF itc=3.1Khz use coding of sec. 11.8.1.1.1.2 with (ce=both/T)
    IF itc=udi use coding of sec. 11.8.1.1.1.4 with (ce=both/T)

```

**Detailed Comments:**

The algorithm for derivation of BS3x Bearer Capabilities :

The Bearer Capability for 1st SETUP ( used for an MT call):

itc= TSPX\_BS\_3x\_itc1

sacp= TSPX\_BS\_3x\_sacp1

IF itc= 3.1Khz

IF sacp= I440 use coding of sec. 11.8.1.2.1.1 with (ce=T)

IF sacp= X32

IF TSPX\_BS\_3x\_T\_NT OR (TSPX\_BS\_3x\_ce = NT)

use coding of sec. 11.8.1.2.1.4 with (ce= NT)

IF NOT TSPX\_BS\_3x\_T\_NT AND (TSPX\_BS\_3x\_ce = T)

use coding of sec. 11.8.1.2.1.3 with (ce= T)

IF itc=udi

IF sacp= I440 use coding of sec. 11.8.1.2.1.2 with (ce=T)

IF sacp= X21 use coding of sec. 11.8.1.2.1.2 with (ce=T)

IF sacp= X32 use coding of sec. 11.8.1.2.1.5 with (ce=NT)

The derived 2nd Bearer Capability for 2nd SETUP (used for TC\_11\_1\_ only):

Note: the 2nd BC is derived only IF

TSPX\_BS\_3x\_more\_itc OR TSPX\_BS\_3x\_more\_sacp OR

((TSPX\_BS\_3x\_itc1 = 3.1kHz) AND (TSPX\_BS\_3x\_sacp1 = X32))

IF TSPX\_BS\_3x\_more\_itc

itc= TSPX\_BS\_3x\_itc2

IF itc= 3.1kHz

IF TSP\_BS\_3x\_more\_sacp

sacp= TSPX\_BS\_3x\_sacp2

ELSE

sacp = TSPX\_BS\_3x\_sacp1

IF sacp= I440 use coding of sec. 11.8.1.2.1.1 with (ce=T)

IF sacp= X32 use coding of sec. 11.8.1.2.1.4 with (ce=both/T)

IF itc= udi

IF TSP\_BS\_3x\_more\_sacp

sacp= TSPX\_BS\_3x\_sacp2

**Detailed Comments:**

The algorithm for derivation of BS61 Bearer Capabilities:

The data Bearer Capability for 1st SETUP (used for an MT call):

```

IF TSPX_BS_61_A
  ur= TSPX_BS_61_A_ur1
  IF TSPX_BS_61_A_ur1_T_NT OR (TSPX_BS_61_A_ur1_ce = NT)
    use coding of sec. 11.8.1.3.2 with (ur & ce=NT)
  ELSE
    use coding of sec. 11.8.1.3.1 with (ur & ce=T)
ELSE
  IF TSPX_BS_61_S
    ur= TSPX_BS_61_S_ur1 use coding of sec. 11.8.1.3.3 with (ur & ce=T)

```

The 2nd Bearer Capability for second SETUP ( used for TC\_11\_1\_1):

Note: the 2nd BC is derived IF  
(TSPX\_BS\_61\_A OR (TSPX\_BS\_61\_S AND TSPX\_BS\_61\_S\_more\_ur))

```

IF TSPX_BS_61_A AND TSPX_BS_61_S
  ur= TSPX_BS_61_S_ur1 use coding of sec. 11.8.1.3.3 with (ur & ce= T)
ELSE
  IF TSPX_BS_61_A_more_ur AND TSPX_BS_61_A
    ur= TSPX_BS_61_A_ur2
    IF TSPX_BS_61_A_ur2_T_NT
      use coding of sec. 11.8.1.3.1 with (ur & ce=T)
    ELSE
      use coding of sec. 11.8.1.3.2 with (ur & ce=both/T)
  ELSE
    IF TSPX_BS_61_S AND TSPX_BS_61_S_more_ur
      ur=TSPX_BS_61_S_ur2
      use coding of sec. 11.8.1.3.3 with (ur & ce= T)
    ELSE
      IF TSPX_BS_61_A
        ur= TSPX_BS_61_A_ur1
        IF TSPX_BS_61_A_ur1_T_NT
          use coding of sec. 11.8.1.3.1 with (ur & ce=T)
        ELSE
          use coding of sec. 11.8.1.3.2 with (ur & ce=both/T)

```

The algorithm for derivation of BS81 Bearer Capabilities is same as above except all parameters are changed to corresponding BS81's parameters.

| <b>Objective:</b>           |       | To assign correct values to the test case variables TCV_ChMod and TCV_ChModb.                                                                                                                                                                                                     |      |   |                |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                       |      |   |                |
| <b>Comments:</b>            |       | The rules for assignment are in Table 10-1 of GSM 11.10 section 10.3. If the value for ce is "BothT", the rule for transparent is used. If the value for ce is "BothNT", the rule for non transparent is used. That means the preferred value will be used in test configuration. |      |   |                |

| <b>Objective:</b>           |       | To establish a mobile originating call and put the MS under test in the CC state U3.                                                                                                                                                                                         |                                |   |          |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                  |                                |   |          |
| <b>Comments:</b>            |       | test case variable TCV_TIO holds the transaction ID used by the MS, and TCV_TI is used by test system. The calling tree shall prepare two variables for the step: TCV_ch for the SDCCH4 subchannel; TCV_CphKey for ciphering key. The call setup is generic setup procedure. |                                |   |          |

| <b>Objective:</b>           |       | To bring the MS into CC state U3 by procedure in table 26.8.1.2/3. This is used in CC testing.                                                                                                                                                                                                             |                                 |   |                                                            |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                |                                 |   |                                                            |
| <b>Comments:</b>            |       | TCV_TI0 contains the transaction identifier from the MS, and TCV_TI contains the transaction identifier for test system to send CC message. Their values are used in test body. The calling tree shall prepare two variables for the step: TCV_ch for the SDCCH4 subchannel; TCV_CphKey for ciphering key. |                                 |   |                                                            |

| <b>Objective:</b>                             |       | To bring the MS into CC state U9 by procedure in table 26.8.1.3/1. This is used in CC testing.                                                                                                                                                                        |                                  |   |          |
| <b>Default:</b>                               |       | OtherEvents                                                                                                                                                                                                                                                           |                                  |   |          |
| <b>Comments:</b>                              |       | The state U9 is a transient state when the signal IE is included in the SETUP message. The calling tree shall prepare three variables for the test step: TCV_ChRate for the type of the channel, TCV_CphKey for the ciphering key and TCV_ChMod for the channel mode. |                                  |   |          |

| <b>Objective:</b>           |            | To establish a mobile terminating call for the supported bearer capability and put the MS under test in the CC state U10.                                                                                                                                                                                                                                                                           |                                               |     |          |
| <b>Default:</b>             |            | OtherEvents                                                                                                                                                                                                                                                                                                                                                                                         |                                               |     |          |
| <b>Comments:</b>            |            | The supported bearer capability is specified in the input partameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for SDCCH4 subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. This test step is used for non RR testing. |                                               |     |          |

| <b>Objective:</b>           |            | To establish a mobile terminating call for the supported bearer capability and put the MS under test in the CC state U10.                                                                                                                                                                                                                                                                          |                                               |     |          |
| <b>Default:</b>             |            | OtherEvents                                                                                                                                                                                                                                                                                                                                                                                        |                                               |     |          |
| <b>Comments:</b>            |            | The supported bearer capability is specified in the input parameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for SDCCH4 subchannel, TCV_chTch for traffic channel, TCV_CphKey for ciphering key. This test step is used for non RR testing. |                                               |     |          |

| <b>Objective:</b>           |            | To establish a mobile terminating call for the supported bearer capability and put the MS in the CC state U10.                                                                                                                                                                                                                                                                                             |                                                                                                  |   |                         |
| <b>Default:</b>             |            | OtherEvents                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                  |   |                         |
| <b>Comments:</b>            |            | The supported bearer capability is specified in the input partameter setup, test case variable TCV_TI holds the transaction ID and the transaction ID =0. This is generic call set up procedure. The calling tree shall prepare three variables for the step: TCV_ch for SDCCH4 subchannel, TCV_chTch for traffic channel, TCV_CphKey for cipherring key. The timing advance is parameter. For RR testing. |                                                                                                  |   |                         |

| <b>Objective:</b>           |       | To bring the MS into CC state U10 by procedure in table 26.8.1.2/1. This is used in CC testing.                                                                                                                                                                                                                  |                                               |   |          |
| <b>Default:</b>             |       | OtherEvents                                                                                                                                                                                                                                                                                                      |                                               |   |          |
| <b>Comments:</b>            |       | TCV_TI0 contains the transaction identifier from the MS, and TCV_TI contains the transaction identifier for test system to send CC message. The values of them are used in test body. The calling tree shall prepare two variables for the step: TCV_ch for the SDCCH4 subchannel; TCV_CphKey for ciphering key. |                                               |   |          |

**Detailed Comments:**

The algorithm for derivation of TS61 Bearer Capabilities:

The 1st facsimile group 3 Bearer Capability ( used for an MT call):

ur= TSPX\_TS\_61\_ur1

IF TSPX\_TS\_61\_T\_NT OR (TSPX\_TS\_61\_ce = NT)

use coding 11.8.1.5.2 with (ur & ce=NT)

ELSE

use coding 11.8.1.5.1 with (ur & ce=T)

The 2nd facsimile group 3 Bearer Capabiility ( used for TC\_11\_1\_1):

IF TSPX\_TS\_61\_more\_ur

ur=TSPX\_TS\_61\_ur2

ELSE

ur=TSPX\_TS\_61\_ur1

IF TSPX\_TS\_61\_T\_NT

use coding 11.8.1.5.1 with (ur & ce=T)

ELSE

use coding 11.8.1.5.2 with(ur & ce=both/T)

**Detailed Comments:** The algorithm for derivation of TS62 Bearer Capabilities:

The 1st Bearer Capability ( used for an MT call):  
ur= TSPX\_TS\_62\_ur1  
IF TSPX\_TS\_62\_T\_NT OR (TSPX\_TS\_62\_ce = NT)  
use coding 11.8.1.5.2 with (ur & ce=NT)  
ELSE  
use coding 11.8.1.5.1 with (ur & ce=T)

The 2nd Bearer Capability ( used for TC\_11\_1\_1):  
IF TSPX\_TS\_62\_more\_ur  
ur=TSPX\_TS\_62\_ur2  
ELSE  
ur=TSPX\_TS\_62\_ur1  
IF TSPX\_TS\_62\_T\_NT  
use coding 11.8.1.5.1 with (ur & ce=T)  
ELSE  
use coding 11.8.1.5.2 with(ur & ce=both/T)

**Annex B (normative): Partial IXIT proforma**

Notwithstanding the provisions of the copyright clause related to the text of this ETS, ETSI grants that users of this ETS may freely reproduce the PIXIT proforma in this annex so that it can be used for its intended purposes and may further publish the completed PIXIT.

**Introduction**

This partial IXIT proforma contained in this ETS, after augmented by the Test Realizer, is proposed to be provided to the client for completion, when the related Abstract Test Suite is to be used against client's Implementation Under Test (IUT).

Text in *italics* is comments for guidance for the production of a IXIT, and is not to be included in the actual IXIT.

The completed IXIT will normally be used in conjunction with the completed ICS, as it adds precision to the information provided by the ICS.

## B.1 Identification Summary

*This table is completed by the test laboratory. The item "Contract References" is optional.*

**Table 1: Identification Summary**

|                            |  |
|----------------------------|--|
| IXIT Reference Number      |  |
| Test Laboratory Name       |  |
| Date of Issue              |  |
| Issued to (name of client) |  |
| Contract References        |  |

## B.2 Abstract Test Suite Summary

*In the following table the test laboratory provides the version number of the protocol specification and the version number of ATS which are used in the conformance testing.*

**Table 2: ATS Summary**

|                                   |                    |
|-----------------------------------|--------------------|
| Protocol Specification            | ETS 300 557        |
| Version of Protocol Specification |                    |
| TSS & TP Specification            | ETS 300 607-1      |
| Version of TSS & TP Specification |                    |
| ATS Specification                 | ETS 300 607-3      |
| Version of ATS Specification      |                    |
| Abstract Test Method              | Remote Test Method |

## B.3 Test Laboratory

### B.3.1 Test Laboratory Identification

*The test laboratory provides the following information.*

**Table 3: Test Laboratory Identification**

|                         |  |
|-------------------------|--|
| Name of Test Laboratory |  |
| Postal Address          |  |
| Office address          |  |
| Telephone Number        |  |
| FAX Number              |  |

**B.3.2 Accreditation status of the test service**

*The test laboratory provides the following information.*

**Table 4: Accreditation status of the test service**

|                         |  |
|-------------------------|--|
| Accreditation status    |  |
| Accreditation Reference |  |

**B.3.3 Manager of Test Laboratory**

*The test laboratory provides the information about the manager of test laboratory in the following table.*

**Table 5: Manager of Test Laboratory**

|                                    |  |
|------------------------------------|--|
| Name of Manager of Test Laboratory |  |
| Telephone Number                   |  |
| FAX Number                         |  |
| E-mail Address                     |  |

**B.3.4 Contact person of Test Laboratory**

*The test laboratory provides the information about the contact person of test laboratory in the following table.*

**Table 6: Contact person of Test Laboratory**

|                                    |  |
|------------------------------------|--|
| Name of Contact of Test Laboratory |  |
| Telephone Number                   |  |
| FAX Number                         |  |
| E-mail Address                     |  |

**B.3.5 Means of Testing**

*In the table below, the test laboratory provides a statement of conformance of the Means Of Testing (MOT) to the reference standardized ATS, and identifies all restrictions for the test execution required by the MOT beyond those stated in the reference standardized ATS.*

**Table 7: Means of Testing**

| Means of Testing |
|------------------|
|------------------|

**B.3.6 Instructions for Completion**

*In this table, the test laboratory provides any specific instructions necessary for completion and return of the proforma from the client.*

Table 8: Instruction for Completion

| Instructions for Completion |
|-----------------------------|
|                             |

**B.4 Client**

**B.4.1 Client Identification**

*The client provides the identification in the following table.*

**Table 9: Client Identification**

|                  |  |
|------------------|--|
| Name of Client   |  |
| Postal Address   |  |
| Office Address   |  |
| Telephone Number |  |
| FAX Number       |  |

**B.4.2 Client Test Manager**

*In this table the client provides information about the test manager.*

**Table 10: Client Test Manager**

|                             |  |
|-----------------------------|--|
| Name of Client Test Manager |  |
| Telephone Number            |  |
| FAX Number                  |  |
| E-mail Address              |  |

**B.4.3 Client Contact person**

*In this table the client provides information about the test contact person.*

**Table 11: Client Contact person**

|                               |  |
|-------------------------------|--|
| Name of Client contact person |  |
| Telephone Number              |  |
| FAX Number                    |  |
| E-mail Address                |  |

**B.4.4 Test Facilities Required**

*In the following table, the client records the particular facilities required for testing, if a range of facilities is provided by the test laboratory.*

**Table 12: Test Facilities Required**

| Test Facilities Required |
|--------------------------|
|--------------------------|

## **B.5 System Under Test**

### **B.5.1 SUT Information**

*The client provides information about the SUT in the table below.*

Table 13: SUT Information

|                                 |  |
|---------------------------------|--|
| System Name                     |  |
| System Version                  |  |
| SCS Reference                   |  |
| Machine Configuration           |  |
| Operating System Identification |  |
| IUT Identification              |  |
| ICS Reference for the IUT       |  |

**B.5.2 Limitations of the SUT**

*In the table below, the client provides information explaining if any of the abstract tests cannot be executed.*

Table 14: Limitation of the SUT

| Limitations of the SUT |
|------------------------|
|------------------------|

**B.5.3 Environmental Conditions**

*In the table below the client provides information about any tighter environmental conditions for the correct operation of the SUT.*

**Table 15: Environmental Conditions**

| Environmental Conditions |
|--------------------------|
|                          |

**B.6 Ancillary Protocols**

*This clause is completed by the client in conjunction with the test laboratory.*

In the following tables, the client identifies relevant information concerning each ancillary protocol in the SUT other than the IUT itself. One table for one ancillary protocol.

Based on the MOT the test laboratory should create question proforma for each ancillary protocol in the blank space following each table. The information required is dependent on the MOT and the SUT, and covers all the addressing, parameter values, timer values and facilities (relevant to ETSS) as defined by the ICS for the ancillary protocol.

### B.6.1 Ancillary Protocols 1

**Table 16: Ancillary Protocol 1**

|                           |         |
|---------------------------|---------|
| Protocol Name             | ETS 300 |
| Version number            |         |
| ICS Reference (optional)  |         |
| IXIT Reference (optional) |         |
| PCTR Reference (optional) |         |

### B.6.2 Ancillary Protocols 2

**Table 17: Ancillary Protocol 2**

|                           |         |
|---------------------------|---------|
| Protocol Name             | ETS 300 |
| Version number            |         |
| ICS Reference (optional)  |         |
| IXIT Reference (optional) |         |
| PCTR Reference (optional) |         |

## B.7 Protocol Layer Information for L3 of Mobile Station

### B.7.1 Information provided for test purposes by the MS supplier

| Item                     | Description                                       | Type/Allowed values | Supported Value |
|--------------------------|---------------------------------------------------|---------------------|-----------------|
| TSPC_24DataF             | 2.4 k full rate data mode supported               | BOOLEAN             |                 |
| TSPC_24DataH             | 2.4 k half rate data mode supported               | BOOLEAN             |                 |
| TSPC_48DataF             | 4.8 k full rate data mode supported               | BOOLEAN             |                 |
| TSPC_48DataH             | 4.8 k half rate data mode supported               | BOOLEAN             |                 |
| TSPC_96Data              | 9.6 k full rate data mode supported               | BOOLEAN             |                 |
| TSPC_Feat_A51            | ciphering algorithm A5/1 supported                | BOOLEAN             |                 |
| TSPC_Feat_A52            | ciphering algorithm A5/2 supported                | BOOLEAN             |                 |
| TSPC_AddCharSet          | A, B, C, D chars supported                        | BOOLEAN             |                 |
| TSPC_AddInfo_PseudoSynch | Pseudo synchronised supported                     | BOOLEAN             |                 |
| TSPC_AlertInd            | alerting indication to the user supported         | BOOLEAN             |                 |
| TSPC_SvcOnTCH            | at least one service on traffic channel supported | BOOLEAN             |                 |

| Item                | Description                                                    | Type/Allowed values | Supported Value |
|---------------------|----------------------------------------------------------------|---------------------|-----------------|
| TSPC_SMS            | at least one short message service supported                   | BOOLEAN             |                 |
| TSPC_SS             | at least one supplementary service supported                   | BOOLEAN             |                 |
| TSPC_AutoAutoMode   | automatically enter automatic selection of PLMN mode supported | BOOLEAN             |                 |
| TSPC_BasCharSet     | Chars 0-9, *, # supported                                      | BOOLEAN             |                 |
| TSPC_CalledNumDisp  | called number display supported                                | BOOLEAN             |                 |
| TSPC_DCS            | testing DCS1 800                                               | BOOLEAN             |                 |
| TSPC_DetachOnPwrDn  | detach on power down supported                                 | BOOLEAN             |                 |
| TSPC_DetachOnSIMRmv | detach on SIM remove supported                                 | BOOLEAN             |                 |
| TSPC_DispRcvSMS     | display of received SMS supported                              | BOOLEAN             |                 |
| TSPC_DualRate       | dual rate channel types supported                              | BOOLEAN             |                 |
| TSPC_EGSM           | both standard and extended GSM band supported                  | BOOLEAN             |                 |
| TSPC_EmgOnly        | the only circuit switched basic service is emergency call      | BOOLEAN             |                 |
| TSPC_followOnReq    | follow-on request procedure supported                          | BOOLEAN             |                 |
| TSPC_HalfRateData   | half rate data supported                                       | BOOLEAN             |                 |
| TSPC_HalfRateSpeech | half rate speech mode supported                                | BOOLEAN             |                 |
| TSPC_InCallMod      | In-Call modification supported                                 | BOOLEAN             |                 |
| TSPC_NoimmConn      | at least one service not support immediate connection          | BOOLEAN             |                 |
| TSPC_Feat_FND       | FND feature supported                                          | BOOLEAN             |                 |
| TSPC_NonCallSS      | non call related supplementary service supported               | BOOLEAN             |                 |
| TSPC_MTsvc          | at least one MT circuit switched basic service supported       | BOOLEAN             |                 |
| TSPC_MOsvc          | at least one MO circuit switched basic service supported       | BOOLEAN             |                 |
| TSPC_PGSM           | only standard GSM band supported                               | BOOLEAN             |                 |
| TSPC_RefusalCall    | refusal of call supported                                      | BOOLEAN             |                 |
| TSPC_ReplaceSMS     | replace SMS supported                                          | BOOLEAN             |                 |
| TSPC_ReplyProc      | (SMS) reply procedures supported                               | BOOLEAN             |                 |
| TSPC_RFAmp          | RF amplification supported                                     | BOOLEAN             |                 |
| TSPC_SDCCHOnly      | only SDCCH supported                                           | BOOLEAN             |                 |

| Item                  | Description                                        | Type/Allowed values | Supported Value |
|-----------------------|----------------------------------------------------|---------------------|-----------------|

| TSPC_Serv_BS81       | speech followed data (BS81) supported                                                                          | BOOLEAN             |                 |
| TSPC_SMSStatusRepCap | SMS status report capabilities supported                                                                       | BOOLEAN             |                 |
| TSPC_StoreRcvSMSME   | Storage of received SMS in ME supported                                                                        | BOOLEAN             |                 |
| TSPC_StoreRcvSMSSIM  | Storage of received SMS in SIM supported                                                                       | BOOLEAN             |                 |
| TSPC_SIMRmv          | SIM removable without power down supported                                                                     | BOOLEAN             |                 |
| TSPC_SwitchOnOff     | switch on/off supported                                                                                        | BOOLEAN             |                 |
| TSPC_TranspDataOnly  | only transparent data service supported                                                                        | BOOLEAN             |                 |
| TSPX_TE_stopbit      | TE conf. number stop bits. default value : '0'B, 1 bit                                                         | BITSTRING[1]        |                 |
| TSPX_TE_databit      | TE conf. number data bits. default value : '1'B, 8 bits                                                        | BITSTRING[1]        |                 |
| TSPX_TE_FLCT         | TE flow control. default : 0, outband flow control                                                             | 0, 1, 2             |                 |
| TSPX_TE_parity       | TE conf. parity. default : '001'B, no parity                                                                   | BITSTRING[3]        |                 |
| TSPX_BS_21_its1      | its value supported for BS21. default value : '001'B, UDI                                                      | BITSTRING[3]        |                 |
| TSPX_BS_21_more_its  | more than one its value supported by BS21. default value : FALSE, only one its                                 | BOOLEAN             |                 |
| TSPX_BS_21_T_NT      | both T and NT supported by BS21. default value : FALSE, not support both transparent and non transparent modes | BOOLEAN             |                 |

| Item                | Description                                                                                                                                                                      | Type/Allowed values | Supported Value |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------|
| TSPX_BS_21_ce       | ce value used in MO call and if the answer to TSPX_BS_21_T_NT is FALSE, the manufacturer must precise which mode is supported by the MS. default value : '00'B, transparent mode | BITSTRING[2]        |                 |
| TSPX_BS_21_sacp     | sacp value used in MO call. default value : '001'B, I440/450                                                                                                                     | BITSTRING[3]        |                 |
| TSPX_BS_21_itc2     | other itc value supported by BS21, it shall be differenet from the previous one if the answer to TSPX_BS_21_more_itc is TRUE. default value : '001'B, UDI                        | BITSTRING[3]        |                 |
| TSPX_BS_22_itc1     | itc value supported by BS22. default value : '010'B, 3.1kHz audio, exPLMN                                                                                                        | BITSTRING[3]        |                 |
| TSPX_BS_22_more_itc | more than one itc value supported by BS22. default value : FALSE, only one itc                                                                                                   | BOOLEAN             |                 |
| TSPX_BS_22_T_NT     | both T and NT supported by BS22. default value : FALSE, not support both transparent and non transparent modes                                                                   | BOOLEAN             |                 |
| TSPX_BS_22_ce       | ce value used in MO call and if the answer to TSPX_BS_22_T_NT is FALSE, the manufacturer must precise which mode is supported by the MS. default value : '01'B, non transparent  | BITSTRING[2]        |                 |
| TSPX_BS_22_sacp     | sacp value used in MO call. default value : '001'B, I440/450                                                                                                                     | BITSTRING[3]        |                 |
| TSPX_BS_22_itc2     | other itc value supported by BS22, it shall be differenet from the previous one if the answer to TSPX_BS_22_more_itc is TRUE. default value : '010'B, 3.1kHz audio, exPLMN       | BITSTRING[3]        |                 |
| TSPX_BS_23_itc      | itc value supported by BS23. default value : '010'B, 3.1kHz audio, exPLMN                                                                                                        | BITSTRING[3]        |                 |
| TSPX_BS_23_T_NT     | both T and NT supported for BS23. default value : FALSE, not support both transparent and non transparent modes                                                                  | BOOLEAN             |                 |
| TSPX_BS_23_ce       | ce value used in MO call. default value : '00'B, transparent                                                                                                                     | BITSTRING[2]        |                 |
| TSPX_BS_23_sacp     | sacp value used in MO call. default value : '001'B, I440/450                                                                                                                     | BITSTRING[3]        |                 |
| TSPX_BS_24_itc1     | itc value supported by BS24. default value : '010'B, 3.1kHz audio, exPLMN                                                                                                        | BITSTRING[3]        |                 |

| Item                | Description                                                                                                                                                                 | Type/Allowed values | Supported Value |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------|
| TSPX_BS_24_more_itc | more than one itc value supported by BS24. default value : FALSE, only one itc                                                                                              | BOOLEAN             |                 |
| TSPX_BS_24_T_NT     | both T and NT supported by BS24. default value : FALSE, not support both transparent and non transparent modes                                                              | BOOLEAN             |                 |

| TSPX_BS_81_A_ur1_ce   | if the answer to TSPX_BS_81_A_ur1_T_NT is FALSE, the manufacturer must precise which mode is supported by the MS. default value : '01'B, non transparent                                                | BITSTRING[2]        |                 |
| TSPX_BS_81_A_more_ur  | more than one user rate for asynchronous data service supported by BS81. default value : FALSE, only one user rate                                                                                      | BOOLEAN             |                 |
| TSPX_BS_81_A_ur2      | another user rate value supported for asynchronous data service of BS81. it shall be different from the previous one if the answer to TSPX_BS_81_A_more_ur is TRUE. default value : '0100'B, 4.8 kbit/s | BITSTRING[4]        |                 |
| TSPX_BS_81_A_ur2_T_NT | both T and NT supported for the rate TSPX_BS_81_A_ur2 of BS81. default value : FALSE, not support both transparent and non transparent modes                                                            | BOOLEAN             |                 |
| TSPX_TS_61_T_NT       | both T and NT supported for TS61(fax). default value : FALSE, not support both transparent and non transparent modes                                                                                    | BOOLEAN             |                 |
| TSPX_TS_61_ce         | if the answer to TSPX_TS_61_T_NT is FALSE, the manufacturer must precise which mode is supported by the MS. default value : '01'B, non transparent                                                      | BITSTRING[2]        |                 |
| TSPX_TS_61_ur1        | user rate for TS61(fax). default value : '0101'B, 9.6 kbit/s                                                                                                                                            | BITSTRING[4]        |                 |
| TSPX_TS_61_more_ur    | more than one user rate supported for TS61. default value : FALSE, only one user rate                                                                                                                   | BOOLEAN             |                 |
| TSPX_TS_61_ur2        | another user rate for TS61, it shall be different from the previous one if the answer to TSPX_TS_61_more_ur is TRUE. default value : '0101'B, 9.6 kbit/s                                                | BITSTRING[4]        |                 |
| TSPX_TS_62_T_NT       | both T and NT supported for TS62. default value : FALSE, not support both transparent and non transparent modes                                                                                         | BOOLEAN             |                 |
| TSPX_TS_62_ce         | if the answer to TSPX_TS_62_T_NT is FALSE, the manufacturer must precise which mode is supported by the MS. default value : '00'B, transparent                                                          | BITSTRING[2]        |                 |
| TSPX_TS_62_ur1        | user rate for TS62. default value : '0100'B, 4.8 kbit/s                                                                                                                                                 | BITSTRING[4]        |                 |

| Item               | Description                                                                                                                                                                       | Type/Allowed values | Supported Value |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------|
| TSPX_TS_62_more_ur | more than one user rate supported by TS62. default value : FALSE, only one user rate                                                                                              | BOOLEAN             |                 |
| TSPX_TS_62_ur2     | another user rate for TS62, it shall be different from the previous one if the answer to TSPX_TS_62_more_ur is TRUE. default value : '0100'B, 4.8 kbit/s                          | BITSTRING[4]        |                 |
| TSPX_DTMF          | call control capabilities: value '1'B means MS supports DTMF                                                                                                                      | BITSTRING[1]        |                 |
| TSPX_modF          | any non signalling full rate channel mode for TC_26_6_4_1                                                                                                                         | BITSTRING[8]        |                 |
| TSPX_modH          | any non signalling half channel mode for TC_26_6_4_1                                                                                                                              | BITSTRING[8]        |                 |
| TSPX_anymod        | channel mode for TC_62_10_2_4_2. Any supported value except signalling and Full rate speech. possible values are '00000011'B' 12k data, '00001011'B 6k data, '0010011'B 3.6k data | BITSTRING[8]        |                 |
| TSPX_CKSNA         | cipher key sequence number                                                                                                                                                        | BITSTRING[3]        |                 |
| TSPX_CKSNB         | cipher key sequence number                                                                                                                                                        | BITSTRING[3]        |                 |
| TSPX_CKSNC         | cipher key sequence number                                                                                                                                                        | BITSTRING[3]        |                 |
| TSPX_CKSNDef       | default cipher key sequence number                                                                                                                                                | BITSTRING[3]        |                 |
| TSPX_RfPwrCap      | RF power capability                                                                                                                                                               | BITSTRING[3]        |                 |
| TSPX_RevLevel      | Revision level of classmark 1                                                                                                                                                     | BITSTRING[2]        |                 |
| TSPX_CiphAlgA5_1   | A5/1 algorithm: '1'B : available, '0'B: not available                                                                                                                             | BITSTRING[1]        |                 |
| TSPX_CiphAlgA5_2   | A5/2 algorithm: '1'B : available, '0'B: not available                                                                                                                             | BITSTRING[1]        |                 |
| TSPX_CiphAlgA5_3   | A5/3 algorithm: '1'B : available, '0'B: not available                                                                                                                             | BITSTRING[1]        |                 |
| TSPX_CiphAlgA5_4   | A5/4 algorithm: '1'B : available, '0'B: not available                                                                                                                             | BITSTRING[1]        |                 |
| TSPX_CiphAlgA5_5   | A5/5 algorithm: '1'B : available, '0'B: not available                                                                                                                             | BITSTRING[1]        |                 |
| TSPX_CiphAlgA5_6   | A5/6 algorithm: '1'B : available, '0'B: not available                                                                                                                             | BITSTRING[1]        |                 |
| TSPX_CiphAlgA5_7   | A5/7 algorithm: '1'B : available, '0'B: not available                                                                                                                             | BITSTRING[1]        |                 |
| TSPX_pSyncCap      | pseudo synchronisation capability, '0'B: not present '1'B: present                                                                                                                | BITSTRING[1]        |                 |
| TSPX_SSscrnInd     | SS screen indicator                                                                                                                                                               | BITSTRING[2]        |                 |

| Item                   | Description                                                                                              | Type/Allowed values | Supported Value |
|------------------------|----------------------------------------------------------------------------------------------------------|---------------------|-----------------|
| TSPX_SMCap             | short message capability, '0'B: not present '1'B: present                                                | BITSTRING[1]        |                 |
| TSPX_frqCap            | frequency capability. DCS: reserved, GSM: '0'B not support extension band, '1'B support extension band   | BITSTRING[1]        |                 |
| TSPX_ClsMk3            | classmark 3 indicator, '0'B no addition capability info, '1'B additional capability info in class mark 3 | BITSTRING[1]        |                 |
| TSPX_RfPwrCapAmp       | RF power capability with external RF amplifier                                                           | BITSTRING[3]        |                 |
| TSPX_DTMFInd           | DTMF indication to user supported                                                                        | BOOLEAN             |                 |
| TSPX_IMEI              | IMEI of the MS.                                                                                          | HEXSTRING           |                 |
| TSPX_IMEISV            | IMEISV of the MS.<br>Used in: TC_26_6_8_5,<br>TC_26_7_3_1                                                | HEXSTRING           |                 |
| TSPX_TC1M              | timer value for GSM timer TC1M (for SMS)                                                                 | INTEGER             |                 |
| TSPX_MaxCPDataRetx     | max. number of CP data retransmissions for SMS                                                           | INTEGER             |                 |
| TSPX_Telephony_Immconn | Immediate connect for telephony supported ?                                                              | BOOLEAN             |                 |
| TSPX_Uupd              | user-user protocol discriminator                                                                         | BITSTRING[8]        |                 |
| TSPX_UuInfo            | user-user information                                                                                    | OCTETSTRING         |                 |

### B.7.2 MMI information

How is the Accumulated Call Meter (ACM) on the SIM read ?

NOTE: Used in Operation OO\_ACMIncCHK and OO\_ACMReading.

How is the ACM on the SIM reset to zero, and ACMmax set to 2 units?

NOTE: Used in Operation OO\_ACMSetting.

How is power amplification added to the mobile and removed?

NOTE: Used in Operation OO\_AddPwrAmp and OO\_RemvPwrAmp.

What alerting indication is given by the mobile?

NOTE: Used in Operation OO\_AltIndCHK.

How is the called party number displayed on the mobile?

NOTE: Used in Operation OO\_CalledNumCHK and OO\_CalledPtyNumCHK.

How is a call placed on Hold?

NOTE: Used in Operation OO\_CallHold.

How is the presence of short messages checked in the mobile and how are they displayed?

NOTE: Used in Operation OO\_CheckAllSMPresentBut4th and OO\_CheckMessageDisplayed and OO\_DisplaySMAndSendReplySM and OO\_ReadSMAndRemove and OO\_RecallAndDisplaySM.

How is the presence of Cell Broadcast short messages in the mobile checked?

NOTE: Used in Operation OO\_CheckCBSMReceived.

How is it checked whether the memory capacity of the SIM has been exceeded?

NOTE: Used in Operation OO\_CheckMCEFOOnSIM and OO\_CheckMCEFOOnSIMUnset.

How and where is the SIM inserted and removed?

NOTE: Used in Operation OO\_ConnectSIMSimulator and OO\_SIMIns and OO\_SIM2Ins and OO\_SIM3Ins and OO\_SIMRmv.

Does the MS have an 'END' key? If not, what method is used to replace its function?

NOTE: Used in Operation OO\_DepressEndKey.

How is a number entered in order to make an outgoing call?

NOTE: Used in Operation OO\_DiallCalledNum.

How is a reply to a received short message sent?

NOTE: Used in Operation OO\_DisplaySMAndSendReplySM.

How is it checked which DTMF character has been sent?

NOTE: Used in Operation OO\_DTMFIndCHK.

How is the message store of the MS emptied?

NOTE: Used in OO\_EmptyMessageStorage.

How is a password on the MS entered?

NOTE: Used in Operation OO\_EnterPswd.

How is an incoming call answered?

NOTE: Used in Operation OO\_HookOff.

For each service on the MS which requires the MS to be connected to an interface on other equipment (e.g. a computer), how is that interface set up for the purpose?

NOTE: Used in Operation OO\_IFsetup.

How is an In-Call modification initiated on the MS?

NOTE: Used in Operation OO\_InCallMod.

For each mobile originating basic service supported by the MS, how is the MS configured to make an outgoing call on that service?

NOTE: Used in Operation OO\_InitCall.

How is the MS to configured accept standard MMI sequences for the initiation of supplementary services?

NOTE: Used in Operation OO\_InitSS

How is the MS checked whether it is in the normal service state (idle, updated).

NOTE: Used in Operation OO\_InServiceCHK and OO\_PressKeyWhenInService.

How is a Multi-Party call initiated on the MS.

NOTE: Used in Operation OO\_MptyCall

How is the MS configured to store received Class 1 short messages in the mobile equipment (rather than in the SIM)?

NOTE: Used in Operation OO\_MSSetupStoreClass1SMInMEMemory.

How is the list of available PLMNs checked?

NOTE: Used in Operation OO\_PLMNsCHK.

How is the PLMN selection mode switched to automatic selection.

NOTE: Used in operation OO\_PLMNselModeAuto.

How is the PLMN selection mode switched to manual selection.

NOTE: Used in operation OO\_PLMNselModeMan.

How is the power source for the MS removed and replaced. (Note, this is not the same as switching the Mobile on and off using the on/off switch.)

NOTE: Used in operation OO\_PowerUp and OO\_PowerDown.

How is a short message removed from the message store?

NOTE: Used in operation OO\_ReadSMAndRemove.

When in manual PLMN selection mode, how is a PLMN selected?

NOTE: Used in OperationOO\_SelPLMN

How is a short message sent from the MS?

NOTE: Used in operation OO\_SendMOShortMessage.

How is an SMS COMMAND message sent to delete the last short message sent?

NOTE: Used in OO\_SendSMSCOMMANDDe.

How is an SMS COMMAND message sent enquiring about the last short message sent?

NOTE: Used in OO\_SendSMS\_COMMANDEnq

How is Call Refusal set on the MS?

NOTE: Used in Operation OO\_SetRefuseCall.

How is a DTMF digit sent?

NOTE: Used in operation OO\_ShortKeyDepr.

|                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------|
| <p>How is it checked whether a supplementary service result is correct?</p> <p>NOTE:      Used in Operation OO_SSresultCHK</p> |
| <p>How is the MS switched on and off?</p> <p>NOTE:      Used in operation OO_SwitchOn and OO_SwitchOff.</p>                    |
| <p>How is a call cleared?</p> <p>NOTE:      Used in operation OO_TermCall.</p>                                                 |

### B.7.3 Test house specified parameters

| Item            | Description                                                  | Type/Allowed values | Value chosen |
|-----------------|--------------------------------------------------------------|---------------------|--------------|
| TSPX_AltNb      | use alternative neighbour cells description. default : FALSE | BOOLEAN             |              |
| TSPX_CphAlgA    | any supported ciphering algorithm                            | OCTETSTRING [1]     |              |
| TSPX_CphAlgB    | ciphering algorithm supported                                | OCTETSTRING [1]     |              |
| TSPX_CphAlgC    | ciphering algorithm supported                                | OCTETSTRING [1]     |              |
| TSPX_CphAlgD    | ciphering algorithm supported                                | OCTETSTRING [1]     |              |
| TSPX_CphAlgE    | ciphering algorithm supported                                | OCTETSTRING [1]     |              |
| TSPX_CphAlgDef  | default ciphering algorithm                                  | OCTETSTRING [1]     |              |
| TSPX_NoOfHoAccA | number of handover access bursts, value range 10 - 20        | INTEGER             |              |
| TSPX_NoOfHoAccB | number of handover access bursts, value range 10 - 20        | INTEGER             |              |
| TSPX_NoOfHoAccC | number of handover access bursts, value range 10 - 20        | INTEGER             |              |
| TSPX_NoOfHoAccD | number of handover access bursts, value range 5 - 10         | INTEGER             |              |
| TSPX_NoOfHoAccE | number of handover access bursts, value range 5 - 10         | INTEGER             |              |
| TSPX_NoOfHoAccF | number of handover access bursts, value range 5 - 10         | INTEGER             |              |
| TSPX_NoOfHoAccG | number of handover access bursts, value range 2 - 5          | INTEGER             |              |
| TSPX_NoOfHoAccH | number of handover access bursts, value range 2 - 5          | INTEGER             |              |
| TSPX_NoOfHoAccI | number of handover access bursts, value range 2 - 5          | INTEGER             |              |

| Item              | Description                                            | Type/Allowed values | Value chosen |
|-------------------|--------------------------------------------------------|---------------------|--------------|
| TSPX_HoRefA       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefB       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefC       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefD       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefE       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefF       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefG       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefH       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefI       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HoRefJ       | Hand over reference, GSM 04.08, 10.5.2.15              | BITSTRING [8]       |              |
| TSPX_HSN          | Hopping sequence number<br>value range: 0 - 63         | INTEGER             |              |
| TSPX_IMSI         | IMSI of the MS                                         | HEXSTRING           |              |
| TSPX_Ki           | default authentication key<br>used in testing          | BITSTRING           |              |
| TSPX_MAIO         | mobile allocation index offset,<br>value range: 0 - 63 | INTEGER             |              |

| TSPX_ChMod2 | channel mode for TC_26_6_13_2                                                                                                          | BITSTRING[8]        |              |
| TSPX_Maio4  | hopping parameter for TC_26_6_13_2, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma4, default : 3  | INTEGER             |              |
| TSPX_Ma4    | mobile allocation for TC_26_6_13_2, its value shall indicate number of frequencies between 1 and 17. default : '001141'O               | OCTETSTRING[3]      |              |
| TSPX_Hsn4   | hopping parameter for TC_26_6_13_2, default : 0                                                                                        | INTEGER             |              |
| TSPX_Maio5  | hopping parameter for TC_26_6_13_2, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma5, default : 9  | INTEGER             |              |
| TSPX_Ma5    | mobile allocation for TC_26_6_13_2, its value shall indicate number of frequencies between 1 and 17. default : '01ABCB'O               | OCTETSTRING[3]      |              |
| TSPX_Hsn5   | hopping parameter for TC_26_6_13_2, default : 16                                                                                       | INTEGER             |              |
| TSPX_Chtp3  | channel type for TC_26_6_13_3, any value supported by the MS                                                                           | BITSTRING[5]        |              |
| TSPX_Maio6  | hopping parameter for TC_26_6_13_3, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma6, default : 4  | INTEGER             |              |
| TSPX_Ma6    | mobile allocation for TC_26_6_13_3, its value shall indicate number of frequencies between 1 and 17. default : '006248'O               | OCTETSTRING[3]      |              |
| TSPX_Hsn6   | hopping parameter for TC_26_6_13_3, default : 4                                                                                        | INTEGER             |              |

| Item        | Description                                                                                                                            | Type/Allowed values | Value chosen |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------|
| TSPX_Maio7  | hopping parameter for TC_26_6_13_3, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma7, default : 10 | INTEGER             |              |
| TSPX_Ma7    | mobile allocation for TC_26_6_13_3, its value shall indicate number of frequencies between 2 and 17. default : '009AFB'O               | OCTETSTRING[3]      |              |
| TSPX_Chtp4  | channel type for TC_26_6_13_3, any value supported by the MS                                                                           | BITSTRING[5]        |              |
| TSPX_Maio8  | hopping parameter for TC_26_6_13_3, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma8, default : 1  | INTEGER             |              |
| TSPX_Ma8    | mobile allocation for TC_26_6_13_3, its value shall indicate number of frequencies between 2 and 17. default : '002800'O               | OCTETSTRING[3]      |              |
| TSPX_Hsn8   | hopping parameter for TC_26_6_13_3, default : 40                                                                                       | INTEGER             |              |
| TSPX_Maio9  | hopping parameter for TC_26_6_13_3, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma9, default : 15 | INTEGER             |              |
| TSPX_Ma9    | mobile allocation for TC_26_6_13_3, its value shall indicate number of frequencies between 2 and 17. default : '01FFFB'O               | OCTETSTRING[3]      |              |
| TSPX_Hsn9   | hopping parameter for TC_26_6_13_3, default : 8                                                                                        | INTEGER             |              |
| TSPX_Chtp5  | channel type for TC_26_6_13_4                                                                                                          | BITSTRING[5]        |              |
| TSPX_Maio10 | hopping parameter for TC_26_6_13_4, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma10, default : 5 | INTEGER             |              |
| TSPX_Ma10   | mobile allocation for TC_26_6_13_4, its value shall indicate number of frequencies between 1 and 17. default : '01D082'O               | OCTETSTRING[3]      |              |
| TSPX_Hsn10  | hopping parameter for TC_26_6_13_4, default: 0                                                                                         | INTEGER             |              |

| Item        | Description                                                                                                                             | Type/Allowed values | Value chosen |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------|
| TSPX_Maio11 | hopping parameter for TC_26_6_13_4, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma11, default : 11 | INTEGER             |              |
| TSPX_Ma11   | mobile allocation for TC_26_6_13_4, its value shall indicate number of frequencies between 2 and 17. default : '00CFF3'O                | OCTETSTRING[3]      |              |
| TSPX_Chtp6  | channel type for TC_26_6_13_4                                                                                                           | BITSTRING[5]        |              |
| TSPX_Maio12 | hopping parameter for TC_26_6_13_4, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma12, default : 1  | INTEGER             |              |
| TSPX_Ma12   | mobile allocation for TC_26_6_13_4, its value shall indicate number of frequencies between 1 and 17. default : '010100'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn12  | hopping parameter for TC_26_6_13_4, default : 39                                                                                        | INTEGER             |              |
| TSPX_Maio13 | hopping parameter for TC_26_6_13_4, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma13, default : 6  | INTEGER             |              |
| TSPX_Ma13   | mobile allocation for TC_26_6_13_4, its value shall indicate number of frequencies between 1 and 17. default : '00E690'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn13  | hopping parameter for TC_26_6_13_4, default: 42                                                                                         | INTEGER             |              |
| TSPX_Chtp7  | channel type for TC_26_6_13_5                                                                                                           | BITSTRING[5]        |              |
| TSPX_ChMod4 | channel mode for TC_26_6_13_5                                                                                                           | BITSTRING[8]        |              |
| TSPX_Tm2    | a value to calculate the starting time for TC_26_6_13_5, value between 60 -100                                                          | INTEGER             |              |
| TSPX_Maio14 | hopping parameter for TC_26_6_13_5, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma14, default : 5  | INTEGER             |              |
| TSPX_Ma14   | mobile allocation for TC_26_6_13_5, its value shall indicate number of frequencies between 1 and 17. default : '014A28'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn14  | hopping parameter for TC_26_6_13_5, default : 50                                                                                        | INTEGER             |              |

| Item        | Description                                                                                                                             | Type/Allowed values | Value chosen |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------|
| TSPX_Maio15 | hopping parameter for TC_26_6_13_5, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma15, default : 12 | INTEGER             |              |
| TSPX_Ma15   | mobile allocation for TC_26_6_13_5, its value shall indicate number of frequencies between 1 and 16. default : '00FF79'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn15  | hopping parameter for TC_26_6_13_5, default : 33                                                                                        | INTEGER             |              |
| TSPX_Maio16 | hopping parameter for TC_26_6_13_5, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma16, default : 2  | INTEGER             |              |
| TSPX_Ma16   | mobile allocation for TC_26_6_13_5, its value shall indicate number of frequencies between 1 and 16. default : '001110'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn16  | hopping parameter for TC_26_6_13_5, default : 21                                                                                        | INTEGER             |              |
| TSPX_Chtp8  | channel type for TC_26_6_13_6                                                                                                           | BITSTRING[5]        |              |
| TSPX_ChMod5 | channel mode for TC_26_6_13_6                                                                                                           | BITSTRING[8]        |              |
| TSPX_Maio17 | hopping parameter for TC_26_6_13_6, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma17, default : 7  | INTEGER             |              |
| TSPX_Ma17   | mobile allocation for TC_26_6_13_6, its value shall indicate number of frequencies between 1 and 17. default : '00E6A1'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn17  | hopping parameter for TC_26_6_13_6, default : 22                                                                                        | INTEGER             |              |
| TSPX_Maio18 | hopping parameter for TC_26_6_13_6, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma18, default : 13 | INTEGER             |              |
| TSPX_Ma18   | mobile allocation for TC_26_6_13_6, its value shall indicate number of frequencies between 1 and 16. default : '00FFF9'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn18  | hopping parameter for TC_26_6_13_6, default : 9                                                                                         | INTEGER             |              |

| Item        | Description                                                                                                                             | Type/Allowed values | Value chosen |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------|
| TSPX_Maio19 | hopping parameter for TC_26_6_13_6, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma19, default : 3  | INTEGER             |              |
| TSPX_Ma19   | mobile allocation for TC_26_6_13_6, its value shall indicate number of frequencies between 1 and 16. default : '001111'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn19  | hopping parameter for TC_26_6_13_6, default : 44                                                                                        | INTEGER             |              |
| TSPX_Chtp9  | channel type for TC_26_6_13_7                                                                                                           | BITSTRING[5]        |              |
| TSPX_ChMod6 | channel mode for TC_26_6_13_7                                                                                                           | BITSTRING[8]        |              |
| TSPX_Maio20 | hopping parameter for TC_26_6_13_7, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma20, default : 8  | INTEGER             |              |
| TSPX_Ma20   | mobile allocation for TC_26_6_13_7, its value shall indicate number of frequencies between 1 and 17. default : '016699'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn20  | hopping parameter for TC_26_6_13_7, default : 30                                                                                        | INTEGER             |              |
| TSPX_Maio21 | hopping parameter for TC_26_6_13_7, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma21, default : 14 | INTEGER             |              |
| TSPX_Ma21   | mobile allocation for TC_26_6_13_7, its value shall indicate number of frequencies between 1 and 17. default : '01FEFB'O                | OCTETSTRING[3]      |              |
| TSPX_Chtp10 | channel type for TC_26_6_13_7                                                                                                           | BITSTRING[5]        |              |
| TSPX_Maio22 | hopping parameter for TC_26_6_13_7, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma22, default : 4  | INTEGER             |              |
| TSPX_Ma22   | mobile allocation for TC_26_6_13_7, its value shall indicate number of frequencies between 1 and 16. default : '006241'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn22  | hopping parameter for TC_26_6_13_7, default : 11                                                                                        | INTEGER             |              |

| Item        | Description                                                                                                                             | Type/Allowed values | Value chosen |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------|
| TSPX_Maio23 | hopping parameter for TC_26_6_13_7, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma23, default : 11 | INTEGER             |              |
| TSPX_Ma23   | mobile allocation for TC_26_6_13_7, its value shall indicate number of frequencies between 1 and 16. default : '00FF1B'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn23  | hopping parameter for TC_26_6_13_7, default : 60                                                                                        | INTEGER             |              |
| TSPX_Chtp11 | channel type for TC_26_6_13_8                                                                                                           | BITSTRING[5]        |              |
| TSPX_ChMod7 | channel mode for TC_26_6_13_8                                                                                                           | BITSTRING[8]        |              |
| TSPX_Maio24 | hopping parameter for TC_26_6_13_8, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma24, default : 9  | INTEGER             |              |
| TSPX_Ma24   | mobile allocation for TC_26_6_13_8, its value shall indicate number of frequencies between 1 and 17. default : '00E6E9'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn24  | hopping parameter for TC_26_6_13_8, default : 7                                                                                         | INTEGER             |              |
| TSPX_Maio25 | hopping parameter for TC_26_6_13_8, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma25, default : 15 | INTEGER             |              |
| TSPX_Ma25   | mobile allocation for TC_26_6_13_8, its value shall indicate number of frequencies between 1 and 17. default : '01FFFB'O                | OCTETSTRING[3]      |              |
| TSPX_Chtp12 | channel type for TC_26_6_13_8                                                                                                           | BITSTRING[5]        |              |
| TSPX_Maio26 | hopping parameter for TC_26_6_13_8, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma26, default : 5  | INTEGER             |              |
| TSPX_Ma26   | mobile allocation for TC_26_6_13_8, its value shall indicate number of frequencies between 1 and 16. default : '009168'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn26  | hopping parameter for TC_26_6_13_8, default : 9                                                                                         | INTEGER             |              |

| Item        | Description                                                                                                                              | Type/Allowed values | Value chosen |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------|
| TSPX_Maio27 | hopping parameter for TC_26_6_13_8, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma27, default : 1   | INTEGER             |              |
| TSPX_Ma27   | mobile allocation for TC_26_6_13_8, its value shall indicate number of frequencies between 1 and 16. default : '004080'O                 | OCTETSTRING[3]      |              |
| TSPX_Hsn27  | hopping parameter for TC_26_6_13_8, default : 38                                                                                         | INTEGER             |              |
| TSPX_Chtp13 | channel type for TC_26_6_13_9                                                                                                            | BITSTRING[5]        |              |
| TSPX_Tm3    | channel mode for TC_26_6_13_9, value between 60 -100                                                                                     | INTEGER             |              |
| TSPX_Maio28 | hopping parameter for TC_26_6_13_9, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma28, default : 10  | INTEGER             |              |
| TSPX_Ma28   | mobile allocation for TC_26_6_13_9, its value shall indicate number of frequencies between 1 and 17. default : '00EE7A'O                 | OCTETSTRING[3]      |              |
| TSPX_Hsn28  | hopping parameter for TC_26_6_13_9, default : 11                                                                                         | INTEGER             |              |
| TSPX_Maio29 | hopping parameter for TC_26_6_13_9, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma29, default : 6   | INTEGER             |              |
| TSPX_Ma29   | mobile allocation for TC_26_6_13_9, its value shall indicate number of frequencies between 1 and 17. default : '00F070'O                 | OCTETSTRING[3]      |              |
| TSPX_Chtp14 | channel type for TC_26_6_13_10                                                                                                           | BITSTRING[5]        |              |
| TSPX_Maio30 | hopping parameter for TC_26_6_13_10, its value between 0 and (the number of frequencies) -1, which is defined in TSPX_Ma30, default : 11 | INTEGER             |              |
| TSPX_Ma30   | mobile allocation for TC_26_6_13_10, its value shall indicate number of frequencies between 1 and 17. default : '017F69'O                | OCTETSTRING[3]      |              |
| TSPX_Hsn30  | hopping parameter for TC_26_6_13_10, default : 62                                                                                        | INTEGER             |              |

| Item           | Description                                                                                                                             | Type/Allowed values                                                                                                                                                                                                                                                                                                                                                                      | Value chosen |

## **Annex D (normative): Enhanced Full Rate Abstract Test Suite**

### **The machine processable ATS**

The electronic forms of the machine processable files (TTCN MP format) corresponding to the ATS for EFR are contained in the file ef-4m0.mp<sup>2)</sup> (EFR) on the diskette included as a part of this ETS (Part 3).

### **The graphical form ATS**

The TTCN.GR representation of this ATS is contained in the remainder of this annex.

| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | ChgLAC_A                 | To change the LAC of cell A.                                                                                                                                                 | 1918 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | ChgLAC_B                 | To change the LAC of cell B.                                                                                                                                                 | 1918 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | ChgLAI_C                 | To change the LAI of cell C to HPLMN.                                                                                                                                        | 1919 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SysInfoSending_cbms      | To send system information messages for the CBMS tests.                                                                                                                      | 1920 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SysInfoSending_fh        | To send system information messages for the L3 tests. The following parameters specified by input parameters.                                                                | 1921 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SysInfoSending_nfh       | To send system information messages with default parameters defined for L3 tests for which no other special parameters indicated.                                            | 1923 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SysInfoSending_nfhCb     | To send system information messages with default parameters defined for L3 tests except that the cell is barred.                                                             | 1925 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SysInfoSending_e         | Sending of Systeminformation for cell A in EGSM test case TC_26_10_2_2.                                                                                                      | 1926 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SysInfo_SacchSending     | To send SYSTEM INFORMATION 5 and 6 messages defined by parameters 'sysinfo5_pdu' and 'sysinfo6_pdu' in the parametrised 'ch' channel.                                        | 1927 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SysInfo_5bisSending      | To send SYSTEM INFORMATION 5bis message defined by parameters 'sysinfo5bis_pdu' in the parametrised 'ch' channel.                                                            | 1927 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SetNECI                  | To set the NECI =1.                                                                                                                                                          | 1928 |
| GSM_MS_EFR_4220/Miscellaneous/<br>SysInfo/ | SetATT                   | To set the ATT flag to "MS's in the cell should apply IMSI attach and detach procedure"                                                                                      | 1929 |
| GSM_MS_EFR_4220/OperatorOP/                | InitCall                 | To initiate a call of the basic service `srv`.                                                                                                                               | 1930 |
| GSM_MS_EFR_4220/OperatorOP/                | InitNonCallSupp          | To attempt a non call related supplementary service at the MS under test.                                                                                                    | 1930 |
| GSM_MS_EFR_4220/OperatorOP/                | AtmpShortMsg             | To attempt an MO short message service transaction at the MS under test.                                                                                                     | 1930 |
| GSM_MS_EFR_4220/OperatorOP/                | CheckUssdStringDisplayed | To check whether the correct USSD String is displayed on the MS                                                                                                              | 1930 |
| GSM_MS_EFR_4220/OperatorOP/                | PLMNsCHK                 | To check whether the MS presents a list of available PLMNs.                                                                                                                  | 1930 |
| GSM_MS_EFR_4220/OperatorOP/                | RFtransCHK               | To check whether the MS transmits any radio signal.                                                                                                                          | 1931 |
| GSM_MS_EFR_4220/Postambles/                | PostLinkRelEnd           | To release the RR connection and bring the MS back to Idle state.<br><br>This teststep decides the final verdict and therefor it shall be used only at the end of testcases. | 1931 |
| GSM_MS_EFR_4220/Postambles/                | PostMainLinkRel          | To release the main signalling link `ch`, and bring the MS back to Idle state.                                                                                               | 1931 |
| GSM_MS_EFR_4220/Postambles/                | ChanRel                  | To release the RR connection on the channel TCV_ch and bring the MS back to Idle state.                                                                                      | 1931 |
| GSM_MS_EFR_4220/Postambles/                | ChanRel_P                | To release the RR connection on the channel TCV_chmaindcch and bring the MS back to Idle state.<br>This teststep decides the verdict (P).                                    | 1932 |
| GSM_MS_EFR_4220/Postambles/                | ChanRel_end              | To release the RR connection and bring the MS back to Idle state.<br><br>This teststep decides the final verdict and therefor it shall be used only at the end of testcases. | 1932 |
| GSM_MS_EFR_4220/Preambles/                 | Chmod                    | To assign correct values to the test case variables TCV_ChMod and TCV_ChModb.                                                                                                | 1933 |

| <b>Detailed Comments:</b> One of the six tpdus is contained in the RPUSRDATA. Since the structures of the messages SMS-Deliver-Report and SMS-Submit-Report are identical, they have been combined to tpdlvr_sbmt_rpt and therefore only five tp message types exist in this type definition. |                                                              |          |

| <b>Detailed Comments:</b>    | <p>Values:</p> <p>Sending Components: If it is an invoke component then use Test Case Variable (with default) to set value. If another invoke component is sent the TCV should be incremented beforehand. If it is a return result, error or reject component in response to a received invoke component then use TCV also, making sure the value is set to the value of the received component beforehand.</p> <p>Receiving Components: If it is an invoke comp then use '?'. If it is a return result, error or reject component in response to a sent invoke component then use TCV value (as used in sent invoke component).</p> |

| <p>The operation codes a part of the contents for a cell broadcast short message. The cell broadcast short message, is 82 octets long, i.e. 93 characters, each represented by 7 bits. As many as possible different characters are sent, the characters are those corresponding to the 7-bit representation of the integers 0, 1, 2, ..., 92. The bits are arranged acc. to GSM 03.38, clause 6.1.2.1.1. The result of this operation is the octetstring of the octets 'firstoct' to 'lastoct' (16 octets for the first message block, 22 octets for the 2nd, 3rd and 4th blocks), with the octets of the cell broadcast short message being numbered from 1 to 82.</p> |                                                          |

| This operation provides a short message's contents with a specified number of characters 'NumberOfCharacters', each represented by 7 bits. As possible different characters are sent, the characters are those corresponding to the 7-bit representation of 0, 1, 2, ... up to ('NumberOfCharacters' - 1). If more than 128 characters are sent, the rest of the characters is the corresponding to 0, 1, ... up to (NumberOfCharacters - 128 - 1), e.g. for 160 characters: 0, 1, ..., 127, 0, 1, ..., 31. The bits are arranged acc. to GSM 03.38, clause 6.1.2.1.1. |                                                   |

then the operation returns TRUE otherwise FALSE.

```

**Detailed Comments:**

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_OeBit(bcddigits:HEXSTRING)
<b>Result Type:</b>	BITSTRING
<b>Comments:</b>	The input parameter `bcddigits` is really BCD string (subset of HEXSTRING), the result is BITSTRING[1].
Description	
The function of the OC_OeBit is as the following:	
<ol style="list-style-type: none"> <li>1. it returns '1'B, if the length of the `bcddigits` is odd,</li> <li>2. it returns '0'B, if the length of the `bcddigits` is even.</li> </ol>	
for example:	
OC_OeBit('12583') = '1'B,	
OC_OeBit('87259957') = '0'B.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_OctToInt(ostr: OCTETSTRING)
<b>Result Type:</b>	INTEGER
<b>Comments:</b>	
Description	
OC_OctToInt converts the OCTETSTRING `ostr` into INTEGER.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_OctToInvokeIDType(o:OCTETSTRING)
<b>Result Type:</b>	InvokeIDType
<b>Comments:</b>	
Description	
OC_OctToInvokeIDType converts the OCTETSTRING `o` into InvokeIDType, with the MSB of 'o' representing the negative value $-2^{\exp(n-1)}$ , for example '80'O->'10000000'B-> -128. The rest of the bits can code positive values up to $+2^{\exp(n-2)-1}$ , for example '4F'O->'01111111'B-> +127.	
for example:	
OC_OctToInvokeIDType('80'O) = -128;	
OC_OctToInvokeIDType('81'O) = -128+1 = -127;	
OC_OctToInvokeIDType('40'O) = +64.	
OC_OctToInvokeIDType('7F'O) = +127.	
OC_OctToInvokeIDType('C0'O) = -128+64 = -64.

<b>Operation Name:</b>	OC_OtherDigi(bcddigits:HEXSTRING)
<b>Result Type:</b>	OCTETSTRING
<b>Comments:</b>	The input parameter `bcddigits` is really BCD string (subset of HEXSTRING), the result is an even BCD digits except that the next to last may either be 'F'H or a BCD digit.
<b>Description</b>	
<p>The function of the OC_OtherDigi is as the following:</p> <ol style="list-style-type: none"> <li>1. If the number of the `bcddigits` is odd, the operation removes the most significant digit, and then reverses the order of each pair of digits;</li> <li>2. If the number of the `bcddigits` is even, first the operation suffixes the `bcddigits` with 'F'H, then removes the most significant digit, and then reverses the order of each pair of digits.</li> </ol> <p>for example:</p> <p>OC_OtherDigi('12345') = '3254',            OC_OtherDigi('12345678') = '325476F8'.</p>	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_PosinSet(set: Components; comp: Component)
<b>Result Type:</b>	INTEGER
<b>Comments:</b>	
<b>Description</b>	
<p>The operation OC_PosinSet returns the position of component `comp` within the SET `set`.</p> <p>for example:</p> <p>if the set = { registerSSComponents, eraseSSComponents, activateSSComponents, deactivateSSComponents }</p> <p>OC_PosinSet(set, registerSSComponents) = 0,            OC_PosinSet(set, activateSSComponents) = 2.</p>	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_RachSlots(fn1:FN; fn2:FN; cmbn: BOOLEAN; mode:INTEGER)
<b>Result Type:</b>	INTEGER
<b>Comments:</b>	
Description	
<p>OC_RachSlots calculates the number of RACH slots between frame number `fn1` and `fn2` excluding the slots in `fn1` and `fn2`, then return the result of the calculation.</p> <p>If mode=0, 'fn1' denotes the (first) frame number for sending Paging Request, while 'fn2' denotes the (first) frame number for the received Channel Request. If mode=1 'fn1' and 'fn2' denote the (first) frame number for the received two subsequent Channel Requests. Any other values for mode is not allowed.</p> <p>Since the number of RACH slots depends on the RACH being combined or not with dedicated channels, the parameter 'cmbn' is needed: TRUE --&gt; combined, FALSE--&gt; not combined.</p> <p>It is assumed that the distance between fn1 and fn2 is not more than one group of 42432 TDMA frames (modulo 42432 is used to calculate t1' of fn1 and fn2). This is equivalent to approximately 196 seconds. The 51 TDMA frames in a multiframe are numbered 0 to 50.</p> <p>fn1' := fn1 mod 51 fn2' := fn2 mod 51</p> <p>CASE 1: cmbn is FALSE ('not combined')</p> <p>When 'not combined', all slots are RACH slots.</p> <p>1.1 mode=0 (sending paging message at fn1)</p> <p>The paging uses the numbered frames 6 - 9, 12 -19, 22-29, 32-39 and 42-49.</p> <p>1.1.1 If fn1 is not in the paging TDMA frame mapping, it leads testing to a test system error. IF (fn1' &lt; 6) OR (9 &lt; fn1' &lt; 12) OR (19 &lt; fn1' &lt; 22) OR (29 &lt; fn1' &lt; 32) OR (39 &lt; fn1' &lt; 42) OR (fn1' &gt;49), A test system error! The calling test case shall re-run again. OTHERWISE</p> <p>1.1.2 The number of RACH slots is equal to the number of frames between fn1 + 3 and fn2. The fn1 is added by 3 because a page message occupies 4 slots. The fn1 indicates the first slot of the paging message. IF (fn1 + 3) &lt; fn2, OC_RachSlots := fn2 - (fn1 + 3) -1 = fn2 - fn1 - 4,</p> <p>1.1.3 If fn1+3 is equal to or greater than fn2, then this is due to fn2 being in the next group of 42432 frames. In this case 42432 frames have to be added. IF fn2 &lt;= (fn1 + 3), OC_RachSlots := fn2 -fn1 - 3 + 42432 -1 = fn2 -fn1 + 42428</p> <p>1.2 mode=1 (receiving channel request at fn1)</p> <p>The number of RACH slots is equal to the number of frames between fn1 and fn2</p> <p>1.2.1 IF fn1 &lt; fn2, OC_RachSlots := fn2 - fn1 - 1, 1.2.2 IF fn2 &lt;= fn1, OC_RachSlots := fn2 -fn1 + 42432 -1 = fn2 -fn1 + 42431</p> <p>CASE 2: cmbn is TRUE ('combined')</p> <p>When combined only the slots of the numbered frames 4, 5, 14 to 36, 45 and 46 in each multiframe are RACH slots, i.e.total 27 frames per multiframe.</p> <p>2.1 mode=0 (sending paging message at fn1)</p> <p>The paging uses the numbered frames 6 - 9 and 12 -19.</p> <p>2.1.1 If fn1 is not in the paging TDMA frame mapping, it leads testing to a test system error. If fn2 is not in the RACH TDMA frame mapping, it leads testing to fail.</p> <p>IF (fn2' &lt; 4) OR (5 &lt; fn2' &lt; 14) OR (36 &lt; fn2' &lt; 45) OR (fn2' &gt; 46), OC_RachSlots := -9999 IF (fn1' &lt; 6) OR (9 &lt; fn1' &lt; 12) OR (fn1' &gt;19), A test system error! The calling test case shall re-run again. OTHERWISE</p> <p>2.1.2 Calculation of the number 'c' multiframes between fn1 + 3 and fn2. If fn1 + 3 is equal to or greater than fn2, then this is due to fn2 being in the next group of 42432 frames. In this case 42432 frames have to be added. '/' shall be the integer division, i.e. the result is also integer. Fractions are discarded.</p> <p>2.1.2.1 IF (fn1 + 3) &lt; fn2, c := fn2 / 51 - (fn1 + 3) / 51 2.1.2.2 IF fn2 &lt;= (fn1 + 3), c := fn2 / 51 - (fn1 + 3) / 51 + 42432 / 51 = fn2 / 51 - (fn1 + 3) / 51 + 832</p> <p>2.1.3 Calculation of the number of frames 'a' to be subtracted according to the position of fn1' within the multiframe IF (5 &lt; fn1' &lt; 9), a := 2</p>

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_RcsdPresent(msg:MODIFY_PDU)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	To check if RCSD IE is present or not in Modify PDU
<b>Description</b>	
IF RCSD IE is present in the PDU passed on input parameter return TRUE ELSE return FALSE.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_SaveAndProc1(val:INTEGER; mode :INTEGER; cnt:INTEGER; cmbnd:BOOLEAN)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	This operation is used for storing and analysing the CHANNEL REQUEST message distribution.
<b>Description</b>	
<p>The function of this operation is defined as an pseudo C code:</p> <pre> #define SAVE 0; #define PROC 1;  OC_SaveAndProc(val, mode,cnt) INTEGER    val, mode,cnt; BOOLEAN    combined; {   static INTEGER  buf[200];   int i, j, n;   if (mode == SAVE)     { cnt = cnt mod 200;       if (cmbnd == C_NotCombined) AND (val&lt;(151 + 8)) then         { buf[cnt] = val;           return (TRUE);         }       if (cmbnd == C_Combined) AND (val&lt;(81 + 8)) then         { buf[cnt] = val;           return (TRUE);         }       else return (FALSE);     }   if (mode == PROC)     {       for (i=0, i&lt;200, i++)         { n=0;           for (j=0, j&lt;200, j++)             if (buf[j] == buf[i])               n = n+1;           if (n &gt; 41) return (FALSE);         }       return(TRUE);     } } </pre>	
<b>Detailed Comments:</b>	<p>This test suite operation has two operation modes :</p> <ul style="list-style-type: none"> <li>- when the mode is SAVE and the val is less than 89 for combined or 159 for non-combined, it saves the value val into internal buffer and returns TRUE, otherwise returns FALSE. 200 values will be stored in the internal buffer when the operation is invoked 200 times.</li> <li>- When the mode is PROC, it analyses the values stored in the internal buffer, if no more than 41 of them are equal the operation returns TRUE, otherwise returns FALSE. ( i.e. for all n, <math>CARD\{ k f(k) = n \} \leq 41</math>)</li> </ul>

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_SaveAndProc3(val:BITSTRING; mode :INTEGER; cnt:INTEGER)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	This operation is used for storing and analysing the random reference.
<b>Description</b>	
<p>The function of this operation is defined as an pseudo C code:</p> <pre> #define SAVE 0; #define PROC 1;  OC_SaveAndProc(val, mode,cnt) BITSTRING[8] val; INTEGER    mode,cnt; { static BITSTRING[8]  buf[7]; int i, j, n=7; if (mode == SAVE)     { cnt = cnt mod 7;       buf[cnt] = val;       return(TRUE);     } if (mode == PROC)     {     for (i=0, i&lt;6, i++)         { for (j=i+1, j&lt;7, j++)             if (buf[j] == buf[i])                 { n = n-1;                   break;                 }             }         }     if (n&gt;=4) then         return(TRUE)     else return (FALSE);     } } </pre>	
<b>Detailed Comments:</b>	<p>The function of this test suite operation is :</p> <ul style="list-style-type: none"> <li>- it saves the value val into internal buffer when the mode = SAVE. 7 values will be stored in the internal buffer when the operation is invoked 7 times.</li> <li>- it compares the values stored in the internal buffer when the mode = PROC, if 4 or more than 4 of them are different the operation returns TRUE, otherwise returns FALSE.</li> </ul>

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OC_SaveAndRetrv(val:RQR; mode, idx, ex: INTEGER)
<b>Result Type:</b>	RQR
<b>Comments:</b>	This operation is used for storing and retrieving the random reference.
<b>Description</b>	
<p>The function of this test suite operation is (in prose):</p> <ul style="list-style-type: none"> <li>- it saves the value val into internal buffer buf[idx] when the mode = SAVE and ex = 0. Maximum 9 values can be stored. The idx is ranged between 1-9.</li> <li>- it returns the value stored in the internal buffer buf[idx] when the mode = RETRV and ex = 0.</li> <li>- it returns a value which is different from any value stored in the buf and also different from any values which have been returned by the consecutive invocation of this operation with <math>ex &lt; 0</math>, if <math>ex &gt; 0</math>. The idx is ranged between 10-13.</li> </ul> <p>The function of this operation is defined as an pseudo C code:</p> <pre> #define SAVE 0; #define RETRV 1;  OC_SaveAndRetrv(val, mode, idx, ex) RQR      val; INTEGER  mode, idx, ex; {   int i, j;   static RQR  buf[14];   if ((mode == SAVE) AND (ex == 0))   {     buf[idx] = val;     buf[10].ra = '00000000'B;     buf[10].fn = '00'O;     buf[11].ra = '00000000'B;     buf[11].fn = '00'O;     buf[12].ra = '00000000'B;     buf[12].fn = '00'O;     buf[13].ra = '00000000'B;     buf[13].fn = '00'O;     return (buf[10]);   }   if ((mode == RETRV) AND (ex == 0))     return (buf[idx]);   if (ex != 0)   {     buf[0].ra = buf[1].ra + '00000001'B;     buf[0].fn = buf[1].fn;     for (j=1, j &lt; 13, j++)     {       for (i=1, i &lt; 14, i++)         if (buf[0] == buf[i])           { buf[0].ra = buf[i].ra + '00000001'B;             break;           }     }     if (i == 14)     {       buf[idx].ra = buf[0].ra;       return (buf[0]);     }   }   buf[idx].ra = buf[j].ra+'00000001'B;   return (buf[idx]); } </pre>	
<b>Detailed Comments:</b>	<p>0. The pseudo C code gives one of the possible implementations for the OC description in prose.</p> <ol style="list-style-type: none"> <li>1. '00'O should be understood as equivalence of Fn_01, a TTCN structured type constraint.</li> <li>2. The OC can save maximum 13 RQR values. In SAVE mode, idx is ranged between 1-9.</li> </ol>

3. For  $ex < > 0$ , there are maximum 13 scans. In each scan a new value is assigned to `buf[0].ra`. If there is a 'non-match' in one of the 13 scans the `buf[0]` is returned. In case of 'all-match' for the 13 scans, the pair of `(buf[i].ra + '00000001')` at the last scan, `buf[idx].fn` is returned (`idx` is ranged between 10 - 13).

### Test Suite Operation Definition

**Operation Name:** OM\_2Msgs(ch:LOGICCH; pgg:PGG; mode:SENDINGMODE)

**Result Type:** BOOLEAN

**Comments:**

#### Description

OM\_2Msgs puts the layer 2 emulator into a special operation mode then returns. In this special mode the layer 2 emulator sends the next two consecutive messages in the following way:

- send the first message on the paging subchannel indicated by the `pgg` and `ch`;
- if the `mode` = C\_NxtButOne, send the second message in the next but one paging sub block;
- if the `mode` = C\_FmrAGB, send the second message in a former access grant block;
- if the `mode` = C\_BfReOcc, send the second message before the MS's original paging subchannel re-occurs but later than the next paging block of that CCCH (paging block not belong to the MS);
- if the `mode` = C\_NxtButOneNxt, nothing is sent in the next but one paging sub block, then send the second message in the next paging subblock of the MS's paging subchannel.

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_Assoc(lgch1:LOGICCH; sublgch1:LOGICCH; sublgch2:LOGICCH; sublgch3:LOGICCH; sublgch4:LOGICCH; sublgch5:LOGICCH; sublgch6:LOGICCH; sublgch7: LOGICCH; sublgch8:LOGICCH; lgch2:LOGICCH; sublgch9:LOGICCH; sublgch10:LOGICCH; sublgch11:LOGICCH; sublgch12:LOGICCH; sublgch13:LOGICCH; sublgch14:LOGICCH; sublgch15: LOGICCH; sublgch16:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
<p>OM_Assoc operation associates the sub logic channel identifiers `sublgch1` to `sublgch8` and `sublgch9` to `sublgch16` with the generic "parent" channel identifier `lgch1` and `lgch2` respectively, therefore the subchannel identifiers can refer to the corresponding channels configured by OM_ChConf operation.</p> <p>The `lgch1` can be an identifier for SDCCH4, SDCCH8, FACCH and the `lgch2` can be SACCH4, SACCH8, and SACCHH.</p> <p>"dummy" in the actual parameter list means the corresponding parameter is not used.</p> <p>Naming convention for logical channel constants:</p> <p style="text-align: center;">C_&lt;channel type&gt;[&lt;rate&gt;][&lt;subchannel&gt;][&lt;cell&gt;][&lt;instance&gt;]</p> <p>e.g.: C_FACCH H 0 _C _3 =&gt; C_FACCHH0_C_3</p> <p>channel type: FCCH, SCH, BCCH, CBCH, PCH, RACH, FACCH, SACCH, SDCCH, DCCH</p> <p>rate: F(ull), H(alf), 4 (fourths, C4 for SACCH4), 8 (eighths, C8 for SACCH8).</p> <p>subchannel: H: 0, 1 (C)4: 0, ..., 3 (C)8: 0, ..., 7</p> <p>cell: A, ..., H</p> <p>instance: 1, ..., 3 When several channels of the same type can exist in one cell simultaneously (in different time slots and / or on different frequencies) they are identified by their instance. The parameters of ChConf are used to specify the frequency and slot of this instance of the channel type.</p> <p>Not all possible combinations of this naming syntax have been used. According to the elements that are used / omitted the name can have a special meaning.</p> <p>Examples:                      Comments:</p> <p>C_FCCH_A                      FCCH of cell A.</p> <p>C_SCH_A                        SCH of cell A.</p> <p>C_BCCH_A_1                    First instance of a BCCH in cell A.</p> <p>C_CBCH_A                      CBCH of cell A.</p> <p>C_PCH_A_1                     First instance of a PCH in cell A (there is one instance of the PCH per BCCH in the cell).</p> <p>C_AGCH_A_1                    First instance of a AGCH in cell A (there is one instance of the AGCH per BCCH in the cell).</p> <p>C_RACH_A_1                    First instance of a RACH in cell A.</p> <p>C_FACCHF_A_1                 First instance of a full rate FACCH in cell A.</p> <p>C_FACCHH_A_1                First instance of a half rate FACCH in cell A (all subchannels).</p> <p>C_FACCHH0_A_1                Subchannel 0 of the first instance of a half rate FACCH in cell A.</p> <p>C_SACCHF_A_1                 First instance of a full rate SACCH in cell A.</p> <p>C_SACCHH_A_1                First instance of a half rate SACCH in cell A (all subchannels).</p> <p>C_SACCHH1_A_1                Subchannel 1 of the first instance of a half rate SACCH in cell A.</p> <p>C_SACCHC4_A                 SACCH/4 of cell A (all subchannels).</p> <p>C_SACCHC43_A                Subchannel 3 of the SACCH/4 of cell A.</p> <p>C_SACCHC8_A_1                First instance of a SACCH/8 in cell A (all subchannels).</p> <p>C_SACCHC87_A_1              Subchannel 7 of the first instance of a SACCH/8 in cell A.</p> <p>C_SDCCH4_A                    SDCCH/4 of cell A (all subchannels).</p> <p>C_SDCCH42_A                 Subchannel 2 of the SDCCH/4 of cell A.</p> <p>C_SDCCH87_A_1                First instance of a SDCCH/8 in cell A (all subchannels).</p> <p>C_SDCCH87_A_1                Subchannel 7 of the first instance of a SDCCH/8 in cell A.</p>	

This list covers all types of combinations used in the TTCN for the time being.

When the meaning refers to 'all' subchannels of a channel (eg. C\_FACCHH\_A\_1), it means that all active subchannels of this channel activated previously by OM\_ChConf, are associated with a logical channel identifier in the OM\_Assoc.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_BmlInfo(ch:LOGICCH; mode:B\_8)  
**Result Type:** BOOLEAN  
**Comments:** mode is of type BITSTRING[8], imode is a part of the channel mode IE

#### Description

OM\_BmlInfo operation checks whether the MS starts transmitting Bm channel information according to the new channel mode 'mode'. The operation returns TRUE if the result of the check is correct otherwise the TSO returns FALSE.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_ChangeRFOf2Cells( cellid1:CellID; bspwr1:INTEGER; cellid2:CellID; bspwr2:INTEGER)  
**Result Type:** BOOLEAN  
**Comments:**

#### Description

This TSO is used to change the RF level of the cell 'cellid1' to the RF level 'bspwr1' and the RF level of the cell 'cellid2' to the RF level 'bspwr2' [dBuVemf], then the TSO returns TRUE.

The main use of this TSO is to force the Mobile Station(MS) to select a new cell according to the GSM 05.08 and GSM 03.22.

For the MS to select the new cell then the path loss criterion parameter (C1) of the old will have to be less than zero (C1 < 0). This criterion is defined as:

$$C1 = (A - \max(B, 0))$$

when

A - Received Level Average - (RXLEV\_ACCESS\_MIN)  
 B - MS\_TXPWR\_MAX\_CCH - P {non DCS 1800}  
 MS\_TXPWR\_MAX\_CCH + POWEROFFSET - P {DCS 1800}

RXLEV\_ACCESS\_MIN - Minimum received level at the MS required for access to the system.  
 MS\_TXPWR\_MAX\_CCH - Maximum TX power level an MS may use when accessing the system until otherwise commanded.  
 POWER OFFSET - The power offset to be used in conjunction with the MS TXPWR MAX CCH parameter by the class 3 DCS 1 800 MS.  
 P - Maximum RF output power of the MS.

All values are expressed in dBm.

In most test cases MS\_TXPWR\_MAX\_CCH and the POWER\_OFFSET will be set at their minimum values thus C1 = A (B always being negative). Suitable levels of cells will be either 63 dBuV(C\_E\_default), 53 dBuV(C\_E\_neighbourdefault) or 45 dBuV(C\_E\_suitable). Assuming that the MS uses a RXLEV\_ACCESS\_MIN between -110 and -115 dBm then to ensure that C1 < 0 the test system's output needs to be set to ensure the level input detected by the MS is less than -123 dBm or lower (-115 plus an 8dB for discrimination between C1 or C2 values and 0, GSM 11.10-1 section 20). This value of -123 dBm corresponds to -10 dBuV (C\_E\_notsuitable)

If new channel = "C\_FCCH\_SCH\_BCCH\_CCCH" (non-combined) then use any combined, combined + SMS or non-combined control channel configuration with the same CellID.

If new channel = "C\_BCCH\_CCCH\_2", "C\_BCCH\_CCCH\_3" or "C\_BCCH\_CCCH\_4" (ccch-group) then re-use any existing ccch-group control channel configuration with the same CellID and the slot, or re-use any existing combined, combined + SMS with the same CellID.

If new channel = "C\_TCHF\_ACCHF\_1", "C\_TCHF\_ACCHF\_2", "C\_TCHH\_ACCHH\_1", "C\_TCHH\_ACCHH\_2" (traffic) or "C\_SDCCH8\_SACCHC8\_1", "C\_SDCCH8\_SACCHC8\_2", "C\_SDCCH8\_SACCHC8\_3" (dedicated) then re-use any existing traffic or dedicated channel with the same channel description.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_ChMdModi(ch:LOGICCH; chmod: CHMOD)

**Result Type:** BOOLEAN

**Comments:**

#### Description

OM\_ChMdModi operation passes channel mode IE for channel `ch` to lower layer emulator and requests the emulator to set the `ch` to the mode `chmod`. After the mode changed, it returns.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_CphMdChg(ch:LOGICCH; cphmod: CPHMS; key:BITSTRING)

**Result Type:** BOOLEAN

**Comments:**

#### Description

OM\_CphMdChg operation passes ciphering parameters for channel `ch` to lower layer and sets the lower layer emulator into a special operation mode in which lower layer starts the 3-step ciphering mode setting sequence when the next L3 message on the channel `ch` arrives.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_CphMd(ch:LOGICCH; cphmod: CPHMS; key:BITSTRING)

**Result Type:** BOOLEAN

**Comments:**

#### Description

OM\_CphMd operation passes ciphering parameters for channel `ch` to lower layer and sets the channel `ch` in the ciphering mode `cphmod`. This operation puts the channel `ch` into specified ciphering mode `cphmod` immediately without the 3-step ciphering mode setting sequence.

**Detailed Comments:**

### Test Suite Operation Definition

**Operation Name:** OM\_ComingFn(ch:LOGICCH)

**Result Type:** FN

**Comments:**

#### Description

OM\_ComingFn operation returns the frame number (FN modulo 42432) which is about 5 seconds later than current frame number and is able to carry L3 message on the channel `ch`.

**Detailed Comments:** The delay of about 5 seconds ensures that there is still enough time left for higher layer controller to prepare next TTCN send event after the OM\_ComingFn returns. the exact delay value is up to the implementor.

Test Suite Operation Definition	
<b>Operation Name:</b>	OM_Deactivate(ch1, ch2:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
<p>OM_Deactivate operation deactivates the logical channels `ch1` and `ch2`, then returns TRUE.</p> <p>The ch1 can be a DCCH or a TCH, the ch2 is the associated SACCH.</p> <p>Deactivation of an active SDCCH channel can be done by stopping transmission; this means that for the bursts on the BCCH carriers, dummy bursts shall be transmitted, for other bursts nothing shall be transmitted. Alternatively the deactivation of a SDCCH can be done by transmitting bad blocks on the SACCH with the parity bits set incorrectly. This will lead to a radio link failure in the MS.</p> <p>Deactivation of a TCH channel can be done by stopping transmission if it is non-BCCH.</p> <p>Deactivation of a SACCH_T can be done by transmitting bad blocks on the SACCH_T with the parity bits set incorrectly. The wrong channel coding on the SACCH will lead to a radio link failure in the MS after several seconds depending on the system information messages..</p>	
<b>Detailed Comments:</b>	<p>The TSO is called in</p> <p>TC_26_7_3_2, TC_26_7_4_3_2, TC_26_7_4_3_3, TC_26_7_4_3_4 on a SDCCH/4/SACCH/C4 channel in downlink,</p> <p>TC_26_2_4_1, TC_26_2_4_2, TC_26_8_2_1, TC_26_8_2_2, TC_26_8_2_3 on TCH/SACCH_T channel in both directions.</p>

Test Suite Operation Definition	
<b>Operation Name:</b>	OM_FHCHK(ch:LOGICCH; ca:CCHD; ma:MA; cd:CHD; t :INTEGER; fn:FN)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
<p>After the SS has been configured to start / change frequency hopping at a particular start time, this TSO instructs the SS to check whether the MS correctly uses the hopping frequencies on and after the expected start time according to the frequency parameters.</p> <p>If <math>t = 0</math> or <math>32024 \leq t \leq 42431</math> the operation checks that the new frequencies starts "without delay".</p> <p>If <math>0 &lt; t \leq 31000</math> the operation checks that the new frequencies starts "on" the frame number of <math>(X + t) \bmod 42432</math>, where <math>x = 51 * ((fn.t3 - fn.t2) \bmod 26) + fn.t3 + 1326 * fn.t1</math>.</p> <p>If <math>31000 &lt; t &lt; 32024</math>, or <math>t &lt; 0</math> or <math>t &gt; 42431</math> then the test has been configured incorrectly and should be re-run with a permitted value for <math>t</math>.</p> <p>This check is performed at the uplink RF burst level by sampling for a period of 3 seconds from the start time and should therefore be called immediately after the SS has been configured to start / change hopping. The operation returns TRUE if the MS behaviour is correct, otherwise it returns FALSE.</p> <p>Note: before this TSO is called, a layer 3 message must be sent to the MS to command the MS to start / change hopping using the same frequency hopping parameters.</p>

<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
<p>This operation puts the layer 2 emulator into a special operation mode then returns. In this special mode the layer 2 emulator will not acknowledge the last L 2 frame which carries the SETUP message, and the layer 2 emulator resumes normal operation after this L 2 frame.</p>	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_NoUAforDISC(ch:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
<p>OM_NoUAforDISC and OM_ResumUAforDISC are a pair of TSOs. OM_NoUAforDISC forces the L2 emulator of the tester to enter a specific mode. OM_ResumUAforDISC resumes the L2 emulator to a normal L2 operational mode.</p> <p>In the specific mode on receiving a DISC on the channel 'ch', the L2 emulator</p> <ul style="list-style-type: none"> <li>- does not respond with a UA,</li> <li>- remains in the multiple-frame established state,</li> <li>- indicates that the DISC has been received (by means of subsequent DL_RELEASE_INDICATION ASPs).</li> </ul> <p>Then the TSO returns TRUE.</p>	
<b>Detailed Comments:</b>	The TSO is called in TC_26_6_12_2 and TC_26_6_12_4.

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_PgFill(cellid:CellID; msg:PG1_RQ_PDU)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	The result returned by the operation is not used.
<b>Description</b>	
<p>OM_PgFill operation sets up the contents of paging filling frame to be sent on all paging subchannels continuously. If the contents of paging filling frame in cell `cellid` have not been set up, the operation sets the contents to `msg`. If paging filling frame in cell `cellid` has been set up, the operation changes the paging filling message to `msg`. After the required action has been taken it returns.</p>	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_Reactivate(ch1, ch2:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
The TSO OM_Reactivate reactivates the logical channels 'ch1' and 'ch2' which were previously deactivated by the OM_Deactivate. Then the TSO returns TRUE. The ch1 is an SDCCH, the ch2 is the associated SACCH.	
Reactivation of deactivated SDCCH/SACCH channels means to restart normal transmissions both on the SDCCH and the associated SACCH as specified in the ETS 300 574 (GSM 05.02).	
<b>Detailed Comments:</b>	The TSO is called in TC_26_7_3_2, TC_26_7_4_3_2, TC_26_7_4_3_3, TC_26_7_4_3_4 on the SDCCH/4 / SACCH/C4 channels.

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_ReturnFn(ch:LOGICCH)
<b>Result Type:</b>	FN
<b>Comments:</b>	
<b>Description</b>	
OM_ReturnFn operation returns the frame number (FN modulo 42432) on which the last L3 message was sent on logic channel 'ch'.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_ResumUAforDISC(ch:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
OM_NoUAforDISC and OM_ResumUAforDISC are a pair of TSOs. OM_NoUAforDISC forces the L2 emulator to enter a specific mode. OM_ResumUAforDISC resumes the L2 emulator to a normal L2 operational mode.	
OM_ResumeUAforDISC cancels the effect of OM_NoUAforDISC, returning L2 on the channel 'ch' to normal operation in the multiple-frame established state.	
Then the TSO returns TRUE.	
<b>Detailed Comments:</b>	The TSO is called in TC_26_6_12_2 and TC_26_6_12_4.

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_SendSMSCBWhilePaging(ch:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	The result returned by the operation is not used.
<b>Description</b>	
The TSO makes the lower layers send the second SMSCB message at the same time as the MS is paged.	
This shall be achieved by paging the MS immediately after the first block of the CB message has been sent. The SS shall ensure that the page is transmitted on the radio interface prior to the transmission of the 4th block of the CB message.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_SendNextOn(ch:LOGICCH; fn:FN)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
OM_SendNextOn operation sets the lower layer emulator into a special operation mode then returns. In the special mode the lower layer emulator sends the next L3 message on the indicated frame number 'fn' on the 'ch' channel. After the next L3 message is sent, the lower layer resumes normal operation automatically.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_SendNextOnHO(ch:LOGICCH; cnt:INTEGER)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	Used in non-synchronised handover tests
<b>Description</b>	
OM_SendNextOnHO operation sets the lower layer emulator into a special operation mode then returns. In the special mode the lower layer emulator waits for the number of Handover bursts specified by the parameter 'cnt' on channel 'ch' before sending the next L3 message. After the message is sent, the lower layer resumes normal operation automatically. The TSO does not affect any TTCN receiving event.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_StartMsrReport(ch:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	The result returned by the operation is not used.
<b>Description</b>	
The operation starts the reporting of received MEASUREMENT REPORT message to layer 3 emulator, then it returns with value TRUE. Measurement Reports shall be disable by default. By default means that the tester filters them out from the TTCN in-buffer. This operation enables the reports entering the TTCN in-buffer. The OM_StopMsrReport operation disables the reports entering the TTCN in-buffer. When starting each test case, the measurement reports are filtered out by default.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_StopAllBCCH(cell1, cell2, cell3, cell4, cell5, cell6, cell7, cell8:CellID)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	The result returned by the operation is not used.
<b>Description</b>	
The TSO stops the RF transmission on all BCCH channels including dummy bursts in the indicated cells, but keeps the uplink CCCH reception active. After all transmission have been stopped the TSO returns TRUE. If a cell in the parameter list is not in use a "dummy" value needs to be assigned to it by the calling test case. The TSO is called in TC_26_3_3.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_StopCell(cell:CellID)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	The result returned by the operation is not used.
<b>Description</b>	
The TSO stops completely all RF transmission of the specific cell `cell`, including the dummy bursts on other slots. After all RF transmission have been stopped the TSO returns TRUE. The cell shall be deleted from the lower layer tester and therefore if the cell 'cell' is required again by the calling test case it needs to be re-configured. The TSO is called in TC_26_3_4, TC_26_6_6_1, TC_26_7_4_2_2_1, TC_26_7_4_2_2_2, TC_26_7_4_6, TC_31_6_2_3.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OM_StopMsrReport(ch:LOGICCH)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	The result returned by the operation is not used.
<b>Description</b>	
The operation stops the reporting of received MEASUREMENT REPORT message to layer 3 emulator, after measurement report stops it returns with value TRUE.	
Measurement Reports shall be disable by default. By default means that the tester filters them out from the TTCN in-buffer. This operation disables the reports entering the TTCN in-buffer. The OM_StartMsrReport operation enables the reports entering the TTCN in-buffer. When starting each test case, the measurement reports are filtered out by default.

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_ACMIncCHK(para:IA5String)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
the OO_ACMIncCHK operation requests (e.g. from the control console of the test system) the test operator to read the value of ACM on SIM and check the increment of the value. Then the operator informs the test system whether the increment is as description `para`, if it is as the description the operation returns TRUE, otherwise returns FALSE.	
The value of ACM can be read either via MMI or by removing the SIM and using SIM reader.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_ACMReading
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
the OO_ACMReading operation requests (e.g. from the control console of the test system) the test operator to read and note the value of ACM on SIM. After the operator finishes the action, he informs the test system and the operation returns with the value TRUE.	
The value of ACM can be read either via MMI or by removing the SIM and using SIM reader.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_ACMSetting
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
the OO_ACMSetting operation requests (e.g. from the control console of the test system) the test operator to reset the ACM to zero and set the ACMmax to 2 units. After the operator finishes the action and informs the test system it returns TRUE.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_AddPwrAmp
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This operation requests (e.g. from the control console of the test system) the test operator to add power amplification at the Mobile Station under test.	
After the operator finishes the action, he informs the test system and the operation returns with the value TRUE.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_AltIndCHK
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation first requests (e.g. from the control console of the test system) the test operator to check whether the alerting indication is generated. If the operator informs (e.g. from the control console of the test system) the test system that the alerting indication is generated, the operation returns TRUE. If the operator informs the test system that the alerting indication is not generated, the operation returns FALSE.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_CalledNumCHK
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation first requests (e.g. from the control console of the test system) the test operator to check whether the called party number is correctly displayed on the mobile station. If the operator informs (e.g. from the control console of the test system) the test system that the display is correct, the operation returns TRUE. If the operator informs the test system that the display is wrong, the operation returns FALSE.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_CalledPtyNumCHK(num:CDPN)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation first requests (e.g. from the control console of the test system) the test operator to check whether the called party number `num` is the one that was entered into the MS. If the operator informs (e.g. from the control console of the test system) the test system that the number is correct, the operation returns TRUE. If the operator informs the test system that the number is wrong, the operation returns FALSE.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_CheckAllSMPresentBut4th
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation requests (e.g. from the control console of the test system) the test operator to check if the mobile station under test has stored all short messages during the test case but not the 4th one which should have been replaced by the 5th(cf. GSM 11.10, clause 34.2.7.4). The messages are displayed. Then the operation returns. TRUE: All SM present but not the 4th FALSE: 4th SM present or 1st, 2nd, 3rd or 5th missing.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_CheckCBSMReceived(NumbOfIA5chara: INTEGER; msg:SMSCBpack)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation requests (e.g. from the control console of the test system) the test operator to check whether the MS under test has correctly received the cell broadcast short message represented by 'msg'. Then the TSO returns TRUE: if the CBSM has been correctly received, FALSE: if non or an incorrect CBSM has been received. The TSO needs to convert the 'msg' into IA5 string according to the packing character rules specified in the section 6.1.2 of ETS 300 628 (GSM 03.38). The 'NumbOfIA5chara' indicates the number of IA5 characters in the 'msg'.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_CheckMCEFOOnSIM
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This operation requests (e.g. from the control console of the test system) the test operator to check if the Memory Capacity Exceeded Flag has been set on the SIM simulator and to inform the test system of the result of the checking. If the checking succeeds the operation returns TRUE, FALSE otherwise.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_CheckMCEFOOnSIMUnset
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This operation requests (e.g. from the control console of the test system) the test operator to check if the Memory Capacity Exceeded Flag has been unset on the SIM simulator and to inform the test system of the result of the checking. If the checking succeeds the operation returns TRUE, FALSE otherwise.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_CheckMessageDisplayed(NumbOfIA5chara:INTEGER; msg:OCTETSTRING)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This operation requests (e.g. from the control console of the test system) the test operator to check if the mobile station under test indicates that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the message contents represented by 'msg' is correctly displayed. Then the operation returns TRUE: if the MS indicates SM reception (and displays correct message), FALSE: if the MS does not indicate SM reception (or displays incorrect message). The TSO needs to convert the 'msg' into IA5 string according to the packing character rules specified in the section 6.1.2 of ETS 300 628 (GSM 03.38). The 'NumbOfIA5chara' indicates the number of IA5 characters in the 'msg'.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_CheckUssdStringDisplayed(strg: IA5String)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This operation requests (e.g. from the control console of the test system) the test operator to check if the mobile station under test displays the Ussd String 'strg'. Then the operation returns. TRUE: MS displays the correct Ussd String. FALSE: MS does not display the correct Ussd String.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_ConnectSIMSimulator
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This operation requests (e.g. from the control console of the test system) the test operator to connect the SIM simulator to the mobile station under test. For the contents of the SIM simulator the operator refers to initial conditions of the test case in GSM 11.10-1. After the operator finishes the action, he informs the test system and the operation returns with the value TRUE.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_DepressEndKey
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation requests (e.g. from the control console of the test system) the test operator to depress the 'END' key of the Mobile Stations keypad, then returns.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_DialCalledNum
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation requests (e.g. from the control console of the test system) the test operator to dial the called party number at the Mobile Station under test but not press the "SEND" key (i.e. not initiate the call setup). After the operator finishes the action, he informs the test system and the operation returns with the value TRUE.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_DisplaySMAndSendReplySM(n, NumOfIA5chara: INTEGER; msg:OCTETSTRING)
<b>Result Type:</b>	OCTETSTRING
<b>Comments:</b>	
Description	
This operation requests (e.g. from the control console of the test system) the test operator to display the 'n'-th short message received in the arriving order and to check whether the short message contents represented by 'msg' is correctly displayed. Then the TSO asks the operator to send a reply short message from the mobile. After the operator finishes the action, the operation returns with the message contents sent in OCTETSTRING. The TSO needs to convert the 'msg' into IA5 string and the IA5 text entered by the operator into OCTETSTRING according to the packing character rules specified in the section 6.1.2 of ETS 300 628 (GSM 03.38). The 'NumOfIA5chara' indicates the number of IA5 characters in the 'msg'.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_DTMFIndCHK(character:IA5String)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation first requests (e.g. from the control console of the test system) the test operator to check whether the `character` is indicated by the DTMF indicator of the MS. If the operator informs (e.g. from the control console of the test system) the test system that the MS does not give the indication of `character`, the operation returns FALSE. If the operator informs the test system that the MS gives the indication, the operation returns TRUE.	
<b>Detailed Comments:</b>	

Test Suite Operation Definition	
<b>Operation Name:</b>	OO_EmptyMessageStorage
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
Description	
This operation requests (e.g. from the control console of the test system) the test operator to empty the message storage of the mobile station under test. After the operator finishes the action, he informs the test system and the operation returns with the value TRUE.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_EnterPswd(pswd:IA5String)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This TSO displays a message on the control console to inform the operator that he is to enter a given password (the actual password is given by 'pswd') on the mobile. The operation waits for the operator to acknowledge the request, which may be done before or after entering the password into the mobile, and then returns the value TRUE.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_HookOff
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This operation requests (e.g. from the control console of the test system) the test operator to answer the mobile terminating call at the Mobile Station under test.	
This operation waits for the operator to acknowledge the request which may be done before or after the call has been answered and then returns the value TRUE.	
<b>Detailed Comments:</b>	

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_IFsetup_Telephony
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or configuration of the MS in such a way that the MS is able to successfully receive the call for telephony service. If the MS supports both telephony without immediate connection mode and telephony with immediate connection mode, set the MS in telephony without immediate connection mode. After the operator finishes the required action and informs the test system, the TSO returns with value TRUE.	
This TSO is used in MO call test cases except TC_11_2, where this TSO is call for single-numbering scheme MT testing.	
<b>Detailed Comments:</b>	used for TS11 and TS12

<b>Test Suite Operation Definition</b>	
<b>Operation Name:</b>	OO_IFsetup_BS2xorBS3x_MO(srv:SERVICES; itc, sacp:B_3; ce:B_2; rate:IA5String)
<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
<p>This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or the MS configuration in such a way that the MS, when triggered, is able to initiate the call for the BS2x or BS3x service `srv` with the specified itc, sacp, ce values. <b>Description</b>	
<p>This TSO requests (e.g. from the control console of the test system) the test operator to setup the external interface, or the MS configuration in such a way that the MS is able to successfully receive the call for BS61 or BS81 with the specified ur and sa values. After the operator finishes the required action and informs the test system, the TSO returns with value TRUE.</p> <p>Three negotiable parameters, number of stop bit, number of data bit, parity information, are asked as global IXIT parameters for all TE configurations. If necessary, the test operator refers to the manual provided by manufacturer to configure the MS.</p>	
<b>Detailed Comments:</b>	used for BS61 and BS81

<b>Result Type:</b>	BOOLEAN
<b>Comments:</b>	
<b>Description</b>	
<p>This operation requests (e.g. from the control console of the test system) the test operator to initiate a in-call modification at the Mobile Station under test, which is triggered by the calling tone identification (CNG) received by the MS, for the basic service 'srv', then returns TRUE. The calling test step can pass the 'srv' value either as TSPX or constant to the TSO.</p> <p>The possible service values include (see also test suite constant declarations):</p> <p>1) Teleservices</p> <ul style="list-style-type: none"> <li>- C_Telephony</li> <li>- C_EmgCall</li> <li>- C_AltSpchFax</li> <li>- C_AutoFax</li> </ul> <p>2) Bearer services</p> <ul style="list-style-type: none"> <li>- C_Async300, C_Async1200, C_Async120075, C_Async2400, C_Async4800, C_Async9600</li> <li>- C_Sync1200, C_Sync2400, C_Sync4800, C_Sync9600</li> <li>- C_PAD300, C_PAD1200, C_PAD120075, C_PAD2400, C_PAD4800, C_PAD9600</li> <li>- C_Packet2400, C_Packet4800, C_Packet9600</li> <li>- C_AltSpchData</li> <li>- C_SpchData</li> </ul>
