Foreword

This draft European Telecommunication Standard (ETS) has been produced by the Radio Equipment and Systems (RES) Technical Committee of the European Telecommunications Standards Institute (ETSI), and is now submitted for the Voting phase of the ETSI standards approval procedure.

This ETS consists of 3 parts as follows:

Part 1: "PTS - summary".

Part 2: "Profile Specific Test Specification (PSTS) for Portable radio Termination (PT)".

Part 3: "Profile Specific Test Specification (PSTS) for Fixed radio Termination (FT)".

Proposed transposition dates	
Date of latest announcement of this ETS (doa):	3 months after ETSI publication
Date of latest publication of new National Standard or endorsement of this ETS (dop/e):	6 months after doa
Date of withdrawal of any conflicting National Standard (dow):	6 months after doa

1 Scope

This draft European Telecommunications Standard (ETS) specifies the PTS summary referencing all the documents necessary for the conformance testing of the Digital Enhanced Cordless Telecommunications/ Integrated Services Digital Network (DECT/ISDN) ISDN Access Profile (IAP) as specified in ETS 300 434-1 [11] and ETS 300 434-2 [12].

This Profile Test Specification (PTS) summary together with the documents it references constitute the DECT/ISDN IAP PTS.

This document has the following structure:

clause 4 contains general information relative to the profile including references to the related documents (standards).

clause 5 contains a summary and references to the documents (standards) relevant for each of protocol layers to be tested.

The ISO standard for the methodology of conformance testing ISO/IEC 9646 [39] to [45] is used as the basis for the test methodology, and as the basis for test case specification.
