Introduction

The TETRA standard was developed to satisfy the unique user requirements of PMR/PAMR which, when combined, cannot be met by any other existing or planned ETSI standard. TETRA is a technology that offers a unique range of services and features that are not available from other systems.

TETRA Releases 1.x are defined in the original Terms of Reference of ETSI Project TETRA [1] and are continuously maintained. The work continues according to the revised Terms of Reference for TETRA Releases 2 [1].

1 Scope

The present document identifies ETSI specifications for TETRA V+D and DMO Release 1.2.

Release 1.2 specifications were functionally frozen after the 21st EP TETRA meeting in June 2003.

NOTE 1: Functionally frozen means that no further functionality/features may be incorporated into the set of specifications, and that only corrective Change Requests (CRs) are to be accepted and agreed.

NOTE 2: It can be expected that corrective CRs will be introduced into the Release 1.2 specifications.

NOTE 3: Some of the CRs that will be produced will be for the next release as they add new functionalities/features.

NOTE 4: Some of the documents were in Public Enquiry, One step Approval or National Voting stage at the publication of the present document. Due to those stages editorial modifications may be performed and the version number of the document may step up in the last digit in addition to the normal step-up due to publication or voting. The resulting version is also a part of the present Release 1.2.
