## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Core Network and Interoperability Testing (INT).

The present document is part 2 of a multi-part deliverable covering SIP NNI - SIP-I Interworking described in the clauses 7.2 and 7.3 of TS 129 235 (Release 10) [1], as identified below:

**Part 1:** "Protocol Implementation Conformance Statement (PICS)";

**Part 2:** "**SIP-I / SIP NNI Test Suite Structure and Test Purposes (TSS&TP)**".

---

# 1 Scope

The present document specifies the Test Suite Structure and Test Purposes for SIP - SIP-I Interworking described in the clauses 7.2 and 7.3 of TS 129 235 (Release 10) [1].

---

## 2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication ETSI cannot guarantee their long term validity.

### 2.1 Normative references

The following referenced documents are necessary for the application of the present document.

- [1] ETSI TS 129 235: "Digital cellular telecommunications system (Phase 2+); Universal Mobile Telecommunications System (UMTS); LTE; Interworking between SIP-I based circuit-switched core network and other networks (3GPP TS 29.235 version 10.1.0 Release 10)".
- [2] ETSI TS 129 163: "Digital cellular telecommunications system (Phase 2+); Universal Mobile Telecommunications System (UMTS); LTE; Interworking between the IP Multimedia (IM) Core Network (CN) subsystem and Circuit Switched (CS) networks (3GPP TS 29.163 Release 8)".
- [3] ISO/IEC 9646-1: "Information technology - Open Systems Interconnection - Conformance testing methodology and framework - Part 1: General concepts".
- [4] Recommendation ITU-T T.38: "Procedures for real-time Group 3 facsimile communication over IP networks".
- [5] Recommendation ITU-T Q.850: "Usage of cause and location in the Digital Subscriber Signalling System No. 1 and the Signalling System No. 7 ISDN user part".
- [6] ETSI TS 101 572-1: "Core Network and Interoperability Testing (INT); Conformance tests according to 3GPP™ 29.235 Release 10; Interworking between SIP-I based circuit-switched core network and other networks; Part 1: Protocol Implementation Conformance Statement (PICS)".

### 2.2 Informative references

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] Recommendation ITU-T E.164: "The international public telecommunication numbering plan".

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in [1] and the following apply:

**Implementation Under Test (IUT):** Refer to ISO/IEC 9646-1 [3].

**System Under Test (SUT):** Refer to ISO/IEC 9646-1 [3].

**Test Purpose (TP):** Refer to ISO/IEC 9646-1 [3].

### 3.2 Symbols

For the purposes of the present document, the symbols given in [1] apply.

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in [1] and the following apply:

ACM	Address Complete Message
IAM	Initial Address Message
IUT	Implementation Under Test
oBCI	optional Backward Call Indicator
oFCI	optional Forward Call Indicator
REL	RERelease message
SUT	System Under Test
TP	Test Purpose

## 4 Test Suite Structure (TSS)

The Test Suite Structure is in close alignment with TS 129 235 [1] and TS 129 163 [2].

	IMS-SS/CC	TP_408_xxx
	IMS-SS/CW	TP_409_xxx

## 5 Test Purposes (TP)

### 5.1 Introduction

For each requirement in [2] a TP is defined.

#### 5.1.1 TP naming convention

TPs are numbered, starting at 001, within each group. Groups are organized according to the TSS. Additional references are added to identify the actual test suite and whether it applies to the network or the user (see table 5.1.1-1).

**Table 5.1.1-1: TP identifier naming convention scheme**

<b>Identifier:</b> <b>TP_&lt;group&gt;_&lt;nnn&gt;</b>	
<group> = group	3 digit field representing group reference according to TSS
<nnn> = TP number	3 digit sequential number (001 to 999)

## 5.1.2 Test strategy

As the base standard TS 129 235 [1] and TS 129 163 [2] contains no explicit requirements for testing, the TPs were generated as a result of an analysis of the base standard and the PICS specification TS 101 572-1 [6]. The criteria applied include the following:

- whether or not a test case can be built from the TP is not considered.

## 5.1.3 Test purpose structure

The test purpose structure is according to the test suite structure (TSS). The Reference column in each Test Purpose refers to the basic specification except stated explicitly.

# 6 Test purposes (TP)

## 6.1 SIP NNI -SIP-I protocol interworking

### 6.1.1 Signalling Interworking of a Call from the IP Multimedia Subsystem towards the SIP-I based circuit-switched core network

#### 6.1.1.1 Sending of INVITE (IAM)

<b>TP number</b>	TP_101_001	<b>Reference</b>	[1], clause 7.2.1 [2], clause 7.2.3.1.1
<b>TSS reference</b>	SIP NNI - SIP-I/Basic call/Sending_of_SIP-INVITE request /		
<b>Selection criteria</b>			
<b>Test Purpose name</b>	Sending of SIP-INVITE request		
<b>Test Purpose</b>	Ensure that on reception of a SIP-INVITE requesting a session, the I-MGCF sends a SIP-INVITE request with encapsulated IAM message.		
<b>ISUP Parameter values</b>			
<b>SIP Parameter values</b>			
<b>Comments</b>			
<b>Message flows</b>	<b>SIP NNI</b> INVITE 100 Trying	<b>MGCF</b> 	<b>SIP-I</b> INVITE (IAM) 100 Trying <b>Apply post test routine</b>

<b>TP number</b>	TP_101_002	<b>Reference</b>	[1], clause 7.2.4 [2], clause 7.2.3.1.1
<b>TSS reference</b>	SIP NNI - SIP-I/Basic call/Sending_of_SIP-INVITE request /		
<b>Selection criteria</b>	PICS 6.1.1/1 AND PICS 6.2.1/1 AND PICS 6.2.1/2		
<b>Test Purpose name</b>	Preconditions support indicated in the Supported header		
<b>Test Purpose</b>	Ensure that the Preconditions procedure is successful if the support of Precondition is indicated in the Supported header. The INVITE with encapsulated IAM is immediately sent. The Nature of connection indicator is set to 'continuity check performed on a previous circuit' or 'continuity check required'. After the UPDATE was received, a UPDATE is sent		
<b>ISUP Parameter values</b>	<b>IAM:</b> Nature of connection indicator = 'continuity check performed on a previous circuit' or 'continuity check required'

	<b>Apply post test routine</b>		

Table 6.1.2.5-3: Mapping of PSTN XML BearerCapability into ISUP TMU parameter

TMU_VA	PSTN XML BearerCapability TMU_VA_BC	TMU value TMU_VA_TMU
TMU_VA_01	'00000'	'speech'
TMU_VA_02	'10000'	'3,1 kHz audio'
TMU_VA_03	'10001'	No mapping (see note 1)
TMU_VA_04	Not present (see note 2)	'3,1 kHz audio'

NOTE 1: The value of 'UDITA' is sent when fallback does not occur.

NOTE 2: The absence of a PSTN XML attachment indicates that a non ISDN destination is reached.

### 6.1.2.6 Sending of the 200 OK (INVITE) with encapsulated Connect message (CON)

<b>Test Purpose name</b>	Mapping of the SIP XML CUG Element to the ISUP <i>closed user group call indicator included in the optional Forward Call Indicator Parameter</i>		
<b>Test Purpose</b>	Ensure that on receipt of an INVITE request containing the Content-Type application/vnd.etsi.cug+xml and the 'cug' XML body, an INVITE with encapsulated IAM is sent. The XML 'cugCommunicationIndicator' is mapped into the ISUP Optional forward call indicator Closed user group call indicator as indicated in table 6.3.7-1		
<b>ISUP Parameter values</b>	<b>IAM:</b> Optional forward call indicator Closed user group call indicator= <b>CUG_ind</b> Closed user group interlock code Network Identity Binary code		
<b>SIP Parameter values</b>	<b>INVITE:</b> Content-Type: application/vnd.etsi.cug+xml <?xml version="1.0" cug networkIndicator cugInterlockBinaryCode cugCommunicationIndicator= <b>CUG_COM_ind</b> INVITE(IAM): no xml body present		
<b>Comments</b>			
<b>Message flows</b>	<b>SIP NNI</b> INVITE 100 Trying	<b>MGCF</b> 	<b>SIP-I</b> → INVITE (IAM) ←
	<b>Apply post test routine</b>		

**Table 6.3.7-1: Mapping of XML cugCommunicationIndicator into ISUP Optional forward call indicator Closed user group call indicator**

	<b>CUG_COM_ind</b>	<b>CUG_ind</b>
VA_01	00	non-CUG call
VA_02	01	Spare
VA_03	10	closed user group call, outgoing access allowed
VA_04	11	closed user group call, outgoing access not allowed

<b>TP number</b>	TP_407_003	<b>Reference</b>	[1], clause 7.2.1 [2], clauses 7.5.10.1, table, 7.5.10.1.4
<b>TSS reference</b>	IMS-SS/CUG/		
<b>Selection criteria</b>	PICS 6.3.1/2 AND PICS 6.3.2/23		
<b>Test Purpose name</b>	Communication is released if the PSTN/ISDN network does not support CUG, CUG without outgoing access		
<b>Test Purpose</b>	Ensure that on receipt of an INVITE request containing the Content-Type application/vnd.etsi.cug+xml and the 'cug' XML body the cugCommunicationIndicator set to '11', the communication is released with 403 (Forbidden) final response if the PSTN/ISDN network does not support CUG		
<b>ISUP Parameter values</b>			
<b>SIP Parameter values</b>	<b>INVITE:</b> Content-Type: application/vnd.etsi.cug+xml <?xml version="1.0" cug networkIndicator cugInterlockBinaryCode cugCommunicationIndicator='11' <b>INVITE(IAM): no xml body present</b>		
<b>Comments</b>			
<b>Message flows</b>	<b>SIP NNI</b> INVITE → 403 Forbidden ← ACK → <b>Apply post test routine</b>	<b>MGCF</b>	<b>SIP-I</b>
