# 4 General

GSM Release 1999 consists of GSM-only specifications and the GSM Core Network specifications developed for both GSM Release 1999 and Release 1999 of the 3<sup>rd</sup> Generation mobile system.

GSM Release 1999 also includes many enhanced features developed within the 3<sup>rd</sup> Generation Partnership Project.

The present document identifies the GSM system set of specifications required to implement GSM Release 1999.

## 4.1 Specification and report numbering

Specifications for GSM Release-1999-only can be identified by the "**ab.de**" numbering scheme.

Specifications for both GSM Release 1999 and Release 1999 of the 3<sup>rd</sup> Generation mobile system are identified by the "**ab.cde**" numbering scheme.

NOTE: A "c" digit equal to zero indicates a GSM heritage of a specification.

## 4.2 Specification series

In general the Specification series are identified as follows:

### 4.2.1 01 and 21-series

#### **Requirements specifications**

These specifications are often transient and contain requirements towards other specifications. They may become obsolete when technical solutions have been fully specified; they could then, e.g., be replaced by reports describing the performance of the system, they could be deleted without replacement or be kept for historical reasons but turned into background material. When found necessary and appropriate, the transient or permanent nature of a requirement specification may be expressed in its scope.

### 4.2.2 02 and 22-series

#### **Service aspects**

Specifications in this series specify services, service features, building blocks or platforms for services (a service feature or service building block may provide certain generic functionality for the composition of a service, including the control by the user; a platform may comprise one or more network elements, e.g. UIM, mobile terminal, auxiliary system to the core network etc.); stage 1 specifications that are felt appropriate belong into this series; reports defining services which can be realized by generic building blocks etc. also belong into this series.

### 4.2.3 03 and 23-series

#### **Technical realization**

This series mainly contains stage 2 specifications (or specifications of a similar nature describing interworking over several interfaces, the behaviour in non-exceptional cases, etc.).

### 4.2.4 04 and 24-series

#### **Signalling protocols (UE-CN)**

This series contains the detailed and bit exact stage 3 specifications of protocols between MS/UE and the core network.

### 4.2.5 05 series

#### **GSM Radio aspects**

### 4.2.6 06 series

#### **Codecs**

This series defines speech codecs and other codecs for GSM.

### 4.2.7 07 and 27-series

#### **Data**

This series defines the functions necessary to support data applications at the user equipment side.

### 4.2.8 08 and 28-series

#### **Signalling protocols (RSS - network part )**

This series contains the detailed and bit exact stage 3 specifications of protocols relevant for interfaces internal to the Radio Access Network and between this and the Core Network.

## 4.2.9 09 and 29-series

### Signalling protocols (NSS)

This series contains the detailed and bit exact stage 3 specifications of protocols within the Core Network.

## 4.2.10 11 series

### SIM and conformance test

This series specifies the Subscriber Identity Module (SIM) and the interfaces between SIM and other entities, and the conformance test specifications for GSM.

## 4.2.11 12 series

### Operation and maintenance

This series defines the application of TMN for GSM and other functions for operation, administration and maintenance of a GSM network.

## 4.2.12 13 series

### Access requirements
