Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

All published ETSI deliverables shall include information which directs the reader to the above source of information.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Services and Protocols for Advanced Networks (SPAN).

The present document was developed by EURESCOM P1106 as Deliverable 3 Volume 2 Parts 1 and 2, and made freely and publicly available to ETSI TC SPAN for publication.

The present document is part 2 of a multi-part deliverable covering Network integration testing of Universal Mobile Telecommunications System (UMTS) with Global System for Mobile Communication (GSM) Phase 2+, Public Switched Telephone Network (PSTN) and Integrated Services Digital Network (ISDN), as identified below:

Part 1: "Test Suite Structure and Test Purposes (TSS&TP)";

Part 2: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma".

Introduction

The present document contains the Implementation Conformance Statement (ICS) and Implementation eXtra Information for Testing (IXIT) for Network Integration Testing for the European ISDN and PLMN, covering Network Integration Testing (NIT) between ISDN-UMTS, PSTN-UMTS, UMTS-ISDN, UMTS-PSTN and UMTS-UMTS networks. The objective is to verify the level of international or national end-to-end support of ISDN and UMTS services. Both bearer services (and associated teleservices) and supplementary services are checked for interworking capability and compatibility, in the European ISDN and UMTS.

The European ISDN, PSTN and PLMN (GSM, UMTS) are made up by connecting the different national networks and End-to-end NIT covers all the testing activities necessary to assess the correct behaviour of the interconnected network from the point of view of access interfaces, network side.

1 Scope

The present document specifies the Implementation Conformance Statement (ICS) and Implementation eXtra Information for Testing (IXIT) for Network Integration Testing for Network Integration Testing (NIT) to verify the overall compatibility of UMTS, GSM, ISDN and non-ISDN (PSTN) over the national or international ISUP between networks. Network Integration Testing will assure that the appropriate requested features passes between an ISDN subscriber and the mobile subscriber across the national or international ISUP (ISUP V2) interface.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication and/or edition number or version number) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.

Referenced documents which are not found to be publicly available in the expected location might be found at http://docbox.etsi.org/Reference.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

Abstract Test Case (ATC): Refer to ISO/IEC 9646-1 [20].

Abstract Test Suite (ATS): Refer to ISO/IEC 9646-1 [20].

Implementation Under Test (IUT): Refer to ISO/IEC 9646-1 [20].

lower tester: Refer to ISO/IEC 9646-1 [20].

Implementation Conformance Statement (ICS) proforma: Refer to ISO/IEC 9646-1 [20].

Implementation eXtra Information for Testing (IXIT) proforma: Refer to ISO/IEC 9646-1 [20].

Point of Control and Observation: Refer to ISO/IEC 9646-1 [20].

Protocol Implementation Conformance Statement (PICS): Refer to ISO/IEC 9646-1 [20].

Protocol Implementation eXtra Information for Testing (PIXIT): Refer to ISO/IEC 9646-1 [20].

System Under Test (SUT): Refer to ISO/IEC 9646-1 [20].

3.2 Definitions related to test purpose descriptions

Alternate speech and facsimile group 3 (TS 61): teleservice which allows the connection of ITUgroup 3 fax apparatus (send and/or receive) to the mobile stations of a GSM PLMN

NOTE: Facsimile connections may be established to/from group 3 apparatus in the PSTN, ISDN or GSM PLMN.

Alternate Speech/Data: which provides the capability to swap between speech and data during a call

NOTE: If either the speech or data portion of the call requires a full rate channel, a full rate channel shall be used for the duration of the call. The access interface at the mobile station for the data portion is assumed to be a standard data interface. Some means must be provided to select the speech/data capability.

Automatic Facs. group 3 (TS 62): teleservice which allows connection of ITUgroup 3 fax apparatus to and from the mobile stations of a GSM PLMN

NOTE: Facsimile connections may be established to and from group 3 apparatus in the PSTN, ISDN or GSM PI MN

BC=3,1 kHz audio: Bearer Capability information element with its information transfer capability field set to "3,1 kHz Audio" and its user information layer one protocol field set to "G.711 A-law"

NOTE: See ETS 300 084 [3].

BC=speech: Bearer Capability information element with its information transfer capability field set to "speech" and its user information layer one protocol field set to "G.711 A-law"

NOTE: See ETS 300 083 [2].

BC=UDI: Bearer Capability information element with its information transfer capability set to "unrestricted digital information"

NOTE: See EN 300 403-1 [1].

BC=UDI/TA: Bearer Capability information element with its information transfer capability set to "unrestricted digital information with tones/announcements" and its user information layer one protocol field set to "IUT-T Recommendations H.221 and H.242"

NOTE: See EN 300 267-1 [4].

BC=V110/X30: Bearer Capability information element with its information transfer capability set to "unrestricted digital information" and its user information layer 1 field set to "ITUstandardised rate adaption V.110/X.30", including sync/async and user rate values

NOTE: See EN 300 403-1 [1].

CF active: Call Forwarding (U, B or NR) supplementary service already activated with the address of user C

NOTE: See EN 300 207-1 [14].

CUG default request: calling user do not include in the outgoing SETUP message a explicit request for the CUG supplementary service

NOTE: See EN 300 138-1 [11].

GSM-BC=3,1 kHz: (External to the PLMN) used to select a "3,1 kHz audio" interworking function at the MSC

NOTE: This service category is used when interworking with the ISDN or PSTN "3,1 kHz audio" service and includes the capability to select a modem at the interworking function. "External to the PLMN" indicates that the "3,1 kHz audio" service is only used outside of the PLMN, in the ISDN/PSTN. The connection within the PLMN, user access point to the interworking function, is an unrestricted digital connection.

GSM-BC=Speech (TS 11): service which provides the transmission of speech information and audible signalling tones of the PSTN/ISDN

NOTE: In the GSM PLMN and the fixed network processing technique appropriate for speech such as analogue transmission, echo cancellation and low bit rate voice encoding may be used.

GSM-BC=UD: Unrestricted Digital information (UD) which provides the transfer of unrestricted digital information

GSM - Bearer service categories: all bearer service categories which provide information transfer between R/S reference points and allow the use of sub-rate information streams which are rate adapted

GSM teleservices: teleservices supported by a GSM PLMN are described by a number of attributes which are intended to be largely independent

NOTE: They are grouped into three categories:- High layer attributes - Low layer attributes (describing the Bearer capabilities which support the Teleservice). - information transfer attributes, - access attributes. - General attributes.

HLC = **Facsimile G2/G3:** High Layer Compatibility information element with its high layer characteristics identification field set to "facsimile group 2/3 (ITU-T Recommendation F.182)"

NOTE: See EN 300 403-1 [1].

HLC=facsimile group 4: High Layer Compatibility information element with its high layer characteristics identification field set to "facsimile group 4 class 1"

NOTE: See EN 300 403-1 [1] and ETS 300 080 [5].

HLC=telephony: High Layer Compatibility information element with its high layer characteristics identification field set to "telephony"

NOTE: See EN 300 289 [19].

HLC=telex: High Layer Compatibility information element with its high layer characteristics identification field set to "telex"

HLC=videotelephony_ic: High Layer Compatibility information element with its high layer characteristics identification field set to "videotelephony (ITU-T Recommendation F.721)" and its extended audiovisual characteristics field set to "capability set of initial channel of ITU-T Recommendation H.221"

NOTE: See EN 300 267-1 [4] and EN 300 403-1 [1].

LLC=telematic_term: Low Layer Compatibility information element with its user information layer 2 field indicating "ISO/IEC 7776 DTE-DTE operation" and user information layer 3 field indicating "ISO/IEC 8208"

NOTE: See EN 300 403-1 [1] and ETS 300 080 [5].

LLC = V110/X30: Low Layer Compatibility information element with its user information layer 1 field indicating "ITUstandardised rate adaption V.110/X.30" and including sync/async and user rate values

LLC=voice band data via modem: Low Layer Compatibility information element with its user information layer 1 field indicating a "modem type" coding

NOTE: See EN 300 403-1 [1] and ETS 300 103 [6].

NPI=unknown: Numbering Plan Identification coded as "unknown"

NOTE: See EN 300 403-1 [1].

PI=PR: Presentation Indicator coded as "Presentation restricted"

NOTE: See EN 300 403-1 [1].

SI=NP: Screening Indicator coded as "Network provided"

NOTE: See EN 300 403-1 [1].

SI=UPVP: Screening Indicator forwarded to the served user coded as "User-provided, verified and passed"

Speech followed by Data: which provides a speech connection first and then at some time while the call is in progress, the user can switch to a data connection

NOTE: The user cannot switch back to speech after the data portion. If either the speech or data portion of the call

requires a full rate channel, a full rate channel shall be used from the start of the call. The network may

then change to a half rate channel for the data portion.

TON=international: Type Of Number coded as "international"

NOTE: See EN 300 403-1 [1].

TON=unknown: Type Of Number coded as "unknown"

NOTE: See EN 300 403-1 [1].

UI length=32: length of the User Information field of the User-user information element is 35 octets

4 Conformance to this ICS and IXIT proformas specification

If it claims to conform to the present document, the actual ICS proforma to be filled in by a supplier shall be technically equivalent to the text of the ICS proforma given in annex A, and shall preserve the numbering/naming and ordering of the proforma items.

An ICS which conforms to the present document shall be a conforming ICS proforma completed in accordance with the guidance for completion given in clause A.1.

A test realizer, producing a executable test suite for this ATS specification is required, as specified in ISO/IEC 9646-7 [42], to produce an augmented partial IXIT proforma conformant with the text of the partial IXIT proforma given in annex B.

An augmented partial IXIT proforma which conforms to this partial IXIT proforma specification shall, as a minimum, have contents which are technically equivalent to annex B. The augmented partial IXIT proforma may contain additional questions that need to be answered in order to prepare the Means Of Testing (MOT) for a particular IUT. The test laboratory may further augment the augmented partial IXIT proforma to produce a IXIT proforma conformant with this partial IXIT proforma specification.

A IXIT proforma whic0h conforms to this partial IXIT proforma specification shall, as a minimum, have contents which are technically equivalent to annex B. The IXIT proforma may contain additional questions that need to be answered in order to prepare the test laboratory for a particular IUT.

Annex A (normative): End-to-end ICS proforma

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

A.1 Guidance for completing the ICS proforma

A.1.1 Purposes and structure

The purpose of this ICS proforma is to provide a mechanism whereby a supplier of an implementation of the requirements defined by ETSI, may provide information about the implementation in a standardized manner.

The proforma is subdivided into subclauses for the following categories of information:

- guidance for completing the proformas;
- identification of the implementation;
- global statement of conformance.

A.1.2 Abbreviations and conventions

The ICS proforma contained in the annexes A is comprised of information in tabular form in accordance with the guidelines presented in ISO/IEC 9646-7 [42].

Item column

The item column contains a number which identifies the item in the table.

Item description column

The item description column describes in free text each respective item (e.g. parameters, timers, etc.). It implicitly means "is <item description> supported by the implementation?".

Status column

The following notations, defined in ISO/IEC 9646-7 [42], are used for the status column:

m	mandatory - the capability is required to be supported.
0	optional - the capability may be supported or not.
n/a	not applicable - in the given context, it is impossible to use the capability.
X	prohibited (excluded) - there is a requirement not to use this capability in the given context.
o.i	qualified optional - for mutually exclusive or selectable options from a set. "i" is an integer which identifies an unique group of related optional items and the logic of their selection which is defined immediately following the table.
ci	conditional - the requirement on the capability ("m", "o", "x" or " n/a ") depends on the support of other optional or conditional items. "i" is an integer identifying an unique conditional status

expression which is defined immediately following the table.

i irrelevant (out-of-scope) - capability outside the scope of the reference specification. No answer is requested from the supplier.

NOTE 1: This use of "i" status is not to be confused with the suffix "i" to the "o" and "c" statuses above.

Reference column

The reference column makes reference to ETS < reference specification id> [], except where explicitly stated otherwise.

Support column

The support column shall be filled in by the supplier of the implementation. The following common notations, defined in ISO/IEC 9646-7 [42], are used for the support column:

Y or y supported by the implementation.

N or n not supported by the implementation.

N/A, n/a or - no answer required (allowed only if the status is n/a, directly or after evaluation of a conditional

status).

If this ICS proforma is completed in order to describe a multiple-profile support in a system, it is necessary to be able to answer that a capability is supported for one profile and not supported for another. In that case, the supplier shall enter the unique reference to a conditional expression, preceded by "?" (e.g. ?3). This expression shall be given in the space for comments provided at the bottom of the table. It uses predicates defined in the SCS, each of which refers to a single profile and which takes the value TRUE if and only if that profile is to be used.

EXAMPLE 1: ?3: IF prof1 THEN Y ELSE N

NOTE 2: As stated in ISO/IEC 9646-7 [42], support for a received PDU requires the ability to parse all valid parameters of that PDU. Supporting a PDU while having no ability to parse a valid parameter is non-conformant. Support for a parameter on a PDU means that the semantics of that parameter are supported.

Values allowed column

The values allowed column contains the type, the list, the range, or the length of values allowed. The following notations are used:

range of values: <min value> .. <max value>

example: 5 .. 20

- list of values: <value1>, <value2>, ..., <valueN>

example: 2,4,6,8,9

example: '1101'B, '1011'B, '1111'B example: '0A'H, '34'H, '2F'H

- list of named values: <name1>(<val1>), <name2>(<val2>), ..., <nameN>(<valN>)

example: reject(1), accept(2)

- length: size (<min size> .. <max size>)

example: size (1 .. 8)

Values supported column

The values supported column shall be filled in by the supplier of the implementation. In this column, the values or the ranges of values supported by the implementation shall be indicated.

References to items

For each possible item answer (answer in the support column) within the ICS proforma a unique reference exists, used, for example, in the conditional expressions. It is defined as the table identifier, followed by a solidus character "/", followed by the item number in the table. If there is more than one support column in a table, the columns are discriminated by letters (a, b, etc.), respectively.

EXAMPLE 2: A.5/4 is the reference to the answer of item 4 in table 5 of annex A.

EXAMPLE 3: A.6/3b is the reference to the second answer (i.e. in the second support column) of item 3 in table 6 of annex A.

Prerequisite line

A prerequisite line takes the form: Prerequisite: cpredicate>.

A prerequisite line after a clause or table title indicates that the whole clause or the whole table is not required to be completed if the predicate is FALSE.

A.1.3 Instructions for completing the ICS proforma

The supplier of the implementation shall complete the ICS proforma in each of the spaces provided. In particular, an explicit answer shall be entered, in each of the support or supported column boxes provided, using the notation described in clause A.1.2.

If necessary, the supplier may provide additional comments in space at the bottom of the tables, or separately on sheets of paper.

More detailed instructions may be GIven at the beginning of the different clauses of the ICS proforma.

A.2 Identification of the implementation

Identification of the Implementation Under Test (IUT), the Integrated Services Digital Network provided by the European public telecommunications operator, should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS and IXIT should be named as the contact person.

	Date of the statement
A.2.2 IUT name:	Implementation Under Test (IUT) identification

(A person to contact if there are any queries concerning the content of the ICS or IXIT)

A.2.3 ICS contact person

Name:
Telephone number:
Facsimile number:
E-mail address:
Additional information:

A.3 Identification of the document

This ICS proforma applies to the following standard:

EN 300 403-1: "Integrated Services Digital Network (ISDN); Digital Subscriber Signalling System No. one (DSS1), User-network interface layer 3 specification for basic call control. Part 1: Protocol specification".

PLMN 04.08 (EN 300 940): "European digital cellular telecommunications system (Phase 2); Mobile radio interface layer 3 specification".

TS 124 008 (V3.2.1): "Mobile Radio Interface Layer 3 specification; Core Network Protocols- Stage 3".

Other ETSI standards related to UMTS, ISDN and GSM signalling, layer 3 testing.

A.5 Interworking PSTN-UMTS

A.5.1 Basic call

When performing network integration testing between PSTN and UMTS users, the following tables related to the implemented interworking capabilities should be filled in.

Table A.30: PSTN-UMTS interworking capabilities, basic call

Item	Service	Reference	Status	Support
	PSTN			
1	Call establishment to a UMTS user	EN 300 001	0	
	UMTS			
2	Multi Numbering Scheme and TS11	TS 124 008	0	

A.5.2 Interworking PSTN-UMTS -Supplementary services

Table A.31: CLIP service

Item	Service	Reference	Status	Support	
	PSTN				
1	Call to a UMTS user	EN 300 001	0		
	UMTS				
2	The called user is provided with CLIP	TS 124 008	0		
		TS 124 081			

Table A.32: CLIR service

Item	Service	Reference	Status	Support
	PSTN			
1	The calling user is provided with CLIR subscription	EN 300 001 EN 300 093-1	0	
	UMTS		-	
2	The called user is provided with CLIP	TS 124 008 TS 124 081	0	

Table A.33: CUG service

Item	Service	Reference	Status	Support	
	PSTN				
1	Closed user group (Calling user is not member of a CUG)	EN 300 001	0		
	UMTS				
2	CUG incoming access "not allowed"	TS 124 008 TS 124 085	0		

Table A.34:CFU service

Item	Service	Reference	Status	Support
1	Configuration PSTN-UMTS	·		
	PSTN			
2	Call to a forwarding subscriber (CFU)	EN 300 001	0	
	UMTS			
3	Call forwarding unconditional (CFU)	TS 124 008	0	
		TS 124 082		
	specify configuration: than A and C in Originating network, B in Destinati	on Network)		

Table A.35: CFB service

Item	Service	Reference	Status	Support
1	Configuration PSTN-UMTS			
	PSTN			
2	Call to a forwarding subscriber (CFB)	EN 300 001	0	
	UMTS			
3	CFB- Called user with CFBUDUB	TS 124 008	0.33	
		TS 124 082

Annex B (normative): Partial End-to-end PIXIT proforma

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the PIXIT proforma in this annex so that it can be used for its intended purposes and may further publish the completed PIXIT.

B.1 Instructions for completing the PIXIT proforma

Before running the end-to-end test suite each participating public network operator will need to supply information concerning the allocation and availability of suitable test numbers which will be required for setting up international connections.

This annex contains a questionnaire, which shall be completed before performing the end-to-end test suite. Additional information is used by the testing personnel for selecting and for setting the correct parameters on the test equipment.

This questionnaire contains only the information required to perform the tests.

B.2	Identification summary
PIXIT numbe	er:

98 P_T_STOP_RINGING
Time (ms) after which ringing at (analog) B
side has to terminate when A clears before
answer
99 P_T_WAIT
Time (min) for waiting activity on called
side. (e.g. 4 min) if P_T_BCHECK is 0 or if there
(e.g. 4 min) if P_1_BCHECK is 0 or if there
100 P_T_WAIT_MTC
Time (min) for the MTC to wait for all the
PTCs' verdicts
MUST be longer than P_T_WAIT
(e.g. 6 min)

Annex C (normative): Abstract Test Suite (ATS)

This ATS has been produced using the Tree and Tabular Combined Notation (TTCN) according to ISO/IEC 9646-3 [22].

The ATS was developed on a separate TTCN software tool and therefore the TTCN tables are not completely referenced in the table of contents. The ATS itself contains a test suite overview part which provides additional information and references.

C.1 The TTCN Graphical form (TTCN.GR)

The TTCN.GR representation of this ATS is contained in an Adobe Portable Document Format[™] file (MINIT-53-CHO2b_UMTS.PDF contained in archive ts_10211002v010101p0.zip) which accompanies the present document.

C.2 The TTCN Machine Processable form (TTCN.MP)

The TTCN.MP representation corresponding to this ATS is contained in an ASCII file (MINIT-53-CHO2b_UMTS.MP contained in archive $ts_10211002v010101p0.zip$) which accompanies the present document.

NOTE: Where an ETSI Abstract Test Suite (in TTCN) is published in both .GR and .MP format these two forms shall be considered equivalent. In the event that there appears to be syntactical or semantic differences between the two then the problem shall be resolved and the erroneous format (whichever it is) shall be corrected.

Annex D (informative): Bibliography

ETSI EN 300 121: "Integrated Services Digital Network (ISDN); Application of the ISDN User Part (ISUP) of CCITT Signalling System No 7 for International ISDN interconnection (ISUP version 1) Amendment 1: International Emergency Preference Scheme (IEPS) service [ITU-T Amendment 1 to Q.767 modified]".

ETSI EN 300 185-1: "Integrated Services Digital Network (ISDN); Conference call, add-on (CONF) supplementary service; Digital Subscriber Signalling System No. one (DSS1) protocol; Part 1: Protocol specification".

ETSI EN 300 061-1: "Integrated Services Digital Network (ISDN); Subaddressing (SUB) supplementary service; Digital Subscriber Signalling System No. one (DSS1) protocol; Part 1: Protocol specification".

ETSI EN 300 210-1: "Integrated Services Digital Network (ISDN); Freephone (FPH) supplementary service; Digital Subscriber Signalling System No. one (DSS1) protocol; Part 1: Protocol specification".

ETSI EN 300 130-1: "Integrated Services Digital Network (ISDN); Malicious Call Identification (MCID) supplementary service; Digital Subscriber Signalling System No. one (DSS1) protocol; Part 1: Protocol specification".

ETSI EN 300 188-1: "Integrated Services Digital Network (ISDN); Three-Party (3PTY) supplementary service; Digital Subscriber Signalling System No. one (DSS1) protocol; Part 1: Protocol specification".

ETSI EN 300 356-1: "Integrated Services Digital Network (ISDN); Signalling System No.7 (SS7); ISDN User Part (ISUP) version 4 for the international interface; Part 1: Basic services [ITU-T Recommendations Q.761 to Q.764 (1999) modified]".

ETSI EN 300 359-1: "Integrated Services Digital Network (ISDN); Completion of Calls to Busy Subscriber (CCBS) supplementary service; Digital Subscriber Signalling System No. one (DSS1) protocol; Part 1: Protocol specification".

ETSI EN 300 195-1: "Integrated Services Digital Network (ISDN); Digital Subscriber Signalling System No. one (DSS1) protocol; Supplementary service interactions; Part 1: Protocol specification".

ETSI TBR 008: "Integrated Services Digital Network (ISDN); Telephony 3,1 kHz teleservice; Attachment requirements for handset terminals".

ETSI ETR 193: "Methods for Testing and Specification (MTS); Network Integration Testing (NIT); Methodology aspects; Test Co-ordination Procedure (TCP) style guide".

ITU-T Recommendation G.821: "Error performance of an international digital connection operating at a bit rate below the primary rate and forming part of an Integrated Services Digital Network".

ITU-T Recommendation G.822 (1988): "Controlled slip rate objectives on an international digital connection".

ITU-T Recommendation O.152: "Error performance measuring equipment for bit rates of 64 kbit/s and N x 64 kbit/s".
