Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Intelligent Transport Systems (ITS).

The present document is part 3 of a multi-part deliverable covering Conformance test specifications for Cooperative Awareness Basic Service (CA) as identified below:

Part 1: "Test requirements and Protocol Implementation Conformance Statement (PICS) pro forma";

Part 2: "Test Suite Structure and Test Purposes (TSS & TP)";

Part 3: "Abstract Test Suite (ATS) and Protocol Implementation eXtra Information for Testing (PIXIT)".

The development of ITS test specifications follows the guidance provided in the ETSI EG 202 798 [i.1]. Therefore this ATS documentation is also based on the guidance provided in ETSI EG 202 798 [i.1].

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

1 Scope

The present document contains the Abstract Test Suite (ATS) for Co-operative Awareness Basic Service (CA) as defined in ETSI EN 302 637-2 [1] in compliance with the relevant requirements and in accordance with the relevant guidance given in ISO/IEC 9646-7 [i.7].

The objective of the present document is to provide a basis for conformance tests for Co-operative Awareness Basic Service (CA) equipment giving a high probability of interoperability between different manufacturers' equipment.

The ISO standards for the methodology of conformance testing (ISO/IEC 9646-1 [i.4] and ISO/IEC 9646-2 [i.5]) as well as the ETSI rules for conformance testing (ETSI ETS 300 406 [i.8]) are used as a basis for the test methodology.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] ETSI EN 302 637-2 (V1.3.2): "Intelligent Transport Systems (ITS); Vehicular Communications; Basic Set of Applications; Part 2: Specification of Cooperative Awareness Basic Service".
- [2] ETSI TS 102 868-1 (V1.4.1): "Intelligent Transport Systems (ITS); Testing; Conformance test specifications for Cooperative Awareness Basic Service (CA); Part 1: Test requirements and Protocol Implementation Conformance Statement (PICS) pro forma".
- [3] ETSI TS 102 868-2 (V1.4.1): "Intelligent Transport Systems (ITS); Testing; Conformance test specifications for Cooperative Awareness Basic Service (CA); Part 2: Test Suite Structure and Test Purposes (TSS & TP)".
- [4] ETSI TS 102 894-2 (V1.2.1): "Intelligent Transport Systems (ITS); Users and applications requirements; Part 2: Applications and facilities layer common data dictionary".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] ETSI EG 202 798 (V1.1.1): "Intelligent Transport Systems (ITS); Testing; Framework for conformance and interoperability testing".
- [i.2] ETSI TS 103 096-3 (V1.3.1): "Intelligent Transport Systems (ITS); Testing; Conformance test specifications for ITS Security; Part 3: Abstract Test Suite (ATS) and Protocol Implementation eXtra Information for Testing (PIXIT)".

- [i.3] ETSI TR 103 099 (V1.4.1): "Intelligent Transport Systems (ITS); Architecture of conformance validation framework".
- [i.4] ISO/IEC 9646-1 (1994): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 1: General concepts".
- [i.5] ISO/IEC 9646-2 (1994): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 2: Abstract Test Suite specification".
- [i.6] ISO/IEC 9646-6 (1994): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 6: Protocol profile test specification".
- [i.7] ISO/IEC 9646-7 (1995): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 7: Implementation Conformance Statements".
- [i.8] ETSI ETS 300 406 (1995): "Methods for testing and Specification (MTS); Protocol and profile conformance testing specifications; Standardization methodology".
- [i.9] ETSI ES 201 873-1 (V4.5.1): "Methods for Testing and Specification (MTS); The Testing and Test Control Notation version 3; Part 1: TTCN-3 Core Language".
- [i.10] ETSI ES 201 873-7 (V4.5.1): "Methods for Testing and Specification (MTS); The Testing and Test Control Notation version 3; Part 7: Using ASN.1 with TTCN-3".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in ETSI EN 302 637-2 [1], ISO/IEC 9646-1 [i.4] and ISO/IEC 9646-7 [i.7] apply.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

| | |
|-------|--|
| ASN | Abstract Syntax Notation |
| ASN.1 | Abstract Syntax Notation One |
| ATM | Abstract Test Method |
| ATS | Abstract Test Suite |
| BV | Valid test events for Behaviour tests |
| CA | Co-operative Awareness Basic Service |
| CAM | Cooperative Awareness Messages |
| CAN | Controller Area Network |
| CRS | Crash Status |
| FMT | Message Format |
| GFQ | Generation Frequency |
| GNSS | Global Navigation Satellite System |
| INA | Information Adaptation |
| ISO | International Organization for Standardization |
| ITS | Intelligent Transport Systems |
| IUT | Implementation Under Test |
| LDM | Local Dynamic Map |
| MSD | Message Dissemination |
| MSG | Message Generation |
| MSP | Message Processing |
| MTC | Main Test Component |
| PCTR | Protocol Conformance Testing Report |
| PICS | Protocol Implementation Conformance Statement |

| | |
|-------|---|
| PIXIT | Partial Protocol Implementation eXtra Information for Testing |
| PX | Pixit |
| SAP | Service Access Point |
| SCS | System Conformance Statement |
| SCTR | Static Conformance Test Report |
| SSP | Service Specific Permissions |
| SUT | System Under Test |
| TC | Test Case |
| TI | Timer tests |
| TP | Test Purposes |
| TSS | Test Suite Structure |
| TTCN | Testing and Test Control Notation |

4 Abstract Test Method (ATM)

4.1 Abstract protocol tester

The abstract protocol tester used by this test suite is described in figure 1. The test system will simulate valid and invalid protocol behaviour, and will analyse the reaction of the IUT.

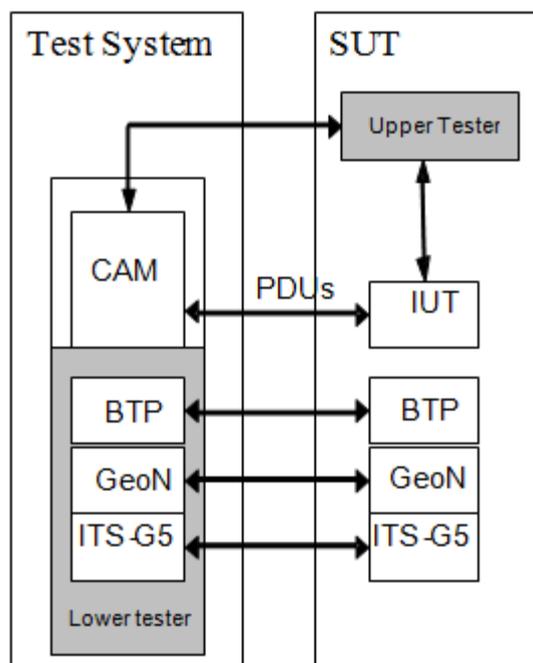

Figure 1: Abstract protocol tester - CA

4.2 Test Configuration

This test suite uses a unique test configuration in order to cover the different test scenarios. In this configuration, the tester simulates one ITS station implementing the CAM protocol.

4.3 Test architecture

The present document implements the general TTCN-3 test architecture described in ETSI EG 202 798 [i.1], clauses 6.3.2 and 8.3.1.

Figure 2 shows the test architecture used for the CA ATS. The CA test component requires using only the Main Test Component (MTC). The MTC communicates with the CA SUT over the camPort. The camPort is used to exchange CA protocol messages between the CA test component and the CA IUT.

The Upper tester entity in the SUT enables triggering CA functionalities by simulating primitives from application or LDM entities. It is required to trigger the CA layer in the SUT to send CA messages, which are resulting from upper layer primitives. Furthermore, receiving CA messages may result for the CA layer in sending primitives to the upper layer (sending Data to LDM for instance).

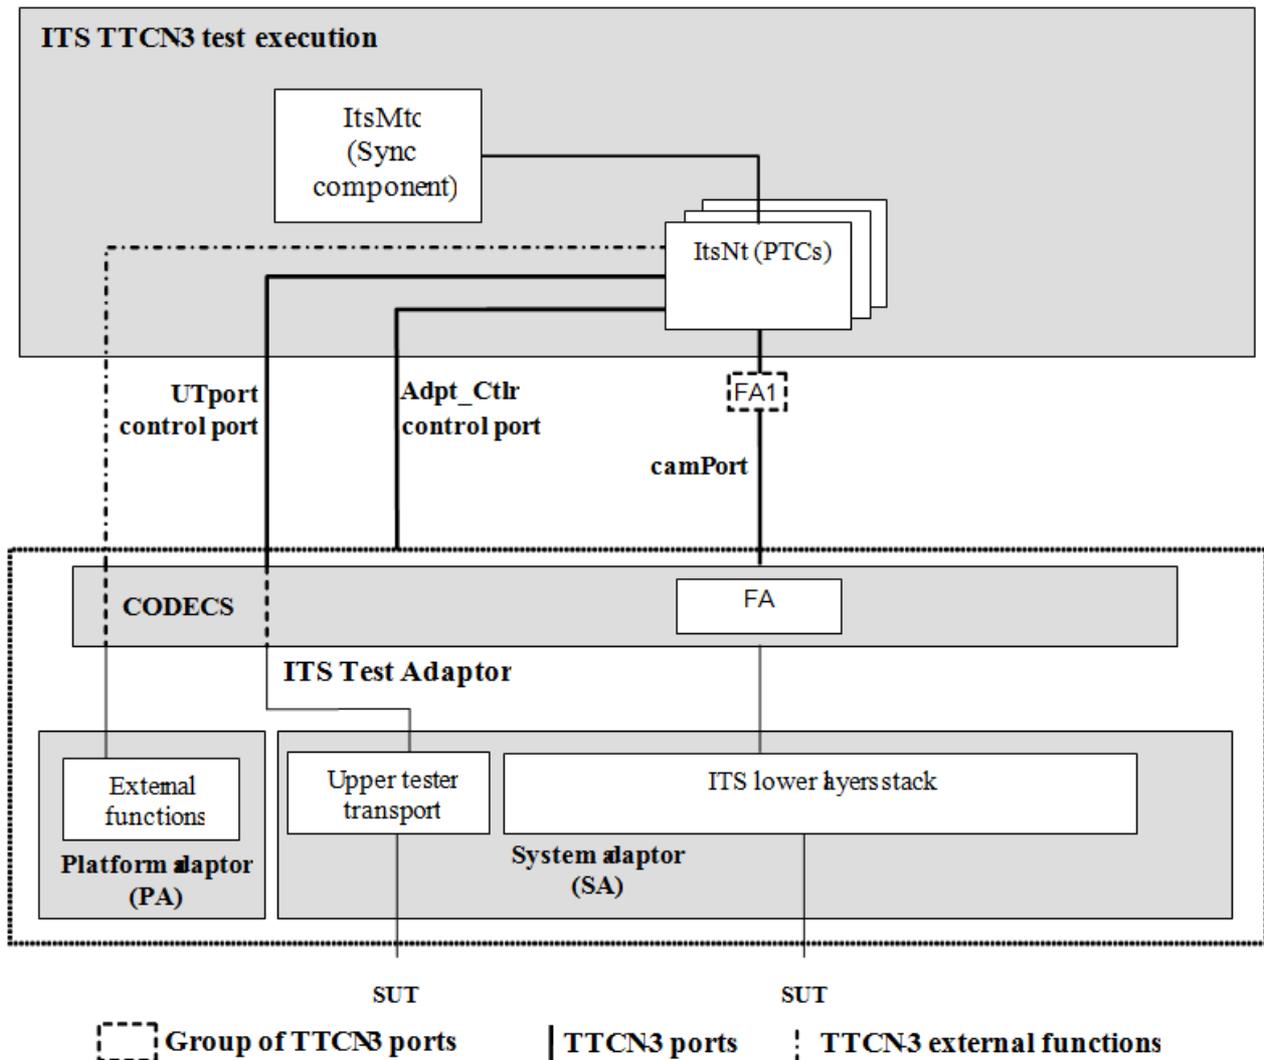

Figure 2: Test system architecture

4.4 Ports and ASPs (Abstract Services Primitives)

4.4.1 Introduction

Two ports are used by the CA ATS:

- The camPort, of type CamPort.
- The utPort, of type UpperTesterPort.

4.4.2 Primitives of the camPort

Two types of primitives are used in the camPort:

- The CamInd primitive used to receive messages of type CamPdu.
- The CamReq primitive used to send messages of type CamPdu.

These two primitives use the CamPdu type, which is declared in the CAM.asn ASN.1 module, following the ASN.1 definition from ETSI EN 302 637-2 [1].

```
CamPdu ::= SEQUENCE {
    header  ItsPduHeader,
    cam     CoopAwareness
}
```

4.4.3 Primitives of the utPort

This port uses two types of primitives:

- The UtInitialize primitive used to initialize IUT.
- The UtTrigger primitive used trigger upper layer events in IUT.

4.5 Executing CA tests in secured mode

All the CA tests, with the exception of the SSP tests, can be executed with security enabled or with security disabled. The choice of running the CA tests in secured or non-secured mode has no impact on the result of the CA tests because the test verdicts assess CA protocol behaviour only.

The SSP tests can only be executed in secured mode.

The choice of running the CA tests in secured or non-secured mode shall be controlled via the test suite parameter PICS_IS_IUT_SECURED, see table A.4/1 of ETSI TS 102 868-1 [2].

Before running the CA tests in secured mode, the following steps need to be executed:

- security certificates need to be generated for the tester as well as for the IUT, see ETSI TS 103 096-3 [i.2], clause 5.3.2.5;
- security certificates need to be installed onto the IUT, see ETSI TS 103 096-3 [i.2], clause 5.3.2.6;
- in case of usage of the ETSI test adapter, the following test adapter parameters need to be configured:

| Test adapter parameter | Default value | Comment |
|------------------------|-------------------|---|
| TsSecuredRootPath | data/certificates | The path to the location where all certificates (tester and IUT certificates) are installed |
| TsSecuredConfigId | void | Name of the subfolder in TsSecuredRootPath in order to organize multiple IUTs |
| UtSecuredMode | FALSE | To use upper-tester interface in non-secured mode |

4.6 ETSI test adapter

All information of the ETSI test adapter is described in ETSI TR 103 099 [i.3].

5 Untestable Test Purposes

Table 1 gives a list of TPs, which are not implemented in the ATS due to the chosen ATM or other restrictions.

Table 1: Untestable TPs

| Test purpose | Reason |
|--------------|--------|
| None | |

6 ATS conventions

6.1 Introduction

The ATS conventions are intended to give a better understanding of the ATS but they also describe the conventions made for the development of the ATS. These conventions shall be considered during any later maintenance or further development of the ATS.

The ATS conventions contain two clauses, the testing conventions and the naming conventions. The testing conventions describe the functional structure of the ATS. The naming conventions describe the structure of the naming of all ATS elements.

To define the ATS, the guidelines of the document ETSI ETS 300 406 [i.8] were considered.

6.2 Testing conventions

6.2.1 Testing states

6.2.1.1 Initial state

All test cases start with the function `f_prInitialState`. This function brings the IUT in an "initialized" state by invoking the upper tester primitive `UtInitialize`.

6.2.1.2 Final state

All test cases end with the function `f_poDefault`. This function brings the IUT back in an "idle" state. As no specific actions are required for the idle state in ETSI EN 302 637-2 [1], the function `f_poDefault` does not invoke any action.

As necessary, further actions may be included in the `f_poDefault` function.

6.2.2 Message types - ASN.1 definitions

ASN.1 definitions from ETSI EN 302 637-2 [1] are directly imported in TTCN-3 using the ASN.1 import method specified in ETSI ES 201 873-7 [i.10].

The following example shows the TTCN-3 import statement used to import ASN.1 definitions in the TTCN-3 modules:

```
import from CAM_PDU_Descriptions language "ASN.1:1997" all;
```

Generic ASN.1 definitions (message header, station Id, etc.), are defined in the Common Data Dictionary ETSI TS 102 894-2 [4] ASN.1 module. Thus the CA ASN.1 modules shall import these definitions from the Common Data Dictionary ETSI TS 102 894-2 [4] ASN.1 module (see the following ASN.1 import statement extracted from the CA ASN.1 module):

```
IMPORTS
    ItsPduHeader, StationID, ...
FROM ITS-Container {
    itu-t(0) identified-organization(4) etsi(0) itsDomain(5) wgl(1) ts(102894) cdd(2) version(1)
};
```

6.3 Naming conventions

6.3.1 Introduction

This test suite follows the naming convention guidelines provided in the ETSI EG 202 798 [i.1].

6.3.2 General guidelines

The naming convention is based on the following underlying principles:

- in most cases, identifiers should be prefixed with a short alphabetic string (specified in table 2) indicating the type of TTCN-3 element it represents;
- suffixes should not be used except in those specific cases identified in table 2;
- prefixes and suffixes should be separated from the body of the identifier with an underscore ("_");

EXAMPLE 1: `c_sixteen, t_wait.`

- only module names, data type names and module parameters should begin with an upper-case letter. All other names (i.e. the part of the identifier following the prefix) should begin with a lower-case letter;
- the start of second and subsequent words in an identifier should be indicated by capitalizing the first character. Underscores should not be used for this purpose.

EXAMPLE 2: `f_initialState.`

Table 2 specifies the naming guidelines for each element of the TTCN-3 language indicating the recommended prefix, suffixes (if any) and capitalization.

Table 2: ETSI TTCN-3 generic naming conventions

| Language element | Naming convention | Prefix | Example identifier |
|---|--------------------------------|--------|----------------------|
| Module | Use upper-case initial letter | none | IPv6Templates |
| Group within a module | Use lower-case initial letter | none | messageGroup |
| Data type | Use upper-case initial letter | none | SetupContents |
| Message template | Use lower-case initial letter | m_ | m_setupInit |
| Message template with wildcard or matching expression | Use lower-case initial letters | mw_ | mw_anyUserReply |
| Signature template | Use lower-case initial letter | s_ | s_callSignature |
| Port instance | Use lower-case initial letter | none | signallingPort |
| Test component instance | Use lower-case initial letter | none | userTerminal |
| Constant | Use lower-case initial letter | c_ | c_maxRetransmission |
| Constant (defined within component type) | Use lower-case initial letter | cc_ | cc_minDuration |
| External constant | Use lower-case initial letter | cx_ | cx_macId |
| Function | Use lower-case initial letter | f_ | f_authentication() |
| External function | Use lower-case initial letter | fx_ | fx_calculateLength() |
| Altstep (incl. Default) | Use lower-case initial letter | a_ | a_receiveSetup() |
| Test case | Use ETSI numbering | TC_ | TC_COR_0009_47_ND |
| Variable (local) | Use lower-case initial letter | v_ | v_macId |

| Language element | Naming convention | Prefix | Example identifier |
|--|--------------------------------|--------|----------------------|
| Variable (defined within a component type) | Use lower-case initial letters | vc_ | vc_systemName |
| Timer (local) | Use lower-case initial letter | t_ | t_wait |
| Timer (defined within a component) | Use lower-case initial letters | tc_ | tc_authMin |
| Module parameters for PICS | Use all upper case letters | PICS_ | PICS_DOOROPEN |
| Module parameters for other parameters | Use all upper case letters | PX_ | PX_TESTER_STATION_ID |
| Formal Parameters | Use lower-case initial letter | p_ | p_macId |
| Enumerated Values | Use lower-case initial letter | e_ | e_syncOk |

6.3.3 ITS specific TTCN-3 naming conventions

Next to such general naming conventions, table 3 shows specific naming conventions that apply to the ITS TTCN-3 test suite.

Table 3: ITS specific TTCN-3 naming conventions

| Language element | Naming convention | Prefix | Example identifier |
|---|-------------------------------|---------------------------------|--------------------------|
| ITS Module | Use upper-case initial letter | Its"IUTname"_" | ItsCam_ |
| Module containing types and values | Use upper-case initial letter | Its"IUTname"_"TypesAndValues | ItsCam_TypesAndValues |
| Module containing Templates | Use upper-case initial letter | Its"IUTname"_"Templates | ItsCam_Templates |
| Module containing test cases | Use upper-case initial letter | Its"IUTname"_"TestCases | ItsCam_TestCases |
| Module containing functions | Use upper-case initial letter | Its"IUTname"_"Functions | ItsCam_Functions |
| Module containing external functions | Use upper-case initial letter | Its"IUTname"_"ExternalFunctions | ItsCam_ExternalFunctions |
| Module containing components, ports and message definitions | Use upper-case initial letter | Its"IUTname"_"Interface | ItsCam_Interface |
| Module containing main component definitions | Use upper-case initial letter | Its"IUTname"_"TestSystem | ItsCam_TestSystem |
| Module containing the control part | Use upper-case initial letter | Its"IUTname"_"TestControl | ItsCam_TestControl |

6.3.4 Usage of Log statements

All TTCN-3 log statements use the following format using the same order:

- Three asterisks.
- The TTCN-3 test case or function identifier in which the log statement is defined.
- One of the categories of log: INFO, WARNING, ERROR, PASS, FAIL, INCONC, TIMEOUT.
- Free text.
- three asterisks.

EXAMPLE 1: `log("*** TC_CAM_MSG_BV_01: INFO: Initial conditions: First CAM message received ***");`

Furthermore, the following rules are applied for the CA ATS:

- Log statements are used in the body of the functions, so that invocations of functions are visible in the test logs.

- All TTCN-3 setverdict statements are combined (as defined in ETSI ES 201 873-1 [i.9]) with a log statement following the same above rules (see example 2).

EXAMPLE 2: `setverdict(pass, "*** TC_CAM_INA_CRS_BV_01: PASS: CAM message received with crashStatus = true ***").`

6.3.5 Test Case (TC) identifier

Table 4 shows the test case naming convention, which follows the same naming convention as the test purposes.

Table 4: TC naming convention

| Identifier | TC_<root>_<gr>_<sgr>_<x>_<nn> or TP_<root>_<gr>_<x>_<nn> when no <sgr> | | |
|------------|---|-----|--------------------------------------|
| | <root> = root | CAM | |
| | <gr> = group | MSD | Message Dissemination |
| | | MSP | Message Processing |
| | <sgr> =sub- group | FMT | Message Format |
| | | INA | Information Adaptation |
| | | GFQ | Generation Frequency |
| | | PAR | Lower layer parameter |
| | <x> = type of testing | BV | Behaviour tests to valid test events |
| | | TI | Timer tests |
| | <nn> = sequential number | | 01 to 99 |

EXAMPLE: TP identifier: TP/CAM/MSD/BV/01
TC identifier: TC_CAM_MSD_BV_01.

Annex A (normative): TTCN-3 library modules

A.1 Electronic annex, zip file with TTCN-3 code

This test suite has been produced using the Testing and Test Control Notation (TTCN) according to ETSI ES 201 873-1 [i.9].

ETSI EN 302 637-2 [1], ETSI TS 102 868-1 [2] and ETSI TS 102 868-2 [3] have been applied to develop this test suite.

This test suite has been compiled error-free using two different commercial TTCN-3 compilers.

The TTCN-3 library modules, which form parts of the present document, are contained in the archive `ts_10286803v010401p0.zip` which accompanies the present document.

Annex B (normative): Partial PIXIT pro forma for CA

B.1 Partial cancellation of copyright

| |
|---|
| Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the Partial PIXIT pro forma in this annex so that it can be used for its intended purposes and may further publish the completed Partial PIXIT. |
|---|

B.2 Introduction

The PIXIT Pro forma is based on ISO/IEC 9646-6 [i.6].

B.3 Identification summary

The Identification summary shall be as specified in table B.1.

Table B.1: Identification summary

| | |
|-----------------------|--|
| PIXIT Number: | |
| Test Laboratory Name: | |
| Date of Issue: | |
| Issued to: | |

B.4 ATS summary

The ATS summary shall be as specified in table B.2.

Table B.2: ATS summary

| PICS References: | ETSI TS 102 868-1 [2] |

B.8.2 IUT information

CA PIXITs shall be as in table B.7.

Table B.7: CA PIXITs

| Identifier | Description | |
|--------------------------|----------------------|--|
| PX_IUT_STATION_ID | Comment | Station Id sent by the IUT |
| | Type | Integer |
| | Default value | 1 |
| PX_IUT_STATION_TYPE | Comment | Station Type sent by the IUT |
| | Type | Integer |
| | Default value | 1 |
| PX_TESTER_STATION_ID | Comment | Station Id sent by the tester |
| | Type | Integer |
| | Default value | 111 111 |
| PX_TESTER_STATION_TYPE | Comment | Station Type sent by the tester |
| | Type | Integer |
| | Default value | 1 |
| PX_TS_LATITUDE | Comment | The Latitude of the tester (microdegrees) |
| | Type | Integer |
| | Default value | 436 175 790 |
| PX_TS_LONGITUDE | Comment | The Longitude of the tester (microdegrees) |
| | Type | Integer |
| | Default value | 70 546 480 |
| PX_TIME_DELTA | Comment | Tolerance to be applied when checking timestamps (ms) |
| | Type | Integer |
| | Default value | 1 000 |
| PX_GNSS_SCENARIO_SUPPORT | Comment | Does the IUT support GNSS scenarios? |
| | Type | Boolean |
| | Default value | FALSE |
| PX_CERT_FOR_TS | Comment | The certificate identifier that the tester (TS) shall use in case of secured IUT |
| | Type | Charstring |
| | Default value | "CERT_TS_A_AT" |

Annex C (normative): PCTR pro forma for CA

C.1 Partial cancellation of copyright

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the PCTR pro forma in this annex so that it can be used for its intended purposes and may further publish the completed PCTR.

C.2 Introduction

The PCTR pro forma is based on ISO/IEC 9646-6 [i.6].

C.3 Identification summary

C.3.1 Protocol conformance test report

A protocol conformance test report shall be as in table C.1.

Table C.1: Protocol conformance test report

| | |
|---------------------------------|--|
| PCTR Number: | |
| PCTR Date: | |
| Corresponding SCTR Number: | |
| Corresponding SCTR Date: | |
| Test Laboratory Identification: | |
| Test Laboratory Manager: | |
| Signature: | |

C.3.2 IUT identification

An IUT shall be identified as specified in table C.2.

Table C.2: IUT identification

| | |
|-------------------------|--|
| Name: | |
| Version: | |
| Protocol specification: | |
| PICS: | |
| Previous PCTR if any: | |

C.3.3 Testing environment

The testing environment shall be as specified in table C.3.

Table C.3: Testing environment

| | |
|--------------------------------------|--|
| PIXIT Number: | |
| ATS Specification: | |
| Abstract Test Method: | |
| Means of Testing identification: | |
| Date of testing: | |
| Conformance Log reference(s): | |
| Retention Date for Log reference(s): | |

C.3.4 Limits and reservation

Additional information relevant to the technical contents or further use of the test report, or the rights and obligations of the test laboratory and the client, may be given here. Such information may include restriction on the publication of the report.

.....

.....

.....

.....

.....

.....

C.3.5 Comments

Additional comments may be given by either the client or the test laboratory on any of the contents of the PCTR, for example, to note disagreement between the two parties.

.....

.....

.....

.....

.....

.....

C.4 IUT Conformance status

This IUT has or has not been shown by conformance assessment to be non-conforming to the specified protocol specification.

Strike the appropriate words in this sentence. If the PICS for this IUT is consistent with the static conformance requirements (as specified in clause C.3 in the present document) and there are no "FAIL" verdicts to be recorded (in clause C.6 in the present document) strike the words "has or", otherwise strike the words "or has not".

C.5 Static conformance summary

The PICS for this IUT is or is not consistent with the static conformance requirements in the specified protocol.

Strike the appropriate words in this sentence.

C.6 Dynamic conformance summary

The test campaign did or did not reveal errors in the IUT.

Strike the appropriate words in this sentence. If there are no "FAIL" verdicts to be recorded (in clause C.6 of the present document) strike the words "did or" otherwise strike the words "or did not".

Summary of the results of groups of test:

.....
.....
.....
.....
.....
.....

C.7 Static conformance review report

If clause C.3 indicates non-conformance, this clause itemizes the mismatches between the PICS and the static conformance requirements of the specified protocol specification.
