Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Electronic Signatures and Infrastructures (ESI).

The present document is part 3 of a multi-part deliverable covering XAdES digital signatures - Testing Conformance and Interoperability. Full details of the entire series can be found in part 1 [i.1].

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

1 Scope

The present document defines a number of test suites to assess the interoperability between implementations claiming conformance to extended XAdES signatures as specified in ETSI EN 319 132-2 [2].

The present document defines test suites for each level defined in ETSI EN 319 132-2 [2].

Test suites also cover augmentation of extended XAdES signatures and negative test cases.

These test suites are agnostic of the PKI infrastructure. Any PKI infrastructure can be used including the one based on EU Member States Trusted Lists.

4 Overview

This clause describes the overall approach used throughout the present document to specify test suites for extended XAdES signatures as specified in ETSI EN 319 132-2 [2].

ETSI EN 319 132-2 [2] defines eight different levels of extended XAdES signatures.

The test suites are defined with different layers reflecting the levels of XAdES signatures specified in ETSI EN 319 132-2 [2]. Below follows an overview.

The test suites for testing interoperability of extended XAdES signatures include:

- XAdES-E-BES signatures test cases;
- XAdES-E-EPES signatures test cases;
- XAdES-E-T signatures test cases;
- XAdES-E-C test cases;
- XAdES-E-X test cases;
- XAdES-E-X Long test cases; and
- XAdES-E-A signatures.

The test suites including negative test cases for extended XAdES signatures include:

- Negative test cases for XAdES-E-BES signatures;
- Negative test cases for XAdES-E-EPES signatures;
- Negative test cases for XAdES-E-T signatures; and
- Negative test cases for XAdES-E-A signatures.

The test suites for testing augmentation of extended XAdES signatures include:

- Augmentation to XAdES-E-C signatures;
- Augmentation to XAdES-E-X signatures;
- Augmentation to XAdES-E-XL signatures; and
- Augmentation to XAdES-E-A signatures.

Certain XAdES extended signatures are also XAdES baseline signatures. In consequence, the present document defines test suites for testing interoperability of extended XAdES signatures that include certain test cases already defined in ETSI TS 119 134-2 [3].

Table 1 shows the prefixes used throughout the present document to refer to specific elements in the XAdES signature associated to the URIs of the corresponding namespaces.

6 Test-suite for augmentation of extended XAdES signatures

6.1 Introduction

This clause describes the so called augmentation tests cases. For running them a certain signer generates an extended XAdES signature of a certain level. After that a verifier validates the signature and augments it to a higher level by adding a number of unsigned qualifying properties. Finally, a third entity validates the augmented signature.

6.2 Augmentation to XAdES-E-C signatures

This clause defines a test suite for augmenting XAdES-E-BES and XAdES-E-T signatures to XAdES-E-C signatures.

The test suite is formed by the test cases defined in Table 10.

7 Test suites with negative test cases

7.1 Introduction

The present clause define a number of negative test cases for extended XAdES signatures.

The present clause distinguishes two different types of negative test cases:

- 1) Test cases leading to valid signatures that nevertheless, are not XAdES signatures.
- 2) Test cases leading to extended XAdES signatures whose validation according to ETSI EN 319 102-1 [i.4] would not result in TOTAL_PASSED.

7.2 Test cases generating non XAdES signatures

The test case XAdES/NB/4 defined in ETSI TS 119 134-2 [3] clause 10.2 generates a XML signature that is not a XAdES signature.

7.3 Test cases for XAdES-E-BES signatures

This clause defines a test suite of negative test cases for XAdES-E-BES signatures.

The test suite of negative test cases for XAdES-E-BES signatures as specified in ETSI EN 319 132-2 [2] shall include the test cases defined in ETSI TS 119 134-2 [3], clause 10.3 (except test case XAdES/BBN/8, which is a test case for a XAdES-E-EPES signature) and the test cases defined in Table 14.

The signature does not incorporate the <code>xades:QualifyingProperties</code> container. The signing certificate of the signature is issued by a CA whose certificate is revoked.	Negative validation.	<ul style="list-style-type: none"> No <code>xades:QualifyingProperties</code> <code>ds:KeyInfo</code> with signing certificate of the signature <code>ds:KeyInfo</code> is also signed by the signature

7.4 Test cases generating non valid XAdES-E-EPES signatures

7.6 Test cases generating non valid XAdES-E-A signatures

This clause defines a test suite of negative test cases for XAdES-E-A signatures.

The test suite of negative test cases for XAdES-E-A signatures as specified in ETSI EN 319 132-2 [2] shall include the test cases defined in ETSI TS 119 134-2 [3], clause 10.5 and the test cases defined in Table 17.

Table 17: Test cases generating non valid XAdES-E-A signatures not covered in ETSI TS 119 134-2 [3] clause 10.5
