Important notice

The present document can be downloaded from:
<http://www.etsi.org/standards-search>

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status.

Information on the current status of this and other ETSI documents is available at
<https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx>

If you find errors in the present document, please send your comment to one of the following services:
<https://portal.etsi.org/People/CommitteeSupportStaff.aspx>

If you find a security vulnerability in the present document, please report it through our
Coordinated Vulnerability Disclosure Program:
<https://www.etsi.org/standards/coordinated-vulnerability-disclosure>

Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use or inability to use the software.

Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.

The content of the PDF version shall not be modified without the written authorization of ETSI.
The copyright and the foregoing restriction extend to reproduction in all media.

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

This document defines the IMS service level tracing management object. The management object is compatible with OMA Device Management protocol specifications, version 1.2 and upwards, and is defined using the OMA DM Device Description Framework as described in the Enabler Release Definition OMA-ERELD_DM-V1_2 [3].

The IMS service level tracing management object consists of relevant parameters that can be managed for IMS service level tracing capabilities specified in 3GPP TS 24.229 [5].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] apply.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CN	Core Network
DDF	Device Description Framework
DM	Device Management
IMS	IP Multimedia core network Subsystem
IP	Internet Protocol
MO	Management Object
OMA	Open Mobile Alliance
SIP	Session Initiation Protocol

UE	User Equipment
----	----------------

4 IMS service level tracing management object

The IMS service level tracing management object is used to manage configuration settings of the UE for IMS service level tracing. The management object covers parameters for IMS service level trace related capabilities. The management object enables the management of the settings on behalf of the end user.

The management object Identifier is: urn:oma:mo:ext-3gpp-ims_slt:1.0.

Protocol compatibility: This MO is compatible with OMA DM 1.2.

The following nodes and leaf objects are possible under the Service Level Tracingnode:

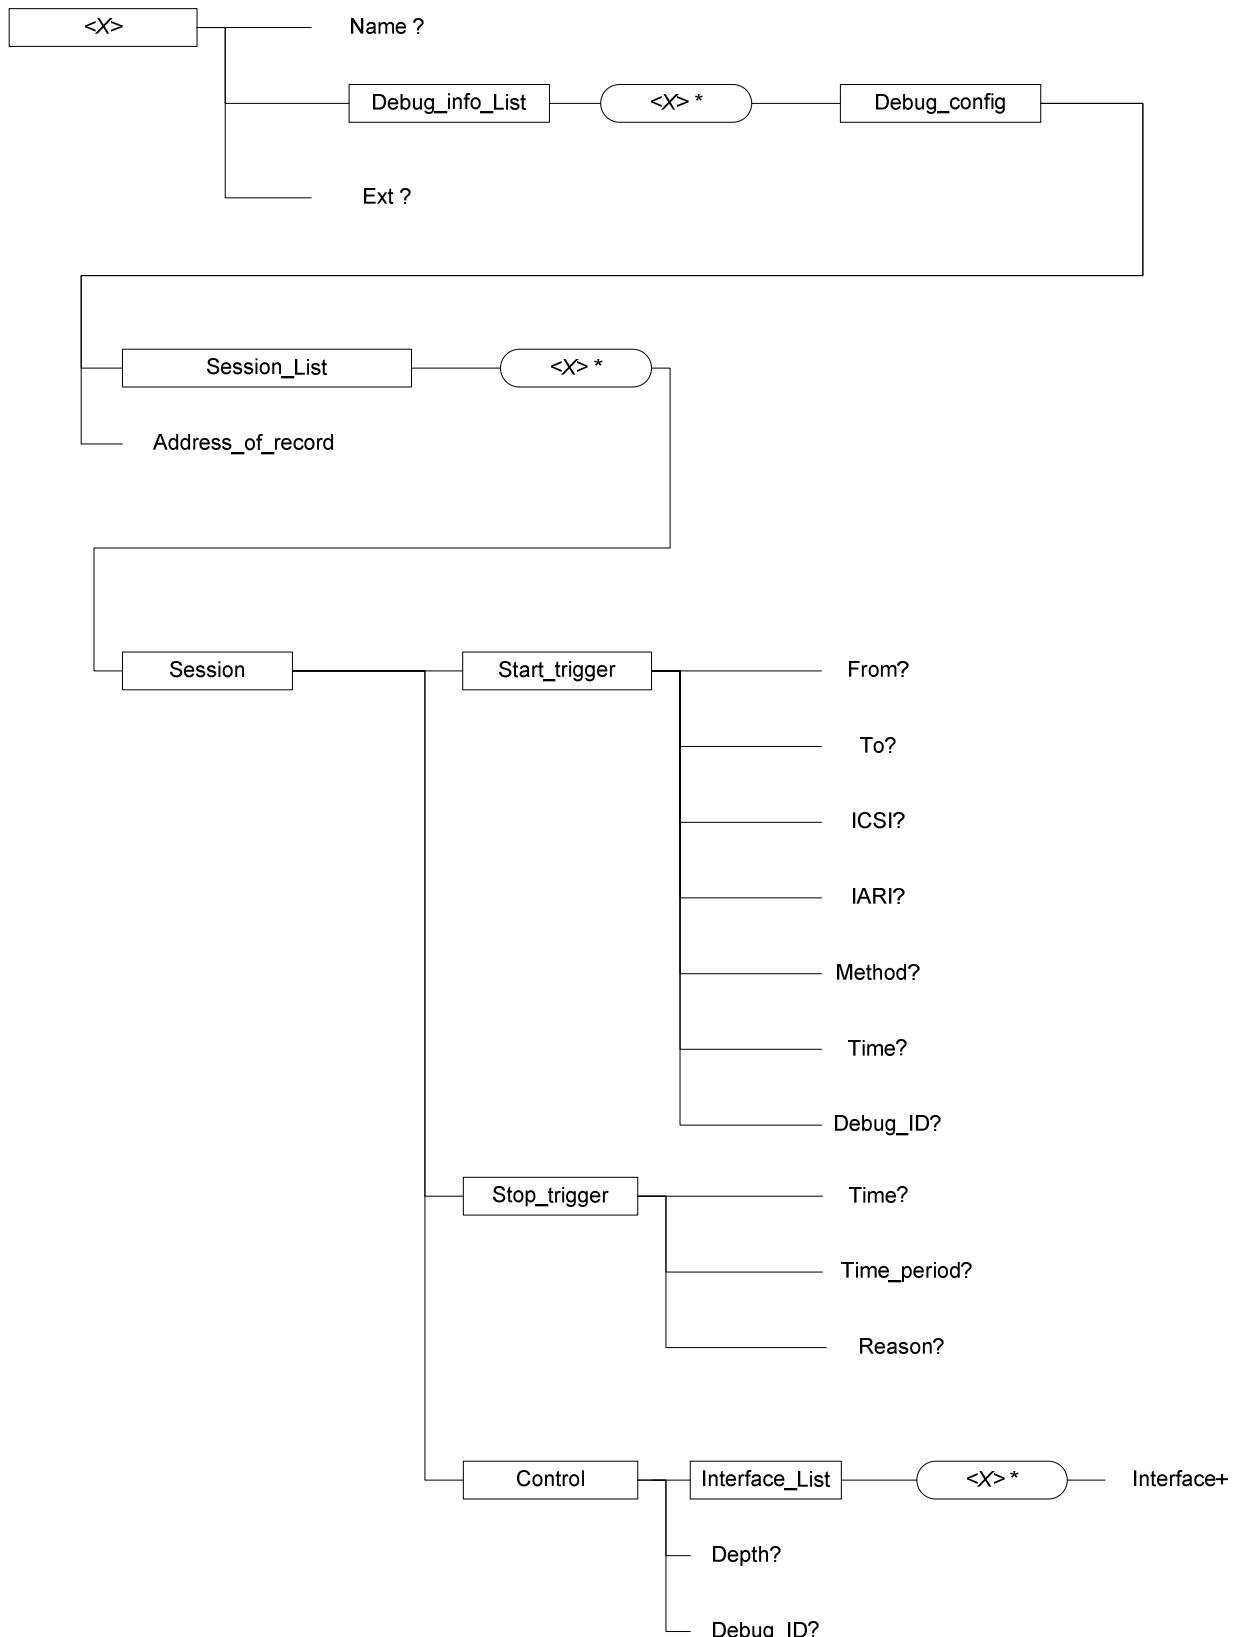

Figure 1: The 3GPP Service Level Tracing Management Object

5 Management object parameters

5.1 General

This clause describes the parameters for the IMS service level tracing management object.

5.2 Node: /<X>

This interior node acts as a placeholder for one or more accounts for a fixed node.

- Occurrence: OneOrMore
- Format: node
- Access Types: Get
- Values: N/A

The interior node is mandatory if the UE supports one or more IMS service level tracing capabilities. Support for a UE is defined by the related roles as defined by the related IMS service level tracing service, as listed in clause 4 of this specification.

NOTE: One node is normally used.

5.3 /<X>/Name

The Name leaf is a name for the 3GPP service level tracing settings.

- Occurrence: ZeroOrOne
- Format: chr
- Access Types: Get
- Values: <User displayable name>

5.4 /<X>/Debug_info_List/

The Debug-info_List node acts as a placeholder for control and configuration of IMS service level tracing.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: N/A

5.5 /<X>/Debug_info_List/<X>

This run-time node acts as a placeholder for one or more debugging configurations containing control and configuration of IMS service level tracing.

- Occurrence: One
- Format: node
- Access Types: Get

- Values: N/A

5.6 /<X>/Debug_info_List/<X>/Debug_config/

The Debug-config node acts as a placeholder for control and configuration of IMS service level tracing.

- Occurrence: ZeroOrMore
- Format: node
- Access Types: Get
- Values: N/A

5.7

/<X>/Debug_info_List/<X>/Debug_config/Address_of_record

The Address_of_record leaf represents one public user identity.

- Occurrence: One
- Format: chr
- Access Types: Get, Replace
- Values: <A public user identity>

This public user identity is the identity used to subscribe to SIP debugging configuration from the debug-event package.

The format of the public user identity is defined by 3GPP TS 23.003 [2].

EXAMPLE: sip: 234150999999999@ims.mnc015.mcc234.3gppnetwork.org

5.8 /<X>/Debug_info_List/<X>/Debug_config/Session_List/

The Session_List interior node is used to allow a reference to a list of different SIP sessions to be debugged.

- Occurrence: One
- Format: node
- Access Types: Get
- Values: N/A

5.9 /<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>

This run-time node acts as a placeholder for one or more descriptions of SIP sessions to be debugged.

- Occurrence: One
- Format: node
- Access Types: Get
- Values: N/A

5.10

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/Session

The Session interior node is used to allow a reference to events that start and stop logging of SIP signalling, and to control what is logged.

- Occurrence: One
- Format: node
- Access Types: Get, Replace
- Values: N/A

5.11

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/Session/Start_trigger/

The Start_trigger interior node is used to allow a reference to events that start logging of SIP signalling.

- Occurrence: One
- Format: node
- Access Types: Get, Replace
- Values: N/A

5.12

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/Session/Start_trigger/From

The From leaf represents an address in the From: SIP header field.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: N/A

5.13

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/Session/Start_trigger/To

The To leaf represents an address in the To: SIP header field.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: N/A

5.14

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Start_trigger/ICSI

The ICSI leaf represents an IMS communication service identifier.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: <an IMS communication service identifier>

The format of the IMS communication service identifier is defined by 3GPP TS 24.229 [5].

EXAMPLE: urn:urn-7:3gpp-service.ims.icsi.mmTEL

5.15

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Start_trigger/IARI

The IARI leaf represents an IMS application reference identifier.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: <an IMS application reference identifier>

The format of the IMS application reference identifier is defined by 3GPP TS 24.229 [5].

EXAMPLE: urn:urn-7:3gpp-application.ims.iari.mmTEL-app-

5.16

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Start_trigger/Method

The Method leaf represents a SIP method.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: <A SIP method name>

The SIP method names are listed in 3GPP TS 24.229 [5].

EXAMPLE: MESSAGE

5.17

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Start_trigger/Time

The Method leaf represents a SIP method.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: <A date and time at which trace logging shall begin in ISO 8601 extended format CCYY-MM-DDThh:mm:ss>

Date and time is described by the standard type 'dateTime' for an XML schema [4].

EXAMPLE: 2009-05-09T15:00:00-05:00 to indicate 3:00 pm on May 9th, 2009 for Eastern Standard Time, which is 5 hours behind Coordinated Universal Time (UTC).

5.18

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Start_trigger/Debug_ID

The Debug_ID leaf represents represents an identifier that allows trace logging to be correlated across IMS entities.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: <6-digit hexadecimal number>

The format of the trace reference is 3 octets in hexadecimal format, as defined by 3GPP TS 32.422 [6].

EXAMPLE: 7BA614

5.19

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Stop_trigger/

The Stop_trigger interior node is used to allow a reference to events that stop logging of SIP signalling.

- Occurrence: One
- Format: node
- Access Types: Get, Replace
- Values: N/A

5.20

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Stop_trigger/Time

The Time leaf represents a time at which SIP logging is stopped.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: <A date and time at which trace logging shall stop in ISO 8601 extended format CCYY-MM-DDThh:mm:ss>

Date and time is described by the standard type 'dateTime' for an XML schema [4].

EXAMPLE: 2009-05-09T15:00:00-05:00 to indicate 3:00 pm on May 9th, 2009 for Eastern Standard Time, which is 5 hours behind Coordinated Universal Time (UTC).

5.21

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/Session/Stop_trigger/Time_period

The Time_period leaf represents a time duration of logging SIP signalling. When the duration has expired, logging stops.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: <A time period, measured from starting trace logging, after which trace logging shall stop>

Time period is described by the standard type 'duration' for an XML schema [4].

5.22

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/Session/Stop_trigger/Reason

The Reason leaf represents a named event that causes logging SIP signalling to stop.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get, Replace
- Values: "dialog_established" or "session_end"

5.23

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/Session/Control/

The Control interior node is used to allow a reference to parameters that control what SIP signalling is logged.

- Occurrence: One
- Format: node
- Access Types: Get, Replace
- Values: N/A

5.24

**/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/
Session/Control/Interface_List/**

The Interface_List interior node is used to allow a reference to a list of different interfaces for which SIP signalling is to be logged.

- Occurrence: One
- Format: node
- Access Types: Get
- Values: N/A

5.25

**/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/
Session/Control/Interface_List/<X>/**

This run-time node acts as a placeholder for one or more identifiers of interfaces for which SIP signalling is to be logged.

- Occurrence: One
- Format: node
- Access Types: Get
- Values: N/A

5.26

**/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/
Session/Control/Interface_List/<X>/Interface**

The Interface leaf identifies an interfaces for which SIP signalling is to be logged.

- Occurrence: One
- Format: node
- Access Types: Get
- Values: <An IP address and port number of an interface>

5.27

**/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/
Session/Control/Depth**

The Depth leaf indicates which SIP requests and responses are to be logged.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get
- Values: "maximum" or "minimum"

5.28

/<X>/Debug_info_List/<X>/Debug_config/Session_List/<X>/ Session/Control/Debug_ID

The Debug_ID leaf contains an identifier that is common to all logged SIP requests and responses for one logging session.

- Occurrence: ZeroOrOne
- Format: node
- Access Types: Get
- Values: <MCC + MNC + a 4-digit hexadecimal number>.

EXAMPLE: 722330A4D7

Annex A (informative): Management object DDF

This DDF is the standardized minimal set. A vendor can define it's own DDF for the complete device. This DDF can include more features than this minimal standardized version.
