</table>

Note 1: The second entity of the "RF capability TDD" is not needed in the INTER RAT HANDOVER INFO message: if both TDD 3.84/7.68 Mcps and TDD 1.28 Mcps are supported, the "RF capability TDD 1.28 Mcps" entity shall be used for TDD 1.28 Mcps; the "UE power class" in the "RF capability TDD" entity shall apply for both chip rates.

Note 2: For 1.28 Mcps TDD, UE supporting E-DCH enhanced random access in CELL_FACH state and Idle mode always supports HS-PDSCH reception in CELL_FACH, CELL_PCH and URA_PCH state and CELL_FACH HS-DSCH DRX operation.

Note 3: Two non-adjacent carriers can be in the same band or in two different bands.

<td></td>
<td>Re-establishment timer</td>
<td></td>
<td>10.3.3.30</td>
</tr>
</tbody>
</table>

NOTE 1: Only the “MBMS Service ID” part of the MBMS service identity is signalled in this IE. The UE should consider that the “PLMN identity” part of the MBMS service identity equals the PLMN identity of an MBMS service with the same “MBMS Service ID” stored in the variable ACTIVATED_MBMS SERVICES. If there is no such MBMS service or more than one such MBMS service, the UE behaviour is unspecified.
### Condition

**Message**

This IE is optionally present in the RADIO BEARER SETUP and the SRNS RELOCATION INFO messages and not needed otherwise.

</tbody>
</table>

10.3.5.17 Void

10.3.5.18 Transport channel identity

This information element is used to distinguish transport channels. Transport channels of different type (RACH, USCH, FACH/PCH, DSCH or DCH) have separate series of identities. This also holds for uplink and downlink transport channel identities (i.e., for DCH). Depending on in which context a transport channel identity \( n \) that is sent, it will have different meaning.

<table>

### 10.3.6.13 Void

### 10.3.6.14 Void

### 10.3.6.15 Void
10.3.6.16 Default DPCH Offset Value

Indicates the default offset value within interleaving size at a resolution of 512 chip (1/5 slot) in FDD and a resolution of one frame in TDD to offset CFN in the UE. This is used to distribute discontinuous transmission periods in time and also to distribute NodeB-RNC transmission traffics in time. Even though the CFN is offset by DOFF, the start timing of the interleaving will be the timing that "CFN mod (interleaving size)"=0 (e.g. interleaving size: 2,4,8) in both UE and SRNC.

### Condition | Explanation
--- | ---
SF/2 | The information element is mandatory present if the UE has a compressed mode pattern sequence configured in variable TGPS_IDENTITY or included in the message including IE "Downlink DPCH info for each RL", which is using compressed mode method "SF/2". Otherwise the IE is not needed.

### Condition | Explanation
--- | ---
TxDiversity Mode | This IE is mandatory present if any TX Diversity Mode is used on the radio link, i.e. if STTD or "closed loop mode 1" is used on the radio link. Otherwise the IE is not needed.

</tr>
</tbody>
</table>
NOTE 1: The IE is not signalled when the "PICH info" is present in "Secondary CCPCH system information" in SIB5 and SIB6.

NOTE 2: HS-PDSCH channelisation codes are allocated contiguously from a signalled start code to a signalled stop code, and the allocation includes both the start and stop code. If a value of Start code = 16 and Stop code = 1 is signalled, a spreading factor of SF=1 shall be used for the HS-PDSCH resources.

NOTE 3: The timing between PICH and the paging associated HS-PDSCH is specified in [30]. UE should receives the HS-PDSCH based on the timing specification.

10.3.6.36e HS-SCCH system info

These parameters enable the UE to receive transmission on HSDPA cell resources, when the UE is not in CELL_DCH.

NOTE: for FDD only.

### 10.3.6.41 Midamble shift and burst type

**NOTE:** Only for TDD.

This information element indicates burst type and midamble allocation. Three different midamble allocation schemes exist:

- Default midamble: the midamble shift is selected by layer 1 depending on the associated channelisation code (DL and UL)

- Common midamble: the midamble shift is chosen by layer 1 depending on the number of channelisation codes (possible in DL only)

- UE specific midamble: a UE specific midamble is explicitly assigned (DL and UL).

3GPP TS 25.331 version 10.13.0 Release 10

898

ETSI TS 125 331 V10.13.0 (2013-10)

Available Signature

MD

Bit string(16)

E-AI Indication

MP

BOOLEAN

Preamble scrambling code
number

MD

Integer (0 ..
15)

Available Sub Channel Number

MD

Bit string(12)

ETSI

The default value is
the inverse of the
bitstring indicated in
the IE "Available
Signature" in the IE
"PRACH Info (for
RACH)" in the first
occurrence in list
"PRACH system
information list" in
SIB5 or SIB5bis.
Each bit indicates
availability for a
signature.
Each available
signature on the
AICH is associated
with one Common EDCH Resource
Configuration in the
“Common E-DCH
resource
configuration
information list”.
TRUE: E-AIs are in
use on the AICH.
FALSE: E-AIs are not
in use on the AICH.
The default value is
the value indicated in
the IE "Preamble
scrambling code
number" in the IE
"PRACH Info (for
RACH)" in the first
occurrence in list
"PRACH system
information list" in
SIB5 or SIB5bis.
Identification of
scrambling code, see
[28]
The default value is
the same value
indicated in the IE
"Available Sub
Channel Number" in
the IE "PRACH
system information
list" in the first
occurrence in list
"PRACH system
information list" in
SIB5 or SIB5bis.
Each bit indicates
availability for a
subchannel, where
the subchannels are
numbered
"subchannel 0" to
"subchannel 11". The
value 1 of a bit
indicates that the
corresponding
subchannel is
available and the
value 0 indicates that
it is not available.

### Condition

<table>
<thead>
<tr>
<th>Condition</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIB5-MD</td>
<td>The information element is present only in SIB 5 and in SIB5bis. In SIB 5 and in SIB 5bis it is mandatory with default.</td>
</tr>
<tr>
<td>Add-RACH-TFS</td>
<td>The information element is MP if the IE &quot;Additional RACH TFS for CCCH&quot; is included. Otherwise the information element is not needed.</td>
</tr>
</tbody>
</table>

**NOTE:** If the setting of the PRACH information results in that a combination of a signature, preamble scrambling code and subchannel corresponds to a RACH with different TFS and/or TFCS, then for that combination only the TFS/TFCS of the PRACH listed first is valid, where PRACHs listed in System Information Block type 5 or 5bis shall be counted first.

### 10.3.6.56 Predefined PhyCH configuration

This information element concerns a pre-defined configuration of physical channel parameters.

NOTE 1: HS-PDSCH channelisation codes are allocated contiguously from a signalled start code to a signalled stop code, and the allocation includes both the start and stop code. If a value of Start code = 16 and Stop code = 1 is signalled, a spreading factor of SF=1 shall be used for the HS-PDSCH resources.

**Condition** | **Explanation**
--- | ---
UL_E-DCH | This IE is mandatory present if IE "uplink transport channel type" is equal to "E-DCH". Otherwise it is not needed.

### 10.3.6.123 E-RGCH Info for Common E-DCH

Includes the configuration for the E-DCH related Relative Grant Channel to be used with common E-DCH in CELL_FACH and Idle mode. The E-RGCH is using the same channelisation code as configured for the E-HICH channel (see subclause 10.3.6.124).
### 10.3.6.124 E-HICH Info for Common E-DCH

Includes the configuration for the E-DCH related HARQ Acknowledgement Indicator Channel.

<table>
<thead>
<tr>
<th>Information Element/Group name</th>
<th>Need</th>

<td></td>
<td>REL-8</td>
</tr>
<tr>
<td>Signature Sequence</td>
<td>MD</td>
<td></td>
<td>Integer(0..39)</td>
<td>NOTE1</td>
<td>REL-8</td>
</tr>
</tbody>
</table>

**NOTE1:** The default value is defined by:

\[ \text{Signature Sequence} = (\text{offset} + \text{common E-DCH resource list position}) \mod 40 \]

where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero.

"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence.

10.3.7.6 Cell synchronisation information

The IE "Cell synchronisation information" contains the OFF and Tm as defined in [7] and [8] and the four most significant bits of the difference between the 12 least significant bits of the RLC Transparent Mode COUNT-C in the UE and the SFN of the measured cell. It is notified to SRNC by Measurement Report message or Measurement Information Element in other RRC messages.

<td>MP</td>
<td></td>
<td>Integer (0..1023)</td>
<td>Last ARFCN value in the set, NOTE 3</td>
<td>REL-8</td>
</tr>
</tbody>
</table>

NOTE 1: Let the IE "Starting ARFCN" = s. The complete set of (n+1) ARFCN values is defined as: \( \{s, ((s + d) \mod 1024), ((s + 2d) \mod 1024) ... ((s + nd) \mod 1024)\} \).

NOTE 2: Bitmap representing the following ARFCN values in the set. Let the IE "Starting ARFCN" = s. The first bit of the first octet in the bitmap corresponds to ARFCN = ((s + 1) mod 1024), the next bit to the ARFCN = ((s + 2) mod 1024), and so on. If the bitmap consist of N octets, the last bit of octet N corresponds to ARFCN = ((s + 8*N) mod 1024). The complete set of ARFCN values consists of ARFCN = s and the ARFCN values, where the corresponding bit in the bitmap is set to "1".

NOTE 3: Let the IEs "Starting ARFCN" = s and "Ending ARFCN" = t. The complete set of ARFCN values is defined as: \( \{s, ((s + 1) \mod 1024), ((s + 2) \mod 1024) ... ((t - 1) \mod 1024), t\} \).
### 10.3.7.10 HCS Cell re-selection information

</tbody>
</table>

**Condition** | **Explanation**
---|---
Message | The IE is optionally present in the MEASUREMENT CONTROL and in the SRNS RELOCATION INFO messages, otherwise the IE is not needed.

**NOTE 1:** The UTRAN may choose not to use the "Inter-RAT cell info indication" value "0" in the MEASUREMENT CONTROL message, to distinguish that case from those cases where the UE receives the IE "Inter-RAT cell info list" in SIB11 or SIB12.

**NOTE 2:** In case of an SRNS relocation, if the UE has been sent the "Inter-RAT cell info indication" in the MEASUREMENT CONTROL message and the IE "Inter-RAT cell info list" is included in the SRNS RELOCATION INFO sent from the source RNC to the target RNC, the "Inter-RAT cell info indication" should be included in the IE "Inter-RAT cell info list".

**NOTE 3:** If the UTRAN configures a UE with a "Inter-RAT cell info list" containing a set of GSM cells where one or more cell(s) belong to DCS 1800 band and one or more cell(s) belong to PCS 1900 band, the UE behaviour is unspecified.

**10.3.7.30 Inter-RAT measurement reporting criteria**

The triggering of the event-triggered reporting for an inter-RAT measurement. All events concerning inter-RAT measurements are labelled 3x where x is a,b,c, ...

Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold and the estimated quality of the other system is above a certain threshold.

Event 3b: The estimated quality of the other system is below a certain threshold.

Event 3c: The estimated quality of the other system is above a certain threshold.

Event 3d: Change of best cell in other system.
### Parameters required for each event

</tbody>
</table>
**10.3.7.39 Intra-frequency measurement reporting criteria**

The triggering of the event-triggered reporting for an intra-frequency measurement. All events concerning intra-frequency measurements are labelled 1x where x is a, b, c,....

**Event 1a:** A Primary CPICH enters the Reporting Range (FDD only).

**Event 1b:** A Primary CPICH leaves the Reporting Range (FDD only).

**Event 1c:** A Non-active Primary CPICH becomes better than an active Primary CPICH (FDD only).

**Event 1d:** Change of best cell (FDD only).

**Event 1e:** A Primary CPICH becomes better than an absolute threshold (FDD only).

**Event 1f:** A Primary CPICH becomes worse than an absolute threshold (FDD only).

**Event 1g:** Change of best cell in TDD.

**Event 1h:** Timeslot ISCP below a certain threshold (TDD only).

**Event 1i:** Timeslot ISCP above a certain threshold (TDD only).

**Event 1j:** A Non-active E-DCH but active DCH Primary CPICH becomes better than an active E-DCH Primary CPICH (FDD only).

### 10.3.7.44 Measured results

Contains the measured results of the quantity indicated optionally by Reporting Quantity in Measurement Control. "Measured results" can be used for both event trigger mode and periodical reporting mode. For intra-frequency and
inter-frequency measurements the list shall be in the order of the value of the measurement quantity (the first cell shall be the best cell). The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP". For intra-frequency measurements, the ordering shall be applied to all cells included in the IE "Measured results". For inter-frequency measurements, the ordering shall be applied to all cells on the same frequency included in the IE "Measured results". For other measurements, the order of reported measurement objects is not specified.

**10.3.7.45 Measured results on RACH**

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non-used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP".

10.3.7.60 Reference time difference to cell

In the System Information message, the reference time difference to cell indicates the timing difference between the primary CCPCH of the current cell and the primary CCPCH of a neighbouring cell.

In the Measurement Control message, the reference time difference to cell indicates the timing difference between UE uplink transmission timing and the primary CCPCH of a neighbouring cell.

### 10.3.7.80 UE internal measurement reporting criteria

The triggering of the event-triggered reporting for a UE internal measurement. All events concerning UE internal measurements are labelled 6x where x is a, b, c,…. In TDD, the events 6a - 6d are measured and reported on timeslot basis.

Event 6a: The UE Transmitted Power becomes larger than an absolute threshold

Event 6b: The UE Transmitted Power becomes less than an absolute threshold

Event 6c: The UE Transmitted Power reaches its minimum value

Event 6d: The UE Transmitted Power reaches its maximum value

Event 6e: The UE RSSI reaches the UEs dynamic receiver range

Event 6f (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

Event 6f (1.28 Mcps TDD): The time difference indicated by $T_{ADV}$ becomes larger than an absolute threshold

Event 6g: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

10.3.7.88b  UE positioning GANSS reference measurement information

This IE provides reference code and Doppler measurement information of visible satellites of a GNSS constellation. The information enables fast acquisition of the GNSS signals in UE-assisted GNSS positioning. If the IE “UE positioning GPS acquisition assistance” is not included in IE "UE positioning measurement", the Satellite Information is valid at the time as given in the IE "UE positioning GNSS reference time" IE. I.e., if IE "UE positioning GNSS reference measurement information” is included in IE “UE positioning GNSS assistance data” and IE "UE positioning GPS acquisition assistance” is not included in IE "UE positioning measurement”, the IE "UE positioning GNSS reference time” shall also be included. If the IE "UE positioning GPS acquisition assistance” is included in IE "UE positioning measurement”, the IE "GPS TOW msec” and IE "UTRAN GPS reference time” included in IE "UE positioning GNSS reference measurement information” is also valid for the Satellite information in IE "UE positioning GNASS reference measurement information”.

### 10.3.7.88d DGANSS Signal Id

The DGANSS signal Id refers to the signal for which differential corrections or data bit assistance are required. It depends on the GANSS ID. Each bit refers to a particular signal. When the bit is set to 1, this means that the differential corrections or data bit assistance are requested for this particular signal. Differential corrections or data bit assistance can be requested for several signals using the bit string.

For a GANSS ID referring to Galileo, the definition and the unit of the elements are provided in [61].

10.3.7.97d  UE positioning GANSS additional UTC models

This element contains several sets of parameters needed to relate GNSS system time to Universal Time Coordinate (UTC), as defined in [68, 69, 70, 71, 72, 73]. Only one parameter set can be included in one UE positioning GANSS additional UTC models and which set of parameters to include depends on the GANSS-ID and UE capabilities.

The UTC time standard, UTC(k), is GNSS specific. E.g., if GANSS ID indicates QZSS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate QZST to UTC(NICT). If GANSS ID indicates Modernized GPS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GPS system time to UTC(USNO). If GANSS ID indicates GLONASS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GLONASS system time to UTC(RU). If GANSS ID indicates SBAS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate SBAS network time for the SBAS indicated by SBAS ID to the UTC standard defined by the UTC Standard ID.

<table>
<thead>
<tr>
<th>Information Element/Group name</th>
<th>Need</th>
<th>Multi</th>
<th>Type and Reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Std Resolution</td>
<td>MP</td>
<td></td>
<td>Bit string(2)</td>
<td>Std Resolution field includes the resolution used in Std of OTDOA Measurements field.</td>
</tr>
</tbody>
</table>
### Information Element/Group name

<table>
<thead>
<tr>
<th>Need</th>
<th>Multi</th>
<th>Type and Reference</th>
<th>Semantics description</th>
</tr>
</thead>
</table>
|      | MP    | Bit string(3)      | Encoding on two bits as follows:
|      |       |                    | '00' 10 meters         |
|      |       |                    | '01' 20 meters         |
|      |       |                    | '10' 30 meters         |
|      |       |                    | '11' Reserved          |

#### Number of OTDOA Measurements

- **The 'Number of OTDOA measurements' field indicates how many OTDOA measurements have been used in the UE to determine the sample standard deviation of the measurements.**
- **Following 3 bit encoding is used:**
  - '001' 5-9
  - '010' 10-14
  - '011' 15-24
  - '100' 25-34
  - '101' 35-44
  - '110' 45-54
  - '111' 55 or more

- **Special case:** '000': In this case the field 'Std of OTDOA measurements' contains the std of the reported SFN-SFN std value = \( \sqrt{E[(x-\mu)^2]} \), where \( x \) is the reported value and \( \mu = E[x] \) is the expectation value (i.e. the true value) of \( x \). This std can be used irrespective of the number of measurements and reporting of the number of measurements is not needed. Also other measurements such as Ec/No or Rx levels can be utilised in this case to evaluate the 'Std of OTDOA measurements' reported in this IE.
### 10.3.7.108 UE positioning OTDOA reference cell info

This IE defines the cell used for time references in all OTDOA measurements.

| System Information Type 15.8    |

10.3.8.19  SIB data fixed

Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with fixed length (segments filling an entire transport block).

<table>
<thead>
<tr>
<th>Information Element/Group name</th>
<th>Need</th>
<th>Multi</th>
<th>Type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIB data fixed</td>
<td>MP</td>
<td></td>
<td>Bit string (222)</td>
<td>The first bit contains the first bit of the segment.</td>
</tr>
</tbody>
</table>

10.3.8.20  SIB data variable

Contains either a complete system information block or a segment of a system information block. Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with variable length. The system information blocks are defined in clauses 10.2.48.8.1 to 10.2.48.8.18.

<table>
<thead>
<tr>
<th>Information Element/Group name</th>
<th>Need</th>
<th>Multi</th>
<th>Type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIB data variable</td>
<td>MP</td>
<td></td>

<td>The first bit contains the first bit of the segment.</td>
</tr>
</tbody>
</table>

10.3.8.20a  SIB occurrence identity

This information element identifies a SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis. For System Information Block type 15.2, 15.2bis and 15.2ter, this identity is assigned to the visible satellite only. Unused identities are claimed by newly rising satellites.

<table>
<thead>
<tr>
<th>Information Element/Group name</th>

<td>REL-6</td>
</tr>
</tbody>
</table>

>Scheduling period MD Enumerate d (32, 64, 128, 256, 512, 1024) The period, in number of frames, between MBMS scheduling messages (MSCH_REP). Default value is the value included in the MBMS GENERAL INFORMATION message. REL-6

>Scheduling offset MD Integer (0..(MSCH _REP-1)) The position of MBMS scheduling messages relative to timing of the corresponding cell (MSCH_OFF). Default value is the value included in the MBMS GENERAL INFORMATION message. REL-6

>RNC info MD RLC info MBMS 10.3.4.23a Default value is the one included in the MBMS GENERAL INFORMATION message. REL-6

TCTF presence OP Enumerate d (FALSE) By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent. REL-6

10.3.9a.17 Network Standard Time Information

NOTE: Only for 1.28Mcps TDD

This IE includes information about the Network Standard Time and a related SFN value. If Correlative SFN is absent, the default Correlative SFN is equal to zero, this means the "Network Standard Time" indicate the standard time value when SFN equal zero.

The "Network Standard Time" occupied 40 bits; the format refers to "ETSI EN 300 468 V1.5.1 (2003-05)".
### 10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

<table>

10.3.11  Void
11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in [14]. PDU and IE definitions are grouped into separate ASN.1 modules.

11.0 General

Some messages and/or IEs may include one or more IEs with name "dummy" that are included only in the ASN.1. The UE should avoid sending information elements that are named "dummy" to UTRAN. Likewise, UTRAN should avoid sending IEs with name "dummy" to the UE. If the UE anyhow receives an information element named "dummy", it shall ignore the IE and process the rest of the message as if the IE was not included.

NOTE: An IE with name "dummy" concerns an information element that was (erroneously) included in a previous version of the specification and has been removed by replacing it with a dummy with same type.

The UE shall only include the "variable length extension container" when it sends a non critical extension that according to this specification shall be transferred within this container.

If the abstract syntax of an IE is defined using the ASN.1 type "BIT STRING", and this IE corresponds to a functional IE definition in tabular format, in which the significance of bits is semantically defined, the following general rule shall be applied:

The bits in the ASN.1 bit string shall represent the semantics of the functional IE definition in decreasing order of bit significance;

- with the first (or leftmost) bit in the bit string representing the most significant bit; and
- with the last (or rightmost) bit in the bit string representing the least significant bit.

11.1 General message structure

Measuring RACH results:

- **MeasuredResultsOnRACH-v7g0ext**: A sequence containing:
  - `currentCell-DeltaRSCP`: The current cell's Delta RSCP (optional).
  - `monitoredCellRACH-List-v7g0ext`: A list of monitored cell RACH results (optional).

---

**MeasurementCommand**: A choice that can be:
- **setup**: MeasurementType
- **modify**: A sequence containing:
  - `measurementType`: MeasurementType (optional)
- **release**: NULL

**MeasurementCommand-r4**, **MeasurementCommand-r6**, **MeasurementCommand-r7**, **MeasurementCommand-r8**, **MeasurementCommand-r9**, **MeasurementCommand-r10** follow the same structure as **MeasurementCommand**, with the `measurementType` defined for each version:
- **MeasurementCommand-r4**: MeasurementType-r4
- **MeasurementCommand-r6**: MeasurementType-r6
- **MeasurementCommand-r7**: MeasurementType-r7
- **MeasurementCommand-r8**: MeasurementType-r8
- **MeasurementCommand-r9**: MeasurementType-r9
- **MeasurementCommand-r10**: MeasurementType-r10

---

**MeasurementControlSysInfo**: A sequence containing:
- `interFreqCellIndication-SIB11`: Integer (0..1)
- `interFreqCellIndication-SIB12`: Integer (0..1)
- `interFreqRACHRepCellsList`: InterFreqRACHRepCellsList
