Important notice

The present document can be downloaded from: <u>https://www.etsi.org/standards-search</u>

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status. Information on the current status of this and other ETSI documents is available at <u>https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx</u>

If you find errors in the present document, please send your comment to one of the following services: https://portal.etsi.org/People/CommiteeSupportStaff.aspx

If you find a security vulnerability in the present document, please report it through our Coordinated Vulnerability Disclosure Program: https://www.etsi.org/standards/coordinated-vulnerability-disclosure

Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.

The content of the PDF version shall not be modified without the written authorization of ETSI. The copyright and the foregoing restriction extend to reproduction in all media.

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECTTM, **PLUGTESTSTM**, **UMTSTM** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPPTM** and **LTETM** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2MTM** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**[®] and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under https://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

shall indicates a mandatory requirement to do something

shall not indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

should	indicates a recommendation to do something
should not	indicates a recommendation not to do something
may	indicates permission to do something
need not	indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

can	indicates that something is possible
cannot	indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

will	indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
will not	indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
might	indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

3GPP TS 28.105 version 17.3.0 Release 17

6

might not indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

- is (or any other verb in the indicative mood) indicates a statement of fact
- is not (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

1 Scope

The present document specifies the Artificial Intelligence / Machine Learning (AI/ML) management capabilities and services for 5GS where AI/ML is used, including management and orchestration (e.g. MDA, see 3GPP TS 28.104 [2]) and 5G networks (e.g. NWDAF, see 3GPP TS 23.288 [3]).

The present document also describes the functionality and service framework for AI/ML management.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

ML entity: an entity that is either an ML model or contains an ML model and ML model related metadata, it can be managed as a single composite entity.

NOTE 1: Metadata may include e.g. the applicable runtime context for the ML model.

AI decision entity: an entity that applies a non-ML based logic for making decisions that can be managed as a single composite entity.

ML model: mathematical algorithm that can be "trained" by data and human expert input as examples to replicate a decision an expert would make when provided that same information.

ML model training: capabilities of an ML training function to take data, run it through an ML model, derive the associated loss and adjust the parameterization of that ML model based on the computed loss.

ML training: capabilities and associated end-to-end processes to enable an ML training function to perform ML model training (as defined above).

ML training function: a function with ML training capabilities; it is also referred to as MLT function.

AI/ML inference function: a function that employs an ML model and/or AI decision entity to conduct inference.

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and TS 28.533 [15]. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1] and TS 28.533 [15].

AI Artificial Intelligence ML Machine Learning

4 Concepts and overview

4.1 Overview

The AI/ML techniques and relevant applications are being increasingly adopted by the wider industries and proved to be successful. These are now being applied to telecommunication industry including mobile networks.

Although AI/ML techniques in general are quite mature nowadays, some of the relevant aspects of the technology are still evolving while new complementary techniques are frequently emerging.

The AI/ML techniques can be generally characterized from different perspectives including the followings:

- Learning methods

NOTE 2: ML training capabilities may include interaction with other parties to collect and format the data required for ML model training.

The learning methods include supervised learning, semi-supervised learning, unsupervised learning and reinforcement learning. Each learning method fits one or more specific category of inference (e.g. prediction), and requires specific type of training data. A brief comparison of these learning methods is provided in table 4.1-1.

Table 4.1-1: Comparison of Learning methods

	Supervised learning	Semi-supervised learning	Unsupervised learning	Reinforcement learning		
Category of inference	Regression	Regression	Association,	Reward-based		
	(numeric),	(numeric),	Clustering	behaviour		
	classification	classification				
Type of training data	Labelled data (Note)	Labelled data	Unlabelled data	Not pre-defined		
		(Note), and				
		unlabelled data				
NOTE: The labelled da	NOTE: The labelled data means the input and output parameters are explicitly labelled for each training data					
example.				-		

- Learning complexity:

- As per the learning complexity, there are Machine Learning (i.e. basic learning) and Deep Learning.

- Learning architecture

- Based on the topology and location where the learning tasks take place, the AI/ML can be categorized to centralized learning, distributed learning and federated learning.

- Learning continuity

- From learning continuity perspective, the AI/ML can be offline learning or continual learning.

Artificial Intelligence/Machine Learning (AI/ML) capabilities are used in various domains in 5GS, including management and orchestration (e.g. MDA, see 3GPP TS 28.104 [2]) and 5G networks (e.g. NWDAF, see 3GPP TS 23.288 [3]).

The AI/ML-inference function in the 5GS uses the ML model and/or AI decision entity for inference.

Each AI/ML technique, depending on the adopted specific characteristics as mentioned above, may be suitable for supporting certain type/category of use case(s) in 5GS.

To enable and facilitate the AI/ML capabilities with the suitable AI/ML techniques in 5GS, the ML model and AI/ML inference function need to be managed.

The present document specifies the AI/ML management related capabilities and services, which include the followings:

- ML training.

5 AI/ML management functionality and service framework

5.1 Functionality and service framework for ML training

An ML training Function playing the role of ML training MnS producer, may consume various data for ML training purpose.

As illustrated in Figure 5.1-1 the ML training capability is provided via ML training MnS in the context of SBMA to the authorized consumer(s) by ML training MnS producer.

Figure 5.1-1: Functional overview and service framework for ML training

The internal business logic of ML training leverages the current and historical relevant data, including those listed below to monitor the networks and/or services where relevant to the ML model, prepare the data, trigger and conduct the training:

- Performance Measurements (PM) as per 3GPP TS 28.552 [4], 3GPP TS 32.425 [5] and Key Performance Indicators (KPIs) as per 3GPP TS 28.554 [6].
- Trace/MDT/RLF/RCEF data, as per 3GPP TS 32.422 [7] and 3GPP TS 32.423 [8].
- QoE and service experience data as per 3GPP TS 28.405 [9] and 3GPP TS 28.406 [10].
- Analytics data offered by NWDAF as per 3GPP TS 23.288 [3].
- Alarm information and notifications as per 3GPP TS 28.532 [11].
- CM information and notifications.
- MDA reports from MDA MnS producers as per 3GPP TS 28.104 [2].
- Management data from non-3GPP systems.
- Other data that can be used for training.

6 AI/ML management use cases and requirements

6.1 General

The use cases and requirements for AI/ML management are specified in the following clauses.

6.2 ML training

6.2.1 Description

In operational environment before the ML entity is deployed to conduct inference, the ML model associated with the ML entity needs to be trained (e.g. by ML training function which may be a separate or an external entity to the AI/ML inference function).

NOTE: In the present document, ML entity training refers to ML model training associated with an ML entity.

The ML Entity is trained by the ML training (MLT) MnS producer, and the training can be triggered by request(s) from one or more MLT MnS consumer(s), or initiated by the MLT MnS producer (e.g. as result of model evaluation).

6.2.2 Use cases

6.2.2.1 ML training requested by consumer

The ML training capabilities are provided by an MLT MnS producer to one or more consumer(s).

Figure 6.2.2.1-1: ML training requested by MLT MnS consumer

The ML training may be triggered by the request(s) from one or more MLT MnS consumer(s). The consumer may be for example a network function, a management function, an operator, or another functional differentiation To trigger an ML training, the MLT MnS consumer requests the MLT MnS producer to train the ML model. In the ML training request, the consumer should specify the inference type which indicates the function or purpose of the ML entity, e.g. CoverageProblemAnalysis. The MLT MnS producer can perform the training according to the designated inference type. The consumer may provide the data source(s) that contain(s) the training data which are considered as inputs candidates for training. To obtain the valid training outcomes, consumers may also designate their requirements for model performance (e.g. accuracy, etc) in the training request.

The MLT MnS producer provides a response to the consumer indicating whether the request was accepted.

If the request is accepted, the MLT MnS producer decides when to start the ML training with consideration of the request(s) from the consumer(s). Once the training is decided, the producer performs the followings:

- selects the training data, with consideration of the consumer provided candidate training data. Since the training data directly influences the algorithm and performance of the trained ML Entity, the MLT MnS producer may examine the consumer's provided training data and decide to select none, some or all of them. In addition, the MLT MnS producer may select some other training data that are available;
- trains the ML entity using the selected training data; and
- provides the training results (including the location of the trained ML model or entity, etc.) to the MLT MnS consumer(s).

6.2.2.2 ML training initiated by producer

The ML training may be initiated by the MLT MnS producer, for instance as a result of performance evaluation of the ML model, based on feedback or new training data received from the consumer, or when new training data which are not from the consumer describing the new network status/events become available.

When the MLT MnS producer decides to start the ML training, the producer performs the followings:

- selects the training data;
- trains the ML entity using the selected training data; and
- provides the training results (including the location of the trained ML entity, etc.) to the MLT MnS consumer(s) who have subscribed to receive the ML training results.

6.2.2.3 ML model and and ML entity selection

For a given machine learning-based use case, different entities that apply the respective ML model or AI/ML inference function may have different inference requirements and capabilities. For example, one consumer with specific responsibility and wish to have an AI/ML inference function supported by an ML model or entity trained for city central business district where mobile users move at speeds not exceeding 30 km/hr. On the other hand, another consumer, for the same use case may support a rural environment and as such wishes to have an ML model and AI/ML inference function fitting that type of environment. The different consumers need to know the available versions of ML entities, with the variants of trained ML models or entities and to select the appropriate one for their respective conditions.

Besides, there is no guarantee that the available ML models/entities have been trained according to the characteristics that the consumers expect. As such the consumers need to know the conditions for which the ML models or ML entities have been trained to then enable them to select the models that are best fit to their conditions and needs.

The models that have been trained may differ in terms of complexity and performance. For example, a generic comprehensive and complex model may have been trained in a cloud-like environment but when such a model cannot be used in the gNB and instead, a less complex model, trained as a derivative of this generic model, could be a better candidate. Moreover, multiple less complex models could be trained with different level of complexity and performance which would then allow different relevant models to be delivered to different network functions depending on operating conditions and performance requirements. The network functions need to know the alternative models available and interactively request and replace them when needed and depending on the observed inference-related constraints and performance requirements.

6.2.2.4 Managing ML training processes

This machine learning capability relates to means for managing and controlling ML model/entity training processes.

To achieve the desired outcomes of any machine learning relevant use-case, the ML model applied for such analytics and decision making, needs to be trained with the appropriate data. The training may be undertaken in managed function or in a management function.

In either case, the network (or the OAM system thereof) not only needs to have the required training capabilities but needs to also have the means to manage the training of the ML models/entities. The consumers need to be able to interact with the training process, e.g. to suspend or restart the process; and also need to manage and control the requests related to any such training process.

6.2.2.5 Handling errors in data and ML decisions

Traditionally, the ML models/entities (e.g. ML entity1 and ML entity2 in figure 6.2.2.5-1) are trained on good quality data, i.e. data that were collected correctly and reflected the real network status to represent the expected context in which the ML entity is meant to operate. Good quality data is void of errors, such as:

- Imprecise measurements, with added noise (such as RSRP, SINR, or QoE estimations).
- Missing values or entire records, e.g. because of communication link failures.
- Records which are communicated with a significant delay (in case of online measurements).

Without errors, an ML entity can depend on a few precise inputs, and don't need to exploit the redundancy present in the training data. However, during inference, the ML entity is very likely to come across these inconsistencies. When this happens, the ML entity shows high error in the inference outputs, even if redundant and uncorrupted data are available from other sources.

Figure 6.2.2.5-1: The propagation of erroneous information

As such the system needs to account for errors and inconsistencies in the input data and the consumers should deal with decisions that are made based on such erroneous and inconsistent data. The system should:

- 1) enable functions to undertake the training in a way that prepares the ML entities to deal with the errors in the training data, i.e. to identify the errors in the data during training;
- 2) enable the MLT MnS consumers to be aware of the possibility of erroneous input data that are used by the ML entity.

6.2.3 Requirements for ML training

Requirement label	Description	Related use case(s)
REQ-ML_TRAIN-FUN-01	The MLT MnS producer shall have a capability allowing the	ML training requested
	consumer to request ML training.	by consumer (clause
		6.2.2.1)
REQ- ML_TRAIN-FUN-02	The MLT MnS producer shall have a capability allowing the	ML training requested
	consumer to specify the data sources containing the	by consumer (clause
	candidate training data for ML training.	6.2.2.1)
REQ- ML_TRAIN-FUN-03	The MLT MnS producer shall have a capability allowing the	ML training requested
	consumer to specify the inference type of the ML model entity	by consumer (clause
	to be trained.	6.2.2.1)
REQ- ML_TRAIN-FUN-04	The MLT MnS producer shall have a capability to provide the	ML training requested
	training result (including the location of the trained ML model	by consumer (clause
	entity) to the consumer.	6.2.2.1), /ML training
		initiated by producer
		(clause 6.2.2.2)
REQ-ML_SELECT-01	3GPP management system shall have the capability to enable	ML model and ML
	an authorized consumer to discover the characteristics of	entity selection (clause
	available models including the contexts under which each of the models was trained.	6.2.2.3)
REQ-ML_SELECT-02	3GPP management system shall have the capability to enable	ML models and ML
REQ-IVIL_SELECT-02	an authorized consumer to select an ML model.	entity selection (clause
		6.2.2.3)
REQ-ML_SELECT-03	The MLT MnS producer shall have the capability to enable an	ML training requested
	authorized consumer to request for a model to be trained to	by consumer (clause
	satisfy the consumer's expectations.	6.2.2.1), ML model
		and ML entity selection
		(clause 6.2.2.3)
REQ-ML_SELECT-04	3GPP management system shall have the capability to enable	ML model and ML
	an authorized consumer to request for information and be	entity selection (clause
	informed about the available alternative models of differing	6.2.2.3)
	complexity and performance.	,
REQ-ML_SELECT-05	3GPP management system shall have the capability to enable	ML model and ML
	an authorized consumer to request one of the known or	entity selection (clause
	available alternative models of differing complexity and	6.2.2.3)
	performance to be used for inference.	

Table 6.2.3-1

Requirement label	Description	Related use case(s)
REQ-ML_SELECT-06	The 3GPP management system shall have a capability to provide a selected ML model/entity to the consumer.	ML model and ML entity selection (clause 6.2.2.3)
REQ-ML_TRAIN- MGT-01	The MLT MnS producer shall have a capability allowing an authorized consumer to manage and configure one or more requests for the training of specific ML models or ML entities, e.g. to modify the characteristics of the request or to delete a request.	ML training requested by consumer (clause 6.2.2.1),Managing ML Training Processes (clause 6.2.2.4)
REQ-ML_TRAIN- MGT-02	The MLT MnS producer shall have a capability allowing an authorized consumer to manage and configure one or more training processes, e.g. to start, suspend or restart the training; or to adjust the training conditions and/or characteristics.	ML training requested by consumer (clause 6.2.2.1), Managing ML training processes (clause 6.2.2.4)
REQ-ML_TRAIN- MGT-03	3GPP management system shall have the capability to enable an authorized consumer (e.g. the function/entity different from the function that generated a request for ML model/entity training) to request for a report on the outcomes of a specific training instance.	Managing ML training processes (clause 6.2.2.4)
REQ-ML_TRAIN- MGT-04	3GPP management system shall have the capability to enable an authorized consumer to define the reporting characteristics related to a specific training request or training instance.	Managing ML training processes (clause 6.2.2.4)
REQ-ML_TRAIN- MGT-05	3GPP management system shall have the capability to enable the MLT function to report to any authorized consumer about specific ML Training process and/or report about the outcomes of any such ML training process.	Managing ML training processes (clause 6.2.2.4)
REQ-ML_ERROR-01	The 3GPP management system shall enable an authorized consumer of data services (e.g. an MLT function) to request from a producer of data services a Value Quality Score of the data, which is the numerical value that represents the dependability/quality of a given observation and measurement type.	Handling errors in data and ML decisions (clause 6.2.2.5)
REQ-ML_ERROR-02	The 3GPP management system shall enable an authorized consumer of AI/ML decisions (e.g. a controller) to request ML decision confidence score which is the numerical value that represents the dependability/quality of a given decision generated by an AI/ML-inference function.	Handling errors in data and ML decisions (clause 6.2.2.5)
REQ-ML_ERROR-03	The 3GPP management system shall enable a producer of data services (e.g. a gNB) to provide to an authorized consumer (e.g. an MLT function) a Value Quality Score of the data, which is the numerical value that represents the dependability/quality of a given observation and measurement type.	Handling errors in data and ML decisions (clause 6.2.2.5)
REQ-ML_ERROR-04	The 3GPP management system shall enable a producer of ML decisions (e.g. an Al/ML inference function) to provide to an authorized consumer of Al/ML decisions (e.g. a controller) an Al/ML decision confidence score which is the numerical value that represents the dependability/quality of a given decision generated by the inference function.	Handling errors in data and ML decisions (clause 6.2.2.5)

7 Information model definitions for AI/ML management

- 7.1 Imported and associated information entities
- 7.1.1 Imported information entities and local labels

Label reference	Local label
3GPP TS 28.622 [12], IOC , Top	Тор
3GPP TS 28.622 [12], IOC, SubNetwork	SubNetwork

3GPP TS 28.622 [12], IOC, ManagedFunction	ManagedFunction

7.2 Class diagram

7.2.1 Relationships

This clause depicts the set of classes (e.g. IOCs) that encapsulates the information relevant to ML model training. For the UML semantics, see TS 32.156 [13].

Figure 7.2.1-1: NRM fragment for ML training

7.2.2 Inheritance

Figure 7.2.2-1: Inheritance Hierarchy for ML training related NRMs

7.3 Class definitions

7.3.1 MLTrainingFunction

7.3.1.1 Definition

The IOC MLTrainingFunction represents the entity that undertakes ML training and is also the container of the MLTrainingRequest IOC(s).

The entity represented by MLTrainingFunction MOI supports training of one or more MLEntity(s).

7.3.1.2 Attributes

Table 7.3.1.2-1

Attribute name	Support Qualifier	isReadable	isWritable	isInvariant	isNotifyable
mLEntityList	М	Т	F	F	F

7.3.1.3 Attribute constraints

None.

7.3.1.4 Notifications

The common notifications defined in clause 7.6 are valid for this IOC, without exceptions or additions.

7.3.2 MLTrainingRequest

7.3.2.1 Definition

The IOC MLTrainingRequest represents the ML model training request that is created by the ML training MnS consumer.

The MLTrainingRequest MOI is contained under one MLTrainingFunction MOI. Each MLTrainingRequest is associated to at least one MLEntity.

The MLTrainingRequest may have a source to identify where it is coming from, and which may be used to prioritize the training resources for different sources. The sources may be for example the network functions, operator roles, or other functional differentiations.

Each MLTrainingRequest may indicate the expectedRunTimeContext that describes the specific conditions for which the MLEntity should be trained for.

In case the request is accepted, the ML training MnS producer decides when to start the ML training. Once the MnS producer decides to start the training based on the request, the ML training MnS producer instantiates one or more MLTrainingProcess MOI(s) that are responsible to perform the followings:

- collects (more) data for training, if the training data are not available or the data are available but not sufficient for the training;
- prepares and selects the required training data, with consideration of the consumer's request provided candidate training data if any. The ML training MnS producer may examine the consumer's provided candidate training data and select none, some or all of them for training. In addition, the ML training MnS producer may select some other training data that are available in order to meet the consumer's requirements for the MLentity training;
- trains the MLEntity using the selected and prepared training data.

The MLTrainingRequest may have a requestStatus field to represent the status of the specific MLTrainingRequest:

- The attribute values are "NOT_STARTED", "TRAINING_IN_PROGRESS", "SUSPENDED", "FINISHED", and "CANCELLED".
- When value turns to "TRAINING_IN_PROGRESS", the ML training MnS producer instantiates one or more MLTrainingProcess MOI(s) representing the training process(es) being performed per the request and notifies the MLT MnS consumer(s) who subscribed to the notification.

When all of the training process associated to this request are completed, the value turns to "FINISHED".

7.3.2.2 Attributes

None.

7.3.2.4 Notifications

The common notifications defined in clause 7.6 are valid for this IOC, without exceptions or additions.

7.3.3 MLTrainingReport

7.3.3.1 Definition

The IOC MLTrainingReport represents the ML model training report that is provided by the training MnS producer.

The MLTrainingReport MOI is contained under one MLTrainingFunction MOI.

7.3.3.2 Attributes

Qualifier	ALL or PARTIALLY.
trainingRequestRef Support Qualifier	Condition: The MLTrainingReport MOI represents the report for the
	ML model training that was requested by the MnS consumer (via
	MLTrainingRequest MOI).
lastTrainingRef Support Qualifier	Condition: The MLTrainingReport MOI represents the report for the ML
	model training that was not initial training (i.e. the model has been trained
	before).

7.3.3.4 Notifications

The common notifications defined in clause 7.6 are valid for this IOC, without exceptions or additions.

7.3.4 MLTrainingProcess

7.3.4.1 Definition

The IOC MLTrainingProcess represents the ML training process.

One MLTrainingProcess MOI may be instantiated for each MLTrainingRequest MOI or a set of MLTrainingRequest MOIs.

For each MLEntity under training, a MLTrainingProcess is instantiated, i.e. an MLTrainingProcess is associated with exactly one MLEntity. The MLTrainingProcess may be associated with one or more MLTrainingRequest MOI.

The MLTrainingProcess does not have to correspond to a specific MLTrainingRequest, i.e. a MLTrainingRequest does not have to be associated to a specific MLTrainingProcess. The MLTrainingProcess may be managed separately from the MLTrainingRequest MOIs, e.g. the MLTrainingRequest MOI may come from consumers which are network functions while the operator may wish to manage the MLTrainingProcess that is instantiated following the requests. Thus, the MLTrainingProcess may be associated to either one or more MLTrainingRequest MOI.

Each MLTrainingProcess instance needs to be managed differently from the related MLEntity, although the MLTrainingProcess may be associated to only one MLEntity. For example, the MLTrainingProcess may be triggered to start with a specific version of the MLEntity and multiple MLTrainingProcess instances may be

triggered for different versions of the MLEntity. In either case the MLTrainingProcesse instances are still associated with the same MLEntity but are managed separately from the MLEntity.

Each MLTrainingProcess has a priority that may be used to prioritize the execution of different MLTrainingProcesse instances. By default, the priority of the MLTrainingProcess may be related in a 1:1 manner with the priority of the MLTrainingRequest for which the MLTrainingProcess is instantiated.

Each MLTrainingProcess may have one or more termination conditions used to define the points at which the MLTrainingProcess may terminate.

The "progressStatus" attribute represents the status of the ML model training and includes information the ML training MnS consumer can use to monitor the progress and results. The data type of this attribute is "ProcessMonitor" (see 3GPP TS 28.622 [12]). The following specializations are provided for this data type for the ML training process:

- The "status" attribute values are "RUNNING", "CANCELLING", "SUSPENDED", "FINISHED", and "CANCELLED". The other values are not used.
- The "timer" attribute is not used.
- When the "status" is equal to "RUNNING" the "progressStateInfo" attribute shall indicate one of the following states: "COLLECTING_DATA", "PREPARING_TRAINING_DATA", "TRAINING".
- No specifications are provided for the "resultStateInfo" attribute. Vendor specific information may be provided though.

When the training is completed with "status" equal to "FINISHED", the MLT MnS producer provides the training report, by creating an MLTrainingReport MOI, to the MLT MnS consumer.

Name	Definition
trainingRequestRef Support	Condition: The MLTrainingReport MOI represents the report for the ML
Qualifier	model training that was requested by the training MnS consumer (via
	MLTrainingRequest MOI).

7.3.4.4 Notifications

The common notifications defined in clause 7.6 are valid for this IOC, without exceptions or additions.

7.4 Data type definitions

7.4.1 ModelPerformance <<dataType>>

7.4.1.1 Definition

This data type specifies the performance of an ML entity when performing inference. The performance score is provided for each inference output.

7.4.1.2 Attributes

Table 7.4.1.2-1

Attribute name	Support Qualifier	isReadable	isWritable	isInvariant	isNotifyable
inferenceOutputName	М	Т	F	F	Т
performanceScore	М	Т	F	F	Т
performanceMetric	М	Т	F	F	Т
decisionConfidenceScore	0	Т	F	F	Т

7.4.1.3 Attribute constraints

None.

7.4.1.4 Notifications

The notifications specified for the IOC using this <</dataType>> for its attribute(s), shall be applicable.

7.4.2 MLEntity <<dataType>>

7.4.2.1 Definition

This data type represents the properties of an ML entity ML training may be requested for either an ML model or ML entity. The algorithm of ML model or ML entity is not to be standardized.

For each MLEntity under training, one or more MLTrainingProcess are instantiated.

The MLEntity may contain 3 types of contexts - TrainingContext which is the context under which the MLEntity has been trained, the ExpectedRunTimeContext which is the context where an MLEntity is expected to be applied or/and the RunTimeContext which is the context where the MLmodel or entity is being applied.

7.4.2.2 Attributes

Table 7.4.2.2-1

Attribute name	Support Qualifier	isReadable	isWritable	isInvariant	isNotifyable

7.5 Attribute definitions

7.5.1 Attribute properties

Table 7.5.1-1

Attribute Name	Documentation and Allowed Values	Properties
mLEntityId	It identifies the ML entity.	type: String
	It is unique in each MnS producer.	multiplicity: 1
		isOrdered: N/A
	allowedValues: N/A.	isUnique: N/A
		defaultValue: None
		isNullable: True

Attribute Name	Documentation and Allowed Values	Properties
candidateTrainingDataSource	It provides the address(es) of the candidate training	type: String
	data source provided by MnS consumer. The	multiplicity: *
	detailed training data format is vendor specific.	isOrdered: False
	allowedValues: N/A.	isUnique: True defaultValue: None
		isNullable: True
inferenceType	It indicates the type of inference that the ML model	type: String
	supports.	multiplicity: 1
		isOrdered: N/A
	allowedValues: the values of the MDA type (see	isUnique: N/A
	3GPP TS 28.104 [2]), Analytics ID(s) of NWDAF (see 3GPP TS 23.288 [3]), types of inference for	defaultValue: None isNullable: True
	RAN-intelligence, and vendor's specific extensions.	
areConsumerTrainingDataUsed	It indicates whether the consumer provided training	type: Enum
	data have been used for the ML model training.	multiplicity: 1
		isOrdered: N/A
	allowedValues: ALL, PARTIALLY, NONE.	isUnique: N/A
		defaultValue: None isNullable: True
usedConsumerTrainingData	It provides the address(es) where lists of the	type: String
	consumer-provided training data are located, which	multiplicity: *
	have been used for the ML model training.	isOrdered: False
		isUnique: True
	allowedValues: N/A.	defaultValue: None
trainingRequestRef	It is the DN(s) of the related MLTrainingRequest	isNullable: True type: DN (see TS 32.156
crainingkequestker	MOI(s).	[13])
		multiplicity: *
	allowedValues: DN.	isOrdered: False
		isUnique: True
		defaultValue: None isNullable: True
trainingProcessRef	It is the DN(s) of the related MLTrainingProcess	type: DN (see TS 32.156
	MOI(s) that produced the MLTrainingReport.	[13])
	······································	multiplicity: 1
	allowedValues: DN.	isOrdered: N/A
		isUnique: N/A defaultValue: None
		isNullable: True
trainingReportRef	It is the DN of the MLTrainingReport MOI that	type: DN (see TS 32.156
	represents the reports of the ML training.	[13])
		multiplicity: 1
	allowedValues: DN.	isOrdered: N/A isUnique: N/A
		defaultValue: None
		isNullable: True
lastTrainingRef	It is the DN of the MLTrainingReport MOI that	type: DN (see 3GPP
	represents the reports for the last training of the ML	TS 32.156 [13])
	model.	multiplicity: 1 isOrdered: N/A
	allowedValues: DN.	isUnique: N/A
		defaultValue: None
		isNullable: True
confidenceIndication	It indicates the confidence (in unit of percentage)	type: integer
	that the ML model would perform for inference on the data with the same distribution as training data.	multiplicity: 1 isOrdered: N/A
		isUnique: N/A
	allowedValues: { 0100 }.	defaultValue: None
		isNullable: False
mLEntityList	It describes the list of MLEntity.	type: MLEntity multiplicity: *
		isOrdered: False
		isUnique: True
		defaultValue: None
		isNullable: False
trainingRequestSource	It describes the entity that requested to instantiate	type: integer
	the MLTrainingRequest MOI.	multiplicity: 1

Attribute Name	Documentation and Allowed Values	Properties
		isOrdered: N/A
		isUnique: N/A
		defaultValue: None
		isNullable: False
requestStatus	It describes the status of a particular ML training	type: Enum
	request.	multiplicity: 1
	allowedValues: NOT_STARTED,	isOrdered: N/A
	TRAINING_IN_PROGRESS, CANCELLING,	isUnique: N/A
	SUSPENDED, FINISHED, and CANCELLED.	defaultValue: None
		isNullable: False
mLTrainingProcessId	It identifies the training process.	type: String
	It is unique in each instantiated process in the MnS	multiplicity: 1
	producer.	isOrdered: N/A
		isUnique: N/A
	allowedValues: N/A.	defaultValue: None
		isNullable: True
priority	It indicates the priority of the training process.	type: DN (see TS 32.156
	The priority may be used by the ML training to	[13])
	schedule the training processes. Lower value	multiplicity: 1
	indicates a higher priority.	isOrdered: N/A
		isUnique: N/A
	allowedValues: { 065535 }.	defaultValue: 0
	(isNullable: False
terminationConditions	It indicates the conditions to be considered by the	type: String
	MLtraining MnS producer to terminate a specific	multiplicity: 1
		isOrdered: N/A
	training process.	isUnique: N/A
	allamadValuasi MODEI	defaultValue: None
	allowedValues: MODEL	isNullable: False
	UPDATED_IN_INFERENCE_FUNCTION,	
	INFERENCE FUNCTION_TERMINATED,	
	INFERENCE FUNCTION_UPGRADED,	
	INFERENCE_CONTEXT_CHANGED.	
progressStatus	It indicates the status of the ML training process.	type: ProcessMonitor (see
		ŤŚ 28.622 [12])
	allowedValues: N/A.	multiplicity: 1
		isOrdered: N/A
		isUnique: N/A
		defaultValue: None
		isNullable: False
mLEntityVersion	It indicates the version number of the ML entity.	type: String
		multiplicity: 1
	allowedValues: N/A.	isOrdered: N/A
		isUnique: N/A
		defaultValue: None
		isNullable: False
performanceRequirements	It indicates the expected performance for a trained	type: ModelPerformance
_	ML entity when performing on the training data.	multiplicity: *
		isOrdered: N/A
	allowedValues: N/A.	isUnique: N/A
		defaultValue: None
		isNullable: True
modelperformanceTraining	It indicates the performance score of the ML entity	type: ModelPerformance
	when performing on the training data.	multiplicity: *
		isOrdered: N/A
	allowedValues: N/A.	isUnique: N/A
		defaultValue: None
		isNullable: False
		10140110010. 1 0100

Attribute Name	Documentation and Allowed Values	Properties
mLTrainingProcess.progressSt	It provides the following specialization for the	Type: String
atus.progressStateInfo	"progressStateInfo" attribute of the	multiplicity: 01
	"ProcessMonitor" data type for the	isOrdered: N/A
	"MLTrainingProcess".	isUnique: N/A defaultValue: None
	When the ML training is in progress, and the "	isNullable: False
	mLTrainingProcess.progressStatus.status " is equal	
	to "RUNNING", it provides the more detailed	
	progress information.	
	allowedValues for "	
	mLTrainingProcess.progressStatus.status " =	
	"RUNNING":	
	- COLLECTING_DATA	
	- PREPARING_TRAINING_DATA - TRAINING	
	- IRAINING	
	The allowed values for "	
	mLTrainingProcess.progressStatus.status " =	
	"CANCELLED" are vendor specific.	
inferenceOutputName	It indicates the name of an inference output of an ML entity.	Type: String multiplicity: 1
		isOrdered: N/A
	allowedValues: the name of the MDA output IEs	isUnique: N/A
	(see 3GPP TS 28.104 [2]), name of analytics output	
	IEs of NWDAF (see TS 23.288 [3]), RAN-	isNullable: False
	intelligence inference output IE name(s), and	
	vendor's specific extensions.	
performanceMetric	It indicates the performance metric used to evaluate the performance of an ML entity, e.g. "accuracy",	multiplicity: 1
	"precision", "F1 score", etc.	isOrdered: N/A
		isUnique: True
	allowedValues: N/A.	defaultValue: None
		isNullable: False
performanceScore	It indicates the performance score (in unit of	Type: Real
	percentage) of an ML entity when performing inference on a specific data set (Note).	multiplicity: 1 isOrdered: N/A
	interence on a specific data set (Note).	isUnique: N/A
	The performance metrics may be different for	defaultValue: None
	different kinds of ML models depending on the	isNullable: False
	nature of the model. For instance, for numeric	
	prediction, the metric may be accuracy; for	
	classification, the metric may be a combination of precision and recall, like the "F1 score".	
	allowedValues: { 0100 }.	
cancelRequest	It indicates whether the ML training MnS consumer	Type: Boolean
	cancels the ML training request.	multiplicity: 01
	Setting this attribute to "TRUE" cancels the ML training request. Cancellation is possible when the	isOrdered: N/A isUnique: N/A
	requestStatus is the "NOT_STARTED", "	defaultValue: FALSE
	TRAINING_IN_PROGRESS", and "SUSPENDED"	isNullable: False
	state. Setting the attribute to "FALSE" has no	
	observable result.	
	Default value is set to "FALSE".	
	allowedValues: TRUE, FALSE.	
suspendRequest	It indicates whether the ML training MnS consumer	Type: Boolean
	suspends the /ML training request.	multiplicity: 01
	Setting this attribute to "TRUE" suspends the ML	isOrdered: N/A
	training request. Suspension is possible when the	isUnique: N/A
	requestStatus is not the "FINISHED" state. Setting the attribute to "FALSE" has no observable	defaultValue: FALSE isNullable: False
	result.	131 YUIIQUIC. 1 013C
	Default value is set to "FALSE".	
	allowedValues: TRUE, FALSE.	

Attribute Name	Documentation and Allowed Values	Properties
cancelProcess suspendProcess	Setting this attribute to "TRUE" cancels the ML training request. Cancellation is possible when the " mLTrainingProcess.progressStatus.status" is not the "FINISHED" state. Setting the attribute to "FALSE" has no observable result. Default value is set to "FALSE". allowedValues: TRUE, FALSE. It indicates whether the ML training MnS consumer suspends the ML training process. Setting this attribute to "TRUE" suspends the ML training request. Suspension is possible when the " mLTrainingProcess.progressStatus.status" is not	Type: Boolean multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: FALSE isNullable: False Type: Boolean multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: FALSE
	state. Setting the attribute to "FALSE" has no observable result. Default value is set to "FALSE". allowedValues: TRUE, FALSE.	isNullable: False
inferenceEntityRef	It describes the target entities that will use the ML entity for inference.	Type: DN (see 3GPP TS 32.156 [13]) multiplicity: * isOrdered: False isUnique: True defaultValue: None isNullable: True
dataProviderRef	It describes the entities that have provided or should provide data needed by the ML entity e.g. for training or inference	Type: DN (see 3GPP TS 32.156 [13]) multiplicity: * isOrdered: False isUnique: True defaultValue: None isNullable: True
areNewTrainingDataUsed	It indicates whether the other new training data have been used for the ML model training. allowedValues: TRUE, FALSE.	type: Boolean multiplicity: 1 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
trainingDataQualityScore	It indicates numerical value that represents the dependability/quality of a given observation and measurement type. The lowest value indicates the lowest level of dependability of the data, i.e. that the data is not usable at all. allowedValues: { 0100 }.	Type: Real multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
decisionConfidenceScore	It is the numerical value that represents the dependability/quality of a given decision generated by the AI/ML inference function. The lowest value indicates the lowest level of dependability of the decisions, i.e. that the data is not usable at all. allowedValues: { 0100 }.	Type: Real multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
expectedRuntimeContext	This describes the context where an MLEntity is expected to be applied or/and the RunTimeContext which is the context where the MLmodel or entity is being applied. allowedValues: NA	Type: MLContext multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
trainingContext		Type: MLContext multiplicity: 1 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False

Attribute Name	Documentation and Allowed Values	Properties				
runTimeContext	This specifies the context where the MLmodel or	Type: MLContext				
	entity is being applied.	multiplicity: 1				
		isOrdered: N/A				
	allowedValues: NA	isUnique: N/A				
		defaultValue: None				
		isNullable: False				
NOTE: When the performanceSco training data set.	5,					

7.5.2 Constraints

None.

7.6 Common notifications

7.6.1 Configuration notifications

This clause presents a list of notifications, defined in 3GPP TS 28.532 [11], that an MnS consumer may receive. The notification header attribute objectClass/objectInstance shall capture the DN of an instance of a class defined in the present document.

Table 7.6.1-1
