The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status. Information on the current status of this and other ETSI documents is available at
https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx

If you find errors in the present document, please send your comment to one of the following services:
https://portal.etsi.org/People/CommiteeSupportStaff.aspx

If you find a security vulnerability in the present document, please report it through our
Coordinated Vulnerability Disclosure Program:
https://www.etsi.org/standards/coordinated-vulnerability-disclosure

Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.
No recommendation as to products and services or vendors is made or should be implied.
No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.
In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

Copyright Notification

ETSI

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**® and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Contents

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

> x   the first digit:

>> 1   presented to TSG for information;

>> 2   presented to TSG for approval;

>> 3   or greater indicates TSG approved document under change control.

> y   the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

> z   the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

28.621 Generic Network Resource Model (NRM) Integration Reference Point (IRP); Requirements.

28.622 Generic Network Resource Model (NRM) Integration Reference Point (IRP); Information Service (IS).

28.623 Generic Network Resource Model (NRM) Integration Reference Point (IRP); Solution Set (SS) definitions.

1 Scope

The TS 28.62x-series (Generic Network Resources IRP) define an Integration Reference Point (IRP) through which an "IRPAgent" (typically an Element Manager or Network Element) can communicate Network Management related information to one or several "IRPManagers" (typically Network Managers).

This TS-family specifies a generic Network Resource Model, NRM (also referred to as a Management Information Model - MIM) with definitions of Information Object Classes (IOCs) and Managed Object Classes (MOCs).

The present document specifies the Solution Set definition for the Generic NRM IRP.

The Solution Set definition is related to 3GPP TS 28.622 V16.4.X [4].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.

- For a specific reference, subsequent revisions do not apply.

- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [15], 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.600 [3], 3GPP TS 28.622 [4] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [15] and 3GPP TS 32.101 [1], 3GPP TS 32.102 [2] and 3GPP TS 32.600 [3] and 3GPP TS 28.622 [4].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [15], 3GPP TS 32.600 [3] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [15] and 3GPP TS 32.600 [3].

    JSON   JavaScript Object Notation
    SS   Solution Set

4 Solution Set (SS) definitions

This specification defines the following 3GPP Generic NRM IRP Solution Set Definitions:

- 3GPP Generic NRM IRP CORBA SS (Annex A).

- 3GPP Generic NRM IRP XML Definitions (Annex B).

- 3GPP Generic NRM IRP JSON Definitions (Annex C).

- 3GPP Generic NRM IRP YANG Definitions (Annex D).

Annex A (normative):
CORBA Solution Set

A.0   General

This annex contains the CORBA Solution Set for the IRP whose semantics is specified in Generic NRM IRP: Information Service (3GPP TS 28.622 [4]).

A.1   Architectural features

The overall architectural feature of Generic Network Resources IRP is specified in 3GPP TS 28.622 [4]. This clause specifies features that are specific to the CORBA SS.

A.1.1   Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [5].

A.1.2   Rules for NRM extensions

A.1.2.0   Introduction

This clause discusses how the models and IDL definitions provided in the present document can be extended for a particular implementation and still remain compliant with 3GPP SA5's specifications.

A.1.2.1   Allowed extensions

Vendor-specific MOCs may be supported. The vendor-specific MOCs may support new types of attributes. The 3GPP SA5-specified notifications may be issued referring to the vendor-specific MOCs and vendor-specific attributes. New MOCs shall be distinguishable from 3GPP SA5 MOCs by name. 3GPP SA5-specified and vendor-specific attributes may be used in vendor-specific MOCs. Vendor-specific attribute names shall be distinguishable from existing attribute names.

NRM MOCs may be subclassed. Subclassed MOCs shall maintain the specified behaviour of the 3GPP SA5's superior classes. They may add vendor-specific behaviour with vendor-specific attributes. When subclassing, naming attributes cannot be changed. The subclassed MOC shall support all attributes of its superior class. Vendor-specific attributes cannot be added to 3GPP SA5 NRM MOCs without subclassing.

When subclassing, the 3GPP SA5-specified containment rules and their specified cardinality shall still be followed. As an example, ManagementNode (or its subclasses) shall be contained under SubNetwork (or its subclasses).

Managed Object Instances may be instantiated as CORBA objects. This requires that the MOCs be represented in IDL. 3GPP SA5's NRM MOCs are not currently specified in IDL, but may be specified in IDL for instantiation or subclassing purposes. However, management information models should not require that IRPManagers access the instantiated managed objects other than through supported methods in the present document.

Extension rules related to notifications (Notification categories, Event Types, Extended Event Types etc.) are for further study.

A.1.2.2   Extensions not allowed

The IDL specifications in the present document cannot be edited or altered. Any additional IDL specifications shall be specified in separate IDL files.

IDL interfaces (note: not MOCs) specified in the present document may not be subclassed or extended. New interfaces may be defined with vendor-specific methods.

A.2 Mapping

A.2.1 General mapping

Attributes modelling associations as defined in the NRM (here also called "reference attributes") are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as an MOReference. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type MOReferenceSet, which contains a sequence of MO references.

A.2.2 Information Object Class (IOC) mapping

This Solution Set supports reference attributes for relations other than containment relations between objects. Reference attributes are therefore introduced in each MOC where needed.

A.2.2.1 IOC SubNetwork

Mapping from NRM IOC SubNetwork attributes to SS equivalent MOC SubNetwork attributes

IS Attributes	SS Attributes	SS Type
id	id	string
dnPrefix	dnPrefix	string
userLabel	userLabel	string
userDefinedNetworkType	userDefinedNetworkType	string
setOfMcc	setOfMcc	GenericNetworkResourcesIRPSystem::AttributeTypes::StringSet

A.2.2.2 IOC ManagedElement

Mapping from NRM IOC ManagedElement attributes and association roles to SS equivalent MOC ManagedElement attributes

IS Attributes	SS Attributes	SS Type
id	id	string
dnPrefix	dnPrefix	string
userLabel	userLabel	string
locationName	locationName	string
vendorName	vendorName	string
userDefinedState	userDefinedState	string
managedElementType	managedElementType	GenericNetworkResourcesIRPSystem::AttributeTypes::StringSet
managedBy	managedBy	GenericNetworkResourcesIRPSystem::AttributeTypes::MOReferenceSet
swVersion	swVersion	string

A.2.2.3 IOC MeContext

Mapping from NRM IOC MeContext attributes to SS equivalent MOC MeContext attributes

IS Attributes	SS Attributes	SS Type
id	id	string
dnPrefix	dnPrefix	string

A.2.2.4   IOC ManagementNode

Mapping from NRM IOC ManagementNode attributes and association roles to SS equivalent MOC ManagementNode attributes

IS Attributes	SS Attributes	SS Type
id	id	string
userLabel	userLabel	string
locationName	locationName	string
vendorName	vendorName	string
userDefinedState	userDefinedState	string
managedElements	managedElements	GenericNetworkResourcesIRPSystem::AttributeTypes::MOReferenceSet
swVersion	swVersion	string

A.2.2.5   IOC VsDataContainer

Mapping from NRM IOC VsDataContainer attributes and association roles to SS equivalent MOC VsDataContainer attributes

IS Attributes	SS Attributes	SS Type
id	id	string
vsDataType	vsDataType	string
vsData	vsData	any
vsDataFormatVersion	vsDataFormatVersion	string

A.2.2.6   IOC ManagedFunction

Mapping from NRM IOC ManagedFunction attributes and association roles to SS equivalent MOC ManagedFunction attributes

IS Attributes	SS Attributes	SS Type
id	id	string
peeParametersList	peeParametersList	GenericNetworkResourcesIRPSystem::AttributeTypes::PEEParametersListType
userLabel	userLabel	string
vnfParametersList	vnfParametersList	GenericNetworkResourcesIRPSystem::AttributeTypes::VNFParametersListType

A.2.2.7   IOC IRPAgent

Mapping from NRM IOC IRPAgent attributes to SS equivalent MOC IRPAgent attributes

IS Attributes	SS Attributes	SS Type
id	id	string
systemDN	systemDN	string

A.2.2.8   IOC Top

Mapping from NRM IOC Top attributes to SS equivalent attributes in all MOCs

IS Attributes	SS Attributes	SS Type
objectClass	CLASS	string
objectInstance	No direct mapping	

A.2.2.9   IOC Link

Mapping from NRM IOC Link attributes to SS equivalent MOC IRPAgent attributes

IS Attributes	SS Attributes	SS Type
id	id	string
userLabel (see note 2)	userLabel	string
aEnd	aEnd	GenericNetworkResourcesIRPSystem::AttributeTypes::MOReference
zEnd	zEnd	GenericNetworkResourcesIRPSystem::AttributeTypes::MOReference
linkType	linkType	LinkTypeType
protocolName	protocolName	string
protocolVersion	protocolVersion	string

NOTE 1: Void.

NOTE 2: Void.

A.2.2.10 IOC EP_RP

Mapping from NRM IOC EP_RP attributes to SS equivalent MOC EP_RP attributes

IS Attributes	SS Attributes	SS Type
id	id	string
userLabel	userLabel	string
farEndEntity	farEndEntity	GenericNetworkResourcesIRPSystem::AttributeTypes::MOReference

A.2.2.11 IOC ThresholdMonitoringCapability

Mapping from NRM IOC ThresholdMonitoringCapability attributes to SS equivalent MOC ThresholdMonitoringCapability attributes

IS Attributes	SS Attributes	SS Type
supportedMonitoringGPs	supportedMonitoringGPs	GenericNetworkResourcesIRPSystem::AttributeTypes::LongSet

A.2.2.12 IOC ThresholdMonitor

Mapping from NRM IOC ThresholdMonitor attributes to SS equivalent MOC ThresholdMonitor attributes

IS Attributes	SS Attributes	SS Type
thresholdInfoList	thresholdInfoList	GenericNetworkResourcesIRPSystem::AttributeTypes::ThresholdInfoListType
monitoringGP	monitoringGP	long
monitoringNotifTarget	monitoringNotifTarget	string
monitoredIOCName	monitoredIOCName	string
monitoredObjectDNs	monitoredObjectDNs	GenericNetworkResourcesIRPSystem::AttributeTypes::DNListType

A.2.2.13 IOC TraceJob

Mapping from NRM IOC TraceJob attributes to SS equivalent MOC TraceJob attributes

IS Attributes	SS Attributes	SS Type
tjJobType	tjJobType	tjJobType-Type
tjListOfInterfaces	tjListOfInterfaces	tjListOfInterfaces-Type
tjListOfNeTypes	tjListOfNeTypes	tjListOfNeTypes-Type
tjPLMNTarget	tjPLMNTarget	tjPLMNTarget-Type
tjStreamingTraceConsumerURI	tjTraceConsumer	StreamingTraceConsumerURI-Type
tjTraceCollectionEntityAddress	tjTraceConsumer	TraceCollectionEntityAddress-Type
tjTraceDepth	tjTraceDepth	tjTraceDepth-Type
tjTraceReference	tjTraceReference	tjTraceReference-Type
tjTraceReportingFormat	tjTraceReportingFormat	tjTraceReportingFormat-Type
tjTraceTarget	tjTraceTarget	tjTraceTarget-Type
tjTriggeringEvent	tjTriggeringEvent	tjTriggeringEvent-Type
tjMDTAnonymizationOfData	tjMDTAnonymizationOfData	tjMDTAnonymizationOfData-Type
tjMDTAreaConfigurationForNeighCell	tjMDTAreaConfigurationForNeighCell	tjMDTAreaConfigurationForNeighCell-Type
tjMDTAreaScope	tjMDTAreaScope	tjMDTAreaScope-Type
tjMDTCollectionPeriodRrmLte	tjMDTCollectionPeriodRrmLte	tjMDTCollectionPeriodRrmLte-Type
tjMDTCollectionPeriodRrmUmts	tjMDTCollectionPeriodRrmUmts	tjMDTCollectionPeriodRrmUmts-Type
tjMDTCollectionPeriodRrmNR	tjMDTCollectionPeriodRrmNR	tjMDTCollectionPeriodRrmNR-Type
tjMDTEventListForTriggeredMeasurement	tjMDTEventListForTriggeredMeasurement	tjMDTEventListForTriggeredMeasurement-Type
tjMDTEventThreshold	tjMDTEventThreshold	tjMDTEventThreshold-Type
tjMDTListOfMeasurements	tjMDTListOfMeasurements	tjMDTListOfMeasurements-Type
tjMDTLoggingDuration	tjMDTLoggingDuration	tjMDTLoggingDuration-Type
tjMDTLoggingInterval	tjMDTLoggingInterval	tjMDTLoggingInterval-Type
tjMDTMBSFNAreaList	tjMDTMBSFNAreaList	tjMDTMBSFNAreaList-Type
tjMDTMeasurementPeriodLTE	tjMDTMeasurementPeriodLTE	tjMDTMeasurementPeriodLTE-Type
tjMDTMeasurementPeriodUMTS	tjMDTMeasurementPeriodUMTS	tjMDTMeasurementPeriodUMTS-Type
tjMDTMeasurementQuantity	tjMDTMeasurementQuantity	tjMDTMeasurementQuantity-Type
tjMDTPLMList	tjMDTPLMList	tjMDTPLMList-Type
tjMDTPositioningMethod	tjMDTPositioningMethod	tjMDTPositioningMethod-Type
tjMDTReportAmount	tjMDTReportAmount	tjMDTReportAmount-Type
tjMDTReportingTrigger	tjMDTReportingTrigger	tjMDTReportingTrigger-Type
tjMDTReportInterval	tjMDTReportInterval	tjMDTReportInterval-Type
tjMDTReportType	tjMDTReportType	tjMDTReportType-Type
tjMDTSensorInformation	tjMDTSensorInformation	tjMDTSensorInformation-Type
tjMDTTraceCollectionEntityID	tjMDTTraceCollectionEntityID	tjMDTTraceCollectionEntityID-Type
excessPacketDelayThresholds	excessPacketDelayThresholds	excessPacketDelayThresholds-Type

A.3 Solution Set (SS) definitions

A.3.1 IDL definition structure

Clause A.3.2 defines the types which are used by the Generic NRM IRP.

Clause A.3.3 defines the MO classes for the Generic NRM IRP.

A.3.2 IDL specification "GenericNetworkResourcesIRPSystem.idl"

```
//File: GenericNetworkResourcesIRPSystem.idl
#ifndef _GENERIC_NETWORK_RESOURCES_IRP_SYSTEM_IDL_
#define _GENERIC_NETWORK_RESOURCES_IRP_SYSTEM_IDL_

// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"

module GenericNetworkResourcesIRPSystem
{
    /**
     * The format of Distinguished Name (DN) is specified in "Name Convention
     * for Managed Objects (3GPP TS 32.300 [5])".
     */
    typedef string DN;

    /**
     *  This module adds datatype definitions for types
     *  used in the NRM which are not basic datatypes defined
     *  already in CORBA.
     */
    module AttributeTypes
    {
        /**
         * An MO reference refers to an MO instance.
         * "otherMO" contains the distinguished name of the referred MO.
         * A conceptual "null" reference (meaning no MO is referenced)
         * is represented as an empty string ("").
         *
         */
        struct MOReference
        {
            DN otherMO;
        };

        /**
         * MOReferenceSet represents a set of MO references.
         * This type is used to hold 0..n MO references.
         * A referred MO is not allowed to be repeated (therefore
         * it is denoted as a "Set")
         */
        typedef sequence<MOReference> MOReferenceSet;

        /**
         *  A set of strings.
         */
        typedef sequence<string> StringSet;

        /**
         *  A set of long.
         */
        typedef sequence<long> LongSet;
        /*
         * The LinkListSet represents the Link_X_Y objects (or subclasses of
         * Link_X_Y objects) that have a relationship with this object instance.
         * Each Link_X_Y object models interface(s) between objects of class X and
         * Y. The object containing this attribute must either be a class of type X,
         * Y, XFunction, YFunction or a subclass of one of those classes. The
         * LinkListSet may be empty, or there may be no instances for a particular
         * Link_X_Y class name.
         */
        typedef MOReferenceSet LinkListSet;
```

```
    /**
     * VNFParameters includes several attributes of a VNF instance.
     * The detailed definition of the attributes, see clause 4.4.1 of [4].
     */

Annex B (normative): XML Definitions

B.0 General

This annex contains the XML Definitions for the Generic NRM IRP as it applies to Itf-N, in accordance with Generic NRM IRP IS definitions TS 28.622 [4].

The XML file formats are based on XML W3C REC-xml11-20060816 [8], W3C XML Schema Definition Language (XSD) 1.1 Part 1: Structures [10] W3C XML Schema Definition Language (XSD) 1.1 Part 2: Datatypes [11] and W3C REC-xml-names-20060816 [12] standards.

B.1 Architectural features

B.1.0 Introduction

The overall architectural feature of Generic Network Resources IRP is specified in 3GPP TS 28.622 [4].

This clause specifies features that are specific to the Schema definitions.

B.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [5].

B.2 Mapping

B.2.1 General mapping

An IOC maps to an XML element of the same name as the IOC's name in the IS. An IOC attribute maps to a sub-element of the corresponding IOC's XML element, and the name of this sub-element is the same as the attribute's name in the IS.

B.2.2 Information Object Class (IOC) mapping

The mapping is not present in the current version of this specification.

B.3 Solution Set (SS) definitions

B.3.1 XML definition structure

The overall description of the file format of configuration data XML files is provided by 3GPP TS 28.616 [7].

Annex B.3.3 of the present document defines the NRM-specific XML schema `genericNrm.xsd` for the Generic Network Resources IRP NRM defined in 3GPP TS 28.622 [4].

XML schema `genericNrm.xsd` explicitly declares NRM-specific XML element types for the related NRM.

The definition of those NRM-specific XML element types complies with the generic mapping rules defined in 3GPP TS 28.616 [7], with the following exception: as defined in 3GPP TS 28.616 [7], the `vsData` XML element type has an empty XML content.

Additionally, XML schema `genericNrm.xsd` also provides the following global XML declarations and definitions:

- XML complex type `NrmClass`: derivation base type (see [8], [10] and [11]) for all NRM class associated XML element types (see 3GPP TS 28.616 [7]);

- XML element type `vsData`: derivation base type (see [8], [10] and [11]) for all vendor-specific XML element types (see 3GPP TS 28.616 [7]);

- XML element type `SubNetworkOptionallyContainedNrmClass`: substitution group head (see [8], [10] and [11]) for all XML element types associated to further NRM classes optionally contained under `SubNetwork` NRM class;

- XML element type `ManagedElementOptionallyContainedNrmClass`: substitution group head (see [8], [10] and [11]) for all XML element types associated to further NRM classes optionally contained under `ManagedElement` NRM class.

B.3.2 Graphical Representation

The graphical representation is not present in the current version of this specification.

B.3.3   XML schema "genericNrm.xsd"

```xml
<?xml version="1.1" encoding="UTF-8"?>

Annex C (normative): OpenAPI definitions

C.1 General

This annex contains the OpenAPI definition of the Generic NRM in YAML format.

The Information Service (IS) of the Generic NRM is defined in 3GPP TS 28.622 [4].

Mapping rules to produce the OpenAPI definition based on the IS are defined in 3GPP TS 32.160 [14].

C.2 Void

C.3 Void

C.4 Solution Set (SS) definitions

C.4.1 Void

C.4.2 Void

C.4.2a OpenAPI document "TS28623_ComDefs.yaml"

  list ManagedElement {
    description "Represents telecommunications equipment or TMN entities within
      the telecommunications network providing support and/or service to the
      subscriber. An ManagedElement IOC is used to represent a Network Element
      defined in TS 32.101 including virtualizeation or non-virtualization
      scenario. An ManagedElement instance is used for communicating with a
      manager (directly or indirectly) over one or more management interfaces
      for the purpose of being monitored and/or controlled. ManagedElement may
      or may not additionally perform element management functionality.
      An ManagedElement contains equipment that may or may not be geographically
      distributed.

      A telecommunication equipment has software and hardware components. The
      ManagedElement IOC described above represents following two case:
      - In the case when the software component is designed to run on dedicated
        hardware component, the ManagedElement IOC description includes both
        software and hardware components.
      - In the case when the software is designed to run on ETSI NFV defined
        NFVI [15], the ManagedElement IOC description would exclude the NFVI
        component supporting the above  mentioned subject software.

      A ManagedElement may be contained in either a SubNetwork or in a MeContext
      instance. A single ManagedElement may also exist stand-alone with no
      parent at all.
```

ETSI

```
         The relation of ManagedElement IOC and ManagedFunction IOC can be
         described as following：
         - A ManaagedElement instance may have 1..1 containment relationship to a
           ManagedFunction instance. In this case, the ManagedElement IOC may be
           used to represent a NE with single functionality. For example, a
           ManagedElement is used to represent the 3GPP defined RNC node;
         - A ManagedElement instance may have 1..N containment relationship to
           multiple ManagedFunction IOC instances. In this case, the ManagedElement
           IOC may be used to represent a NE with combined ManagedFunction
           funcationality (as indicated by the managedElementType attribute and the
           contained instances of different ManagedFunction IOCs).For example, a
           ManagedElement is used to represent the combined functionality of 3GPP
           defined gNBCUCPFuntion, gNBCUUPFunction and gNBDUFunction";

      If a class uses this grouping in its list it shall also use the
      grouping SupportedPerfMetricGroupGrp to add SupportedPerfMetricGroup as
      an attribute to its grouping";

    list PerfMetricJob {
      description "This IOC represents a performance metric production job. It
        can be name-contained by SubNetwork, ManagedElement, or ManagedFunction.

        To activate the production of the specified performance metrics, a MnS
        consumer needs to create a PerfMetricJob instance on the MnS producer.
        For ultimate deactivation of metric production, the MnS consumer should
        delete the job to free up resources on the MnS producer.

        For temporary suspension of metric production, the MnS consumer can
        manipulate the value of the administrative state attribute. The MnS
        producer may disable metric production as well, for example in overload
        situations. This situation is indicated by the MnS producer with setting
        the operational state attribute to disabled. When production is resumed
        the operational state is set back to enabled.

        The jobId attribute can be used to associate metrics from multiple
        PerfMetricJob instances. The jobId can be included when reporting
        performance metrics to allow a MnS consumer to associate received
        metrics for the same purpose.  For example, it is possible to configure
        the same jobId value for multiple PerfMetricJob instances required to
        produce the measurements for a specific KPI.

        The attribute performanceMetrics defines the performance metrics to be
        produced and the attribute granularityPeriod defines the granularity
        period to be applied.

        All object instances below and including the instance name-containing
        the PerfMetricJob (base object instance) are scoped for performance
        metric production. Performance metrics are produced only on those object
        instances whose object class matches the object class associated to the
        performance metrics to be produced.

        The attributes objectInstances and rootObjectInstances allow to restrict
        the scope. When the attribute objectInstances is present, only the object
        instances identified by this attribute are scoped. When the attribute
        rootObjectInstances is present, then the subtrees whose root objects are
        identified by this attribute are scoped. Both attributes may be present
        at the same time meaning the total scope is equal to the sum of both
        scopes. Object instances may be scoped by both the objectInstances and
        rootObjectInstances attributes. This shall not be considered as an error
        by the MnS producer.

        When the performance metric requires performance metric production on
```

```
      multiple managed objects, which is for example the case for KPIs, the
      MnS consumer needs to ensure all required objects are scoped. Otherwise
      a PerfMetricJob creation request shall fail.

      The attribute reportingCtrl specifies the method and associated control
      parameters for reporting the produced measurements to MnS consumers.
      Three methods are available: file-based reporting with selection of the
      file location by the MnS producer, file-based reporting with selection
      of the file location by the MnS consumer and stream-based reporting.

      For file-based reporting, all performance metrics that are produced
      related to a 'PerfMetricJob' instance for a reporting period shall be
      stored in a single reporting file.

      When the administrative state is set to 'UNLOCKED' after the creation
      of a 'PerfMetricJob' the first granularity period shall start. When
      the administrative state is set to 'LOCKED' or the operational state
      to 'DISABLED', the ongoing reporting period shall be aborted, for
      streaming the ongoing granularity period. When the administrative
      state is set back to 'UNLOCKED' or the operational state to 'ENABLED'
      a new reporting period period shall start, in case of streaming a new
      granularity period.

      Changes of all other configurable attributes shall take effect only at
      the beginning of the next reporting period, for streaming at the
      beginning of the next granularity period.

      When the 'PerfMetricJob' is deleted, the ongoing reporting period shall
      be aborted, for streaming the ongoing granularity period.

      A PerfMetricJob creation request shall fail, when the requested
      performance metrics, the requested granularity period, the requested
      repoting method, or the requested combination thereof is not supported
      by the MnS producer.

      Creation and deletion of PerfMetricJob instances by MnS consumers is
      optional; when not supported, PerfMetricJob instances may be created and
      deleted by the system or be pre-installed.";

    key id;
    uses top3gpp:Top_Grp ;
    container attributes {
      uses PerfMetricJobGrp ;
    }
  }

  list ThresholdMonitor {
    key id;
    description "Represents a threshold monitor for performance metrics.
    It can be contained by SubNetwork, ManagedElement, or ManagedFunction.
    A threshold monitor checks for threshold crossings of performance metric
    values and generates a notification when that happens.

    To activate threshold monitoring, a MnS consumer needs to create a
    ThresholdMonitor instance on the MnS producer. For ultimate deactivation
    of threshold monitoring, the MnS consumer should delete the monitor to
    free up resources on the MnS producer.

    For temporary suspension of threshold monitoring, the MnS consumer can
    manipulate the value of the administrative state attribute. The MnS
    producer may disable threshold monitoring as well, for example in
    overload situations. This situation is indicated by the MnS producer with
    setting the operational state attribute to disabled. When monitoring is
    resumed the operational state is set again to enabled.

    All object instances below and including the instance containing the
    ThresholdMonitor (base object instance) are scoped for performance
    metric production. Performance metrics are monitored only on those
    object instances whose object class matches the object class associated
    to the performance metrics to be monitored.

    The optional attributes objectInstances and rootObjectInstances allow to
    restrict the scope. When the attribute objectInstances is present, only
    the object instances identified by this attribute are scoped. When the
    attribute rootObjectInstances is present, then the subtrees whose root
    objects are identified by this attribute are scoped. Both attributes may
    be present at the same time meaning the total scope is equal to the sum
    of both scopes. Object instances may be scoped by both the objectInstances
```

```
      and rootObjectInstances attributes. This shall not be considered as an
      error by the MnS producer.

      Multiple thresholds can be defined for multiple performance metric sets
      in a single monitor using thresholdInfoList. The attribute
      monitorGranularityPeriod defines the granularity period to be applied.

      Each threshold is identified with a number (key) called thresholdLevel.
      A threshold is defined using the attributes thresholdValue ,
      thresholdDirection and hysteresis.

      When hysteresis is absent or carries no information, a threshold is
      triggered when the thresholdValue is reached or crossed. When hysteresis
      is present, two threshold values are specified for the threshold as
      follows: A high treshold value equal to the threshold value plus the
      hysteresis value, and a low threshold value equal to the threshold value
      minus the hysteresis value. When the monitored performance metric
      increases, the threshold is triggered when the high threshold value is
      reached or crossed. When the monitored performance metric decreases, the
      threshold is triggered when the low threshold value is reached or crossed.
      The hsyteresis ensures that the performance metric value can oscillate
      around a comparison value without triggering each time the threshold when
      the threshold value is crossed.

      Using the thresholdDirection attribute a threshold can be configured in
      such a manner that it is triggered only when the monitored performance
      metric is going up or down upon reaching or crossing the threshold.

      A ThresholdMonitor creation request shall be rejected, if the performance
      metrics requested to be monitored, the requested granularity period, or
      the requested combination thereof is not supported by the MnS producer.
      A creation request may fail, when the performance metrics requested to be
      monitored are not produced by a PerfMetricJob.

      Creation and deletion of ThresholdMonitor instances by MnS consumers is
      optional; when not supported, ThresholdMonitor instances may be created
      and deleted by the system or be pre-installed.";

      uses top3gpp:Top_Grp ;
      container attributes {
        uses ThresholdMonitorGrp ;
      }

      If some YAM wants to augment these classes/list/groupings they must
      augment all user classes!";

    list NtfSubscriptionControl {
      description "A NtfSubscriptionControl instance represents the
        notification subscription of a particular notification recipient.
        The scope attribute is used to select managed object instances.
        The base object instance of the scope is the object instance
        name-containing the NtfSubscriptionControl instance.
        The notifications related to the selected managed object instances
        are candidates to be sent to the address specified by the
        notificationRecipientAddress attribute.
        The notificationType attribute and notificationFilter attribute
        allow MnS consumers to exercise control over which candidate
        notifications are sent to the notificationRecipientAddress.
        If the notificationType attribute is supported and present, its
        value identifies the
        types of notifications that are candidate to be sent to the
```

```
      notificationRecipientAddress. If the notificationType attribute is
      not supported or not present, all types of notifications are
      candidate to be sent to notificationRecipientAddress.
      If supported, the notificationFilter attribute defines a filter that
      is applied to the set of candidate notifications. Only candidate
      notifications that pass the filter criteria are sent to the
      notificationRecipientAddress. If the notificationFilter attribute is
      not supported all candidate notificatios are sent to the
      notificationRecipientAddress.
      To receive notifications, a MnS consumer has to create
      NtfSubscriptionControl object instancess on the MnS producer.
      A MnS consumer can create a subscription for another MnS consumer
      since it is not required the notificationRecipientAddress be his own
      address.
      When a MnS consumer does not wish to receive notifications any more
      the MnS consumer shall delete the corresponding NtfSubscriptionControl
      instance.
      Creation and deletion of NtfSubscriptionControl instances by MnS
      consumers is optional; when not supported, the NtfSubscriptionControl
      instances may be created and deleted by the system or be
      pre-installed.";

    key id;
    uses top3gpp:Top_Grp;
    container attributes {
      uses NtfSubscriptionControlGrp;
    }

    list HeartbeatControl {
      description "MnS consumers (i.e. notification recipients) use heartbeat
        notifications to monitor the communication channels between them and
        data reporting MnS producers emitting notifications such as
        notifyNewAlarm and notifyFileReady.

        A HeartbeatControl instance allows controlling the emission of
        heartbeat notifications by MnS producers. The recipients of heartbeat
        notifications are specified by the notificationRecipientAddress
        attribute of the NtfSubscriptionControl instance containing the
        HeartbeatControl instance.

        Note that the MnS consumer managing the HeartbeatControl instance
        and the MnS consumer receiving the heartbeat notifications may not be
        the same.

        As a pre-condition for the emission of heartbeat notifications, a
        HeartbeatControl instance needs to be created. Creation of an instance
        with an initial non-zero value of the heartbeatNtfPeriod attribute
        triggers an immediate heartbeat notification emission. Creation of an
        instance with an initial zero value of the heartbeatPeriod attribute
        does not trigger an emission of a heartbeat notification. Deletion of
        an instance does not trigger an emission of a heartbeat notification.

        Once the instance is created, heartbeat notifications are emitted with
        a periodicity defined by the value of the heartbeatNtfPeriod
        attribute. No heartbeat notifications are emitted if the value is
        equal to zero. Setting a zero value to a non zero value, or a non zero
        value to a different non zero value, triggers an immediate heartbeat
        notification, that is the base for the new heartbeat period. Setting a
        non zero value to a zero value stops emitting heartbeats immediately;
        no final heartbeat notification is sent.

        Creation and deletion of HeartbeatControl instances by MnS Consumers
        is optional; when not supported, the HeartbeatControl instances may be
        created and deleted by the system or be pre-installed.

        Whether and when to emit heartbeat notifications is controlled by
        HeartbeatControl. Subscription for heartbeat is not supported via the
        NtfSubscriptionControl.";

    Extensions MUST be defined with the following structure in the
    description statement:
        - What is this statement.
        - Newline,
        - This statement can be a substatement of the xxx statements with
        cardinality x..y.
        - This statement can have the following substatements with
        cardinality x..y.
        - Newline
        - Is changing this statement an editorial, BC(backwards compatible)
        or NBC(non-BC) change?
        - Newline.
        - The argument its meaning and type. Preferably use YANG types and
          constraints to define the argument's type.

    Any extension statement can be added with a
    deviation/deviate add statement. In this case the restriction about
    the parent statement of the extension SHALL be evaluated based on the
    target of the deviation statement.

    Support for this module does not mean that a YANG server implements
    support for each of these extensions.
    Implementers of each specific module using an extensions MUST check
    if the server implements support for the used extension.
    Note: modules use many extensions which individual
    implementations MAY or MAY NOT support.
    If support for an extension is missing the extension statement needs
    individual handling or it SHOULD be removed from the module using
    the extension e.g. with a deviation.

  typedef EnabledDisabled {
    type enumeration {
      enum DISABLED ;
      enum ENABLED ;
    }
  }

grouping ProcessMonitor {
    description "Provides attributes to monitor the progress of processes
      with specific purpose and limited lifetime running on MnS producers.
      It may be used as data type for dedicated progress monitor attributes
      when specifying the management representation of these processes.
      The attributes in this clause are defined in a generic way.
      For some attributes specialisations may be provided when specifying a
      concrete process representation.

      If a management operation on some IOCs triggers an associated
      asynchronous process (whose progress shall be monitored), this should
      also result in creating an attribute named 'processMonitor' (of type
      'ProcessMonitor') in these IOC(s). The processMonitor attribute may be
      accompanied by use-case specific additional data items.

      The progress of the process is described by the 'status' and
      'progressPercentage' attributes. Additional textual qualifications for
      the 'status' attribute may be provided by the 'progressStateInfo' and
      'resultStateInfo' attributes.

      When the process is instantiated, the 'status' is set to 'NOT_RUNNING'
      and the 'progressPercentage' to '0'. The MnS producer decides when to
      start executing the process and to transition into the 'RUNNING' state.
      This time is captured in the 'startTime' attribute. Alternatively, the
      process may start to execute directly upon its instantiation. One
      alternative must be selected when using this data type.

      During the 'RUNNING' state the 'progressPercentage' attribute may be
      repeatedly updated. The exact semantic of this attribute is subject to
      further specialisation. The 'progressInfo' attribute may be used to
      provide additional textual information in the 'NOT_RUNNING', 'CANCELLING'
      and 'RUNNING' states. Further specialisation of
      'progressStateInfo' may be provided where this data type is
      used.

      Upon successful completion of the process, the 'status' attribute is set
      to 'FINISHED', the 'progressPercentage' to 100%. The time is captured in
      the 'endTime' attribute. Additional textual information may be provided
      in the 'resultStateInfo' attribute. The type of
      'resultStateInfo' in this data type definition is 'String'.
      Further specialisation of 'resultStateInfo' may be provided
      where this data type is used.

      In case the process fails to complete successfully, the 'status'
      attribute is set to 'FAILED' or 'PARTIALLY_FAILED', the current value of
      'progressPercentage' is frozen, and the time captured in 'endTime'. The
      'resultStateInfo' specifies the reason for the failure.
      Specific failure reasons may be specified where the data type defined in
      this clause is used. The exact semantic of failure may be subject for
```

```
    further specialisation as well.

    In case the process is cancelled, the 'status' attribute is first set to
    'CANCELLING' and when the process is really cancelled then to 'CANCELLED'.
    The transition to 'CANCELLED' is captured in the 'endTime' attribute.
    The value of 'progressPercentage' is frozen. Additional textual
    information may be provided in the 'resultStateInfo' attribute.

    The 'resultStateInfo' attribute is provided only for additional textual
    qualification of the states 'FINISHED', 'FAILED', 'PARTIALLY_FAILED' or
    'CANCELLED'. It shall not be used for making the outcome, that the
    process may produce in case of success, available.

    The process may have to be completed within a certain time after its
    creation, for example because required data may not be available any
    more after a certain time, or the process outcome is needed until a
    certain time and when not provided by this time is not needed any more.
    The time until the MnS producer automatically cancels the process is
    indicated by the 'timer' attribute.";

      description "
        This choice defines the method for reporting collected performance
        metrics to MnS consumers as well as the parameters for configuring the
        reporting function. It is a choice between the control parameter
        required for the reporting methods, whose presence selects the
        reporting method as follows:

        - When only the fileReportingPeriod attribute is present, the MnS
        producer shall store files on the MnS producer at a location selected
        by the MnS producer and, on condition that an appropriate subscription
        is in place, inform the MnS consumer about the availability of new
        files and the file location using the notifyFileReady notification.
        In case the preparation of a file fails, 'notifyFilePreparationError'
        shall be sent instead.

        - When the 'fileReportingPeriod' and 'notificationRecipientAddress'
        attributes are present, then the MnS producer shall behave like
        described for the case that only the 'fileReportingPeriod' is present.
        In addition, the MnS producer shall create on behalf of the MnS
        consumer a subscription, using 'NtfSubscriptionControl', for the
        notification types 'notifyMOICreation' and 'notifyMOIDeletion' related
        to the 'File' instances that will be produced later. In case an existing
        subscription does already include the 'File' instances to be produced,
        no new subscription shall be created. The
        'notificationRecipientAddress' attribute in the created
        'NtfSubscriptionControl' instance shall be set to the value of the
        'notificationRecipientAddress' in the related 'PerfMetricJob'. This
        feature is called implicit notification subscription, as opposed to the
        case where the MnS consumer creates the subscription (explicit
        notification subscription). When the related 'PerfMetricJob' is
        deleted, the 'NtfSubscriptionControl' instance created due to the
        request for implicit subscription shall be deleted as well.

        - When only the fileReportingPeriod and fileLocation attributes are
        present, the MnS producer shall store the files on a MnS consumer, that
        can be any entity such as a file server, at the location specified by
        fileLocation. No notification is emitted by the MnS producer.

        - When only the streamTarget attribute is present, the MnS producer
        shall stream the data to the location specified by streamTarget.

        For the file-based reporting methods the fileReportingPeriod attribute
        specifies the time window during which collected measurements are
        stored into the same file before the file is closed and a new file is
        opened.";

    description "Contains classes that manage Tracing.
      Should be used in all  classes (or classes inheriting from)
      - SubNnetwork
      - ManagedElement
      - ManagedFunction

      If a YANG module wants to augment these classes/list/groupings they must
      augment all user classes!";

    list TraceJob {
      description "Represents the Trace Control and Configuration parameters of a
        particular Trace Job (see TS 32.421 and TS 32.422 for details).
        It can be name-contained by SubNetwork, ManagedElement, ManagedFunction
        or NetworkSliceSubnet.

        To activate Trace Jobs, a MnS consumer has to create TraceJob object
        instances on the MnS producer. A MnS consumer can activate a Trace Job
        for another MnS consumer since it is not required the value of
        tjTraceCollectionEntityAddress or tjStreamingTraceConsumerUri to be his
        own.

        When a MnS consumer wishes to deactivate a Trace Job, the MnS consumer
        shall delete the corresponding TraceJob instance.

        For details of management Trace Job activation/deactivation see clause
        4.1.1.1.2 of TS 32.422.

        The attribute tjJobType specifies the kind of data to collect. Dependent
        on the selected type various parameters shall be available. The
        attributes tjJobType, tjTraceReference, tjTraceRecordSessionReference,
        tjTraceCollectionEntityAddress and tjTraceReportingFormat are mandatory
        for all job types. If streaming reporting is selected for
        tjTraceReportingFormat, tjStreamingTraceConsumerURI shall be present
        additionally. The attribute tjPLMNTarget shall be present if trace
        activation method is management based.

        For the different job types the attributes are differentiated as follows:
        -   In case of TRACE_ONLY additionally the following attributes shall be
        available: tjListOfNeTypes, tjTraceDepth, tjTraceTarget and
        tjTriggeringEvent.

        For this case the optional attribute tjListOfInterfaces allows to
        specify the interfaces to be recorded.

        -   In case of IMMEDIATE_MDT_ONLY additionally the following attributes
        shall be available:
          - tjTraceTarget
          - tjMDTAnonymizationOfData,
          - tjMDTListOfMeasurements,
          - tjMDTCollectionPeriodRrmUmts (conditional for M3, M4 and M5 in UMTS),
          - tjMDTMeasurementPeriodUMTS (conditional for M6 and M7 in UMTS),
          - tjMDTCollectionPeriodRrmLte (conditional for M2 and M3 in LTE),
          - tjMDTMeasurementPeriodLTE (conditional for M4 and M5 in LTE),
          - tjMDTCollectionPeriodM6Lte (conditional for M6 in LTE),
          - tjMDTCollectionPeriodM7Lte (conditional for M7 in LTE),
          - tjMDTCollectionPeriodRrmNR (conditional for M4 and M5 in NR),
          - tjMDTCollectionPeriodM6NR (conditional for M6 in NR),
          - tjMDTCollectionPeriodM7NR (conditional for M7 in NR),
```

```
                - tjMDTReportInterval (conditional for M1 in LTE or NR and M1/M2 in
                  UMTS),
                - tjMDTReportAmount (conditional for M1 in LTE or NR and M1/M2 in
                  UMTS),
                - tjMDTReportingTrigger (conditional for M1 in LTE or NR and M1/M2 in
                  UMTS),
                - tjMDTEventThreshold (conditional for A2 event reporting or A2 event
                  triggered periodic reporting),
                - tjMDTMeasurementQuantity (conditional for 1F event reporting).

           For this case the optional attribute tjMDTAreaScope allows to specify
           the area in terms of cells or Tracking Area/Routing Area/Location area
           where the MDT data collection shall take place and the optional
           attributes tjMDTPositioningMethod, tjMDTSensorInformation allow to
           specify the positioning methods to use or the sensor information to
           include.

           -   In case of IMMEDIATE_MDT_AND_TRACE both additional attributes of
           TRACE_ONLY and IMMEDIATE_MDT_ONLY shall apply.

           -   In case of LOGGED_MDT_ONLY additionally the following attributes
           shall be available: tjTraceTarget, tjMDTAnonymizationOfData,
           tjMDTTraceCollectionEntityID, tjMDTLoggingInterval,
           tjMDTLoggingDuration, tjMDTReportType,
           tjMDTEventListForTriggeredMeasurements.

           For this case the optional attribute tjMDTAreaScope allows to specify
           the area in terms of cells or Tracking Area/Routing Area/Location area
           where the MDT data collection shall take place, the optional attribute
           tjMDTPLMNList allows to specify the PLMNs where measurement collection,
           status indication and log reporting is allowed, the optional attribute
           tjMDTAreaConfigurationForNeighCell allows to specify the area for
           which UE is requested to perform measurements logging for neighbour
           cells which have list of frequencies and the optional attribute
           tjMDTSensorInformation allows to specify the sensor information to
           include.

           -   In case of RLF_REPORT_ONLY and RCEF_REPORT_ONLY additionally the
           attribute tjTraceTarget shall be available, the optional attribute
           tjMDTAreaScope allows to specify the eNB or list of eNBs or gNB or
           list of gNBs where the reports should be collected.

           -   In case of LOGGED_MBSFN_MDT additionally the following attributes
           shall be available: tjMDTAnonymizationOfData, tjMDTLoggingInterval,
           tjMDTLoggingDuration, tjMDTMBSFNAreaList.

           Creation and deletion of TraceJob instances by MnS consumers is optional;
           when not supported, the TraceJob instances may be created and deleted by
           the system or be pre-installed.";

          S-NSSAI or per 5QI.";
    }
  }

  augment /subnet3gpp:SubNetwork {

    list ManagementDataCollection {
      key id;
      uses top3gpp:Top_Grp ;
      container attributes {
          uses ManagementDataCollectionGrp;
      }
      description "This IOC represents a management data collection request
        job. The requested data could be of kind Trace, MDT (Minimization
        of Drive Test), RLF (Radio Link Failure) report, RCEF (RRC Connection
        Establishment Failure) report, PM (performance measurements), KPI
        (end-to-end key performance indicators) or a combination of these.

        The attribute 'managementData' defines the management data which shall
        be reported. This may either include a list of data categories or a
        list of management data identified with their name. For further details
        see TS 28.622 clause 4.3.50. The 'targetNodeFilter' attribute can be
        used to target object instance(s) producing the required management
        data. It is assumed that the consumer may not have detailed knowledge
        of the network and hence may not identify the exact object instance
        producing the required management data. In this case consumer can
        request management data, specified by 3GPP, produced by certain network
        function(s) based on a particular location, the domain (CN or RAN) of
        the network function, and the handled traffic (CP or UP) of the network
        function.

        To activate the production of the requested data, a MnS consumer has to
        create a 'ManagementDataCollection' object instance on the MnS producer.

        The MnS producer will derive multiple jobs ('PerfMetricJob',
        'TraceJob') from a single 'ManagementDataCollection' job for collecting
        the required management data. Once it receives the measurement from
        multiple sources, it consolidates the data into a set of management data
        for reporting.

        The attribute 'collectionTimeWindow' specifies the time window for which
        the management data should be reported.

        The attribute 'reportingCtrl' specifies the method and associated
        control parameters for reporting the produced management data to MnS
        consumers. Three methods are available: file-based reporting with
        selection of the file location by the MnS producer, file-based
        reporting with selection of the file location by the MnS consumer and
        stream-based reporting.

        The attribute 'dataScope' configures, whether the management data
        should be reported per S-NSSAI or per 5QI, if applicable.";
    }
  }

}
<CODE ENDS>
```
