Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI IPR online database.

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**® and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at 3GPP to ETSI numbering cross-referencing.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Contents

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:

1 presented to TSG for information;

2 presented to TSG for approval;

3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

28.624 State Management Data Definition Integration Reference Point (IRP); Requirements.

28.625 State Management Data Definition Integration Reference Point (IRP); Information Service (IS).

28.626 State Management Data Definition Integration Reference Point (IRP); Solution Set (SS) definitions.

1 Scope

The present document specifies the Solution Set (SS) definitions for the IRP whose semantics is specified in State Management Data Definition IRP: Information Service (IS) (3GPP TS 28.625 [2]).

2 References

The following documents contain provisions, which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions defined in 3GPP TS 32.672 [2] apply, and the following XML terms and definitions apply:

XML file: See definition in TS 32.616 [6].

XML document: See definition in TS 32.616 [6].

XML declaration: See definition in TS 32.616 [6].

XML element: See definition in TS 32.616 [6].

empty XML element: See definition in TS 32.616 [6].

XML content (of an XML element): See definition of [1].

XML start-tag: See definition in TS 32.616 [6].

XML end-tag: See definition in TS 32.616 [6].

XML empty-element tag: See definition in TS 32.616 [6].

XML attribute specification: See definition in TS 32.616 [6].

DTD: See definition in TS 32.616 [6].

XML schema: See definition in TS 32.616 [6].

XML namespace: See definition in TS 32.616 [6].

XML complex type: See definition in TS 32.616 [6].

XML element type: See definition in TS 32.616 [6].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CM	Configuration Management
CORBA	Common Object Request Broker Architecture
DTD	Document Type Definition
EDGE	Enhanced Data for GSM Evolution
GERAN	GSM/EDGE Radio Access Network
GSM	Global System for Mobile communication
IDL	Interface Definition Language
IOC	Information Object Class
IRP	Integration Reference Point
IS	Information Service
NE	Network Element
NRM	Network Resource Model
OMG	Object Management Group
SS	Solution Set
UMTS	Universal Mobile Telecommunications System
UTRAN	Universal Terrestrial Radio Access Network
XML	eXtensible Markup Language

4 Solution Set (SS) definitions

This specification defines the following 3GPP State Management Data Definition IRP Solution Set definitions:

- 3GPP State Management Data Definition IRP CORBA SS (Annex A).
- 3GPP State Management Data Definition IRP XML definitions (Annex B).
- 3GPP State Management Data Definition IRP JSON definitions (Annex C).

Annex A (normative): CORBA Solution Set (SS)

A.1 Architectural features

The overall architectural feature of State Management Data Definition IRP is specified in 3GPP TS 28.625 [2].

This clause specifies features that are specific to the CORBA SS.

A.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [13].

A.2 Mapping

A.2.1 General mapping

None.

A.2.2 Information Object Class (IOC) mapping

Table 1 provides the mapping of the information object classes defined in the IS of the State Management IRP [2] to the equivalent of this CORBA Solution Set.

Table 1: Mapping of IOCs

IOCs defined in State Management Data Definition IRP IS [2]	CORBA SS Method
StateManagementEntity	No mapping applicable for this <<Archetype>> class.

Table 2: Mapping of Attributes

Attributes defined in State Management Data Definition IRP IS [2]	CORBA SS Method attributes	Qualifier
operationalState	OperationalState (ITU-T Recommendation X.721 [3])	M
operationalState	OperationalStateTypeOpt (ITU-T Recommendation X.721 [3])	O
usageState	UsageState (ITU-T Recommandation X.721 [3])	M
usageState	UsageStateTypeOpt (ITU-T Recommandation X.721 [3])	O
administrativeState	AdministrativeState (ITU-T Recommandation X.721 [3])	M
administrativeState	AdministrativeStateTypeOpt (ITU-T Recommandation X.721 [3])	O
alarmStatus	AlarmStatus (ITU-T Recommandation M.3100 [4])	M
alarmStatus	AlarmStatusTypeOpt (ITU-T Recommendation M.3100 [4])	O
proceduralStatus	ProceduralStatus (ITU-T Recommendation X.721 [3])	M
proceduralStatus	ProceduralStatusTypeOpt (ITU-T Recommendation X.721 [3])	O
availabilityStatus	AvailabilityStatus (ITU-T Recommandation X.721 [3])	M
availabilityStatus	AvailabilityStatusTypeOpt (ITU-T Recommandation X.721 [3])	O
controlStatus	ControlStatus (ITU-T Recommandation X.721 [3])	M
controlStatus	ControlStatusTypeOpt (ITU-T Recommandation X.721 [3])	O
standbyStatus	StandbyStatus (ITU-T Recommandation X.721 [3])	M
standbyStatus	StandbyStatusTypeOpt (ITU-T Recommandation X.721 [3])	O
unknownStatus	UnknownStatus (ITU-T Recommendation X.721 [3])	M
unknownStatus	UnknownStatusTypeOpt (ITU-T Recommendation X.721 [3])	O

A.3 Solution Set definitions

A.3.1 IDL definition structure

Clause A.3.2 contains const definitions for State Management Data Definition IRP.

Clause A.3.3 contains commonly used optional definitions for State Management Data Definition IRP.

Clause A.3.4 contains commonly used definitions for State Management Data Definition IRP.

A.3.2 IDL specification “StateManagementIRPConstDefs.idl”

```
//File:- StateManagementIRPConstDefs.idl
#ifndef _STATE_MANAGEMENT_IRP_CONST_DEFS_IDL_
#define _STATE_MANAGEMENT_IRP_CONST_DEFS_IDL_

#include "CosNotification.idl"
#include "ManagedGenericIRPConstDefs.idl"
#include <StateManagementIRPCommonConstDefs.idl>
#include <StateManagementIRPOptConstDefs.idl>

// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"

/* ## Module: StateManagementIRPConstDefs
This module contains commonly used definitions for State Management IRP
=========================================================================
*/
module StateManagementIRPConstDefs
{
/*
  Constant definitions for state management notifications uses when populating the
  Cos::Structured event.
  The "name" party of the structured event carries the following constant definitions
  appropriate to the state being notified.
  Refer to TS 32.666 regarding how to populate the structured event
*/
   interface AttributeNameValue {
      const string OPERATIONAL_STATE    = "operationalState";

Annex B (normative): XML definitions

B.0 General

This annex specifies the XML file format definition for the Bulk Configuration Management IRP IS [5] for the IRP whose semantics is specified in State Management Data Definition IRP: Information Service (IS) (3GPP TS 28.625 [2]).

The XML file formats are based on XML [7], XML Schema [9][10]and XML Namespace [11] standards.

B.1 Architectural features

B.1.0 Introduction

The overall architectural feature of State Management IRP is specified in 3GPP TS 28.625 [2].

This clause specifies features that are specific to the XML Schema definitions.

B.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [13].

B.2 Mapping

The mapping is not present in the current version of this specification.

B.3 Solution Set definitions

B.3.1 XML definition structure

The overall description of the file format of configuration data XML files is provided by 3GPP TS 32.616 [6].

Clause B.3.2 defines the XML schema `stateManagementIRP.xsd` for the State Management IRP: Information Service (IS) defined in 3GPP TS 28.625 [2].

The definition of the XML element types complies with the generic mapping rules defined in 3GPP TS 32.616 [6].

B.3.2 XML schema “stateManagementIRP.xsd”

```
<?xml version="1.1" encoding="UTF-8"?>
<!--
  3GPP TS 28.626 State Management IRP
  Bulk CM Configuration data file XML schema
  stateManagementIRP.xsd
-->

```

Annex C (normative): JSON definitions

C.1 General

This annex specifies the JSON file format definition for the NRM whose semantics is specified in State Management Data Definition IRP: Information Service (IS) (3GPP TS 28.625 [2]).

C.2 Architectural features

C.2.1 Introduction

The overall architectural feature of State Management IRP is specified in 3GPP TS 28.625 [2].

This clause specifies features that are specific to the JSON Schema definitions.

C.2.2 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [13].

C.3 Mapping

C.3.1 Attributes mapping

Mapping from the attributes of IOCs defined in the information model to SS equivalent definitions are listed in the following table.

Object Attributes	JSON definitions' Name	JSON Type
operationalState	operationalState	OperationalState
usageState	usageState	UsageState
administrativeState	administrativeState	AdministrativeState
alarmStatus	alarmStatus	AlarmStatus
proceduralStatus	proceduralStatus	ProceduralStatus
availabilityStatus	availabilityStatus	AvailabilityStatus
controlStatus	controlStatus	ControlStatus
standbyStatus	standbyStatus	StandbyStatus
unknownStatus	unknownStatus	UnknownStatus

C.4 Solution Set (SS) definitions

C.4.1 JSON definition structure

JSON is used as resource representations format carried in the HTTP request and HTTP response message bodies. The properties (key-value pairs) on an object are defined using the properties keyword.

The definition of the JSON resource object complies with the generic rules defined in 3GPP TS 32.158 [14].

C.4.2 Graphical representation

The graphical representation is not present in the current version of the present document.

C.4.3 JSON schema "stateManagementNrm.json"

```
{
    "$schema": "http://json-schema.org/draft-05/schema#",
    "id": "http://3gpp.org/28626/stateManagementNrm.json",
    "description": "JSON based solution set definitions for State Management NRM",
    "definitions": {
      "AdministrativeState": {
        "enum": ["Locked", "Unlocked", "ShuttingDown"]
      },
      "OperationalState": {
        "enum": ["Enabled", "Disabled"]
      },
