Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: “Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards”, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Annex A (normative): OpenAPI specification ........................................................................ 31
A.1 General .......................................................................................................................... 31
Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x  the first digit:
   1  presented to TSG for information;
   2  presented to TSG for approval;
   3  or greater indicates TSG approved document under change control.

y  the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z  the third digit is incremented when editorial only changes have been incorporated in the document.
1 Scope

The present specification provides the stage 3 definition of the Network Data Analytics Function Services of the 5G System.

The 5G System Architecture is defined in 3GPP TS 23.501 [2]. The stage 2 definition and related procedures for Network Data Analytics Function Services are specified in 3GPP TS 23.502 [3] and 3GPP TS 23.503 [4].

The 5G System stage 3 call flows are provided in 3GPP TS 29.513 [5].

The Technical Realization of the Service Based Architecture and the Principles and Guidelines for Services Definition are specified in 3GPP TS 29.500 [6] and 3GPP TS 29.501 [7].

The Network Data Analytics Function Services are provided by the Network Data Analytics Function (NWDAF). These services provide NWDAF slice congestion events notification and NWDAF specific analytics.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

4 Services offered by the NWDAF

4.1 Introduction

The Nnwdaf services are used for the NWDAF to provide network data analytics (i.e. load level information). These services provide NWDAF slice congestion events notification and NWDAF specific analytics.

The following services are specified for NWDAF:

<table>
<thead>
<tr>
<th>Service Name</th>
<th>Description</th>
<th>Service Operations</th>
<th>Operation Semantics</th>
<th>Example Consumer(s)</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

4.2 Nnwdaf_EventsSubscription Service

4.2.1 Service Description

4.2.1.1 Overview

The NWDAF slice congestion events notification Service, as defined in 3GPP TS 23.501 [2], 3GPP TS 23.502 [3] and 3GPP TS 23.503 [4], is provided by the Network Data Analytics Function (NWDAF).

This service:
- Allows NF consumers to subscribe to and unsubscribe from load events of network slice instance; and
- notifies NF consumers with a corresponding subscription about observed events.

The types of observed events include:
- Load level of network slice instance.

### 4.2.1.2 Service Architecture

The 5G System Architecture is defined in 3GPP TS 23.501 [2]. The Policy and Charging related 5G architecture is also described in 3GPP TS 23.503 [4] and 3GPP TS 29.513 [5].

The Nnwdaf_EventsSubscription service is part of the Nnwdaf service-based interface exhibited by the Network Data Analytics Function (NWDAF).

Known consumers of the Nnwdaf_EventsSubscription service are:
- Policy Control Function (PCF)
- Network Slice Selection Function (NSSF)

The PCF accesses the Nnwdaf_EventsSubscription service at the NWDAF via the N23 Reference point. The NSSF accesses the Nnwdaf_EventsSubscription service at the NWDAF via the N34 Reference point.

![Reference Architecture for the Nnwdaf_EventsSubscription Service; SBI representation](image1)

![Reference Architecture for the Nnwdaf_EventsSubscription Service: reference point representation](image2)

### 4.2.1.3 Network Functions

#### 4.2.1.3.1 Network Data Analytics Function (NWDAF)

The Network Data Analytics Function (NWDAF) provides:
The Network Data Analytics Function (NWDAF) allows NF consumers to subscribe to and unsubscribe from periodic notification and/or notification when a threshold is exceeded.

4.2.1.3.2 NF Service Consumers

The Policy Control Function (PCF):
- Supports taking input from Network Data Analytics Function (NWDAF) into consideration for policies on assignment of network resources and for traffic steering policies.

NOTE: How this information is used by the PCF is not standardized in this release of the specification.

The Network Slice Selection Function (NSSF):
- supports taking load level information from Network Data Analytics Function (NWDAF) into consideration for slice selection.

4.2.2 Service Operations

4.2.2.1 Introduction

<table>
<thead>
<tr>
<th>Service operation name</th>
<th>Description</th>
<th>Initiated by</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nnwdaf_Events_SubscriptionSubscribe</td>
<td>This service operation is used by an NF to subscribe or update subscription for event notifications for a specified network slice instance. Periodic notification and notification upon threshold exceeded can be subscribed.</td>
<td>NF consumer (PCF, NSSF)</td>
</tr>
<tr>
<td>Nnwdaf_Events_SubscriptionUnSubscribe</td>
<td>This service operation is used by an NF to unsubscribe from event notifications.</td>
<td>NF consumer (PCF, NSSF)</td>
</tr>
<tr>
<td>Nnwdaf_Events_SubscriptionNotify</td>
<td>This service operation is used by an NWDAF to notify NF consumers about subscribed events.</td>
<td>NWDAF</td>
</tr>
</tbody>
</table>

4.2.2.2 Nnwdaf_EventsSubscription_Subscribe service operation

4.2.2.2.1 General

The Nnwdaf_EventsSubscription_Subscribe service operation is used by an NF service consumer to subscribe or update subscription for event notifications on a specified network slice instance. The following are the types of events for which a subscription can be made:
- Load level of network slice instance.

To subscribe to event notifications, the NF service consumer shall send an Nnwdaf_EventsSubscription_Subscribe request that shall include:
- Identification(s) of network slice to which the subscription applies via:
  a) Identifier of network slice instance; or
  b) all slices;
- event notification method (periodic, upon threshold exceeded); and
- notification URI;

and that may include:
- repetition period for periodic reporting; and
- load level threshold value.
Upon the reception of the Nnwdaf_EventsSubscription_Subscribe request message, the NWDAF shall store the subscription and shall send an Nnwdaf_EventsSubscription_Subscribe response message.

4.2.2.2.2 Subscription for event notifications on a specified network slice instance

Figure 4.2.2.2.2-1 shows a scenario where the NF service consumer sends a request to the NWDAF to subscribe for event notifications (see also 3GPP TS 23.502 [3] figure 4.19.1-1 step 1).

![Figure 4.2.2.2.2-1: NF service consumer subscribes to notifications](image)

The NF service consumer shall invoke the Nnwdaf_EventsSubscription_Subscribe service operation to subscribe to event notifications on specified network slice instance(s). The NF service consumer shall send an HTTP POST request with “[apiRoot]/nnwdaf-eventssubscription/v1/subscriptions” as Resource URI representing the "NWDAF Events Subscriptions", as shown in figure 4.2.2.2.2-1, step 1, to create a subscription for an "Individual NWDAF Event Subscription" according to the information (e.g. identification(s) of network slice(s)) in message body. The NnwdafEventsSubscription data structure provided in the request body shall include:

- a description of the subscribed events as "eventSubscriptions" attribute that for each event shall include an event identifier as "event" attribute and may include:
  
a) identification(s) of network slice to which the subscription applies via:
    
    1) identification of network slice(s) by "snssai" attribute: or
    2) any slices indication via the "anySlice" attribute;
  
b) event notification method (periodic, upon threshold exceeded) as "notificationMethod" attribute;
  
c) repetition period for periodic reporting as "repetitionPeriod" attribute;
  
d) load level threshold as "loadLevelThreshold" attribute; and

- an URI where to receive the requested notifications as "notificationURI" attribute; and

- list of supported features by the service consumer as "supportedFeatures" attribute.

Upon the the reception of an HTTP POST request with: “[apiRoot]/nnwdaf-eventssubscription/v1/subscriptions” as Resource URI and NnwdafEventsSubscription data structure as request body, the NWDAF shall:

- create a new subscription;

- assign an event subscriptionId;

- store the subscription.

If the NWDAF created an "Individual NWDAF Event Subscription" resource, the NWDAF shall respond with "201 Created" with the message body containing a representation of the created subscription, as shown in figure 4.2.2.2.2-1, step 2. The NWDAF shall include a Location HTTP header field. The Location header field shall contain the URI of the created subscription i.e. "[apiRoot]/nnwdaf-eventssubscription/v1/subscriptions/{subscriptionId}”.

4.2.2.2.3 Update subscription for event notifications on a specified network slice instance

Figure 4.2.2.2.3-1 shows a scenario where the NF service consumer sends a request to the NWDAF to subscribe for event notifications (see also 3GPP TS 23.502 [3] figure 4.19.1-1 step 1).
The NF service consumer shall invoke the Nnwdaf_EventsSubscription_Subscribe service operation to update subscription to event notifications on specified network slice instance(s). The NF service consumer shall send an HTTP PUT request with "{apiRoot}/nnwdaf-eventssubscription/v1/subscriptions/{subscriptionId}" as Resource URI representing the "NWDAF Events Subscriptions", as shown in figure 4.2.2.2.3-1, step 1, to update the subscription for an "Individual NWDAF Event Subscription" resource identified by the {subscriptionId}. The NnwdafEventsSubscription data structure provided in the request body may include:

- a description of the subscribed events as "eventSubscriptions" attribute that for each event shall include an event identifier as "event" attribute and may include:
  a) identification(s) of network slice to which the subscription applies via:
     1) identification of network slice(s) by "snssai" attribute; or
     2) any slices indication via the "anySlice" attribute;
  b) event notification method (periodic, upon threshold exceeded) as "notificationMethod" attribute;
  c) repetition period for periodic reporting as "repetitionPeriod" attribute;
  d) load level threshold as "loadLevelThreshold" attribute; and
- an URI where to receive the requested notifications as "notificationURI" attribute.

Upon the reception of an HTTP PUT request with: "{apiRoot}/nnwdaf-eventssubscription/v1/subscriptions/{subscriptionId}" as Resource URI and NnwdafEventsSubscription data structure as request body, the NWDAF shall:

- update the subscription of corresponding subscriptionId; and
- store the subscription.

If the NWDAF updated an "Individual NWDAF Event Subscription" resource, the NWDAF shall respond with:

a) HTTP "200 OK" status code with the message body containing a representation of the updated subscription, as shown in figure 4.2.2.2.3-1, step 2a; or

b) HTTP "204 No Content" status code, as shown in figure 4.2.2.2.3-1, step 2b.

If the Individual NWDAF Event Subscription resource does not exist, the NWDAF shall respond with "404 Not Found ".

4.2.2.3 Nnwdaf_EventsSubscription_Unsubscribe service operation

4.2.2.3.1 General

The Nnwdaf_EventsSubscription_Unsubscribe service operation is used by an NF service consumer to unsubscribe from event notifications on a specified network slice instance.
To unsubscribe from event notifications, the NF service consumer shall send an Nnwdaf_EventsSubscription_Unsubscribe request.

Upon the reception of the Nnwdaf_EventsSubscription_Unsubscribe request message, the NWDAF shall remove the corresponding subscription and shall send an Nnwdaf_EventsSubscription_Unsubscribe response message.

### 4.2.2.3.2 Unsubscribe from event notifications on a specified network slice instance

Figure 4.2.2.3.2-1 shows a scenario where the NF service consumer sends a request to the NWDAF to unsubscribe from event notifications (see also 3GPP TS 23.502 [3] figure 4.19.1-1 step 1).

![Diagram](image)

**Figure 4.2.2.3.2-1: NF service consumer unsubscribes from notifications**

The NF service consumer shall invoke the Nnwdaf_EventsSubscription_Unsubscribe service operation to unsubscribe to event notifications on specified network slice instance(s). The NF service consumer shall send an HTTP DELETE request with: "{apiRoot}/nnwdaf-eventssubscription/v1/subscriptions/{subscriptionId}" as Resource URI, where "{subscriptionId}" is the event subscriptionId of the existing subscription that is to be deleted.

Upon the reception of an HTTP DELETE request with: "{apiRoot}/nnwdaf-eventssubscription/v1/subscriptions/{subscriptionId}" as Resource URI, the NWDAF shall:

- remove the corresponding subscription.

If the HTTP request message from the NF service consumer is accepted, the NWDAF shall respond with "204 No Content".

If the Individual NWDAF Event Subscription resource does not exist, the NWDAF shall respond with "404 Not Found".

### 4.2.2.4 Nnwdaf_EventsSubscription_Notify service operation

#### 4.2.2.4.1 General

The Nnwdaf_EventsSubscription_Notify service operation is used by an NWDAF to notify NF consumers about subscribed events. If the NWDAF observes network slice related event(s) for which an NF service consumer has subscribed to, the NWDAF shall send to that NF service consumer an Nnwdaf_EventsSubscription_Notify request that shall include:

- Identification(s) of network slice to which the subscription applies via:
  a) Identifier of network slice instance; and
  - load level information of network slice instance.

Upon the reception of the Nsmf_EventExposure_Notify request message, the NF shall send an Nsmf_EventExposure_Notify response message.

The NWDAF shall notify the NF service consumer depending upon type of subscription this notification is either on a periodic basis or triggered whenever a threshold is crossed.

#### 4.2.2.4.2 Notification about subscribed event on specified network slice instance

Figure 4.2.2.4.2-1 shows a scenario where the NWDAF sends a request to the NF Service Consumer to notify for event notifications (see also 3GPP TS 23.502 [3] figure 4.19.1-1 step 2).
The NWDAF shall invoke the Nnwdaf_EventsSubscription_Notify service operation to notify the subscribed event on specified network slice instance(s). The NWDAF shall send an HTTP POST request with "{notificationURI}" received in the Nnwdaf_EventsSubscription_Subscribe service operation as Resource URI, as shown in figure 4.2.2.2.2-1, step 1. The NnwdafEventsSubscriptionNotification data structure provided in the request body that shall include:

- a description of the notified event as "eventNotifications" attribute that for each event shall include:
  a) an event identifier as "event" attribute;
  b) identification(s) of network slice to which the notification applies as "snssai" attribute;
  c) load level information as "loadLevelInformation" attribute; and
- an event subscriptionId as "subscriptionId" attribute.

Upon the the reception of an HTTP POST request with: "{notificationURI}" as Resource URI and NnwdafEventsSubscriptionNotification data structure as request body, the NF Service Consumer shall:

- store the notification.

If the HTTP request message from the NWDAF is accepted, the NF Service Consumer shall respond with "204 No Content".

4.3 Nnwdaf_AnalyticsInfo Service

4.3.1 Service Description

4.3.1.1 Overview

The Nnwdaf_AnalyticsInfo Service as defined in 3GPP TS 23.501 [2], 3GPP TS 23.502 [3] and 3GPP TS 23.503 [4], is provided by the Network Data Analytics Function (NWDAF).

This service:

- allows NF consumers to request and get load level information of network slice instance.

4.3.1.2 Service Architecture

The 5G System Architecture is defined in 3GPP TS 23.501 [2]. The Policy and Charging related 5G architecture is also described in 3GPP TS 23.503 [4] and 3GPP TS 29.513 [5].

The Nnwdaf_AnalyticsInfo service is part of the Nnwdaf service-based interface exhibited by the Network Data Analytics Function (NWDAF).

Known consumers of the Nnwdaf_AnalyticsInfo service are:

- Policy Control Function (PCF)
- Network Slice Selection Function (NSSF)
The PCF accesses the Nnwdaf_AnalyticsInfo service at the NWDAF via the N23 Reference point. The NSSF accesses the Nnwdaf_AnalyticsInfo service at the NWDAF via the N34 Reference point.

**Figure 4.3.1.2-1: Reference Architecture for the Nnwdaf_AnalyticsInfo Service; SBI representation**

**Figure 4.3.1.2-2: Reference Architecture for the Nnwdaf_AnalyticsInfo Service: reference point representation**

### 4.3.1.3 Network Functions

#### 4.3.1.3.1 Network Data Analytics Function (NWDAF)

The Network Data Analytics Function (NWDAF) provides specific analytics:

- Identifier of network slice instance; and
- Load level information for that network slice instance.

#### 4.3.1.3.2 NF Service Consumers

The Policy Control Function (PCF):

- Supports taking input from Network Data Analytics Function (NWDAF) into consideration for policies on assignment of network resources and for traffic steering policies.

  **NOTE:** How this information is used by the PCF is not standardized in this release of the specification.

The Network Slice Selection Function (NSSF):

- Supports taking load level information from Network Data Analytics Function (NWDAF) into consideration for slice selection.
4.3.2 Service Operations

4.3.2.1 Introduction

Table 4.3.2.1-1: Operations of the Nnwdaf_AnalyticsInfo Service

<table>
<thead>
<tr>
<th>Service operation name</th>
<th>Description</th>
<th>Initiated by</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nnwdaf_AnalyticsInfo_Request</td>
<td>This service operation is used by an NF to request and get specific analytics from NWDAF.</td>
<td>NF consumer (PCF, NSSF)</td>
</tr>
</tbody>
</table>

4.3.2.2 Nnwdaf_AnalyticsInfo_Request service operation

4.3.2.2.1 General

The Nnwdaf_AnalyticsInfo_Request service operation is used by an NF service consumer to request and get specific analytics on a specified network slice instance. The following are the types of specific analytics:

- Load level information of particular network slice instance.

NOTE: This information has a meaning only in the operator network.

To request the analytics information, the NF service consumer shall send an Nnwdaf_AnalyticsInfo_Request request message that shall include:

- Event ID; and
- Event filters. For Event ID with value of "Load_Level_Information", the Event filters shall contain the list of network slice instance(s).

Upon the reception of the Nnwdaf_AnalyticsInfo_Request request message, the NWDAF shall send a Nnwdaf_AnalyticsInfo_Request response message that shall include:

- Analytic data indicated in the request.

4.3.2.2.2 Request and get from NWDAF load level information for a particular Network Slice instance

Figure 4.3.2.2.2-1 shows a scenario where the NF service consumer (e.g. PCF) sends a request to the NWDAF to request and get from NWDAF load level information for a particular Network Slice instance (see also 3GPP TS 23.502 [3] figure 4.19.2-1 step 1).

The NF service consumer (e.g. PCF) shall invoke the Nnwdaf_AnalyticsInfo_Request service operation when represent the NWDAF load level information of particular network slice instance. The NF service consumer shall send an HTTP GET request on the resource URI "/apiRoot/nnwdaf-analyticsinfo/v1/analytics" representing the "NWDAF Analytics", as shown in figure 4.3.2.2.2-1, step 1, to request analytics data according to the value of eventId. The EventFilter data structure provided in the request body shall include:

- identification(s) of network slice when the eventId is "LOAD_LEVEL_INFORMATION" via:
  1) identification of network slice(s) by "snssai" attribute; or
2) any slices indication via the "anySlice" attribute.

Upon the reception of the HTTP GET request, the NWDAF shall:

- analyse the requested analytic data. For eventId of "LOAD_LEVEL_INFORMATION", the NWDAF shall
  analyse the load level information of corresponding network slice instance(s).

If the HTTP request message from the NF service consumer is accepted, the NWDAF shall respond with "200 OK"
status code with the message body containing the analytics with parameters as relevant for the requesting NF service
consumer. The AnalyticsData data structure in the response body shall include:

- analytics with parameters indicated in the request. For eventId of "LOAD_LEVEL_INFORMATION ", the
  analytics shall include the load level information of corresponding network slice instance.

If the request NWDAF Analytics data does not exist, the NWDAF shall respond with "204 No Content ".

5 API Definitions

5.1 Nnwdaf_EventsSubscription Service API

5.1.1 Introduction

The Nnwdaf_EventsSubscription Service shall use the Nnwdaf_EventsSubscription API.

The request URI used in each HTTP request from the NF service consumer towards the NWDAF shall have the
structure defined in subclause 4.4.1 of 3GPP TS 29.501 [7], i.e.:

{apiRoot}/{apiName}/{apiVersion}/{apiSpecificResourceUriPart}

with the following components:

- The {apiRoot} shall be set as described in 3GPP TS 29.501 [7].
- The {apiName} shall be "nnwdaf-eventssubscription".
- The {apiVersion} shall be "v1".
- The {apiSpecificResourceUriPart} shall be set as described in subclause 5.1.3.

5.1.2 Usage of HTTP

5.1.2.1 General

HTTP/2, IETF RFC 7540 [9], shall be used as specified in clause 5 of 3GPP TS 29.500 [6].

HTTP/2 shall be transported as specified in subclause 5.3 of 3GPP TS 29.500 [6].

The OpenAPI [11] specification of HTTP messages and content bodies for the Nnwdaf_EventsSubscription is contained
in Annex A.

5.1.2.2 HTTP standard headers

5.1.2.2.1 General

See subclause 5.2.2 of 3GPP TS 29.500 [6] for the usage of HTTP standard headers.

5.1.2.2.2 Content type

JSON, IETF RFC 8259 [10], shall be used as content type of the HTTP bodies specified in the present specification as
specified in subclause 5.4 of 3GPP TS 29.500 [6]. The use of the JSON format shall be signalled by the content type
"application/json".

"Problem Details" JSON object shall be used to indicate additional details of the error in a HTTP response body and
shall be signalled by the content type "application/problem+json", as defined in IETF RFC 7807 [15].
5.1.2.3 HTTP custom headers

The Nnwdaf_EventsSubscription Service API shall support HTTP custom header fields specified in subclause 5.2.3.2 of 3GPP TS 29.500 [6].

In this release of the specification, no specific custom headers are defined for the Nnwdaf_EventsSubscription Service API.

5.1.3 Resources

5.1.3.1 Resource Structure

![Resource URI structure of the Nnwdaf_EventsSubscription API](image)

Figure 5.1.3.1-1: Resource URI structure of the Nnwdaf_EventsSubscription API

Table 5.1.3.1-1 provides an overview of the resources and applicable HTTP methods.

<table>
<thead>
<tr>
<th>Resource name</th>
<th>Resource URI</th>
<th>HTTP method or custom operation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NWDAF Events Subscriptions</td>
<td>{apiRoot}/nnwdaf-eventssubscription/v1/subscriptions</td>
<td>POST</td>
<td>Creates a new Individual NWDAF Events Subscription resource.</td>
</tr>
<tr>
<td>Individual NWDAF Event Subscription</td>
<td>{apiRoot}/nnwdaf-eventssubscription/v1/subscriptions/{subscriptionId}</td>
<td>DELETE</td>
<td>Deletes an Individual NWDAF Events Subscription identified by subresource {subscriptionId}.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>PUT</td>
<td>Modifies an existing Events Subscription subresource.</td>
</tr>
</tbody>
</table>

5.1.3.2 Resource: NWDAF Events Subscriptions

5.1.3.2.1 Description

The NWDAF Events Subscriptions resource represents all subscriptions to the Nnwdaf_EventsSubscription Service at a given NWDAF.

5.1.3.2.2 Resource definition

Resource URI: {apiRoot}/nnwdaf-eventssubscription/v1/subscriptions

This resource shall support the resource URI variables defined in table 5.1.3.2.2-1.
5.1.3.2.3 Resource Standard Methods

5.1.3.2.3.1 POST

This method shall support the URI query parameters specified in table 5.1.3.2.3.1-1.

<table>
<thead>
<tr>
<th>Name</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>apiRoot</td>
<td>See subclause 5.1.1</td>
</tr>
</tbody>

</tbody>
</table>

NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.7.1-1 of 3GPP TS 29.500 [6] also apply.

5.1.3.2.4 Resource Custom Operations

None in this release of the specification.

5.1.3.3 Resource: Individual NWDAF Event Subscription

5.1.3.3.1 Description

The Individual NWDAF Events Subscription resource represents a single subscription to the Nnwdaf_EventsSubscription Service at a given NWDAF.

5.1.3.3.2 Resource definition

Resource URI: {apiRoot}/nnwdaf-eventssubscription/v1/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.1.3.3.2-1.

Table 5.1.3.3.2-1: Resource URI variables for this resource

<table>
<thead>
<tr>

NOTE 2: Failure cases are described in subclause 5.1.7.

### 5.1.3.3.4 Resource Custom Operations

None in this release of the specification.

### 5.1.4 Custom Operations without associated resources

None in this release of the specification.

### 5.1.5 Notifications

#### 5.1.5.1 General

Notifications shall comply with subclause 6.2 of 3GPP TS 29.500 [6] and subclause 4.6.2.3 of 3GPP TS 29.501 [7].

#### Table 5.3.3.4.1-1: Notifications

</tr>
</tbody>
</table>

### 5.1.5.2 Event Notification

#### 5.1.5.2.1 Description

The Event Notification is used by the NWDAF to report one or several observed Events to a NF service consumer that has subscribed to such Notifications via the Individual NWDAF Event Subscription Resource.

#### 5.1.5.2.2 Operation Definition

**URI:** {notificationURI}

The operation shall support the URI variables defined in table 5.1.5.2.2-1, the request data structures specified in table 5.1.5.2.2-2 and the response data structure and response codes specified in table 5.1.5.2.2-3.

#### Table 5.1.5.2.2-1: URI variables

5.1.6.3 Simple data types and enumerations

5.1.6.3.1 Introduction

This subclause defines simple data types and enumerations that can be referenced from data structures defined in the previous subclauses.

5.1.6.3.2 Simple data types

The simple data types defined in table 5.1.6.3.2-1 shall be supported.

Table 5.1.6.3.2-1: Simple data types

5.1.7  Error handling

5.1.7.1  General

HTTP error handling shall be supported as specified in subclause 5.2.4 of 3GPP TS 29.500 [6].

For the Nnwdaf_EventsSubscription API, HTTP error responses shall be supported as specified in subclause 4.8 of 3GPP TS 29.501 [7]. Protocol errors and application errors specified in table 5.2.7.2-1 of 3GPP TS 29.500 [6] shall be supported for an HTTP method if the corresponding HTTP status codes are specified as mandatory for that HTTP method in table 5.2.7.1-1 of 3GPP TS 29.500 [6]. In addition, the requirements in the following subclauses shall apply.

5.1.7.2  Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the Nnwdaf_EventsSubscription API.

5.1.7.3  Application Errors

The application errors defined for the Nnwdaf_EventsSubscription API are listed in table 5.1.7.3-1. The NWDAF shall include in the HTTP status code a “ProblemDetails” data structure with the “cause” attribute indicating the application error as listed in table 5.7.3-1.

Table 5.1.7.3-1: Application errors

<table>
<thead>
<tr>
<th>Application Error</th>
<th>HTTP status code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUBSCRIPTION_NOT_FOUND</td>
<td>404 Not Found</td>
<td>Indicates that the modification or deletion has failed because the specified Individual NWDAF Event Subscription resource does not exist. (NOTE)</td>
</tr>
</tbody>
</table>

NOTE: This application error is included in the responses to the GET and the DELETE requests.

5.1.8  Feature negotiation

The optional features in table 5.1.8-1 are defined for the Nnwdaf_EventsSubscription API. They shall be negotiated using the extensibility mechanism defined in subclause 6.6 of 3GPP TS 29.500 [6].

Table 5.1.8-1: Supported Features

<table>
<thead>
<tr>
<th>Feature number</th>
<th>Feature Name</th>
<th>Description</th>
</tr>
</thead>
</table>

5.1.9  Security

As indicated in 3GPP TS 33.501 [13] and 3GPP TS 29.500 [6], the access to the Nnwdaf_EventsSubscription API may be authorized by means of the OAuth2 protocol (see IETF RFC 6749 [14]), based on local configuration, using the "Client Credentials" authorization grant, where the NRF (see 3GPP TS 29.510 [12]) plays the role of the authorization server.

If OAuth2 is used, a NF Service Consumer, prior to consuming services offered by the Nnwdaf_EventsSubscription API, shall obtain a "token" from the authorization server, by invoking the Access Token Request service, as described in 3GPP TS 29.510 [12], subclause 5.4.2.2.

NOTE: When multiple NRFs are deployed in a network, the NRF used as authorization server is the same NRF that the NF Service Consumer used for discovering the Nnwdaf_EventsSubscription service.
The Nnwdaf_EventsSubscription API defines a single scope "nnwdaf-eventssubscription" for the entire service, and it does not define any additional scopes at resource or operation level.

5.2 Nnwdaf_AnalyticsInfo Service API

5.2.1 Introduction

The Nnwdaf_AnalyticsInfo Service shall use the Nnwdaf_AnalyticsInfo API.

The request URI used in each HTTP request from the NF service consumer towards the NWDAF shall have the structure defined in subclause 4.4.1 of 3GPP TS 29.501 [7], i.e.:

\[
\text{apiRoot}/\text{apiName}/\text{apiVersion}/\text{apiSpecificResourceUriPart}
\]

with the following components:

- The \{apiRoot\} shall be set as described in 3GPP TS 29.501 [7].
- The \{apiName\} shall be "nnwdaf-analyticsinfo".
- The \{apiVersion\} shall be "v1".
- The \{apiSpecificResourceUriPart\} shall be set as described in subclause 5.2.3.

5.2.2 Usage of HTTP

5.2.2.1 General

HTTP/2, IETF RFC 7540 [9], shall be used as specified in clause 5 of 3GPP TS 29.500 [6]. HTTP/2 shall be transported as specified in subclause 5.3 of 3GPP TS 29.500 [6].

The OpenAPI [11] specification of HTTP messages and content bodies for the Nnwdaf_AnalyticsInfo is contained in Annex A.

5.2.2.2 HTTP standard headers

5.2.2.2.1 General

See subclause 5.2.2 of 3GPP TS 29.500 [6] for the usage of HTTP standard headers.

5.2.2.2.2 Content type

JSON, IETF RFC 8259 [10], shall be used as content type of the HTTP bodies specified in the present specification as specified in subclause 5.4 of 3GPP TS 29.500 [6]. The use of the JSON format shall be signalled by the content type "application/json".

"Problem Details" JSON object shall be used to indicate additional details of the error in a HTTP response body and shall be signalled by the content type "application/problem+json", as defined in IETF RFC 7807 [15].

5.2.2.3 HTTP custom headers

The Nnwdaf_AnalyticsInfo Service API shall support HTTP custom header fields specified in subclause 5.2.3.2 of 3GPP TS 29.500 [6].

In this release of the specification, no specific custom headers are defined for the Nnwdaf_AnalyticsInfo Service API.
5.2.3 Resources

5.2.3.1 Resource Structure

```
//{apiRoot}/nnwdaf-analyticsinfo/v1
/analytics
```

Figure 5.2.3.1-1: Resource URI structure of the Nnwdaf_AnalyticsInfo API

Table 5.2.3.1-1 provides an overview of the resources and applicable HTTP methods.

<table>
<thead>
<tr>
<th>Resource name</th>
<th>Resource URI</th>
<th>HTTP method or custom operation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NWDAF Analytics</td>
<td>{apiRoot}/nnwdaf-analyticsinfo/v1/analytics</td>
<td>GET</td>
<td>Retrieve the NWDAF analytics</td>
</tr>
</tbody>
</table>

5.2.3.2 Resource: NWDAF Analytics

5.2.3.2.1 Description

The NWDAF Analytics resource represents the analytics to the Nnwdaf_AnalyticsInfo Service at a given NWDAF.

5.2.3.2.2 Resource definition

Resource URI: {apiRoot}/nnwdaf-analyticsinfo/v1/analytics

This resource shall support the resource URI variables defined in table 5.2.3.2.2-1.

<table>
<thead>
<tr>
<th>Name</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>apiRoot</td>
<td>See subclause 5.2.1</td>
</tr>
</tbody>
</table>

5.2.3.2.3 Resource Standard Methods

5.2.3.2.3.1 GET

This method shall support the URI query parameters specified in table 5.2.3.2.3.1-1.

<table>
<thead>
<tr>
<th>Name</th>
<th>Data type</th>
<th>P</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>event-id</td>
<td>EventId</td>
<td>M</td>
<td>1</td>
<td>Shall be included to identify the analytics.</td>
</tr>
<tr>
<td>event-filter</td>
<td>EventFilter</td>
<td>C</td>
<td>0..1</td>
<td>Shall be included to identify the analytics when the eventid is &quot;Load_Level_Information&quot;.</td>
</tr>
<tr>
<td>supported-features</td>
<td>SupportedFeatures</td>
<td>O</td>
<td>0..1</td>
<td>To filter irrelevant responses related to unsupported features.</td>
</tr>
</tbody>
</table>

This method shall support the request data structures specified in table 5.2.3.2.3.1-2 and the response data structures and response codes specified in table 5.2.3.2.3.1-3.
Table 5.2.3.2.3.1-2: Data structures supported by the GET Request Body on this resource

<table>
<thead>
<tr>
<th>Data type</th>
<th>P</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>n/a</td>
<td></td>
<td></td>
<td>204 No Content</td>
<td>If the request NWDAF Analytics data does not exist, the NWDAF shall respond with “204 No Content”</td>
</tr>
</tbody>
</table>

NOTE: The mandatory HTTP error status codes for the GET method listed in table 5.2.7.1-1 of 3GPP TS 29.500 [6] also apply.

5.2.3.2.4 Resource Custom Operations

None in this release of the specification.

5.2.4 Custom Operations without associated resources

None in this release of the specification.

5.2.5 Notifications

None in this release of the specification.

5.2.6 Data Model

5.2.6.1 General

This subclause specifies the application data model supported by the API.

Table 5.2.6.1-1 specifies the data types defined for the Nnwdaf_AnalyticsInfo service based interface protocol.

Table 5.2.6.1-1: Nnwdaf_AnalyticsInfo specific Data Types

<table>
<thead>
<tr>
<th>Data type</th>
<th>Section defined</th>
<th>Description</th>
<th>Applicability</th>
</tr>
</thead>
<tbody>
<tr>

<td>1..N</td>
<td>Identification(s) of network slice to which the subscription belongs. (NOTE)</td>
<td></td>
</tr>
</tbody>
</table>

NOTE: When eventId in the request is "LOAD_LEVEL_INFORMATION ", either information about slice(s) identified by snssai, or anySlice set to "TRUE" shall be included.

5.2.6.3 Simple data types and enumerations

5.2.6.3.1 Introduction

This subclause defines simple data types and enumerations that can be referenced from data structures defined in the previous subclauses.

5.2.6.3.2 Simple data types

The simple data types defined in table 5.2.6.3.2-1 shall be supported.

<table>
<thead>
<tr>
<th>Type Name</th>
<th>Type Definition</th>
<th>Description</th>
<th>Applicability</th>
</tr>
</thead>
<tbody>
<tr>
<td>n/a</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5.2.6.3.3 Enumeration: EventId

<table>
<thead>
<tr>
<th>Enumeration value</th>
<th>Description</th>
<th>Applicability</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOAD_LEVEL_INFORMATION</td>
<td>Represent the analytics of load level information of corresponding network slice instance.</td>
<td></td>
</tr>
</tbody>
</table>
5.2.7 Error handling

5.2.7.1 General

HTTP error handling shall be supported as specified in subclause 5.2.4 of 3GPP TS 29.500 [6].

For the Nnwdaf_AnalyticsInfo API, HTTP error responses shall be supported as specified in subclause 4.8 of 3GPP TS 29.501 [7]. Protocol errors and application errors specified in table 5.2.7.2-1 of 3GPP TS 29.500 [6] shall be supported for an HTTP method if the corresponding HTTP status codes are specified as mandatory for that HTTP method in table 5.2.7.1-1 of 3GPP TS 29.500 [6]. In addition, the requirements in the following subclauses shall apply.

5.2.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the Nnwdaf_AnalyticsInfo API.

5.2.7.3 Application Errors

The application errors defined for the Nnwdaf_AnalyticsInfo API are listed in table 5.2.7.3-1. The NWDAF shall include in the HTTP status code a “ProblemDetails” data structure with the “cause” attribute indicating the application error as listed in table 5.2.7.3-1.

<table>
<thead>
<tr>
<th>Application Error</th>
<th>HTTP status code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>n/a</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5.2.8 Feature negotiation

The optional features in table 5.2.8-1 are defined for the Nnwdaf_AnalyticsInfo API. They shall be negotiated using the extensibility mechanism defined in subclause 6.6 of 3GPP TS 29.500 [6].

<table>
<thead>
<tr>
<th>Feature number</th>
<th>Feature Name</th>
<th>Description</th>
</tr>
</thead>
</table>

5.2.9 Security

As indicated in 3GPP TS 33.501 [13] and 3GPP TS 29.500 [6], the access to the Nnwdaf_AnalyticsInfo API may be authorized by means of the OAuth2 protocol (see IETF RFC 6749 [14]), based on local configuration, using the "Client Credentials" authorization grant, where the NRF (see 3GPP TS 29.510 [12]) plays the role of the authorization server.

If OAuth2 is used, a NF Service Consumer, prior to consuming services offered by the Nnwdaf_AnalyticsInfo API, shall obtain a "token" from the authorization server, by invoking the Access Token Request service, as described in 3GPP TS 29.510 [12], subclause 5.4.2.2.

NOTE: When multiple NRFS are deployed in a network, the NRF used as authorization server is the same NRF that the NF Service Consumer used for discovering the Nnwdaf_AnalyticsInfo service.

The Nnwdaf_AnalyticsInfo API defines a single scope "nnwdaf-analyticsinfo" for the entire service, and it does not define any additional scopes at resource or operation level.
Annex A (normative):
OpenAPI specification

A.1 General

The present Annex contains an OpenAPI [11] specification of HTTP messages and content bodies used by the Nnwdaf_EventsSubscription and the Nnwdaf_AnalyticsInfo API.

In case of conflicts between the main body of the present document and the present Annex, the information in the main body shall be applicable.
