## Intellectual Property Rights

### Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

### Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

---

## Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

---

## Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

# Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

- shall** indicates a mandatory requirement to do something
- shall not** indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

- should** indicates a recommendation to do something
- should not** indicates a recommendation not to do something
- may** indicates permission to do something
- need not** indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

- can** indicates that something is possible
- cannot** indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

- will** indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- will not** indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
- might** indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

**might not** indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

**is** (or any other verb in the indicative mood) indicates a statement of fact

**is not** (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

---

# 1 Scope

The present document specifies the stage 3 protocol and data model for the Nspaf Service Based Interface. It provides stage 3 protocol definitions and message flows, and specifies the API for each service offered by the SP-AF.

The 5G System stage 2 architecture and procedures are specified in 3GPP TS 23.501 [2] and 3GPP TS 23.502 [3].

The Technical Realization of the Service Based Architecture and the Principles and Guidelines for Services Definition are specified in 3GPP TS 29.500 [4] and 3GPP TS 29.501 [5].

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

### 3.1 Terms

Void.

### 3.2 Symbols

Void.

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

SOR-AF	Steering Of Roaming Application Function
SP-AF	Secured Packet Application Function
UDM	Unified Data Management

---

## 4 Overview

### 4.1 Introduction

Within the 5GC, the SP-AF offers services to the UDM and to the SOR-AF via the Nspaf service based interface.

The UDM or SOR-AF shall make use of the SP-AF services when it needs to protect UE parameters for which the final consumer is the USIM (see 3GPP TS 33.501 [8] clause 6.15.2.1).

Figure 4.1-1 provides the reference model with focus on the SP-AF.

**NOTE:** The generation of the secured packet and the definition of the storage and handling of OTA keys or other sensitive data are out of scope of this document. For more details, refer to 3GPP TS 23.040 [18] and 3GPP TS 31.115 [16].

**Figure 4.1-1: Reference model – SP-AF**

## 5 Services offered by the SP-AF

### 5.1 Introduction

The SP-AF offers the following services via the Nspaf interface:

- Nspaf\_SecuredPacket Service

Table 5.1-1 summarizes the corresponding APIs defined for this specification.

**Table 5.1-1: API Descriptions**

Service Name	Clause	Description	OpenAPI Specification File	apiName	Annex
Nspaf_SecuredPacket	6.1	Nspaf Secured Packet Service	TS29544_Nspaf_SecuredPacket.yaml	nspaf-secured-packet	A.2

### 5.2 Nspaf\_SecuredPacket Service

#### 5.2.1 Service Description

The Nspaf\_SecuredPacket Service may be consumed by the NF consumer (e.g. UDM or SOR-AF) when it has detected that a UICC configuration parameter (e.g. Routing ID data or Steering of Roaming information) needs to be updated, and the new value is not available in secured packet format.

For the list of service operations see clause 5.2.2.1

#### 5.2.2 Service Operations

##### 5.2.2.1 Introduction

For the Nspaf\_SecuredPacket service the following service operations are defined:

- Provide

The Nspaf\_SecuredPacket Service is used by Consumer NFs (e.g. UDM or SOR-AF) to request the SP-AF to provide a secured packet that contains an UICC configuration parameter as sent in the request by means of the Provide service operation

##### 5.2.2.2 Provide

###### 5.2.2.2.1 General

This service operation is used by the NF Service Consumer (e.g. UDM or SOR-AF) to request construction of a secured packet that contains the provided UICC configuration information (e.g. Routing Indicator or Steering of Roaming information).

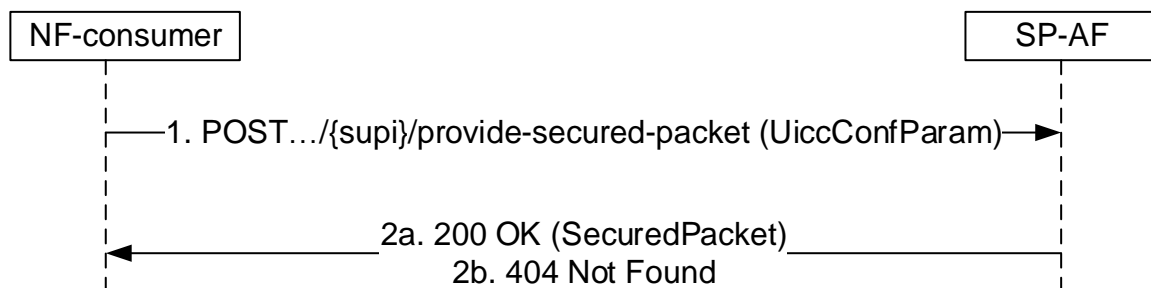

The following procedures using the Provide service operation are supported:

- Secured Packet Retrieval

###### 5.2.2.2.2 Secured Packet Retrieval

Figure 5.2.2.2.2-1 shows a scenario where the NF consumer (e.g. UDM or SOR-AF) sends a request to the SP-AF to provide a secured packet.

The request contains the UE's identity ( $\{supi\}$ ) and the UICC configuration parameter.

**Figure 5.2.2.2-1: NF consumer requests the SP-AF to provide a secured packet**

1. The NF consumer sends a POST request (custom method: provide-secured-packet) to the resource representing the SUPI.
- 2a. On success, the SP-AF responds with "200 OK", containing the requested SecuredPacket.
- 2b. If the resource does not exist (the supi is unknown in the SP-AF), the SP-AF returns the HTTP status code "404 Not Found", and additional error information should be included in the response body (in "ProblemDetails" element).

On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the POST response body.

## 6 API Definitions

### 6.1 Nspaf\_SecuredPacket Service API

#### 6.1.1 Introduction

The Nspaf\_SecuredPacket service shall use the Nspaf\_SecuredPacket API.

The request URI used in HTTP request from the NF service consumer towards the NF service producer shall have the structure defined in clause 4.4.1 of 3GPP TS 29.501 [5], i.e.:

**{apiRoot}/<apiName>/<apiVersion>/<apiSpecificResourceUriPart>**

with the following components:

- The {apiRoot} shall be set as described in 3GPP TS 29.501 [5].
- The <apiName> shall be "nspaf-secured-packet".
- The <apiVersion> shall be "v1".
- The <apiSpecificResourceUriPart> shall be set as described in clause 5.3.

#### 6.1.2 Usage of HTTP

##### 6.1.2.1 General

HTTP/2, IETF RFC 7540 [11], shall be used as specified in clause 5 of 3GPP TS 29.500 [4].

HTTP/2 shall be transported as specified in clause 5.3 of 3GPP TS 29.500 [4].

The OpenAPI [6] specification of HTTP messages and content bodies for the Nspaf\_SecuredPacket API is contained in Annex A.

### 6.1.2.2 HTTP standard headers

#### 6.1.2.2.1 General

See clause 5.2.2 of 3GPP TS 29.500 [4] for the usage of HTTP standard headers.

#### 6.1.2.2.2 Content type

JSON, IETF RFC 8259 [12], shall be used as content type of the HTTP bodies specified in the present specification as specified in clause 5.4 of 3GPP TS 29.500 [4]. The use of the JSON format shall be signalled by the content type "application/json".

"Problem Details" JSON object shall be used to indicate additional details of the error in a HTTP response body and shall be signalled by the content type "application/problem+json", as defined in IETF RFC 7807 [13].

### 6.1.2.3 HTTP custom headers

The mandatory HTTP custom header fields specified in clause 5.2.3.2 of 3GPP TS 29.500 [4] shall be applicable.

## 6.1.3 Resources

### 6.1.3.1 Overview

**Figure 6.1.3.1-1: Resource URI structure of the nspaf-secured-packet API**

Table 6.1.3.1-1 provides an overview of the resources and applicable HTTP methods.

**Table 6.1.3.1-1: Resources and methods overview**

Resource name	Resource URI	HTTP method or custom operation	Description
SecuredPacket (Custom operation)	/{supi}/provide-secured-packet	Provide-secured-packet (POST)	The SP-AF generates a secured packet containing the presented UICC configuration parameter

### 6.1.3.2 Resource: SecuredPacket

#### 6.1.3.2.1 Description

This resource represents the information that is needed to construct secured packets for the SUPI.

#### 6.1.3.2.2 Resource Definition

Resource URI: **{apiRoot}/nspaf-secured-packet/v1/{supi}/provide-secured-packet**

This resource shall support the resource URI variables defined in table 6.1.3.2.2-1.

**Table 6.1.3.2.2-1: Resource URI variables for this resource**

Name	Definition
apiRoot	See clause 6.1.1
supi	Represents the Subscription Permanent Identifier (see 3GPP TS 23.501 [2] clause 5.9.2) pattern: " <sup>^(imsi-[0-9]{5,15} nai-.+ .+)\$"</sup>

#### 6.1.3.2.3 Resource Standard Methods

No Standard Methods are supported for this resource.

#### 6.1.3.2.4 Resource Custom Operations

##### 6.1.3.2.4.1 Overview

**Table 6.1.3.2.4.1-1: Custom operations**

Custom operation URI	Mapped HTTP method	Description
/provide-secured-packet	POST	The SP-AF generates a secured packet for the SUPI that contains the presented UICC configuration parameter.

##### 6.1.3.2.4.2 Operation: provide-secured-packet

###### 6.1.3.2.4.2.1 Description

This custom operation is used by the NF service consumer (e.g. UDM) to request a secured packet for the SUPI containing the presented UICC configuration parameter. The returned secured packet shall be constructed as an SMS-Deliver as specified in 3GPP TS 23.040 [18] and protected as specified in 3GPP TS 31.115 [16].

###### 6.1.3.2.4.2.2 Operation Definition

This operation shall support the request data structures specified in table 6.1.3.2.4.2.2-1 and the response data structure and response codes specified in table 6.1.3.2.4.2.2-2.

**Table 6.1.3.2.4.2.2-1: Data structures supported by the POST Request Body on this resource**

Data type	P	Cardinality	Description
UiccConfiguration Parameter	M	1	Contains the parameter that is to be updated in the UICC

**Table 6.1.3.2.4.2.2-2: Data structures supported by the POST Response Body on this resource**

Data type	P	Cardinality	Response codes	Description
SecuredPacket	M	1	200 OK	Upon success, a response body containing the generated secured packet shall be returned.
ProblemDetails	O	0..1	404 Not Found	The "cause" attribute may be used to convey the following application error: - USER_NOT_FOUND
NOTE: The mandatory HTTP error status code for the POST method listed in Table 5.2.7.1-1 of 3GPP TS 29.500 [4] also apply.				

## 6.1.4 Custom Operations without associated resources

In this release of this specification, no custom operations without associated resources are defined for the Nspaf\_SecuredPacket Service.

## 6.1.5 Notifications

In this release of this specification, no notifications are defined for the Nspaf\_SecuredPacket Service.

## 6.1.6 Data Model

### 6.1.6.1 General

This clause specifies the application data model supported by the API.

Table 6.1.6.1-1 specifies the data types defined for the Nspaf service based interface protocol.

**Table 6.1.6.1-1: Nspaf specific Data Types**

Data type	Clause defined	Description	Applicability
UiccConfigurationParameter	6.1.6.2.2	UICC Configuration Parameters	
RoutingId	6.1.6.3.2	Routing ID	

Table 6.1.6.1-2 specifies data types re-used by the Nspaf service based interface protocol from other specifications, including a reference to their respective specifications and when needed, a short description of their use within the N<sub>spaf</sub> service based interface.

**Table 6.1.6.1-2: Nspaf re-used Data Types**

Data type	Reference	Comments	Applicability
SecuredPacket	3GPP TS 29.503 [14]	Secured Packet	
ProblemDetails	3GPP TS 29.571 [15]		
SteeringInfo	3GPP TS 29.509 [17]	Steering Information	

### 6.1.6.2 Structured data types

#### 6.1.6.2.1 Introduction

This clause defines the structures to be used in resource representations.

## 6.1.6.2.2 Type: UiccConfigurationParameter

**Table 6.1.6.2.2-1: Definition of type UiccConfigurationParameter**

Attribute name	Data type	P	Cardinality	Description	Applicability
routingId	RoutingId	C	0..1	The Routing Id that needs to be updated in the USIM.	
steeringContainer	array(SteeringInfo)	C	1..N	List of PLMN/AccessTechnologies combinations that need to be updated in the USIM.	

Note: Exactly one attribute shall be present

## 6.1.6.3 Simple data types and enumerations

## 6.1.6.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

## 6.1.6.3.2 Simple data types

The simple data types defined in table 6.1.6.3.2-1 shall be supported.

**Table 6.1.6.3.2-1: Simple data types**

Type Name	Type Definition	Description	Applicability
RoutingId	string	Pattern: "[0-9]{1,4}"	

## 6.1.7 Error Handling

## 6.1.7.1 General

For the Nspaf\_SecuredPacket API, HTTP error responses shall be supported as specified in clause 4.8 of 3GPP TS 29.501 [5]. Protocol errors and application errors specified in table 5.2.7.2-1 of 3GPP TS 29.500 [4] shall be supported for an HTTP method if the corresponding HTTP status codes are specified as mandatory for that HTTP method in table 5.2.7.1-1 of 3GPP TS 29.500 [4].

In addition, the requirements in the following clauses are applicable for the Nspaf\_SecuredPacket API.

## 6.1.7.2 Protocol Errors

No specific procedures for the Nspaf\_SecuredPacket service are specified.

## 6.1.7.3 Application Errors

The application errors defined for the Nspaf\_SecuredPacket service are listed in Table 6.1.7.3-1.

**Table 6.1.7.3-1: Application errors**

Application Error	HTTP status code	Description

## 6.1.8 Feature negotiation

The optional features in table 6.1.8-1 are defined for the Nspaf\_SecuredPacket API. They shall be negotiated using the extensibility mechanism defined in clause 6.6 of 3GPP TS 29.500 [4].

**Table 6.1.8-1: Supported Features**

Feature number	Feature Name	Description

## 6.1.9 Security

As indicated in 3GPP TS 33.501 [8] and 3GPP TS 29.500 [4], the access to the Nspaf\_SecuredPacket API may be authorized by means of the OAuth2 protocol (see IETF RFC 6749 [9]), based on local configuration, using the "Client Credentials" authorization grant, where the NRF (see 3GPP TS 29.510 [10]) plays the role of the authorization server.

If OAuth2 is used, an NF Service Consumer, prior to consuming services offered by the Nspaf\_SecuredPacket API, shall obtain a "token" from the authorization server, by invoking the Access Token Request service, as described in 3GPP TS 29.510 [10], clause 5.4.2.2.

**NOTE:** When multiple NRFs are deployed in a network, the NRF used as authorization server is the same NRF that the NF Service Consumer used for discovering the Nspaf\_SecuredPacket service.

The Nspaf\_SecuredPacket API defines a single scope "nspaf-secured-packet" for the entire service, and it does not define any additional scopes at resource or operation level.

# Annex A (normative): OpenAPI specification

## A.1 General

This Annex specifies the formal definition of the API(s) defined in the present specification. It consists of OpenAPI 3.0.0 specifications in YAML format.

This Annex takes precedence when being discrepant to other parts of the specification with respect to the encoding of information elements and methods within the API(s).

**NOTE:** The semantics and procedures, as well as conditions, e.g. for the applicability and allowed combinations of attributes or values, not expressed in the OpenAPI definitions but defined in other parts of the specification also apply.

Informative copies of the OpenAPI specification files contained in this 3GPP Technical Specification are available on a Git-based repository hosted in ETSI Forge, that uses the GitLab software version control system (see 3GPP TS 29.501 [5] clause 5.3.1 and 3GPP TR 21.900 [7] clause 5B).

## A.2 Nspaf\_SecuredPacket API
