Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x  the first digit:

1  presented to TSG for information;
2  presented to TSG for approval;
3  or greater indicates TSG approved document under change control.

Y  the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z  the third digit is incremented when editorial only changes have been incorporated in the document.
1 Scope

The present document defines the ISIM Application Programming Interface extending the "UICC API for Java Card™" [2].

This API allows to develop an application running together with a ISIM application.

The present document includes information applicable to network operators, service providers, server -,-ISIM – and database manufactures.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

[1] ETSI TS 101 220: "Smart Cards; ETSI numbering system for telecommunication application providers".

[2] ETSI TS 102 241 V9.0.0: "Smart Cards; UICC Application Programming Interface (UICC API) for Java Card™".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions defined in ETSI TS 102 241 [2] apply.

3.2 Abbreviations

For the purposes of the present document, the abbreviations defined in ETSI TS 102 241 [2] apply.

4 Description

4.0 Overview

This API is an extension to the ETSI TS 102 241 [2] "UICC API for Java Card™" and requires the implementation of this specification.

The classes and interfaces described in this specification inherit functionality from the classes and interfaces specified in ETSI TS 102 141[2] "UICC API for Java Card™".
4.1 ISIM Java Card™ architecture

The overall architecture of the ISIM API is based on the “UICC API for Java Card™” defined in ETSI TS 102 241].

5 File Access API

The ISIM file access API consists of the package uicc.isim.access. This package defines additional constants to those defined in the uicc.access package from ETSI TS 102 241 [2]. The access to the file system, defined in TS 31.103 [3] is the one specified in ETSI TS 102 241 [2] via the UICC FileView Interface.
Annex A (normative): Java Card™ ISIM API

The attached files "31133_Annex_A_Java.zip", and "31133_Annex_A.HTML.zip" contain source files and html documentation for the Java Card™ ISIM API.
Annex B (normative):
Java Card™ ISIM API identifiers

The attached file "31133_Annex_B_Export_files.zip" contains the export files for the uicc.isim.access package.
Annex C (normative):
ISIM API package version management

The following table describes the relationship between each TS 31.133 specification version and its packages AID and Major, Minor versions defined in the export files.

<table>
<thead>
<tr>
<th>TS 31.133</th>
<th>uicc.isim.access package</th>
<th>Major, Minor</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A0 00 00 00 87 10 05 FF FF FF 89 14 10 00 00</td>
<td>1.1</td>
</tr>
</tbody>
</table>

The package AID coding is defined in ETSI TS 101 220 [1]. The ISIM API packages AID are not modified by changes to Major or Minor Version.

The Major Version shall be incremented if a change to the specification introduces byte code incompatibility with the previous version.

The Minor Version shall be incremented if a change to the specification does not introduce byte code incompatibility with the previous version.

The package uicc.isim.access contains only constants, therefore it may not be loaded on the UICC.
Annex D (normative):
ISIM API jar files

The attached file "31133_Annex_D.jar" contains class files for the Java Card™ ISIM API.
Annex E (informative):
