Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/legal/home.htm>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under www.etsi.org/key.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The present document is part 6 of a multi-part TS covering the 3rd Generation Partnership Project: Technical Specification Group Services and System Aspects; Telecommunication Management; Configuration Management, as identified below:

- Part 1: “3G Configuration Management: Concept and Requirements”;
- Part 2: “Notification Integration Reference Point: Information Service Version 1”;
- Part 3: “Notification Integration Reference Point: CORBA Solution Set Version 1:1”;
- Part 4: “Notification Integration Reference Point: CMIP Solution Set Version 1:1”;
- Part 5: “Basic Configuration Management IRP: Information Model Version 1”;
- Part 6: “Basic Configuration Management IRP CORBA Solution Set Version 1:1”;**
- Part 7: “Basic Configuration Management IRP CMIP Solution Set Version 1:1”;
- Part 8: “Name Convention for Managed Objects”.

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

Configuration Management (CM), in general, provides the operator with the ability to assure correct and effective operation of the 3G-network as it evolves. CM actions have the objective to control and monitor the actual configuration on the NEs and NRs, and they may be initiated by the operator or functions in the OSs or NEs.

CM actions may be requested as part of an implementation programme (e.g. additions and deletions), as part of an optimisation programme (e.g. modifications), and to maintain the overall Quality of Service. The CM actions are initiated either as a single action on a Network Element (NE) of the 3G-network or as part of a complex procedure involving actions on many NEs.

The Itf-N interface for Configuration Management is built up by a number of Integration Reference Points (IRPs) and a related Name Convention, which realise the functional capabilities over this interface. The basic structure of the IRPs is defined in 3GPP TS 32.101 [1] and 3GPP TS 32.102 [2]. For CM, a number of IRPs (and the Name Convention) are defined herein, used by this as well as other technical specifications for telecom management produced by 3GPP. All these documents are included in Parts 2 and onwards of the 3GPP TS 32.106.

This document constitutes 32.106 Part 6 - Basic Configuration Management IRP: CORBA Solution Set Version 1:1.

1 Scope

The purpose of this *Basic Configuration Management (CM) IRP: Information Service CORBA Solution Set* is to define the mapping of the IRP information model (see 3GPP TS 32.106-5 [4]) to the protocol specific details necessary for implementation of this IRP in a CORBA/IDL environment.

The present document does not describe any Network Resource Model (NRM) – this is described in 3GPP TS 32.106-5 [4]. Please note that 3GPP TS 32.106-5 [4] defines an *IRP Information Model*, which comprises both an IS and NRM definition.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For terms and definitions please refer to 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.106-1 [3] and 3GPP TS 32.106-5 [4].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA Common Object Request Broker Architecture

DN	Distinguished Name
IS	Information Service
IDL	Interface Definition Language (OMG)
IRP	Integration Reference Point
MO	Managed Object
MOC	Managed Object Class
NRM	Network Resource Model
OMG	Object Management Group
SS	Solution Set

4 IRP Solution Set version

The version of this CORBA Solution Set (SS) is 1:1, where the first “1” means that it corresponds to the Information Model version 1, and the second “1” means that it is the first CORBA Solution Set corresponding to Information Model version 1.

5 Architectural features

The overall architectural feature of Basic Configuration Management IRP is specified in 3GPP TS 32.106-5 [4]. This clause specifies features that are specific to the CORBA SS.

5.1 Notifications

Notifications are sent according to the Notification IRP: CORBA SS (see 3GPP TS 32.106-3 [9]).

The contents of the Basic CM IRP notifications are defined in the present document.

5.2 Filter language

The filter language used in the SS is the Extended Trader Constraint Language (see OMG Notification Service [6]). IRP Agents may throw a FilterComplexityLimit exception when a given filter is too complex. However, for 3GPP Release 99 an “empty filter” shall be used i.e. a filter that satisfies all MOs of a scoped search (this does not affect the filter for notifications as defined in the Notification IRP – see 3GPP TS 32.106-3 [9]).

5.3 Syntax for Distinguished Names and Versions

The format of a Distinguished Name is defined in 3GPP TS 32.106-8 [5].

The Version of this IRP is represented as a string. The value of this version is defined by a constant in Annex A.

6 Mapping

6.1 General mappings

The IS parameter name `managedObjectInstance` is mapped into DN.

Attributes modelling associations as defined in the NRM (here also called “reference attributes”) are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as an `MOReference`. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type `MOReferenceSet`, which contains a sequence of MO references.

If a reference attribute is changed, an AttributeValueChange notification is emitted.

6.2 Operation and Notification mapping

The IS part of Basic CM IRP: IM (see 3GPP TS 32.106-5 [4]) defines semantics of operation and notification visible across the Basic Configuration Management IRP. Table 1 indicates mapping of these operations and notifications to their equivalents defined in this SS.

Table 1: Mapping from IS Notification/Operation to SS equivalents

IS Operation/ notification (3GPP TS 32.106-5 [4])	SS Method	Qualifier
getMoAttributes	BasicCmIrpOperations::find_managed_objects BasicCmInformationIterator::next_basicCmInformations BasicCmInformationIterator::destroy	M
getContainment	BasicCmIrpOperations::find_managed_objects BasicCmInformationIterator::next_basicCmInformations BasicCmInformationIterator::destroy	O
getBasicCmIRPVersion	get_basicCm_IRP_version	M
notifyObjectCreation (to convey of a new Managed Object created)	See Notification IRP: CORBA SS [9]	O
notifyObjectDeletion (to convey of a new Managed Object deleted)	See Notification IRP: CORBA SS [9]	O
notifyAttributeValueC hange (to convey of a change of one or several attributes of a Managed Object)	See Notification IRP: CORBA SS [9]	O

6.3 Operation parameter mapping

The IS part of Basic CM IRP: IM (see 3GPP TS 32.106-5 [4]) defines semantics of parameters carried in operations across the Basic Configuration Management IRP. Tables 2, 3 and 4 indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

The SS operation `find_managed_objects` is equivalent to the IS operation `getMoAttributes` when called with `ResultContents` set to `NAMES_AND_ATTRIBUTES`. Iterating the `BasicCmInformationIterator` is used to fetch the result.

Table 2: Mapping from IS getMoAttributes parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
baseObjectInstance	in DN baseObject	M
scope	in searchControl (SearchControl.scope and SearchControl.level)	M
filter	in searchControl (SearchControl.filter)	M
attributeListIn	in requestedAttributes	M
managedObjectClass managedObjectInstance attributeListOut	parameter fetchedElements in the next_basicCmInformations in the BasicCmInformationIterator interface.	M
status	exception UndefinedMOException, exception IllegalDNFormatException, exception UndefinedScopeException, exception IllegalScopeTypeException, exception IllegalScopeLevelException, exception IllegalFilterFormatException, exception FilterComplexityLimit	M

The SS operation find_managed_objects is equivalent to the IS operation getContainment when called with ResultContents set to NAMES. Iterating the BasicCmInformationIterator is used to fetch the result.

Table 3: Mapping from IS getContainment parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
baseObjectInstance	in DN baseObject	M
scope	in searchControl (SearchControl.scope and SearchControl.level)	O
Not specified in IS	in searchControl (SearchControl.filter)	M
containment	parameter fetchedElements in the next_basicCmInformations in the BasicCmInformationIterator interface.	M
status	exception UndefinedMOException, exception IllegalDNFormatException, exception UndefinedScopeException, exception IllegalScopeTypeException, exception IllegalScopeLevelException, exception IllegalFilterFormatException, exception FilterComplexityLimit	M

Table 4: Mapping from IS getBasicCmIRPVersion parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
versionNumberList	Return value of type: CommonIRPConstDefs::VersionNumberSet	M
status	- (No failure conditions identified)	M

6.4 Notification attribute mapping

The IS part of Basic CM IRP: IM (see 3GPP TS 32.106-5 [4]) identifies and defines the semantics of attributes for notifyObjectCreation, notifyObjectDeletion and notifyAttributeValueChange for use for its IRP. Table 5 shows the mapping of the IS notifications to SS equivalents.

Table 5: Mapping from IS notifications to SS equivalents

IS notifications in 3GPP TS 32.106-5 [4]	SS notifications	Qualifier
NotifyObjectCreation	push_structured_event	O
NotifyObjectDeletion	push_structured_event	O
NotifyAttributeValue Change	push_structured_event	O

The IS part of Basic CM IRP: IM (see 3GPP TS 32.106-5 [4]) also qualifies the attributes. Tables 6, 7, 8 and 9 show the mapping of these IS attributes to SS equivalents.

Table 6: Mapping from IS Notification Header attributes to SS equivalent

IS Attribute of Notification Header in 3GPP TS 32.106-5 [4]	SS Attribute	Qualifier
managedObjectClass	BasicCmNotifDefs::NotificationCommon::MANAGED_OBJECTCLASS	M
managedObjectInstance	BasicCmNotifDefs::NotificationCommon::MANAGED_OBJECT_INSTANCE	M
notificationId	BasicCmNotifDefs::NotificationCommon::NOTIFICATION_ID	O
eventTime	BasicCmNotifDefs::NotificationCommon::EVENT_TIME	M
systemDN	BasicCmNotifDefs::NotificationCommon::SYSTEM_DN	O
eventType	header.fixed_header.event_type.type_name	M
extendedEventType	header.fixed_header.event_name - (always contains an empty string)	M

Table 7: Mapping from IS notifyObjectCreation attributes to SS equivalent OBJECT_CREATION

IS Attribute of notifyObjectCreation in 3GPP TS 32.106-5 [4]	SS Attribute	Qualifier
notificationHeader	See Table 6	M
correlatedNotifications	BasicCmNotifDefs::MOCreation::CORRELATED_NOTIFICATIONS	O
additionalText	BasicCmNotifDefs::MOCreation::ADDITIONAL_TEXT	O
sourceIndicator	BasicCmNotifDefs::MOCreation::SOURCE_INDICATOR	O
attributeList	remainder_of_body	O

Table 8: Mapping from IS notifyObjectDeletion attributes to SS equivalent OBJECT_DELETION

IS Attribute of notifyObjectDeletion in 3GPP TS 32.106-5 [4]	SS Attribute	Qualifier
notificationHeader	See Table 6	M
correlatedNotifications	BasicCmNotifDefs::MODEletion::CORRELATED_NOTIFICATIONS	O
additionalText	BasicCmNotifDefs::MODEletion::ADDITIONAL_TEXT	O
sourceIndicator	BasicCmNotifDefs::MODEletion::SOURCE_INDICATOR	O
attributeList	remainder_of_body (a field of the StructuredEvent)	O

Table 9: Mapping from IS notifyAttributeValueChange attributes to SS equivalent ATTRIBUTE_VALUE_CHANGE

IS Attribute of notifyAttributeValueChange in 3GPP TS 32.106-5 [4]	SS Attribute	Qualifier
notificationHeader	See Table 6	M
correlatedNotifications	BasicCmNotifDefs::AttributeValueChange::CORRELATED_NOTIFICATIONS	O
additionalText	BasicCmNotifDefs::AttributeValueChange::ADDITIONAL_TEXT	M
sourceIndicator	BasicCmNotifDefs::AttributeValueChange::SOURCE_INDICATOR	O
attributeValueChangeDefinition	remainder_of_body	M

6.5 Network Resource Model (NRM) mapping

6.5.1 Generic NRM Managed Object Class (MOC) mapping

This Solution Set supports reference attributes for relations other than containment relations between objects. Reference attributes are therefore introduced in each MOC where needed.

6.5.1.1 MOC G3SubNetwork

Table 10: Mapping from NRM MOC G3SubNetwork attributes to SS equivalent MOC G3SubNetwork attributes

NRM Attributes of MOC G3SubNetwork in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
g3SubNetworkId	g3SubNetworkId	string	Read-Only, M
dnPrefix	dnPrefix	string	Read-Only, M
userLabel	userLabel	string	Read-Only, M

6.5.1.2 MOC G3ManagedElement

Table 11: Mapping from NRM MOC G3ManagedElement attributes and association roles to SS equivalent MOC G3ManagedElement attributes

NRM Attributes/Association roles	SS Attributes	SS Type	Qualifier
g3ManagedElementId	g3ManagedElementId	string	Read-Only, M
dnPrefix	dnPrefix	string	Read-Only, M
userLabel	userLabel	string	Read-Only, M
locationName	locationName	string	Read-Only, M
vendorName	vendorName	string	Read-Only, M
userDefinedState	userDefinedState	string	Read-Only, M
managedElementType	managedElementType	StringSet	Read-Only, M
managedBy	managedBy	BasicCmIRPSsystem::AttributeTypes::MOReferenceSet	Read-Only, M

6.5.1.3 MOC MeContext

Table 12: Mapping from NRM MOC MeContext attributes to SS equivalent MOC MeContext attributes

NRM Attributes of MOC MeContext in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
meContextId	meContextId	string	Read-Only, M
dnPrefix	dnPrefix	string	Read-Only, M

6.5.1.4 MOC ManagementNode

Table 13: Mapping from NRM MOC ManagementNode attributes and association roles to SS equivalent MOC ManagementNode attributes

NRM Attributes/association roles of MOC ManagementNode in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
managementNodeId	managementNodeId	string	Read-Only, M
userLabel	userLabel	string	Read-Only, M
locationName	locationName	string	Read-Only, M
vendorName	vendorName	string	Read-Only, M
userDefinedState	userDefinedState	string	Read-Only, M
manages	manages	BasicCmIRPSysSystem::AttributeTypes::MOReferenceSet	Read-Only, M

6.5.1.5 MOC ManagedFunction

This Managed Object Class is provided for sub-classing only. Therefore no mapping for this class is provided in this document.

6.5.1.6 MOC IRPAgent

Table 14: Mapping from NRM MOC IRPAgent attributes to SS equivalent MOC IRPAgent attributes

NRM Attributes of MOC IRPAgent in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
irpAgentId	irpAgentId	string	Read-Only, M
systemDN	systemDN	string	Read-Only, M

6.5.1.7 MOC NotificationIRP

Table 15: Mapping from NRM MOC NotificationIRP attributes to SS equivalent MOC NotificationIRP attributes

NRM Attributes of MOC NotificationIRP in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
notificationIRPId	notificationIRPId	string	Read-Only, M
irpVersion	irpVersion	CommonIRPConstDefs::VersionNumberSet	Read-Only, M

6.5.1.8 MOC AlarmIRP

Table 16: Mapping from NRM MOC AlarmIRP attributes to SS equivalent MOC AlarmIRP attributes

NRM Attributes of MOC AlarmIRP in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
alarmIRPId	alarmIRPId	string	Read-Only, M
irpVersion	irpVersion	CommonIRPConstDefs::VersionNumberSet	Read-Only, M

6.5.1.9 MOC BasicCmIRP

Table 17: Mapping from NRM MOC BasicCmIRP attributes to SS equivalent MOC BasicCmIRP attributes

NRM Attributes of MOC BasicCmIRP in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
basicCmIRPId	basicCmIRPId	string	Read-Only, M
irpVersion	irpVersion	CommonIRPConstDefs::VersionNumberSet	Read-Only, M

6.5.2 UMTS NRM Managed Object Class (MOC) mapping

6.5.2.1 MOC RncFunction

Table 18: Mapping from NRM MOC RncFunction attributes to SS equivalent MOC RncFunction attributes

NRM Attributes of MOC RncFunction in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
rncFunctionId	rncFunctionId	string	Read-Only, M
userLabel	userLabel	string	Read-Only, M

6.5.2.2 MOC UtranCell

Table 19: Mapping from NRM MOC UtranCell attributes and associations to SS equivalent MOC UtranCell attributes

NRM Associations/Attributes of MOC UtranCell in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
utranCellId	utranCellId	string	Read-Only, M
userLabel	userLabel	string	Read-Only, M
AssociatedWith/ utranCell-IubLink	utranCellIubLink	BasicCmIRPSystem::AttributeTypes::MOReference	Read-Only, M

6.5.2.3 MOC NodeBFunction

Table 20: Mapping from NRM MOC NodeBFunction attributes and associations to SS equivalent MOC NodeBFunction attributes

userLabel	userLabel	string	Read-Only, M

6.5.2.15 MOC GmscFunction

Table 32: Mapping from NRM MOC GmscFunction attributes to SS equivalent MOC GmscFunction attributes

NRM Attributes of MOC GmscFunction in 3GPP TS 32.106-5 [4]	SS Attributes	SS Type	Qualifier
gmscFunctionId	gmscFunctionId	string	Read-Only, M
userLabel	userLabel	string	Read-Only, M

7 Use of OMG Structured Event

In CORBA SS, OMG defined StructuredEvent (see OMG Notification Service [6]) is used to carry notification. This clause identifies the OMG defined StructuredEvent attributes that carry the attributes of parameters defined in 3GPP TS 32.106-5 [4].

The composition of OMG Structured Event, as defined in OMG Notification Service [6], is:

```

Header
  Fixed Header
    domain_name
    type_name
    event_name
  Variable Header
Body
  filterable_body_fields
  remainder_of_body

```

Table 33 lists all OMG Structured Event attributes in its leftmost column. The second column identifies the SS attributes, if any, that shall be carried there.

Attributes that are denoted as "optional" may be absent from the OMG Structured Event. As an example, if the optional `additionalText` attribute is not used for a particular notification, then the IRP Agent may exclude `additionalText` from the filterable body fields for that particular notification. Individual notifications from the same IRP Agent may include or exclude the same optional attribute.

Table 33: Use of OMG Structured Event

SS Attribute	OMG CORBA Structured Event attribute	Comment
There is no corresponding SS attribute	<code>domain_name</code>	It contains the version of the supported SS version. This version is defined by constant <code>NotificationIRPConstDefs::CONFIGURATION_IRP_VERSION_1_1</code> defined in 3GPP TS 32.106-3 [9]
Event Type	<code>type_name</code>	It is an attribute of <code>notificationHeader</code> . It shall indicate one of the following ITU-T defined semantics: Object Creation, Object Deletion and Attribute Value Change. It is a string. Its value is either defined by <code>BasicCmNotifDefs::MOCreation::EVENT_TYPE</code> , <code>BasicCmNotifDefs::MODEletion::EVENT_TYPE</code> or <code>BasicCmNotifDefs::AttributeValueChange::EVENT_TYPE</code>
Extended Event Type	<code>event_name</code>	Shall be set to an empty string
There is no corresponding SS attribute	<code>variable Header</code>	
Managed Object Class, Managed Object Instance	One NV pair of <code>filterable_body_fields</code>	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. They are attributes of <code>notificationHeader</code> . Name of NV pair is a string, <code>BasicCmNotifDefs::<interface>::MANAGED_OBJECT_INSTANCE</code> where <code><interface></code> is either <code>MOCreation</code> , <code>MODEletion</code> or <code>AttributeValueChange</code> . Value of NV pair is a string. This string conveys the semantics of both the Managed Object Class and the Managed Object Instance. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.106-3 [9]).
Notification Id	One NV pair of <code>filterable_body_fields</code>	It is an attribute of <code>notificationHeader</code> . Name of NV pair is a string, <code>BasicCmNotifDefs::<interface>::NOTIFICATION_ID</code> where <code><interface></code> is either <code>MOCreation</code> , <code>MODEletion</code> or <code>AttributeValueChange</code> . Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.106-3 [9]).
Event Time	One NV pair of <code>filterable_body_fields</code>	It is an attribute of <code>notificationHeader</code> . Name of NV pair is a string, <code>BasicCmNotifDefs::<interface>::EVENT_TIME</code> where <code><interface></code> is either <code>MOCreation</code> , <code>MODEletion</code> or <code>AttributeValueChange</code> . Value of NV pair is a <code>CommonIRPConstDefs::IRPTime</code> defined in 3GPP TS 32.106-3 [9]. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.106-3 [9]).
System DN	One NV pair of <code>filterable_body_fields</code>	It is an attribute of <code>notificationHeader</code> . Name of NV pair is a string, <code>BasicCmNotifDefs::<interface>::SYSTEM_DN</code> where <code><interface></code> is either <code>MOCreation</code> , <code>MODEletion</code> or <code>AttributeValueChange</code> .

		Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS [9].
Correlated Notifications	One NV pair of filterable_body_fields	It is an attribute of the Object Creation, Object Deletion and Attribute Value Change notifications. Name of NV pair is a string, BasicCmNotifDefs::<interface>::CORRELATED_NOTIFICATIONS where <interface> is either MOCreation, MODeletion or AttributeValueChange. Value of NV pair is a NotificationIRPConstDefs::CorrelatedNotificationSetType defined in 3GPP TS 32.106-3 [9].
Additional Text	One NV pair of filterable_body_fields	It is an attribute of the Object Creation, Object Deletion and Attribute Value Change notifications. Name of NV pair is a string, BasicCmNotifDefs::<interface>::ADDITIONAL_TEXT where <interface> is either MOCreation, MODeletion or AttributeValueChange. Value of NV pair is a string.
Source Indicator	One NV pair of filterable_body_fields	It is an attribute of the Object Creation, Object Deletion and Attribute Value Change notifications. Name of NV pair is a string, BasicCmNotifDefs::<interface>::SOURCE_INDICATOR where <interface> is either MOCreation, MODeletion or AttributeValueChange. Value of NV pair is a string with values of either BasicCmNotifDefs::<interface>::RESOURCE_OPERATION, BasicCmNotifDefs::<interface>::MANAGEMENT_OPERATION or BasicCmNotifDefs::<interface>::UNKNOWN_OPERATION where <interface> is either MODeletion, MOCreation or AttributeValueChange.
There is no corresponding SS attribute		Is used to transport attribute information. For Object Creation notification, this is defined by BasicCmNotifDefs::MOCreation::InitialAttributeValues. For Object Deletion notification, this is defined by BasicCmNotifDefs::MODeletion::AttributeValues. For Attribute Value Change notification, this is defined by BasicCmNotifDefs::AttributeValueChange::ModifiedAttributeSet. The name component of InitialAttributeValues, AttributeValues and ModifiedAttributeSet will be set to attribute names defined in BasicCmNRMDefs.

8 Rules for management information model extensions

This clause discusses how the models and IDL definitions provided in 3GPP TS 32.111-3 [10], 3GPP TS 32.106-3 [9] and 3GPP TS 32.106-6 (the present document) can be extended for a particular implementation and still remain compliant with 3GPP SA5's specifications.

8.1 Allowed extensions

Vendor-specific MOCs, other than those specified in clause 6.5, may be supported. The vendor-specific MOCs may support new types of attributes. The 3GPP SA5-specified notifications may be issued referring to the vendor-specific MOCs and vendor-specific attributes. New MOCs shall be distinguishable from 3GPP SA5 MOCs by name. 3GPP SA5-specified and vendor-specific attributes may be used in vendor-specific MOCs. Vendor-specific attribute names shall be distinguishable from existing attribute names.

Basic CM IRP MOCs may be subclassed. Subclassed MOCs shall maintain the specified behaviour of the 3GPP SA5's superior classes. They may add vendor-specific behaviour with vendor-specific attributes. When subclassing, naming attributes cannot be changed. The subclassed MOC shall support all attributes of its superior class. Vendor-specific attributes cannot be added to 3GPP SA5 MOCs without subclassing.

When subclassing, the 3GPP SA5-specified containment rules and their specified cardinality shall still be followed. As an example, ManagementNode (or its subclasses) shall be contained under G3SubNetwork (or its subclasses). Also, in R99, there may only be 0 or 1 ManagementNode (or its subclasses) contained under G3SubNetwork (or its subclasses).

Managed Object Instances may be instantiated as CORBA objects. This requires that the MOCs be represented in IDL. 3GPP SA5's MOCs are not currently specified in IDL, but may be specified in IDL for instantiation or subclassing

purposes. However, management information models should not require that IRPManagers access the instantiated managed objects other than through supported methods in the present document (3GPP TS 32.106-6).

Extension rules related to notifications (Notification categories, Event Types, Extended Event Types etc.) are for further study in 3GPP's Releases 4/5.

8.2 Extensions not allowed

The IDL specifications in 3GPP TS 32.111-3 [10], 3GPP TS 32.106-3 [9] and 3GPP TS 32.106-6 (the present document) cannot be edited or altered. Any additional IDL specifications shall be specified in separate IDL files.

IDL interfaces (note: not MOCs) specified in 3GPP TS 32.111-3 [10], 3GPP TS 32.106-3 [9] and 3GPP TS 32.106-6 (the present document) may not be subclassed or extended. New interfaces may be defined with vendor-specific methods.

Annex D (informative): Change history

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
Dec 2000	S_10	SP-000514	--	--	Approved at TSG SA #10 and placed under Change Control.	1.0.0	3.0.0
Mar 2001	S_11	SP-010030	001	--	Remove TimeBase.idl not used in the module NotificationDefs	3.0.0	3.1.0
Mar 2001	S_11	SP-010030	002	--	Update get_basicCm_IRP_version to be consistent with Alarm IRP and Notification IRP	3.0.0	3.1.0
Mar 2001	S_11	SP-010030	003	--	Mismatched irpVersion types	3.0.0	3.1.0
Mar 2001	S_11	SP-010030	004	--	Update Basic CM IRP Iterator to be consistent with Alarm IRP Iterator	3.0.0	3.1.0
Mar 2001	S_11	SP-010030	005	--	Removing nested IDL modules	3.0.0	3.1.0
Mar 2001	S_11	SP-010030	006	--	Update Structured Event table to be consistent with Alarm IRP	3.0.0	3.1.0
Mar 2001	S_11	SP-010030	007	--	UMTS Network Resource Model alignment with TSG RAN specifications	3.0.0	3.1.0
Jun 2001	S_12	SP-010284	008	--	Reposition "#pragma prefix" directive	3.1.0	3.2.0
Jun 2001	S_12	SP-010284	009	--	Correction of UTRAN attributes	3.1.0	3.2.0
Sep 2001	S_13	SP-010473	010	--	Duplicated exception definition for FilterComplexityLimit	3.2.0	3.3.0
