# ETSITS 132 106-7 V3.2.0 (2001-06)

Technical Specification

Universal Mobile Telecommunications System (UMTS);

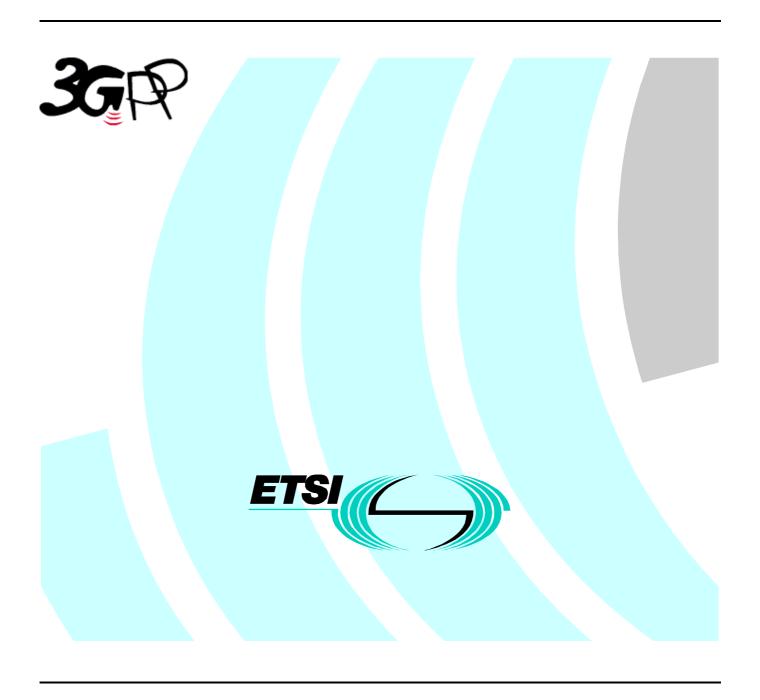

**Telecommunication Management;** 

**Configuration Management;** 

Part 7: Basic Configuration Management IRP:

**CMIP Solution Set Version 1:1** 

(3GPP TS 32.106-7 version 3.2.0 Release 1999)

# Reference RTS/TSGS-0532106-7UR2 Keywords UMTS

### Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://www.etsi.org/ipr).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

#### **Foreword**

This Technical Specification (TS) has been produced by the ETSI 3<sup>rd</sup> Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under www.etsi.org/key.

### **Foreword**

This Technical Specification (TS) has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The present document is part 7 of a multi-part TS covering the 3<sup>rd</sup> Generation Partnership Project: Technical Specification Group Services and System Aspects; Telecommunication Management; Configuration Management, as identified below:

Part 1: "3G Configuration Management: Concept and Requirements"; "Notification Integration Reference Point: Information Service Version 1"; Part 2: Part 3: "Notification Integration Reference Point: CORBA Solution Set Version 1:1"; Part 4: "Notification Integration Reference Point: CMIP Solution Set Version 1:1"; Part 5: "Basic Configuration Management IRP: Information Model Version 1"; Part 6: "Basic Configuration Management IRP CORBA Solution Set Version 1:1"; Part 7: "Basic Configuration Management IRP CMIP Solution Set Version 1:1"; "Name Convention for Managed Objects". Part 8:

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

### Introduction

Configuration Management (CM), in general, provides the operator with the ability to assure correct and effective operation of the 3G-network as it evolves. CM actions have the objective to control and monitor the actual configuration on the NEs and NRs, and they may be initiated by the operator or functions in the OSs or NEs.

CM actions may be requested as part of an implementation programme (e.g. additions and deletions), as part of an optimisation programme (e.g. modifications), and to maintain the overall Quality of Service. The CM actions are initiated either as a single action on a Network Element of the 3G-network or as part of a complex procedure involving actions on many Network Elements.

The Itf-N interface for Configuration Management is built up by a number of Integration Reference Points (IRPs) and a related Name Convention, which realise the functional capabilities over this interface. The basic structure of the IRPs is defined in 3GPP TS 32.101 [1] and 3GPP TS 32.102 [2]. For CM, a number of IRPs (and the Name Convention) are defined, used by this as well as other technical specifications for telecom management produced by 3GPP. All these documents are included in Parts 2 and onwards of the 3GPP TS 32.106.

This document constitutes 32.106 Part 7 - Basic Configuration Management IRP CMIP Solution Set Version 1:1.

### 1 Scope

The present document defines a CMIP Solution Set for the Basic CM IRP introduced in 3GPP TS 32.106-5 [15]. The version of this CMIP Solution Set is 1:1, where the first "1" means that it corresponds to the Information Model version 1, and the second "1" means that it is the first CMIP Solution Set corresponding to Information Model version 1.

Clause 4 maps the protocol- and technology-independent operations, parameters, notifications and the Network Resource Model specified in the Basic CM IRP Information Model (Chapter 6 of 3GPP 3GPP TS 32.106-5 [15]) onto the corresponding CMIP/CMISE equivalences. The important technical aspects specific to this CMIP Solution Set are also described there. The GDMO definitions are introduced in Clause 5. Clause 6 contains the ASN.1 definitions related to the GDMO definitions provided in clause 5.

### 2 References

[14]

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

### 3 Definitions and abbreviations

#### 3.1 Definitions

The terms and definitions introduced in 3GPP TS 32.106-1, 3GPP TS 32.106-2 and 3GPP TS 32.106-5 apply in this document.

#### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CMIP Common Management Information Protocol

DN Distinguished Name

GDMO Guidelines for the Definition of Managed Objects

IDL Interface Definition Language

IEC International Electro-technical Commission
ISO International Standards Organization

ITU-T International Telecommunication Union, Telecommunication Sector

MIB Management Information Base
MIM Management Information Model

MIT Management Information Tree (or Naming Tree)

MOC Managed Object Class
MOI Managed Object Instance
NE Network Element
NR Network Resource

NRM Network Resource Model

TMN Telecommunications Management Network

### 4 Basic aspects

### 4.1 CMIP specific aspects

This clause describes some technical details specific to CMIP technology, which are not easy to be handled in the related GDMO definitions.

#### 4.1.1 About Associations

In the GDMO definitions, except the containment relations, all associations among different object classes and object instances are modelled with dedicated pointers of the concerned objects, i.e. various relation role attributes. These pointers are normal object attributes and don't require any special treatment. The service operation *getMoAttributes* defined in 3GPP TS 32.106-5 [15] and mapped on M-GET in this CMIP solution set is applied for managers to retrieve the values of these association pointers and the notification *attributeValueChange* is applied for agents to report any change of the values of these association pointers.

### 4.1.2 About getContainment

In the GDMO definition the containment relations of the Managed Object Classes and those of the managed object instances are described by the name bindings. The service operation *getContainment* is defined in 3GPP TS 32.106-5

[15] to enable managers to retrieve the management information about the containment tree of the local MIB of an agent. This service operation is mapped to CMISE *M-GET* in this CMIP solution set. The information about the containment relation of a local MIB is consists of all MOIs abstracted from the output parameter *AttributeList* of a *M-GET* operation.

#### 4.1.3 About getMoAttributes

The service operation *getMoAttributes* defined in the Basic CM IRP IM (3GPP TS 32.106-5 [15]) provides the basic functionality required to retrieve managed objects and their attributes, which is a subset of the functionality provided by the corresponding CMISE service operation *M-GET. getMoAttributes* is mapped to *M-GET* in this standard. This doesn't mean any limitation for using *M-GET*. Users of this standard are encouraged to use the whole functionality provided by *M-Get*, especially the input parameter "Attribute Identifier List" (see ITU-T X.710 [7]).

#### 4.1.4 Allowed Alarms of MOCs

Neither the Basic CM IRP IM (3GPP TS 32.106-5 [15]) nor Alarm IRP IS (3GPP TS 32.111-2 [3]) specifies the allowed alarms of each MOC in the sense of EventType or/and ExtendedEventType. Table 1 defines the allowed alarms of each MOCs for this CMIP Solution Set. Further study of table 1 and its relationship to 3GPP TS 32.106-5 [15] is planed for Releases 4/5.

**MOCs** Legal Alarms G3SubNetwork EnvironmentalAlarm G3ManagedElement environmentalAlarm equipmentAlarm communicationsAlarm processingErrorAlarm ManagementNode environmentalAlarm equipmentAlarm communicationsAlarm processingErrorAlarm ManagedFunction communicationsAlarm processingErrorAlarm QualityofServiceAlarm IRPAgent communicationsAlarm processingErrorAlarm AlarmIRP alarmListRebuiltAlarm

Table 1: Allowed alarms of MOCs

The MOCs, which do not appear in table 1, may not issue any alarm except the alarms that are defined allowed for its parent MOC(s).

### 4.2 Mapping

The semantics of the Basic CM IRP IM are defined in 3GPP TS 32.106-5 [15]. The definitions of the management services and management information defined there are independent of any implementation technology and protocol. This subclause maps these technology and protocol independent definitions onto the equivalencies of the CMIP Solution Set of the Basic CM IRP.

### 4.2.1 Mapping of Operations

Table 2 maps the operations defined in the Basic CM IRP Information Service onto the equivalent Actions/Services of the CMIP Solution Set. The CMIP Actions/Services are qualified as Mandatory (M) or Optional (O).

**Table 2: Mapping of operations** 

Operations of Information Services of the Basic CM IRP defined in 3GPP TS 32.106-5 [15]	Equivalent operation of the CMIP solution set of the Basic CM IRP	Qualifier
getMoAttributes	M-GET	M
	(CMISE Service)	
getContainment	M-GET	0
	(CMISE Service)	
getBasicCmIRPVersion	M-ACTION getBasicCmIRPVersion	M
	(Action of MOC bcmControl)	

### 4.2.2 Mapping of operation parameters

Tables 3, 4 and 5 in the following subclauses show the parameters of each operation defined in the Information Service described in 3GPP TS 32.106-5 [15] and their equivalences in the CMIP Solution Set.

#### 4.2.2.1 Mapping of Parameters of 'getMoAttributes'

Table 3: Mapping of parameters of 'getMoAttributes'

Parameters of the operation 'getMoAttributes' defined in 3GPP TS 32.106-5 [15]	CMISE M-GET parameters	Qualifier
baseObjectInstance	Base object instance	M
scope	Scope	M
filter	Filter	M
no equivalence	Invoker identifier This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getMoAttributes'.	
no equivalence	Basic object class This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getMoAttributes'.	M
no equivalence	Access Control This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getMoAttributes'.	0
no equivalence	Synchronisation This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getMoAttributes'.	0
attributeListIn	Attribute identifier list	M
managedObjectClass	Managed object class	M
managedObjectInstance	Managed object instance	M
attributeListOut	Attribute list	M
status	Errors	M
no equivalence	Current time This is a CMISE specific parameter. There is no equivalence parameter defined in the Information Service for 'getMoAttributes'.	0

### 4.2.2.2 Mapping of Parameters of 'getContainment'

Table 4: Mapping of parameters of 'getContainment'

Parameters of the operation 'getContainment' defined in 3GPP TS 32.106-5 [15]	CMISE M-GET parameter	Qualifier
baseObjectInstance	Base object instance	M
scope	Scope	0
no equivalence	filter This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getContainment'. The value of this parameter shall be 'empty'.	
no equivalence	Invoker identifier This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getContainment'.	0
no equivalence	Basic object class This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getContainment'.	M
no equivalence	Access Control This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getContainment'.	
no equivalence	Synchronisation This is a CMISE specific parameter. There is no equivalent parameter defined in the Information Service for 'getContainment'.	0
no equivalence	Attribute identifier list This is a CMISE specific parameter. There is no equivalence parameter defined in the Information Service for 'getContainment'. It is recommended to use 'objectClass' or/and 'nameBinding' defined in X.721 for the MOC top as the value of this input parameter.	0
containment	Managed object class	М
	Managed object instance	M
	Attribute list	M
status	Errors	M
no equivalence	Current time This is a CMISE specific parameter. There is no equivalence parameter defined in the Information Service for 'getMoAttributes'.	0

### 4.2.2.3 Mapping of parameters of 'getBasicCmIRPVersion'

Table 5: Mapping of parameters of "getBasicCmIRPVersion"

Operation parameters of the Basic CM IRP Information Services	CMISE M-ACTION Parameters	Qualifier
no equivalence	Invoke identifier	M
no equivalence	Linked identifier	0
no equivalence	Mode	M
no equivalence	Base object class (input)	M
no equivalence	Base object instance (input)	M
no equivalence	Scope	0
no equivalence	Filter	0
no equivalence	Managed object class (output)	0
no equivalence	Managed object instance (output)	0
no equivalence	Access control	0
no equivalence	Synchronization	0
no equivalence	Action type	M
no equivalence	Action information	0
no equivalence	Current time	0
versionNumberList,	Action reply	0
status		
no equivalence	Errors	0

### 4.2.3 Mapping of notifications

Table 6 maps the notifications defined in the Basic CM IRP Information Service onto the equivalent notification of the CMIP Solution Set. The CMIP notifications are qualified as Mandatory (M) or Optional (O).

Table 6: Mapping of notifications

Notifications of Basic CM IRP	Notifications of the Basic CM IRP CMIP solution set	Qualifier
Information Service		
notifyObjectCreation	objectCreation	0
	ITU-T X.721 {smi2Notification 6}	
notifyObjectDeletion	objectDeletion	0
	ITU-T X.721 {smi2Notification 7}	
notifyAttributeValueChange	attributeValueChange	0
	ITU-T X.721 {smi2Notification 1}	

### 4.2.4 Mapping of notification parameters

Tables 7, 8 and 9 in the following subclauses show the parameters of each notification defined in the Information Service described in 3GPP TS 32.106-5 [15] and their equivalence in the CMIP Solution Set.

The mapping of common parameters of all kinds of notifications defined in 3GPP TS 32.106-2 [3] is described in 3GPP TS 32.106-4 [16] and will not be repeated in the present document. These common parameters are *managedObjectClass, managedObjectInstance, NotificationId, eventType, extendedEventType, eventTime* and *systemDN*.

#### 4.2.4.1 Mapping of parameters of the notification 'notifyObjectCreation'

Table 7: Mapping of parameters of the notification 'notifyObjectCreation'

Parameters of the Basic CM IRP IS notification 'notifyObjectCreation'	Parameters of the CMIP SS notification 'objectCreation'	Qualifier
correlatedNotifications	correlatedNotifications	0
sourceIndicator	sourceIndicator	0
attributeList	attributeList	0
no equivalence	additionalText	0
no equivalence	additionalInformation	0

### 4.2.4.2 Mapping of parameters of the notification 'notifyObjectDeletion'

Table 8: Mapping of parameters of the notification 'notifyObjectDeletion'

Parameter of the Basic CM IRP IS notification 'notifyObjectDeletion'	parameter of the CMIP SS notification 'objectDeletion'	Qualifier
correlatedNotifications	correlatedNotifications	0
sourceIndicator	sourceIndicator	0
attributeList	attributeList	0
no equivalence	additionalText	0
no equivalence	additionalInformation	0

### 4.2.4.3 Mapping of parameters of the notification 'notifyAttributeValueChange'

Table 9: Mapping of parameters of the notification 'notifyAttributeValueChange'

Parameter of the Basic CM IRP IS notification	parameter of the CMIP SS notification 'attributeValueChange'	Qualifier
'notifyAttributeValueChange'		
correlatedNotifications	correlatedNotifications	0
sourceIndicator	sourceIndicator	0
attributeValueChangeDefinition	attributeValueChangeDefinition	М
no equivalence	attributeIdentifierList	0
no equivalence	additionalText	0
no equivalence	additionalInformation	0

### 4.2.5 Mapping of MOCs

Table 10 maps the MOCs defined in the CM IRP Network Resource Model onto the equivalent MOCs of the CMIP Solution Set.

**Table 10: Mapping of MOCs** 

MOCs of the Basic CM IRP NRM	MOCs of the CMIP SS
AlarmIRP	alarmControl
	(defined in 3GPP TS 32.111-4 [16])
AucFunction	aucFunction
BasicCmIRP	bcmControl

#### 5.6 Behaviours

#### alarmControl-irpAgentBehavior BEHAVIOUR

**DEFINED AS** 

"The name binding represents a relationship in which a irpAgent contains and controls an alarmControl. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### aucFunctionIdBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute identifies a aucFunction instance.";

#### $aucFunction\hbox{-} g3 Managed Element Behaviour \verb|BEHAVIOUR|$

**DEFINED AS** 

"The name binding represents a relationship in which a 3gManagedElement contains and controls a aucFunction. When automatic instance naming is used, the choice

of name bindings left as a local matter.";

#### bcmControlBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"The object class bcmControl offers the functions defined in the CM IRP IS enabling to control the behaviour and to retrieve the management information related a Basic CM IRP agent.

An instance of the 'BCmControl' MOC is identified by the value of the attribute 'bcmControlId'.";

#### bcmControlIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute names an instance of the 'bcmControl' object class.";

#### bcmIRPVersionPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This package has been defined to allow the Manager to get information about the Basic CM IRP versions supported by the Agent.

The attribute 'supportedBCmIRPVersions' indicates all versions of the Basic IRP currently supported by the Agent. .

With the action 'getBasicCmIRPVersion' a manager can find out the versions of the Basic CM IRP CMIP solution sets the Agent supports.";

#### bcmControl-irpAgentBehavior BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a irpAgent contains and controls an bcmControl. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### bgFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies a bgFunction instance.";

#### bgFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a bgFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### eirFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies a eirFunction instance.";

#### eirFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a eirFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### getBCmIRPVersionBehaviour BEHAVIOUR

#### **DEFINED AS**

"A Manager invokes this action to enquiry about the versions of the Basic CM IRP CMIP solution set which the concerned Agent supports.

The 'Action information' field contains no data:

The 'Action response' is composed of the following data:

\* versionNumbersList It contains a list of versions supported by the concerned agent which are backwards compatible. A list containing no element, i.e. a NULL list means that the concerned agent doesn't support any version of the Notification IRP.

\* status It contains the results of this action. Possible values: noError (0), error (the value indicates the reason of the error).";

#### ggsnFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies a ggsnFunction instance.";

#### ggsnFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a ggsnFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### g3ManagedElement-meContextBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a meContext contains and controls a 3gManagedElement. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### g3ManagedElement-g3SubNetworkBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gMnetwork contains and controls a 3gManagedElement. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### g3ManagedElementAssociationPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"The attribute 'meManagedBy' points to the g3ManagmentNode instance which manages this g3ManagedElement instance. It implements the attribute *managedBy* 

of MOC G3ManagedElement defined in TS32.106-5.";

#### g3ManagedElementBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This managed object class represents telecommunications equipment within the telecommunications network that performs managed element functions, i.e. provides support and/or service to the subscriber. A managed element communicates with a manager (directly or indirectly) over one or more standard interfaces for the purpose of being monitored and/or controlled. A managed element contains equipment that may or may not be geographically distributed. A Managed Element is often referred to as a 'node' or a 'network element'.";

#### g3SubNetworkBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This managed object class represents collections of interconnected telecommunications and management objects (logical or physical) capable of exchanging information. A network may be nested within another (larger) network, thereby forming a containment relationship.";

#### g3SubNetworkIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute names an instance of the '3gSubNetwork' object class.";

#### gmscFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies a gmscFunction instance.";

#### gmscFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a gmscFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### hlrFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies a hlrFunction instance.";

#### hlrFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a hlrFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### irpAgentBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This MOC may have only one instance in R99. The instance of this MOC represents the behavior of an IRP Agent which implements one or more IRPs, e.g. AlarmIRP defined in 3GPP TS 32.111-2, NotificationIRP defined in TS32.106-2 and Basic CM IRP defined in 3GPP TS 32.106-5";

#### irpAgentIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies an irpAgent instance.";

#### irpAgent-g3SubNetworkBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a g3SubNetwork contains and controls a irpAgent. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### irpAgent-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a g3ManagedElement contains and controls a irpAgent. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### irpAgent-managementNodeBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a managementNode contains and controls a irpAgent. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### iubLinkNodeBFunctionLinkBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute points to the nodeBFunction instance which this iubLink instance connects directly to.";

#### iubLink-rncFunctionBahaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a rncFunction contains and controls a iubLink. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### iubLinkAssociationPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"The attribute 'iubLinkNodeBFunctionLink' points to the nodeBFunction instance which this iubLink instance connects to. The attribute 'iubLinkUtranCellLink' points from an

iubLink to a list of utranCell.";

#### iubLinkBasicPackageBehaviour BEHAVIOUR

**DEFINED AS** 

"This managed object class models the Iub Link between a Node-B and a RNC.";

#### iubLinkIdBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute names an instance of the 'iubLink' object class.";

#### iubLinkUtranCellLinkBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute points from an iubLink instance to a list of utranCell instance";

#### managedElementBehaviour BEHAVIOUR

**DEFINED AS** 

"This is a multi-value attribute specifying the sub-classes of managedFunction this managedElement instance is containing, for instances, RNC, NodeB or RNC+NodeB.";

#### managedElementIdBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute names an instance of the '3gManagedElement' object class.";

#### managementFunctionBasicPackageBehaviour BEHAVIOUR

**DEFINED AS** 

"This Managed Object class corresponds to the class gsmManagedFunction defined in GSM 12.20 0 and is provided for sub-classing only. It provides the attributes that are common to functional MO classes. Note that a managed element may contain several managed functions. The ManagedFunction may be extended in the future if more common characteristics to functional objects are identified.";

#### managementNode-g3SubNetworkBahaviour BEHAVIOUR

**DEFINED AS** 

"The name binding represents a relationship in which a 3gSubNetwork contains and controls a managementNode. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### managementNodeAssociationPackageBehaviour BEHAVIOUR

**DEFINED AS** 

"The attribute 'mnManagesList' points to all g3ManagedElement instances which this managementNode instance manages. It implements the attribute *manages* of MOC ManagementNode defined in TS32.106-5.";

#### managementNodeBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This managed object class represents a telecommunications management system (EM or NM) within the TMN, that manages a number of Managed Elements. The management system communicates with the MEs directly or indirectly over one or more standard interfaces for the purpose of monitoring and/or controlling these MEs.";

#### managmentNodeIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute names an instance of the 'managmentNode' object class.";

#### meContext-g3SubNetworkBahaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gSubnetwork contains and controls a meContext. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### meContextBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This managed object class represents the Managed Element from the network perspective. It can be used to hold surveillance status information, and also planning status information for the case when the managed element is part of a planned configuration in a management system, before it has been taken into service. It can also support unambiguous naming in all cases, also for scenarios when the Managed Elements have been pre-configured where some of them may have equal names (to avoid necessary administration to make all of them globally unique at creation/installation time). Thus, by means of globally unique names for the MEContext instances, and by using these in the DN, the DNs for all MEs (and MOIs contained in them) can be assured to be globally unique, even in such a scenario as described above.";

#### meContextIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute names an instance of the 'MEContext' object class.";

#### meManagedByBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute points to the managementNode instance which manages the related 3gManagedElement instance.";

#### mnManagesListBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute points to all 3gManagedElement instances which this 3gManagmentNode instance manages.";

#### mscFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies a mscFunction instance.";

#### mscFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a mscFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### nodeBiubLinkLinkBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute points to the IubLink instance which connectes to the related nodeBFunction instance directly.";

#### nodeBFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a nodeBFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### nodeBFunctionAssociationPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"The attribute 'nodeBiubLinkLink' points to the iubLink instance which connectes to this nodeBFunction instance directly. It implements the attribute nodeB-IubLink of MOC NodeBFunction defined in TS32.106-5.";

#### nodeBFunctionBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This managed object class represents the NodeB functionality.";

#### nodeBFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute names an instance of the 'nodeBFunction' object class.";

#### notificationControl-irpAgentBehavior BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a irpAgent contains and controls an otificationControl. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### rncFunction-g3ManagedElementBehaviour BEHAVIOUR

**DEFINED AS** 

"The name binding represents a relationship in which a 3gManagedElement contains and controls a rncFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### rncFunctionBasicPackageBehaviour BEHAVIOUR

**DEFINED AS** 

"This MOC represents RNC function.";

#### rncFunctionIdBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute names an instance of the 'rncFunction' object class.";

#### sgsnFunctionIdBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute identifies a sgsnFunction instance.";

#### $sgsnFunction\hbox{-} g3 Managed Element Behaviour \hbox{ BEHAVIOUR}$

**DEFINED AS** 

"The name binding represents a relationship in which a 3gManagedElement contains and controls a sgsnFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### smsGmscFunctionIdBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute identifies a smsGmscFunction instance.";

#### $smsGmscFunction\hbox{-} g3ManagedElementBehaviour \verb|BEHAVIOUR|$

**DEFINED AS** 

"The name binding represents a relationship in which a 3gManagedElement contains and controls a smsGmscFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### smsIwmscFunctionIdBehaviour BEHAVIOUR

**DEFINED AS** 

"This attribute identifies a iwmscFunction instance.";

#### smsIwmscFunction-g3ManagedElementBehaviour BEHAVIOUR

**DEFINED AS** 

"The name binding represents a relationship in which a 3gManagedElement contains and controls a smsIwmscFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### ${\bf supported BCmIRPVersions Behaviour} \ {\bf BEHAVIOUR}$

**DEFINED AS** 

"This attribute provides the information concerning the Basic CM IRP versions currently supported by the Agent.";

#### supportedIRPsBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute provides the information about IRPs an IRPAgent supports.";

#### utranCelliubLinkLinkBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute implements the attribute UtranCell-IubLink of MOC UtranCell Defined in TS32.106-5.";

#### userDefinedStateBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute specifies an operator defined state for operator specific usage.";

#### utranCell-rncFunctionBahaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a rncFunction contains and controls a utranCell. When automatic instance naming is used, the choice of name bindings left as a local matter.";

#### utranCellIubLinkAssociationPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"The attribute 'utranCelliubLinkLink' points to the iubLink instance which connectes to this utranCell instance.";

#### utranCellNodeBAssociationPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"The attribute 'utranCellNodeBLink' points to the nodeBFunction instance which connectes to this utranCell instance.";

#### utranCellBasicPackageBehaviour BEHAVIOUR

#### **DEFINED AS**

"This managed object class represents the radio cell controlled by the RNC.";

#### utranCellIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute names an instance of the 'utranCell' object class.";

#### vlrFunctionIdBehaviour BEHAVIOUR

#### **DEFINED AS**

"This attribute identifies a vlrFunction instance.";

#### vlrFunction-g3ManagedElementBehaviour BEHAVIOUR

#### **DEFINED AS**

"The name binding represents a relationship in which a 3gManagedElement contains and controls a vlrFunction. When automatic instance naming is used, the choice of name bindings left as a local matter.";
