Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

- 32.111-1 Fault Management; Part 1: 3G fault management requirements.
- 32.111-2 Fault Management; Part 2: Alarm Integration Reference Point (IRP): Information Service (IS).
- 32.111-3 Fault Management; Part 3: Alarm Integration Reference Point (IRP): Common Object Request Broker Architecture (CORBA) Solution Set (SS).
- 32.111-5 Alarm Integration Reference Point (IRP): eXtensible Markup Language (XML) definitions.
- 32.111-7 Alarm Integration Reference Point (IRP): SOAP Solution Set (SS).**

1 Scope

The present document specifies the SOAP Solution Set for the IRP whose semantics are specified in Alarm IRP: Information Service (3GPP TS 32.111-2 [4]).

This Solution Set specification is related to 3GPP TS 32.111-2 V8.0.X.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.150 [9] and 3GPP TS 32.111-1 [3] and the following apply:

IRP document version number string (or "IRPVersion"): See 3GPP TS 32.311 [6].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

IS	Information Service
SS	Solution Set
WSDL	Web Service Description Language

4 Architectural features

4.1 General

The overall architectural feature of the Alarm IRP is specified in 3GPP TS 32.111-2 [4]. This clause specifies features that are specific to the SOAP solution set.

The SOAP 1.1 specification [11] and WSDL 1.1 specification [13] are supported.

The SOAP 1.2 specification [14] is supported optionally.

This specification uses "document" style in WSDL file.

This specification uses "literal" encoding style in WSDL file.

The filter language used in the SS is the XPath Language (see W3C XPath 1.0 specification [12]). IRPAgents may throw a FilterComplexityLimit fault when a given filter is too complex.

The Alarm IRP SOAP SS uses the Notification IRP SOAP SS of 3GPP TS 32.307 [10]. The IRPAgent shall support the push interface model, which means that the IRPAgent sends alarm notifications to the IRPManager as soon as new events occur. The IRPManager does not need to check ("pull") for events.

Relevant definitions are imported from the Alarm IRP XML definitions of 3GPP TS 32.111-5 [5].

This specification uses a number of namespace prefixes throughout that are listed in Table 4.1.

Table 4.1: Prefixes and Namespaces used in this specification

PREFIX	NAMESPACE
(no prefix)	http://schemas.xmlsoap.org/wsdl/
soap	http://schemas.xmlsoap.org/wsdl/soap/
alarmIRPSystem	http://www.3gpp.org/ftp/Specs/archive/32_series/32.111-7#AlarmIRPSystem
alarmIRPData	http://www.3gpp.org/ftp/Specs/archive/32_series/32.111-7#AlarmIRPData
xai	http://www.3gpp.org/ftp/specs/archive/32_series/32.111-5#alarmIRPIOCs
xn	http://www.3gpp.org/ftp/specs/archive/32_series/32.625#genericNrm
genericIRPSystem	http://www.3gpp.org/ftp/Specs/archive/32_series/32.317/schema/32317-810/GenericIRPSystem
ntfIRPNtfSystem	http://www.3gpp.org/ftp/Specs/archive/32_series/32.307/schema/32307-810/notification/NotificationIRPNtfSystem

The WSDL structure is depicted in Figure 4.1 below, depicting port type, binding and service. The port type contains port type operations, which again contains input, output and fault messages. The binding contains binding operations, which have the same name as the port type operations. The binding connects to a port inside the service.

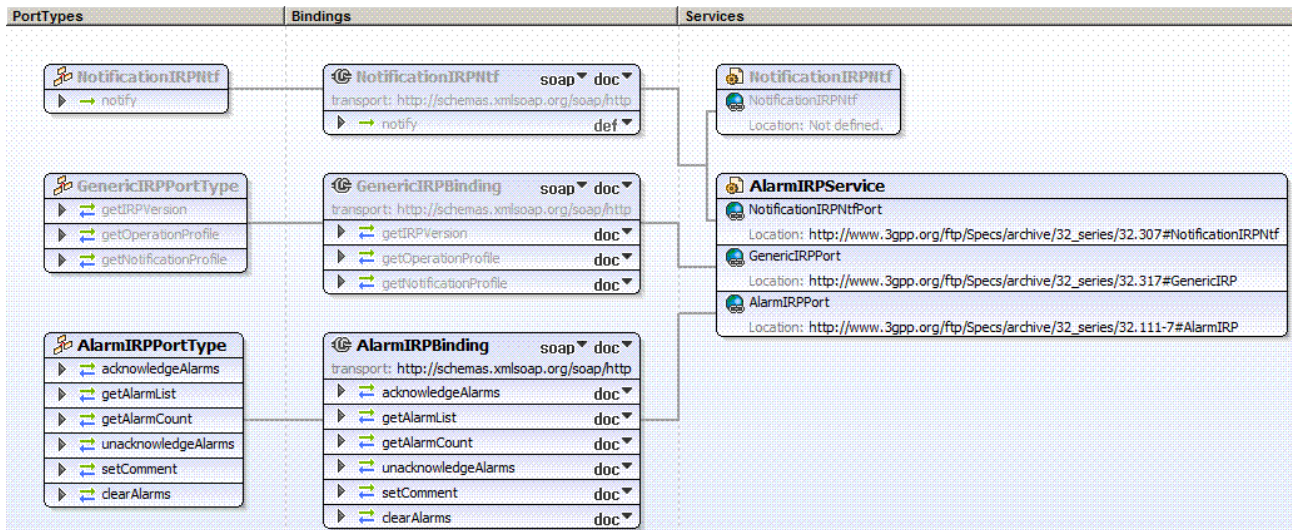

Figure 4.1: Alarm IRP SOAP Solution Set WSDL structure

5 Mapping

5.1 Operation and notification mapping

The Alarm IRP IS (3GPP TS 32.111-2 [4]) defines the operations and their semantics.

Table 5.1 maps the operations defined in the Alarm IRP IS to their equivalent types, messages, port type operation, and binding operation in this Solution Set (SS).

Table 5.1 also maps the notifications of the Alarm IRP IS, as well as inherited operations.

Table 5.1 also qualifies if an operation is Mandatory (M) or Optional (O).

Table 5.1: Mapping from IS Operation to SS Equivalents

IS Operation in 3GPP TS 32.111-2 [4]	SS: Operation of WSDL port type and WSDL binding	SS: Port of AlarmIRPService	Qualifier
acknowledgeAlarms	acknowledgeAlarms (note 1)	AlarmIRPServicePort	M
getAlarmList	getAlarmList (note 1)	AlarmIRPServicePort	M
getAlarmCount	getAlarmCount (note 1)	AlarmIRPServicePort	O
unacknowledgeAlarms	unacknowledgeAlarms (note 1)	AlarmIRPServicePort	O
setComment	setComment (note 1)	AlarmIRPServicePort	O
clearAlarms	clearAlarms (note 1)	AlarmIRPServicePort	O
notifyNewAlarm	notify (note 2)	NotificationIRPNtfServicePort	M
notifyAckStateChanged	notify (note 2)	NotificationIRPNtfServicePort	M
notifyClearedAlarm	notify (note 2)	NotificationIRPNtfServicePort	M
notifyAlarmListRebuilt	notify (note 2)	NotificationIRPNtfServicePort	M
notifyChangedAlarm	notify (note 2)	NotificationIRPNtfServicePort	O
notifyComments	notify (note 2)	NotificationIRPNtfServicePort	O
notifyPotentialFaultyAlarmList	notify (note 2)	NotificationIRPNtfServicePort	O
getIRPVersion (note 3)	See TS 32.317 [8]	GenericIRPServicePort	M
getOperationProfile (note 3)	See TS 32.317 [8]	GenericIRPServicePort	O
getNotificationProfile (note 3)	See TS 32.317 [8]	GenericIRPServicePort	O
NOTE 1: The operation is under the port type alarmIRPSystem:AlarmIRPPortType and under the binding alarmIRPSystem:AlarmIRPBinding.			
NOTE 2: The IS equivalent maps to an XML definition specified in 3GPP TS 32.111-5 [5], and this being an input parameter to the operation notify under the port type ntfIRPNtfSystem:NotificationIRPNtf and under the binding ntfIRPNtfSystem:NotificationIRPNtf of 3GPP TS 32.307 [10]. This binding is linked to a port of the AlarmIRPService as indicated in the table above.			
NOTE 3: The IS operation is inherited from the ManagedGenericIRP IOC specified in 3GPP TS 32.312 [7]. This inheritance is by the AlarmIRP IOC of 3GPP TS 32.111-2 [4] inheriting from the ManagedGenericIRP IOC. The corresponding binding is linked to a port of the AlarmIRPService as indicated in the table above.			

5.2 Operation parameter mapping

The Alarm IRP IS (3GPP TS 32.111-2 [4]) defines semantics of parameters carried in the operations. The tables below show the mapping of these parameters, as per operation, to their equivalents defined in this SS.

5.2.1 Operation acknowledgeAlarms

5.2.1.1 Input parameters

Table 5.2.1.1: Mapping from IS acknowledgeAlarms input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
alarmInformationAndSeverityReferenceList	alarmInformationAndSeverityReferenceList	M
ackUserId	ackUserId	M
ackSystemId	ackSystemId	O

5.2.1.2 Output parameters

Table 5.2.1.2: Mapping from IS acknowledgeAlarms output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
badAlarmInformationReferenceList	badAlarmInformationReferenceList	M
status	status	M

5.2.1.3 Fault definition

Table 5.2.1.3: Mapping from IS acknowledgeAlarms exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
operation_failed	OperationFailed	M

5.2.2 Operation getAlarmList

5.2.2.1 Input parameters

Table 5.2.1.1: Mapping from IS getAlarmList input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
alarmAckState	alarmAckState	O
baseObjectClass	baseObjectClass	O
baseObjectInstance	baseObjectInstance	O
filter	filter	O

5.2.2.2 Output parameters

Table 5.2.2.2: Mapping from IS `getAlarmList` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
alarmInformationList	alarmInformationList	M
status	status	M

5.2.2.3 Fault definition

Table 5.2.2.3: Mapping from IS `getAlarmList` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
operation_failed	OperationFailed	M
filter_complexity_limit	FilterComplexityLimit	M

5.2.3 Operation `getAlarmCount`

5.2.3.1 Input parameters

Table 5.2.3.1: Mapping from IS `getAlarmCount` input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
filter	filter	O
alarmAckState	alarmAckState	O

5.2.3.2 Output parameters

Table 5.2.3.2: Mapping from IS `getAlarmCount` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
criticalCount	criticalCount	M
majorCount	majorCount	M
minorCount	minorCount	M
warningCount	warningCount	M
indeterminateCount	indeterminateCount	M
clearedCount	clearedCount	M
status	status	M

5.2.3.3 Fault definition

Table 5.2.3.3: Mapping from IS getAlarmCount exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
operation_failed	OperationFailed	M
filter_complexity_limit	FilterComplexityLimit	M

5.2.4 Operation unacknowledgeAlarms

5.2.4.1 Input parameters

Table 5.2.4.1: Mapping from IS unacknowledgeAlarms input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
alarmInformationReferenceList	alarmInformationReferenceList	M
ackUserId	ackUserId	M
ackSystemId	ackSystemId	O

5.2.4.2 Output parameters

Table 5.2.4.2: Mapping from IS unacknowledgeAlarms output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
badAlarmInformationReferenceList	badAlarmInformationReferenceList	M
status	status	M

5.2.4.3 Fault definition

Table 5.2.4.3: Mapping from IS unacknowledgeAlarms exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
operation_failed	OperationFailed	M

5.2.5 Operation `setComment`

5.2.5.1 Input parameters

Table 5.2.5.1: Mapping from IS `setComment` input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>alarmInformationReferenceList</code>	<code>alarmInformationReferenceList</code>	M
<code>commentUserId</code>	<code>commentUserId</code>	M
<code>commentSystemId</code>	<code>commentSystemId</code>	O
<code>commentText</code>	<code>commentText</code>	M

5.2.5.2 Output parameters

Table 5.2.5.2: Mapping from IS `setComment` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>badAlarmInformationReferenceList</code>	<code>badAlarmInformationReferenceList</code>	M
<code>status</code>	<code>status</code>	M

5.2.5.3 Fault definition

Table 5.2.5.3: Mapping from IS `setComment` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>operation_failed</code>	<code>OperationFailed</code>	M

5.2.6 Operation `clearAlarms`

5.2.6.1 Input parameters

Table 5.2.6.1: Mapping from IS `clearAlarms` input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>alarmInformationReferenceList</code>	<code>alarmInformationReferenceList</code>	M
<code>clearUserId</code>	<code>clearUserId</code>	M
<code>clearSystemId</code>	<code>clearSystemId</code>	O

5.2.6.2 Output parameters

Table 5.2.6.2: Mapping from IS `clearAlarms` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
badAlarmInformationReferenceList	badAlarmInformationReferenceList	M
status	status	M

5.2.6.3 Fault definition

Table 5.2.6.3: Mapping from IS `clearAlarms` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
