Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project: Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

- 32.601: "Configuration Management (CM); Basic CM Integration Reference Point (IRP); Requirements"
- 32.602: "Configuration Management (CM); Basic CM Integration Reference Point (IRP); Information Service (IS)"
- 32.606: "Configuration Management (CM); Basic CM Integration Reference Point (IRP): Solution Set (SS) definitions"**

Configuration Management (CM), in general, provides the operator with the ability to assure correct and effective operation of the 3G network as it evolves. CM actions have the objective to control and monitor the actual configuration on the Network Elements (NEs) and Network Resources (NRs), and they may be initiated by the operator or by functions in the Operations Systems (OSs) or NEs.

CM actions may be requested as part of an implementation programme (e.g. additions and deletions), as part of an optimisation programme (e.g. modifications), and to maintain the overall Quality of Service (QoS). The CM actions are initiated either as single actions on single NEs of the 3G network, or as part of a complex procedure involving actions on many resources/objects in one or several NEs.

1 Scope

The purpose of this document is to define the mapping of the Basic CM IRP: IS (see 3GPP TS 32.602 [8]) to the protocol specific details necessary for implementation of this IRP in a CORBA/IDL environment and in a SOAP/WSDL environment.

This document defines NRM independent data types and methods.

This Solution Set specification is related to 3GPP TS 32.602 V11.0.X.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For terms and definitions please refer to 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.600 [7] and 3GPP TS 32.602 [8].

IRP document version number string

The IRP document version number (sometimes called "IRPVersion" or "SS version number") string is used to identify this specification. The string is derived using a rule described in 3GPP TS 32.311 [5].

This string (or sequence of strings, if more than one version is supported) is returned in getBasicCmIRPVersion method.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA	Common Object Request Broker Architecture
DN	Distinguished Name
IS	Information Service
IDL	Interface Definition Language (OMG)
IRP	Integration Reference Point
MO	Managed Object
MOC	Managed Object Class
NRM	Network Resource Model
OMG	Object Management Group
SS	Solution Set
WSDL	Web Service Description Language

4 Solution Set Definitions

This specification defines the following 3GPP Basic CM IRP Solution Set Definitions:

Annex A provides the CORBA Solution Set.

Annex B provides the SOAP Solution Set.

Annex A (normative): CORBA Solution Set

This annex specifies the CORBA Solution Set for the IRP whose semantics are specified in 3GPP TS 32.602 [8].

A.1 Architectural features

The overall architectural feature of Basic Configuration Management IRP is specified in 3GPP TS 32.602 [8]. This clause specifies features that are specific to the CORBA SS.

A.1.1 Syntax for Distinguished Names and Versions

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [3].

The version of this IRP is represented as a string (see also clause 3.1).

A.1.2 IRP document version number string

The IRP document version number (sometimes called "IRPVersion" or "SS version number") string is used to identify this specification. The string is derived using a rule described in 3GPP TS 32.312: [6].

This string (or sequence of strings, if more than one version is supported) is returned in `getBasicCmIRPVersion` method.

A.1.3 Filter language

The filter language used in the SS is the Extended Trader Constraint Language (see *OMG Notification Service* [10]). IRPAgents may throw a `FilterComplexityLimit` exception when a given filter is too complex. However, for 3GPP Release 99 an "empty filter" shall be used i.e. a filter that satisfies all MOs of a scoped search (this does not affect the filter for notifications as defined in the Notification IRP – see 3GPP TS 32.306 [4]).

A.2 Mapping

A.2.1 General mappings

The IS parameter name `managedObjectInstance` is mapped into DN.

Attributes modelling associations as defined in the NRM (here also called "reference attributes") are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as an `MOReference`. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type `MOReferenceSet`, which contains a sequence of MO references.

If a reference attribute is changed, an `AttributeValueChange` notification (see TS 32.666 [9]) is emitted.

A.2.2 Operation mapping

The Basic CM IRP: IS (see 3GPP TS 32.602 [8]) defines semantics of operation visible across the Basic Configuration Management IRP. Table A.2.2 indicates mapping of these operations to their equivalents defined in this SS.

Table A.2.2: Mapping from IS Operation to SS equivalents

IS Operation (3GPP TS 32.602 [8])	SS Method	Qualifier
<code>getMoAttributes</code>	<code>BasicCmlrpOperations::find_managed_objects</code> <code>BasicCmlInformationIterator::next_basic_cm_informations</code>	M
<code>getContainment</code>	<code>BasicCmlrpOperations::find_managed_objects</code> <code>BasicCmlInformationIterator::next_basic_cm_informations</code>	O
<code>cancelOperation</code>	<code>BasicCmlInformationIterator::destroy</code>	O
<code>createMo</code>	<code>BasicCmlrpOperations::create_managed_object</code>	O
<code>deleteMo</code>	<code>BasicCmlrpOperations::delete_managed_objects</code> <code>DeleteResultIterator::next_basic_cm_informations</code> <code>DeleteResultIterator::next_delete_errors</code>	O
<code>setMoAttributes</code>	<code>BasicCmlrpOperations::modify_managed_objects</code> <code>ModifyResultIterator::next_basic_cm_informations</code> <code>ModifyResultIterator::next_modification_errors</code>	O

A.2.3 Operation parameter mapping

The Basic CM IRP: IS (see 3GPP TS 32.602 [8]) defines semantics of parameters carried in operations across the Basic Configuration Management IRP. Tables A.2.3.1 through A.2.3.6 indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

The SS operation `find_managed_objects` is equivalent to the IS operation `getMoAttributes` when called with `ResultContents` set to `NAMES_AND_ATTRIBUTES`. Iterating the `BasicCmInformationIterator` is used to fetch the result.

Table A.2.3.1: Mapping from IS `getMoAttributes` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
<code>invokelIdentifier</code>	- (No equivalence)	-
<code>invokelIdentifierOut</code>	Return value of type <code>BasicCmInformationIterator</code>	M
<code>baseObjectInstance</code>	<code>GenericRPMManagementConstDefs::DN base_object</code>	M
<code>scope</code>	<code>SearchControl search_control</code> (<code>SearchControl.type</code> and <code>SearchControl.level</code>)	M
<code>filter</code>	<code>SearchControl search_control</code> (<code>SearchControl.filter</code>)	M
<code>attributeListIn</code>	<code>AttributeNameSet requested_attributes</code>	M
<code>managedObjectClass</code> <code>managedObjectInstance</code> <code>attributeListOut</code>	Return value of type <code>BasicCmInformationIterator</code> - parameter out ResultSet <code>fetches_elements</code> of method <code>next_basic_cm_informations</code>	M
<code>status</code>	Exceptions: <code>FindManagedObjects</code> , <code>GenericRPMManagementSystem::InvalidParameter</code> , <code>UndefinedMOException</code> , <code>IllegalDNFormatException</code> , <code>UndefinedScopeException</code> , <code>IllegalScopeTypeException</code> , <code>IllegalScopeLevelException</code> , <code>IllegalFilterFormatException</code> , <code>FilterComplexityLimit</code>	M

The SS operation `find_managed_objects` is equivalent to the IS operation `getContainment` when called with `ResultContents` set to `NAMES`. Iterating the `BasicCmInformationIterator` is used to fetch the result.

Table A.2.3.2: Mapping from IS getContainment parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
invokeldentifier	- (No equivalence)	-
invokeldentifierOut	Return value of type BasicCmInformationIterator	M
baseObjectInstance	GenericIRPManagementConstDefs::DN base_object	M
scope	SearchControl search_control (SearchControl.type and SearchControl.level)	O
Not specified in IS	SearchControl search_control (SearchControl.filter)	M
containment	Return value of type BasicCmInformationIterator - parameter out ResultSet fetched_elements of method next_basic_cm_informations	M
status	Exceptions: FindManagedObjects, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, GenericIRPManagementSystem::ValueNotSupported, UndefinedMOException, IllegalDNFormatException, UndefinedScopeException, IllegalScopeTypeException, IllegalScopeLevelException, IllegalFilterFormatException, FilterComplexityLimit	M

Table A.2.3.3: Mapping from IS cancelOperation parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
invokeldentifier	- (Not applicable, the BasicCmInformationIterator instance identifies the ongoing operation)	M
status	Exceptions: GenericIRPManagementSystem::OperationNotSupported, DestroyException	M

Table A.2.3.4: Mapping from IS createMo parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
managedObjectClass managedObjectInstance	GenericIRPManagementConstDefs::DN object_name	M
referenceObjectInstance	GenericIRPManagementConstDefs::DN reference_object	O
attributeListIn attributeListOut	GenericIRPManagementConstDefs::MoAttributeSet attributes	M
status	AttributeErrorSeq attribute_errors Exceptions: CreateManagedObject, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::ParameterNotSupported, GenericIRPManagementSystem::InvalidParameter, UndefinedMOException, IllegalDNFormatException, DuplicateMO, CreateNotAllowed, ObjectClassMismatch, NoSuchObjectClass, ParentObjectDoesNotExist	M

Table A.2.3.5: Mapping from IS deleteMo parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
baseObjectInstance	GenericIRPManagementConstDefs::DN base_object	M
scope	SearchControl search_control (SearchControl.type and SearchControl.level)	M
filter	SearchControl search_control (SearchControl.filter)	M
deletionList	Return value of type DeleteResultIterator - parameter out ResultSet fetched_elements of method next_basic_cm_informations	M
status	Return value of type DeleteResultIterator - parameter out DeleteErrorSeq fetched_delete_errors of method next_delete_errors Exceptions: DeleteManagedObjects, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::InvalidParameter, UndefinedMoException, IllegalDNFormatException, UndefinedScopeException, IllegalScopeTypeException, IllegalScopeLevelException, IllegalFilterFormatException, FilterComplexityLimit	M

Table A.2.3.6: Mapping from IS setMoAttributes parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
baseObjectInstance	GenericIRPManagementConstDefs::DN base_object	M
scope	SearchControl search_control (SearchControl.type and SearchControl.level)	M
filter	SearchControl search_control (SearchControl.filter)	M
modificationList	AttributeModificationSet modifications	M
modificationListOut	Return value of type ModifyResultIterator - parameter out ResultSet fetched_elements of method next_basic_cm_informations	M
status	Return value of type ModifyResultIterator - parameter out ModifyAttributeErrorsSeq fetched_modify_errors of method next_modify_errors Exceptions: ModifyManagedObjects, GenericIRPManagementSystem::OperationNotSupported, GenericIRPManagementSystem::InvalidParameter, UndefinedMoException, IllegalDNFormatException, UndefinedScopeException, IllegalScopeTypeException, IllegalScopeLevelException, IllegalFilterFormatException, FilterComplexityLimit	M

A.3 Solution Set definitions

A.3.1 IDL definition structure

Clause A.3.2 defines the constants and types used by the Basic CM IRP.

Clause A.3.3 defines the operations which are performed by the Basic CM IRP agent.

A.3.2 IDL specification "BasicCMIRPConstDefs.idl"

```
//File: BasicCMIRPConstDefs.idl

#ifndef _BASIC_CM_IRP_CONST_DEFS_IDL_
#define _BASIC_CM_IRP_CONST_DEFS_IDL_

#include <GenericIRPManagementConstDefs.idl>

// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"

/* ## Module: BasicCMIRPConstDefs
This module contains commonly used definitions for BasicCMIRP.
=====
*/
module BasicCMIRPConstDefs
{
    /**
     * Defines the name of a Managed Object Class
     */
    typedef string MOClass;

    /**
     *
     * In this version the only allowed filter value is "TRUE" i.e. a filter that
     * matches everything.
     */
    typedef string Filter;

    /**
     * ResultContents is used to tell how much information to get back
     * from the find_managed_objects operation.
     *
     * NAMES: Used to get only Distinguished Name
     *         for MOs.
     *         The name contains both the MO class
     *         and the names of all superior objects in the naming
     *         tree.
     *
     * NAMES_AND_ATTRIBUTES: Used to get both NAMES plus
     *         MO attributes (all or selected).
     */
    enum ResultContents
    {
        NAMES,
        NAMES_AND_ATTRIBUTES
    };

Annex B (normative): SOAP Solution Set

This annex specifies the SOAP Solution Set for the IRP whose semantics are specified in 3GPP TS 32.602 [8].

B.1 Architectural features

The overall architectural feature of Basic Configuration Management IRP is specified in 3GPP TS 32.602 [8]. This clause specifies features that are specific to the SOAP SS.

B.1.1 Syntax for Distinguished Names and Versions

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [3].

The version of this IRP is represented as a string (see also clause 3.1).

B.1.2 Supported W3C specifications

The SOAP 1.1 specification [11] and WSDL 1.1 specification [12] are supported.

The SOAP 1.2 specification [14] is supported optionally.

This specification uses "document" style in the WSDL description.

This specification uses "literal" encoding style in the WSDL description.

B.1.3 Prefixes and namespaces

This specification uses a number of namespace prefixes throughout that are listed in Table B.1.3.

Table B.1.3: Prefixes and Namespaces used in this specification

Prefix	Namespace
http	http://schemas.xmlsoap.org/wsdl/http/
soap	http://schemas.xmlsoap.org/wsdl/soap/
SOAP-ENV	http://schemas.xmlsoap.org/soap/envelope/
SOAP-ENC or soapenc	http://schemas.xmlsoap.org/soap/encoding/
xs or xsd	http://www.w3.org/2001/XMLSchema
xsi	http://www.w3.org/2001/XMLSchema-instance
basicCMIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32606#BasicCMIRPSystem
basicCMIRPData	http://www.3gpp.org/ftp/specs/archive/32_series/32606#BasicCMIRPData
genericIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32316#GenericIRPSystem

B.1.4 Filter language

The filter language used in the SS is the XPath Language (see W3C XPath 1.0 specification [13]). IRPAgents may throw a FilterComplexityLimit fault when a given filter is too complex.

B.2 Mapping

B.2.1 General mappings

The IS parameter name `managedObjectInstance` is mapped into DN.

Attributes modelling associations as defined in the NRM (here also called "reference attributes") are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as a `MOReference`. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type `MOReferenceSet`, which contains a sequence of MO references.

If a reference attribute is changed, an `AttributeValueChange` notification (see 3GPP TS 32.666 [9]) is emitted.

B.2.2 Operation mapping

The Basic CM IRP: IS (see 3GPP TS 32.602 [8]) defines semantics of operation visible across the Basic Configuration Management IRP. Table B.2.2 indicates mapping of these operations to their equivalents defined in this SS.

Table B.2.2: Mapping from IS Operation to SS equivalents

IS Operation (3GPP TS 32.602 [8])	SS Operation	Qualifier
<code>getMoAttributes</code>	<code>getMOAttributes</code>	M
<code>getContainment</code>	<code>getContainment</code>	O
<code>cancelOperation</code> (see note 1)	N/A	N/A
<code>createMO</code>	<code>createMO</code>	O
<code>deleteMO</code>	<code>deleteMO</code>	O
<code>setMOAttributes</code>	<code>setMOAttributes</code>	O
<code>getIRPVersion</code> (see note 2)	<code>getIRPVersion</code>	M
<code>getOperationProfile</code> (see note 2)	<code>getOperationProfile</code>	O
<code>getNotificationProfile</code> (see note 2)	<code>getNotificationProfile</code>	O
NOTE 1: This operation is NOT mapped because it's useful for one-request-and-multiple-responses operations, which are not used in this Solution Set.		
NOTE 2: This operation is of IOC ManagedGenericIRP specified in [6]. The IOC BasicCmIRP of [8] inherits from it.		

B.2.3 Operation parameter mapping

The Basic CM IRP: IS (see 3GPP TS 32.602 [8]) defines semantics of parameters carried in operations across the Basic Configuration Management IRP. The following tables show the mapping of these parameters, as per operation, to their equivalents defined in the present document.

B.2.3.1 Operation getMoAttributes

B.2.3.1.1 Input parameters

Mapping from IS getMoAttributes input parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
invokeIdentifierIn	string invokeIdentifierIn	M
baseObjectInstance, scope, filter, attributeListIn	string queryXPathExp	M

Here is the XML schema fragment of the getMOAttributes request:

```
<!-- getMOAttributes Request -->
<element name="getMOAttributes">
  <complexType>
    <sequence>
      <element name="invokeIdentifierIn" type="string"/>
      <element name="queryXPathExp" type="string"/>
    </sequence>
  </complexType>
</element>
```

B.2.3.1.2 Output parameters

Mapping from IS getMoAttributes output parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
invokeIdentifierOut	string invokeIdentifierOut	M
managedObjectClass, managedObjectInstance, attributeListOut	basicCMIRPData:MOSequenceType moiListOut	M
status	basicCMIRPData:getMOAttributesFault	M

The specific 'attributeListOut' definition depends on the corresponding NRM XML definition.

Here is the XML schema fragment of the getMOAttributes response:

```
<!-- getMoAttributes Response -->
<element name="getMoAttributesResponse">
  <complexType>
    <sequence>
      <element name="invokeIdentifierOut" type="string"/>
      <<element name="moiListOut" type="basicCMIRPData:MOSequenceType"/>/sequence>
    </complexType>
  </element>
```

B.2.3.1.3 Fault definition

```
<!-- getMoAttributes Fault -->
<element name="getMOAttributesFault">
  <complexType>
    <choice>
      <element name="getMOAttributesFault" type="string"/>
      <element name="resourceLimitationFault" type="string"/>
      <element name="operationCancelledFault" type="string"/>
      <element name="complexityLimitationFault" type="string"/>
      <element ref="basicCMIRPData:InvalidParameterFault"/>
    </choice>
  </complexType>
</element>
```

B.2.3.2 Operation getContainment

B.2.3.2.1 Input parameters

Mapping from IS getContainment input parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
invokeIdentifierIn	string invokeIdentifierIn	M
baseObjectInstance, scope	string queryXPathExp	M

Here is the XML schema fragment of the getContainment request:

```
<!-- getContainment Request -->
<element name="getContainment">
  <complexType>
    <sequence>
      <element name="invokeIdentifierIn" type="string"/>
      <element name="queryXPathExp" type="string"/>
    </sequence>
  </complexType>
</element>
```

B.2.3.2.2 Output parameters

Mapping from IS getContainment output parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
invokeIdentifierOut	string invokeIdentifierOut	M
containment	string topContainerLoc	M
status	basicCMIRPData:getContainmentFault	M

Here is the XML schema fragment of the getContainment response:

```
<!-- getContainment Response -->
<element name="getContainmentResponse">
  <complexType>
    <sequence>
      <element name="invokeIdentifierOut" type="string"/>
      <element name="topContainerLoc" type="string"/>
      <!--each element contains only id attribute and other MO it contains -->
      <any minOccurs="0" maxOccurs="unbounded"/>
    </sequence>
  </complexType>
</element>
```

B.2.3.2.3 Fault definition

```
<!-- getContainment Fault -->
<element name="getContainmentFault">
  <complexType>
    <choice>
      <element name="getContainmentFault" type="string"/>
      <element name="resourceLimitationFault" type="string"/>
      <element name="operationCancelledFault" type="string"/>
      <element name="complexityLimitationFault" type="string"/>
      <element ref="basicCMIRPData:OperationNotSupportedFault"/>
      <element ref="basicCMIRPData:InvalidParameterFault"/>
    </choice>
  </complexType>
</element>
```

B.2.3.3 Operation createMO

B.2.3.3.1 Input parameters

Mapping from IS createMO input parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
managedObjectClass, managedObjectInstance	string mOIElementLoc	M
referenceObjectInstance	string referenceObjectInstance	O
attributeListIn	basicCMIRPData:AnyMOType mO	M

The specific 'attributeListIn' definition depends on the corresponding NRM XML definition. Here is the XML schema fragment of the createMO request:

```
<!-- createMO Request -->
<element name="createMO">
  <complexType>
    <sequence>
      <element name="mOIElementLoc" type="string"/>
      <element name="referenceObjectInstance" type="string" minOccurs="0"/>
      <element name="mO" type="basicCMIRPData:AnyMOType"/>
    </sequence>
  </complexType>
</element>
```

B.2.3.3.2 Output parameters

Mapping from IS createMO output parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
attributeListOut	basicCMIRPData:AnyMOType mO	M
status	basicCMIRPData:createMOFault	M

The specific 'attributeListOut' definition depends on the corresponding NRM XML definition. Here is the XML schema fragment of the createMO response:

```
<!-- createMO Response -->
<element name="createMOResponse">
  <complexType>
    <sequence>
      <element name="mO" type="basicCMIRPData:AnyMOType"/>
    </sequence>
  </complexType>
</element>
```

B.2.3.3.3 Fault definition

```
<!-- createMO Fault -->
<element name="createMOFault">
  <complexType>
    <choice>
      <element name="createMOFault" type="string"/>
      <element name="objectClassSpecificationMismatchedFault" type="string"/>
      <element name="InvalidObjectInstanceFault" type="string"/>
      <element name="createNotAllowedFault" type="string"/>
      <element name="noSuchObjectClassFault" type="string"/>
      <element name="classInstanceConflictFault" type="string"/>
      <element name="noSuchAttributeFault" type="string"/>
      <element name="invalidAttributeValueFault" type="string"/>
      <element name="missingAttributeValueFault" type="string"/>
      <element name="parentObjectDoesNotExistFault" type="string"/>
      <element ref="basicCMIRPData:OperationNotSupportedFault"/>
      <element ref="basicCMIRPData:InvalidParameterFault"/>
    </choice>
  </complexType>
</element>
```

B.2.3.4 Operation deleteMO

B.2.3.4.1 Input parameters

Mapping from IS deleteMO input parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
baseObjectInstance, scope, filter	string queryXPathExp	M

Here is the XML schema fragment of the deleteMO request:

```
<!-- deleteMO Request -->
<element name="deleteMO">
  <complexType>
    <sequence>
      <element name="queryXPathExp" type="string"/>
    </sequence>
  </complexType>
</element>
```

B.2.3.4.2 Output parameters

Mapping from IS deleteMO output parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
deletionList	basicCMIRPData:MOSequenceTypedeletionList	M
status	basicCMIRPData:deleteMOFault	M

Here is the XML schema fragment of the deleteMO response:

```
<!-- deleteMO Response -->
<element name="deleteMOResponse">
  <complexType>
    <sequence>
      <element name="deletionList" type="basicCMIRPData:MOSequenceType">
    </element>
    </sequence>
  </complexType>
</element>
```

B.2.3.4.3 Fault definition

```
<!-- deleteMO Fault -->
<element name="deleteMOFault">
  <complexType>
    <choice>
      <element name="deleteMOFault" type="string"/>
      <element name="invalidObjectInstanceFault" type="string"/>
      <element name="deleteNotAllowedFault" type="string"/>
      <element name="resourceLimitationFault" type="string"/>
      <element name="complexityLimitationFault" type="string"/>
      <element ref="basicCMIRPData:OperationNotSupportedFault"/>
      <element ref="basicCMIRPData:InvalidParameterFault"/>
    </choice>
  </complexType>
</element>
```

B.2.3.5 Operation setMOAttributes

B.2.3.5.1 Input parameters

Mapping from IS setMOAttributes input parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
baseObjectInstance, scope, filter, modificationList	stringqueryXPathExp	M
modificationList	basicCMIRPData:AttributeModificationSetType modificationList	M

Here is the XML schema fragment of the setMOAttributes request:

```
<!-- setMOAttributes Request -->
<element name="setMOAttributes">
  <complexType>
    <sequence>
      <element name="queryXPathExp" type="string"/>
      <element name="modificationList"
        type="basicCMIRPData:AttributeModificationSetType"/>
    </sequence>
  </complexType>
</element>

<complexType name='AttributeModificationSetType'>
  <sequence>
    <element name="AttributeModification" maxOccurs="unbounded">
      <complexType>
        <sequence>
          <any/>
          <element name="operator" type='basicCMIRPData:ModifyOperatorType' />
        </sequence>
      </complexType>
    </element>
  </sequence>
</complexType>

<simpleType name="ModifyOperatorType">
  <restriction base="string">
    <enumeration value="REPLACE"/>
    <enumeration value="ADDValues"/>
    <enumeration value="REMOVEValues"/>
    <enumeration value="SETToDefault"/>
  </restriction>
</simpleType>
```

B.2.3.5.2 Output parameters

Mapping from IS setMOAttributes output parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
modificationListOut	basicCMIRPData:MOSequenceTypemodificationListOut	M
status	basicCMIRPData:setMOAttributesFault	M

Here is the XML schema fragment of the setMOAttributes response:

```
<!-- setMOAttributes Response -->
<element name="setMOAttributesResponse">
  <complexType>
    <sequence>
      <element name="modificationListOut" type="basicCMIRPData:MOSequenceType"/>
    </sequence>
  </complexType>
</element>
```

B.2.3.5.3 Fault definition

```
<!-- setMOAttributes Fault -->
<element name="setMOAttributesFault">
  <complexType>
    <choice>
      <element name="setMOAttributesFault" type="string"/>
      <element name="modifyNotAllowedFault" type="string"/>
      <element name="noSuchAttributeFault" type="string"/>
      <element name="invalidAttributeValueFault" type="string"/>
      <element name="missingAttributeValueFault" type="string"/>
      <element name="resourceLimitationFault" type="string"/>
      <element name="complexityLimitationFault" type="string"/>
      <element ref="basicCMIRPData:OperationNotSupportedFault"/>
      <element ref="basicCMIRPData:InvalidParameterFault"/>
    </choice>
  </complexType>
</element>
```

B.3 Solution Set definitions

B.3.1 WSDL definition structure

Clause B.3.2 provides a graphical representation of the Basic CM IRP service.

Clause B.3.3 defines the services which are supported the Basic CM IRP agent.

B.3.2 Graphical Representation

The WSDL structure is presented in Figure B.3.2:

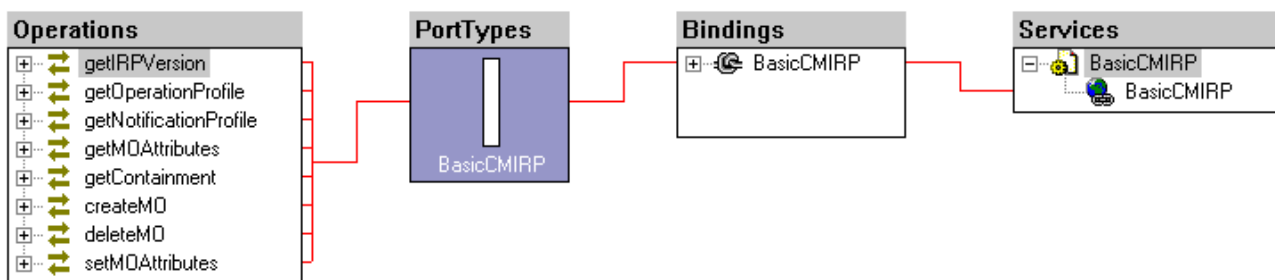

Figure B.3.2: BasicCM IRP SOAP Solution Set WSDL structure

B.3.3 WSDL specification 'BasicCMIRPSystem.wsdl'
