| NOTE1: UL_TFC0, UL_TFC1, UL_TFC2 and UL_TFC3 are part of minimum set of TFCIs.<br>NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. | | | | | | |

See clause 14.1.1 for test procedure.

#### 14.2.6.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x75) and RB6/TF1 (1x84).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS; and no data shall be received on RB7.

### 14.2.7 Conversational / speech / UL:7.4 DL:7.4 kbps / CS RAB+ UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.2.7.1 Conformance requirement

See clause 14.2.4.1.

See clause 14.1.1 for test procedure.

#### 14.2.10.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x49) and RB6/TF1 (1x54).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS; and no data shall be received on RB7.

### 14.2.11 Conversational / speech / UL:4.75 DL:4.75 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.2.11.1 Conformance requirement

See clause 14.2.4.1.

#### 14.2.11.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.11.

#### 14.2.11.3 Method of test

Uplink TFS:

| 1 | DL_TFC1 | UL_TFC1 | DL_TFC0, DL_TFC2, UL_TFC0, UL_TFC2 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 | RB5: 576 | RB5: 576 |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. | | | | | | |

See 14.1.1 for test procedure.

14.2.15.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x576).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS.

## 14.2.16 Streaming / unknown / UL:28.8/DL:28.8 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.16.1 Conformance requirement

See 14.2.4.1.

### 14.2.16.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.16.

### 14.2.16.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

Uplink TFS:

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

See 14.1.1 for test procedure.

### 14.2.23b.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send a RADIO BEARER SETUP COMPLETE message.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336) or RB5/TF1 (1x336).

3. At step 15 the UE shall return

   - for sub-test 1 and 2: an RLC SDU on RB5 having the same content as sent by the SS.

## 14.2.23c Interactive or background / UL:32 DL:32 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23c.

### 14.2.23c.1 Conformance requirement

See 14.2.4.1.

### 14.2.23c.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23c.

### 14.2.23c.3 Method of test

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
For RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

See 14.1.1 for test procedure.

### 14.2.23c.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send a RADIO BEARER SETUP COMPLETE message.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336) or RB5/TF1 (1x336).
   - for sub-test 3: RB5/TF3 (3x336) or RB5/TF1 (1x336).
   - for sub-test 4: RB5/TF4 (4x336) or RB5/TF1 (1x336).

3. At step 15 the UE shall return

   - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

NOTE 1: UL_TFC0, UL_TFC1, and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

### 14.2.27.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336) or RB5/TF1 (1x336).
   - for sub-test 3: RB5/TF3 (3x336) or RB5/TF1 (1x336).
   - for sub-test 4: RB5/TF4 (4x336) or RB5/TF1 (1x336).
3. At step 15 the UE shall return

- for sub-test 1, 2 and 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
- for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the test data sent by the SS in downlink.

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

#### 14.2.31.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x336).
- for sub-test 2: RB5/TF2 (2x336) or RB5/TF1 (1x336).
- for sub-test 3: RB5/TF3 (3x336) or RB5/TF1 (1x336).
- for sub-test 4: RB5/TF4 (4x336) or RB5/TF1 (1x336).

3. At step 15 the UE shall return
   - for sub-test 1, 2 and 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the test data sent by the SS in downlink.

## 14.2.31.2 Interactive or background / UL:64 DL:256 kbps / PS RAB / 20 ms TTI

### 14.2.31.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.31.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.31 for the downlink 20 ms TTI case.

### 14.2.31.2.3 Method of test

| 5 | DL_TFC5 | UL_TFC3 | DL_TFC0, DL_TFC6, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC5, UL_TFC8 | RB5: 3832 | RB5: 3832 |

NOTE1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.

See 14.1.1 for test procedure.

#### 14.2.33.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (4x336).
   - for sub-test 4 and 5: RB5/TF4 (8x336).

3. At step 15 the UE shall return

   - for sub-test 1 to 5: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

## 14.2.33.2 Interactive or background / UL:128 DL:384 kbps / PS RAB / 20 ms TTI

### 14.2.33.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.33.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.33 for the 20 ms TTI case.

### 14.2.33.2.3 Method of test

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size

See 14.1.1 for test procedure.

#### 14.2.35.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4 to 10: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-tests 1, 2 and 4 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 2552 bits equal to the content of the test data sent by the SS in downlink.

### 14.2.35.2 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 20 ms TTI

#### 14.2.35.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.35.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.35 for the 20 ms TTI case.

| Sub-test | Downlink TFCS under test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC9 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over two subsequent TTIs, i.e. UL RLC SDU SIZE has been set to two times the uplink TFS size minus 8 (the size of a 7 bit length indicator and expansion bit).

#### 14.2.38.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3 and 6: RLC SDUs on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4 and 7: RLC SDUs on RB5 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB6 and RB7.
   - for sub-test 5 and 8: RLC SDUs on RB5, RB6, RB7 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.38.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (TC, 10 ms TTI)

#### 14.2.38.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.38.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the turbo channel coding and 10 ms TTI case.

#### 14.2.38.2.3 Method of test

See 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 10 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over four subsequent TTIs, i.e. UL RLC SDU SIZE has been set to four times the uplink TFS size minus 8 (the size of a 7 bit length indicator and expansion bit).

#### 14.2.38.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB5 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB6 and RB7.
- for sub-test 5: RLC SDUs on RB5, RB6, RB7 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.38.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the convolutional channel coding and 20 ms TTI case.

See test case 14.2.38.1 for test procedure and test requirement.

### 14.2.38.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the convolutional channel coding and 10 ms TTI case.

See test case 14.2.38.2 for test procedure and test requirement.

## 14.2.38a Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:0 DL:0 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.38a.1 Conformance requirement

See 14.2.4.1.

#### 14.2.38a.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38a.

#### 14.2.38a.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2.38b.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

- for sub-test 3: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

| | |
|---|---|
| NOTE1: | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs |
| NOTE2: | See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8 and RB9: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit). |

#### 14.2.38d.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7, RB8 or RB9.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8 or RB9.
   - for sub-test 3, 6, 9 and 12: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6, RB7 or RB9.
   - for sub-test 4, 7, 10 and 13: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6, RB7 or RB9.
   - for sub-test 5, 8, 11 and 14: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS. No data shall be received on RB9.
   - for sub-test 15: RLC SDUs on RB5, RB6, RB7 and RB9 having the same content as sent by SS; and no data shall be received on RB8.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.38e Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:0 DL:0 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.38e.1 Conformance requirement

See 14.2.4.1.

#### 14.2.38e.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38e.

#### 14.2.38e.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

### 14.2.38e.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return

- for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
- for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38f Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.38f.1 Conformance requirement

See clause 14.2.4.1.

### 14.2.38f.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38f.

### 14.2.38f.3 Method of test

See clause 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC12 are part of minimum set of TFCIs.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

#### 14.2.38f.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8,9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC16 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2.38g.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.

- for sub-test 12: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 14: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 15 and 16: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38h Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:32 DL:32 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.38h.1 Conformance requirement

See clause 14.2.4.1.

### 14.2.38h.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38h.

### 14.2.38h.3 Method of test

See clause 14.1.2 for test procedure.

The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2. 38h.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1,2 and 3: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 5, 6 and 7: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
   - for sub-test 8: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 9: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 10 and 11: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; RLC SDUs on RB8 having the same content as the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.

- for sub-test 12: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.

- for sub-test 13: RLC SDUs on RB5 having the first 55 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 63 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.

- for sub-test 14 and 15: RLC SDUs on RB5 having the first 55 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 63 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.

- for sub-test 16: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.

- for sub-test 17: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.

- for sub-test 18 and 19: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.

- for sub-test 20: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.

- for sub-test 21, 22 and 23: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38i Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.38i.1 Conformance requirement

See clause 14.2.4.1.

### 14.2.38i.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38i.

### 14.2.38i.3 Method of test

See clause 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC24 are part of minimum set of TFCIs.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

### 14.2.38i.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15 the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.

   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.

- for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 8,9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 12: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 14,15 and 16: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 18: RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 19: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 20,21 and 22: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB7.
- for sub-test 23: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink.
- for sub-test 24: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 25: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 26,27 and 28: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 29: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38j Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.38j.1 Conformance requirement

See clause 14.2.4.1.

### 14.2.38j.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38j.

### 14.2.38j.3 Method of test

See clause 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC24 are part of minimum set of TFCIs.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

### 14.2.38j.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.

- for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 8,9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 12: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 14,15 and 16: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 18: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 19: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 20,21 and 22: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 23: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 25: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 26,27 and 28: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.
- for sub-test 29: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.39 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH

### 14.2.39.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (TC, 10 ms TTI)

#### 14.2.39.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.39.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink turbo channel coding and 10 ms TTI case.

14.2.39.1.3 Method of test

See 14.1.2 for test procedure.

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (32 kbps, 10 ms TTI) | DCCH |

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 10 ms while the downlink TTI is 20 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over two subsequent TTIs, i.e. UL RLC SDU SIZE has been set to two times the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.2.39.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15a and step 15b the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

   - for sub-test 3: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 4: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 5: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 7: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.39.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (TC, 20 ms TTI)

### 14.2.39.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.39.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink turbo channel coding and 20 ms TTI case.

14.2.39.2.3 Method of test

See 14.1.2 for test procedure.

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (32 kbps, 20 ms TTI) | DCCH |

| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC9 are part of minimum set of TFCIs<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2.39.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.39.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 10 ms TTI case.

See test case 14.2.39.1 for test procedure and test requirement.

### 14.2.39.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 20 ms TTI case.

See test case 14.2.39.2 for test procedure and test requirement.

## 14.2.40 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH

#### 14.2.40.1 Conformance requirement

See 14.2.4.1.

#### 14.2.40.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.40.

#### 14.2.40.3 Method of test

See 14.1.2 for test procedure.

#### 14.2.40.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

| Sub-test | Downlink TFCS Under Test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|
| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2.41.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.42 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.42.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB / 10 ms TTI

#### 14.2.42.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.42.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.42 for the downlink 10 ms TTI case.

#### 14.2.42.1.3 Method of test

See 14.1.2 for test procedure.

|---|---|---|---|---|---|---|
| NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs<br>NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 10 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over each TTIs, i.e. UL RLC SDU SIZE has been set to the uplink TFS size under test minus 8 (the size of a 7 bit length indicator and expansion bit). | | | | | | |

#### 14.2.42.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.42.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB / 20 ms TTI

### 14.2.42.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.42.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.42 for the downlink 20 ms TTI case.

### 14.2.42.2.3 Method of test

See 14.1.2 for test procedure.

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs

NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.2.42.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 15: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 16: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 17: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 18: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 19: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 20: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.43 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.43.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB / 10 ms TTI

#### 14.2.43.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.43.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.43 for the downlink 10 ms TTI case.

#### 14.2.43.1.3 Method of test

See 14.1.2 for test procedure.

For the PS DL:384/UL:64 kbps radio bearer the downlink TTI is 10ms while the uplink TTI is 20ms. As the SS will send one DL SDU every 10 ms then the UE test loop function will return 2 UL SDUs per uplink TTI. To not cause uplink transmission buffer overflow then the UL RLC SDU size should be chosen such that the UE will transmit 2 RLC SDUs per uplink TTI. For the case when the transport format under test does not allow for 2 SDUs to fit into the transport format size without requiring concatenation then the UL RLC SDU size shall be chosen such that one SDU is returned per uplink TTI.

The following RLC parameter value is used in the RADIO BEARER SETUP message used to setup the PS DL:384/UL:64 kbps radio bearer:

| | |
|---|---|
| Uplink RLC<br>Transmission window size | 512 |

| | |
|---|---|
| Downlink RLC<br>Receiving window size | 512 |

NOTE The transmission and receiving window size values have been chosen to avoid that UE transmission and reception buffers become full during the test.

Uplink TFS:

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit).

NOTE 2: RB8 (TF1/TF3): For sub-tests where uplink transport format TF1 (1x336) or TF3 (3x336) are used then no adaptation to the difference in downlink TTI (10 ms) and uplink TTI (20ms) is possible as this would require the UE to concatenate 2 SDUs into one PDU for TF1; or into three PDUs for TF3. For these sub-tests the UL RLC SDU size is set equal to the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

NOTE 3: RB8 (TF2/TF4): For sub-tests where uplink transport formats TF2 (2x336) or TF4 (4x336) is used then to adopt to the difference in downlink TTI (10 ms) and uplink TTI (20ms) the UL RLC SDU size has been chosen such that 2 SDUs will be returned per uplink TTI. I.e. the UL RLC SDU size is set equal to half the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

NOTE 4: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.

NOTE 5: DL_TFC1 for subtests 4, 7, 10, 13 and 16 and DL_TFC2 for subtests 5, 8, 11, 14 and 17 are necessary to cope with the effect of the acknowlegde PDUs in AM mode.

#### 14.2.43.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15a and step 15b the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.

   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
- for sub-test 6: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 7: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 8: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink.
- for sub-test 9: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 10: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 11: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 14: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink.
- for sub-test 15: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 16: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.43.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB / 20 ms TTI

### 14.2.43.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.43.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.43 for the downlink 20 ms TTI case.

The following RLC parameter value is used in the RADIO BEARER SETUP message used to setup the PS DL:384/UL:64 kbps radio bearer:

| | |
|---|---|
| Uplink RLC<br>Transmission window size | 512 |

| | |
|---|---|
| Downlink RLC<br>Receiving window size | 512 |

NOTE: The transmission and receiving window size values have been chosen to avoid that UE transmission and reception buffers become full during the test.

14.2.43.2.3 Method of test

See 14.1.2 for test procedure.

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs

NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

NOTE 3: DL_TFC1 for subtests 4, 7, 10, 13, 16, 18, 21 and 24 and DL_TFC2 for subtests and 5, 8, 11, 14, 17, 20, 23 and 26 are necessary to cope with the effect of the acknowlegde PDUs in AM mode.

### 14.2.43.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15 the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

   - for sub-test 3: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 4: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.

   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 7: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.

   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 15: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 16: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 17: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 18: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 19: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 20: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 21: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 22: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 23: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 25: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 26: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.44 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.44.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB / 10 ms TTI

#### 14.2.44.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.44.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 10 ms TTI case.

#### 14.2.44.1.3 Method of test

See 14.1.2 for test procedure.

Uplink TFS:

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 10 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over each TTI, i.e. the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.2.44.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15 the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

- for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 9: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 13: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 15: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 16: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 17: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 18: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 19: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 20: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 21: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 22: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 23: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 25: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 26: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 27: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 28: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 29: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 30: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 31: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 32: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.44.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB / 20 ms TTI

### 14.2.44.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.44.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 20 ms TTI case.

### 14.2.44.2.3 Method of test

See 14.1.2 for test procedure.

| Sub-test | Downlink TFCS under test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|
| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2.44.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 15: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 16: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 17: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 18: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 19: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 20: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 21: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 22: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 23: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 25: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 26: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 27: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 28: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 29: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 30: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 31: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 32: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 33: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 34: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 35: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 36: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 37: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 38: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 39: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 40: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 41: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 42: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 43: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 44: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 45: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 46: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 47: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 48: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 49: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 50: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 51: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 52: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 53: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 54: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 55: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 56: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.45 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming / unknown / UL:57.6 DL:57.6 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.45.1 Conformance requirement

See 14.2.4.1.

### 14.2.45.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.45.

### 14.2.45.3 Method of test

See 14.1.2 for test procedure.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Streaming / unknown / UL:57.6 DL:57.6 kbps / CS RAB (RB8):

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (57.6 kbps) | DCCH |

#### 14.2.45.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified in the actual sub test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.46 Void

## 14.2.47 Void

## 14.2.48 Void

## 14.2.49 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.49.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI

#### 14.2.49.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.49.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49 for the 20 ms TTI case.

#### 14.2.49.1.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |

### 14.2.49.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.49.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI

### 14.2.49.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.49.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49 for the 40 ms TTI case.

### 14.2.49.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (64 kbps) | DCCH |

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TB size.

#### 14.2.49.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: four RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB5 and four RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5: RLC SDUs on RB5, RB6 and RB7; and four RLC SDUs on RB8 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.49a Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL(12.2 7.95 5.9 4.75) kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH (20ms TTI)

### 14.2.49a.1 Conformance requirement

See 14.2.4.1.

### 14.2.49a.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49a for 20ms TTI case.

### 14.2.49a.3 Method of test

See 14.1.2 for test procedure.

#### Initial Conditions

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC12 are part of minimum set of TFCIs.

NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TB size.

#### 14.2.49a.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2, 3, 4: RLC SDUs on RB5, RB6 having the same content as sent by SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6, RB7.
   - for sub-test 8, 9, 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.49a.1 Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL(12.2 7.95 5.9 4.75) kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH (40ms TTI)

#### 14.2.49a.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.49a.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49a for 40 ms TTI case .

#### 14.2.49a.1.3 Method of test

See 14.1.2 for test procedure.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC12 are part of minimum set of TFCIs

NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TB size.

#### 14.2.49a.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2, 3, 4: RLC SDUs on RB5, RB6 having the same content as sent by SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6, RB7.
   - for sub-test 8, 9, 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.50 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.50.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 20 ms TTI

#### 14.2.50.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.50.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.50 for the 20 ms TTI case.

14.2.50.1.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5 and RB6):

| | RB5 (64 kbps) | RB6 (64 kbps) |
|---|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | | |

See 14.1.2 for test procedure.

Uplink TFS:

### 14.2.50.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 2: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 3: RLC SDUs on RB5 and RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.50.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 40 ms TTI

### 14.2.50.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.50.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.50 for the 40 ms TTI case.

### 14.2.50.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5 and RB6):

#### 14.2.51.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by the SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 and RB6 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.51.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:64 DL:64 kbps / PS RAB

#### 14.2.51.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.51.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51 for the 40 ms TTI case.

14.2.51.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

As the TTI for RB5 and RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size for RB6 has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).and .the UL RLC SDU size for RB5 has been set equal to the uplink TB size . | | | | | | |

#### 14.2.51.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 and RLC SDUs on RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.51a Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or Background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.51a.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:8 DL:8 kbps / PS RAB

#### 14.2.51a.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.51a.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51a for the 20 ms TTI case.

14.2.51a.1.3 Method of test

Initial Conditions

The following RLC Info parameter values for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: 'Timer based discard without explicit signalling' is configured in uplink to secure that the UE will be able to return data in uplink for the case when the UE test loop function, due to processing delays, will not deliver the SDUs in one and the same TTI, but instead in two subsequent TTIs. | |

See 14.1.2 for test procedure.

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2_and UL_TFC4 are part of minimum set of TFCIs
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

### 14.2.51a.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 2: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 3: RLC SDUs on RB5 and RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

# 14.2.51b Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or Background / UL:16 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

## 14.2.51b.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:16 DL:64 kbps / PS RAB

### 14.2.51b.1.1 Conformance requirement

See 14.2.4.1.

### 14.2.51b.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51b for the 20 ms TTI case.

### 14.2.51b.1.3 Method of test

Initial Conditions

The following RLC Info parameter values for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: 'Timer based discard without explicit signalling' is configured in uplink to secure that the UE will be able to return data in uplink for the case when the UE test loop function, due to processing delays, will not deliver the SDUs in one and the same TTI, but instead in two subsequent TTIs. | |

See 14.1.2 for test procedure.

For the PS UL:16/DL:64 kbps radio bearer the downlink TTI is 20ms while the uplink TTI is 40ms. As the SS will send one DL SDU every 20 ms then the UE test loop function will return 2 UL SDUs per uplink TTI. To not cause uplink transmission buffer overflow then the UL RLC SDU size should be chosen such that the UE will transmit 2 RLC SDUs per uplink TTI. For the case when the transport format under test does not allow for 2 SDUs to fit into the transport format size without requiring concatenation then the UL RLC SDU size shall be chosen such that one SDU is returned per uplink TTI.

| Sub-test | Downlink TFCS Under Test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|
| 9 | DL_TFC9, DL_TFC19 | UL_TFC5, UL_TFC11 | DL_TFC0, DL_TFC1, DL_TFC5, DL_TFC6, DL_TFC10, UL_TFC0, UL_TFC4, UL_TFC6 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6, UL_TFC8, UL_TFC9, UL_TFC11 | RB5: 640 RB6: 312 (note 4) | RB5: 2x640 RB6: 1272 |

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 3: RB6 (TF1): For sub-tests where uplink transport format TF1 (1x336) is used then no adaptation to the difference in downlink TTI (20 ms) and uplink TTI (40ms) is possible as this would require the UE to concatenate 2 SDUs into one PDU. For these sub-tests the UL RLC SDU size is set equal to the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).
NOTE 4: RB6 (TF2): For sub-tests where uplink transport formats TF2 (2x336) is used then to adopt to the difference in downlink TTI (20 ms) and uplink TTI (40ms) the UL RLC SDU size has been chosen such that 2 SDUs will be returned per uplink TTI. I.e. the UL RLC SDU size is set equal to half the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

#### 14.2.51b.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 2: RLC SDUs on RB6 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5.
   - for sub-test 3, 4: RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6 : RLC SDUs on RB5 and RB6 having the same content as sent by SS
   - for sub-test 7 : RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 8 , 9 : RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.51b.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:16 DL:64 kbps / PS RAB

#### 14.2.51b.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.51b.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51b for the 40 ms TTI case.

### 14.2.51b.2.3 Method of test

Initial Conditions

The following RLC Info parameter values for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling' is configured in uplink to secure that the UE will be able to return data in uplink for the case when the UE test loop function, due to processing delays, will not deliver the SDUs in one and the same TTI, but instead in two subsequent TTIs. | |

See 14.1.2 for test procedure.

For the PS UL:16/DL:64 kbps radio bearer the downlink TTI is 20ms while the uplink TTI is 40ms. As the SS will send one DL SDU every 20 ms then the UE test loop function will return 2 UL SDUs per uplink TTI. To not cause uplink transmission buffer overflow then the UL RLC SDU size should be chosen such that the UE will transmit 2 RLC SDUs per uplink TTI. For the case when the transport format under test does not allow for 2 SDUs to fit into the transport format size without requiring concatenation then the UL RLC SDU size shall be chosen such that one SDU is returned per uplink TTI.

Uplink TFS:

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 3: RB6 (TF1): For sub-tests where uplink transport format TF1 (1x336) is used then no adaptation to the difference in downlink TTI (20 ms) and uplink TTI (40ms) is possible as this would require the UE to concatenate 2 SDUs into one PDU. For these sub-tests the UL RLC SDU size is set equal to the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).
NOTE 4: RB6 (TF2): For sub-tests where uplink transport formats TF2 (2x336) is used then to adopt to the difference in downlink TTI (20 ms) and uplink TTI (40ms) the UL RLC SDU size has been chosen such that 2 SDUs will be returned per uplink TTI. I.e. the UL RLC SDU size is set equal to half the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

#### 14.2.51b.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 2: RLC SDUs on RB6 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5.
   - for sub-test 3, 4: RLC SDUS on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6 : RLC SDUs on RB5 and RB6 having the same content as sent by SS
   - for sub-test 7 : RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 8 , 9 : RLC SDUs on RB5 having the same content as sent by SS ; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.52 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.52.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:64 DL:128 kbps / PS RAB

#### 14.2.52.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.52.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.52 for the 20 ms TTI case.

14.2.52.1.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

As the TTI for RB5 and RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size for RB6 has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).and .the UL RLC SDU size for RB5 has been set equal to the uplink TB size. | | | | | | |

#### 14.2.52.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6: RLC SDUs on RB5 and RLC SDUs on RB6 having the same content as sent by SS.
   - For sub-test 3: RLC SDUs on RB6 having the content equal to the first 952 bits of the test data sent by the SS in downlink;
   - For sub-test 4: RLC SDUs on RB6 having the content equal to the first 1272 bits of the test data sent by the SS in downlink;
   - for sub-test 8: RLC SDUs on RB6 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB6 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.52.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:64 DL:128 kbps / PS RAB

#### 14.2.52.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.52.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51 for the 40 ms TTI case.

14.2.52.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

| NOTE1: UL_TFC0, UL_TFC1, UL_TFC5_and UL_TFC10 are part of minimum set of TFCIs<br>NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB5 and RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size for RB6 has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).and .the UL RLC SDU size for RB5 has been set equal to the uplink TFS size under test. | | | | | | |

#### 14.2.53.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 and RLC SDUs on RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.53.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:128 DL:128 kbps / PS RAB

#### 14.2.53.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.53.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.53 for the 40 ms TTI case.

14.2.53.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

#### 14.2.57.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1 to 4: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS in RB5.
   - for sub-test 5: RLC SDUs on RB6 having the same content as the DL RLC SDUs sent by the SS in RB6.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.58 Streaming / unknown / UL:16 DL:64 kbps / PS RAB + Interactive or background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.58.1 Conformance requirement

See 14.2.4.1.

#### 14.2.58.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.58.

14.2.58.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2 and UL_TFC4 are part of minimum set of TFCIs.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB5 is 20 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over two subsequent TTIs, i.e. UL RLC SDU size has been set to two times the payload size of the UL TF under test minus 8 bits (the size of a 7 bit length indicator and expansion bit).
RB6: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the uplink TFS size minus 8 bits (the size of a 7 bit length indicator and expansion bit).

#### 14.2.58.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6.
   - for sub-test 2 and 3: RLC SDUs on RB5 having the first 632 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6.
   - for sub-test 4: RLC SDUs on RB6 having the same content as sent by the SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 and RB6 having the same content as sent by the SS.
   - for sub-test 6 and 7: RLC SDUs on RB5 having the first 632 bits equal to the content of the test data sent by the SS in downlink; and RLC SDUs on RB6 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.58a Streaming / unknown / UL:16 DL:128 kbps / PS RAB + Interactive or background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.58a.1 Conformance requirement

See 14.2.4.1.

#### 14.2.58a.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.58a.

#### 14.2.58a.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

Specific Message Content:

Use the RADIO BEARER SETUP message as defined in [9] TS 34.108 clause 9, with the following exceptions:

#### 14.2.58a.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1, 2, 3 and 4: RLC SDUs on RB5 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6.
   - for sub-test 5: RLC SDUs on RB6 having the same content as sent by the SS; and no data shall be received on RB5.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and RLC SDUs on RB6 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

#### 14.2.63.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).

- for sub-test 3: RB5/TF3 (3x336).
- for sub-test 4 to 8: RB5/TF4 (4x336).

3. At step 15 the UE shall return
   - for sub-test 1, 2 and 4 to 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the test data sent by the SS in downlink.

| NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size. | | | | | | |

See 14.1.1 for test procedure.

#### 14.2.63.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4 to 14: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1, 2 and 4 to 14: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the test data sent by the SS in downlink.

See 14.1.1 for test procedure.

#### 14.3.3.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4, 5, 6, 7, 8, 9 and 10: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1, 2, 4 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 2552 bits equal to the content of the DL RLC SDU sent by the SS.

### 14.3.3.2 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 20 ms TTI

#### 14.3.3.2.1 Conformance requirement

See 14.2.4.1.

#### 14.3.3.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.3 for the downlink 20 ms TTI case.

#### 14.3.3.2.3 Method of test

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: the UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.

See 14.1.1 for test procedure.

#### 14.3.3.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4 to 18: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1, 2, 4 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 2552 bits equal to the content of the DL RLC SDU sent by the SS.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). The size of the uplink RLC SDU is set to the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.3.5.1.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15e and 15f the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.
   - for sub-test 3 and 6: RLC SDUs on RB8 having the same content as the DL RLC SDUs sent by the SS; no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4 and 7: RLC SDUs on RB5 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 5 and 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 13 and 15: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14 and 16: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

## 14.3.5.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 20 ms TTI

### 14.3.5.2.1 Conformance requirement

See 14.2.4.1

### 14.3.5.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.5 for the downlink 20 ms TTI case.

### 14.3.5.2.3 Method of test

Uplink TFS:

| | | | | | | |

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.3.5.2.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15e and 15f the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.
   - for sub-test 3 and 6: RLC SDUs on RB8 having the same content as the DL RLC SDUs sent by the SS; no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4 and 7: RLC SDUs on RB5 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 5 and 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-tests 13, 15, 17, 19 and 21: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-tests14, 16, 18, 20 and 22: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

## 14.3.6 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.3.6.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 10 ms TTI

#### 14.3.6.1.1 Conformance requirement

See 14.2.4.1

#### 14.3.6.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.6 for the downlink 10 ms TTI case.

#### 14.3.6.1.3 Method of test

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (64 kbps, 20 ms TTI) | DCCH |

| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, and UL_TFC15 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). The size of the uplink RLC SDU has been set such that it will be transmitted over each TTI, i.e. the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

#### 14.3.6.1.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15e and 15f the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-tests 13, 15, 17, 19, 21, 23 and 25: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-tests 14, 16, 18, 20, 22, 24 and 26: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

## 14.3.6.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 10 ms TTI

### 14.3.6.2.1 Conformance requirement

See 14.2.4.1

### 14.3.6.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.6 for the downlink 20 ms TTI case.

### 14.3.6.2.3 Method of test

Uplink TFS:

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.3.6.2.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15e and 15f the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-tests 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39 and 41: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-tests 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40 and 42: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

# 14.4 Combinations on SCCPCH

## 14.4.1 Stand-alone signalling RB for PCCH

Void

## 14.4.2 Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.2.

This radio bearer configuration is tested with three different SYSTEM INFORMATION (BCCH) configurations:

1. The contents of System Information Block type 5 / System Information Block type 5bis shall be as per the specific message content.

   Two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2.1.

2. The contents of System Information Block type 5 / System Information Block type 5bis as specified in TS 34.108, clause 6.1.3.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2.2.

3. The contents of System Information Block type 5 / System Information Block type 5bis and 6 as specified in TS 34.108, clause 6.1.2.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

   This configuration is verified in test case 14.4.2.3.

### 14.4.2.1 One SCCPCH: Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2.1.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2.1.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.1 for the case when two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2.1.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis shall be as per the specific message content.

Uplink TFS:

| | **TFI** | **RB7+SRB (32kbps on RACH)** |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| **TFCI** | **RB7+SRB** |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | **SRBs** | **RB7 (32 kbps)** |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x360 |
| | TF1, bits | 1x168 | 1x360 |
| | TF2, bits | 2x168 | N/A |
| | | | |

Downlink TFCS:

| **TFCI** | **(SRB, RB7)** |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF2, TF0) |
| DL_TFC3 | (TF0, TF1) |
| DL_TFC4 | (TF1, TF1) |

Sub-tests:

| Sub-test | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC3 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB7: 312 bits | RB7: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB7: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

Specific Message Contents

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.1 of TS 34.108, with the following exceptions

| Information Element | Value/remark |
|---|---|
| - SIB6 indicator | FALSE |

#### 14.4.2.1.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB7/TF1 (1x360).
2. At step 15 the UE shall return an RLC SDU on RB7 having the same content as sent by SS

### 14.4.2.2 Two SCCPCHs: Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2.2.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2.2.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.1 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2.2.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis shall be as specified in TS 34.108, clause 6.1.3.

Uplink TFS:

| | TFI | RB7+SRB (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| TFCI | RB7+SRB |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | SRBs | RB7 (32 kbps) |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x360 |
| | TF1, bits | 1x168 | 1x360 |
| | TF2, bits | 2x168 | N/A |
| | | | |

Downlink TFCS:

| TFCI | (SRB, RB7) |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF2, TF0) |
| DL_TFC3 | (TF0, TF1) |
| DL_TFC4 | (TF1, TF1) |

Sub-tests:

| Sub-test | Downlink TFCS under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC3 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB7: 312 bits | RB7: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB7: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

#### 14.4.2.2.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB7/TF1 (1x360).
2. At step 15 the UE shall return an RLC SDU on RB7 having the same content as sent by SS

### 14.4.2.3 One SCCPCH/connected mode: Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2.3.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2.3.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.1 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

Uplink TFS:

| | TFI | RB7+SRB (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| TFCI | RB7+SRB |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | SRBs | RB7 (32 kbps) |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x360 |
| | TF1, bits | 1x168 | 1x360 |
| | TF2, bits | 2x168 | N/A |
| | | | |

Downlink TFCS:

| TFCI | (SRB, RB7) |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF2, TF0) |
| DL_TFC3 | (TF0, TF1) |
| DL_TFC4 | (TF1, TF1) |

Sub-tests:

| Sub-test | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC3 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB7: 312 bits | RB7: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB7: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

#### 14.4.2.3.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB7/TF1 (1x360).

2. At step 15 the UE shall return an RLC SDU on RB7 having the same content as sent by SS

## 14.4.2a Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.2a.

This radio bearer configuration is tested with three different SYSTEM INFORMATION (BCCH) configurations:

1. The contents of System Information Block type 5 / System Information Block type 5bis shall be as per the message specific content.

   Two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2a.1.

2. The contents of System Information Block type 5 / System Information Block type 5bis as specified in TS 34.108, clause 6.1.3.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2a.2.

3. The contents of System Information Block type 5 / System Information Block type 5bis and 6 as specified in TS 34.108, clause 6.1.2.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

   This configuration is verified in test case 14.4.2a.3.

Specific Message Content for Radio Bearer Setup message to be used for these test cases:

Use the RADIO BEARER SETUP message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - RAB information for setup | |
| - RAB info | (AM DTCH for PS domain) |

## 14.4.2a.1 One SCCPCH: Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

### 14.4.2a.1.1 Conformance requirement

See 14.2.4.1.

### 14.4.2a.1.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.2a and 6.10.2.4.4.2 for the case when two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.2 (Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

### 14.4.2a.1.3 Method of Test

The contents of System Information Block type shall be as per the specific message content below.

See 14.1.1 for test procedure.

NOTE The test procedure for single radio bearer configurations is used as there are no uplink transport format combination for simultaneous data transmission on the PS radio bearers, nor any transport format combination for simultaneous data transmission and signalling.

Uplink TFS:

| | TFI | RB7+RB8+SRB (2x32 kbps on RACH) |

The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

Specific Message Contents

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.1 of TS 34.108, with the following exceptions

| Information Element | Value/remark |
|---|---|
| - SIB6 indicator | FALSE |

#### 14.4.2a.1.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be TF1 (1x360).
2. At step 15 the UE shall return
   - for sub test 1: RLC SDUs on RB7 having the same content as sent by SS
   - for sub test 2: RLC SDUs on RB8 having the same content as sent by SS

### 14.4.2a.2 Two SCCPCHs: Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2a.2.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2a.2.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.2 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.2 (Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

### 14.4.2a.2.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis shall be as specified in TS 34.108, clause 6.1.3.

See 14.1.1 for test procedure.

NOTE The test procedure for single radio bearer configurations is used as there are no uplink transport format combination for simultaneous data transmission on the PS radio bearers, nor any transport format combination for simultaneous data transmission and signalling.

Uplink TFS:

| | TFI | RB7 + RB8 (2x32 kbps on RACH) |

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB7 and RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

#### 14.4.2a.2.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be TF1 (1x360).
2. At step 15 the UE shall return
   - for sub test 1: RLC SDUs on RB7 having the same content as sent by SS
   - for sub test 2: RLC SDUs on RB8 having the same content as sent by SS

### 14.4.2a.3 One SCCPCH/connected mode: Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2a.3.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2a.3.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.2 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.2 (Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2a.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

See 14.1.1 for test procedure.

NOTE The test procedure for single radio bearer configurations is used as there are no uplink transport format combination for simultaneous data transmission on the PS radio bearers, nor any transport format combination for simultaneous data transmission and signalling.

#### 14.4.2a.3.4 Test Requirements

1. At step 15 the UE transmitted transport format shall be TF1 (1x360).
2. At step 15 the UE shall return
   - for sub test 1: RLC SDUs on RB7 having the same content as sent by SS
   - for sub test 2: RLC SDUs on RB8 having the same content as sent by SS

### 14.4.3 Interactive/Background 32 kbps RAB + SRBs for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.3.1 Conformance requirement

See 14.2.4.1.

#### 14.4.3.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.3 and 6.10.2.4.4.1 for the case when one SCCPCH is used in this SYSTEM INFORMATION (BCCH) configuration. The SCCPCH carries the PCH, the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

### 14.4.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.

Uplink TFS:

| | TFI | RB8 (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

| DL_TFC6 | (TF0, TF0, TF1) |
| DL_TFC7 | (TF0, TF1, TF1) |

Sub-tests:

| Sub-test | Downlink TFCS under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC6 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB8: 312 bits | RB8: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

### 14.4.3.4 Test requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB8/TF1 (1x360).
2. At step 15 the UE shall return an RLC SDU on RB8 having the same content as sent by SS

## 14.4.4 RB for CTCH + SRB for CCCH +SRB for BCCH

### 14.4.4.1 Definition and applicability

Applicable only for a UE supporting Cell Broadcast Services (CBS) as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of certain CBS message contents carried with certain activated CG message types in a clear way on UE side.

### 14.4.4.2 Conformance Requirement

See 14.2.4.1 and 7.4.2.1.2.

### 14.4.4.3 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.4 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.3. Data transfer on CTCH is tested similar to testing BMC for a UE in idle mode as specified in TS 34.123-1, clause 7.4.2, data transfer on CCCH is tested by establishing a RRC connection.

### 14.4.4.4 Method of Test

Initial conditions:

The contents of System Information Block type 1 shall be as per the specific message content.

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

The UE is RRC idle mode, the BMC entity is established.

The CB message ID stored on the SIM shall be known for this test (parameter for CBS PDUs). The CBS data type shall be allocated and activated in the UE.

Related ICS/IXIT Statement(s)

As in clause 7.4.2.1.4

Uplink TFS:

| | **TFI** | **RB7+SRB (32 kbps on RACH)** |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| **TFCI** | **RB7+SRB** |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | RB7 (32 kbps on CTCH) | SRBs |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x168 |
| | TF1, bits | 1x168 | 1x168 |

Downlink TFCS:

| TFCI | (RB7, SRB) |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF0, TF1) |

Test Procedure:

a) The UE in RRC Idle mode is triggered to wait for the next system information. The UE is activated to receive CBS messages.

b) The UE and the SS have configured their RLC, MAC, and PHYs layers with all CB related system information.

c) The SS sends the CVS message containing an activated CGS message type according to CB-Data 1 to the UE; this shall be repeated for CPREP times (indicated by the parameter "repetition period").

d) The UE indicates in an unambiguous way, that this message was received.

e) Steps 1 – 4 in the Expected sequence are followed by the steps 2 – 6 of the test procedure according to clause 14.1.1.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION | |
| 2 | | | | The SS waits for about 10 s to make sure, that the UE is configured to receive CBS data |
| 3 | ← | | BMC CBS Message | Activated CBS message with CB Data 1 message content as described by the manufacturer. This message shall be repeated "CPREP" times, Parameter:<br>- Message_ID,<br>- Serial-No,<br>- Data coding scheme,<br>- CB-Data 1, |
| 4 | | | | After having received the BMC CBS message the UE shall indicate the reception of CB Data 1 in a clear way. |

Specific Message Contents

Use the default parameter values for the System Information Block type 1 with the same type specified in clause 6.1.0b of TS 34.108, with the following exceptions

| Information Element | Conditions | Value/remark |
|---|---|---|
| - CN domain identity | | PS |
| - CHOICE CN Type | | GSM-MAP |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | | 05 00H |
| - CN domain specific DRX cycle length coefficient | | 9 |
| - CN domain identity | | CS |
| - CHOICE CN Type | | GSM-MAP |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | | 1E 01H |
| - CN domain specific DRX cycle length coefficient | | 9 |

#### 14.4.4.5 Test Requirements

At step 4 in the Expected sequence, the UE shall store and decode a received activated CBS message.

At step e of the test procedure according to clause 14.1.1 the RRC Connection shall be established.

## 14.4.5 64.8kbps RB for MTCH with 80 ms TTI / MBMS Broadcast Service

#### 14.4.5.1 Conformance Requirement

The UE shall correctly receive user data on the MTCH from the peer to peer RLC entity according to the configured MTCH.

| 8 | DL_TFC8 | DL_TFC0 | 5176 |
| NOTE 1: Test data size (=DL SDU size) has been set to the N*payload size of the DL TF under test minus 16 bits (size of 2, 7 bit length indicator and expansion bit), where N is the number of transport blocks in the transport format combination under test. | | | |

#### 14.4.5.4 Test Requirements

See 14.1.5 for definition of steps 8 and 12.

1. For the first sub-test: At step 8 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than zero.

2. For the second and following sub-tests: At step 12 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than the reported value at previous sub-test.

NOTE: For UE in UE test loop mode 3 then the RLC SDU counter value is only reset upon reception of CLOSE UE TEST LOOP message configuring UE test loop mode 3. As the generic test procedure in section 14.1.5 runs through all sub-tests without deactivating the UE test mode then the SS needs to check the reported counter value against the value reported at the previous sub-test.

## 14.4.5m 64.8kbps RB for MTCH with 80 ms TTI / MBMS Multicast Service

#### 14.4.5m.1 Conformance Requirement

Same conformance requirement as in clause 14.4.5.1.

#### 14.4.5m.2 Test purpose

Same test purpose as in clause 14.4.5.2.

14.4.5m.3 Method of Test

Initial Condition

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

MBMS Multicast service application available on UE Yes / No

Test Procedure

Same test procedure as in clause 14.4.5.3

14.4.5m.4 Test Requirements

Same test requirements as in clause 14.4.5.4.

## 14.4.5n 64.8kbps RB for MTCH with 80 ms TTI / MBMS Multicast Service in MBSFN mode

14.4.5n.1 Conformance Requirement

Same conformance requirement as in clause 14.4.5.1.

14.4.5n.2 Test purpose

Same test purpose as in clause 14.4.5.2.

14.4.5n.3 Method of Test

Initial conditions

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test Procedure

See 14.1.5m for test procedure.

Same Downlink TFS, Downlink TFCS and Sub-tests as in clause 14.4.5.3

14.4.5n.4 Test Requirements

Same test requirements as in clause 14.4.5.4.

## 14.4.6 129.6 kbps RB for MTCH with 80 ms TTI / MBMS Broadcast Service

### 14.4.6.1 Conformance Requirement

See 14.4.5.1.

### 14.4.6.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.6.

### 14.4.6.3 Method of Test

#### Initial Condition

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

#### Related ICS/IXIT statements

MBMS Broadcast service application available on UE Yes / No

#### Test Procedure

See 14.1.5 for test procedure.

### 14.4.6.4 Test Requirements

See 14.1.5 for definition of steps 8 and 12.

1. For the first sub-test: At step 8 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than zero.

2. For the second and following sub-tests: At step 12 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than the reported value at previous sub-test.

NOTE: For UE in UE test loop mode 3 then the RLC SDU counter value is only reset upon reception of CLOSE UE TEST LOOP message configuring UE test loop mode 3. As the generic test procedure in section 14.1.5 runs through all sub-tests without deactivating the UE test mode then the SS needs to check the reported counter value against the value reported at the previous sub-test.

## 14.4.6m 129.6 kbps RB for MTCH with 80 ms TTI / MBMS Multicast Service

### 14.4.6m.1 Conformance Requirement

### 14.4.7n.1 Conformance Requirement

Same conformance requirement as in clause 14.4.7.1.

### 14.4.7n.2 Test purpose

Same test purpose as in clause 14.4.7.2.

### 14.4.7n.3 Method of Test

Initial conditions

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test Procedure

See 14.1.5m for test procedure.

Same Downlink TFS, Downlink TFCS and Sub-tests as in clause 14.4.7.3

#### 14.4.7n.4 Test Requirements

Same test requirements as in clause 14.4.7.4.

## 14.5 Combinations on PRACH

### 14.5.1 Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH

The reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.4.1 is implicitly tested by the test cases 14.4.2.1, 14.4.2.2, 14.4.2.3 and 14.4.3.

### 14.5.2 Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH

The reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.4.2 is implicitly tested by the test cases 14.4.2a.1, 14.4.2a.2 and 14.4.2a.3.

### 14.5.3 Interactive/Background / UL:32 DL: [max bit rate depending on UE category] with fixed RLC and MAC-ehs / PS RAB + SRBs for DCCH on RACH and SRB with fixed RLC and MAC-ehs on HS-DSCH / DL:QPSK

#### 14.5.3.1 Conformance requirement

See 14.2.4.1.

#### 14.5.3.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.7.1 for QPSK using the downlink enhanced Layer 2 configuration with Fixed RLC and MAC-ehs

#### 14.5.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.4.3 using downlink MAC-d flow parameters |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test with QPSK and non-MIMO case using condition A24 for Radio Bearer Setup.

Uplink TFS:

| | TFI | RB7+SRB (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| TFCI | RB7+SRB |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Sub-tests:

| Sub-test | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size bits | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size bits (note 3) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 5 | 6 | 512 | 256 | 336 | UL_TFC1 | UL_TFC0 | UL_TFC0, UL_TFC1 | RB7: 312 |
| | 6 | 6 | 512 | 256 | | | | | |
| | 7 | 6 | 1536 | 512 | | | | | |
| | 8 | 6 | 1536 | 512 | | | | | |
| | 9 | 6 | 2047 | 512 | | | | | |
| | 10 | 6 | 2047 | 512 | | | | | |
| | 12 | 6 | 1024 | 128 | | | | | |
| | 13 | 6 | 2047 | 512 | | | | | |
| | 14 | 6 | 2047 | 512 | | | | | |
| | 15 | 6 | 2047 | 512 | | | | | |
| | 16 | 6 | 2047 | 512 | | | | | |
| | 17 | 6 | 2047 | 512 | | | | | |
| | 18 | 6 | 2047 | 512 | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return the data within one UL TTI.

#### 14.5.3.4 Test Requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be RB7/TF1 (1x1360)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number of RLC SDUs on RB7 as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6 Combinations on DPCH and HS-PDSCH

### 14.6.1 Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.1.1 Conformance requirement

For all transmissions of a transport block, the transport block size is derived from the TFRI value as specified below, except only in those cases of retransmissions where the Node-B selects a combination for which no mapping exists between the original transport block size and the selected combination of channelisation Code set and modulation type. In such cases, the transport block size index value signalled to the UE shall be set to 111111, i.e., $k_i$=63.

Let $k_i$ be the TFRI signalled on the HS-SCCH value and let $k_{0,i}$ be the value in the table 9.2.3.1 corresponding to the modulation and the number of codes signalled on the HS-SCCH. Let $k_t$ be the sum of the two values: $k_t = k_i + k_{0,i}$. The transport block size $L(k_t)$ can be obtained by accessing the position $k_t$ in the table in Annex A (normative) or by using the formula below (informative):

If $k_t < 40$

$$L(k_t) = 125 + 12 \cdot k_t$$

else

$$L(k_t) = \lfloor L_{\min} p^{k_t} \rfloor$$
$$p = 2085/2048$$
$$L_{\min} = 296$$

End

**Table 9.2.3.1: Values of $k_{0,i}$ for different numbers of channelization codes and modulation schemes**

| Combination *i* | Modulation scheme | Number of channelization codes | $k_{0,i}$ |
|---|---|---|---|
| 0 | QPSK | 1 | 1 |
| 1 | | 2 | 40 |
| 2 | | 3 | 63 |
| 3 | | 4 | 79 |
| 4 | | 5 | 92 |
| 5 | | 6 | 102 |
| 6 | | 7 | 111 |
| 7 | | 8 | 118 |
| 8 | | 9 | 125 |
| 9 | | 10 | 131 |
| 10 | | 11 | 136 |
| 11 | | 12 | 141 |
| 12 | | 13 | 145 |
| 13 | | 14 | 150 |
| 14 | | 15 | 153 |
| 15 | 16QAM | 1 | 40 |
| 16 | | 2 | 79 |
| 17 | | 3 | 102 |
| 18 | | 4 | 118 |
| 19 | | 5 | 131 |
| 20 | | 6 | 141 |
| 21 | | 7 | 150 |
| 22 | | 8 | 157 |
| 23 | | 9 | 164 |
| 24 | | 10 | 169 |
| 25 | | 11 | 175 |
| 26 | | 12 | 180 |
| 27 | | 13 | 184 |
| 28 | | 14 | 188 |
| 29 | | 15 | 192 |

The following table provides the mapping between $k_t$ (as per the definition in subclause 9.2.3.1) and the HS-DSCH Transport Block Size ($L(k_t)$).

**Table 9.2.3.2: mapping between $k_t$ (as per the definition in subclause 9.2.3.1) and the HS-DSCH Transport Block Size (L($k_t$))**

Reference(s)

3GPP TS 25.321, 9.2.3.1 and Annex A

#### 14.6.1.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1.

#### 14.6.1.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

| | 11 | 3 | 512 | 128 | | | | | |
| | 12 | 8 | 512 | 128 | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.

#### 14.6.1.4 Test requirements

See 14.1.3.5 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (3x336).
   - for sub-test 4: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.1a Interactive or background / UL:128 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.1a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.1a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1a.

#### 14.6.1a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

#### 14.6.1a.4 Test requirements

See 14.1.3.5.2 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (4x336).
   - for sub-test 4: TF4 (8x336).
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.1b Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Fixed RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK and 16QAM

#### 14.6.1b.1 Conformance requirement

See 14.6.1.1.

#### 14.6.1b.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the QPSK, 16QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with Fixed RLC and MAC-ehs .

#### 14.6.1b.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 and 2.

| Execution counter | Downlink Modulation Scheme (M) | MIMO |
|---|---|---|
| 1 | QPSK | No |
| 2 | 16QAM | No |

| | 13 to 20 | 8 | 1024 | 1024 | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.

#### 14.6.1b.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (3x336).
   - for sub-test 4: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.1c Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM

#### 14.6.1c.1 Conformance requirement

See 14.6.1.1.

#### 14.6.1c.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 64QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

#### 14.6.1c.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test with M=64QAM and non-MIMO case.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: For Subtest 3, when 16QAM/16QAM modulation is executed, test points 33 and above are not applicable.

### 14.6.1d.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).

- for sub-test 3: TF3 (3x336).
- for sub-test 4: TF4 (4x336)

3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.1e Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM and MIMO

### 14.6.1e.1 Conformance requirement

See 14.6.1.1.

### 14.6.1e.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 64QAM and MIMO case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

### 14.6.1e.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |

| UL_TFC9 | (TF4, TF1) |

Sub-tests:

| Sub-test | UE Category | RLC Receiving window size (note 1) | RLC Transmission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test dat size (bit (note 4 |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 19 and 20 | 2047 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 | See note |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return one complete UL RLC SDU per UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1e.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the

downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

## 14.6.1f Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK, 16QAM and Dual-Cell

### 14.6.1f.1 Conformance requirement

See 14.6.1.1.

### 14.6.1f.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the QPSK, 16QAM and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

### 14.6.1f.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-8 IE "HS-DSCH physical layer category extension 2". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) Dual-Cell data flow#1 | Downlink Modulation Scheme (M2) Dual-Cell data flow#2 | Number of HARQ processes | Dual-Cell |
|---|---|---|---|---|
| 1 | QPSK | QPSK | 6 | Yes |
| 2 | 16QAM | 16QAM | 8 | Yes |
| 3 | 16QAM | QPSK | 8 | Yes |

Uplink TFS:

| UL_TFC9 | (TF4, TF1) |

Sub-tests:

| Sub-test | UE Category | RLC Receiving window size (note 1) | RLC Transmission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 21 to 24 | 2047 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 | See note 4 |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return the data within one UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1f.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

# 14.6.1g Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM and Dual-Cell

## 14.6.1g.1 Conformance requirement

See 14.6.1.1.

## 14.6.1g.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 64QAM and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

## 14.6.1g.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-8 IE "HS-DSCH physical layer category extension 2". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) Dual-Cell data flow#1 | Downlink Modulation Scheme (M2) Dual-Cell data flow#2 | Number of HARQ processes | Dual-Cell |
|---|---|---|---|---|

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return the data within one UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1g.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

# 14.6.1h Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 16QAM, Dual-Cell and MIMO

## 14.6.1h.1 Conformance requirement

See 14.6.1.1.

## 14.6.1h.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 16QAM, MIMO and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

## 14.6.1h.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-9 IE "HS-DSCH physical layer category extension 3". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: The test data size for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1i.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be TF1 (1x336).
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.2 Interactive or background / UL:384 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.6.2.1 Conformance requirement

See 14.6.1.1.

### 14.6.2.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.2.

### 14.6.2.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| | TFI | RB5 (384 kbps, 10ms) | DCCH |

| NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.<br>NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC6 are part of minimum set of TFCIs.<br>NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI. | | | | | | | | | |

#### 14.6.2.4 Test requirements

See 14.1.3.5.2 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (4x336).
   - for sub-test 4: TF4 (8x336).
   - for sub-test 5: TF5 (12x336).
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.3.1 Conformance requirement

See 14.6.1.1.

#### 14.6.3.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.3.

#### 14.6.3.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:384 kbps radio bearer (RB8) has the highest number of transport formats (5 for TTI=10 ms and excluding TF0) then 5 sub-tests has been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB8 and for the different speech transport formats are: UL_TFC4 for TF1, UL_TFC8 for TF2, UL_TFC11 for TF3, UL_TFC13 for TF4 and UL_TFC17 for TF5.

| | 6 | 8 | 256 | 256 | | | | | | | |
| | 7 | 8 | 512 | 512 | | | | | | | |
| | 8 | 8 | 512 | 512 | | | | | | | |
| | 9 | 8 | 1024 | 512 | | | | | | | |
| | 10 | 6 | 1024 | 1024 | | | | | | | |
| | 11 | 3 | 256 | 256 | | | | | | | |
| | 12 | 8 | 256 | 256 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC18 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.3.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.3a Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL: 64 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.3a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.3a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.3a for the uplink 64 kbps case.

#### 14.6.3a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| DL_TFC4 | (TF1, TF0, TF0, TF1) |
| DL_TFC5 | (TF2, TF1, TF1, TF1) |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:64 kbps radio bearer (RB8) has the highest number of transport formats (4 excluding TF0) then 4 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF4 for RB8 and for the different speech transport formats are: UL_TFC4 for TF1, UL_TFC8 for TF2, UL_TFC11 for TF3 and UL_TFC13 for TF4.

| Sub-tes | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|---|---|

| | 11 | 3 | 512 | 128 | | | | | | | |
| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.3a.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.4 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.4.1 Conformance requirement

See 14.6.1.1.

#### 14.6.4.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.4.

#### 14.6.4.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | **RB5 (Conv. 64 kbps)** |
|---|---|
| Uplink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| Transmission RLC discard | |
| CHOICE *SDU Discard Mode* | |
| Timer based no explicit | |
| Timer_discard | 100ms |
| Downlink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| | TFI | RB5 (Conv. 64 kbps, 20 ms TTI) | RB6 (I/B 384 kbps, 10 ms TTI) | DCCH |
|---|---|---|---|---|
| TFS | TF0, bits | 0x640 | 0x336 | 0x148 |
| | TF1, bits | 2x640 | 1x336 | 1x148 |
| | TF2, bits | N/A | 2x336 | N/A |
| | TF3, bits | N/A | 4x336 | N/A |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Conversational CS and Interactive Background PS radio bearer. As the Interactive Background UL:384 kbps radio bearer (RB6) has the highest number of transport formats (5 for TTI=10 ms and excluding TF0) then 5 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB6 and for TF1 for RB5 are: UL_TFC3 for TF1, UL_TFC5 for TF2, UL_TFC7 for TF3, UL_TFC9 for TF4 and UL_TFC11 for TF5.

| | 3 | 3 | 256 | 256 | | | | | | | |
| | 4 | 3 | 256 | 256 | | | | | | | |
| | 5 | 6 | 256 | 256 | | | | | | | |
| | 6 | 8 | 256 | 256 | | | | | | | |
| | 7 | 8 | 512 | 512 | | | | | | | |
| | 8 | 8 | 512 | 512 | | | | | | | |
| | 9 | 8 | 1024 | 512 | | | | | | | |
| | 10 | 5 | 1024 | 1024 | | | | | | | |
| | 11 | 3 | 256 | 256 | | | | | | | |
| | 12 | 8 | 256 | 256 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC12 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.4.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.4a Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:64 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.4a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.4a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.4a.

#### 14.6.4a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

##### Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | **RB5 (Conv. 64 kbps)** |
|---|---|
| Uplink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| Transmission RLC discard | |
| CHOICE *SDU Discard Mode* | |
| Timer based no explicit | |
| Timer_discard | 100ms |
| Downlink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| | TFI | RB5 (Conv. 64 kbps, 20ms TTI) | RB6 (I/B 64 kbps) | DCCH |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC10 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.4a.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.5 Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.5.1 Conformance requirement

See 14.6.1.1.

#### 14.6.5.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.5.

#### 14.6.5.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| | **TFI** | **RB5 + RB6 (64 kbps RAB, 10 ms TTI)** | **DCCH** |
|---|---|---|---|
| TFS | TF0, bits | 0x340 | 0x148 |
| | TF1, bits | 1x340 | 1x148 |
| | TF2, bits | 2x340 | N/A |
| | TF3, bits | 4x340 | N/A |
| | TF4, bits | 8x340 | N/A |

| | 8 | 8 | 512 | 512 | | | | | | | |
| | 9 | 8 | 1024 | 512 | | | | | | | |
| | 10 | 6 | 1024 | 1024 | | | | | | | |
| | 11 | 3 | 256 | 256 | | | | | | | |
| | 12 | 8 | 256 | 256 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.5.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.5a Interactive or background / UL:64 DL:[Bit rate depending on the UE category] / PS RAB + Interactive or background / UL:64 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.5a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.5a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.5a.

#### 14.6.5a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| | TFI | RB5 + RB6 (64 kbps RAB, 20 ms TTI) | DCCH |
|---|---|---|---|
| TFS | TF0, bits | 0x340 | 0x148 |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the 2 x Interactive Background PS radio bearer. As the 2 x Interactive Background UL:64 kbps radio bearer (RB5+RB6) has 4 transport formats then 4 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF4 for RB5+RB6 are: UL_TFC1 for TF1, UL_TFC2 for TF2, UL_TFC3 for TF3 and UL_TFC4 for TF4.

| | 11 | 3 | 512 | 128 | | | | | | | |
| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC10 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.5a.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6 Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] kbps / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.6.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6.

#### 14.6.6.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 are: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

| | 11 | 3 | 512 | 128 | | | | | | | |
| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.6.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.6a Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK and 16QAM

#### 14.6.6a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is refered to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is refered to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 and 2.

| Execution counter | Downlink Modulation Scheme (M) | MIMO |
|---|---|---|
| 1 | QPSK | No |
| 2 | 16QAM | No |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 are: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

| | 13 - 20 | 8 | 1024 | 1024 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6a.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6b Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM

#### 14.6.6b.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6b.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6b.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is refered to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is refered to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test with M=64QAM and non-MIMO case.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 are: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | | UL_TFC6 | UL_TFC19, UL_TFC20, UL_TFC21, UL_TFC24, UL_TFC39 | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6b.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6c Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK, 16QAM and MIMO

#### 14.6.6c.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6c.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6c.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is refered to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is refered to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 | |
| MAC-ehs receiver window size | 16 | |
| MIMO N_cqi_typeA/M_cqi ratio | 1/1 | 25.331, 10.3.6.41a |
| Second CPICH pattern | Antenna1 S-CPICH | 25.331, 10.3.6.41b |
| S-CPICH Channelisation code | 12 | |
| precodingWeightIndicator, W2 | 00 | 25.212, Table 14A |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 and 2.

| Execution counter | Downlink Modulation Scheme (M1) MIMO data flow#1 | Downlink Modulation Scheme (M2) MIMO data flow#2 | MIMO |
|---|---|---|---|
| 1 | QPSK | QPSK | Yes |
| 2 | 16QAM | 16QAM | Yes |
| 3 | 16QAM | QPSK | Yes |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 are: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

| 12 | 15-20 | 12 | 1024 | 1024 | RB5: 656 RB6: Flexible | N/A | UL_TFC19 | UL_TFC0, UL_TFC3, UL_TFC16, UL_TFC4, UL_TFC20, UL_TFC6 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC4, UL_TFC16, UL_TFC19, UL_TFC20, UL_TFC21, UL_TFC24, UL_TFC39 | RB5: 2552 RB6: 2552 | See note 4 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.
NOTE 5: For Subtest 3, when 16QAM/16QAM modulation is executed, test points 33 and above are not applicable.

#### 14.6.6c.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6d Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM and MIMO

#### 14.6.6d.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6d.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the 64QAM and MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6d.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is refered to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is refered to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 | |
| MAC-ehs receiver window size | 16 | |
| MIMO N_cqi_typeA/M_cqi ratio | 1/1 | 25.331, 10.3.6.41a |
| Second CPICH pattern | Antenna1 S-CPICH | 25.331, 10.3.6.41b |
| S-CPICH Channelisation code | 12 | |
| precodingWeight2 | 00 | 25.212, Table 14A |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) MIMO data flow#1 | Downlink Modulation Scheme (M2) MIMO data flow#2 | Number of HARQ processes | MIMO |
|---|---|---|---|---|
| 1 | 64QAM | QPSK | 12 | Yes |
| 2 | 64QAM | 16QAM | 12 | Yes |
| 3 | 64QAM | 64QAM | 12 | Yes |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified.

| Sub-tes | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 19 and 20 | 2047 | 1024 | RB5: 656<br>RB6: Flexible | UL_TFC19 | UL_TFC0,<br>UL_TFC3,<br>UL_TFC16,<br>UL_TFC4,<br>UL_TFC20,<br>UL_TFC6 | UL_TFC0,<br>UL_TFC1,<br>UL_TFC3,<br>UL_TFC4,<br>UL_TFC16,<br>UL_TFC19,<br>UL_TFC20,<br>UL_TFC21,<br>UL_TFC24,<br>UL_TFC39 | RB5: 2552<br>RB6: 2552 | See note 4 |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return one complete UL RLC SDU per UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6d.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

## 14.6.6e Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK, 16QAM and Dual-Cell

#### 14.6.6e.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6e.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and Dual-Cell case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6e.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-8 IE “HS-DSCH physical layer category extension 2”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is refered to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is refered to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 | |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) Dual-Cell data flow#1 | Downlink Modulation Scheme (M2) Dual-Cell data flow#2 | Number of HARQ processes | Dual-Cell |
|---|---|---|---|---|
| 1 | QPSK | QPSK | 6 | Yes |
| 2 | 16QAM | 16QAM | 8 | Yes |
| 3 | 16QAM | QPSK | 8 | Yes |

Uplink TFS:

| | TFI | RB5 (Streaming 128 kbps, 20ms) | RB6 (I/B 128 kbps, 20ms) | DCCH |
|---|---|---|---|---|

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6f.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

## 14.6.6g Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: combination of 16QAM, Dual-Carrier and MIMO

#### 14.6.6g.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6g.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the 16QAM, MIMO and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

#### 14.6.6g.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-9 IE “HS-DSCH physical layer category extension 3”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is refered to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is refered to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 64 | |
| precodingWeight2 | 00 | 25.212, Table 14A |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

| Execution counter | Dual-Cell#1 | | Dual-Cell#2 | | Number of HARQ processes |
|---|---|---|---|---|---|
| | Downlink Modulation Scheme (M1) For Cell#1 data flow#1 | Downlink Modulation Scheme (M2) For Cell#1 data flow#2 | Downlink Modulation Scheme (M3) For Cell#2 data flow#1 | Downlink Modulation Scheme (M4) For Cell#2 data flow#2 | |
| 1 | 16QAM | 16QAM | 16QAM | 16QAM | 24 |

Uplink TFS:

| | TFI | RB5 (Streaming 128 kbps, 20ms) | RB6 (I/B 128 kbps, 20ms) | DCCH |
|---|---|---|---|---|
| TFS | TF0, bits | 0x656 | 0x336 | 0x148 |
| | TF1, bits | 1x656 | 1x336 | 1x148 |

The generic test procedure in 14.1.3.5a is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified.

| Sub-tes | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 25 to 28 | 2047 | 1024 | RB5: 656<br>RB6: Flexible | UL_TFC19 | UL_TFC0, UL_TFC3, UL_TFC16, UL_TFC20 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC4, UL_TFC16, UL_TFC19, UL_TFC20, UL_TFC21, UL_TFC24, UL_TFC39 | RB5: 2552<br>RB6: 2552 | See note 4 |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.6g.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 4 SDU or 16 SDUs depending on the transport block size under tests.

# 14.6.6h Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: combination of 64QAM, Dual-Carrier and MIMO

## 14.6.6h.1 Conformance requirement

See 14.6.1.1.

## 14.6.6h.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the 64QAM, MIMO and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

## 14.6.6h.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-9 IE "HS-DSCH physical layer category extension 3". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 64 | |
| precodingWeight2 | 00 | 25.212, Table 14A |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Dual-Cell #1 | | Dual-Cell #2 | | Number of HARQ processes |
|---|---|---|---|---|---|
| | Downlink Modulation Scheme (M1) For Cell 1 data flow#1 | Downlink Modulation Scheme (M2) For Cell 1 data flow#2 | Downlink Modulation Scheme (M3) For Cell 2 data flow#1 | Downlink Modulation Scheme (M4) For Cell 2 data flow#2 | |
| 1 | 64QAM | 16QAM | 16QAM | 64QAM | 24 |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified.

| Sub-tes | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 25 and 28 | 2047 | 1024 | RB5: 656 RB6: Flexible | UL_TFC19 | UL_TFC0, UL_TFC3, UL_TFC16, UL_TFC20 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC4, UL_TFC16, UL_TFC19, UL_TFC20, UL_TFC21, UL_TFC24, UL_TFC39 | RB5: 2552 RB6: 2552 | See note 4 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.6h.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:
The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5a sends either 4 SDU or 16 SDUs depending on the transport block size under tests.

## 14.6.7 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] kbps / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.6.7.1 Conformance requirement

See 14.6.1.1.

### 14.6.7.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.7.

### 14.6.7.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech + Streaming + Interactive Background PS radio bearer. The CS speech 12.2 kbps + Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6+RB7+RB8+RB9) have 62 transport format combinations. As the transport formats where RB5, RB6, RB7, RB8, RB9 or DCCH has no data (TF0 for RB5, RB6, RB7, RB8, RB9 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB8 and TF1 to TF4 for RB9 are: UL_TFC3, UL_TFC6 to UL_TFC7, UL_TFC9 to UL_TFC10, UL_TFC11 to UL_TFC12, UL_TFC15 to UL_TFC16, UL_TFC18 to UL_TFC19, UL_TFC21 to UL_TFC22, UL_TFC24 to UL_TFC25, UL_TFC27 to UL_TFC28 and UL_TFC30 to UL_TFC31.

| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4 and UL_TFC32 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.7.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.8 Conversational / speech / UL:(12.65 8.85 6.6) DL:(12.65 8.85 6.6) kbps / CS RAB + Interactive or Background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB+ UL:3.4 DL:3.4 kbps SRBs for DCCH + DL:0.15 kbps SRB#5 for DCCH

#### 14.6.8.1 Conformance requirement

See 14.6.1.1.

#### 14.6.8.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.8.

#### 14.6.8.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.6 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:384 kbps radio bearer (RB8) has the highest number of transport formats (5 for TTI=10 ms and excluding TF0) then 5 sub-tests has been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB8 and for the different speech transport formats are: UL_TFC11 for TF1, UL_TFC22 for TF2, UL_TFC33 for TF3, UL_TFC44 for TF4 and UL_TFC54 for TF5.

| Sub-tes | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | TFC subset identity (note 5) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |

| | 12 | 8 | 256 | 256 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: Void.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.6.
NOTE 5: TFC subset identity shall be signalled by the SS on the downlink SRB#5, see generic test procedure in clause 14.1.3.6.

#### 14.6.8.4 Test requirements

See 14.1.3.6 for definition of the referenced step numbers.

1. At step B12b the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for RB5 and RB6 the UE shall return an RLC SDU having the same content as sent by SS. No data shall be received on RB7.
4. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.9 Streaming MBMS PTP / unknown / UL:16 DL: [max bit rate depending on UE category] kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / MBMS Selected Service

NOTE: The testing of MBMS PTP radio bearer combinations on DPCH and HSPDSCH is focusing on verifying that the UE is capable to establish the radio bearer combination and to verify correct data transfer using all the possible uplink TFS for transport channels mapped on DCH. The verification of MAC-hs transport block size selection and that the UE is capable of transmitting all the possible transport block sizes within the UE capability is tested in the MAC-hs test case 7.1.5.6.

#### 14.6.9.1 Conformance requirement

The UE shall be able to establish the UTRAN requested MBMS PTP radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested MBMS PTP radio bearer configuration.

Reference(s)

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

3GPP TS 25.331 (RRC)

#### 14.6.9.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.9:

#### 14.6.9.3 Method of test

NOTE: The reference to HS-DSCH Category refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See table for parameters for different HS-DSCH Categories |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | HS-PDSCH TFRC (note 2) | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 2 | 2 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 3 | 3 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 4 | 3 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 5 | 6 | 256 | 256 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 6 | 6 | 256 | 256 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 7 | 6 | 512 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 8 | 6 | 512 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 9 | 6 | 1024 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 10 | 6 | 1024 | 1024 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 11 | 3 | 512 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 12 | 6 | 512 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size is bigger than the maximum MAC-d PDU size under test + MAC-hs header size (21 bits). See 14.1.3.4 (MAC-d PDU size=656) for recommended TFRC values for different transport block size.

Uplink TFS:

| | TFI | RB5 (16 kbps, 20 ms TTI) | DCCH |
|---|---|---|---|
| TFS | TF0, bits | 0x336 | 0x148 |
| | TF1, bits | 1x336 | 1x148 |

Uplink TFCS:

| UL_TFC1 | (TF1, TF0) |
| UL_TFC2 | (TF0, TF1) |
| UL_TFC3 | (TF1, TF1) |

The generic test procedure in 14.1.6, using the MBMS Selected Service branch, is run for each sub-test.

Sub-tests:

| Sub-test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) |
|---|---|---|---|---|
| 1 | UL_TFC1 | UL_TFC0, UL_TFC2 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 | RB5: 312 |
| NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC2 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI. | | | | |

#### 14.6.9.4 Test requirements

See 14.1.6 for definition of step 14 and step 22.

1. At step 14 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 22 the UE shall return a RLC SDU where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink.

## 14.6.9m Streaming MBMS PTP / unknown / UL:16 DL: [max bit rate depending on UE category] kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / MBMS Multicast Service

This test case is identical to test case 14.6.9 with the exception that the SS shall use the MBMS Multicast Service branch in the generic test procedure in 14.1.6.

## 14.6.10 Streaming MBMS PTP / unknown / UL:16 DL: [max bit rate depending on UE category] kbps / PS RAB + Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / MBMS Selected Service

NOTE: The testing of MBMS PTP radio bearer combinations on DPCH and HSPDSCH is focusing on verifying that the UE is capable to establish the radio bearer combination and to verify correct data transfer using all the possible uplink TFS for transport channels mapped on DCH. The verification of MAC-hstransport block size selection and that the UE is capable of transmitting all the possible transport block sizes within the UE capability is tested in the MAC-hs test case 7.1.5.6.

#### 14.6.10.1 Conformance requirement

The UE shall be able to establish the UTRAN requested MBMS PTP radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested MBMS PTP radio bearer configuration.

This will enable the UE to return th data within one UL TTI. |

#### 14.6.10.4 Test requirements

See 14.1.6 for definition of step 14 and step 22.

1. At step 14 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 22 the UE shall return
   - for sub-test 1: RLC SDU on RB5 where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB6 and RB7.
   - for sub-test 2: RLC SDU on RB6 where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 3: RLC SDU on RB5 and RB6 where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 4: RLC SDU on RB6 where the first 632 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 5: RLC SDU on RB5 and RB6 where the first 312 bits for RB5 and the .first 632 bits for RB6 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 6: RLC SDU on RB6 where the first 952 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 7: RLC SDU on RB5 and RB6 where the first 312 bits for RB5 and the first 952 bits for RB6 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 8: RLC SDU on RB6 where the first 1272 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 9: RLC SDU on RB5 and RB6 where the first 312 bits for RB5 and the first 1272 bits for RB6 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 10: RLC SDU on RB5 and RB7 where the first 312 bits for RB5 and the first 1272 bits for RB7 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB6.

This test case is identical to test case 14.6.10 with the exception that the SS shall use the MBMS Multicast Service branch in the generic test procedure in 14.1.6.

# 14.7 Combinations on DPCH, HS-PDSCH and E-DPDCH

NOTE: The testing of radio bearer combinations on DPCH, HSPDSCH and E-DPDCH is focusing on verifying that the UE is capable to establish the radio bearer combination and to verify correct data transfer using all the possible uplink TFS for transport channels mapped on DCH and all the configured MAC-d PDU sizes for the transport channel mapped to E-DCH. The verification of MAC-e/es transport block size selection and that the UE is capable of transmitting all the possible transport block sizes within the UE capability is tested in the MAC-e/es test case 7.1.6.3.2. (UL QPSK), 7.1.6.3.2a (UL 16QAM), 7.1.7.4 (UL QPSK and MAC-i/is) and 7.1.7.5 (UL 16 QAM and MAC-i/is)

## 14.7.1 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH on DCH

### 14.7.1.1 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

Reference(s)

3GPP TS 25.331, clause 8.2.1

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

### 14.7.1.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.1:

1. To verify that the UE is able to establish the radio bearer combination.
2. To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.1.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size is bigger than the maximum MAC-d PDU size under test + MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336) for recommended TFRC values for different transport block size.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | 312 | 312 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | 312 | 312 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.

### 14.7.1.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

## 14.7.1a Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH on DCH/ UL 16QAM

### 14.7.1a.1 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

Reference(s)

3GPP TS 25.331, clause 8.2.1

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

### 14.7.1a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.1:

1. To verify that the UE is able to establish the radio bearer combination.
2. To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.1a.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 7 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size is bigger than the maximum MAC-d PDU size under test + MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336) for recommended TFRC values for different transport block size. | | | | | | | | |

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL RLC SDU size (note 2 &4) | Test data size (note 3) |
|---|---|---|---|---|---|
| 1 | 7 | 2ms, Table 2 | 8 | 7992 | 312 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.<br>NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.<br>NOTE 4: The UL RLC SDU size is calculated as 25*320-8= 7992, such that TB size 8450 corresponding to E-TFCI 103 will be selected. With PLnon-max = 0.84, [(8450+24[CRC] ) *3 [TC] ]= 25422 bits. 25422* PLnon-max =21355 , this guarantees as per algorithm in 25.212 clause 4.8.4.1,16QAM to be selected [$2\times M_2+2\times M_4$] | | | | | |

14.7.1a.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with first 312 bits equal to the content of the DL RLC SDU sent by the SS.

## 14.7.2 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL:3.4 kbps SRBs for DCCH on E-DCH and DL DCH

14.7.2.1 Conformance requirement

See 14.7.1.1.

14.7.2.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.2:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.2.3 Method of test

See 14.7.1.3.

14.7.2.4 Test requirements

See 14.7.1.4.

## 14.7.3 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

14.7.3.1 Conformance requirement

See 14.7.1.1.

14.7.3.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.3.3 Method of test

See 14.7.1.3.

14.7.3.4 Test requirements

See 14.7.1.4.

## 14.7.3a Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] with Flexible RLC, MAC-ehs and MAC-i/is / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH with MAC-ehs and MAC-i/is

14.7.3a.1 Conformance requirement

See 14.7.1.1.

14.7.3a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3 and for the case when Flexible RLC and MAC-i/is is configured:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.3a.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 2 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 3 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 4 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 5 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 6 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 7 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 8 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 9 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 10 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 11 | 3 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 12 | 6 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 13 to 20 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size is bigger than the "Minimum TBS" that equals maximum MAC-d PDU size under test + the MAC-ehs header size (24 bits). | | | | | | | | |

The generic test procedure in 14.1.4.1b is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | Flexible | Flexible | 320 | 320 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | Flexible | Flexible | 320 | 320 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size. This will enable the UE to return the data within one UL TTI ("Use special value of HE field" is configured).
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size.

#### 14.7.3a.4 Test requirements

See 14.1.4.1b for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

### 14.7.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.7.4.1 Conformance requirement

See 14.7.1.1.

#### 14.7.4.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.4:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH in combination with the possible TFCI of the conversional speech radio bearer.

#### 14.7.4.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

Uplink TFS:

| | | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | DCCH |
|---|---|---|---|---|---|
| TFS | TF0, bits | 1x0 | 0x103 | 0x60 | 0x148 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2 and UL_TFC3 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.

#### 14.7.4.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the sub-test.
3. At step 18 and for each radio bearer where test data is sent in downlink the UE shall return a RLC SDU with same content as sent in downlink. For radio bearers where no data is sent in downlink then no data shall be received in uplink.

### 14.7.5 Streaming or interactive or background / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL:3.4 kbps SRBs for DCCH on E-DCH and DL DCH

#### 14.7.5.1 Conformance requirement

See 14.7.1.1.

#### 14.7.5.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.5:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

#### 14.7.5.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The first Streaming or background or interactive / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the second Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336) for recommended TFRC values for different transport block size. | | | | | | | | |

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL RLC SDU size (note 2) | Test data size (note 2) |
|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | RB5:312<br>RB6:312 | RB5:312<br>RB6:312 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | RB5:312<br>RB6:312 | RB5:312<br>RB6:312 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.<br>NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested. | | | | | |

### 14.7.5.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink.

## 14.7.6 Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

### 14.7.6.1 Conformance requirement

See 14.7.1.1.

### 14.7.6.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 344 | 365 | 1 | QPSK | 1 | 19 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB5 of 365 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB6 of 357 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 365.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return th data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size minus 8 bits (size of 7 bit length indicator and expansion bit).

### 14.7.6.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

## 14.7.6a Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH/ UL 16QAM

### 14.7.6a.1 Conformance requirement

See 14.7.1.1.

### 14.7.6a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6a.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-7 IE “E-DCH physical layer category extension”.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 7 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | |
|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Max MAC-d PDU size | Max MAC-d PDU size | Max MAC-d PDU size | Max MAC-d PDU size |
| 1 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 2 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 3 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 4 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 5 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 6 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 7 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 |
| 8 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 |
| 9 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 |
| 10 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 |
| 11 | 3 | 1024 | 344 | 365 | 1 | QPSK | 1 |
| 12 | 6 | 1024 | 344 | 365 | 1 | QPSK | 1 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB5 of 365 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB6 of 357 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 365.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 7 | 2ms, Table 2 | 8 | RB5:96<br>RB6:336 | RB5:112<br>RB6:336 | RB5:80<br>RB6: 7992 | RB5:96<br>RB6:312 |

| 10 | 7 | 2ms, Table 2 | 8 | RB5:296<br>RB6:336 | RB5:296<br>RB6:336 | RB5:280<br>RB6: 7992 | RB5:280<br>RB6:312 |
| 11 | 7 | 2ms, Table 2 | 8 | RB5:312<br>RB6:336 | RB5:344<br>RB6:336 | RB5:296<br>RB6: 7992 | RB5:328<br>RB6:312 |
| 12 | 7 | 2ms, Table 2 | 8 | RB5:344<br>RB6:336 | RB5:344<br>RB6:336 | RB5:328<br>RB6: 7992 | RB5:328<br>RB6:312 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return th data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 4: The UL RLC SDU size is calculated as 25*320-8= 7992, such that TB size 8450 corresponding to E-TFCI 103 will be selected. With PLnon-max = 0.84, [(8450+24[CRC] ) *3 [TC] ]= 25422 bits. 25422* PLnon-max =21355 , this guarantees as per algorithm in 25.212 clause 4.8.4.1,16QAM to be selected [$2\times M_2+2\times M_4$]

### 14.7.6a.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 with same content as sent in downlink and on RB6 with first 312 bits equal to the content of the DL RLC SDU sent by the SS. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

### 14.7.6b.1 Conformance requirement

See 14.7.1.1.

### 14.7.6b.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6 for the case for the QPSK and non-MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and Fixed and Flexible RLC configured:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6b.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.6 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB5; using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB6; and using Alt 2 (Fixed RLC and MAC-ehs) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| Alternative E-bit interpretation | TRUE |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |
| RB5: DL UM RLC LI size | 7 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 2 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 3 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 4 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 5 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 6 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 7 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 8 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 9 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 10 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 11 | 3 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 12 | 6 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 13 to 20 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-ehs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB5 of 368 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB6 of 360 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 368.

The generic test procedure in 14.1.4.1a is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size minus 8 bits (size of 7 bit length indicator and expansion bit).

### 14.7.6b.4 Test requirements

See 14.1.4.1a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

## 14.7.6c Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps with Flexible RLC, MAC-ehs and MAC-i/is / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] with Fixed RLC, MAC-ehs and MAC-i/is / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH with MAC-ehs and MAC-i/is / UL: QPSK and DL: QPSK

### 14.7.6c.1 Conformance requirement

See 14.7.1.1.

### 14.7.6c.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6 for the case QPSK and non-MIMO case when MAC-ehs and MAC-i/is and the mix of Fixed and Flexible RLC is configured:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6c.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.6 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 2 (Flexible RLC and MAC-i/is) for RB5; using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-i/is) for RB6; and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| RB5: Alternative E-bit interpretation | TRUE |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 2 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 3 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 4 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 5 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 6 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 7 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 8 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 9 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 10 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 11 | 3 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 12 | 6 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 13 to 20 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-ehs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB5 of 368 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB6 of 360 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 368.

The generic test procedure in 14.1.4.1b is run for each sub-test.

Sub-tests:

| 24 | 2,4,6 | 2ms, Table 0 | 8 | RB5:Flexible RB6:336 | RB5:Flexible RB6:336 | RB5:336 RB6:320 | RB5:336 RB6:320 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size to be tested.. This will enable the UE to return the data within one UL TTI ("Alternative E-bit interpretation" is configured for RB5 (UM) and "Use special value of HE field" is configured for RB6 (AM)). The selected UL RLC SDU sizes for the flexible case (RB5) are the same as specified for the UL fixed case (Alt 1) of the reference radio bearer configuration in TS 34.108, clause 6.10.2.4.6.6 (88, 104, 136, 152, 168, 184, 200, 216, 280, 288, 304 and 336).

NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size. The selected DL test data sizes for RB5 are the same as specified for the DL fixed case (Alt 2) of the reference radio bearer configuration in TS 34.108, clause 6.10.2.4.6.6 (104, 136, 152, 168, 184, 216, 288 and 336).

#### 14.7.6c.4 Test requirements

See 14.1.4.1b for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

### 14.7.7 Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

#### 14.7.7.1 Conformance requirement

See 14.7.1.1.

#### 14.7.7.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.7:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

#### 14.7.7.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5, the first Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6 and the second the first Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB7.

The following parameters are specific for this test case and RB5, RB6 and RB7:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |
| RB7: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB5 of 357 bits. For RB6 and RB7 the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB6 of 357 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 357.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |

#### 14.7.7.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5, RB6 and RB7 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

### 14.7.8 Conversational / speech / UL:(12.65 8.85 6.6) DL:(12.65 8.85 6.6) kbps / CS RAB + Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH + DL:0.15 kbps SRB#5 for DCCH

#### 14.7.8.1 Conformance requirement

See 14.7.1.1.

#### 14.7.8.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.8:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.8.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | DCCH 3.4 |
|---|---|---|---|---|---|
| TFS | TF0, bits | 0x72 | 0x181 | 0x60 | 0x148 |
| | TF1, bits | 1x40 | 1x78 | N/A | 1x148 |
| | TF2, bits | 1x54 | 1x113 | N/A | N/A |
| | TF3, bits | 1x64 | 1x181 | N/A | N/A |
| | TF4, bits | 1x72 | N/A | N/A | N/A |

Uplink TFCS:

| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size (“Minimum TBS”) is bigger than the maximum MAC-d PDU size under test data + RLC, MAC-d and MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336). | | | | | | | | |

The generic test procedure in 14.1.4.2 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech radio bearer.

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | DCH | | | | UL RLC SDU size (note 3) | Test data size (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| | | | | DL TFCS Under test | UL TFCS Under test | Implicitly tested | TFC subset identity (note 5) | | |
| 1 | 1 to 6 | 10ms, Table 0 | 4 | DL_TFC1 | UL_TFC1 | DL_TFC0, DL_TFC5, DL_TFC6, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC6 | 0 | RB5: 40<br>RB6: 181<br>RB7: 60<br>RB8: 312 | RB5: 40<br>RB6: No data<br>RB7: No data<br>RB8: 312 |
| 2 | 1 to 6 | 10ms, Table 0 | 4 | DL_TFC2 | UL_TFC2 | DL_TFC0, DL_TFC5, DL_TFC7, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC7 | 0 | RB5: 54<br>RB6: 78<br>RB7: 60<br>RB8: 312 | RB5: 54<br>RB6: 78<br>RB7: No data<br>RB8: 312 |
| 3 | 2,4 and 6 | 2ms, Table 0 | 8 | DL_TFC3 | UL_TFC3 | DL_TFC0, DL_TFC5, DL_TFC8, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC8 | 1 | RB5: 64<br>RB6: 113<br>RB7: 60<br>RB8: 312 | RB5: 64<br>RB6: 113<br>RB7: No data<br>RB8: 312 |
| 4 | 2,4 and 6 | 2ms, Table 0 | 8 | DL_TFC4 | UL_TFC4 | DL_TFC0, DL_TFC5, DL_TFC9, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC9 | 2 | RB5: 72<br>RB6: 181<br>RB7: 60<br>RB8: 312 | RB5: 72<br>RB6: 181<br>RB7: No data<br>RB8: 312 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: Void
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.
NOTE 5: TFC subset identity shall be signalled by the SS on the downlink SRB#5, see generic test procedure in clause 14.1.4.2.

#### 14.7.8.4 Test requirements

See 14.1.4.2 for definition of step numbers. For each sub-test:

1. At step 20 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 26 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the sub-test.
3. At step 26 and for each radio bearer where test data is sent in downlink the UE shall return a RLC SDU with same content as sent in downlink. For radio bearers where no data is sent in downlink then no data shall be received in uplink.

### 14.7.9 Conversational / speech / UL:(12.2, 7.95, 5.9, 4.75) kbps DL: (12.2, 7.95, 5.9, 4.75) kbps / CS RAB on E-DCH and HS-DSCH + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

#### 14.7.9.1 Conformance requirement

See 14.7.1.1.

#### 14.7.9.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.9 (Alt.2)

#### 14.7.9.3 Method of test

The following parameters are specific for this test case:

| E-DCH Category | RLC Transmission window size | Modulation Scheme |
|---|---|---|
| 1 | 512 | QPSK |
| 2 | 512 | |
| 3 | 512 | |
| 4 | 512 | |
| 5 | 1536 | |
| 6 | 1536 | |
| 7 | 1536 | |

This will enable the UE to return the data within one UL TTI.<br>NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested. | | | | | | |

### 14.7.9.4 Test requirements

See 14.1.4.1a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU on RB5 with same content as sent in downlink.

## 14.7.10 Conversational / speech / UL:(12.65, 8.85, 6.6) kbps DL: (12.65, 8.85, 6.6) kbps / CS RAB on E-DCH and HS-DSCH + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

### 14.7.10.1 Conformance requirement

See 14.7.1.1.

14.7.10.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.10 (Alt.2)

14.7.10.3 Method of test

The following parameters are specific for this test case:

| E-DCH Category | RLC Transmission window size | Modulation Scheme |
|---|---|---|
| 1 | 512 | QPSK |
| 2 | 512 | |
| 3 | 512 | |
| 4 | 512 | |
| 5 | 1536 | |
| 6 | 1536 | |
| 7 | 1536 | |

| HS-DSCH Category | Number of HARQ processes | RLC Receiving window size |
|---|---|---|
| 1 | 2 | 512 |
| 2 | 2 | 512 |
| 3 | 3 | 512 |
| 4 | 3 | 512 |
| 5 | 6 | 512 |
| 6 | 6 | 512 |
| 7 | 6 | 1536 |
| 8 | 6 | 1536 |
| 9 | 6 | 2047 |
| 10 | 6 | 2047 |
| 11 | 3 | 1024 |
| 12 | 6 | 1024 |
| 13 to 20 | 6 | 2047 |

| HS-PDSCH TFRC for mac-ehs (note 1) | | | | | |
|---|---|---|---|---|---|
| Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 56 | 80 | 1 | QPSK | 1 | 0 |
| 152 | 176 | 1 | QPSK | 1 | 7 |
| 200 | 224 | 1 | QPSK | 1 | 13 |
| 272 | 296 | 1 | QPSK | 1 | 22 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-ehs transport block size is equal to or bigger than the maximum MAC-d PDU size under test + MAC-ehs header size (24 bits). | | | | | |

The generic test procedure in 14.1.4.1a is run for each sub-test using condition A23 for radio bearer setup, as specified in 34.108.

Testing of UE supporting UE HS-DSCH physical layer category 13 to 20 shall be performed in accordance to test parameters, sub-tests and test points for UE HS-DSCH physical layer category 10.

Testing of UE supporting UE E-DCH category 7 shall be performed in accordance to test parameters, sub-tests and test points for E-DCH category 6.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | MAC-d PDU size under test ( UL and DL ) | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|
| 1 | 1 to 7 | 10ms, Table 0 | 4 | 56 | 40 | 40 |
| 2 | 1 to 7 | 10ms, Table 0 | 4 | 152 | 136 | 136 |
| 3 | 1 to 7 | 10ms, Table 0 | 4 | 200 | 184 | 184 |
| 4 | 1 to 7 | 10ms, Table 0 | 4 | 272 | 256 | 256 |

| 6 | 2,4, 6, 7 | 2ms, Table 0 | 8 | 152 | 136 | 136 |
| 7 | 2,4, 6, 7 | 2ms, Table 0 | 8 | 200 | 184 | 184 |
| 8 | 2,4, 6, 7 | 2ms, Table 0 | 8 | 272 | 256 | 256 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.

#### 14.7.10.4 Test requirements

See 14.1.4.1a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU on RB5 with same content as sent in downlink.

### 14.7.11 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH for enhanced uplink/downlink in CELL_FACH

#### 14.7.11.1 Conformance requirement

Conformance requirement

See 14.7.1.1

#### 14.7.11.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to common E-DCH in CELL_FACH.

#### 14.7.11.3 Method of test

NOTE 1: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE 2: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 2 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 3 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 4 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 5 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 6 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 7 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 8 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 9 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 10 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 11 | 3 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 12 | 6 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 13 to 20 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size is bigger than the "Minimum TBS" that equals maximum MAC-d PDU size under test + the MAC-ehs header size (24 bits). | | | | | | | | |

The generic test procedure in 14.1.4.3 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | Flexible | Flexible | 320 | 320 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | Flexible | Flexible | 320 | 320 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size. This will enable the UE to return the data within one UL TTI ("Use special value of HE field" is configured).<br>NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size. | | | | | | | |

#### 14.7.11.4 Test requirements

See 14.1.5.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

### 14.7.11a Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on common E-DCH and HS-DSCH for enhanced CELL_FACH with DRX configured

#### 14.7.11a.1 Conformance requirement

Conformance requirement

See 14.7.1.1

#### 14.7.11a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer corresponding to Enhanced DRX reception pattern by UE when transport channel is mapped to common E-DCH in CELL_FACH.

#### 14.7.11a.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 2 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 3 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 4 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 5 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 6 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 7 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 8 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 9 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 10 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 11 | 3 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 12 | 6 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 13 to 20 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size is bigger than the "Minimum TBS" that equals maximum MAC-d PDU size under test + the MAC-ehs header size (24 bits). | | | | | | | | |

The generic test procedure in 14.1.4.3 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | Flexible | Flexible | 320 | 320 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | Flexible | Flexible | 320 | 320 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size. This will enable the UE to return the data within one UL TTI ("Use special value of HE field" is configured).<br>NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size. | | | | | | | |

Specific Message Contents

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.1 of TS 34.108 for common E-DCH and HS-DSCH reception in CELL_FACH, with the following exceptions

| Information Element | Value/remark |
|---|---|
| HS-DSCH DRX in CELL_FACH Information | |
| -T321 | 200ms |
| - HS-DSCH DRX $cycle_{FACH}$ | 4 |
| - HS-DSCH Rx $burst_{FACH}$ | 1 |
| - DRX Interruption by HS-DSCH data | FALSE |

14.7.11a.4 Test requirements

See 14.1.5.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

# 15 Supplementary Services

This clause is FFS.

# 16 Short message service (SMS)

Ref.: 3GPP TS 23.040, 3GPP TS 24.011 (point to point)
3GPP TS 23.041, (cell broadcast)

General

The purpose of these tests is to verify that the UE can handle Iu mode system functions when submitting or receiving Short Messages (SM) between UE and a short message service centre as described in 3GPP TS 23.040.

The procedures are based upon services provided by the Mobility Management (MM) sublayer and GPRS Mobility Management (GMM) sublayer which are not tested in this case.

The SMS comprises three basic services; SMS point to point services on CS mode, on PS mode and SMS cell broadcast service. The SMS point to point services on CS mode shall work in an active UE at any time independent of whether or not there is a speech or data call in progress. The SMS point to point services on PS mode shall work in an active UE at any time independent of whether or not there is a PDP context in progress. The SMS cell broadcast service only works when the UE is in idle mode.

Since the timer TC1M currently is not standardized, the value of TC1M shall be declared by the manufacturer (to be used in clauses 16.1.1 and 16.1.2).

The manufacturer shall declare whether SMS messages are stored in the USIM and/or the ME. This shall be referred to as the SMS message store in the following tests.

Unless otherwise stated default message contents from 3GPP TS 34.108 applies for following tests.

## 16.1 Short message service point to point on CS mode

All of test cases in this clause are applied to UE supporting CS mode.

### 16.1.1 SMS mobile terminated

#### 16.1.1.1 Definition

#### 16.1.1.2 Conformance requirements

An active UE shall be able to receive short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is a speech or data call in progress. A report will always be returned to the SC, confirming that the UE has received the short message.

Reference

3GPP TS 23.040 clause 3.1.

#### 16.1.1.3 Test purpose

To verify the ability of a UE to receive and decode the SMS where provided for the point to point service.

#### 16.1.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Support for call control state U10.

Maximum number of retransmissions of an unacknowledged CP-DATA message.

Test procedure

a) The UE terminates the establishment of Radio Resource Connection. After the completion of the RRC Connection the SS authenticates the UE.

After the SS receives SECURITY MODE COMPLETE, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU).

b) The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

c) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC Connection release.

d) Steps a), b) and c) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

e) Steps a) and b) are repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) SS initiates the channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions.

f) The SMS message store shall be cleared manually by the operator.

g) A data or speech call is established on a DTCH with the SS and the state U10 of call control is entered.

The SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU). The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

h) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages. SS will wait for a period of 120ms. for the UE to send acknowledgement to the CP-ACK prior to the SS initiating the DISCONNECT. The SS initiates RRC Connection release. The SMS message store shall be cleared manually by the operator.

i) Steps g) and h) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

j) Step g) is repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) SS initiates the channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions (during a call in progress).

k) A data or speech call is established on a DTCH with the SS and the state U10 of call control shall be entered. The speech call is cleared by the SS with a disconnect message. (The call clearing is continued on the DCCH in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA RPDU (SMS DELIVER TPDU) message. The information element of the CP-DATA message is RP-DATA.

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.

The SMS message store shall be cleared manually by the operator.

l) A data or speech call is established with the SS and the state U10 of call control is entered. The speech call shall be cleared from the UE. (The call clearing is continued in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA message. The information element of the CP-DATA message is RP-DATA RPDU (SMS DELIVER TPDU).

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC Connection release.

The SMS message store shall be cleared manually by the operator.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS 34.108. The IE “Paging cause” in the PAGING TYPE 1 message is set to “Terminating Low Priority Signalling”. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Terminating Low Priority Signalling”. |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | | SS | | The SS starts integrity protection |
| 6 | | | (void) | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 8 | | SS | | Waits max 25 s for CP-ACK |
| 9 | --> | | CP-ACK | |
| 10 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 12 | <-- | | CP-ACK | |
| 13 | | SS | | The SS releases the RRC connection |
| 14 | | UE | | The UE shall indicate that an SM has arrived. |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS 34.108. The IE “Paging cause” in the PAGING TYPE 1 message is set to “Terminating Low Priority Signalling”. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Terminating Low Priority Signalling”. |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | | SS | | The SS starts integrity protection |
| 20 | | | (void) | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 22 | | SS | | Waits max 25 s for CP-ACK |
| 23 | --> | | CP-ACK | |
| 24 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 25 | --> | | CP-DATA | First CP-DATA from UE, contains RP-ACK RPDU |
| 26 | | SS | | First CP-DATA message not acknowledged by SS |
| 27 | --> | | CP-DATA | Retransmitted CP-DATA from UE within twice TC1M, after step 25, contains RP-ACK RPDU |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 28 | <-- | | CP-ACK | Second CP_DATA message is acknowledged |
| 29 | | SS | | The SS releases the RRC connection |
| 30 | UE | | | The UE shall indicate that an SM has arrived. |
| 31 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS 34.108. The IE "Paging cause" in the PAGING TYPE 1 message is set to "Terminating Low Priority Signalling". The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Terminating Low Priority Signalling". |
| 32 | --> | | PAGING RESPONSE | |
| 33 | <-- | | AUTHENTICATION REQUEST | |
| 34 | --> | | AUTHENTICATION RESPONSE | |
| 35 | | SS | | The SS starts integrity protection |
| 36 | | | (void) | |
| 37 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 38 | | SS | | Waits max 25 s for CP-ACK |
| 39 | --> | | CP-ACK | |
| 40 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 41 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 42 | | SS | | First CP-DATA message not acknowledged by SS |
| 43 | | | CP-DATA | Retransmitted CP-DATA from UE within twice TC1M after step 41, contains RP-ACK RPDU |
| 44 | | SS | | Retransmitted CP-DATA message not acknowledged by SS |
| 45 | UE | | | Depending upon the maximum number of CP-DATA retransmissions implemented, step 43 and 44 may be repeated. The maximum number of retransmissions may however not exceed three. The UE may also send less than 3 re-transmissions. The same RRC connection shall be used for CP-DATA retransmissions. |
| 45a | UE | | | The UE may send a Signalling Connection Release Indication message immediately when TC1M has run out. This is according to TS 24.011 clause 5.3.2.1. |
| 46 | | SS | | The SS releases the RRC connection after a duration of 4*TC1M + 10 s (Maximum of T3240) from step 41. |
| 47 | | | (void) | |
| 48 | UE | | | The UE shall indicate that an SM has arrived. |
| 49 | | SS | | Following steps are applicable only for UE which supports CS call establishment (ICS pc_CS_CallEst). A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 50 | | | (void) | |
| 51 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 52 | | SS | | Waits max 25 s for CP-ACK |
| 53 | --> | | CP-ACK | |
| 54 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 55 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 56 | <-- | | CP-ACK | |
| 56a | | SS | | SS will wait for 120 ms for the ACK SUFI. |
| 57 | <-- | | DISCONNECT | Disconnect the active call |
| 58 | --> | | RELEASE | |
| 58a | ← | | RELEASE COMPLETE | |
| 58b | | SS | | The SS releases the RRC connection |
| 59 | UE | | | The UE shall indicate that an SM has arrived. |
| 60 | UE | | | Clear the SMS message store |
| 61 | | SS | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 62 | | | (void) | |
| 63 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 64 | | SS | | Waits max 25 s for CP-ACK |
| 65 | --> | | CP-ACK | |
| 66 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 67 | --> | | CP-DATA | First CP-DATA from UE, contains RP-ACK RPDU |
| 68 | | SS | | First CP-DATA message not acknowledged by SS |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 69 | --> | | CP-DATA | Retransmitted CP-DATA message within twice TC1M after step 67, contains RP-ACK RPDU |
| 70 | <-- | | CP-ACK | Second CP-DATA message is acknowledged |
| 70a | SS | | | SS will wait for 120 ms for the ACK SUFI. |
| 71 | <-- | | DISCONNECT | Disconnect the active call |
| 72 | --> | | RELEASE | |
| 73 | ← | | RELEASE COMPLETE | |
| 74 | SS | | | The SS releases the RRC connection |
| 75 | UE | | | The UE shall indicate that an SM has arrived. |
| 76 | UE | | | Clear the SMS message store |
| 77 | SS | | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 78 | | | (void) | |
| 79 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 80 | SS | | | Waits max 25 s for CP-ACK |
| 81 | --> | | CP-ACK | |
| 82 | SS | | | Waits max 60 s for RP-ACK RPDU |
| 83 | --> | | CP-DATA | First CP-DATA from UE, contains RP-ACK RPDU |
| 84 | SS | | | First CP-DATA message not acknowledged by SS |
| 85 | --> | | CP-DATA | Retransmitted CP-DATA message within twice TC1M after step 83, contains RP-ACK RPDU |
| 86 | SS | | | Retransmitted CP-DATA message not acknowledged by SS |
| 87 | UE | | | Depending on the maximum number of CP-DATA retransmissions implemented, step 85-86 may be repeated. The maximum number of retransmissions may however not exceed three. The UE may also send less than 3 re-transmissions. The same RRC connection shall be used for CP-DATA retransmissions. |
| 87a | ← | | DISCONNECT | Disconnect the active call |
| 87b | → | | RELEASE | |
| 87c | ← | | RELEASE COMPLETE | |
| 88 | | | (void) | |
| 89 | SS | | | The SS releases the RRC connection after a duration of 4*TC1M + 10 s (Maximum of T3240) from step 83. |
| 90 | UE | | | The UE shall indicate that an SM has arrived. |
| 91 | UE | | | Clear the SMS message store |
| 92 | SS | | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 93 | | | (void) | |
| 94 | <-- | | DISCONNECT | The speech call is cleared by the SS. The call clearing is continued in parallel to the following exchange of messages related to SMS. |
| 95 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 96 | | | void | |
| 96a | → | | RELEASE | UE releases the connection |
| 96b | ← | | RELEASE COMPLETE | SS completes the connection release (Step 96a and 96b may be executed after step 97) |
| 97 | --> | | CP-ACK | |
| | | | Void | |
| 98 | SS | | | Waits max 60 s for RP-ACK RPDU |
| 99 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 100 | <-- | | CP-ACK | |
| 101 | SS | | | The SS releases the RRC connection. |
| 102 | UE | | | The UE shall indicate that an SM has arrived. |
| 103 | UE | | | Clear the SMS message store |
| 104 | SS | | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 105 | | | (void) | |
| 106 | --> | | DISCONNECT | The speech call is cleared from the UE. The call clearing is continued in parallel to the following exchange of messages related to SMS. |
| 107 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 108 | <-- | | RELEASE | This message is likely to be sent before all of the CP-DATA message has been sent on the DCCH. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 109 | --> | | RELEASE COMPLETE | |
| 110 | --> | | CP-ACK | shall be sent before 25 s after the start of step 107 |
| 111 | SS | | | Waits max 60 s for RP-ACK RPDU |
| 112 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 113 | <-- | | CP-ACK | |
| 114 | SS | | | The SS releases the RRC connection |
| 115 | UE | | | The UE shall indicate that an SM has arrived. |
| 116 | UE | | | Clear the SMS message store |
| NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS DELIVER TPDU (not containing a type 0 message)

| Information element | CommentValue |
|---|---|
| TP-PID | Different from Type 0: “01000000”B |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |
| NOTE: The 160 characters in TP-UD shall include at least one occurrence of each character in the default alphabet (see 3GPP TS 23.038, clause 6.2.1). | |

### 16.1.1.5 Test requirements

After step 7 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 14 UE shall indicate that an SM has arrived.

After step 25 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 30 UE shall indicate that an SM has arrived.

After step 43 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 48 UE shall indicate that an SM has arrived.

After step 51 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 59 UE shall indicate that an SM has arrived.

After step 67 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 75 UE shall indicate that an SM has arrived.

After step 79 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 90 UE shall indicate that an SM has arrived.

After step 95 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 102 UE shall indicate that an SM has arrived.

After step 107 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 115 UE shall indicate that an SM has arrived.

## 16.1.2 SMS mobile originated

### 16.1.2.1 Definition

### 16.1.2.2 Conformance requirements

An active UE shall be able to submit short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is a speech or data call in progress.

Reference

3GPP TS 23.040 clause 3.1.

### 16.1.2.3 Test purpose

To verify that the UE is able to correctly send a short message where the SMS is provided for the point to point service.

### 16.1.2.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MO/PP.

Support for state U10 of call control.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Maximum number of retransmissions of an unacknowledged CP-DATA message.

Test procedure

a) The UE shall be set up to send an SM to the SS. The UE establishes successfully an RRC connection.

b) The SS performs authentication and after that, the SS starts integrity protection.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message.

d) The SS sends a channel release message to the UE.

e) Steps a) and b) are repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) the SS initiates channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions.

f) Steps a) and b) are repeated. On receipt of the CP-DATA from the UE the SS sends a CP-ERROR message within TC1M containing a "Network Failure" cause. Then the SS initiates channel release.

g) A data or speech call is established with the SS and the state U10 of call control is entered. The UE is set up to send an SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM SERVICE ACCEPT message.

h) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message. Then the SS sends a channel release message to the UE.

i) Step g) is repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) the SS initiates channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions (during a call in progress).

j) (void)

k) The UE is set up to send an SM to the SS. On receipt of the CM SERVICE REQUEST the SS sends a CM SERVICE REJECT message with the reject cause set to "Service Option not supported" or "Service Option temporarily out of order". After 5 s the SS initiates channel release.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send an SM |
| 2 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 3 | <-- | | Void | |
| 4 | --> | | Void | |
| 5 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service" |
| 6 | <-- | | AUTHENTICATION REQUEST | |
| 7 | --> | | AUTHENTICATION RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | Void | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 11 | <-- | | CP-ACK | Sent within TC1M after step 10 |
| 12 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 13 | SS | | | Waits max 25 s for CP-ACK |
| 14 | --> | | CP-ACK | |
| 15 | SS | | | The SS releases the RRC connection. |
| 16 | UE | | | The UE is set up to send an SM |
| 17 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 18 | | | Void | |
| 19 | | | Void | |
| 20 | | | Void | |
| 21 | | | (void) | |
| 22 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service" |
| 23 | <-- | | AUTHENTICATION REQUEST | |
| 24 | --> | | AUTHENTICATION RESPONSE | |
| 25 | <-- | | SECURITY MODE COMMAND | |
| 26 | --> | | SECURITY MODE COMPLETE | |
| 27 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 28 | SS | | | SS configured not to send CP-ACK |
| 29 | --> | | CP-DATA | Retransmitted CP-DATA message within twice TC1M after step 27 |
| 30 | UE | | | Depending on the maximum number of CP-DATA retransmissions implemented, step 29 may be repeated. The maximum number of retransmissions may however not exceed three. The UE may also send less than 3 re-transmissions. The same RRC connection shall be used for CP-DATA retransmissions. |
| 30aa | UE | | | The UE may send a Signalling Connection Release Indication message immediately when TC1M has run out. This is according to TS 24.011 clause 5.3.2.1. |
| 30a | SS | | | The SS releases the RRC connection after a duration of 4*TC1m + 10 s (Maximum of T3240) from step 27. |
| 30b | | | (void) | |
| 31 | | | (void) | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | CommentValue |
|---|---|
| TP-UDL | as applicable |
| TP-UD (140 octets) | 160 ASCII characters |

#### 16.1.2.5 Test requirements

After step 10 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 27 UE shall retransmit a CP-DATA containing RP-data and the maximum number of retransmissions must not exceed three. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 50 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 62 UE shall retransmit a CP-DATA containing RP-data and the maximum number of retransmissions must not exceed three. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 85 UE shall not send any CP-DATA.

### 16.1.3 Test of memory full condition and memory available notification:

The Memory Available Notification provides a means for the UE to notify the network that it has memory available to receive one or more short messages. The SMS status field in the USIM contains status information on the "memory available" notification flag.

#### 16.1.3.1 Definition

#### 16.1.3.2 Conformance requirement

1. When a mobile terminated message is Class 2, the UE shall ensure that the message has been transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a protocol error message if the short message cannot be stored in the USIM and there is other short message storage available in the UE. If all the short message storage in the UE is already in use, the UE shall return "memory capability exceeded".

2. When the UE rejects a short message due to lack of available memory capability the need to transfer notification shall be stored in the USIM.

3. If the memory capability becomes available because memory is cleared, the value of the memory capability exceeded notification flag in the USIM is read. If the flag is set, the UE notifies the network that memory capability is now available. After a positive acknowledgement from the network, the ME unsets the memory capability exceeded notification flag in the USIM.

References

- 3GPP TS 23.038 clause 4

- 3GPP TS 23.040 clauses 9.2.3.10, 10.3 (operation 14)..

#### 16.1.3.3 Test purpose

1. To verify that the UE sends the correct acknowledgement when its memory in the USIM becomes full.

2. To verify that the UE sends the correct acknowledgement when its memory in the ME and the USIM becomes full, and sets the "memory exceeded" notification flag in the USIM.

3. To verify that the UE performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.

#### 16.1.3.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty;
  - the UE shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least one record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated.
  - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

The value of timer TC1M.

##### Test procedure

a) step a) of clause 16.1.5.3 (test of Class 2 Short Messages) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

b) a Class 1 Short Message is sent to the UE.

c) step b) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

d) a Short Message is sent to the UE with the DCS field of the SMS-DELIVER TPDU set to 0.

e) the SS prompts the operator to read a short message and to remove it from the message store of the UE.

f) the SS waits for a RRC CONNECTION REQUEST from the UE, and sends a RRC CONNECTION SETUP.

g) after the SS receives a RRC CONNECTION SETUP COMPLETE, the SS authenticates the UE and activates ciphering.

h) the SS answers to the RP-SMMA from the UE with a CP-DATA containing a RP-ACK RPDU.

i) after the UE has acknowledged the CP-DATA with a CP-ACK, the SS releases the RRC connection. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM.

j) step e) is repeated.

##### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |

### 16.1.3.5 Test requirements

After UE sends a negative acknowledgement (RP-ERROR) in step 11, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After UE sends a negative acknowledgement (RP-ERROR) in step 25, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After step 53 the ME shall unset the "memory capability exceeded" notification flag on the USIM.

After step 57 UE shall not attempt to send a RP-SMMA RPDU.

## 16.1.4 Test of the status report capabilities and of SMS-COMMAND:

This test applies to UEs which support the status report capabilities.

### 16.1.4.1 Definition

### 16.1.4.2 Conformance requirement

The SMS offers the SC the capabilities of informing the UE of the status of a previously sent mobile originated short message. This is achieved by the SC returning a status report TPDU (SMS-STATUS-REPORT) to the originating UE.

SMS-COMMAND enables an UE to invoke an operation at the SC.

The UE shall increment TP-MR by 1 for each SMS-SUBMIT or SMS-COMMAND being submitted.

References

- 3GPP TS 23.040 clause 3.2.9.
- 3GPP TS 23.040 clauses 9.2.3.2, 9.2.3.4, 9.2.3.5, 9.2.3.6, 9.2.3.14, 9.2.3.18, 9.2.3.19, 9.2.3.26.

### 16.1.4.3 Test purpose

1) To verify that the UE is able to accept a SMS-STATUS-REPORT TPDU.
2) To verify that the UE is able to use the SMS-COMMAND functionality correctly and sends an SMS-COMMAND TPDU with the correct TP-Message-Reference.

### 16.1.4.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated".

Related ICS/IXIT Statements

Support of SMS MO/PP and MT/PP.

Test procedure

a) The UE is made to send a Mobile Originated short message setting TP-SRR as in steps a) to d) of test 16.1.2 (SMS Mobile originated).

b) The SS sends a CP-DATA message containing a RP-DATA RPDU itself containing an SMS-STATUS-REPORT TPDU.

c) The SS sends a RRC CONNECTION RELEASE message.

d) The UE is made to send an SMS-COMMAND message enquiring about the previously submitted short message.

e) void.

f) The SS acknowledges the CP-DATA message from the UE with a CP-ACK followed by a CP-DATA message containing an RP-ACK RPDU

g) After receiving the CP-ACK from the UE, the SS releases the RRC connection by using a RRC CONNECTION RELEASE message.

h) The UE is made to send an SMS-COMMAND message requiring to delete the previously submitted short message.

i) steps e) to g) are repeated.

Expected sequence

Specific Message Contents

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|
| TP-SRR | status report is requested "1"B |

SMS-STATUS-REPORT TPDU (SS to UE in step 23):

| Information element | Comment Value |
|---|---|
| TP-MR | same as previous SMS-SUBMIT |
| TP-MMS | no more messages "1"B |
| TP-SRQ | result of SMS-SUBMIT "0"B |
| TP-RA | same as the Destination address of the SMS-SUBMIT |
| TP-ST | SM received "00000000"B |

first SMS-COMMAND TPDU (UE to SS in step 39)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-SUBMIT plus "1" |
| TP-SRR | status report requested "1"B |
| TP-CT | Enquiry relating to previously submitted short message "00000000"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

second SMS-COMMAND TPDU (UE to SS in step 54)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-COMMAND plus "1" |
| TP-CT | Delete previously submitted short message "00000010"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

#### 16.1.4.5 Test requirements

After step 23 UE accept a SMS-STATUS-REPORT TPDU.

After step 39 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

After step 54 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

## 16.1.5 Test of message class 0 to 3

### 16.1.5.1 Short message class 0

#### 16.1.5.1.1 Definition

#### 16.1.5.1.2 Conformance requirement

When a mobile terminated message is class 0 and the UE has the capability of indicating short messages, the UE shall indicate the message immediately and send an acknowledgement to the SC when the message has successfully reached

the UE irrespective of whether there is memory available in the USIM or ME. The message shall not be automatically stored in the USIM or ME.

Reference

3GPP TS 23.038 clause 4.

#### 16.1.5.1.3 Test purpose

To verify that the UE will accept and indicate but not store a class 0 message, and that it will accept and indicate a class 0 message if its message store is full.

NOTE: failure of this test in a UE could cause it to reject a class 0 message when its SMS memory becomes full. This could lead to unwanted repetitions between the UE and the service centre.

#### 16.1.5.1.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS sends a class 0 message by using the method described in step a) of clause 16.1.1 but with the TPDU described in this clause.

b) The UE message store shall be filled (for example by using the method of clause 16.1.3 test of the memory available notification) with the same SMS-DELIVER TPDU except that TP-DCS is set to class 1.

c) The SS sends a class 0 message as in step a).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The content of the short message shall be indicated by the ME. The UE shall not store the message. This can be checked by verifying that it is impossible to retrieve any short messages from the UE message store. |
| 14 | | SS | | The UE message store shall be filled (for example by using the method of 16.1.3) with Class 1 SMS-DELIVER TPDU. |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The content of the short message shall be indicated by the ME. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 0 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 0 | "1111 0000"B |

SMS-DELIVER TPDU (containing a class 1 message to fill the UE message store) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

#### 16.1.5.1.5 Test requirements

After step 7 UE shall accept and indicate but not store a class 0 message.

After step 21 UE shall accept and indicate a class 0 message.

### 16.1.5.2 Test of class 1 short messages

This test shall apply to UEs which support:

- storing of received Class 1 Short Messages; and
- indicating of stored Short Messages.

#### 16.1.5.2.1 Definition

#### 16.1.5.2.2 Conformance requirement

When a mobile terminated message is class 1, the UE shall send an acknowledgement to the SC when the message has successfully reached the UE and can be stored, either in the ME or in the USIM.

##### Reference

3GPP TS 23.038 clause 4.

#### 16.1.5.2.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 1 message, i.e. that it stores the message in the ME or USIM and sends an acknowledgement (at RP and CP-Layer).

#### 16.1.5.2.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty;
  - for storing of class 1 Short Messages, the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

##### Test procedure

a) The SS delivers a Short Message of class 1 to the UE as specified in clause 16.1.1, step a).

b) The Short Message is recalled (e.g. by means of the MMI).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The short message shall be recalled and indicated at the UE. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 1 message) (SS to UE)

| Information element | CommentValue | |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

#### 16.1.5.2.5 Test requirements

After step 7 UE shall store the message in the ME or USIM and send an acknowledgement.

### 16.1.5.3 Test of class 2 short messages

#### 16.1.5.3.1 Definition

Class 2 Short Messages are defined as USIM specific, and the UE shall ensure that a message of this class is stored on the USIM.

#### 16.1.5.3.2 Conformance requirement

When a mobile terminated message is Class 2, the UE shall ensure that the message has been correctly transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a "protocol error, unspecified" error message if the short message cannot be stored in the USIM and there is other short message storage available at the UE. If all the short message storage at the UE is already in use, the UE shall return "memory capacity exceeded".

References

- 3GPP TS 23.040 clause 9.2.3.10.
- 3GPP TS 23.038 clause 4.
- 3GPP TS 34.108 clause 8.3.2.28.

#### 16.1.5.3.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the USIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network.

There are 2 cases:

1) if the UE supports storing of short messages in the USIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "protocol error, unspecified";

2) if the UE supports storing of short messages in the USIM and not in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded".

NOTE: If the UE supports storing of short messages in the USIM and the ME, and storage in the ME is full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded". This case is not tested in this test.

16.1.5.3.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the ME message store shall be empty;
  - the ME shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least two free records and one full record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated;
    - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS delivers a Short Message of class 2 to the UE as specified in clause 16.1.1, step b).

b) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "OK" ("90 00").

c) Step a) is repeated.

d) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "memory problem" ("92 40").

e) The USIM simulator indicates if an attempt was made in steps a) and c) to store the messages and if the messages are stored according to the requirement.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | < | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 8 | --> | | CP-ACK | |
| 9 | ME | | | The ME shall correctly store the short message in a free record of EFSMS in the USIM, i.e.<br>- the ME shall use a free record<br>- the first byte of the record shall indicate "message received by UE from network"<br>- the TS-Service-Centre-Address shall be correctly stored<br>- the TPDU shall be identical to that sent by the SS<br>- bytes following the TPDU shall be set to "FF" |
| 10 | USIM | | | The USIM simulator returns the status response "OK" ("90 00"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 12 | <-- | | CP-ACK | |
| 13 | <-- | | RRC CONNECTION RELEASE | |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | ME | | | The ME shall attempt to store the short message in a free record of EFSMS in the USIM. |
| 24 | USIM | | | The USIM simulator returns the status response "memory problem" ("92 40"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 25 | --> | | CP-DATA | Contains RP-ERROR RPDU with error cause "protocol error, unspecified" if the UE supports storing of short messages in the ME, or error cause "memory capacity exceeded" if not. |
| 26 | <-- | | CP-ACK | |
| 27 | <-- | | RRC CONNECTION RELEASE | |
| 28 | --> | | RRC CONNECTION RELEASE COMPLETE | |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 2 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 2 | "1111 0010"B |

16.1.5.3.5 Test requirements

After step 10 UE shall confirm that the short message is stored in the USIM and send CP-DATA containing RP-ACK RPDU.

After step 25 UE shall confirm that the short message cannot be stored in the USIM and send CP-DATA containing RP-ERROR RPDU. If UE supports storing of short message in the ME, the error cause of RP-ERROR RPDU shall be "protocol error, unspecified", and if not the error cause of RP-ERROR RPDU shall be "memory capacity exceeded"

#### 16.1.5.4 Test of class 3 short messages

For further study.

### 16.1.6 Test of short message type 0 (R99 and REL-4 UE)

#### 16.1.6.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Circuit Switched mode. It is highly recommended that the UE discards the contents of the short message type 0.

This test shall apply to all R99 and REL-4 UEs supporting receipt of short messages in CS mode.

#### 16.1.6.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but may discard its contents.

Note: It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME.

Reference(s)

3GPP TS 23.040, 9.2.3.9.

#### 16.1.6.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE should discard its contents.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the UE and the service centre.

#### 16.1.6.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in MM-state "Idle, updated".

Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

The SS sends a type 0 message by using the method described in step a) of section 16.1.1 but with the TPDU described in this section.

Maximum Duration of Test

1 minute

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK TP-Protocol-Identifier (TP-PID). |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned0 |
| TP-OA | an international number coded E.164 |
| TP-PID | Type 0: "01000000"B |
| TP-DCS | default alphabet “0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

## 16.1.6a Test of short message type 0 (≥ REL-5 UE)

### 16.1.6a.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Circuit Switched mode. The UE shall discard the contents of the short message type 0.

This test shall apply to all ≥ REL-5 UEs supporting receipt of short messages in CS mode.

### 16.1.6a.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

References

3GPP TS 23.040 9.2.3.1, 9.2.3.2, 9.2.3.4, 9.2.3.7, 9.2.3.9, 9.2.3.10, 9.2.3.11, 9.2.3.16, 9.2.3.17, 9.2.3.23.

### 16.1.6a.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

NOTE: Failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre. In addition service affecting restrictions could happen to the customer.

### 16.1.6a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in MM-state "Idle, updated".

the ME- and (U)SIM message store shall be empty.

Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

a) The SS sends a type 0 short message by using the method described in step a) of clause 16.1.1 but with the TPDU described in this section.

b) The ME- and (U)SIM short message store shall be filled (for example by using the method of clause 16.1.3 test of the memory available notification).

c) The SS sends a type 0 short message as in step a).

Maximum Duration of Test

5 minutes

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |
| 14 | | SS | | The ME- and (U)SIM message store shall be filled (for example by using the method of 16.1.3). |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |

| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS-DELIVER | "00"B |
| TP-MMS | more messages are waiting in SC | "0"B |
| TP-RP | no reply path | "0"B |
| TP-UDHI | TP-UD contains only the SM | "0"B |
| TP-SRI | no status report returned | "0"B |
| TP-OA | an international number coded E.164 | |
| TP-PID | Type 0: | "01000000"B |
| TP-DCS | default alphabet | “0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) | |
| TP-UDL | | 160 |
| TP-UD (140 octets) | text of message (160 characters) | |

#### 16.1.6a.5 Test requirements

After step 9 (ME- and (U)SIM message store not filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 13 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

After step 23 (ME- and (U)SIM message store filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 27 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

### 16.1.7 Test of the replace mechanism for SM type 1-7

#### 16.1.7.1 Definition

#### 16.1.7.2 Conformance requirement

On receipt of a short message, the UE shall check to see if the associated Protocol Identifier contains a Replace Short Message Type code. If such a code is present, then the UE will check the associated originating address (TP-OA) and replace any existing stored message having the same Protocol Identifier code and originating address with the new short message.

References

3GPP TS 23.040 clause 9.2.3.2, 9.2.3.9.

#### 16.1.7.3 Test purpose

This procedure verifies the correct implementation of the replace mechanism for Replace Short Messages.

#### 16.1.7.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Test procedure

a) Two different numbers n and m are drawn randomly between 1 and 7. Two different addresses for TP-Originating-Address (TPOA1 and TPOA2) are drawn.

b) The SS delivers a short message to the UE as specified in clause 16.1.1 step a). In the SMS-DELIVER TPDU, the TP-Protocol-Identifier parameter is "Replace Short Message Type n", the TP-Originating-Address is TPOA1, and the RP-Originating-Address is RPOA.

c) Step b) is repeated but with a different TP-Originating-Address (TPOA2), and different contents of TP-User-Data in the SMS-DELIVER TPDU. The other parameters are the same as in step b).

d) Void

e) Step c) is repeated but with the TP-Protocol-Identifier equal to "Replace Short Message Type m", and contents of TP-User-Data different from the former two messages. The other parameters are the same as in step c).

f) Step e) is repeated but the contents of TP-User-Data are different from that used in step e).

g) The SS prompts the operator to indicate the Short Messages stored in the UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

| 61 | SS | | | Prompts the operator to indicate the Short Messages stored in the UE. Only the Short Messages delivered in step 7, 19 and 55 shall be retrievable and indicated |

Specific Message Contents

SMS-DELIVER TPDU

| Information element | Comment Value |
|---|---|
| TP-MMS | no more messages are waiting in SC "1"B |
| TP-PID | binary 01000xxx, xxx represents n resp. m (see test method description) |

16.1.7.5 Test requirements

After step 61 only the Short Messages delivered in step 7, 19 and 55 shall be retrieved and indicated.

## 16.1.8 Test of the reply path scheme

16.1.8.1 Definition

16.1.8.2 Conformance requirement

When a replying UE receives an original mobile terminated short message it has:

- originating SME = TP-Originating Address in the SMS-DELIVER TPDU;
- original SC = RP-Originating Address in the RP-MT-DATA.

When submitting the reply mobile originated short message, the replying UE should use parameters as follows:

- TP-Destination Address in SMS-SUBMIT TPDU = originating SME;
- RP-Destination Address in RP-MO-DATA = original SC.

References

3GPP TS 23.040 3.2.10, 9.2.3.2, 9.2.3.17, Annex D.5, D.6.

NOTE: Annex D of 3GPP TS 23.040 is only informative.

16.1.8.3 Test purpose

This procedure verifies that the UE is able to send a Reply Short Message back to the correct originating SME even if in the meantime it receives another Short Message.

16.1.8.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

Support for Short message MO/PP.

The value of timer TC1M.

Test procedure

a) The SS delivers a Short Message as specified in clause 16.1.1, step b) with TP-Reply-Path set to 1.

b) Step a) is repeated but with:
   - different TP-Originating-Address for the originating SME;
   - different RP-Originating-Address for the original SC; and
   - different message contents TP-User-Data.

c) UE sends the Reply Short Message corresponding to one of two received Short Messages (e.g. by means of the MMI).

d) step c) is repeated for the other Short Message.

| Information element | Comment | Value |
|---|---|---|
| TP-MMS | no more messages are waiting in SC | "1"B |
| TP-RP | Reply Path exists | "1"B |

16.1.8.5 Test requirements

After step 35 UE shall send the Reply Short Message corresponding to one of two previously received short messages.

After step 51 UE shall send the Reply Short Message corresponding to the other of two previously received short messages.

## 16.1.9 Multiple SMS mobile originated

### 16.1.9.1 UE in idle mode

This test applies to UE supporting the ability of sending multiple short messages on the same RRC connection when there is no call in progress.

16.1.9.1.1 Definition

16.1.9.1.2 Conformance requirements

Release 1999:

If another short message or a memory available notification is to be sent, an originating SMR entity in the UE may choose to continue to use the same RRC connection. When the UE chooses to use the same RRC connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

Release 4 or later release:

In the case of a SMS transfer via the CS domain, when the UE chooses to use the same RR or CS signalling connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (i.e. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE may transmit the CP-ACK for the old MM connection; the UE shall not transmit the final CP-ACK after the new CP-DATA;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

References

- 3GPP TS 23.040 clause 3.1.
- 3GPP TS 24.011 clause 5.4.

#### 16.1.9.1.3 Test purpose

To verify that the UE is able to correctly concatenate multiple short messages on the same RRC connection when using a DCCH.

#### 16.1.9.1.4 Method of test

##### Initial conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

##### Related ICS/IXIT statements

Support for concatenation of multiple short messages MO/PP on the same RRC connection.

Description of how to enter multiple SMS.

Whether SMS messages are stored in the USIM and/or the ME.

##### Foreseen final state of UE

Idle, updated.

##### Test procedure

a) The UE shall be set up to send 3 short messages as multiple SM to the SS. The UE establishes successfully an RRC connection and then the SS performs the authentication.

b) The SS starts integrity protection.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU. The Transaction Identifier used on this MM connection is 'x'.

d) The UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. The UE shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the first short message) has been received. Before transmission of the first CP-DATA on the new MM connection:

   - For R99: The UE shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be y, where y <> x (see step c)). Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection, thus two branches for the transmission of the final CP-ACK are possible which are specified in the expected sequence table like A and B respectively. The SS waits for the UE to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to send the final CP-ACK followed by the first CP-DATA on the new MM connection (branch B).

   - For Rel-4 or later release: The UE may transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be y, where y <> x (see step c)). Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection or not to send a CP-ACK at all, thus three cases are possible. These cases are specified using two branches for the transmission of the final CP-ACK where the transmission of the final CP-ACK for the old MM connection is optional. The two branches are specified in the expected sequence table like A and B respectively. The SS waits for the UE

to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and then waits for the UE to send the final CP-ACK (optional) and/or the first CP-DATA on the new MM connection (branch B).

e) Void.

f) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.

g) The UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. Before transmission of the first CP-DATA on the new MM connection:

- For R99: The UE shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be z, where z <> y (see step d)). The UE shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the second short message) has been received. Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection, thus two branches for the transmission of the final CP-ACK are possible which are specified in the expected sequence table like A and B respectively. The SS waits for the UE to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to send the final CP-ACK followed by the first CP-DATA on the new MM connection (branch B).

- For Rel-4 or later release: The UE may transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be z, where z <> y (see step d)). Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection or not to send a CP-ACK at all, thus three cases are possible. These cases are specified using two branches for the transmission of the final CP-ACK where the transmission of the final CP-ACK for the old MM connection is optional. The two branches are specified in the expected sequence table like A and B respectively. The SS waits for the UE to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and then waits for the UE to send the final CP-ACK (optional) and/or the first CP-DATA on the new MM connection (branch B).

h) Void.

i) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.

j) The SS waits a maximum of 5 s after sending CP-DATA for the CP-ACK message from the UE.

k) The SS sends a RRC CONNECTION RELEASE to the UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send 3 short messages as multiple SM |
| 2 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 3 | | | (void) | |
| 4 | | | (void) | |
| 5 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service". |
| 6 | <-- | | AUTHENTICATION REQUEST | |
| 7 | --> | | AUTHENTICATION RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | Void | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 10, 11, 12 and 14 shall be x. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 11 | <-- | | CP-ACK | |
| 12 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 13 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service". |
| 14 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>If CP-ACK received then continue at A15<br>If CP-ACK is not received within 5 s from the CM SERVICE REQUEST was sent in step 13 then goto step B15a.<br>(See note 1 and note 2) |
| Branch A | | | | |
| A15 | <-- | | CM SERVICE ACCEPT | After having sent the CM SERVICE ACCEPT then goto step 16. |
| Branch B | | | | |
| B15a | <-- | | CM SERVICE ACCEPT | |
| B15b | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>For Rel-4 or later release UE: Optional step (See note 2) |
| 16 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 16, 17, 18 and 20 shall be y where y <> x (see step 10). |
| 17 | <-- | | CP-ACK | |
| 18 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 19 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service". |
| 20 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>If CP-ACK received then continue at A21<br>If CP-ACK is not received within 5 s from the CM SERVICE REQUEST was sent in step 19 then goto step B21a.<br>(See note 1 and note 2) |
| Branch A | | | | |
| A21 | <-- | | CM SERVICE ACCEPT | After having sent the CM SERVICE ACCEPT then goto step 22. |
| Branch B | | | | |
| B21a | <-- | | CM SERVICE ACCEPT | |
| B21b | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>For Rel-4 or later release UE: Optional step (See note 2) |
| 22 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 22, 23, 24 and 25 shall be z, where z <> y (see step 16). |
| 23 | <-- | | CP-ACK | |
| 24 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 25 | --> | | CP-ACK | Shall be sent within 5 s of step 24 |
| 26 | SS | | | The SS releases the RRC connection |
| NOTE 1: 5 s have been agreed to be a reasonable value to secure that the UE have enough time to respond to the different messages. | | | | |
| NOTE 2: The CP-ACK for the old MM connection can be received either before or after the reception of the CM SERVICE ACCEPT message. For Release 4 or later release the UE transmission of the final CP-ACK is optional. | | | | |

#### 16.1.9.1.5 Test requirements

In step 13 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK for the old MM connection is transmitted.

In step 19 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK for the old MM connection is transmitted.

### 16.1.9.2 UE in active mode

This test applies to UE supporting the ability of sending concatenated multiple short messages when there is a call in progress.

16.1.9.2.1 Definition

16.1.9.2.2 Conformance requirements

Release 1999:

If another short message or a memory available notification is to be sent, an originating SMR entity in the UE may choose to continue to use the same RRC connection. When the UE chooses to use the same RRC connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

Release 4 or later release:

In the case of a SMS transfer via the CS domain, when the UE chooses to use the same RR or CS signalling connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (i.e. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE may transmit the CP-ACK for the old MM connection; the UE shall not transmit the final CP-ACK after the new CP-DATA;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

References

- 3GPP TS 23.040 clause 3.1.
- 3GPP TS 24.011 clause 5.4.

16.1.9.2.3 Test purpose

To verify that the UE is able to correctly concatenate multiple short messages on the same RRC connection when sent parallel to a call.

16.1.9.2.4 Method of test

Initial conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT statements

Support for concatenation of multiple short messages MO/PP on the same RRC connection.

Description of how to enter multiple SMS.

Support for state U10 of call control.

Whether SMS messages are stored in the USIM and/or the ME.

Foreseen final state of UE

Idle, updated.

Test procedure

a) A data or speech call is established on a DTCH with the SS and the state U10 of call control is entered. The UE is set up to send 3 short messages as multiple SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM SERVICE ACCEPT message.

b) Steps c) to k) of the test procedure in clause 16.1.9.1.4 are repeated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 2 | UE | | | The UE is set up to send 3 short messages as multiple SM |
| 3 | --> | | CM SERVICE REQUEST | Sent in a layer 2 frame on the DCCH. CM service type set to "Short Message Service" |
| 4 | <-- | | CM SERVICE ACCEPT | |
| 7 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 7, 8, 9 and 11 shall be x. |
| 8 | <-- | | CP-ACK | |
| 9 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 10 | --> | | CM SERVICE REQUEST | Sent in a layer 2 frame on the DCCH. CM service type set to "Short Message Service" |
| 11 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>If CP-ACK received then continue at A12<br>If CP-ACK is not received within 5 s from the CM SERVICE REQUEST was sent in step 10 then goto step B11.<br>(See note 1 and note 2) |
| Branch A | | | | |
| A12 | <-- | | CM SERVICE ACCEPT | After having sent the CM SERVICE ACCEPT then goto step 13. |
| Branch B | | | | |
| B11 | <-- | | CM SERVICE ACCEPT | |
| B12 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>For Rel-4 or later release UE: Optional step (See note 2) |
| 13 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 13, 14, 15 and 17 shall be y where y <> x (see step 7). |
| 14 | <-- | | CP-ACK | |
| 15 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 16 | --> | | CM SERVICE REQUEST | Sent in a layer 2 frame on the DCCH. CM service type set to "Short Message Service" |
| 17 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>If CP-ACK received then continue at A18.<br>If CP-ACK is not received within 5 s from the CM SERVICE REQUEST was sent in step 16 then goto step B17.<br>(See note 1 and note 2) |
| Branch A | | | | |
| A18 | <-- | | CM SERVICE ACCEPT | |
| Branch B | | | | |
| B17 | <-- | | CM SERVICE ACCEPT | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| B18 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>For Rel-4 or later release UE: Optional step (See note 2) |
| 19 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 19, 20, 21 and 22 shall be z, where z <> y (see step 13). |
| 20 | <-- | | CP-ACK | |
| 21 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 22 | --> | | CP-ACK | Shall be sent within 5 s of step 21 |
| 23 | SS | | | The SS releases the RRC connection |
| NOTE 1: 5 s have been agreed to be a reasonable value to secure that the UE have enough time to respond to the different messages. | | | | |
| NOTE 2: The CP-ACK for the old MM connection can be received either before or after the reception of the CM SERVICE ACCEPT message. For Release 4 or later release the UE transmission of the final CP-ACK is optional. | | | | |

#### 16.1.9.2.5 Test requirements

In step 10 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK for the old MM connection is transmitted.

In step 16 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK for the old MM connection is transmitted.

### 16.1.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message

#### 16.1.10.1 Definition

#### 16.1.10.2 Conformance requirements

An active UE shall be able to receive a short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is an SMS mobile originated call (SMS-SUBMIT or SMS-COMMAND) in progress.

References

3GPP TS 23.040 clauses 3.1, 9.2.3.16.

3GPP TS 24.011 clause 3.2.

#### 16.1.10.3 Test purpose

The test verifies that the UE is capable of simultaneously receiving a network originated SM whilst sending a mobile originated SM.

#### 16.1.10.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MO/PP and MT/PP.

Support for state U10 of call control.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS is configured to receive a mobile originated SM. In clause 16.1.2 steps a) and b) are repeated and, using the end of the CP-DATA message from the UE as a trigger, the SS sends a SM to the UE. In this case a new transaction identifier shall be used in the CP messages of SMS mobile terminated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send an SM |
| 2 | SS | | | The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originating Low Priority Signalling". |
| 3 | | | (void) | |
| 4 | | | (void) | |
| 5 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service" |
| 6 | <-- | | AUTHENTICATION REQUEST | |
| 7 | --> | | AUTHENTICATION RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | (void) | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 11 | SS | | | The SS sends an SM to the UE triggered by the end of the CP-DATA message from the UE |
| 12 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 13 | UE | | | The UE shall correctly receive the SM and indicate that a message has arrived. In the MO case the UE shall send the CP-ACK message with transaction identifier assigned to this transfer. In the MT case the UE shall send a CP-ACK message and a CP-DATA message containing the RP-ACK RPDU. The transaction identifier shall be the same as chosen by the SS for the MT transfer. |
| NOTE: Time values for SS wait times are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|
| TP-UDL | as applicable |
| TP-UD (140 octets) | 160 ASCII characters |

16.1.10.5 Test requirements

After step 12 UE shall correctly receive the SM and indicate that a message has arrived.

# 16.2 Short message service point to point on PS mode

All of test cases in this clause are applied to the UE supported PS mode.

## 16.2.1 SMS mobile terminated

16.2.1.1 Definition

16.2.1.2 Conformance requirements

An active UE shall be able to receive short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is a PDP context in progress. A report will always be returned to the SC, confirming that the UE has received the short message.

References

3GPP TS 23.040 clauses 3.1, 9.2.3.16.

16.2.1.3 Test purpose

To verify the ability of a UE to receive and decode the SMS where provided for the point to point service.

16.2.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Support for session management state "PDP-ACTIVE".

Maximum number of retransmissions of an unacknowledged CP-DATA message.

Test procedure

a) Mobile terminates establishment of Radio Resource Connection. After the completion of RRC Connection the SS authenticates the UE and activates ciphering.

   After the SS receives SECURITY MODE COMPLETE, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU).

b) The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

c) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.

d) Steps a), b) and c) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

e) Steps a) and b) are repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) SS initiates the channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions.

f) The SMS message store shall be cleared manually by the operator.

g) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered.

   The SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU). The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

h) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release. The SMS message store shall be cleared manually by the operator.

i) Steps g) and h) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

j) Step g) is repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) SS initiates the channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions (during PDP context in progress).

k) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The PDP context is cleared by the SS with a disconnect message. (The PDP context deactivating is continued in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA RPDU (SMS DELIVER TPDU) message. The information element of the CP-DATA message is RP-DATA.

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.

The SMS message store shall be cleared manually by the operator.

l) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The PDP context shall be cleared from the UE. (The PDP context deactivating is continued in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA message. The information element of the CP-DATA message is RP-DATA RPDU (SMS DELIVER TPDU).

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.

The SMS message store shall be cleared manually by the operator.

Specific Message Contents

SMS DELIVER TPDU (not containing a type 0 message)

| Information element | Comment Value |
|---|---|
| TP-PID | Different from Type 0: “01000000”B |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |
| NOTE: The 160 characters in TP-UD shall include at least one occurrence of each character in the default alphabet (see 3GPP TS 23.038, clause 6.2.1). | |

### 16.2.1.5 Test requirements

After step 7 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 14 UE shall indicate that an SM has arrived.

After step 27 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 30 UE shall indicate that an SM has arrived.

After step 43 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 48 UE shall indicate that an SM has arrived.

After step 51 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 59 UE shall indicate that an SM has arrived.

After step 69 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 74 UE shall indicate that an SM has arrived.

After step 84 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 89 UE shall indicate that an SM has arrived.

After step 94 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 101 UE shall indicate that an SM has arrived.

After step 106 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 113 UE shall indicate that an SM has arrived.

## 16.2.2 SMS mobile originated

### 16.2.2.1 Definition

### 16.2.2.2 Conformance requirements

An active UE shall be able to submit short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is a PDP context in progress.

#### References

3GPP TS 23.040 clause 3.1, 9.2.3.16.

### 16.2.2.3 Test purpose

To verify that the UE is able to correctly send a short message where the SMS is provided for the point to point service.

### 16.2.2.4 Method of test

#### Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty.

#### Related ICS/IXIT Statements

Support for Short message MO/PP.

Support for state PDP-ACTIVE of session management.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Maximum number of retransmissions of an unacknowledged CP-DATA message.

#### Test procedure

a) The UE shall be set up to send an SM to the SS. The UE establishes successfully an RRC connection.

b) The SS performs authentication and after that, the SS starts integrity protection.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message.

d) The SS sends a channel release message to the UE.

e) Steps a) and b) are repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) SS initiates channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions.

f) Steps a) and b) are repeated. On receipt of the CP-DATA from the UE the SS sends a CP-ERROR message within TC1M containing a "Network Failure" cause. Then the SS initiates channel release.

g) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The UE is set up to send an SM to the SS.

h) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message. Then the SS sends a channel release message to the UE.

i) Step g) is repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) the SS initiates channel release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions (during a PDP context in progress).

j) (void)

k) The UE is set up to send an SM to the SS. On receipt of the SERVICE REQUEST the SS sends a SERVICE REJECT message with the reject cause set to "GPRS services not allowed". After 5 s the SS initiates channel release.

| 56a | UE | | | The UE is set up to send an SM. Continue at step 59 (signalling connection already established in step 56). |
| 56b | | | (void) | |
| 56c | | | (void) | |
| 56d | | | (void) | |
| 56e | | | (void) | |
| 57 | | | (void) | |
| 58 | | | (void) | |
| 59 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 60 | | SS | | SS configured not to send CP-ACK |
| 61 | --> | | CP-DATA | Retransmitted CP-DATA message within twice TC1M after step 59 |
| 62 | UE | | | Depending on the maximum number of CP-DATA retransmissions implemented, step 61 may be repeated. The maximum number of retransmissions may however not exceed three. The UE may also send less than 3 re-transmissions. The same RRC connection shall be used for CP-DATA retransmissions. |
| 63 | | SS | | The SS releases the RRC connection after a duration of 4*TC1M + 10 s (Maximum for T3317) from step 59. |
| 63a | | | (void) | |
| 64 | | | (void) | |
| 65-77 | | | (void) | |
| 78 | UE | | | The UE is set up to send an SM |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 79 | | SS | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 80 | | | (void) | |
| 81 | --> | | SERVICE REQUEST | |
| 82 | <-- | | SERVICE REJECT | Reject cause set to "GPRS services not allowed" |
| 83 | | SS | | The SS releases the RRC connection. The RRC connection is releases 5 s after SERVICE REJECT |
| NOTE: Time values for SS wait times are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | CommentValue |
|---|---|
| TP-UDL | as applicable |
| TP-UD (140 octets) | 160 ASCII characters |

#### 16.2.2.5 Test requirements

After step 10 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 26 UE shall retransmit a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 49 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 61 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 82 UE shall not send CP-DATA.

## 16.2.3 Test of memory full condition and memory available notification:

The Memory Available Notification provides a means for the UE to notify the network that it has memory available to receive one or more short messages. The SMS status field in the USIM contains status information on the "memory available" notification flag.

#### 16.2.3.1 Definition

#### 16.2.3.2 Conformance requirement

1. When a mobile terminated message is Class 2, the UE shall ensure that the message has been transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a protocol error message if the short message cannot be stored in the USIM and there is other short message storage available in the UE. If all the short message storage in the UE is already in use, the UE shall return "memory capability exceeded".

2. When the UE rejects a short message due to lack of available memory capability the need to transfer notification shall be stored in the USIM.

3. If the memory capability becomes available because memory is cleared, the value of the memory capability exceeded notification flag in the USIM is read. If the flag is set, the UE notifies the network that memory capability is now available. After a positive acknowledgement from the network, the ME unsets the memory capability exceeded notification flag in the USIM.

References

- 3GPP TS 23.038 clause 4.

- 3GPP TS 23.040 clauses 9.2.3.10, 10.3 (operation 14).

#### 16.2.3.3 Test purpose

1. To verify that the UE sends the correct acknowledgement when its memory in the USIM becomes full.
2. To verify that the UE sends the correct acknowledgement when its memory in the ME and the USIM becomes full, and sets the "memory exceeded" notification flag in the USIM.
3. To verify that the UE performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.

#### 16.2.3.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty;
  - the UE shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least one record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated.
  - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

The value of timer TC1M.

##### Test procedure

a) step a) of clause 16.2.5.3 (test of Class 2 Short Messages) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

b) a Class 1 Short Message is sent to the UE.

c) step b) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

d) a Short Message is sent to the UE with the DCS field of the SMS-DELIVER TPDU set to 0.

e) the SS prompts the operator to read a short message and to remove it from the message store of the UE.

f) the SS waits for a RRC CONNECTION REQUEST from the UE, and sends a RRC CONNECTION SETUP.

g) after the SS receives a RRC CONNECTION SETUP COMPLETE, the SS authenticates the UE and activates ciphering.

h) the SS answers to the RP-SMMA from the UE with a CP-DATA containing a RP-ACK RPDU.

i) after the UE has acknowledged the CP-DATA with a CP-ACK, the SS releases the RRC connection. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM.

j) step e) is repeated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 8 | | SS | | Waits max 25 s for CP-ACK |
| 9 | --> | | CP-ACK | |
| 10 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 12 | <-- | | CP-ACK | Within TC1M after step 11 |
| 13 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. Step 1-13 is repeated until UE sends a negative acknowledgement (RP-ERROR) in step 11. The RP-ERROR RPDU cause field shall be "Protocol error, unspecified" if there is message capability in the USIM, or "Memory capability exceeded" if there is no message capability in the USIM. If the total memory store of the UE is full, the ME shall set the "memory capability exceeded" notification flag on the USIM. |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | SERVICE REQUEST | |
| 17 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 18 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 22 | | SS | | Waits max 25 s for CP-ACK |
| 23 | --> | | CP-ACK | |
| 24 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 25 | --> | | CP-DATA | Shall contain RP-ACK RPDU if there is memory capability in the ME. If not it shall contain RP-ERROR RPDU which cause field shall be "memory capability exceeded". If the total memory store of the UE now becomes full at this step, the ME shall set the "memory cap. exceed" notification flag on the USIM. |
| 26 | <-- | | CP-ACK | Within TC1M after step 25 |
| 27 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. Step 16-27 is repeated until the UE sends an RP-ERROR. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM. |
| 28 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 29 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 30 | --> | | SERVICE REQUEST | |
| 31 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 32 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 33 | <-- | | SECURITY MODE COMMAND | |
| 34 | --> | | SECURITY MODE COMPLETE | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 35 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) with TP-DCS set to 0 |
| 36 | | SS | | Waits max 25 s for CP-ACK |
| 37 | --> | | CP-ACK | |
| 38 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 39 | --> | | CP-DATA | Shall contain RP-ERROR RPDU with error cause "memory capability exceeded". |
| 40 | <-- | | CP-ACK | Within TC1M after step 39 |
| 41 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. |
| 42 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 43 | | SS | | Prompts the operator to remove one of the short messages from the message store of the UE. |
| 44 | <-- | | SYSTEM INFORMATION | BCCH |
| 45 | --> | | RRC CONNECTION REQUEST | CCCH |
| 46 | <-- | | RRC CONNECTION SETUP | CCCH |
| 47 | --> | | RRC CONNECTION SETUP COMPLETE | DCCH |
| 48 | --> | | SERVICE REQUEST | |
| 49 | <-- | | SERVICE ACCEPT | |
| 50 | --> | | CP-DATA | Contains RP-SMMA RPDU |
| 51 | <-- | | CP-ACK | |
| 52 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 53 | --> | | CP-ACK | Acknowledge of CP-DATA containing the RP-ACK RPDU. The ME shall unset the "memory capability exceeded" notification flag on the USIM. |
| 54 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM. |
| 55 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 56 | | SS | | Prompts the operator to remove one of the short messages from the message store of the UE. |
| 57 | UE | | | Shall not attempt to send a RP-SMMA RPDU. This is verified by checking that the UE does not send a CHANNEL REQUEST message with the establishment cause "Other services which can be completed with an SDCCH" |
| NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS-DELIVER TPDU in step 7

### 16.2.3.5 Test requirements

After UE sends a negative acknowledgement (RP-ERROR) in step 11, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After UE sends a negative acknowledgement (RP-ERROR) in step 25, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After step 53 the ME shall unset the "memory capability exceeded" notification flag on the USIM.

After step 57 UE shall not attempt to send a RP-SMMA RPDU.

## 16.2.4 Test of the status report capabilities and of SMS-COMMAND:

This test applies to UEs which support the status report capabilities.

### 16.2.4.1 Definition

### 16.2.4.2 Conformance requirement

The SMS offers the SC the capabilities of informing the UE of the status of a previously sent mobile originated short message. This is achieved by the SC returning a status report TPDU (SMS-STATUS-REPORT) to the originating UE.

SMS-COMMAND enables an UE to invoke an operation at the SC.

The UE shall increment TP-MR by 1 for each SMS-SUBMIT or SMS-COMMAND being submitted.

References

- 3GPP TS 23.040 clauses 3.2.9, 9.2.3.2, 9.2.3.4, 9.2.3.5, 9.2.3.6, 9.2.3.14, 9.2.3.18, 9.2.3.19, 9.2.3.26.

### 16.2.4.3 Test purpose

1) To verify that the UE is able to accept a SMS-STATUS-REPORT TPDU.

2) To verify that the UE is able to use the SMS-COMMAND functionality correctly and sends an SMS-COMMAND TPDU with the correct TP-Message-Reference.

### 16.2.4.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED".

Related ICS/IXIT Statements

Support of SMS MO/PP and MT/PP.

Test procedure

a) The UE is made to send a Mobile Originated short message setting TP-SRR as in steps a) to d) of test 16.2.2 (SMS Mobile originated).

b) The SS sends a CP-DATA message containing a RP-DATA RPDU itself containing an SMS-STATUS-REPORT TPDU.

c) The SS sends a RRC CONNECTION RELEASE message.

d) The UE is made to send an SMS-COMMAND message enquiring about the previously submitted short message.

e) Void.

f) The SS acknowledges the CP-DATA message from the UE with a CP-ACK followed by a CP-DATA message containing an RP-ACK RPDU.

g) After receiving the CP-ACK from the UE, the SS releases the RRC connection by using a RRC CONNECTION RELEASE message.

h) The UE is made to send an SMS-COMMAND message requiring to delete the previously submitted short message.

i) steps e) to g) are repeated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | SYSTEM INFORMATION | BCCH |
| 2 | --> | | RRC CONNECTION REQUEST | CCCH |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|
| TP-SRR | status report is requested "1"B |

SMS-STATUS-REPORT TPDU (SS to UE in step 23):

| Information element | Comment Value |
|---|---|
| TP-MR | same as previous SMS-SUBMIT |
| TP-MMS | no more messages "1"B |
| TP-SRQ | result of SMS-SUBMIT "0"B |
| TP-RA | same as the Destination address of the SMS-SUBMIT |
| TP-ST | SM received "00000000"B |

first SMS-COMMAND TPDU (UE to SS in step 39)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-SUBMIT plus "1" |
| TP-SRR | status report requested "1"B |
| TP-CT | Enquiry relating to previously submitted short message "00000000"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

second SMS-COMMAND TPDU (UE to SS in step 54)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-COMMAND plus "1" |
| TP-CT | Delete previously submitted short message "00000010"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

16.2.4.5 Test requirements

After step 23 UE accept a SMS-STATUS-REPORT TPDU.

After step 39 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

After step 54 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

## 16.2.5 Test of message class 0 to 3

### 16.2.5.1 Short message class 0

#### 16.2.5.1.1 Definition

#### 16.2.5.1.2 Conformance requirement

When a mobile terminated message is class 0 and the UE has the capability of indicating short messages, the UE shall indicate the message immediately and send an acknowledgement to the SC when the message has successfully reached the UE irrespective of whether there is memory available in the USIM or ME. The message shall not be automatically stored in the USIM or ME.

Reference

3GPP TS 23.038 clause 4.

#### 16.2.5.1.3 Test purpose

To verify that the UE will accept and indicate but not store a class 0 message, and that it will accept and indicate a class 0 message if its message store is full.

NOTE: failure of this test in a UE could cause it to reject a class 0 message when its SMS memory becomes full. This could lead to unwanted repetitions between the UE and the service centre.

#### 16.2.5.1.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS sends a class 0 message by using the method described in step a) of clause 16.2.1 but with the TPDU described in this clause.

b) The UE message store shall be filled (for example by using the method of clause 16.2.3 test of the memory available notification) with the same SMS-DELIVER TPDU except that TP-DCS is set to class 1.

c) The SS sends a class 0 message as in step a).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The content of the short message shall be indicated by the ME. The UE shall not store the message. This can be checked by verifying that it is impossible to retrieve any short messages from the UE message store. |
| 14 | | SS | | The UE message store shall be filled (for example by using the method of 16.2.3) with Class 1 SMS-DELIVER TPDU. |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | SERVICE REQUEST | |
| 17 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 18 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The content of the short message shall be indicated by the ME. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 0 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 0 | "1111 0000"B |

SMS-DELIVER TPDU (containing a class 1 message to fill the UE message store) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

16.2.5.1.5 Test requirements

After step 7 UE shall accept and indicate but not store a class 0 message.

After step 21 UE shall accept and indicate a class 0 message.

### 16.2.5.2 Test of class 1 short messages

This test shall apply to UEs which support:

- storing of received Class 1 Short Messages; and
- indicating of stored Short Messages.

#### 16.2.5.2.1 Definition

#### 16.2.5.2.2 Conformance requirement

When a mobile terminated message is class 1, the UE shall send an acknowledgement to the SC when the message has successfully reached the UE and can be stored, either in the ME or in the USIM.

Reference

3GPP TS 23.038 clause 4.

#### 16.2.5.2.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 1 message, i.e. that it stores the message in the ME or USIM and sends an acknowledgement (at RP and CP-Layer).

#### 16.2.5.2.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty;
  - for storing of class 1 Short Messages, the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS delivers a Short Message of class 1 to the UE as specified in clause 16.2.1, step a).

b) The Short Message is recalled (e.g. by means of the MMI).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The short message shall be recalled and indicated at the UE. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 1 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

16.2.5.2.5 Test requirements

After step 7 UE shall store the message in the ME or USIM and send an acknowledgement.

## 16.2.5.3 Test of class 2 short messages

16.2.5.3.1 Definition

Class 2 Short Messages are defined as USIM specific, and the UE shall ensure that a message of this class is stored on the USIM.

16.2.5.3.2 Conformance requirement

When a mobile terminated message is Class 2, the UE shall ensure that the message has been correctly transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a "protocol error, unspecified" error message if the short message cannot be stored in the USIM and there is other short message storage available at the UE. If all the short message storage at the UE is already in use, the UE shall return "memory capacity exceeded".

References

3GPP TS 23.040 clause 9.2.3.10.

3GPP TS 23.038 clause 4.3

3GPP TS 34.108 clause 8.3.2.28.

16.2.5.3.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the USIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network.

There are 2 cases:

1) if the UE supports storing of short messages in the USIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "protocol error, unspecified";

2) if the UE supports storing of short messages in the USIM and not in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded".

NOTE: If the UE supports storing of short messages in the USIM and the ME, and storage in the ME is full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded". This case is not tested in this test.

#### 16.2.5.3.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the ME message store shall be empty;
  - the ME shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least two free records and one full record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated;
    - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

##### Test procedure

a) The SS delivers a Short Message of class 2 to the UE as specified in clause 16.2.1, step b).

b) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "OK" ("90 00").

c) Step a) is repeated.

d) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "memory problem" ("92 40").

e) The USIM simulator indicates if an attempt was made in steps a) and c) to store the messages and if the messages are stored according to the requirement.

##### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 3 | | <-- | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | | --> | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | | <-- | SECURITY MODE COMMAND | |
| 6 | | --> | SECURITY MODE COMPLETE | |
| 7 | | <-- | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 8 | | --> | CP-ACK | |
| 9 | ME | | | The ME shall correctly store the short message in a free record of EFSMS in the USIM, i.e.<br>- the ME shall use a free record<br>- the first byte of the record shall indicate "message received by UE from network"<br>- the TS-Service-Centre-Address shall be correctly stored<br>- the TPDU shall be identical to that sent by the SS<br>- bytes following the TPDU shall be set to "FF" |
| 10 | USIM | | | The USIM simulator returns the status response "OK" ("90 00"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 11 | | --> | CP-DATA | Contains RP-ACK RPDU. |
| 12 | | <-- | CP-ACK | |
| 13 | | <-- | RRC CONNECTION RELEASE | |
| 14 | | --> | RRC CONNECTION RELEASE COMPLETE | |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | | --> | SERVICE REQUEST | |
| 17 | | <-- | AUTHENTICATION AND CIPHERING REQUEST | |
| 18 | | --> | AUTHENTICATION AND CIPHERING RESPONSE | |
| 19 | | <-- | SECURITY MODE COMMAND | |
| 20 | | --> | SECURITY MODE COMPLETE | |
| 21 | | <-- | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 22 | | --> | CP-ACK | |
| 23 | ME | | | The ME shall attempt to store the short message in a free record of EFSMS in the USIM. |
| 24 | USIM | | | The USIM simulator returns the status response "memory problem" ("92 40"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 25 | | --> | CP-DATA | Contains RP-ERROR RPDU with error cause "protocol error, unspecified" if the UE supports storing of short messages in the ME, or error cause "memory capacity exceeded" if not. |
| 26 | | <-- | CP-ACK | |
| 27 | | <-- | RRC CONNECTION RELEASE | |
| 28 | | --> | RRC CONNECTION RELEASE COMPLETE | |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 2 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 2 | "1111 0010"B |

#### 16.2.5.3.5 Test requirements

After step 10 UE shall confirm that the short message is stored in the USIM and send CP-DATA containing RP-ACK RPDU.

After step 24 UE shall confirm that the short message cannot be stored in the USIM and send CP-DATA containing RP-ERROR RPDU. If UE supports storing of short message in the ME, the error cause of RP-ERROR RPDU shall be "protocol error, unspecified", and if not the error cause of RP-ERROR RPDU shall be "memory capacity exceeded"

### 16.2.5.4 Test of class 3 short messages

For further study.

## 16.2.6 Test of short message type 0 (R99 and REL-4 UE)

#### 16.2.6.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Packet Switched mode. It is highly recommended that the UE discards the contents of the short message type 0.

This test shall apply to all R99 and REL-4 UEs supporting receipt of short messages in PS mode.

#### 16.2.6.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but may discard its contents.

Note: It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME.

Reference(s)

3GPP TS 23.040, 9.2.3.9.

#### 16.2.6.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE should discard its contents.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the UE and the service centre.

#### 16.2.6.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in GMM-state "GMM-REGISTERED";

Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

The SS sends a type 0 message by using the method described in step a) of section 16.2.1 but with the TPDU described in this section.

Maximum Duration of Test

1 minute

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK TP-Protocol-Identifier (TP-PID). |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned0 |
| TP-OA | an international number coded E.164 |
| TP-PID | Type 0: "01000000"B |
| TP-DCS | default alphabet “0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

## 16.2.6a Test of short message type 0 (≥ REL-5 UE)

### 16.2.6a.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Packet Switched mode. The UE discards the contents of the short message type 0.

This test shall apply to all ≥ REL-5 UEs supporting receipt of short messages in PS mode.

### 16.2.6a.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

#### References

3GPP TS 23.040 9.2.3.2, 9.2.3.4, 9.2.3.7, 9.2.3.9, 9.2.3.10, 9.2.3.11, 9.2.3.16, 9.2.3.17, 9.2.3.23.

### 16.2.6a.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre. In addition service affecting restrictions could happen to the customer.

### 16.2.6a.4 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in GMM-state "GMM-REGISTERED";

the ME- and (U)SIM message store shall be empty.

#### Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

#### Foreseen Final State of UE

Idle, updated.

Test Procedure

a) The SS sends a type 0 short message by using the method described in step a) of clause 16.2.1 but with the TPDU described in this section.

b) The ME- and (U)SIM short message store shall be filled (for example by using the method of clause 16.2.3 test of the memory available notification).

c) The SS sends a type 0 short message as in step a).

Maximum Duration of Test

5 minutes

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |
| 14 | SS | | | The ME- and (U)SIM message store shall be filled (for example by using the method of 16.1.3). |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | SERVICE REQUEST | |
| 17 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 18 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS-DELIVER | "00"B |
| TP-MMS | more messages are waiting in SC | "0"B |
| TP-RP | no reply path | "0"B |
| TP-UDHI | TP-UD contains only the SM | "0"B |
| TP-SRI | no status report returned | "0"B |
| TP-OA | an international number coded E.164 | |
| TP-PID | Type 0: | "01000000"B |
| TP-DCS | default alphabet | “0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) | |
| TP-UDL | | 160 |
| TP-UD (140 octets) | text of message (160 characters) | |

#### 16.2.6a.5 Test requirements

After step 9 (ME- and (U)SIM message store not filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 13 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

After step 23 (ME- and (U)SIM message store filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 27 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

### 16.2.7 Test of the replace mechanism for SM type 1-7

#### 16.2.7.1 Definition

#### 16.2.7.2 Conformance requirement

On receipt of a short message, the UE shall check to see if the associated Protocol Identifier contains a Replace Short Message Type code. If such a code is present, then the UE will check the associated originating address (TP-OA) and replace any existing stored message having the same Protocol Identifier code and originating address with the new short message.

References

3GPP TS 23.040 clause 9.2.3.2, 9.2.3.9.

#### 16.2.7.3 Test purpose

This procedure verifies the correct implementation of the replace mechanism for Replace Short Messages.

#### 16.2.7.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Test procedure

a) Two different numbers n and m are drawn randomly between 1 and 7. Two different addresses for TP-Originating-Address (TPOA1 and TPOA2) are drawn.

b) The SS delivers a short message to the UE as specified in clause 16.2.1 step a). In the SMS-DELIVER TPDU, the TP-Protocol-Identifier parameter is "Replace Short Message Type n", the TP-Originating-Address is TPOA1, and the RP-Originating-Address is RPOA.

c) Step b) is repeated but with a different TP-Originating-Address (TPOA2), and different contents of TP-User-Data in the SMS-DELIVER TPDU. The other parameters are the same as in step b).

d)

e) Step c) is repeated but with the TP-Protocol-Identifier equal to "Replace Short Message Type m", and contents of TP-User-Data different from the former two messages. The other parameters are the same as in step c).

f) Step e) is repeated but the contents of TP-User-Data are different from that used in step e).

g) The SS prompts the operator to indicate the Short Messages stored in the UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |

| 61 | SS | | | Prompts the operator to indicate the Short Messages stored in the UE. Only the Short Messages delivered in step 7, 19 and 55 shall be retrievable and indicated |

Specific Message Contents

SMS-DELIVER TPDU

| Information element | CommentValue |
|---|---|
| TP-MMS | no more messages are waiting in SC "1"B |
| TP-PID | binary 01000xxx, xxx represents n resp. m (see test method description) |

#### 16.2.7.5 Test requirements

After step 61 only the Short Messages delivered in step 7, 19 and 55 shall be retrieved and indicated.

### 16.2.8 Test of the reply path scheme

#### 16.2.8.1 Definition

#### 16.2.8.2 Conformance requirement

When a replying UE receives an original mobile terminated short message it has:

- originating SME = TP-Originating Address in the SMS-DELIVER TPDU;
- original SC = RP-Originating Address in the RP-MT-DATA.

When submitting the reply mobile originated short message, the replying UE should use parameters as follows:

- TP-Destination Address in SMS-SUBMIT TPDU = originating SME;
- RP-Destination Address in RP-MO-DATA = original SC.

NOTE: Annex D of 3GPP TS 23.040 is only informative.

#### 16.2.8.3 Test purpose

This procedure verifies that the UE is able to send a Reply Short Message back to the correct originating SME even if in the meantime it receives another Short Message.

#### 16.2.8.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

Support for Short message MO/PP.

The value of timer TC1M.

Test procedure

a) The SS delivers a Short Message as specified in clause 16.2.1, step b) with TP-Reply-Path set to 1.

b) Step a) is repeated but with:
   - different TP-Originating-Address for the originating SME;
   - different RP-Originating-Address for the original SC; and
   - different message contents TP-User-Data.

c) UE sends the Reply Short Message corresponding to one of two received Short Messages (e.g. by means of the MMI).

d) step c) is repeated for the other Short Message.

Expected sequence

| Step | Direction | | Message | Comments |

Specific Message Contents

SMS-DELIVER TPDU

| Information element | Comment | Value |
|---|---|---|
| TP-MMS | no more messages are waiting in SC | "1"B |
| TP-RP | Reply Path exists | "1"B |

#### 16.2.8.5 Test requirements

After step 35 UE shall send the Reply Short Message corresponding to one of two previously received short messages.

After step 52 UE shall send the Reply Short Message corresponding to the other of two previously received short messages.

### 16.2.9 Multiple SMS mobile originated

#### 16.2.9.1 UE in idle mode

This test is not applicable for R99.

#### 16.2.9.2 UE in active mode

This test is not applicable for R99.

### 16.2.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message

#### 16.2.10.1 Definition

#### 16.2.10.2 Conformance requirements

An active UE shall be able to receive a short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is an SMS mobile originated call (SMS-SUBMIT or SMS-COMMAND) in progress.

References

3GPP TS 23.040 clause 3.1, 9.2.3.16.

3GPP TS 24.011 clause 3.2.

### 16.2.10.3 Test purpose

The test verifies that the UE is capable of simultaneously receiving a network originated SM whilst sending a mobile originated SM.

### 16.2.10.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MO/PP and MT/PP.

Support for state PDP-ACTIVE of session management.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS is configured to receive a mobile originated SM. In clause 16.2.2 steps a) and b) are repeated and, using the end of the CP-DATA message from the UE as a trigger, the SS sends a SM to the UE. In this case a new transaction identifier shall be used in the CP messages of SMS mobile terminated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send an SM |
| 2 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 3 | | | (void) | |
| 4 | | | (void) | |
| 5 | --> | | SERVICE REQUEST | |
| 6 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 7 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 11 | SS | | | The SS sends an SM to the UE triggered by the end of the CP-DATA message from the UE |
| 12 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 13 | UE | | | The UE shall correctly receive the SM and indicate that a message has arrived. In the MO case the UE shall send the CP-ACK message with transaction identifier assigned to this transfer. In the MT case the UE shall send a CP-ACK message and a CP-DATA message containing the RP-ACK RPDU. The transaction identifier shall be the same as chosen by the SS for the MT transfer. |
| NOTE: Time values for SS wait times are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | CommentValue |
|---|---|
| TP-UDL<br>TP-UD (140 octets) | as applicable<br>160 ASCII characters |

#### 16.2.10.5 Test requirements

After step 12 UE shall correctly receive the SM and indicate that a message has arrived.

## 16.3 Short message service cell broadcast

### 16.3.1 Definition

### 16.3.2 Conformance requirements

In idle mode, the UE has the ability to ignore repeated broadcasts of CBS messages already received (the message has not changed since it was last broadcast i.e. sequence number has not changed within the message's indicated geographical area);

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages in the Idle mode.

References

- 3GPP TS 23.041 clause 8.
- 3GPP TS 25.324 clause 11.

### 16.3.3 Test purpose

This test verifies that an UE supporting SMS-CB is able to receive SMS-CB messages and is able to ignore repeated broadcasts of CBS messages.

### 16.3.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters;
  - the SS provides a BCCH/CCCH to support the UE in idle mode;
  - periodic location updating is disabled.
- User Equipment:
  - the UE shall be in the idle updated state.

Related ICS/IXIT Statements

Support for short message transmission cell broadcast.

Test procedure

Three Cell Broadcast (CB) messages are sent by the SS on the CTCH with message codes 0,1,1 in serial number fields respectively.

NOTE: If the UE fails the test because of a failure to receive the message due to collision of CTCH and paging occasion, then the operator may re-run the test.

Expected sequence

Since the SMS-CB messages are sent continuously, a table is not applicable in this test.

Specific Message Contents:

Use the default parameter values for the system information block 1 with the same type specified in clause 6.1.0b of TS 34.108, with the following exceptions:

| | | |
|---|---|---|
| - CN domain identity | | PS |
| - CHOICE CN Type | | GSM-MAP |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | | 05 00H |

| - Period of CTCH allocation (N) | 2 |
| - CBS frame offset (K) | 0 |

Cell broadcast test message content

| Information element | Comment Value |
|---|---|
| Message Type | CBS Message "1"B (see 3GPP TS 25.324, clause 11.1) |
| Message ID | |
| Serial Number | |
| - Geographical scope | "01"B |
| - Message code | see test procedure "0000000000"B or "0000000001"B |
| - Update number | as applicable |
| Data Coding Scheme | Default alphabet, English "00000001"B |
| CB Data | max 1246 octets |

### 16.3.5 Test requirements

In consequence of test the UE shall ignore third message and store two messages.

## 16.3a Short message service cell broadcast Discontinuous Reception (DRX)

### 16.3a.1 Definition

### 16.3a.2 Conformance requirements

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages in the Idle mode.

In idle mode, the UE will enter CBS DRX mode based upon received Schedule Messages.

References

- 3GPP TS 25.324 clause 9.1.
- 3GPP TS 23.041 clause 8.

### 16.3a.3 Test purpose

This test verifies that a UE supporting SMS-CB and SMS-CB DRX is able to receive SMS-CB messages in DRX..

### 16.3a.4 Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters;
  - the SS provides a BCCH/CCCH to support the UE in idle mode;
  - Cell Broadcast Service DRX is enabled.
  - periodic location updating is disabled.
- User Equipment:
  - the UE shall be in the idle updated state.
  - the UE shall be configured, not to opt-out of presentation of Cell Broadcast messages with Message ID 4371 and 4379.

#### Related ICS/IXIT Statements

Support for short message transmission cell broadcast.

Support for short message transmission cell broadcast DRX.

#### Test procedure

a) The SS sends CELL BROADCAST SCHEDULE #1 message (1 CTCH-BS) on the CTCH.

b) The SS waits for 6 CTCH-BS after Step a), then sends CELL BROADCAST TEST #1 message (3 CTCH-BS), followed by CELL BROADCAST SCHEDULE #2 message (1 CTCH-BS). (Note 1)

c) The SS waits for 9 CTCH-BS after Step b), then sends CELL BROADCAST SCHEDULE#3 message (1 CTCH-BS), followed by CELL BROADCAST TEST #2 message (3 CTCH-BS). (Note 2)

d) The SS waits for 10 CTCH-BS after Step c), then sends CELL BROADCAST TEST #3 message (3 CTCH-BS). (Note 3)

NOTE 1: CELL BROADCAST TEST#1 and CELL BROADCAST SCHEDULE #2 are situated at the beginning of the Scheduling period referred to by CELL BROADCAST SCHEDULE #1.

NOTE 2: CELL BROADCAST SCHEDULE #3 and CELL BROADCAST TEST#2 and are situated in the middle of the Scheduling period referred to by CELL BROADCAST SCHEDULE #2.

NOTE 3: CELL BROADCAST TEST#3 is situated at the end of the Scheduling period referred to by CELL BROADCAST SCHEDULE #3.

[Editor's note: Handling of collision of CTCH and paging occasion is FFS.]

#### Expected sequence

## 16.4.3 Default message contents for SM-TP protocol

SMS DELIVER TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned"0"B |
| TP-OA | an international number coded E.164 |
| TP-PID | default"00000000"B |
| TP-DCS | default alphabet "00000000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) |
| TP-UDL | |
| TP-UD | max 140 octets |

SMS SUBMIT TPDU

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS SUBMIT | "01"B |
| TP-RD | SC shall accept same SMS-SUBMIT | "0"B |
| TP-VPF | TP-VP field not present | "00"B |
| TP-RP | no reply path | "0"B |
| TP-UDHI | TP-UD contains only the SM | "00"B |
| TP-SRR | no request of status report | "00"B |
| TP-MR | | |
| TP-DA | an international number coded E164 | |
| TP-PID | default | "00000000"B |
| TP-DCS | default alphabet | "00000000"B |
| TP-VP | | |
| TP-UDL | | |
| TP-UD | max 140 octets | |

SMS COMMAND TPDU

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS-COMMAND | "10"B |
| TP-UDHI | TP-UD contains only the SM | "00"B |
| TP-SRR | status report not requested | "0"B |
| TP-MR | | |
| TP-PID | default | "00000000"B |
| TP-CT | | |
| TP-MN | | |
| TP-DA | an international number coded E164 | |
| TP-CDL | | |
| TP-CD | | |

SMS STATUS REPORT TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-STATUS-REPORT"10"B |
| TP-MMS | no more messages "1"B |
| TP-SRQ | result of SMS-SUBMIT "0"B |
| TP-MR | |
| TP-RA | the destination address of the previous SM MO |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040, clause 9.2.3.11) |
| TP-DT | any legal value (cf. 3GPP TS 23.040, clause 9.2.3.13) |

# 17 Specific features

## 17.1 Test of autocalling restrictions

### 17.1.1 General

It is essential that all autocalling apparatus is prevented from continuously dialling a given number, to avoid machines repeatedly disturbing PSTN subscribers in error, or numerous repeat attempts to unobtainable numbers which cause waste of valuable network resources. Therefore autocalling restrictions are defined by TS 22.001.

The tests shall be performed using all of the call methods specified by the supplier in the IXIT statement TS 34.123-2. The supplier shall state any autocalling procedures implemented and how many times they can be repeated to a single number and the minimum re-attempt interval(s), i.e. the complete re-try schedule or algorithm with parameter values. The supplier shall further describe any automatic methods for making repeated calls to a single number. The supplier shall also state in the IXIT statement the number of B-party numbers that can be stored on the list of blacklisted numbers as described in TS 22.001, annex E.

For an external R-interface the supplier shall state in the IXIT statement the procedure for autocalling restrictions for that interface and the possible parameter settings for the number of times the LTE can make a re-attempt and the minimum accepted time between re-attempts accepted by the UE. The conditions for clearing the autocalling constraints shall be stated in the IXIT statement.

For external interfaces the LTE must be programmed so that it clearly attempts to violate the autocalling constraints.

For all the tests in this clause the call setup procedure uses the Generic Setup Procedure for Circuit Switched connection as specified in TS 34.108 clause 7. A Radio Access Bearer to set up shall be selected from one of the speech or CS data bearers within the capability of the UE as specified in the ICS statement. Unless otherwise indicated, this procedure shall only run to the transmission by the SS or UE of the SETUP message (CC).

### 17.1.2 Constraining the access to a single number (TS 22.001 category 3)

#### 17.1.2.1 Definition

This test checks that when an auto-dialled call to a B-party number fails due to a category 3 cause, only one retry to that number is permitted.

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

#### 17.1.2.2 Conformance requirement

A repeat call attempt may be made when a call attempt is unsuccessful for the reasons listed below (as defined in TS 24.008).

These reasons are classified in three major categories:

1. "Busy destination";
2. "Unobtainable destination - temporary";
3. "Unobtainable destination - permanent/long term".

NOTE: Cause values for each category are defined in TS 22.001, annex E.

The table below describes a repeat call restriction pattern to any B number. This pattern defines a maximum number (n) of call repeat attempts; when this number n is reached, the associated B number shall be blacklisted by the UE until a manual re-set at the UE is performed in respect of that B number. When a repeat attempt to any one B number fails, or is blacklisted, this does not prevent calls being made to other B numbers.

For the categories 1 and 2 above, n shall be 10; for category 3, n shall be 1.

| Call attempt | Minimum duration between call attempts |
|---|---|
| Initial call attempt | - |
| 1st repeat attempt | 5 s |
| 2nd repeat attempt | 1 min |
| 3rd repeat attempt | 1 min |
| 4th repeat attempt | 1 min |
| 5th repeat attempt | 3 min |
| . | |
| . | |
| nth repeat attempt | 3 min |

Reference:

3GPP TS 22.001 annex E.

17.1.2.3 Test purpose

To ensure the correct behaviour of the UE to TS 22.001 Category 3.

17.1.2.4 Method of test

Initial condition.

There shall be no numbers in the list of blacklisted numbers in the UE. The time set between the first re-attempt and the next re-attempt is set to the minimum value possible. The number of re-attempts is set to the lowest possible number, greater than 1, that is supported by the UE. The autocalling function is invoked for the B-party number to be used during the test.

Related ICS/IXIT Statement(s)

ICS: TBD.

IXIT: Description of auto calling management:

- selection of the auto calling;
- indication that the call failed and a re-try is attempted;
- indication that a call finally failed.

Test Procedure

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | "called number" entered |
| 2 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 3 | ← | | RELEASE COMPLETE | Cause value from category 3 of TS 22.001, Annex E. |
| 4 | ← | | RRC CONNECTION RELEASE | |
| 5 | → | | RRC CONNECTION RELEASE COMPLETE | The signalling link is released |
| 6 | | | | The UE is invoking the auto calling function. The time between step 4 and 7 must be minimum 5 sec. |
| 7 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 8 | ← | | RELEASE COMPLETE | Cause value from category 3 of TS 22.001, Annex E. |
| 9 | ← | | RRC CONNECTION RELEASE | |
| 10 | → | | RRC CONNECTION RELEASE COMPLETE | The main signalling link is released |
| 11 | UE | | | Clear the auto calling constraint after a minimum of 2 minutes from step 9. |

#### 17.1.2.5 Test requirements

The time between step 4 and 7 must be minimum 5 s.

No further call attempt shall be made after step 9.

### 17.1.3 Constraining the access to a single number (TS 22.001 categories 1 and 2)

#### 17.1.3.1 Definition

This test checks that when an auto-dialled call to a B-party number fails due to a category 2 cause, the time between of retries complies with the requirements, and the number of retries does not exceed that declared by the UE manufacturer, and is never more than 10.

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

#### 17.1.3.2 Conformance requirement

The UE must fulfil the requirements for category 1 and 2, see clause 17.1.2.2.

Reference:

3GPP TS 22.001 annex E.

#### 17.1.3.3 Test purpose

To ensure the correct behaviour of the UE to TS 22.001 Categories 1 and 2.

#### 17.1.3.4 Method of test

Initial condition

There shall be no numbers in the list of blacklisted numbers in the UE. The re-try scheme is set to give the shortest possible intervals between re-tries. The number of re-attempts is set to the maximum possible number (N), that is supported by the UE. The autocalling function is invoked for the B-party number to be used during the test.

Related ICS/IXIT Statement(s)

ICS: TBD

IXIT: Description of auto calling management:

- selection of the auto calling;
- indication that the call failed and a re-try is attempted;
- indication that a call finally failed.

Test Procedure

A, UE originated, generic call setup is performed up to the SETUP message. The SS then releases the establishment with a cause value from category 1 or 2 (TS 22.001, annex E).

The UE is continuously making new generic call setup attempts invoked by the auto calling function after each RRC CONNECTION RELEASE from the SS.

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | "called number" entered |
| 2 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 3 | ← | | RELEASE COMPLETE | Cause value from category 1 or 2 of TS 22.001, Annex E. This shall be chosen randomly, from both categories. Cause no. 27 shall be excluded if the UE has implemented in category 3 of TS 22.001, as declared in IXIT statement |
| 4 | ← | | RRC CONNECTION RELEASE | |
| 5 | | | | The UE is invoking the auto calling function. 1: At the first re-attempt the time between step 4 and 7 must be minimum 5 sec. 2: At the 2nd, 3rd and 4th re-attempt the time between step 4 and 7 must be minimum 1 min. 3: At the 5th to 10th re-attempt the time between step 4 and 7 must be minimum 3 min. |
| 6 | → | | RRC CONNECTION RELEASE COMPLETE | The signalling link is released |
| 7 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 8 | ← | | RELEASE COMPLETE | Cause value from category 1 or 2 of TS 22.001, Annex E. This shall be chosen randomly, from both categories. Cause no. 27 shall be excluded if the UE has implemented in category 3 of TS 22.001, as declared in PIXIT statement |
| 9 | ← | | RRC CONNECTION RELEASE | |
| 10 | → | | RRC CONNECTION RELEASE COMPLETE | The signalling link is released. |
| 11 | | | | The auto calling function shall repeat step 5 to 9 (N-1) times. The UE shall not make more than maximum 10 re-attempts. |
| 12 | UE | | | Clear the auto calling constraint by manual intervention after a minimum of 4 minutes from step 11. Following the final completion of step 11 the UE initiate a call prior to manual intervention. |

#### 17.1.3.5 Test requirements

1: At the first re-attempt the time between step 4 and 7 must be minimum 5 sec. 2: At the 2nd, 3rd and 4th re-attempt the time between step 4 and 7 must be minimum 1 min. 3: At the 5th to 10th re-attempt the time between step 4 and 7 must be minimum 3 min.

The UE shall not make more than maximum 10 re-attempts.

### 17.1.4 Behaviour of the UE when its list of blacklisted numbers is full

#### 17.1.4.1 Definition and applicability

This tests that the UE does not allow autocalling when its list of blacklisted numbers is full.

The number of B-party numbers that can be stored in the list of blacklisted numbers, as stated in the IXIT statement, is M.

This test shall only apply to UE that are capable of autocalling more than M B-party numbers.

#### 17.1.4.2 Conformance requirement

The number of B numbers that can be held in the blacklist is at the manufacturers discretion but there shall be at least 8. However, when the blacklist is full the UE shall prohibit further automatic call attempts to any one number until the blacklist is manually cleared at the UE in respect of one or more B numbers.

Reference

TS 22.001, Annex E.

#### 17.1.4.3 Test purpose

To ensure the correct behaviour of the UE when its list of blacklisted numbers is full.

#### 17.1.4.4 Method of test

Initial condition

The list of blacklisted numbers, in the UE, shall be full. This may be achieved as described in the procedure in clause 17.1.2, applied to M B-party numbers.

Related ICS/IXIT Statement(s)

PICS: TBD.

PIXIT: Description of auto calling management:

- selection of the auto calling;
- indication that the call failed and a re-try is attempted;
- indication that a call finally failed.

Test Procedure

The autocalling function is invoked for a B-party number that is not in the list of blacklisted numbers.

Clear the autocalling constraint by manual intervention after a minimum of 10 s.

#### 17.1.4.5 Test requirements

The UE must not initiate a call.

## 17.2 Location Services

This subclause contains test cases for Location Services (LCS).

### 17.2.1 Default conditions during LCS tests

#### 17.2.1.1 Default system information

Default system information, as specified in TS 34.108 subclause 6.1, is broadcasted. SIB15/SIB15.x are not broadcasted unless otherwise stated in the specific test cases.

#### 17.2.1.2 Simulated A-GPS and A-GNSS environment

During A-GPS and A-GNSS tests the SS shall generate satellite signals that are of a sufficient number and strength not to prevent the UE from responding to a positioning request with a valid measurement response. Any assistance data provided during these tests shall be consistent with the satellite signals generated during these tests.

It is considered that six satellite signals with the level of the simulated satellites all at -125 dBm +/- 6 dB should be suitable, however this does not imply any conformance requirements on the UE.

Suitable GPS and GNSS scenarios together with associated assistance data are defined in TS 34.108 clause 10.7.

The accuracy of the GPS time-of-week and/or GANSS time-of-day in the provided assistance data shall be within +/- 2 seconds relative to the GPS and/or GANSS time in the system simulator.

During A-GNSS signalling tests, the SS shall generate all the UE supported GNSS satellite signals.

#### 17.2.1.2.1 A-GNSS sub-test cases

The A-GNSS signalling test cases may include several sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined in the Table below. The detailed assistance data depend on the particular sub-test case as defined in 17.2.1.4.

**Sub-Test Case Number Definition**

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: "A-GPS" includes Modernized GPS if supported by the UE. | |

### 17.2.1.3 A-GPS assistance data sets

This section defines the assistance data sets supplied by the SS in A-GPS test cases.

Throughout this section, "adequate assistance data" means the assistance data used in test cases where it is expected that a UE supporting A-GPS will be able to perform the requested positioning operation using the supplied assistance data, and "inadequate assistance data" is the assistance data used in test cases that expect that the UE will be unable to perform the requested operation. The values of all the fields in all cases are defined in TS 34.108 clause 10.7.

#### 17.2.1.3.1 Adequate assistance data for UE-based A-GPS

For UE-based test cases requiring adequate assistance data, the IE "UE positioning GPS assistance data" is spread across two separate MEASUREMENT CONTROL messages, and set as follows:

First MEASUREMENT CONTROL MESSAGE:

| | |
|---|---|
| - UE positioning GPS assistance data | |
| - UE positioning GPS reference time | |
| - GPS week | Set according to 17.2.1.2 |
| - GPS TOW msec | Set according to 17.2.1.2 |
| - UTRAN GPS reference time | Not present |
| - SFN-TOW uncertainty | Not present |
| - $T_{UTRAN-GPS}$ drift rate | Not present |
| - GPS TOW assist | Not present |
| - UE positioning GPS reference UE position | Set according to 17.2.1.2 |
| - UE positioning GPS DGPS corrections | Not present |
| - UE positioning GPS navigation model | |
| - Satellite information | For satellites 1-3 |
| - SatID | Set according to 17.2.1.2 |
| - Satellite status | NS NN |
| - GPS ephemeris and clock corr. param. | Set according to 17.2.1.2 |
| - UE positioning GPS ionospheric model | Set according to 17.2.1.2 |
| - UE positioning GPS UTC model | Not present |
| - UE positioning GPS almanac | Not present |
| - UE positioning GPS acquisition assistance | Not present |
| - UE positioning GPS real-time integrity | Not present |

Second MEASUREMENT CONTROL message:

| | |
|---|---|
| - UE positioning GPS assistance data | |
| - UE positioning GPS reference time | Not present |
| - UE positioning GPS reference UE position | Not present |
| - UE positioning GPS DGPS corrections | Not present |
| - UE positioning GPS navigation model | |
| - Satellite information | For satellites 4-6 |
| - SatID | Set according to 17.2.1.2 |
| - Satellite status | NS NN |
| - GPS ephemeris and clock corr. param. | Set according to 17.2.1.2 |
| - UE positioning GPS ionospheric model | Not present |
| - UE positioning GPS UTC model | Not present |
| - UE positioning GPS almanac | Not present |
| - UE positioning GPS acquisition assistance | Not present |
| - UE positioning GPS real-time integrity | Not present |

### 17.2.1.3.2 Inadequate assistance data for UE-based A-GPS

For UE-based test cases requiring inadequate assistance data, the IE "UE positioning GPS assistance data" is set to "Not present" in the MEASUREMENT CONTROL message.

### 17.2.1.3.3 Adequate assistance data for UE-assisted A-GPS

For UE-assisted test cases requiring adequate assistance data, the IE "UE positioning GPS assistance data" is set as follows for the first MEASUREMENT CONTROL message:

| | |
|---|---|
| - UE positioning GPS assistance data | |
| - UE positioning GPS reference time | |
| - GPS week | Set according to 17.2.1.2 |
| - GPS TOW msec | Set according to 17.2.1.2 |
| - UTRAN GPS reference time | Not present |
| - SFN-TOW uncertainty | Not present |
| - $T_{UTRAN-GPS}$ drift rate | Not present |
| - GPS TOW assist | Not present |
| - UE positioning GPS reference UE position | Not present |
| - UE positioning GPS DGPS corrections | Not present |
| - UE positioning GPS navigation model | Not present |
| - UE positioning GPS ionospheric model | Not present |
| - UE positioning GPS UTC model | Not present |
| - UE positioning GPS almanac | Not present |
| - UE positioning GPS acquisition assistance | |
| - GPS TOW msec | Set according to 17.2.1.2 |
| - UTRAN GPS reference time | Not present |
| - Satellite information | Set according to 17.2.1.2 |
| - UE positioning GPS real-time integrity | Not present |

If the UE requests further assistance data, the SS sends subsequent MEASUREMENT CONTROL messages containing the assistance data fields requested by the UE that are available in the SS as specified in TS 34.108 clause 10.7 and in clause 17.2.1.3.5.

### 17.2.1.3.4 Inadequate assistance data for UE-assisted A-GPS

For UE-assisted test cases requiring inadequate assistance data, the IE "UE positioning GPS assistance data" is set to "Not present" in the MEASUREMENT CONTROL message.

### 17.2.1.3.5 Response to assistance data requests from UE

If the SS needs to send assistance data in response to a request for additional assistance data from the UE, or in response to an MO-LR request for assistance data, the IE "UE positioning GPS assistance data" is set as follows:

| | |
|---|---|
| - UE positioning GPS assistance data<br>- UE positioning GPS reference time | <br>Set according to 17.2.1.2 if requested by the UE |
| - GPS week | Set according to 17.2.1.2 |
| - GPS TOW msec | Set according to 17.2.1.2 |
| - UTRAN GPS reference time | Not present |
| - SFN-TOW uncertainty | Not present |
| - $T_{UTRAN-GPS}$ drift rate | Not present |
| - GPS TOW assist | Not present |
| - UE positioning GPS reference UE position<br><br>- UE positioning GPS DGPS corrections<br>- UE positioning GPS navigation model | Set according to 17.2.1.2 if requested by the UE<br>Not sent<br>Set according to 17.2.1.2 if requested by the UE |
| - Satellite information | For satellites 1-6 |
| - SatID | Set according to 17.2.1.2 |
| - Satellite status | NS NN |
| - GPS ephemeris and clock corr. param. | Set according to 17.2.1.2 |
| - UE positioning GPS ionospheric model<br><br>- UE positioning GPS UTC model<br>- UE positioning GPS almanac | Set according to 17.2.1.2 if requested by the UE<br>Not sent<br>Set according to 17.2.1.2 if requested by the UE |
| - WNa | Set according to 17.2.1.2 |
| - Satellite information | Set according to 17.2.1.2 |
| - SV Global Health | Not present |
| - UE positioning GPS acquisition assistance | Set according to 17.2.1.2 if requested by the UE |
| - GPS TOW msec | Set according to 17.2.1.2 |
| - UTRAN GPS reference time | Not present |
| - Satellite information | Set according to 17.2.1.2 |
| - UE positioning GPS real-time integrity | Not sent |

If the UE requests the GPS navigation model then the SS provides navigation model satellite information for at most three satellites in any one MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY message; additional satellites are sent in subsequent MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY messages.

If the UE requests the GPS almanac then the SS provides almanac information spread across at least two MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY messages.

If the UE requests both GPS navigation model and almanac then the SS provides them in different MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY messages.

### 17.2.1.4 A-GNSS assistance data sets

This section defines the assistance data sets supplied by the SS in A-GNSS test cases. For A-GNSS sub-test cases which include the GPS L1 C/A signal, the A-GPS assistance data as defined in clause 17.2.1.3 apply.

Throughout this section, “adequate assistance data” means the assistance data used in test cases where it is expected that a UE supporting A-GNSS will be able to perform the requested positioning operation using the supplied assistance data, and “inadequate assistance data” is the assistance data used in test cases that expect that the UE will be unable to perform the requested operation. The values of all the fields in all cases are defined in 3GPP TS 37.571-5.

#### 17.2.1.4.1 Adequate assistance data for UE-based A-GNSS

For UE-based GNSS test cases requiring adequate assistance data, the IE “UE positioning GANSS assistance data” is spread across one or more (dependent on the sub-test) separate MEASUREMENT CONTROL messages, and set as follows:

17.2.1.4.1.1 Sub-Test 1

First MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | Not present |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | |
| - GANSS Day | Set according to 17.2.1.2 |
| - GANSS TOD | Set according to 17.2.1.2 |
| - GANSS TOD Uncertainty | Set according to 17.2.1.2 |
| - GANSS Time ID | 2 (GLONASS) |
| - UTRAN GANSS reference time | Not present |
| - $T_{UTRAN-GANSS}$ drift rate | Not present |
| - UE positioning GANSS reference UE position | Set according to 17.2.1.2 |
| - UE positioning GANSS ionospheric model | Not present |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | 3 (GLONASS) |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Not present |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Not present |
| - UE positioning GANSS additional navigation models | Set according to 17.2.1.2 |
| - Non-Broadcast Indication | Not present |
| - Satellite information | For satellites 1-M |
| - GANSS additional clock models | Model-4 |
| - GANSS additional orbit models | Model-4 |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | Not present |
| - UE positioning GANSS almanac | Not present |
| - UE positioning GANSS UTC model | Not present |
| - UE positioning GANSS additional UTC models | Not present |
| - UE positioning GANSS auxiliary information | Set according to 17.2.1.2 |
| - GANSS-ID-3 | |
| - Aux Info List | For satellites 1-M |

17.2.1.4.1.2 Sub-Test 2

First MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | Not present |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | |
| - GANSS Day | Set according to 17.2.1.2 |
| - GANSS TOD | Set according to 17.2.1.2 |
| - GANSS TOD Uncertainty | Set according to 17.2.1.2 |
| - GANSS Time ID | Not present |
| - UTRAN GANSS reference time | Not present |
| - $T_{UTRAN-GANSS}$ drift rate | Not present |
| - UE positioning GANSS reference UE position | Set according to 17.2.1.2 |
| - UE positioning GANSS ionospheric model | Set according to 17.2.1.2 |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | Not present |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Not present |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Set according to 17.2.1.2 |
| - Non-Broadcast Indication | Not present |
| - Satellite information | For satellites 1-N |
| - GANSS clock model | Model-1 |
| - GANSS orbit model | Model-1 |
| - UE positioning GANSS additional navigation models | Not present |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | Not present |
| - UE positioning GANSS almanac | Not present |
| - UE positioning GANSS UTC model | Not present |
| - UE positioning GANSS additional UTC models | Not present |
| - UE positioning GANSS auxiliary information | Not present |

Second MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | Not present |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | Not present |
| - UE positioning GANSS reference UE position | Not present |
| - UE positioning GANSS ionospheric model | Not present |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | Not present |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Not present |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Set according to 17.2.1.2 |
| - Non-Broadcast Indication | Not present |
| - Satellite information | For satellites (N+1) – M |
| - GANSS clock model | Model-1 |
| - GANSS orbit model | Model-1 |
| - UE positioning GANSS additional navigation models | Not present |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | Not present |
| - UE positioning GANSS almanac | Not present |
| - UE positioning GANSS UTC model | Not present |
| - UE positioning GANSS additional UTC models | Not present |
| - UE positioning GANSS auxiliary information | Not present |

17.2.1.4.1.3 Sub-Test 3

First MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | As defined in 17.2.1.3.1, First Measurement Control Message |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | Not present |
| - UE positioning GANSS reference UE position | Not present |
| - UE positioning GANSS ionospheric model | Not present |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | 1 (Modernized GPS) |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Not present |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Not present |
| - UE positioning GANSS additional navigation models | Not present |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | Not present |
| - UE positioning GANSS almanac | Not present |
| - UE positioning GANSS UTC model | Not present |
| - UE positioning GANSS additional UTC models | Not present |
| - UE positioning GANSS auxiliary information | |
| - GANSS-ID-1 | |
| - Aux Info List | For satellites 1-3 |

Second MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | As defined in 17.2.1.3.1, Second Measurement Control Message |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | Not present |
| - UE positioning GANSS reference UE position | Not present |
| - UE positioning GANSS ionospheric model | Not present |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | 1 (Modernized GPS) |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Not present |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Not present |
| - UE positioning GANSS additional navigation models | Not present |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | Not present |
| - UE positioning GANSS almanac | Not present |
| - UE positioning GANSS UTC model | Not present |
| - UE positioning GANSS additional UTC models | Not present |
| - UE positioning GANSS auxiliary information | |
| - GANSS-ID-1 | |
| - Aux Info List | For satellites 4-6 |

17.2.1.4.1.4 Sub-Test 4

First MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | As defined in 17.2.1.3.1, First Measurement Control Message |
| **UE positioning GANSS assistance data** | Not present |

Second MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | As defined in 17.2.1.3.1, Second Measurement Control Message |
| - UE positioning GPS UTC model | Set according to 17.2.1.2. |
| **UE positioning GANSS assistance data** | Not present |

Third MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | Not present |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | Not present |
| - UE positioning GANSS reference UE position | Not present |
| - UE positioning GANSS ionospheric model | Not present |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | 3 (GLONASS) |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Set according to 17.2.1.2 |
| - GANSS Time Model | |
| - GNSS_TO_ID | 0 (GPS) |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Not present |
| - UE positioning GANSS additional navigation models | Set according to 17.2.1.2 |
| - Non-Broadcast Indication | Not present |
| - Satellite information | For satellites 1-M |
| - GANSS additional clock models | Model-4 |
| - GANSS additional orbit models | Model-4 |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | Not present |
| - UE positioning GANSS almanac | Not present |
| - UE positioning GANSS UTC model | Not present |
| - UE positioning GANSS additional UTC models | Not present |
| - UE positioning GANSS auxiliary information | Set according to 17.2.1.2 |
| - GANSS-ID-3 | |
| - Aux Info List | For satellites 1-M |

#### 17.2.1.4.2 Inadequate assistance data for UE-based A-GNSS

For UE-based test cases requiring inadequate assistance data, the IE “UE positioning GPS assistance data” and “UE positioning GANSS assistance data” is set to “Not present” in the MEASUREMENT CONTROL message.

#### 17.2.1.4.3 Adequate assistance data for UE-assisted A-GNSS

For UE-assisted test cases requiring adequate assistance data, the IEs “UE positioning GPS assistance data” and “UE positioning GANSS assistance data” are set as follows:

17.2.1.4.3.1 Sub-Test 1

MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | Not present |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | |
| - GANSS Day | Set according to 17.2.1.2 |
| - GANSS TOD | Set according to 17.2.1.2 |
| - GANSS TOD Uncertainty | Set according to 17.2.1.2 |
| - GANSS Time ID | 2 (GLONASS) |
| - UTRAN GANSS reference time | Not present |
| - $T_{UTRAN-GANSS}$ drift rate | Not present |
| - UE positioning GANSS reference UE position | Not present |
| - UE positioning GANSS ionospheric model | Not present |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |

| - UE positioning GANSS UTC model | Not present |
| - UE positioning GANSS additional UTC models | Not present |
| - UE positioning GANSS auxiliary information | Set according to 17.2.1.2 |
| - GANSS-ID-1 | |
| - Aux Info List | For satellites 1-6 |

17.2.1.4.3.3 Sub-Test 4

MEASUREMENT CONTROL MESSAGE:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | As defined in 17.2.1.3.3 |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | Not present |
| - UE positioning GANSS reference UE position | Not present |
| - UE positioning GANSS ionospheric model | Not present |
| - UE positioning GANSS additional ionospheric Model | Not present |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | 3 (GLONASS) |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Not present |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Not present |
| - UE positioning GANSS additional navigation models | Not present |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | |
| - GANSS Signal ID | Not present |
| - Satellite Information | For satellites 1-M |
| - Extra Doppler | Set according to 17.2.1.2 |
| - Azimuth and Elevation | Set according to 17.2.1.2 |
| - UE positioning GANSS auxiliary information | Set according to 17.2.1.2 |
| - GANSS-ID-3 | |
| - Aux Info List | For satellites 1-M |

If the UE requests further assistance data, the SS sends subsequent MEASUREMENT CONTROL messages containing the assistance data fields requested by the UE that are available in the SS as specified in TS 34.108 clause 10.7 and in clause 17.2.1.4.5.

#### 17.2.1.4.4 Inadequate assistance data for UE-assisted A-GNSS

For UE-assisted test cases requiring inadequate assistance data, the IEs "UE positioning GPS assistance data" and "UE positioning GANSS assistance data" are set to "Not present" in the MEASUREMENT CONTROL message.

#### 17.2.1.4.5 Response to assistance data requests from UE

If the SS needs to send assistance data in response to a request for additional assistance data from the UE, or in response to an MO-LR request for assistance data, the IEs "UE positioning GPS assistance data" and "UE positioning GANSS assistance data" are set as follows:

| Information Element | Value/Remark |
|---|---|
| **UE positioning GPS assistance data** | Set according to 17.2.1.3.5 |
| - UE positioning GPS UTC model | Set according to 17.2.1.2 |
| **UE positioning GANSS assistance data** | |
| - UE positioning GANSS reference time | Set according to 17.2.1.2 |
| - GANSS Day | Set according to 17.2.1.2 |
| - GANSS TOD | Set according to 17.2.1.2 |
| - GANSS TOD Uncertainty | Set according to 17.2.1.2 |
| - GANSS Time ID | Set according to 17.2.1.2 |
| - UTRAN GANSS reference time | Not present |
| - $T_{UTRAN-GANSS}$ drift rate | Not present |
| - UE positioning GANSS reference UE position | Set according to 17.2.1.2 |
| - UE positioning GANSS ionospheric model | Set according to 17.2.1.2 |
| - UE positioning GANSS additional ionospheric Model | Set according to 17.2.1.2 |
| - UE positioning GANSS Earth orientation Parameters | Not present |
| - GANSS Generic Assistance Data | |
| - GANSS ID | Set according to 17.2.1.2 |
| - UE positioning GANSS SBAS ID | Not present |
| - GANSS Time Models | Set according to 17.2.1.2 |
| - GANSS Time Model | Set according to 17.2.1.2 |
| - GNSS_TO_ID | Set according to 17.2.1.2 |
| - UE positioning DGANSS corrections | Not present |
| - UE positioning GANSS navigation model | Set according to 17.2.1.2 |
| - UE positioning GANSS additional navigation models | Set according to 17.2.1.2 |
| - UE positioning GANSS real-time integrity | Not present |
| - UE positioning GANSS data bit assistance | Not present |
| - UE positioning GANSS reference measurement information | Set according to 17.2.1.2 |
| - GANSS Signal ID | Set according to 17.2.1.2 |
| - Satellite Information | Set according to 17.2.1.2 |
| - Extra Doppler | Set according to 17.2.1.2 |
| - Azimuth and Elevation | Set according to 17.2.1.2 |
| - UE positioning GANSS auxiliary information | Set according to 17.2.1.2 |

If the UE requests the navigation model Model-1, Model-2, or Model-3 then the SS provides navigation model satellite information for at most three satellites in any one MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY message; additional satellites are sent in subsequent MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY messages.

If the UE requests the GANSS almanac then the SS provides almanac information spread across at least two MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY messages.

If the UE requests both navigation model and almanac then the SS provides them in different MEASUREMENT CONTROL or ASSISTANCE DATA DELIVERY messages.

## 17.2.2 Assisted GPS Network Induced Tests

### 17.2.2.1 LCS Network Induced location request/ UE-Based GPS/ Emergency Call / with USIM

#### 17.2.2.1.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities.

17.2.2.1.2 Conformance requirements

1) A MM connection for an emergency call may be established in all states of the mobility management sublayer which allow MM connection establishment for a normal originating call.

   When a user requests an emergency call establishment the UE will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment.

2) Having entered the "MM connection pending" state, upon MM connection establishment, the call control entity of the UE sends a setup message to its peer entity. This setup message is

   - a SETUP message, if the call to be established is a basic call; and
   - an EMERGENCY SETUP message, if the call to be established is an emergency call.

3) If the IE "UE positioning GPS reference time" is included, the UE shall:

   1> store the IE "GPS Week" in "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as the current GPS week;

   1> store the IE "GPS TOW msec" in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as an estimate of the GPS Time-of-Week at the time of reception of the complete message containing the IE "GPS TOW msec";

   NOTE: The UE does not need to apply any compensation on the GPS Time-of-Week.

4) If the IE "UE positioning GPS reference UE position" is included, the UE shall:

   1> store this IE in the IE "UE positioning GPS reference UE position" in variable UE_POSITIONING_GPS_DATA; and

   1> use it as a priori knowledge of the approximate location of the UE.

5) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

      3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

         4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

         4> if the IE "GPS timing of Cell wanted" is set to FALSE:

            5> include the IE "GPS TOW msec".

         4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

            5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

               6> if the UE has been able to calculate a 3-dimensional position:

                  7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

               6> if the UE has not been able to calculate a 3-dimensional position:

                  7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

         4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

            5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

Reference(s):

- Conformance requirement 1: TS 24.008 clause 4.5.1.5.
- Conformance requirement 2: TS 24.008, clause 5.2.1.
- Conformance requirement 3: TS 25.331, clause 8.6.7.19.3.7.
- Conformance requirement 4: TS 25.331, clause 8.6.7.19.3.8.
- Conformance requirement 5: TS 25.331, clause 8.6.7.19.1b.

#### 17.2.2.1.3 Test Purpose

To verify when an emergency call is initiated by a UE with a USIM, and the network performs a location request using the RRC measurement control procedure by sending Measurement Control message , then the UE respond with a Measurement Report containing UE location.

#### 17.2.2.1.4 Method of Test

##### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:
  - the UE is in state "MM idle" with valid TMSI and CKSN.

##### Related PICS/PIXIT Statements

- Emergency speech call yes/no
- UE Based Network Assisted GPS

##### Test procedure

The UE is made to initiate an emergency call.

After the call has been through-connected in both directions, the SS orders an A-GPS positioning measurement using two MEASUREMENT CONTROL messages. The last MEASUREMENT CONTROL message orders periodical reporting by sending a MEASUREMENT CONTROL message requesting periodical measurement reporting (1 report, interval 64s).

The UE then performs positioning measurements, calculates "UE Positioning Position Estimate Info" and responds with this in the RRC message MEASUREMENT REPORT.

Finally the SS clears the call.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The "emergency number" is entered. Number shall be one programmed in test USIM $EF_{ECC}$ (Emergency Call Codes), ref. 34.108 clause 8.3.2.21. |
| 2 | --> | | | UE establishes RRC procedure for emergency call.<br>Establishment cause: Emergency Call<br>SS checks that the UE capability includes A-GPS UE based positioning measurement |
| 3 | --> | | CM SERVICE REQUEST | The CM service type IE indicates "emergency call establishment". |
| 4 | <-- | | AUTHENTICATION REQUEST | IE Authentication Parameter AUTN shall be present in the message. |
| 5 | --> | | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 6 | | | | SS starts security procedure. |
| 7 | --> | | EMERGENCY SETUP | If the Bearer capability IE is not included the default UMTS AMR speech version shall be assumed. |
| 8 | <-- | | CALL PROCEEDING | |
| 9 | <-- | | ALERTING | |
| 10 | <-- | | | SS sets up the radio bearer with the rate indicated by the EMERGENCY SETUP message. |
| 11 | <-- | | CONNECT | |
| 12 | --> | | CONNECT ACKNOWLEDGE | |
| 13 | UE | | | The DTCH is through connected in both directions. |
| 14 | <- | | MEASUREMENT CONTROL | |
| 15 | <- | | MEASUREMENT CONTROL | |
| 16 | --> | | MEASUREMENT REPORT | |
| 17 | <-- | | DISCONNECT | SS disconnects the call and associated radio bearer. |

Specific Message Contents

MEASUREMENT CONTROL (Step 14):

| Information element | Value/remark |
|---|---|
| **Measurement Information Elements** | |
| Measurement Identity | 10 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement report transfer mode | Acknowledged mode RLC |
| - Periodical reporting / Event trigger reporting mode | Periodical reporting |
| Additional Measurements List | Not present |
| CHOICE *Measurement type* | UE positioning measurement |
| - UE positioning measurement | |
| - UE positioning reporting quantity | |
| - Method type | UE based |
| - Positioning methods | GPS |
| - Response time | 128 |
| - Horizontal accuracy | 127 |
| - Vertical accuracy | 127 |
| - GPS timing of cell wanted | FALSE |
| - Multiple sets | FALSE |
| - Additional assistance data request | FALSE |
| - Environmental characterization | Not present |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE *Reporting criteria* | |
| - No reporting | |
| - UE pos OTDOA assistance data for UE-assisted | Not present |
| - UE pos OTDOA assistance data for UE-based | Not present |
| - UE positioning GPS assistance data | Set as specified for the first MEASUREMENT CONTROL message for “Adequate assistance data for UE-based A-GPS” in 17.2.1.3.1 |
| **Physical Channel Information Elements** | |
| DPCH compressed mode status info | Not present |

MEASUREMENT CONTROL (Step 15):

| Information element | Value/remark |
|---|---|
| **Measurement Information Elements** | |
| Measurement Identity | 10 |
| Measurement Command | Modify |
| Measurement Reporting Mode | |
| - Measurement report transfer mode | Acknowledged mode RLC |
| - Periodical reporting / Event trigger reporting mode | Periodical reporting |
| Additional Measurements List | Not present |
| CHOICE *Measurement type* | UE positioning measurement |
| - UE positioning measurement | |
| - UE positioning reporting quantity | |
| - Method type | UE based |
| - Positioning methods | GPS |
| - Response time | 128 |
| - Horizontal accuracy | 127 |
| - Vertical accuracy | 127 |
| - GPS timing of cell wanted | FALSE |
| - Multiple sets | FALSE |
| - Additional assistance data request | FALSE |
| - Environmental characterization | Not present |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE *Reporting criteria* | Periodical reporting criteria |
| - Amount of reporting | 1 |
| - Reporting interval | 64000 |
| - UE pos OTDOA assistance data for UE-assisted | Not present |
| - UE pos OTDOA assistance data for UE-based | Not present |
| - UE positioning GPS assistance data | Set as specified for the second MEASUREMENT CONTROL message for "Adequate assistance data for UE-based A-GPS" in 17.2.1.3.1 |
| **Physical Channel Information Elements** | |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 16):

| Information element | Value/remark |
|---|---|
| **Measurement Information Elements** | |
| Measurement Identity | 10 |
| Measured Results | |
| - CHOICE *Measurement* | UE positioning measured results |
| - UE positioning measured results | |
| - UE positioning OTDOA measured results | Not present |
| - UE positioning position estimate info | |
| - CHOICE *Reference time* | GPS reference time only |
| - GPS TOW msec | Not checked |
| - CHOICE *Position estimate* | One of 'Ellipsoid point with uncertainty Circle' or 'Ellipsoid point with uncertainty Ellipse' or 'Ellipsoid point with altitude and uncertainty Ellipsoid' |
| - UE positioning GPS measured results | Not present |
| - UE positioning error | Not present |
| Measured Results on RACH | Not present |
| Additional Measured Results | Not present |
| Event Results | Not present |

17.2.2.1.5 Test requirements

After step 12 the UE shall have through connected the DTCH in both directions.

After step 15 the UE shall respond with a MEASUREMENT REPORT message.

## 17.2.2.2 LCS Network Induced location request/ UE-Based GPS/ Emergency Call / without USIM

### 17.2.2.2.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities.

### 17.2.2.2.2 Conformance requirements

1) A MM connection for an emergency call may be established in all states of the mobility management sublayer which allow MM connection establishment for a normal originating call.

   When a user requests an emergency call establishment the UE will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment.

   Normally, the UE will be identified by an IMSI or a TMSI. However, if none of these identifiers is available in the UE, then the UE shall use the IMEI for identification purposes.

2) As a serving network option, emergency calls may be established without the network having to apply the security mode procedure as defined in TS 24.008.

   The following are the only cases where the "security procedure not applied" option may be used:

   a) Authentication is impossible because the USIM is absent.

3) Having entered the "MM connection pending" state, upon MM connection establishment, the call control entity of the UE sends a setup message to its peer entity. This setup message is

   - a SETUP message, if the call to be established is a basic call; and
   - an EMERGENCY SETUP message, if the call to be established is an emergency call.

4) If the IE "UE positioning GPS reference time" is included, the UE shall:

   1> store the IE "GPS Week" in "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as the current GPS week;

   1> store the IE "GPS TOW msec" in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as an estimate of the GPS Time-of-Week at the time of reception of the complete message containing the IE "GPS TOW msec";

   NOTE: The UE does not need to apply any compensation on the GPS Time-of-Week.

5) If the IE "UE positioning GPS reference UE position" is included, the UE shall:

   1> store this IE in the IE "UE positioning GPS reference UE position" in variable UE_POSITIONING_GPS_DATA; and

   1> use it as a priori knowledge of the approximate location of the UE.

6) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

      3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

         4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

         4> if the IE "GPS timing of Cell wanted" is set to FALSE:

            5> include the IE "GPS TOW msec".

         4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

Reference(s):

- Conformance requirement 1: TS 24.008 clause 4.5.1.5, TS 22.101 clause 8.
- Conformance requirement 2: TS 33.102, clause 6.4.9.2.
- Conformance requirement 3: TS 24.008, clause 5.2.1.

#### 17.2.2.2.3 Test Purpose

To verify when an emergency call is initiated by a UE in the "MM idle, no IMSI" state (no USIM inserted) and the network performs a location request using the RRC measurement control procedure by sending Measurement Control message , then the UE respond with a Measurement Report containing UE location.

#### 17.2.2.2.4 Method of Test

##### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:
  - the UE is in MM-state "MM idle, no IMSI", no USIM inserted.

##### Related PICS/PIXIT Statements

- Emergency speech call yes/no
- UE Based Network Assisted GPS

##### Test procedure

The UE is made to initiate an emergency call.

After the call has been through-connected in both directions, the SS orders an A-GPS positioning measurement using two MEASUREMENT CONTROL messages. The last MEASUREMENT CONTROL message orders periodical reporting by sending a MEASUREMENT CONTROL message requesting periodical measurement reporting (1 report, interval 64s).

The UE then performs positioning measurements, calculates "UE Positioning Position Estimate Info" and responds with this in the RRC message MEASUREMENT REPORT.

Finally the SS clears the call.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The "emergency number" is entered. One of the following emergency numbers shall be used: 000, 08, 112, 110, 118, 119, 911 or 999. |
| 2 | --> | | | UE establishes RRC procedure for emergency call.<br>Establishment cause: Emergency Call<br>SS checks that the UE capability includes A-GPS UE based positioning measurement |
| 3 | --> | | CM SERVICE REQUEST | The CM service type IE indicates "emergency call establishment". |

| Event Results | Not present |

17.2.2.2.5 Test requirements

After step 10 the UE shall have through connected the DTCH in both directions.

After step 13 the UE shall respond with a MEASUREMENT REPORT message containing a position estimate.

### 17.2.2.3 LCS Network induced location request/ UE-Assisted GPS/ Emergency call/ With USIM

#### 17.2.2.3.1 Definition

This test case applies to all UEs supporting UE-Assisted GPS Location Service capabilities.

#### 17.2.2.3.2 Conformance requirements

1) A MM connection for an emergency call may be established in all states of the mobility management sublayer which allow MM connection establishment for a normal originating call.

   When a user requests an emergency call establishment the UE will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment.

2) Having entered the "MM connection pending" state, upon MM connection establishment, the call control entity of the UE sends a setup message to its peer entity. This setup message is

   - a SETUP message, if the call to be established is a basic call; and
   - an EMERGENCY SETUP message, if the call to be established is an emergency call.

3) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

4) The UE shall:

1> when a measurement report is triggered:

   2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

      3> if the IE "Vertical Accuracy" is included:

         4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

      3> if the IE "Positioning Methods" is set to "GPS":

         4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

            5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

               6> if the IE "GPS timing of Cell wanted" is set to TRUE:

                  7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

                  7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

                  7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

               6> if the IE "GPS timing of Cell wanted" is set to FALSE:

7> include the IE "GPS TOW msec".

5> if the UE does not support the capability to provide the GPS timing of the cell:

6> include the IE "GPS TOW msec".

### 17.2.2.3.3 Test Purpose

To verify when an emergency call is initiated by a UE with a USIM, and the network performs a location request using the RRC measurement control procedure by sending Measurement Control message , then the UE respond with a Measurement Report containing “UE positioning GPS measured results”.

### 17.2.2.3.4 Method of Test

Initial Conditions

System Simulator (SS):

1 cell, default parameters

Satellites: As specified in 17.2.1.2

UE:

- the UE is in state "MM idle" with valid TMSI and CKSN.

Related PICS/PIXIT Statements

- Emergency speech call yes/no
- UE Assisted Network Assisted GPS

Test Procedure

The UE is made to initiate an emergency call.

After the call has been through-connected in both directions, the SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.3.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE “Error reason” set to “Assistance Data Missing”. If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE then performs positioning measurements and responds with the RRC message MEASUREMENT REPORT.

Finally the SS clears the call.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The "emergency number" is entered. Number shall be one programmed in test USIM $EF_{ECC}$ (Emergency Call Codes), ref. 34.108 clause 8.3.2.21. |
| 2 | --> | | | UE establishes RRC procedure for emergency call.<br>Establishment cause: Emergency Call<br>SS checks that the UE capability includes A-GPS UE assisted positioning measurement |
| 3 | --> | | CM SERVICE REQUEST | The CM service type IE indicates "emergency call establishment". |
| 4 | <-- | | AUTHENTICATION REQUEST | IE Authentication Parameter AUTN shall be present in the message. |
| 5 | --> | | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 6 | SS | | | SS starts security procedure. |
| 7 | --> | | EMERGENCY SETUP | If the Bearer capability IE is not included the default UMTS AMR speech version shall be assumed. |
| 8 | <-- | | CALL PROCEEDING | |
| 9 | <-- | | ALERTING | |
| 10 | <-- | | | SS sets up the radio bearer with the rate indicated by the EMERGENCY SETUP message. |
| 11 | <-- | | CONNECT | |
| 12 | --> | | CONNECT ACKNOWLEDGE | |
| 13 | UE | | | The DTCH is through connected in both directions. |
| 14 | <- | | MEASUREMENT CONTROL | |
| 15 | --> | | MEASUREMENT REPORT | UE reports positioning measurement results (Option 1) or requests additional assistance data (Option 2). |
| 15a | <- | | MEASUREMENT CONTROL | If UE requested additional assistance data in step 15, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.3.5. |
| 15b | -> | | MEASUREMENT REPORT | If UE requested additional assistance data in step 15, this message contains the IE “UE positioning GPS measured results”. |
| 16 | <-- | | DISCONNECT | SS disconnects the call and associated radio bearer. |

17.2.2.3.5 Test requirements

After step 12 the UE shall have through connected the DTCH in both directions.

After step 14 the UE shall send a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

### 17.2.2.4 LCS Network induced location request/ UE-Assisted GPS/ Emergency call/ Without USIM

#### 17.2.2.4.1 Definition

This test case applies to all UEs supporting UE-assisted A-GPS Location Service capabilities.

#### 17.2.2.4.2 Conformance requirements

1) A MM connection for an emergency call may be established in all states of the mobility management sublayer which allow MM connection establishment for a normal originating call.

   When a user requests an emergency call establishment the UE will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment.

   Normally, the UE will be identified by an IMSI or a TMSI. However, if none of these identifiers is available in the UE, then the UE shall use the IMEI for identification purposes.

2) As a serving network option, emergency calls may be established without the network having to apply the security mode procedure as defined in TS 24.008.

   The following are the only cases where the "security procedure not applied" option may be used:

a) Authentication is impossible because the USIM is absent.

3) Having entered the "MM connection pending" state, upon MM connection establishment, the call control entity of the UE sends a setup message to its peer entity. This setup message is

   - a SETUP message, if the call to be established is a basic call; and
   - an EMERGENCY SETUP message, if the call to be established is an emergency call.

4) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

5) The UE shall:

1> when a measurement report is triggered:

   2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

      3> if the IE "Vertical Accuracy" is included:

         4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

      3> if the IE "Positioning Methods" is set to "GPS":

         4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

6> if the IE "GPS timing of Cell wanted" is set to TRUE:

7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

6> if the IE "GPS timing of Cell wanted" is set to FALSE:

7> include the IE "GPS TOW msec".

5> if the UE does not support the capability to provide the GPS timing of the cell:

6> include the IE "GPS TOW msec".

#### 17.2.2.4.3 Test Purpose

To verify that when an emergency call is initiated by a UE with no USIM, and the network performs a network-induced location request using UE-assisted A-GPS, the UE responds with a Measurement Report containing the IE “UE positioning GPS measured results”.

#### 17.2.2.4.4 Method of Test

Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:
  - the UE is in state "MM idle" with no IMSI and no USIM inserted.

Related PICS/PIXIT Statements

- Emergency speech call yes/no
- UE Assisted Network Assisted GPS

Test procedure

The UE is made to initiate an emergency call. The call is established without authentication and security.

After the call has been through-connected in both directions, the SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.3.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE “Error reason” set to “Assistance Data Missing”. If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message including the IE “UE positioning GPS measured results”.

Finally the SS clears the call.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The "emergency number" is entered. One of the following emergency numbers shall be used: 000, 08, 112, 110, 118, 119, 911 or 999. |
| 2 | --> | | | UE establishes RRC procedure for emergency call.<br>Establishment cause: Emergency Call<br>SS checks that the UE capability includes A-GPS UE-assisted positioning measurement. |
| 3 | --> | | CM SERVICE REQUEST | The CM service type IE indicates "emergency call establishment". The mobile identity IE specifies the IMEI of the UE. The cipher key sequence number IE indicates "no key is available". |
| 4 | <-- | | CM SERVICE ACCEPT | |
| 5 | --> | | EMERGENCY SETUP | If the Bearer capability IE is not included the default UMTS AMR speech version shall be assumed. |
| 6 | <-- | | CALL PROCEEDING | |
| 7 | <-- | | ALERTING | |
| 8 | <-- | | | SS sets up the radio bearer with the rate indicated by the EMERGENCY SETUP message. |
| 9 | <-- | | CONNECT | |
| 10 | --> | | CONNECT ACKNOWLEDGE | |

### 17.2.2.4.5 Test requirements

After step 10 the UE shall have through connected the DTCH in both directions.

After step 12 the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

## 17.2.3 Assisted GPS Mobile Originated Tests

### 17.2.3.1 Void

### 17.2.3.2 LCS Mobile originated location request/ UE-Based GPS/ Position estimate request/ Success

#### 17.2.3.2.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities and providing a method to trigger an MO-LR request for a position estimate.

#### 17.2.3.2.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.

2) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

3) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

   1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

   1> if an update has been provided for this satellite:

      2> act as specified in subclause 8.6.7.19.3.4.

   If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

   1> update the variable UE_POSITIONING_GPS_DATA as follows:

      2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

   1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

4) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

4> if the IE "GPS timing of Cell wanted" is set to FALSE:

5> include the IE "GPS TOW msec".

4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

5) The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.

6) After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

#### 17.2.3.2.3 Test Purpose

To verify the UE behaviour at a mobile originated location request procedure using network-assisted UE-based GPS.

#### 17.2.3.2.4 Method of Test

Initial Conditions

- System Simulator:
  - 1 cell, default parameters.

- Satellites: As specified in 17.2.1.2

- User Equipment:
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI

### Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- Method of triggering an MO-LR request for a position estimate.

### Test Procedure

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

Then the UE invokes an MO-LR request of type “locationEstimate”. The SS orders an A-GPS positioning measurement using two MEASUREMENT CONTROL messages, including assistance data. The UE then initiates periodic measurement reporting. After the first received MEASUREMENT REPORT message, the SS responds with a FACILITY message containing an MO-LR result. When UE receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

### Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originated High Priority Signalling”. |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service” |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request of type “locationEstimate”. |
| 7 | <- | | MEASUREMENT CONTROL | |
| 8 | <- | | MEASUREMENT CONTROL | |
| 9 | -> | | MEASUREMENT REPORT | |
| 10 | <- | | FACILITY | LCS MO-LR result message containing location estimate |
| 11 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 12 | SS | | | The SS releases the RRC connection and the test case ends. |

#### 17.2.3.2.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE "MOLR-Type" set to "locationEstimate".

After step 8, the UE shall respond with a MEASUREMENT REPORT message.

After step 10, the UE shall send a RELEASE COMPLETE message.

### 17.2.3.3 LCS Mobile originated location request/ UE-Based or UE-Assisted GPS/ Assistance data request/ Success

#### 17.2.3.3.1 Definition

This test case applies to all UEs supporting UE-Based or UE-Assisted GPS Location Service capabilities and providing a method to trigger an MO-LR request for assistance data.

#### 17.2.3.3.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.

2) The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.

3) After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Reference(s):

- Conformance requirements 1, 2 and 3: TS 24.030, subclause 5.1.1

#### 17.2.3.3.3 Test Purpose

To verify the UE behaviour at a mobile originated location request procedure using network-assisted network assisted GPS.

#### 17.2.3.3.4 Method of Test

Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:

- The UE shall begin the test with no GPS assistance data stored.
- The UE is in state "MM idle" with valid TMSI and CKSN.
- The UE is in state “PMM idle” with valid P-TMSI

### Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- UE Assisted Network Assisted GPS
- Method of clearing stored GPS assistance data
- Method of triggering an MO-LR request for assistance data.

### Test Procedure

The stored GPS assistance data in the UE shall be cleared.

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

Then the UE invokes an MO-LR request of type “assistanceData”.

The SS transmits an ASSISTANCE DATA delivery message with assistance data. When the assistance data delivery was successful, the SS sends a FACILITY message to the UE.

The UE clears the transaction by sending a RELEASE COMPLETE message.

### Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originated High Priority Signalling”. |
| 3 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service” |
| 4 | <- | | AUTHENTICATION REQUEST | |
| 5 | -> | | AUTHENTICATION RESPONSE | |
| 6 | | SS | | The SS starts ciphering and integrity protection. |
| 7 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request of type “assistanceData”. |
| 8 | <- | | ASSISTANCE DATA DELIVERY | The SS provides the requested data in one or more ASSISTANCE DATA DELIVERY messages as specified in section 17.2.1.3.5 |
| 9 | <- | | FACILITY | |
| 10 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 11 | | SS | | The SS releases the RRC connection and the test case ends |

#### 17.2.3.3.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE “MOLR-Type” set to “assistanceData”.

After step 8, the UE shall send a RELEASE COMPLETE message.

### 17.2.3.4 LCS Mobile originated location request/ UE-Assisted GPS/ Position Estimate/ Success

#### 17.2.3.4.1 Definition

This test case applies to all UEs supporting UE-Assisted GPS Location Service capabilities and providing a method to trigger an MO-LR request for a position estimate.

17.2.3.4.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.

2) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

3) The UE shall:

   1> when a measurement report is triggered:

   2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

      3> if the IE "Vertical Accuracy" is included:

         4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

      3> if the IE "Positioning Methods" is set to "GPS":

         4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

            5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

               6> if the IE "GPS timing of Cell wanted" is set to TRUE:

                  7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

                  7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

                  7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

               6> if the IE "GPS timing of Cell wanted" is set to FALSE:

                  7> include the IE "GPS TOW msec".

            5> if the UE does not support the capability to provide the GPS timing of the cell:

               6> include the IE "GPS TOW msec".

4) The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.

5) After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

#### 17.2.3.4.3 Test Purpose

To verify the UE behaviour in the mobile-originated location request procedure using network-assisted UE-assisted GPS to request a position estimate from the network.

#### 17.2.3.4.4 Method of Test

##### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state "PMM idle" with valid P-TMSI

##### Related PICS/PIXIT Statements

- UE Assisted Network Assisted GPS
- Method of triggering an MO-LR request for a position estimate.

##### Test Procedure

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes an MO-LR request through the Facility IE in a REGISTER message. The MO-LR request is of type “locationEstimate”.

The SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.3.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE “Error reason” set to “Assistance Data Missing”. If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE then initiates periodic measurement reporting. After receiving the MEASUREMENT REPORT message, the SS responds with a FACILITY message containing an MO-LR result. When UE receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originated High Priority Signalling". |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service" |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request. The IE "MOLR-Type" is set to "locationEstimate". |
| 7 | <- | | MEASUREMENT CONTROL | |
| 8 | -> | | MEASUREMENT REPORT | UE reports the IE "UE positioning GPS measured results" (Option 1) or requests additional assistance data (Option 2). |
| 8a | <- | | MEASUREMENT CONTROL | If UE requested additional assistance data in step 8, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.3.5. |
| 8b | -> | | MEASUREMENT REPORT | If UE requested additional assistance data in step 8, this message contains the IE "UE positioning GPS measured results". |
| 9 | <- | | FACILITY | LCS MO-LR result message containing location estimate |
| 10 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 11 | SS | | | The SS releases the RRC connection and the test case ends |

#### 17.2.3.4.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE “MOLR-Type” set to “locationEstimate”.

After step 7, the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

After step 9, the UE shall send a RELEASE COMPLETE message.

### 17.2.3.5 Void

### 17.2.3.6 LCS Mobile originated location request/ UE-Based GPS/ Transfer to third party/ Success

#### 17.2.3.6.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities and providing a method to trigger an MO-LR request for transfer to 3rd party.

#### 17.2.3.6.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.

2) If the UE is requesting that its location be sent to an external LCS client, the message shall include the identity of the LCS client and may include the address of the GMLC through which the LCS client should be accessed.

3) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

4) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

5) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

   1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

   1> if an update has been provided for this satellite:

      2> act as specified in subclause 8.6.7.19.3.4.

   If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

   1> update the variable UE_POSITIONING_GPS_DATA as follows:

      2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

   1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

6) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

      3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

         4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

         4> if the IE "GPS timing of Cell wanted" is set to FALSE:

            5> include the IE "GPS TOW msec".

         4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

            5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

               6> if the UE has been able to calculate a 3-dimensional position:

                  7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

               6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

7) The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.

8) After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

#### 17.2.3.6.3 Test Purpose

To verify the UE behaviour in the mobile-originated location request procedure using network-assisted UE-based GPS to request a position estimate from the network for transfer to a third-party LCS client.

#### 17.2.3.6.4 Method of Test

Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI

Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- Method of triggering an MO-LR request for transfer to 3rd party

Test Procedure

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes a MO-LR request through the Facility IE in a REGISTER message. The MO-LR request is of type "locationEstimate". The IE "LCSClientExternalID" is set to the ID of a valid external LCS client.

The SS orders an A-GPS positioning measurement using MEASUREMENT CONTROL messages, including assistance data.

The UE sends a MEASUREMENT REPORT message containing a location estimate.

The SS sends a FACILITY message confirming that the transfer to the external client succeeded. When UE receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Expected Sequence

| Step | Direction UE | Direction SS | Message | Comments |
|---|---|---|---|---|
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originated High Priority Signalling". |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service" |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request. The IE "MOLR-Type" is set to "locationEstimate". The IE "LCSClientExternalID" is set to a valid ID for an external LCS client. |
| 7 | <- | | MEASUREMENT CONTROL | |
| 8 | <- | | MEASUREMENT CONTROL | |
| 9 | -> | | MEASUREMENT REPORT | |
| 10 | <- | | FACILITY | LCS MO-LR result message as confirmation that the position estimate was transferred to the requested LCS client. |
| 11 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 12 | SS | | | The SS releases the RRC connection and the test case ends |

#### 17.2.3.6.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE “MOLR-Type” set to “locationEstimate” and the IE “LCSClientExternalID” set to the ID of a valid external LCS client.

After step 8, the UE shall respond with a MEASUREMENT REPORT message containing the IE “Position Estimate”.

After step 11, the UE shall send a RELEASE COMPLETE message.

### 17.2.3.7 LCS Mobile originated location request/ UE-Assisted GPS/ Transfer to third party/ Success

#### 17.2.3.7.1 Definition

This test case applies to all UEs supporting UE-Assisted GPS Location Service capabilities and providing a method to trigger an MO-LR request for transfer to 3rd party.

#### 17.2.3.7.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.

2) If the UE is requesting that its location be sent to an external LCS client, the message shall include the identity of the LCS client and may include the address of the GMLC through which the LCS client should be accessed.

3) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

4) The UE shall:

   1> when a measurement report is triggered:

      2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

         3> if the IE "Vertical Accuracy" is included:

4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

3> if the IE "Positioning Methods" is set to "GPS":

4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

6> if the IE "GPS timing of Cell wanted" is set to TRUE:

7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

6> if the IE "GPS timing of Cell wanted" is set to FALSE:

7> include the IE "GPS TOW msec".

5> if the UE does not support the capability to provide the GPS timing of the cell:

6> include the IE "GPS TOW msec".

5) The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.

6) After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

- Conformance requirements 1, 5 and 6: TS 24.030, subclause 5.1.1
- Conformance requirement 2: TS 23.171, subclause 8.8.1
- Conformance requirement 3: TS 25.331, subclause 8.4.1.3
- Conformance requirement 4: TS 25.331, subclauses 8.6.7.19.3.3b

#### 17.2.3.7.3 Test Purpose

To verify the UE behaviour in the mobile-originated location request procedure using network-assisted UE-assisted GPS to request a position estimate from the network for transfer to a third-party LCS client.

#### 17.2.3.7.4 Method of Test

Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI

Related PICS/PIXIT Statements

- UE Assisted Network Assisted GPS
- Method of triggering an MO-LR request for transfer to 3rd party

Test Procedure

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes a MO-LR request through the Facility IE in a REGISTER message. The MO-LR request is of type "locationEstimate". The IE "LCSClientExternalID" is set to the ID of a valid external LCS client.

The SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1. 3.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE "Error reason" set to "Assistance Data Missing". If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message containing IE "UE positioning GPS measured results".

The SS sends a FACILITY message confirming that the transfer to the external client succeeded. When UE receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originated High Priority Signalling". |

#### 17.2.3.7.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE "MOLR-Type" set to "locationEstimate" and the IE "LCSClientExternalID" set to the ID of a valid external LCS client.

After step 7, the UE shall respond with a MEASUREMENT REPORT message containing the IE "UE positioning GPS measured results".

After step 9, the UE shall send a RELEASE COMPLETE message.

### 17.2.3.8 LCS Mobile originated location request/ UE-Based or UE-Assisted GPS/ Assistance data request/ Failure

#### 17.2.3.8.1 Definition

This test case applies to all UEs supporting UE-based or UE-assisted GPS Location Service capabilities and providing a method to trigger an MO-LR request for assistance data.

#### 17.2.3.8.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.

2) If the network is unable to successfully fulfil the request received from the MS (e.g. to provide a location estimate or location assistance information), it shall clear the transaction by sending a RELEASE COMPLETE message containing a return error component. Error values are specified in 3GPP TS 24.080.

3) PositionMethodFailure: This error is returned by the network when the network is unable to obtain any of the location information requested or none of the information obtained satisfies the requested LCS QoS or if requested LCS assistance data could not be transferred or requested deciphering keys for broadcast assistance data could not be returned.

Reference(s):

- Conformance requirements 1 and 2: TS 24.030, subclause 5.1.1

- Conformance requirement 3: TS 24.080, subclause 4.3.2.29

#### 17.2.3.8.3 Test Purpose

To verify the UE behaviour at a mobile originated location request for GPS assistance data where the network is unable to provide the requested GPS assistance data.

#### 17.2.3.8.4 Method of Test

##### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:

  The UE shall begin the test with no GPS assistance data stored.
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI

##### Related PICS/PIXIT Statements

- UE Based Network Assisted GPS, or UE Assisted Network Assisted GPS
- Method of triggering an MO-LR request for assistance data.
- Method of clearing stored GPS assistance data

##### Test Procedure

The stored GPS assistance data in the UE shall be cleared.

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes an MO-LR request of type “assistanceData”.

The SS is unable to provide the requested assistance data.

The SS sends a RELEASE COMPLETE message containing a return error component.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| **1** | | | **Void** | |
| **2** | **->** | | | **The UE establishes an RRC connection for location service. The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originated High Priority Signalling".** |

#### 17.2.3.8.5 Test requirements

After step 6 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE “MOLR-Type” set to “assistanceData”.

During step 10 the UE shall not send any RELEASE COMPLETE message.

### 17.2.3.9 LCS Mobile originated location request/ UE-Based GPS/ Position estimate request/ Failure

#### 17.2.3.9.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities and providing a method to trigger an MO-LR request for a position estimate.

#### 17.2.3.9.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.

2) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

3) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

   1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

   1> if an update has been provided for this satellite:

      2> act as specified in subclause 8.6.7.19.3.4.

   If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

   1> update the variable UE_POSITIONING_GPS_DATA as follows:

      2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

   1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

4) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

4> if the IE "GPS timing of Cell wanted" is set to FALSE:

5> include the IE "GPS TOW msec".

4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

5) The UE shall set the contents of the IE "UE positioning Error" as follows:

…

1> if the IE "Positioning Methods" in IE "UE positioning reporting quantity" has been assigned to value "GPS":

2> if there were not enough GPS satellites to be received:

3> set IE "Error reason" to "Not Enough GPS Satellites".

2> if some GPS assistance data was missing:

3> set IE "Error reason" to "Assistance Data Missing"; and

3> if the IE ""Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to TRUE:

4> include the IE "GPS Additional Assistance Data Request".

6) If the network is unable to successfully fulfil the request received from the MS (e.g. to provide a location estimate or location assistance information), it shall clear the transaction by sending a RELEASE COMPLETE message containing a return error component. Error values are specified in 3GPP TS 24.080.

7) PositionMethodFailure: This error is returned by the network when the network is unable to obtain any of the location information requested or none of the information obtained satisfies the requested LCS QoS or if requested LCS assistance data could not be transferred or requested deciphering keys for broadcast assistance data could not be returned.

#### 17.2.3.9.3 Test Purpose

To verify the UE behaviour at a mobile originated location request procedure using network-assisted UE-based GPS when the MO-LR procedure fails due to failure of positioning method.

#### 17.2.3.9.4 Method of Test

Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellite Simulator is switched off
- User Equipment:
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI
  - The UE shall begin the test with no GPS assistance data stored.

Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- Method of triggering an MO-LR request for a position estimate.
- Method of clearing stored GPS assistance data

Test Procedure

The stored GPS assistance data in the UE shall be cleared.

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

Then the UE invokes an MO-LR request of type “locationEstimate”. The SS orders an A-GPS positioning measurement using two MEASUREMENT CONTROL messages, including assistance data.

The UE sends a MEASUREMENT REPORT message reporting a positioning error for not enough satellite signals received.

The SS sends a RELEASE COMPLETE message containing a return error component.

Expected Sequence

| Ste | Direction | | Message | Comments |
|---|---|---|---|---|
| | U | S | | |
| **1** | **->** | | | **The UE establishes an RRC connection for location service. The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originated High Priority Signalling".** |
| **2** | **->** | | **CM SERVICE REQUEST** | **The CM service type IE indicates "call independent supplementary service"** |
| **3** | **<-** | | **AUTHENTICATION REQUEST** | |
| **4** | **->** | | **AUTHENTICATION RESPONSE** | |
| **5** | **SS** | | | **The SS starts ciphering and integrity protection.** |
| **6** | **->** | | **REGISTER** | **Call Independent SS containing Facility IE with a LCS MO-LR request of type "locationEstimate".** |
| **7** | **<-** | | **MEASUREMENT CONTROL** | |
| **8** | **<-** | | **MEASUREMENT CONTROL** | |
| **9** | **->** | | **MEASUREMENT REPORT** | **Positioning error report "not enough GPS satellites"** |
| **10** | **SS** | | | **SS is unable to fulfil the MO-LR request** |
| **11** | **<-** | | **RELEASE COMPLETE** | **SS terminates the dialogue containing a return error component** |
| **12** | **SS** | | | **The SS releases the RRC connection and the test case ends.** |

#### 17.2.3.9.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with a LCS MO-LR request with the IE “MOLR-Type” set to “locationEstimate”.

After step 8, the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning error”, with “Error reason” set to “Not Enough GPS Satellites”.

## 17.2.4 Assisted GPS Mobile Terminated Tests

### 17.2.4.1 LCS Mobile terminated location request/ UE-Based GPS

#### 17.2.4.1.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities.

#### 17.2.4.1.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

   In the case of location notification no response is required from the UE, the UE shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result.

2) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

3) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

   1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

   1> if an update has been provided for this satellite:

      2> act as specified in subclause 8.6.7.19.3.4 of TS 25.331.

4) If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

   1> update the variable UE_POSITIONING_GPS_DATA as follows:

      2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

   1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in ICD-GPS-200.

5) If the IE "UE positioning GPS reference time" is included, the UE shall:

   1> store the IE "GPS Week" in "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as the current GPS week;

   1> store the IE "GPS TOW msec" in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as an estimate of the GPS Time-of-Week at the time of reception of the complete message containing the IE "GPS TOW msec";

   NOTE: The UE does not need to apply any compensation on the GPS Time-of-Week.

6) If the IE "UE positioning GPS reference UE position" is included, the UE shall:

   1> store this IE in the IE "UE positioning GPS reference UE position" in variable UE_POSITIONING_GPS_DATA; and

   1> use it as a priori knowledge of the approximate location of the UE.

7) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

      3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

         4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

         4> if the IE "GPS timing of Cell wanted" is set to FALSE:

            5> include the IE "GPS TOW msec".

         4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

            5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

               6> if the UE has been able to calculate a 3-dimensional position:

                  7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

               6> if the UE has not been able to calculate a 3-dimensional position:

                  7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

         4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

            5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

               6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

#### 17.2.4.1.3 Test Purpose

To verify that when the UE receives a REGISTER message during an established CS call, containing a LCS Location Notification Invoke component set to NotifyLocationAllowed, the UE displays information about the LCS client correctly and sends a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

To verify that the UE responds with a Measurement Report message containing UE location when the assistance data is divided between several Measurement Control messages using Measurement Command “Modify”.

#### 17.2.4.1.4 Method of Test

Initial Conditions

System Simulator (SS):

- 1 cell, default parameters
- Satellites: As specified in 17.2.1.2

UE:

- State “CS-CELL DCH Initial (State 6-1)” as specified in clause 7.4.1 of TS 34.108.

Related PICS/PIXIT Statements

- UE supporting CS domain services
- UE Based Network Assisted GPS
- UE supporting Mobile Terminated Location Request

Test Procedure

The SS initiates authentication and ciphering and sends an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed. The UE then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

The SS orders an A-GPS positioning measurement using two MEASUREMENT CONTROL messages. The last MEASUREMENT CONTROL message orders periodical reporting.

The UE then initiates periodic measurement reporting and sends a MEASUREMENT REPORT message including a location estimate.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <- | | AUTHENTICATION REQUEST | |
| 2 | -> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 5 | UE | | | The UE displays information about LCS client |
| 6 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 7 | <- | | MEASUREMENT CONTROL | |
| 8 | <- | | MEASUREMENT CONTROL | Periodical reporting is configured. |
| 9 | -> | | MEASUREMENT REPORT | |
| 10 | SS | | | SS releases the RRC connection and the test case ends |

17.2.4.1.5 Test requirements

After step 5 the UE shall send a RELEASE COMPLETE message.

After step 8 the UE shall respond with a MEASUREMENT REPORT message.

### 17.2.4.2 LCS Mobile-terminated location request/UE-Based GPS/ Request for additional assistance data/ Success

#### 17.2.4.2.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities.

#### 17.2.4.2.2 Conformance requirements

1) if the IE “Measurement command” has the value “modify”:

   2> for all IEs present in the MEASUREMENT CONTROL message:

   - if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE “measurement identity”:

   - if measurement type is set to “UE positioning measurement” and the IE “UE positioning GPS assistance data” is present, for any of the optional IEs “UE positioning GPS reference time”, “UE positioning GPS reference UE position”, “UE positioning GPS DGPS corrections”, “UE positioning GPS ionospheric model”, “UE positioning GPS UTC model”, “UE positioning GPS acquisition assistance”, “UE positioning GPS real-time integrity” that are present in the MEASUREMENT CONTROL message:

   5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE “measurement identity” with the IEs received in the MEASUREMENT CONTROL message;

   5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

2) If the IE “UE positioning GPS Navigation Model” is included, for each satellite, the UE shall:

   1> use IE “Satellite Status” to determine if an update of IE “UE positioning GPS Ephemeris and Clock Correction parameters” has been provided for the satellite indicated by the IE “SatID”;

   1> if an update has been provided for this satellite:

   2> act as specified in subclause 8.6.7.19.3.4.

3) If the IE “UE positioning GPS Ephemeris and Clock Correction parameters” is included, for each satellite, the UE shall:

   1> update the variable UE_POSITIONING_GPS_DATA as follows:

   2> store this IE at the position indicated by the IE “Sat ID” in the IE “UE positioning GPS Navigation Model” in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

   1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

4) If the IE “UE positioning GPS reference time” is included, the UE shall:

   1> store the IE “GPS Week” in “UE positioning GPS reference time” in variable UE_POSITIONING_GPS_DATA and use it as the current GPS week;

   - store the IE “GPS TOW msec” in the IE “UE positioning GPS reference time” in variable UE_POSITIONING_GPS_DATA and use it as an estimate of the GPS Time-of-Week at the time of reception of the complete message containing the IE “GPS TOW msec”;

   NOTE: The UE does not need to apply any compensation on the GPS Time-of-Week.

   - if the IE “SFN” and IE “UTRAN GPS timing of cell frames” are included:

   - if the UE is able to utilise the IEs:

- store these IEs in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA;
- if the IE "Primary CPICH Info" for FDD or IE "cell parameters id" for TDD is not included:
  - if the UE is not in CELL_DCH state:
    - use IEs "SFN" and "UTRAN GPS timing of cell frames" to estimate the relationship between GPS time and air-interface timing of the NODE B transmission in the serving cell.
  - if the UE is in CELL_DCH state:
    - ignore IEs "SFN" and "UTRAN GPS timing of cell frames".
- if the IE "Primary CPICH Info" for FDD or IE "cell parameters id" for TDD is also included:
  - store this IE in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA;
  - use IEs "SFN" and "UTRAN GPS timing of cell frames" to estimate the relationship between GPS time and air-interface timing of the NODE B transmission in the cell indicated by "Primary CPICH info" or "cell parameters id".

- if the IE "SFN-TOW Uncertainty" is included:
  - store this IE in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it to determine if the relationship between GPS time and air-interface timing of the NODE B transmission is known to within at least 10ms.
- if the IE "$T_{UTRAN-GPS}$ drift rate" is included:
  - store this IE in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA; and
  - may use it as an estimate of the drift rate of the NODE B clock relative to GPS time.
- if the IE "GPS TOW Assist" is included:
  - for each satellite:

    3> delete all information currently stored in the IE "GPS TOW Assist" in the IE "UE positioning GPS reference time" in the variable UE_POSITIONING_GPS_DATA;

    3> store the received GPS TOW Assist information in the IE "UE positioning GPS reference time" in the variable UE_POSITIONING_GPS_DATA.

5) If the IE "UE positioning GPS reference UE position" is included, the UE shall:

   1> store this IE in the IE "UE positioning GPS reference UE position" in variable UE_POSITIONING_GPS_DATA; and

   1> use it as a priori knowledge of the approximate location of the UE.

6) If IE "UE positioning GPS ionospheric model" is included, the UE shall:

   1> store this IE in the IE "UE positioning GPS ionospheric model" in variable UE_POSITIONING_GPS_DATA;

   1> act on these GPS ionospheric model parameters in a manner similar to that specified in [12].

7) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

- include IE “UE positioning Position Estimate Info” in the MEASUREMENT REPORT and set the contents of the IE as follows:
  - if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or
  - if the IE “GPS timing of Cell wanted” is set to FALSE:
    - include the IE “GPS TOW msec”.
  - if IE “Vertical Accuracy” has been included in IE “UE positioning reporting quantity”:
    - if the IE “Vertical Accuracy” has been assigned to a value unequal to “0”:
      - if the UE has been able to calculate a 3-dimensional position:
        - include IE “Ellipsoid point with altitude and uncertainty ellipsoid” as the position estimate.
      - if the UE has not been able to calculate a 3-dimensional position:
        - act as if IE “Vertical Accuracy” has not been included in IE “UE positioning reporting quantity”.
  - if IE “Vertical Accuracy” has not been included in IE “UE positioning reporting quantity”:
  - if IE “Horizontal Accuracy” in IE “UE positioning reporting quantity” has been assigned to a value unequal to 0:

    6> include either IE “Ellipsoid point with uncertainty circle” or IE “Ellipsoid point with uncertainty ellipse” or IE “Ellipsoid point with altitude and uncertainty ellipsoid” as the position estimate.

8) The UE shall set the contents of the IE "UE positioning Error" as follows:

…

1> if the IE "Positioning Methods" in IE "UE positioning reporting quantity" has been assigned to value "GPS":

2> if there were not enough GPS satellites to be received:

3> set IE "Error reason" to "Not Enough GPS Satellites".

2> if some GPS assistance data was missing:

3> set IE "Error reason" to "Assistance Data Missing"; and

3> if the IE ""Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to TRUE:

4> include the IE "GPS Additional Assistance Data Request".

#### 17.2.4.2.3 Test Purpose

To verify the UE’s behaviour in a mobile-terminated location request procedure using UE-based A-GPS with assistance data from the network.

To verify that the UE in CELL_DCH state accepts assistance data received in multiple MEASUREMENT CONTROL messages.

To verify that the UE includes the IE “GPS Additional Assistance Data Request” to request assistance data when it does not have enough assistance data to compute a position.

#### 17.2.4.2.4 Method of Test

##### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment:
  - The UE shall begin the test with no GPS assistance data stored.
  - State "CS-CELL DCH Initial (State 6-1)" as specified in clause 7.4.1 of TS 34.108.

##### Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- Method of clearing stored GPS assistance data
- UE supporting Mobile Terminated Location Request

##### Test Procedure

The stored GPS assistance data in the UE shall be cleared.

The SS initiates authentication and ciphering and sends an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed. The UE then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

The SS orders an A-GPS positioning measurement using MEASUREMENT CONTROL including no assistance data.

The UE sends a MEASUREMENT REPORT message to report a positioning error, requesting further assistance data. The SS response with one or more MEASUREMENT CONTROL messages that include the requested assistance data and instructs the UE not to repeat the request for assistance data. The final MEASUREMENT CONTROL message orders periodic reporting.

The UE performs positioning measurements and responds with a MEASUREMENT REPORT message containing a valid position estimate in the IE “UE Positioning Position Estimate Info”.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <- | | AUTHENTICATION REQUEST | |
| 2 | -> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 5 | UE | | | The UE displays information about LCS client |
| 6 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 7 | <-- | | MEASUREMENT CONTROL | No assistance data, and “Additional Assistance Data Request” IE set to TRUE. |
| 8 | --> | | MEASUREMENT REPORT | Positioning error report with request for further assistance data. |
| 9 | <-- | | MEASUREMENT CONTROL | The SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.3.5. The final MEASUREMENT CONTROL message contains: Reporting mode: Periodical reporting Amount of reporting: 1 Reporting interval: 64000 |
| 10 | --> | | MEASUREMENT REPORT | Measurement report message containing UE position estimate. |
| 11 | SS | | | SS releases the RRC connection and the test case ends |

Specific Message Contents

17.2.4.2.5 Test Requirements

At step 7 the UE shall send a MEASUREMENT REPORT message containing the IE "UE positioning error", with "Error reason" set to "Assistance Data Missing".

At step 9 the UE shall send a MEASUREMENT REPORT message containing a valid UE position estimate.

### 17.2.4.3 LCS Mobile-terminated location request/UE-Based GPS/ Failure – Not Enough Satellites

#### 17.2.4.3.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities.

#### 17.2.4.3.2 Conformance requirements

7) if the IE “Measurement command” has the value “modify”:

2> for all IEs present in the MEASUREMENT CONTROL message:

- if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE “measurement identity”:

- if measurement type is set to “UE positioning measurement” and the IE “UE positioning GPS assistance data” is present, for any of the optional IEs “UE positioning GPS reference time”, “UE positioning GPS reference UE position”, “UE positioning GPS DGPS corrections”, “UE positioning GPS ionospheric model”, “UE positioning GPS UTC model”, “UE positioning GPS acquisition assistance”, “UE positioning GPS real-time integrity” that are present in the MEASUREMENT CONTROL message:

5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE “measurement identity” with the IEs received in the MEASUREMENT CONTROL message;

5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

8) If the IE “UE positioning GPS Navigation Model” is included, for each satellite, the UE shall:

1> use IE “Satellite Status” to determine if an update of IE “UE positioning GPS Ephemeris and Clock Correction parameters” has been provided for the satellite indicated by the IE “SatID”;

1> if an update has been provided for this satellite:

2> act as specified in subclause 8.6.7.19.3.4.

9) If the IE “UE positioning GPS Ephemeris and Clock Correction parameters” is included, for each satellite, the UE shall:

1> update the variable UE_POSITIONING_GPS_DATA as follows:

2> store this IE at the position indicated by the IE “Sat ID” in the IE “UE positioning GPS Navigation Model” in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

10) If the IE “UE positioning GPS reference time” is included, the UE shall:

1> store the IE “GPS Week” in “UE positioning GPS reference time” in variable UE_POSITIONING_GPS_DATA and use it as the current GPS week;

- store the IE “GPS TOW msec” in the IE “UE positioning GPS reference time” in variable UE_POSITIONING_GPS_DATA and use it as an estimate of the GPS Time-of-Week at the time of reception of the complete message containing the IE “GPS TOW msec”;

NOTE: The UE does not need to apply any compensation on the GPS Time-of-Week.

- if the IE “SFN” and IE “UTRAN GPS timing of cell frames” are included:

- if the UE is able to utilise the IEs:

- store these IEs in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA;
- if the IE "Primary CPICH Info" for FDD or IE "cell parameters id" for TDD is not included:
  - if the UE is not in CELL_DCH state:
    - use IEs "SFN" and "UTRAN GPS timing of cell frames" to estimate the relationship between GPS time and air-interface timing of the NODE B transmission in the serving cell.
  - if the UE is in CELL_DCH state:
    - ignore IEs "SFN" and "UTRAN GPS timing of cell frames".
- if the IE "Primary CPICH Info" for FDD or IE "cell parameters id" for TDD is also included:
  - store this IE in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA;
  - use IEs "SFN" and "UTRAN GPS timing of cell frames" to estimate the relationship between GPS time and air-interface timing of the NODE B transmission in the cell indicated by "Primary CPICH info" or "cell parameters id".

- if the IE "SFN-TOW Uncertainty" is included:
  - store this IE in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it to determine if the relationship between GPS time and air-interface timing of the NODE B transmission is known to within at least 10ms.
- if the IE "$T_{UTRAN-GPS}$ drift rate" is included:
  - store this IE in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA; and
  - may use it as an estimate of the drift rate of the NODE B clock relative to GPS time.
- if the IE "GPS TOW Assist" is included:
  - for each satellite:

    3> delete all information currently stored in the IE "GPS TOW Assist" in the IE "UE positioning GPS reference time" in the variable UE_POSITIONING_GPS_DATA;

    3> store the received GPS TOW Assist information in the IE "UE positioning GPS reference time" in the variable UE_POSITIONING_GPS_DATA.

11) If the IE "UE positioning GPS reference UE position" is included, the UE shall:

1> store this IE in the IE "UE positioning GPS reference UE position" in variable UE_POSITIONING_GPS_DATA; and

1> use it as a priori knowledge of the approximate location of the UE.

12) If IE "UE positioning GPS ionospheric model" is included, the UE shall:

1> store this IE in the IE "UE positioning GPS ionospheric model" in variable UE_POSITIONING_GPS_DATA;

1> act on these GPS ionospheric model parameters in a manner similar to that specified in [12].

7) The UE shall when a measurement report is triggered:

2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

- include IE “UE positioning Position Estimate Info” in the MEASUREMENT REPORT and set the contents of the IE as follows:
  - if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or
  - if the IE “GPS timing of Cell wanted” is set to FALSE:
    - include the IE “GPS TOW msec”.
  - if IE “Vertical Accuracy” has been included in IE “UE positioning reporting quantity”:
    - if the IE “Vertical Accuracy” has been assigned to a value unequal to “0”:
      - if the UE has been able to calculate a 3-dimensional position:
        - include IE “Ellipsoid point with altitude and uncertainty ellipsoid” as the position estimate.
      - if the UE has not been able to calculate a 3-dimensional position:
        - act as if IE “Vertical Accuracy” has not been included in IE “UE positioning reporting quantity”.
  - if IE “Vertical Accuracy” has not been included in IE “UE positioning reporting quantity”:
  - if IE “Horizontal Accuracy” in IE “UE positioning reporting quantity” has been assigned to a value unequal to 0:

        7> include either IE “Ellipsoid point with uncertainty circle” or IE “Ellipsoid point with uncertainty ellipse” or IE “Ellipsoid point with altitude and uncertainty ellipsoid” as the position estimate.

8) The UE shall set the contents of the IE "UE positioning Error" as follows:

…

1> if the IE "Positioning Methods" in IE "UE positioning reporting quantity" has been assigned to value "GPS":

2> if there were not enough GPS satellites to be received:

3> set IE "Error reason" to "Not Enough GPS Satellites".

2> if some GPS assistance data was missing:

3> set IE "Error reason" to "Assistance Data Missing"; and

3> if the IE ""Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to TRUE:

4> include the IE "GPS Additional Assistance Data Request".

#### 17.2.4.3.3 Test Purpose

To verify the UE’s behaviour in a mobile-terminated location request procedure using UE-based A-GPS with assistance data from the network.

To verify that the UE in CELL_DCH state accepts assistance data received in multiple MEASUREMENT CONTROL messages.

To verify that the UE sets the IE Error Reason in ‘UE Positioning Error’ to ‘Not Enough GPS Satellites’ when it does not receive enough satellite signals to compute a position.

#### 17.2.4.3.4 Method of Test

##### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
  - Satellite Simulator is switched off.
- User Equipment:
  - State "CS-CELL DCH Initial (State 6-1)" as specified in clause 7.4.1 of TS 34.108.
  - The UE shall begin the test with no GPS assistance data stored.

##### Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- Method of clearing stored GPS assistance data
- UE supporting Mobile Terminated Location Request

##### Test Procedure

The stored GPS assistance data in the UE shall be cleared.

The SS initiates authentication and ciphering and sends an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed. The UE then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

The SS orders an A-GPS positioning measurement using two MEASUREMENT CONTROL messages. The last MEASUREMENT CONTROL message orders periodical reporting.

The UE sends a MEASUREMENT REPORT message reporting a positioning error for not enough satellite signal.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | AUTHENTICATION REQUEST | |
| 2 | --> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |

#### 17.2.4.3.5 Test Requirements

At step 8 the UE shall send a MEASUREMENT REPORT message containing the IE “UE positioning error”, with “Error reason” set to “Not Enough GPS Satellites”.

### 17.2.4.4 LCS Mobile terminated location request/ UE-Assisted GPS/ Success

#### 17.2.4.4.1 Definition

This test case applies to all UEs supporting UE-Assisted GPS Location Service capabilities.

#### 17.2.4.4.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

   In the case of location notification no response is required from the UE, the UE shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result.

2) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

3) The UE shall:

   1> when a measurement report is triggered:

   2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

      3> if the IE "Vertical Accuracy" is included:

         4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

      3> if the IE "Positioning Methods" is set to "GPS":

         4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

            5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

               6> if the IE "GPS timing of Cell wanted" is set to TRUE:

                  7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

                  7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

                  7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

               6> if the IE "GPS timing of Cell wanted" is set to FALSE:

                  7> include the IE "GPS TOW msec".

            5> if the UE does not support the capability to provide the GPS timing of the cell:

6> include the IE "GPS TOW msec".

#### 17.2.4.4.3 Test Purpose

To verify the UE behaviour in the mobile-terminated location request procedure using network-assisted UE-assisted GPS to deliver UE positioning measurements to the network.

#### 17.2.4.4.4 Method of Test

Initial Conditions

System Simulator (SS):

- 1 cell, default parameters
- Satellites: As specified in 17.2.1.2

UE:

- State “CS-CELL DCH Initial (State 6-1)” as specified in clause 7.4.1 of TS 34.108.

Related PICS/PIXIT Statements

- UE supporting CS domain services
- UE Assisted Network Assisted GPS
- UE supporting Mobile Terminated Location Request

Test Procedure

The SS initiates authentication and ciphering and sends an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed. The UE then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

The SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message. The assistance data is as described in section 17.2.1.3.3 (Adequate assistance data for UE-assisted A-GPS). The MEASUREMENT CONTROL message orders periodical reporting.

The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE “Error reason” set to “Assistance Data Missing”. If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE then initiates periodic measurement reporting and sends a MEASUREMENT REPORT message including the IE “UE positioning GPS measured results”.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | AUTHENTICATION REQUEST | |
| 2 | --> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 5 | UE | | | The UE displays information about LCS client |
| 6 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 7 | <- | | MEASUREMENT CONTROL | Periodical reporting is configured. |
| 8 | -> | | MEASUREMENT REPORT | UE reports positioning measurement results (Option 1) or requests additional assistance data (Option 2). |
| 8a | <- | | MEASUREMENT CONTROL | If UE requested additional assistance data in step 8, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.3.5. |
| 8b | -> | | MEASUREMENT REPORT | If UE requested additional assistance data in step 8, this message contains the IE “UE positioning GPS measured results”. |
| 9 | SS | | | SS releases the RRC connection and the test case ends |

17.2.4.4.5 Test requirements

After step 5 the UE shall send a RELEASE COMPLETE message.

After step 7 the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

## 17.2.4.5 LCS Mobile terminated location request/ UE-Assisted GPS/ Request for additional assistance data/ Success

### 17.2.4.5.1 Definition

This test case applies to all UEs supporting UE-Assisted GPS Location Service capabilities.

### 17.2.4.5.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

   In the case of location notification no response is required from the UE, the UE shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result.

2) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

3) The UE shall:

   1> when a measurement report is triggered:

      2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

         3> if the IE "Vertical Accuracy" is included:

            4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

         3> if the IE "Positioning Methods" is set to "GPS":

            4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

               5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

                  6> if the IE "GPS timing of Cell wanted" is set to TRUE:

                     7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

6> if the IE "GPS timing of Cell wanted" is set to FALSE:

7> include the IE "GPS TOW msec".

5> if the UE does not support the capability to provide the GPS timing of the cell:

6> include the IE "GPS TOW msec".

4) 1> if the UE is not able to report the requested measurement results:

2> include IE "UE positioning error" in the MEASUREMENT REPORT and set the contents of this IE as specified in subclause 8.6.7.19.5.

5) if the IE "Positioning Methods" in IE "UE positioning reporting quantity" has been assigned to value "GPS":

2> if there were not enough GPS satellites to be received:

3> set IE "Error reason" to "Not Enough GPS Satellites".

2> if some GPS assistance data was missing:

3> set IE "Error reason" to "Assistance Data Missing"; and

3> if the IE "Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to FALSE:

4> not include the IE "GPS Additional Assistance Data Request", and use the assistance data available for doing a positioning estimate.

### 17.2.4.5.3 Test Purpose

To verify the UE behaviour in the mobile-terminated location request procedure using network-assisted UE-assisted GPS to deliver UE positioning measurements to the network.

To verify that the UE includes the IE “GPS Additional Assistance Data Request” to request additional assistance data when it does not have enough assistance data to perform the requested measurements.

### 17.2.4.5.4 Method of Test

Initial Conditions

System Simulator (SS):

- 1 cell, default parameters
- Satellites: As specified in 17.2.1.2

UE:

- The UE shall begin the test with no GPS assistance data stored.
- State “CS-CELL DCH Initial (State 6-1)” as specified in clause 7.4.1 of TS 34.108.

Related PICS/PIXIT Statements

- UE supporting CS domain services
- UE Assisted Network Assisted GPS
- Method of clearing stored GPS assistance data
- UE supporting Mobile Terminated Location Request

Test Procedure

The stored GPS assistance data in the UE shall be cleared.

The SS initiates authentication and ciphering and sends an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The LCS Client Name contained in the USSD text string of the lcs-LocationNotification shall be displayed. The UE then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

The SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message. The assistance data is as described in section 17.2.1.3.2 (Inadequate assistance data for UE-assisted A-GPS). The MEASUREMENT CONTROL message orders periodical reporting.

The UE then initiates periodic measurement reporting and sends a MEASUREMENT REPORT message including a request for additional assistance data. The SS responds with one or more MEASUREMENT CONTROL messages containing assistance data as specified in section 17.2.1.3.5 (Response to additional assistance data requests from UE). The UE sends a MEASUREMENT REPORT message including the IE “UE positioning GPS measured results”.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | AUTHENTICATION REQUEST | |
| 2 | --> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 5 | UE | | | The UE displays information about LCS client |
| 6 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 7 | <- | | MEASUREMENT CONTROL | Periodical reporting is configured. Assistance data set as specified in section 17.2.1.3.2 (Inadequate assistance data for UE-assisted A-GPS). |
| 8 | -> | | MEASUREMENT REPORT | UE requests additional assistance data. |
| 9 | <- | | MEASUREMENT CONTROL | The SS provides the requested data in one or more MEASUREMENT CONTROL messages as defined in section 17.2.1.3.5 |
| 10 | -> | | MEASUREMENT REPORT | UE sends the IE “UE positioning GPS measured results”. |
| 11 | SS | | | SS releases the RRC connection and the test case ends |

#### 17.2.4.5.5 Test requirements

After step 5 the UE shall send a RELEASE COMPLETE message.

After step 7 the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning error”, with “Error reason” set to “Assistance data missing”.

After step 9 the UE shall send a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

### 17.2.4.6 LCS Mobile terminated location request/ UE-Based GPS/ Privacy Verification/ Location Allowed if No Response

#### 17.2.4.6.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities.

#### 17.2.4.6.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

2) In case of privacy verification the MS shall respond to the request by sending a RELEASE COMPLETE message containing the mobile subscriber's response in a return result component.

3) If the timer expires in the network before any response from the MS (e.g. due to no response from the user), the network shall interpret this by applying the default treatment defined in GSM 03.71 for GSM and TS 23.171 for UMTS (i.e. disallow location if barred by subscription and allow location if allowed by subscription).

4) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

5) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

6) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

   1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

   1> if an update has been provided for this satellite:

      2> act as specified in subclause 8.6.7.19.3.4 of TS 25.331.

7) If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

   1> update the variable UE_POSITIONING_GPS_DATA as follows:

      2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

   1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in ICD-GPS-200.

8) If the IE "UE positioning GPS reference time" is included, the UE shall:

   1> store the IE "GPS Week" in "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as the current GPS week;

   1> store the IE "GPS TOW msec" in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as an estimate of the GPS Time-of-Week at the time of reception of the complete message containing the IE "GPS TOW msec";

   NOTE: The UE does not need to apply any compensation on the GPS Time-of-Week.

9) If the IE "UE positioning GPS reference UE position" is included, the UE shall:

   1> store this IE in the IE "UE positioning GPS reference UE position" in variable UE_POSITIONING_GPS_DATA; and

   1> use it as a priori knowledge of the approximate location of the UE.

10) The UE shall when a measurement report is triggered:

   2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

4> if the IE "GPS timing of Cell wanted" is set to FALSE:

5> include the IE "GPS TOW msec".

4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

### 17.2.4.6.3 Test Purpose

To verify that when the UE receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyAndVerify-LocationAllowedIfNoResponse, the UE notifies the user of the request and indicates that the default response is location allowed if no response and providing the opportunity to accept or deny the request and sends a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied or permissionGranted as appropriate.

### 17.2.4.6.4 Method of Test

Initial Conditions

System Simulator (SS):

- 1 cell, default parameters
- Satellites: As specified in 17.2.1.2

UE:

- State “CS-CELL DCH Initial (State 6-1)” as specified in clause 7.4.1 of TS 34.108.

### Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- px_UeLcsNotification: value for UE LCS Notification timeout timer
- UE supporting Mobile Terminated Location Request

### Test Procedure

The SS initiates authentication and ciphering and sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse.

The LCS Client Name contained in the USSD text string of the lcs-LocationNotification should be displayed with the option to accept or deny the request and an indication that location will be allowed if no user response is received.

The user accepts the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

The SS orders an A-GPS positioning measurement using MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message including a location estimate.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse.

The user denies the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse.

The user ignores the location request by taking no action.

The SS orders an A-GPS positioning measurement using MEASUREMENT CONTROL messages.

The UE then sends a MEASUREMENT REPORT message including a location estimate.

| - CHOICE *Reference time* | |
| - GPS reference time only | |
| - GPS TOW msec | Not checked |
| - CHOICE *Position estimate* | One of 'Ellipsoid point with uncertainty Circle' or 'Ellipsoid point with uncertainty Ellipse' or 'Ellipsoid point with altitude and uncertainty Ellipsoid' |
| - UE positioning GPS measured results | Not present |
| - UE positioning error | Not present |
| Measured Results on RACH | Not present |
| Additional Measured Results | Not present |
| Event Results | Not present |

17.2.4.6.5 Test requirements

After step 7 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionGranted.

After step 10 the UE shall respond with a MEASUREMENT REPORT message containing a UE position estimate.

After step 15 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionDenied.

After step 24 the UE shall respond with a MEASUREMENT REPORT message containing a UE position estimate.

## 17.2.4.7 LCS Mobile terminated location request/ UE-Based GPS/ Privacy Verification/ Location Not Allowed if No Response

### 17.2.4.7.1 Definition

This test case applies to all UEs supporting UE-Based GPS Location Service capabilities.

### 17.2.4.7.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

2) In case of privacy verification the MS shall respond to the request by sending a RELEASE COMPLETE message containing the mobile subscriber's response in a return result component.

3) If the timer expires in the network before any response from the MS (e.g. due to no response from the user), the network shall interpret this by applying the default treatment defined in GSM 03.71 for GSM and TS 23.171 for UMTS (i.e. disallow location if barred by subscription and allow location if allowed by subscription).

4) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

5) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

6) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

   1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

   1> if an update has been provided for this satellite:

      2> act as specified in subclause 8.6.7.19.3.4 of TS 25.331.

7) If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

1> update the variable UE_POSITIONING_GPS_DATA as follows:

2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in ICD-GPS-200.

8) If the IE "UE positioning GPS reference time" is included, the UE shall:

1> store the IE "GPS Week" in "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as the current GPS week;

1> store the IE "GPS TOW msec" in the IE "UE positioning GPS reference time" in variable UE_POSITIONING_GPS_DATA and use it as an estimate of the GPS Time-of-Week at the time of reception of the complete message containing the IE "GPS TOW msec";

NOTE: The UE does not need to apply any compensation on the GPS Time-of-Week.

9) If the IE "UE positioning GPS reference UE position" is included, the UE shall:

1> store this IE in the IE "UE positioning GPS reference UE position" in variable UE_POSITIONING_GPS_DATA; and

1> use it as a priori knowledge of the approximate location of the UE.

10) The UE shall when a measurement report is triggered:

2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or on the list of satellites included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning:

3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

4> if the UE does not support the capability to perform the UE GPS timing of cell frames measurement; or

4> if the IE "GPS timing of Cell wanted" is set to FALSE:

5> include the IE "GPS TOW msec".

4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

#### 17.2.4.7.3 Test Purpose

To verify that when the UE receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyAndVerify-LocationNotAllowedIfNoResponse, the UE notifies the user of the request and indicates that the default response is location not allowed if no response and providing the opportunity to accept or deny the request and sends a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied or permissionGranted as appropriate.

#### 17.2.4.7.4 Method of Test

Initial Conditions

System Simulator (SS):

- 1 cell, default parameters
- Satellites: As specified in 17.2.1.2

UE:

- State “CS-CELL DCH Initial (State 6-1)” as specified in clause 7.4.1 of TS 34.108.

Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- px_UeLcsNotification: value for UE LCS Notification timeout timer
- UE supporting Mobile Terminated Location Request

Test Procedure

The SS initiates authentication and ciphering and sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse.

The LCS Client Name contained in the USSD text string of the lcs-LocationNotification should be displayed with the option to accept or deny the request and an indication that location will be not allowed if no user response is received.

The user accepts the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

The SS orders an A-GPS positioning measurement using MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message including a location estimate.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse.

The user denies the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse.

The user ignores the location request by taking no action. If the timer expires in the SS before any response from the UE is received, the SS interprets this by applying the default treatment LocationNotAllowed.

| Transaction identifier<br>Message type<br>Facility | <br>REGISTER (0011 1011)<br>Invoke = LCS-LocationNotification<br>LocationNotificationArg<br>notificationType -> notifyAndVerify-LocationNotAllowedIfNoResponse<br>locationType -> current Location<br>lcsClientExternalID -> externalAddress<br>lcsClientName ->dataCodingScheme<br>nameString |

RELEASE COMPLETE (Step 22)

| Information element | Value/remark |
|---|---|
| Protocol Discriminator | Call Independent SS message (1011) |
| Transaction identifier<br>Message type | <br>RELEASE COMPLETE (0010 1010) |

#### 17.2.4.7.5 Test requirements

After step 7 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionGranted.

After step 10 the UE shall respond with a MEASUREMENT REPORT message containing a UE position estimate.

After step 15 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionDenied.

During step 21 the UE shall not send any RELEASE COMPLETE message.

### 17.2.4.8 LCS Mobile terminated location request/ UE-Assisted GPS/ Privacy Verification/ Location Allowed if No Response

#### 17.2.4.8.1 Definition

This test case applies to all UEs supporting UE-Assisted GPS Location Service capabilities.

17.2.4.8.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

2) In case of privacy verification the MS shall respond to the request by sending a RELEASE COMPLETE message containing the mobile subscriber's response in a return result component.

3) If the timer expires in the network before any response from the MS (e.g. due to no response from the user), the network shall interpret this by applying the default treatment defined in GSM 03.71 for GSM and TS 23.171 for UMTS (i.e. disallow location if barred by subscription and allow location if allowed by subscription).

4) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

5) The UE shall:

   1> when a measurement report is triggered:

      2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

         3> if the IE "Vertical Accuracy" is included:

            4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

         3> if the IE "Positioning Methods" is set to "GPS":

            4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

               5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

                  6> if the IE "GPS timing of Cell wanted" is set to TRUE:

                     7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

                     7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

                     7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

                  6> if the IE "GPS timing of Cell wanted" is set to FALSE:

                     7> include the IE "GPS TOW msec".

               5> if the UE does not support the capability to provide the GPS timing of the cell:

                  6> include the IE "GPS TOW msec".

References

- Conformance requirement 1, 2 and 3: TS 24.030, clause 4.1.1.

- Conformance requirement 4: TS 25.331, clause 8.4.1.3.
- Conformance requirement 5: TS 25.331, clause 8.6.7.19.3.3b.

#### 17.2.4.8.3 Test Purpose

To verify that when the UE receives a REGISTER message, containing a LCS Location Notification Invoke component set to notifyAndVerify-LocationAllowedIfNoResponse, the UE notifies the user of the request and indicates that the default response is location allowed if no response and providing the opportunity to accept or deny the request and sends a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied or permissionGranted as appropriate.

#### 17.2.4.8.4 Method of Test

##### Initial Conditions

System Simulator (SS):

- 1 cell, default parameters
- Satellites: As specified in 17.2.1.2

UE:

- State "CS-CELL DCH Initial (State 6-1)" as specified in clause 7.4.1 of TS 34.108.

##### Related PICS/PIXIT Statements

- UE Assisted Network Assisted GPS
- px_UeLcsNotification: value for UE LCS Notification timeout timer
- UE supporting Mobile Terminated Location Request

##### Test Procedure

The SS initiates authentication and ciphering and sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse.

The LCS Client Name contained in the USSD text string of the lcs-LocationNotification should be displayed with the option to accept or deny the request and an indication that location will be allowed if no user response is received.

The user accepts the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

The SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.3.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE “Error reason” set to “Assistance Data Missing”. If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message including IE “UE positioning GPS measured results”.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse.

The user denies the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse.

The user ignores the location request by taking no action. If the timer expires in the SS before any response from the UE is received, the SS interprets this by applying the default treatment LocationAllowed.

The SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.3.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE “Error reason” set to “Assistance Data Missing”. If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE then sends a MEASUREMENT REPORT message including IE “UE positioning GPS measured results”.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | AUTHENTICATION REQUEST | |
| 2 | --> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse |
| 5 | SS | | | SS starts timer T(LCSN) set to 90% of px_UeLcsNotification |
| 6 | UE | | | The UE notifies the user of the location request and indicates to the user that location will be allowed in the absence of a response |
| 7 | UE | | | The user accepts the location request before timer T(LCSN) expires |
| 8 | -> | | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionGranted |
| 9 | <- | | MEASUREMENT CONTROL | Assistance data set as specified for “Adequate assistance data for UE-assisted A-GPS” in 17.2.1.3.3 |
| 10 | -> | | MEASUREMENT REPORT | UE reports positioning measurement results (Option 1) or requests additional assistance data (Option 2). |
| 10a | <- | | MEASUREMENT CONTROL | If UE requested additional assistance data in step 10, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.3.5. |
| 10b | -> | | MEASUREMENT REPORT | If UE requested additional assistance data in step 10, this message contains the IE “UE positioning GPS measured results”. |
| 11 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse |
| 12 | SS | | | SS starts timer T(LCSN) set to 90% of px_UeLcsNotification |
| 13 | UE | | | The UE notifies the user of the location request and indicates to the user that location will be allowed in the absence of a response |
| 14 | UE | | | The user denies the location request before timer T(LCSN) expires |
| 15 | -> | | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionDenied |
| 16 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyAndVerify-LocationAllowedIfNoResponse |
| 17 | SS | | | SS starts timer T(LCSN) set to 90% of px_UeLcsNotification |
| 18 | UE | | | The UE notifies the user of the location request and indicates to the user that location will be allowed in the absence of a response |
| 19 | UE | | | The user does not reply |
| 20 | SS | | | SS waits until T(LCSN) expires to verify that the UE does not send a RELEASE COMPLETE message. |
| 21 | <- | | RELEASE COMPLETE | SS terminates the dialogue |
| 22 | <- | | MEASUREMENT CONTROL | Assistance data set as specified for “Adequate assistance data for UE-assisted A-GPS” in 17.2.1.3.5 |
| 23 | -> | | MEASUREMENT REPORT | UE reports positioning measurement results (Option 1) or requests additional assistance data (Option 2). |

| | | | |
|---|---|---|---|
| 23a | <- | MEASUREMENT CONTROL | If UE requested additional assistance data in step 23, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.3.5. |
| 23b | -> | MEASUREMENT REPORT | If UE requested additional assistance data in step 23, this message contains the IE “UE positioning GPS measured results”. |
| 24 | SS | | SS releases the connection and the test case ends |

17.2.4.8.5 Test requirements

After step 7 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionGranted.

After step 9 the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

After step 14 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionDenied.

After step 22 the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

## 17.2.4.9 LCS Mobile terminated location request/ UE-Assisted GPS/ Privacy Verification/ Location Not Allowed if No Response

### 17.2.4.9.1 Definition

This test case applies to all UEs supporting UE-Assisted GPS Location Service capabilities.

### 17.2.4.9.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

2) In case of privacy verification the MS shall respond to the request by sending a RELEASE COMPLETE message containing the mobile subscriber's response in a return result component.

3) If the timer expires in the network before any response from the MS (e.g. due to no response from the user), the network shall interpret this by applying the default treatment defined in GSM 03.71 for GSM and TS 23.171 for UMTS (i.e. disallow location if barred by subscription and allow location if allowed by subscription).

4) if the IE "Measurement command" has the value "setup":

   2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

   …

   2> for any other measurement type:

      3> if the measurement is valid in the current RRC state of the UE:

         4> begin measurements according to the stored control information for this measurement identity.

5) The UE shall:

   1> when a measurement report is triggered:

      2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

         3> if the IE "Vertical Accuracy" is included:

            4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

         3> if the IE "Positioning Methods" is set to "GPS":

            4> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

               5> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

                  6> if the IE "GPS timing of Cell wanted" is set to TRUE:

                     7> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

7> include the IE "Reference SFN" and the IE "UE GPS timing of cell frames".

6> if the IE "GPS timing of Cell wanted" is set to FALSE:

7> include the IE "GPS TOW msec".

5> if the UE does not support the capability to provide the GPS timing of the cell:

6> include the IE "GPS TOW msec".

Test Procedure

The SS initiates authentication and ciphering and sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse.

The LCS Client Name contained in the USSD text string of the lcs-LocationNotification should be displayed with the option to accept or deny the request and an indication that location will be allowed if no user response is received.

The user accepts the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionGranted.

The SS orders an A-GPS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.3.3.. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE “Error reason” set to “Assistance Data Missing”. If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message including IE “UE positioning GPS measured results”.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse.

The user denies the location request. The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result with verificationResponse set to permissionDenied.

The SS sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse.

The user ignores the location request by taking no action. If the timer expires in the SS before any response from the UE is received, the SS interprets this by applying the default treatment LocationNotAllowed.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | AUTHENTICATION REQUEST | |
| 2 | --> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse |
| 5 | SS | | | SS starts timer T(LCSN) set to 90% of px_UeLcsNotification |
| 6 | UE | | | The UE notifies the user of the location request and indicates to the user that location will be not allowed in the absence of a response |
| 7 | UE | | | The user accepts the location request before timer T(LCSN) expires |
| 8 | -> | | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionGranted |
| 9 | <- | | MEASUREMENT CONTROL | |
| 10 | -> | | MEASUREMENT REPORT | UE reports positioning measurement results (Option 1) or requests additional assistance data (Option 2). |
| 10a | <- | | MEASUREMENT CONTROL | If UE requested additional assistance data in step 10, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.3.5. |
| 10b | -> | | MEASUREMENT REPORT | If UE requested additional assistance data in step 10, this message contains the IE “UE positioning GPS measured results”. |
| 11 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse |
| 12 | SS | | | SS starts timer T(LCSN) set to 90% of px_UeLcsNotification |
| 13 | UE | | | The UE notifies the user of the location request and indicates to the user that location will be not allowed in the absence of a response |
| 14 | UE | | | The user denies the location request before timer T(LCSN) expires |
| 15 | -> | | RELEASE COMPLETE | Containing a LocationNotification return result with verificationResponse set to permissionDenied |
| 16 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyAndVerify-LocationNotAllowedIfNoResponse |
| 17 | SS | | | SS starts timer T(LCSN) set to 90% of px_UeLcsNotification |
| 18 | UE | | | The UE notifies the user of the location request and indicates to the user that location will be not allowed in the absence of a response |
| 19 | UE | | | The user does not reply |
| 20 | SS | | | SS waits until T(LCSN) expires to verify that the UE does not send a RELEASE COMPLETE message. |
| 21 | <- | | RELEASE COMPLETE | SS terminates the dialogue |
| 22 | SS | | | SS releases the connection and the test case ends |

#### 17.2.4.9.5 Test requirements

After step 7 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionGranted.

After step 9 the UE shall respond with a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results”.

After step 14 the UE shall send a RELEASE COMPLETE message with verificationResponse set to permissionDenied.

During step 20 the UE shall not send any RELEASE COMPLETE message.

### 17.2.4.10 LCS Mobile terminated location request/ UE-Based or UE-Assisted GPS/ Configuration Incomplete

#### 17.2.4.10.1 Definition

This test case applies to all UEs supporting UE-based or UE-assisted network assisted GPS, but not UE-based OTDOA.

#### 17.2.4.10.2 Conformance requirements

1) The network invokes a location notification procedure by sending a REGISTER message containing a LCS-LocationNotification invoke component to the UE. This may be sent either to request verification for MT-LR or to notify about already authorized MT-LR.

2) In the case of location notification no response is required from the MS, the MS shall terminate the dialogue by sending a RELEASE COMPLETE message containing a LocationNotification return result.

3) The UE shall perform the following consistency check:

   1> if UE, according to its capabilities, does not support UE-based OTDOA and if IE "Positioning Methods" is set to "OTDOA" and if IE "Method Type" is set to "UE-based":

      2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

   1> if UE, according to its capabilities, does not support UE-based GPS and if IE "Positioning Methods" is set to "GPS" and if IE "Method Type" is set to "UE-based":

      2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

   1> if UE, according to its capabilities, does not support UE-assisted GPS and if IE "Positioning Methods" is set to "GPS" and if IE "Method Type" is set to "UE-assisted":

      2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

1> if UE, according to its capabilities, does not support UE-based positioning and if IE "Positioning Methods" is set to "OTDOAorGPS" and if IE "Method Type" is set to "UE-based":

2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

1> if UE, according to its capabilities, does not support Rx-Tx time difference type 2 measurement and if IE "Positioning Methods" is set to "Cell ID":

2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

1> if UE, according to its capabilities, does not support UE GPS timing of cell frames measurement and if IE "GPS timing of Cell wanted" is set to TRUE:

2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

4) If the variable CONFIGURATION_INCOMPLETE is set to TRUE, the UE shall:

1> retain the measurement configuration that was valid before the MEASUREMENT CONTROL message was received;

1> set the IE "RRC transaction identifier" in the MEASUREMENT CONTROL FAILURE message to the value of "RRC transaction identifier" in the entry for the MEASUREMENT CONTROL message in the table "Accepted transactions" in the variable TRANSACTIONS and clear that entry;

1> clear the variable CONFIGURATION_INCOMPLETE;

1> set the cause value in IE "failure cause" to "Configuration incomplete";

1> submit the MEASUREMENT CONTROL FAILURE message to lower layers for transmission on the DCCH using AM RLC;

1> continue with any ongoing processes and procedures as if the invalid MEASUREMENT CONTROL message has not been received;

1> and the procedure ends.

5) The UE should set the variable UNSUPPORTED_CONFIGURATION to TRUE if the received message is not according to the UE capabilities.

- Conformance requirement 5: TS 25.331 clause 8.5.20

### 17.2.4.10.3 Test Purpose

To verify that the UE sends a MEASUREMENT CONTROL FAILURE message, after receiving a MEASUREMENT CONTROL message with IE “Method Type” set a value which is inconsistent with the UE positioning capabilities.

To verify that the UE set the "failure cause" IE to value "configuration incomplete" in the uplink MEASUREMENT CONTROL FAILURE message.

### 17.2.4.10.4 Method of Test

Initial Conditions

System Simulator (SS):

- 1 cell, default parameters

UE:

- State “CS-CELL DCH Initial (State 6-1)” as specified in clause 7.4.1 of TS 34.108.

Related PICS/PIXIT Statements

- UE Based Network Assisted GPS
- UE Assisted Network Assisted GPS
- UE supporting Mobile Terminated Location Request

Test Procedure

The SS initiates authentication and ciphering and sends a REGISTER message containing a Facility IE containing a LCS Location Notification Invoke component set to notifyLocationAllowed.

The UE responds with a RELEASE COMPLETE message containing a LocationNotification return result.

The SS sends a MEASUREMENT CONTROL message with “Method type” set to a value not supported by the UE as indicated in the “UE positioning capability” contained in the “UE radio access capability” (method not to be supported is UE-based OTDOA).

The UE sends a MEASUREMENT CONTROL FAILURE message with Failure Cause “Configuration Incomplete” or “unsupported configuration.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | AUTHENTICATION REQUEST | |
| 2 | --> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 5 | UE | | | The UE notifies the user of the location request |
| 6 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 7 | SS | | | SS verifies that UE does not support UE-based OTDOA |
| 8 | <- | | MEASUREMENT CONTROL | IE “Method type” is set to a method not supported by the UE (UE-based OTDOA) |
| 9 | -> | | MEASUREMENT CONTROL FAILURE | Failure cause “Configuration Incomplete” or “Unsupported Configuration" |
| 10 | SS | | | SS releases the connection and the test case ends |

MEASUREMENT CONTROL FAILURE (Step 9)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | Set to the same value of the same IE in the MEASUREMENT CONTROL message sent in Step 5 |
| Failure cause | Failure cause “Configuration Incomplete” or “Unsupported Configuration" |

### 17.2.4.10.5 Test requirements

After step 5 the UE shall send a RELEASE COMPLETE message.

After step 8, the UE shall transmit MEASUREMENT CONTROL FAILURE message, stating the IE "failure cause" as "configuration incomplete". The UE shall not transmit any MEASUREMENT REPORT messages during the execution of this test case.

## 17.2.5 Assisted GNSS Network Induced Tests

### 17.2.5.1 NI-LR Emergency Call: UE-Based A-GNSS

#### 17.2.5.1.1 Definition

This test case applies to all UEs supporting UE-Based GANSS or GNSS Location Service capabilities.

#### 17.2.5.1.2 Conformance requirements

1) A MM connection for an emergency call may be established in all states of the mobility management sublayer which allow MM connection establishment for a normal originating call.

   When a user requests an emergency call establishment the UE will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment.

2) Having entered the "MM connection pending" state, upon MM connection establishment, the call control entity of the UE sends a setup message to its peer entity. This setup message is

   - a SETUP message, if the call to be established is a basic call; and
   - an EMERGENCY SETUP message, if the call to be established is an emergency call.

3) If the IE "UE positioning GANSS reference time" is included, the UE shall:

   1> if the IE "GANSS Day" is included:

      2> store this IE in "UE positioning GANSS reference time" in variable UE_POSITIONING_GANSS_DATA and use it as the current GANSS day.

   1> store the IE "GANSS TOD" in the IE "UE positioning GANSS reference time" in variable UE_POSITIONING_GANSS_DATA and use it as an estimate of the GANSS Time-of-Day at the time of reception of the complete message containing the IE "GANSS TOD";

   NOTE: The UE does not need to apply any compensation on the GANSS Time-of-Day.

   1> if the IE "GANSS Time ID" is not included:

      2> use Galileo system time as a reference for GANSS-Time-of-Day.

   1> if the IE "GANSS Time ID" is included:

      2> use the system time indicated by this IE as a reference for GANSS-Time-of-Day.

4) If the IE "UE positioning GANSS reference UE position" is included, the UE shall:

   1> store this IE in the IE "UE positioning GANSS reference UE position" in variable UE_POSITIONING_GANSS_DATA; and

   1> use it as a priori knowledge of the approximate location of the UE.

5) If the IE "UE positioning GANSS time model" is included, the UE shall for each GANSS:

   1> store the information in "UE positioning GANSS time model" in variable UE_POSITIONING_GANSS_DATA;

   1> use the stored parameters to relate GANSS time for the GANSS indicated by "GANSS ID" to time reference indicated by IE "GNSS_TO_ID".

6) The UE shall when a measurement report is triggered:

   1> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or the UE has been able to calculate a position in case of GPS or GANSS positioning or the UE has been able to calculate a position using a standalone positioning method:

2> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

3> if the UE supports the capability to provide the GANSS timing of the cell frames measurement;

3> if the IE "GANSS timing of Cell wanted" is not included, or included with each bit set to value zero:

4> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid.

3> if the UE does not support the capability to provide the GANSS timing of the cell:

4> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid;

4> include the IE "GANSS Time ID" to identify the GNSS system time.

3> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

4> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

5> if the UE has been able to calculate a 3-dimensional position:

6> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

5> if the UE has not been able to calculate a 3-dimensional position:

6> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

3> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

4> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

5> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

3> if any of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" is reported:

4> should calculate a value of the IE "Confidence", different from "0", as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" that is reported.

NOTE: The value "0" of the IE "Confidence" is interpreted as "no information" by the UTRAN.

#### 17.2.5.1.3 Test Purpose

To verify when an emergency call is initiated by a UE, and the network performs a GANSS location request using the RRC measurement control procedure, then the UE responds with a Measurement Report containing UE location estimate.

17.2.5.1.4 Method of Test

Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment (UE):
  - the UE is in state "MM idle" with valid TMSI and CKSN.

Related PICS/PIXIT Statements

- Emergency speech call
- UE Based Network Assisted GANSS
- UE Based Network Assisted GPS (Sub-tests 3 and 4)

Test procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: “A-GPS” includes Modernized GPS if supported by the UE. | |

The UE is made to initiate an emergency call.

After the call has been through-connected in both directions, the SS orders an A-GNSS positioning measurement using one or more (dependent on the Sub-Test) MEASUREMENT CONTROL messages. The last MEASUREMENT CONTROL message orders periodical reporting by sending a MEASUREMENT CONTROL message requesting periodical measurement reporting (1 report, interval 64s).

The UE then performs positioning measurements, calculates "UE Positioning Position Estimate Info" and responds with this in the RRC message MEASUREMENT REPORT.

Finally the SS clears the call.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The "emergency number" is entered. Number shall be one programmed in test USIM $EF_{ECC}$ (Emergency Call Codes), ref. 34.108 clause 8.3.2.21. |
| 2 | --> | | | UE establishes RRC procedure for emergency call.<br>Establishment cause: Emergency Call<br>SS checks that the UE capability includes "Network Assisted GANSS Support List" with "GANSS mode" set to "UE-based", and that the UE includes "Network Assisted GPS Support" for UE-based (Sub-Tests 3 and 4 only). |
| 3 | --> | | CM SERVICE REQUEST | The CM service type IE indicates "emergency call establishment". |
| 4 | <-- | | AUTHENTICATION REQUEST | IE Authentication Parameter AUTN shall be present in the message. |
| 5 | --> | | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 6 | | | | SS starts security procedure. |
| 7 | --> | | EMERGENCY SETUP | If the Bearer capability IE is not included the default UMTS AMR speech version shall be assumed. |
| 8 | <-- | | CALL PROCEEDING | |
| 9 | <-- | | ALERTING | |
| 10 | <-- | | | SS sets up the radio bearer with the rate indicated by the EMERGENCY SETUP message. |
| 11 | <-- | | CONNECT | |
| 12 | --> | | CONNECT ACKNOWLEDGE | |
| 13 | UE | | | The DTCH is through connected in both directions. |
| 14 | <-- | | MEASUREMENT CONTROL | All Sub-Tests |
| 14a | <-- | | MEASUREMENT CONTROL | Sub-Tests 2-4 only |
| 14b | <-- | | MEASUREMENT CONTROL | Sub-Test 4 only |
| 15 | --> | | MEASUREMENT REPORT | |
| 16 | <-- | | DISCONNECT | SS disconnects the call and associated radio bearer. |

| - GPS TOW msec | Not checked |
| - GANSS TOD msec | Not checked |
| - CHOICE *Position estimate* | One of 'Ellipsoid point with uncertainty Circle' or 'Ellipsoid point with uncertainty Ellipse' or 'Ellipsoid point with altitude and uncertainty Ellipsoid' |
| - Position Data | Not checked |
| - CHOICE *Velocity estimate* | Not present |
| - UE positioning GPS measured results | Not present |
| - UE positioning error | Not present |
| - UE positioning GANSS measured results | Not present |
| Measured Results on secondary UL frequency | Not present |
| Measured Results on RACH | Not present |
| Additional Measured Results | Not present |
| Additional Measured results on secondary UL frequency | Not present |
| Event Results | Not present |
| Event results on secondary UL frequency | Not present |
| Inter-RAT cell info indication | Not present |
| E-UTRA Measured Results | Not present |
| E-UTRA Event Results | Not present |
| CSG Proximity Indication | Not present |

#### 17.2.5.1.5 Test requirements

After step 12 the UE shall have through connected the DTCH in both directions.

After step 14, 14a, or 14b (dependent on Sub-Test) the UE shall respond with a MEASUREMENT REPORT message.

### 17.2.5.2 NI-LR Emergency call: UE-Assisted A-GNSS

#### 17.2.5.2.1 Definition

This test case applies to all UEs supporting UE-Assisted GANSS or GNSS Location Service capabilities.

#### 17.2.5.2.2 Conformance requirements

1) A MM connection for an emergency call may be established in all states of the mobility management sublayer which allow MM connection establishment for a normal originating call.

   When a user requests an emergency call establishment the UE will send a CM SERVICE REQUEST message to the network with a CM service type information element indicating emergency call establishment.

2) Having entered the "MM connection pending" state, upon MM connection establishment, the call control entity of the UE sends a setup message to its peer entity. This setup message is

   - a SETUP message, if the call to be established is a basic call; and

   - an EMERGENCY SETUP message, if the call to be established is an emergency call.

3) The a measurement report is triggered:

   1> if the UE was UE shall when able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one satellite included in the

variable UE_POSITIONING_GANSS_DATA in case of GANSS positioning or one cell from the active set in case of CELL ID:

2> if the IE "Vertical Accuracy" is included:

3> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

2> if the IE "Positioning Methods" is set to "GPS" and if the IE "GANSS Positioning Methods" is not present or if the IE "GANSS Positioning Methods" is present indicating GPS allowed:

3> include the IE "UE positioning GPS measured results" in the measurement report and set the contents of the IE as follows:

4> if the UE supports the capability to provide the GPS timing of the cell frames measurement:

5> if the IE "GPS timing of Cell wanted" is set to FALSE:

7> include the IE "GPS TOW msec" and set it to the GPS TOW when the measurements included in the MEASUREMENT REPORT were valid;

7> include the IE "UE Positioning GPS Reference Time Uncertainty" and set it to the uncertainty of the GPS TOW when the measurements included in the MEASUREMENT REPORT were valid.

4> if the UE does not support the capability to provide the GPS timing of the cell:

5> include the IE "GPS TOW msec" and set it to the GPS TOW when the measurements included in the MEASUREMENT REPORT were valid;

5> include the IE "UE Positioning GPS Reference Time Uncertainty" and set it to the uncertainty of the GPS TOW when the measurements included in the MEASUREMENT REPORT were valid.

2> if the IE "Positioning Methods" is set to "GPS" and the IE "GANSS Positioning Methods" is present indicating other GNSS than GPS allowed and if any of these other GNSSs is measured:

3> include the IE "UE positioning GANSS measured results" in the measurement report and set the contents of the IE as follows:

4> if the UE supports the capability to provide the GANSS timing of the cell frames measurement:

5> if the IE "GANSS timing of Cell wanted" is not included, or included with each bit set to value zero and if IE “UE positioning GPS measured results” is not present:

6> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the measurements included in the MEASUREMENT REPORT were valid.

4> if the UE does not support the capability to provide the GANSS timing of the cell and if IE "UE positioning GPS measured results" is not present:

5> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the measurements included in the MEASUREMENT REPORT were valid.

4> if the UE supports the capability to perform GANSS measurements on multiple GANSS frequencies:

5> if the IE "GANSS Multi-frequency Measurement Requested" is included with one bit set to value one for a supported GANSS, and if any of these GANSS signals are measured:

6> include the IE "GANSS Signal Measurement Information" for each measured GANSS signal.

- Conformance requirement 1: TS 24.008 clause 4.5.1.5.

- Conformance requirement 2: TS 24.008, clause 5.2.1.
- Conformance requirement 3: TS 25.331, clause 8.6.7.19.1a.

#### 17.2.5.2.3 Test Purpose

To verify when an emergency call is initiated by a UE, and the network performs a GANSS location request using the RRC measurement control procedure, then the UE responds with a Measurement Report containing "UE positioning GANSS measured results" and "UE positioning GPS measured results" (Sub-tests 3 and 4).

#### 17.2.5.2.4 Method of Test

##### Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2.
- User Equipment (UE):
  - the UE is in state "MM idle" with valid TMSI and CKSN.

##### Related PICS/PIXIT Statements

- Emergency speech call
- UE Assisted Network Assisted GANSS
- UE Assisted Network Assisted GPS (Sub-tests 3 and 4)

##### Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: “A-GPS” includes Modernized GPS if supported by the UE. | |

The UE is made to initiate an emergency call.

After the call has been through-connected in both directions, the SS orders an A-GNSS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.4.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE "Error reason" set to "Assistance Data Missing". If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The UE then performs positioning measurements and responds with the RRC message MEASUREMENT REPORT.

Finally the SS clears the call.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The "emergency number" is entered. Number shall be one programmed in test USIM $EF_{ECC}$ (Emergency Call Codes), ref. 34.108 clause 8.3.2.21. |
| 2 | --> | | | UE establishes RRC procedure for emergency call.<br>Establishment cause: Emergency Call<br>SS checks that the UE capability includes "Network Assisted GANSS Support List" with "GANSS mode" set to "UE-assisted", and that the UE includes "Network Assisted GPS Support" for UE-assisted (Sub-Tests 2 and 4 only). |
| 3 | --> | | CM SERVICE REQUEST | The CM service type IE indicates "emergency call establishment". |
| 4 | <-- | | AUTHENTICATION REQUEST | IE Authentication Parameter AUTN shall be present in the message. |
| 5 | --> | | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 6 | SS | | | SS starts security procedure. |
| 7 | --> | | EMERGENCY SETUP | If the Bearer capability IE is not included the default UMTS AMR speech version shall be assumed. |
| 8 | <-- | | CALL PROCEEDING | |
| 9 | <-- | | ALERTING | |
| 10 | <-- | | | SS sets up the radio bearer with the rate indicated by the EMERGENCY SETUP message. |
| 11 | <-- | | CONNECT | |
| 12 | --> | | CONNECT ACKNOWLEDGE | |
| 13 | UE | | | The DTCH is through connected in both directions. |
| 14 | <-- | | MEASUREMENT CONTROL | |
| 15 | --> | | MEASUREMENT REPORT | UE reports positioning measurement results (Option 1) or requests additional assistance data (Option 2). |
| 15a | <-- | | MEASUREMENT CONTROL | If UE requested additional assistance data in step 15, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.4.5. |
| 15b | --> | | MEASUREMENT REPORT | If UE requested additional assistance data in step 15, this message contains the IE "UE positioning GANSS measured results" and "UE positioning GPS measured results" (Sub-tests 3 and 4). |
| 16 | <-- | | DISCONNECT | SS disconnects the call and associated radio bearer. |

| DPCH compressed mode status info | Not present |

#### 17.2.5.2.5 Test requirements

After step 12 the UE shall have through connected the DTCH in both directions.

After step 14 the UE shall send a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results” and/or “UE positioning GANSS measured results”.

## 17.2.6 Assisted GNSS Mobile Originated Tests

### 17.2.6.1 MO-LR Position Estimate: UE-Based A-GNSS

#### 17.2.6.1.1 Definition

This test case applies to all UEs supporting UE-Based GANSS or GNSS Location Service capabilities and providing a method to trigger an MO-LR request for a position estimate.

#### 17.2.6.1.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.

2) The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.

3) After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Reference(s):

- Conformance requirements 1, 2 and 3: TS 24.030, subclause 5.1.1

#### 17.2.6.1.3 Test Purpose

To verify the UE behaviour at a mobile originated location request procedure using network-assisted UE-based GNSS.

#### 17.2.6.1.4 Method of Test

Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment (UE):
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI.

Related PICS/PIXIT Statements

- UE Based Network Assisted GANSS.
- UE Based Network Assisted GPS (Sub-tests 3 and 4).
- Method of triggering an MO-LR request for a position estimate.

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: “A-GPS” includes Modernized GPS if supported by the UE. | |

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes an MO-LR request of type “locationEstimate”.

The SS orders an A-GNSS positioning measurement using one or more (dependent on the Sub-Test) MEASUREMENT CONTROL messages.

The SS responds with a FACILITY message containing an MO-LR result.

When UE receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originated High Priority Signalling”. |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service” |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request of type “locationEstimate”. |
| 7 | <-- | | MEASUREMENT CONTROL | All Sub-Tests |
| 7a | <-- | | MEASUREMENT CONTROL | Sub-Tests 2-4 only |
| 7b | <-- | | MEASUREMENT CONTROL | Sub-Test 4 only |
| 8 | -> | | MEASUREMENT REPORT | |
| 9 | <- | | FACILITY | LCS MO-LR result message containing a location estimate |
| 10 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 11 | SS | | | The SS releases the RRC connection and the test case ends. |

Specific Message Contents

REGISTER (Step 6)

| Information element | Value/remark |
|---|---|
| Supplementary service protocol discriminator | 1011 (supplementary services (call independent)) |
| Transaction identifier | |
| Register message type | xx11 1011 (REGISTER) |
| Facility | Invoke=LCS-MOLR<br>molr-Type ->locationEstimate |

#### 17.2.6.1.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE "MOLR-Type" set to "locationEstimate".

After step 7, the UE shall respond with a MEASUREMENT REPORT message.

After step 9, the UE shall send a RELEASE COMPLETE message.

### 17.2.6.2 MO-LR Position Estimate: UE-Assisted A-GNSS

#### 17.2.6.2.1 Definition

This test case applies to all UEs supporting UE-Assisted GANSS or GNSS Location Service capabilities and providing a method to trigger an MO-LR request for a position estimate.

#### 17.2.6.2.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.

2) The network shall pass the result of the location procedure to the MS by sending a FACILITY message to the MS containing a LCS-MOLR return result component.

3) After the last location request operation the MS shall terminate the dialogue by sending a RELEASE COMPLETE message.

Reference(s):

- Conformance requirements 1, 2 and 3: TS 24.030, subclause 5.1.1

#### 17.2.6.2.3 Test Purpose

To verify the UE behaviour at a mobile originated location request procedure using network-assisted UE-assisted GNSS.

#### 17.2.6.2.4 Method of Test

Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment (UE):
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state "PMM idle" with valid P-TMSI.

Related PICS/PIXIT Statements

- UE Assisted Network Assisted GANSS.
- UE Assisted Network Assisted GPS (Sub-tests 3 and 4).
- Method of triggering an MO-LR request for a position estimate.

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: "A-GPS" includes Modernized GPS if supported by the UE. | |

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes an MO-LR request of type "locationEstimate".

The SS orders an A-GNSS positioning measurement using a MEASUREMENT CONTROL message, including assistance data as specified in section 17.2.1.4.3. The UE may request additional assistance data by sending a MEASUREMENT REPORT message containing a positioning error indication with the IE "Error reason" set to "Assistance Data Missing". If the UE requests additional assistance data, the SS provides the requested assistance data in one or more MEASUREMENT CONTROL messages.

The SS responds with a FACILITY message containing an MO-LR result.

When UE receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originated High Priority Signalling”. |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service" |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request of type “locationEstimate”. |
| 7 | <- | | MEASUREMENT CONTROL | |
| 8 | -> | | MEASUREMENT REPORT | UE reports positioning measurement results (Option 1) or requests additional assistance data (Option 2). |
| 8a | <- | | MEASUREMENT CONTROL | If UE requested additional assistance data in step 8, SS provides the requested data in one or more MEASUREMENT CONTROL messages as specified in section 17.2.1.4.5. |
| 8b | -> | | MEASUREMENT REPORT | If UE requested additional assistance data in step 8, this message contains the IE "UE positioning GANSS measured results" and "UE positioning GPS measured results" (Sub-tests 3 and 4). |
| 9 | <- | | FACILITY | LCS MO-LR result message containing a location estimate |
| 10 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 11 | SS | | | The SS releases the RRC connection and the test case ends |

#### 17.2.6.2.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE “MOLR-Type” set to “locationEstimate”.

After step 7, the UE shall send a MEASUREMENT REPORT message containing the IE “UE positioning GPS measured results” and/or “UE positioning GANSS measured results”.

After step 9, the UE shall send a RELEASE COMPLETE message.

### 17.2.6.3 MO-LR Position Estimate: UE-Based A-GNSS – Failure Not Enough Satellites

#### 17.2.6.3.1 Definition

This test case applies to all UEs supporting UE-Based GANSS or GNSS Location Service capabilities and providing a method to trigger an MO-LR request for a position estimate.

#### 17.2.6.3.2 Conformance requirements

1) The MS invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.

2) if the IE "Measurement command" has the value "modify":

2> for all IEs present in the MEASUREMENT CONTROL message:

3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GANSS assistance data" is present, for any of the optional IEs "UE positioning GANSS reference time", "UE positioning GANSS reference UE position", "UE positioning DGANSS corrections", "UE positioning GANSS ionospheric model", "UE positioning GANSS additional ionospheric model", "UE positioning GANSS UTC model", "UE positioning GANSS additional UTC models", "UE positioning GANSS reference measurement information", "UE positioning GANSS data bit assistance", "UE positioning GANSS Time model", "UE positioning GANSS real-time integrity", "UE positioning GANSS Earth orientation parameters", "UE positioning GANSS auxiliary information" that are present in the MEASUREMENT CONTROL message:

5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

3) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

1> if an update has been provided for this satellite:

2> act as specified in subclause 8.6.7.19.3.4.

If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

1> update the variable UE_POSITIONING_GPS_DATA as follows:

2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

4) If the IE "UE positioning GANSS Navigation Model" is included, the UE shall:

1> for each GANSS:

2> for each satellite, the UE shall:

3> for IE "UE positioning GANSS clock model":

4> act as specified in subclause 8.6.7.19.7.4a.

3> for IE "UE positioning GANSS orbit model":

4> act as specified in subclause 8.6.7.19.7.4b.

5) If the IE "UE positioning GANSS clock model" is included, the UE shall:

1> for each GANSS:

2> update the variable UE_POSITIONING_GANSS_DATA as follows:

3> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GANSS Navigation Model" in the variable UE_POSITIONING_GANSS_DATA, possibly overwriting any existing information in this position.

2> act on these GANSS clock models in a manner similar to that specified in a relevant ICD.

6) If the IE "UE positioning GANSS orbit model" is included, for each satellite of each supported GNSS, the UE shall:

1> update the variable UE_POSITIONING_GANSS_DATA as follows:

2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GANSS Navigation Model" in the variable UE_POSITIONING_GANSS_DATA, possibly overwriting any existing information in this position..

1> act on these GANSS orbit models in a manner similar to that specified in a relevant ICD.

7) The UE shall when a measurement report is triggered:

2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or the UE has been able to calculate a position in case of GPS or GANSS positioning or the UE has been able to calculate a position using a standalone positioning method:

3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

4> if the UE supports the capability to perform the UE GPS timing of cell frames measurement:

5> if the IE "GPS timing of Cell wanted" is set to TRUE:

6> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

6> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD;

6> include the SFN when the position was determined;

6> include the IE "UE GPS timing of cell frames";

6> include the IE "UE Positioning GPS Reference Time Uncertainty".

5> if the IE "GPS timing of Cell wanted" is set to FALSE:

6> include the IE "GPS TOW msec" and set it to the GPS TOW when the position estimate was valid.

4> if the position was calculated with GPS; and

4> the UE does not support the capability to provide the GPS timing of the cell:

5> include the IE "GPS TOW msec" and set it to the GPS TOW when the position estimate was valid.

4> if the UE supports the capability to provide the GANSS timing of the cell frames measurement:

5> if the IE "GANSS timing of Cell wanted" is included with one bit set to value one for a supported GANSS:

6> perform the UE GANSS timing of cell frames measurement on the serving cell or on one cell of the active set;

6> include the IE "GANSS Time ID" to identify the GNSS system time;

6> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

6> include the IE "Reference SFN" and the IE "UE GANSS timing of cell frames".

5> if the IE "GANSS timing of Cell wanted" is not included, or included with each bit set to value zero:

6> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid.

4> if the UE does not support the capability to provide the GANSS timing of the cell:

5> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid;

5> include the IE "GANSS Time ID" to identify the GNSS system time.

4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to value "0":

6> if the IE "Horizontal Accuracy" has been assigned a value "0":

7> may include IE "Ellipsoid point with altitude".

6> if the IE "Horizontal Accuracy" has been assigned a value unequal to "0"; and

6> if the UE has been able to calculate a 3-dimensional position

7> include IE "Ellipsoid point with altitude" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> may act as if IE "Vertical Accuracy" was not included in IE "UE positioning reporting quantity".

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

4> if any of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" is reported:

5> should calculate a value of the IE "Confidence", different from "0", as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" that is reported.

NOTE: The value "0" of the IE "Confidence" is interpreted as "no information" by the UTRAN [57].

4> if IE "Velocity Requested" has been included in IE "UE positioning reporting quantity":

5> include IE "Velocity estimate" if supported and available.

2> if the UE was not able to calculate a position:

3> include IE "UE positioning error" in the MEASUREMENT REPORT and set the contents of this IE as specified in subclause 8.6.7.19.5.

8) The UE shall set the contents of the IE "UE positioning Error" as follows:

…

1> if the IE "Positioning Methods" in IE "UE positioning reporting quantity" has been assigned to value "GPS" and the IE "GANSS Positioning Methods" is present:

2> if there were not enough GANSS satellites to be received:

3> set IE "Error reason" to "Not Enough GANSS Satellites".

2> if some GANSS assistance data was missing:

3> set IE "Error reason" to "Assistance Data Missing"; and

3> if the IE "Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to TRUE:

4> include the IE "GANSS Additional Assistance Data Request".

3> if the IE "Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to FALSE:

4> not include the IE "GANSS Additional Assistance Data Request", and use the assistance data available for doing a positioning estimate.

9) If the network is unable to successfully fulfil the request received from the MS (e.g. to provide a location estimate or location assistance information), it shall clear the transaction by sending a RELEASE COMPLETE message containing a return error component. Error values are specified in 3GPP TS 24.080.

10) PositionMethodFailure: This error is returned by the network when the network is unable to obtain any of the location information requested or none of the information obtained satisfies the requested LCS QoS or if requested LCS assistance data could not be transferred or requested deciphering keys for broadcast assistance data could not be returned.

#### 17.2.6.3.3 Test Purpose

To verify the UE behaviour at a mobile originated location request procedure using network-assisted UE-based GNSS when the MO-LR procedure fails due to failure of positioning method.

#### 17.2.6.3.4 Method of Test

##### Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellite Simulator is switched off
- User Equipment (UE):
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI

##### Related PICS/PIXIT Statements

- UE Based Network Assisted GANSS.
- UE Based Network Assisted GPS (Sub-tests 3 and 4).
- Method of triggering an MO-LR request for a position estimate.

##### Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: “A-GPS” includes Modernized GPS if supported by the UE. | |

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes an MO-LR request of type “locationEstimate”.

The SS orders an A-GNSS positioning measurement using one or more (dependent on the Sub-Test) MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message with a positioning error indication.

The SS sends a RELEASE COMPLETE message containing a return error component.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originated High Priority Signalling". |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service" |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request of type "locationEstimate". |
| 7 | <-- | | MEASUREMENT CONTROL | All Sub-Tests |
| 7a | <-- | | MEASUREMENT CONTROL | Sub-Tests 2-4 only |
| 7b | <-- | | MEASUREMENT CONTROL | Sub-Test 4 only |
| 8 | -> | | MEASUREMENT REPORT | Positioning error report "not enough GANSS satellites" or "not enough GPS satellites" (subtests 3 and 4 only) |
| 9 | SS | | | SS is unable to fulfil the MO-LR request |
| 10 | <- | | RELEASE COMPLETE | SS terminates the dialogue containing a return error component |
| 11 | SS | | | The SS releases the RRC connection and the test case ends. |

Specific Message Contents

REGISTER (Step 6)

| Information element | Value/remark |
|---|---|
| Supplementary service protocol discriminator | 1011 (supplementary services (call independent)) |
| Transaction identifier | |
| Register message type | xx11 1011 (REGISTER) |

| Message type | RELEASE COMPLETE (0010 1010) |
| Facility | |
| | Return error = LCS-MOLR<br>Error -> positionMethodFailure |

#### 17.2.6.3.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE "MOLR-Type" set to "locationEstimate".

After step 7b, the UE shall respond with a MEASUREMENT REPORT message.

### 17.2.6.4 MO-LR Assistance Data: UE-Based or UE-Assisted A-GNSS - Success

#### 17.2.6.4.1 Definition

This test case applies to all UEs supporting UE-Based or UE-Assisted GANSS or GNSS Location Service capabilities and providing a method to trigger an MO-LR request for a assistance data.

#### 17.2.6.4.2 Conformance requirements

1) The UE invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component. SS Version Indicator value 1 or above shall be used.

2) The network shall send a FACILITY message to the UE containing a LCS-MOLR return result component.

3) After the last location request operation the UE shall terminate the dialogue by sending a RELEASE COMPLETE message.

Reference(s):

- Conformance requirements 1, 2 and 3: TS 24.030, subclause 5.1.1

#### 17.2.6.4.3 Test Purpose

To verify the UE behaviour at a mobile originated location request procedure using network-assisted UE-based or UE-assisted GNSS.

#### 17.2.6.4.4 Method of Test

##### Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment (UE):
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI.

##### Related PICS/PIXIT Statements

- UE Based Network Assisted GANSS.
- UE Based Network Assisted GPS (Sub-tests 3 and 4).
- UE Assisted Network Assisted GANSS.
- UE Assisted Network Assisted GPS (Sub-tests 3 and 4).
- Method of triggering an MO-LR request for assistance data.

##### Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: “A-GPS” includes Modernized GPS if supported by the UE. | |

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes an MO-LR request of type “AssistanceData”.

The SS transmits an ASSISTANCE DATA delivery message with assistance data. When the assistance data delivery was successful, the SS sends a FACILITY message to the UE.

The SS responds with a FACILITY message containing an MO-LR result.

When the UE receives the FACILITY message, it clears the transaction by sending a RELEASE COMPLETE message.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originated High Priority Signalling”. |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service” |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request of type “AssistanceData”. |
| 7 | <- | | ASSISTANCE DATA DELIVERY | The SS provides the requested data in one or more ASSISTANCE DATA DELIVERY messages as specified in section 17.2.1.4.5. |
| 8 | <- | | FACILITY | |
| 9 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 10 | SS | | | The SS releases the RRC connection and the test case ends. |

| Supplementary service protocol discriminator | 1011 (supplementary services (call independent)) |
| Transaction identifier | |
| Register message type | xx10 1010 (RELEASE COMPLETE) |

#### 17.2.6.4.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE "MOLR-Type" set to "assistanceData".

After step 8, the UE shall send a RELEASE COMPLETE message.

### 17.2.6.5 MO-LR Assistance Data: UE-Based or UE-Assisted A-GNSS - Failure

#### 17.2.6.5.1 Definition

This test case applies to all UEs supporting UE-Based or UE-Assisted GANSS or GNSS Location Service capabilities and providing a method to trigger an MO-LR request for assistance data.

#### 17.2.6.5.2 Conformance requirements

1) The UE invokes a MO-LR by sending a REGISTER message to the network containing a LCS-MOLR invoke component.

2) If the network is unable to successfully fulfil the request received from the UE (e.g. to provide a location estimate or location assistance information), it shall clear the transaction by sending a RELEASE COMPLETE message containing a return error component. Error values are specified in 3GPP TS 24.080.

3) PositionMethodFailure: This error is returned by the network when the network is unable to obtain any of the location information requested or none of the information obtained satisfies the requested LCS QoS or if requested LCS assistance data could not be transferred or requested deciphering keys for broadcast assistance data could not be returned.

Reference(s):

- Conformance requirements 1 and 2: TS 24.030, subclause 5.1.1

- Conformance requirement 3: TS 24.080, subclause 4.3.2.29

#### 17.2.6.5.3 Test Purpose

To verify the UE behaviour at a mobile originated location request for assistance data where the network is unable to provide the requested assistance data.

#### 17.2.6.5.4 Method of Test

Initial Conditions

- System Simulator (SS):

  - 1 cell, default parameters.

  - Satellites: As specified in 17.2.1.2

- User Equipment (UE):

  The UE shall begin the test with neither GPS nor GANSS assistance data stored.

  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state “PMM idle” with valid P-TMSI

### Related PICS/PIXIT Statements

- UE Based Network Assisted GANSS.
- UE Based Network Assisted GPS (Sub-tests 3 and 4).
- UE Assisted Network Assisted GANSS.
- UE Assisted Network Assisted GPS (Sub-tests 3 and 4).
- Method of triggering an MO-LR request for assistance data.

### Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: “A-GPS” includes Modernized GPS if supported by the UE. | |

The UE invokes call independent supplementary service through a CM SERVICE REQUEST. The SS initiates authentication and ciphering.

The UE invokes an MO-LR request of type “assistanceData”.

The SS is unable to provide the requested assistance data.

The SS sends a RELEASE COMPLETE message containing a return error component.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | | The UE establishes an RRC connection for location service. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originated High Priority Signalling”. |
| 2 | -> | | CM SERVICE REQUEST | The CM service type IE indicates "call independent supplementary service” |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts ciphering and integrity protection. |
| 6 | -> | | REGISTER | Call Independent SS containing Facility IE with an LCS MO-LR request of type “AssistanceData”. |
| 8 | SS | | | SS is unable to provide the requested assistance data |
| 9 | <- | | RELEASE COMPLETE | SS terminates the dialogue containing a return error component |
| 10 | SS | | | The SS waits for 10 seconds to verify that the UE does not send a RELEASE COMPLETE message. |
| 11 | SS | | | The SS releases the RRC connection and the test case ends |

Specific Message Contents

#### 17.2.6.5.5 Test requirements

After step 5 the UE shall transmit a REGISTER message with an LCS MO-LR request with the IE “MOLR-Type” set to “assistanceData”.

During step 10 the UE shall not send any RELEASE COMPLETE message.

## 17.2.7 Assisted GNSS Mobile Terminated Tests

### 17.2.7.1 MT-LR: UE-based or UE-Assisted A-GNSS – Request for additional assistance data/ Success

#### 17.2.7.1.1 Definition

This test case applies to all UEs supporting UE-Based/UE-Assisted GANSS or GNSS Location Service capabilities.

#### 17.2.7.1.2 Conformance requirements

1) if the IE "Measurement command" has the value "modify":

   2> for all IEs present in the MEASUREMENT CONTROL message:

      3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

         4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GANSS assistance data" is present, for any of the optional IEs "UE positioning GANSS reference time", "UE positioning GANSS reference UE position", "UE positioning DGANSS corrections", "UE positioning GANSS ionospheric model", "UE positioning GANSS additional ionospheric model", "UE positioning GANSS UTC model", "UE positioning GANSS additional UTC models", "UE positioning GANSS reference measurement information", "UE positioning GANSS data bit assistance", "UE positioning GANSS Time model", "UE positioning GANSS real-time integrity", "UE positioning GANSS Earth orientation parameters", "UE positioning GANSS auxiliary information" that are present in the MEASUREMENT CONTROL message:

            5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

            5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

2) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

   1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

   1> if an update has been provided for this satellite:

2> act as specified in subclause 8.6.7.19.3.4.

If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

1> update the variable UE_POSITIONING_GPS_DATA as follows:

2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

3) If the IE "UE positioning GANSS Navigation Model" is included, the UE shall:

1> for each GANSS:

2> for each satellite, the UE shall:

3> for IE "UE positioning GANSS clock model":

4> act as specified in subclause 8.6.7.19.7.4a.

3> for IE "UE positioning GANSS orbit model":

4> act as specified in subclause 8.6.7.19.7.4b.

4) If the IE "UE positioning GANSS clock model" is included, the UE shall:

1> for each GANSS:

2> update the variable UE_POSITIONING_GANSS_DATA as follows:

3> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GANSS Navigation Model" in the variable UE_POSITIONING_GANSS_DATA, possibly overwriting any existing information in this position.

2> act on these GANSS clock models in a manner similar to that specified in a relevant ICD.

5) If the IE "UE positioning GANSS orbit model" is included, for each satellite of each supported GNSS, the UE shall:

1> update the variable UE_POSITIONING_GANSS_DATA as follows:

2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GANSS Navigation Model" in the variable UE_POSITIONING_GANSS_DATA, possibly overwriting any existing information in this position..

1> act on these GANSS orbit models in a manner similar to that specified in a relevant ICD.

6) The UE shall when a measurement report is triggered:

2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or the UE has been able to calculate a position in case of GPS or GANSS positioning or the UE has been able to calculate a position using a standalone positioning method:

3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

4> if the UE supports the capability to perform the UE GPS timing of cell frames measurement:

5> if the IE "GPS timing of Cell wanted" is set to TRUE:

6> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

6> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD;

6> include the SFN when the position was determined;

6> include the IE "UE GPS timing of cell frames";

6> include the IE "UE Positioning GPS Reference Time Uncertainty".

5> if the IE "GPS timing of Cell wanted" is set to FALSE:

6> include the IE "GPS TOW msec" and set it to the GPS TOW when the position estimate was valid.

4> if the position was calculated with GPS; and

4> the UE does not support the capability to provide the GPS timing of the cell:

5> include the IE "GPS TOW msec" and set it to the GPS TOW when the position estimate was valid.

4> if the UE supports the capability to provide the GANSS timing of the cell frames measurement:

5> if the IE "GANSS timing of Cell wanted" is included with one bit set to value one for a supported GANSS:

6> perform the UE GANSS timing of cell frames measurement on the serving cell or on one cell of the active set;

6> include the IE "GANSS Time ID" to identify the GNSS system time;

6> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

6> include the IE "Reference SFN" and the IE "UE GANSS timing of cell frames".

5> if the IE "GANSS timing of Cell wanted" is not included, or included with each bit set to value zero:

6> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid.

4> if the UE does not support the capability to provide the GANSS timing of the cell:

5> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid;

5> include the IE "GANSS Time ID" to identify the GNSS system time.

4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to value "0":

6> if the IE "Horizontal Accuracy" has been assigned a value "0":

7> may include IE "Ellipsoid point with altitude".

6> if the IE "Horizontal Accuracy" has been assigned a value unequal to "0"; and

6> if the UE has been able to calculate a 3-dimensional position

7> include IE "Ellipsoid point with altitude" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> may act as if IE "Vertical Accuracy" was not included in IE "UE positioning reporting quantity".

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

4> if any of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" is reported:

5> should calculate a value of the IE "Confidence", different from "0", as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" that is reported.

NOTE: The value "0" of the IE "Confidence" is interpreted as "no information" by the UTRAN [57].

4> if IE "Velocity Requested" has been included in IE "UE positioning reporting quantity":

5> include IE "Velocity estimate" if supported and available.

2> if the UE was not able to calculate a position:

3> include IE "UE positioning error" in the MEASUREMENT REPORT and set the contents of this IE as specified in subclause 8.6.7.19.5.

7) The UE shall:

1> when a measurement report is triggered:

2> if the UE was able to perform measurements on at least one neighbour cell included in the variable UE_POSITIONING_OTDOA_DATA_UE_ASSISTED in case of OTDOA or one satellite included in the variable UE_POSITIONING_GPS_DATA in case of GPS positioning or one cell from the active set in case of CELL ID:

3> if the IE "Vertical Accuracy" is included:

4> interpret the presence of this IE to indicate that the UTRAN desires to compute a 3-dimensional position estimate.

if the IE "Positioning Methods" is set to "GPS" and the IE "GANSS Positioning Methods" is present indicating other GNSS than GPS allowed and if any of these other GNSSs is measured:

4> include the IE "UE positioning GANSS measured results" in the measurement report and set the contents of the IE as follows:

5> if the UE supports the capability to provide the GANSS timing of the cell frames measurement:

6> if the IE "GANSS timing of Cell wanted" is included with one bit set to value one for a supported GANSS and if IE "UE GPS timing of cell frames" is not present:

7> perform the UE GANSS timing of cell frames measurement on the serving cell or on one cell of the active set;

7> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

7> include the IE "Reference SFN" and the IE "UE GANSS timing of cell frames".

6> if the IE "GANSS timing of Cell wanted" is not included, or included with each bit set to value zero and if IE “UE positioning GPS measured results” is not present:

7> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the measurements included in the MEASUREMENT REPORT were valid.

5> if the UE does not support the capability to provide the GANSS timing of the cell and if IE "UE positioning GPS measured results" is not present:

6> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the measurements included in the MEASUREMENT REPORT were valid.

5> if the UE supports the capability to provide the GANSS carrier-phase measurements:

6> if the IE "GANSS Carrier-Phase Measurement Requested" is included with one bit set to value one for a supported GANSS:

7> include the IE "Carrier Quality Indication” and include the IE "ADR".

5> if the UE supports the capability to perform GANSS measurements on multiple GANSS frequencies:

6> if the IE "GANSS Multi-frequency Measurement Requested" is included with one bit set to value one for a supported GANSS, and if any of these GANSS signals are measured:

7> include the IE "GANSS Signal Measurement Information" for each measured GANSS signal.

8) 1> if the UE is unable to report the requested measurement results due to missing GPS assistance data:

2> the UE may at anytime send a measurement report containing the IE "UE positioning error" and set the contents of this IE as specified in subclause 8.6.7.19.5.

2> after sending the measurement report, the UE shall not send another measurement report to request the same GPS assistance data for at least 20s. This requirement does not apply after release of the current RRC connection.

1> if the UE is unable to report the requested measurement results due to missing GANSS assistance data:

2> the UE may at anytime send a measurement report containing the IE "UE positioning error" and set the contents of this IE as specified in subclause 8.6.7.19.5;

2> after sending the measurement report, the UE shall not send another measurement report to request the same GANSS assistance data for at least 20s. This requirement does not apply after release of the current RRC connection.

9) The UE shall set the contents of the IE "UE positioning Error" as follows:

…

1> if the IE "Positioning Methods" in IE "UE positioning reporting quantity" has been assigned to value "GPS" and the IE "GANSS Positioning Methods" is present:

2> if there were not enough GANSS satellites to be received:

3> set IE "Error reason" to "Not Enough GANSS Satellites".

2> if some GANSS assistance data was missing:

3> set IE "Error reason" to "Assistance Data Missing"; and

3> if the IE "Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to TRUE:

4> include the IE "GANSS Additional Assistance Data Request".

3> if the IE "Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to FALSE:

4> not include the IE "GANSS Additional Assistance Data Request", and use the assistance data available for doing a positioning estimate.

#### 17.2.7.1.3 Test Purpose

To verify the UE's behaviour in a mobile-terminated location request procedure using UE-based or UE-assisted A-GNSS with assistance data from the network.

To verify that the UE in CELL_DCH state accepts assistance data received in multiple MEASUREMENT CONTROL messages.

To verify that the UE includes the IE "GPS Additional Assistance Data Request" or "GANSS Additional Assistance Data Request" to request assistance data when it does not have enough assistance data.

#### 17.2.7.1.4 Method of Test

Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellites: As specified in 17.2.1.2
- User Equipment (UE):
  - The UE is in state "MM idle" with valid TMSI and CKSN.
  - The UE is in state "PMM idle" with valid P-TMSI.

Related PICS/PIXIT Statements

- UE Based Network Assisted GANSS.
- UE Assisted Network Assisted GANSS
- UE Based Network Assisted GPS (Sub-tests 3 and 4).
- UE Assisted Network Assisted GPS (Sub-tests 3 and 4).

- UE supporting Mobile Terminated Location Request (LCS value added location request notification capability).
- Method of clearing stored GPS/GANSS assistance data

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: "A-GPS" includes Modernized GPS if supported by the UE. | |

The stored GPS/GANSS assistance data in the UE shall be cleared.

The SS initiates authentication and ciphering and sends an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The UE notifies the UE user of the location request. The UE then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

The SS orders a positioning measurement using a MEASUREMENT CONTROL message including no assistance data. The UE sends a MEASUREMENT REPORT message to report a positioning error, requesting further assistance data. The SS response with one or more MEASUREMENT CONTROL messages that include the requested assistance data and instructs the UE not to repeat the request for assistance data. The final MEASUREMENT CONTROL message orders periodic reporting.

The UE performs positioning measurements and responds with a MEASUREMENT REPORT message including the IE "UE Positioning Position Estimate Info" in case of UE-based, or including the IE "UE positioning GANSS measured results" and/or "UE positioning GPS measured results" in case of UE-assisted.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <- | | AUTHENTICATION REQUEST | |
| 2 | -> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | The SS starts ciphering and integrity protection. |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 5 | UE | | | UE notifies the UE user of the location request. |
| 6 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 7 | <-- | | MEASUREMENT CONTROL | No assistance data, and “Additional Assistance Data Request” IE set to TRUE. |
| 8 | -> | | MEASUREMENT REPORT | Positioning error report ‘Assistance Data Missing’ |
| 9 | <- | | MEASUREMENT CONTROL | The SS provides the requested data in one or more MEASUREMENT CONTROL messages. The last message contains:<br>Reporting mode: Periodical reporting<br>Amount of reporting: 1<br>Reporting interval: 64000 |
| 10 | --> | | MEASUREMENT REPORT | Measurement report message containing UE position estimate (UE-based), or IE “UE positioning GANSS measured results” and/or “UE positioning GPS measured results’’ (UE-assisted). |
| 11 | SS | | | The SS releases the RRC connection and the test case ends. |

Specific Message Contents

REGISTER (Step 4)

| Information element | Value/remark |
|---|---|
| Protocol discriminator | Call independent SS message (1011) |
| Transaction identifier | |
| Register message type | xx11 1011 (REGISTER) |
| Facility | Invoke=lcs-LocationNotification<br>LocationNotificationArg<br>notificationType -> notityLocationAllowed,<br>locationType -> current Location,<br>lcsClientExternalID -> externalAddress<br>lcsClientName -><br>dataCodingSchemenameString |

RELEASE COMPLETE (Step 6)

| Information element | Value/remark |
|---|---|
| Protocol Discriminator | Call Independent SS message (1011) |
| Transaction identifier | |
| Message type | RELEASE COMPLETE (xx10 1010) |
| Facility | Return result = lcs-LocationNotification<br>LocationNotificationRes<br>verificationResponse -> permissionGranted |

MEASUREMENT CONTROL (Step 7):

| Information element | Value/remark |
|---|---|
| Measurement Information Elements | |
| Measurement Identity | 10 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement report transfer mode | Acknowledged mode RLC |
| - Periodical reporting / Event trigger reporting mode | Periodical reporting |
| Additional Measurements List | Not present |
| CHOICE *Measurement type* | UE positioning measurement |
| - UE positioning measurement | |
| - UE positioning reporting quantity | |
| - Method type | UE based or UE assisted |
| - Positioning methods | GPS |
| - Response time | 128 |
| - Horizontal accuracy | 127 |
| - Vertical accuracy | 127 |
| - GPS timing of cell wanted | FALSE |
| - Multiple sets | FALSE |
| - Additional assistance data request | TRUE |
| - Environmental characterization | Not present |
| - Velocity Requested | Not present |
| - GANSS Positioning Method | Sub-Test 1: bit 5 = 1<br>Sub-Test 2: bit 1 = 1<br>Sub-Test 3: bit 0 and 3 = 1<br>Sub-Test 4: bit 0 and 5 = 1 |
| - GANSS timing of cell wanted | Not present |
| - GANSS Carrier-Phase Measurement Requested | Not present |
| - GANSS Multi-frequency Measurement Requested | Set according to UE capabilities |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE *Reporting criteria* | |
| - Periodical reporting criteria | |
| - Amount of reporting | 1 |
| - Reporting interval | 64000 |
| - No reporting | |
| - UE pos OTDOA assistance data for UE-assisted | Not present |
| - UE pos OTDOA assistance data for UE-based | Not present |
| - UE positioning GPS assistance data | Set as specified for “Inadequate assistance data for UE-based A-GNSS” in 17.2.1.4.2<br>or<br>“Inadequate assistance data for UE-assisted A-GNSS” in 17.2.1.4.4 |
| - UE positioning GANSS assistance data | Set as specified for “Inadequate assistance data for UE-based A-GNSS” in 17.2.1.4.2<br>or<br>“Inadequate assistance data for UE-assisted A-GNSS” in 17.2.1.4.4 |
| Physical Channel Information Elements | |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 8)

| Information element | Value/remark |
|---|---|
| Measurement Information Elements | |
| Measurement Identity | 10 |
| Measured Results | |
| - CHOICE *Measurement* | UE positioning measured results |
| - UE positioning measured results | |
| - UE positioning OTDOA measured results | Not present |
| - UE positioning position estimate info | Not present |
| - UE positioning GPS measured results | Not present |

| - Additional assistance data request | FALSE |
| - Environmental characterization | Not present |
| - Velocity Requested | Not present |
| - GANSS Positioning Method | Sub-test 1: bit 5 = 1<br>Sub-test 2: bit 1 = 1<br>Sub-test 3: bit 0 an 3 = 1<br>Sub-Test 4: bit 0 and 5 = 1 |
| - GANSS timing of cell wanted | Not present |
| - GANSS Carrier-Phase Measurement Requested | Not present |
| - GANSS Multi-frequency Measurement Requested | Set according to UE capabilities |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE *Reporting criteria* | Set as required according to position in sequence of messages |
| - Periodical reporting criteria | Set as required according to position in sequence of messages |
| - Amount of reporting | Set as required according to position in sequence of messages |
| - Reporting interval | Set as required according to position in sequence of messages |
| - UE pos OTDOA assistance data for UE-assisted | Not present |
| - UE pos OTDOA assistance data for UE-based | Not present |
| - UE positioning GPS assistance data | Set as specified in 17.2.1.4.5 |
| - UE positioning GANSS assistance data | Set as specified in 17.2.1.4.5 |
| Physical Channel Information Elements | |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 10)

| Information element | Value/remark |
|---|---|
| Measurement Information Elements | |
| Measurement Identity | 10 |
| Measured Results | |
| - CHOICE *Measurement* | UE positioning measured results |
| - UE positioning measured results | |
| - UE positioning OTDOA measured results | Not present |
| - UE positioning position estimate info | |
| -CHOICE Position estimate | One of 'Ellipsoid point with uncertainty Circle' or 'Ellipsoid point with uncertainty Ellipse' or 'Ellipsoid point with altitude and uncertainty Ellipsoid' (UE-based) |
| - UE positioning GPS measured results | Present for UE-assisted (Sub-Tests 3 & 4) |
| - UE positioning error | Not present |
| - UE positioning GANSS measured results | Present for UE-assisted. |
| Measured Results on secondary UL frequency | Not present |
| Measured Results on RACH | Not present |
| Additional Measured Results | Not present |
| Additional Measured results on secondary UL frequency | Not present |
| Event Results | Not present |
| Event results on secondary UL frequency | Not present |
| Inter-RAT cell info indication | Not present |
| E-UTRA Measured Results | Not present |
| E-UTRA Event Results | Not present |
| CSG Proximity Indication | Not present |

#### 17.2.7.1.5 Test requirements

At step 7 the UE shall send a MEASUREMENT REPORT message containing the IE "UE positioning error", with "Error reason" set to "Assistance Data Missing".

At step 9 the UE shall send a MEASUREMENT REPORT message containing a valid UE position estimate (UE-based) or GANSS and/or GPS measurements (UE-assisted).

### 17.2.7.2 MT-LR Position Estimate: UE-Based A-GNSS – Failure Not Enough Satellites

#### 17.2.7.2.1 Definition

This test case applies to all UEs supporting UE-Based GANSS or GNSS Location Service capabilities.

#### 17.2.7.2.2 Conformance requirements

1) if the IE "Measurement command" has the value "modify":

2> for all IEs present in the MEASUREMENT CONTROL message:

3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GPS assistance data" is present, for any of the optional IEs "UE positioning GPS reference time", "UE positioning GPS reference UE position", "UE positioning GPS DGPS corrections", "UE positioning GPS ionospheric model", "UE positioning GPS UTC model", "UE positioning GPS acquisition assistance", "UE positioning GPS real-time integrity" that are present in the MEASUREMENT CONTROL message:

4> if measurement type is set to "UE positioning measurement" and the IE "UE positioning GANSS assistance data" is present, for any of the optional IEs "UE positioning GANSS reference time", "UE positioning GANSS reference UE position", "UE positioning DGANSS corrections", "UE positioning GANSS ionospheric model", "UE positioning GANSS additional ionospheric model", "UE positioning GANSS UTC model", "UE positioning GANSS additional UTC models", "UE positioning GANSS reference measurement information", "UE positioning GANSS data bit assistance", "UE

positioning GANSS Time model", "UE positioning GANSS real-time integrity", "UE positioning GANSS Earth orientation parameters", "UE positioning GANSS auxiliary information" that are present in the MEASUREMENT CONTROL message:

5> replace all instances of the IEs listed above (and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the IEs received in the MEASUREMENT CONTROL message;

5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

2) If the IE "UE positioning GPS Navigation Model" is included, for each satellite, the UE shall:

1> use IE "Satellite Status" to determine if an update of IE "UE positioning GPS Ephemeris and Clock Correction parameters" has been provided for the satellite indicated by the IE "SatID";

1> if an update has been provided for this satellite:

2> act as specified in subclause 8.6.7.19.3.4.

If the IE "UE positioning GPS Ephemeris and Clock Correction parameters" is included, for each satellite, the UE shall:

1> update the variable UE_POSITIONING_GPS_DATA as follows:

2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GPS Navigation Model" in the variable UE_POSITIONING_GPS_DATA, possibly overwriting any existing information in this position.

1> act on these GPS ephemeris and clock correction parameters in a manner similar to that specified in [12].

3) If the IE "UE positioning GANSS Navigation Model" is included, the UE shall:

1> for each GANSS:

2> for each satellite, the UE shall:

3> for IE "UE positioning GANSS clock model":

4> act as specified in subclause 8.6.7.19.7.4a.

3> for IE "UE positioning GANSS orbit model":

4> act as specified in subclause 8.6.7.19.7.4b.

4) If the IE "UE positioning GANSS clock model" is included, the UE shall:

1> for each GANSS:

2> update the variable UE_POSITIONING_GANSS_DATA as follows:

3> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GANSS Navigation Model" in the variable UE_POSITIONING_GANSS_DATA, possibly overwriting any existing information in this position.

2> act on these GANSS clock models in a manner similar to that specified in a relevant ICD.

5) If the IE "UE positioning GANSS orbit model" is included, for each satellite of each supported GNSS, the UE shall:

1> update the variable UE_POSITIONING_GANSS_DATA as follows:

2> store this IE at the position indicated by the IE "Sat ID" in the IE "UE positioning GANSS Navigation Model" in the variable UE_POSITIONING_GANSS_DATA, possibly overwriting any existing information in this position..

1> act on these GANSS orbit models in a manner similar to that specified in a relevant ICD.

6) The UE shall when a measurement report is triggered:

2> if the UE has been able to calculate a position after performing measurements on the cells included in the variable UE_POSITIONING_OTDOA_DATA_UE_BASED in case of OTDOA or the UE has been able to calculate a position in case of GPS or GANSS positioning or the UE has been able to calculate a position using a standalone positioning method:

3> include IE "UE positioning Position Estimate Info" in the MEASUREMENT REPORT and set the contents of the IE as follows:

4> if the UE supports the capability to perform the UE GPS timing of cell frames measurement:

5> if the IE "GPS timing of Cell wanted" is set to TRUE:

6> perform the UE GPS timing of cell frames measurement on the serving cell or on one cell of the active set.

6> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD;

6> include the SFN when the position was determined;

6> include the IE "UE GPS timing of cell frames";

6> include the IE "UE Positioning GPS Reference Time Uncertainty".

5> if the IE "GPS timing of Cell wanted" is set to FALSE:

6> include the IE "GPS TOW msec" and set it to the GPS TOW when the position estimate was valid.

4> if the position was calculated with GPS; and

4> the UE does not support the capability to provide the GPS timing of the cell:

5> include the IE "GPS TOW msec" and set it to the GPS TOW when the position estimate was valid.

4> if the UE supports the capability to provide the GANSS timing of the cell frames measurement:

5> if the IE "GANSS timing of Cell wanted" is included with one bit set to value one for a supported GANSS:

6> perform the UE GANSS timing of cell frames measurement on the serving cell or on one cell of the active set;

6> include the IE "GANSS Time ID" to identify the GNSS system time;

6> include the IE "Primary CPICH Info" for FDD or the IE "cell parameters id" for TDD; and

6> include the IE "Reference SFN" and the IE "UE GANSS timing of cell frames".

5> if the IE "GANSS timing of Cell wanted" is not included, or included with each bit set to value zero:

6> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid.

4> if the UE does not support the capability to provide the GANSS timing of the cell:

5> include the IE "GANSS TOD msec" and set it to the GANSS TOD when the position estimate was valid;

5> include the IE "GANSS Time ID" to identify the GNSS system time.

4> if IE "Vertical Accuracy" has been included in IE "UE positioning reporting quantity":

5> if the IE "Vertical Accuracy" has been assigned to value "0":

6> if the IE "Horizontal Accuracy" has been assigned a value "0":

7> may include IE "Ellipsoid point with altitude".

6> if the IE "Horizontal Accuracy" has been assigned a value unequal to "0"; and

6> if the UE has been able to calculate a 3-dimensional position

7> include IE "Ellipsoid point with altitude" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> may act as if IE "Vertical Accuracy" was not included in IE "UE positioning reporting quantity".

5> if the IE "Vertical Accuracy" has been assigned to a value unequal to "0":

6> if the UE has been able to calculate a 3-dimensional position:

7> include IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

6> if the UE has not been able to calculate a 3-dimensional position:

7> act as if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity".

4> if IE "Vertical Accuracy" has not been included in IE "UE positioning reporting quantity":

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to value "0":

6> may include IE "Ellipsoid point".

5> if IE "Horizontal Accuracy" in IE "UE positioning reporting quantity" has been assigned to a value unequal to 0:

6> include either IE "Ellipsoid point with uncertainty circle" or IE "Ellipsoid point with uncertainty ellipse" or IE "Ellipsoid point with altitude and uncertainty ellipsoid" as the position estimate.

4> if any of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" is reported:

5> should calculate a value of the IE "Confidence", different from "0", as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid" that is reported.

NOTE: The value "0" of the IE "Confidence" is interpreted as "no information" by the UTRAN [57].

4> if IE "Velocity Requested" has been included in IE "UE positioning reporting quantity":

5> include IE "Velocity estimate" if supported and available.

2> if the UE was not able to calculate a position:

3> include IE "UE positioning error" in the MEASUREMENT REPORT and set the contents of this IE as specified in subclause 8.6.7.19.5.

7) The UE shall set the contents of the IE "UE positioning Error" as follows:

…

1> if the IE "Positioning Methods" in IE "UE positioning reporting quantity" has been assigned to value "GPS" and the IE "GANSS Positioning Methods" is present:

2> if there were not enough GANSS satellites to be received:

3> set IE "Error reason" to "Not Enough GANSS Satellites".

2> if some GANSS assistance data was missing:

3> set IE "Error reason" to "Assistance Data Missing"; and

3> if the IE "Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to TRUE:

4> include the IE "GANSS Additional Assistance Data Request".

3> if the IE "Additional Assistance Data Request" included in the IE "UE positioning reporting quantity" stored in the variable MEASUREMENT_IDENTITY is set to FALSE:

4> not include the IE "GANSS Additional Assistance Data Request", and use the assistance data available for doing a positioning estimate.

- Conformance requirement 6: TS 25.331, subclause 8.6.7.19.1b
- Conformance requirement 7: TS 25.331, subclause 8.6.7.19.5

#### 17.2.7.2.3 Test Purpose

To verify the UE behaviour at a mobile terminated location request procedure using network-assisted UE-based GNSS when the MT-LR procedure fails due to failure of positioning method.

To verify that the UE in CELL_DCH state accepts assistance data received in multiple MEASUREMENT CONTROL messages.

To verify that the UE sets the IE Error Reason in ‘UE Positioning Error’ to ‘Not Enough GANSS Satellites’ when it does not receive enough satellite signals to compute a position.

#### 17.2.7.2.4 Method of Test

Initial Conditions

- System Simulator (SS):
  - 1 cell, default parameters.
  - Satellite Simulator is switched off.
- User Equipment (UE):
  - State "CS-CELL DCH Initial (State 6-1)" as specified in clause 7.4.1 of TS 34.108.

Related PICS/PIXIT Statements

- UE Based Network Assisted GANSS.
- UE Based Network Assisted GPS (Sub-tests 3 and 4).
- UE supporting Mobile Terminated Location Request (LCS value added location request notification capability).

Test Procedure

This test case includes sub-test cases dependent on the GNSS supported by the UE. Each sub-test case is identified by a Sub-Test Case Number as defined below:

| Sub-Test Case Number | Supported GNSS |
|---|---|
| 1 | UE supporting A-GLONASS only |
| 2 | UE supporting A-Galileo only |
| 3 | UE supporting A-GPS and Modernized GPS only |
| 4 | UE supporting A-GPS(1) and A-GLONASS only |
| NOTE 1: "A-GPS" includes Modernized GPS if supported by the UE. | |

The SS initiates authentication and ciphering and sends an SS REGISTER message containing a Facility IE containing a DTAP LCS Location Notification Invoke message set to notifyLocationAllowed. The UE notifies the UE user of the location request . The UE then responds with a RELEASE COMPLETE message containing a LocationNotification return to terminate the dialogue.

The SS orders an A-GNSS positioning measurement using one or more (dependent on the sub-test) MEASUREMENT CONTROL messages.

The UE sends a MEASUREMENT REPORT message reporting a positioning error for not enough satellite signal.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <- | | AUTHENTICATION REQUEST | |
| 2 | -> | | AUTHENTICATION RESPONSE | |
| 3 | SS | | | SS starts security procedure |
| 4 | <- | | REGISTER | Call Independent SS containing Facility IE Location Notification Invoke message set to notifyLocationAllowed |
| 5 | UE | | | UE notifies the UE user of the location request. |
| 6 | -> | | RELEASE COMPLETE | The UE terminates the dialogue |
| 7 | <-- | | MEASUREMENT CONTROL | All Sub-Tests |
| 7a | <-- | | MEASUREMENT CONTROL | Sub-Tests 2-4 only |
| 7b | <-- | | MEASUREMENT CONTROL | Sub-Test 4 only |
| 8 | -> | | MEASUREMENT REPORT | Positioning error report 'not enough satellites' |
| 9 | SS | | | The SS releases the RRC connection and the test case ends. |

Specific Message Contents

REGISTER (Step 4)

| Information element | Value/remark |

#### 17.2.7.2.5 Test requirements

At step 8 the UE shall send a MEASUREMENT REPORT message containing the IE “UE positioning error”, with “Error reason” set to “Not Enough Satellites”.

## 17.3 Mobility between 3GPP WLAN Interworking and 3GPP Systems

### 17.3.1 Discovery of the Home Agent via DNS

#### 17.3.1.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems, and discovery of the Home Agent via DNS.

#### 17.3.1.2 Conformance requirement

From TS 24.327 clause 5.1.2.2

The first procedure the UE needs to perform for DSMIPv6 initial attach is the discovery of the node acting as the HA.

The UE discovers the IPv6 address and optionally the IPv4 address of the HA in one of the three following ways:

- via DNS as defined in 3GPP TS 24.303 [3];
- during the PDP context activation procedure in GERAN or UTRAN accesses via the Protocol Configuration Options as defined in 3GPP TS 24.008 [4] if the HA IP address is available in the GGSN; or
- via IKEv2 during tunnel setup with PDG for 3GPP I-WLAN as defined in annex B if the HA IP address is available in the PDG.

From TS 24.303 clause 5.1.2.1.2

A UE performing Home Agent discovery based on DNS shall support the implementation of standard DNS mechanisms.

The UE shall perform DNS Lookup by Home Agent Name as specified in IETF RFC 5026 [10].The QNAME shall be set to the requested HA-APN. The HA-APN shall be constructed as specified in 3GPP TS 23.003 [17]. If a HA has both an IPv4 and an IPv6 address, the corresponding DNS record should be configured with both 'AAAA' and 'A' records. Accordingly the UE should perform one DNS lookup procedure to retrieve both 'AAAA' and 'A' records. The DNS server replies with one 'AAAA' and one 'A' record.

3GPP TS 24.303 clause 5.1.2.1.2

### 17.3.1.3 Test purpose

The purpose of this test case is to verify that when the UE is configured to discover the IP address of the Home Agent via DNS, it transmits a DNS Query with QNAME set to the FQDN of the Home Agent.

### 17.3.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall be in MM-state "Idle, updated".
  - The UE is configured to discover the Home Agent address via DNS.
  - The UE is configured with a DNS server address.
  - The UE is configured with the HA-APN Network Identifier.
  - The UE has acquired an IP address.

Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

Test procedure

a) The UE transmits a DNS Query message with QNAME set to the FQDN of the Home Agent (derived from HA-APN Network Identifier and PLMN information).

b) The SS transmits a DNS Response message with the IPv6 and IPv4 addresses of the Home Agent.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | → | | DNS Query | QNAME set to FQDN of the Home Agent |
| 2 | ← | | DNS Response | DNS Response message contains IPv6 and IPv4 addresses of the Home Agent |

Specific Message Contents

DNS Query (Step 1)

| Information Element | Value/remark |
|---|---|
| QR= | '0'B |
| QPCODE= | '0000'B |
| QNAME= | Fully Qualified Domain Name of the Home Agent |
| QTYPE= | A |
| QCLASS= | IN |
| QNAME= | Fully Qualified Domain Name of the Home Agent |
| QTYPE= | AAAA |
| QCLASS= | IN |

DNS Response (Step 2)

| Information Element | Value/remark |
|---|---|
| QR= | '1'B |
| QPCODE= | '0000'B |
| QNAME= | Same as received in DNS Query (Step 1) |
| QTYPE= | A |
| QCLASS= | IN |
| QNAME= | Same as received in DNS Query (Step 1) |
| QTYPE= | AAAA |
| QCLASS= | IN |
| RR | |
| - NAME | Same as received in DNS Query (Step 1) |
| - TYPE | A |
| - CLASS | IN |
| - RDATA | IPv4 address of HA |
| RR | |
| - NAME | Same as received in DNS Query (Step 1) |
| - TYPE | AAAA |
| - CLASS | IN |
| - RDATA | IPv6 address of HA |

#### 17.3.1.5 Test requirements

1. At Step 1, UE shall send a DNS Query message with QNAME set to the FQDN of the Home Agent (derived from HA-APN Network Identifier and PLMN information).

### 17.3.2 Discovery of the Home Agent address and Home Network Prefix during PDP context activation procedure

#### 17.3.2.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.2.2 Conformance requirement

from TS 24.327, subclause 5.1.2.2

The first procedure the UE needs to perform for DSMIPv6 initial attach is the discovery of the node acting as the HA.

The UE discovers the IPv6 address and optionally the IPv4 address of the HA in one of the three following ways:

- via DNS as defined in 3GPP TS 24.303 [3];
- during the PDP context activation procedure in GERAN or UTRAN accesses via the Protocol Configuration Options as defined in 3GPP TS 24.008 [4] if the HA IP address is available in the GGSN; or
- via IKEv2 during tunnel setup with PDG for 3GPP I-WLAN as defined in annex B if the HA IP address is available in the PDG.

If the HA IP address(es) are available in the GGSN, the GGSN shall return the HA IP address(es) in the Protocol Configuration Options during the PDP context activation procedure when attaching to the GERAN or UTRAN accesses. If the HA IP address(es) are not available in the GGSN, the UE shall discover the HA IP address(es) by DNS if the UE wants to perform the handover to 3GPP I-WLAN.

If the UE requests the HA IP address(es) during the IPsec tunnel setup to PDG in 3GPP I-WLAN connection and if the HA IP address(es) are available in the PDG, the PDG shall return the HA IP address(es) in IKEv2 configuration payload attributes as defined in annex B. If the HA IP address(es) are not available in the PDG, the UE shall discover the HA IP address(es) by DNS before performing the H1 PDN attach.

The UE shall support the HA discovery based on DNS and on Protocol Configuration Options. The UE may support the HA discovery based on IKEv2.

The HA IP address(es) may also be pre-configured in the UE.

from TS 24.327, subclause 5.1.2.3

The UE shall perform the security association establishment with the HA as specified in 3GPP TS 24.303 [3]. For this procedure the UE shall support IKEv2 protocol and EAP over IKEv2 as described in IETF RFC 4306 [9]. The detailed procedure and supported extensions for this step are specified in 3GPP TS 24.303 [3]. The UE may use either EAP-SIM or EAP-AKA for authentication purposes.

During the IKEv2 exchange, the UE shall request an IPv6 home network prefix as specified in 3GPP TS 24.303 [3]. The UE shall then auto-configure an IPv6 home address from the received prefix and create child SA as specified in 3GPP TS 24.303 [3].

In the IKEv2 signalling the UE should indicate the target PDN the UE wants to connect to in the IDr payload as specified in 3GPP TS 24.303 [3].

from TS 24.327, subclause 5.1.2.4

The DSMIPv6 home link detection function is used by the UE to detect if, for a specific PDN, an access interface is on the home link from DSMIPv6 perspective. The home link detection function for a specific PDN connection shall be performed whenever the UE receives a new IPv6 prefix, either at initial attach or after a handover.

The UE is informed of the IPv6 prefix associated with a specific access interface. If the UE is connected to GPRS systems, the UE knows the IPv6 prefix via the IPv6 address auto configuration as described in 3GPP TS 29.061 [6]. If UE is connected to the 3GPP I-WLAN, it knows the IPv6 prefix via IPv6 address auto configuration as described in 3GPP TS 29.161 [7].

In the scenarios considered in this specification, the Home Network Prefix associated to the PDN connection can be assigned:

- via Protocol Configuration Options from the GGSN in GPRS systems as specified in 3GPP TS 24.008 [4];
- via IPsec security associations bootstrap with the PDG in I-WLAN as specified in annex B;
- via the establishment of IPsec security associations with the HA as specified in 3GPP TS 24.303 [3] subclause 5.1.2.2; or
- the HNP may also be pre-configured in the UE.

NOTE: If a pre-configured HNP is available, the UE can use it for home link detection. However the UE cannot use it for the IPv6 address auto configuration.

The home link detection procedure performed by the UE is specified in 3GPP TS 24.303 [3].

If the UE detects it is in the home link for this specific PDN over the access interface, the UE shall not perform the H1 PDN attach. If the UE detects it is not on the home link, the UE shall perform IKEv2 procedure for security associations setup and IPv6 prefix and optionally IPv4 HA assignment if the UE does not have a valid security association with the HA, and then the UE shall send a Binding Update as specified in 3GPP TS 24.303 [3].

| -- Container 2 Length | 17 bytes; |
| -- Container 2 contents | Home Network Prefix set by SS; |
| -- container 3 Identifier | 0009H (DSMIPv6 IPv4 Home Agent Address); sent if requested by UE |
| -- Container 3 Length | 4 bytes; |
| -- Container 3 contents | IPv4 HA Address set by SS; |

#### 17.3.2.5 Test requirements

1) In step 1, the UE shall request for HA IPv6 address and optionally HA IPv4 address and Home Network Prefix to the GGSN within the Protocol Configuration Options IE.

## 17.3.3 Void

## 17.3.4 Security association establishment

#### 17.3.4.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.4.2 Conformance requirement

From TS 24.327 clause 5.1.2.3

The UE shall perform the security association establishment with the HA as specified in 3GPP TS 24.303 [3]. For this procedure the UE shall support IKEv2 protocol and EAP over IKEv2 as described in IETF RFC 4306 [9]. The detailed procedure and supported extensions for this step are specified in 3GPP TS 24.303 [3]. The UE may use either EAP-SIM or EAP-AKA for authentication purposes.

During the IKEv2 exchange, the UE shall request an IPv6 home network prefix as specified in 3GPP TS 24.303 [3]. The UE shall then auto-configure an IPv6 home address from the received prefix and create child SA as specified in 3GPP TS 24.303 [3].

In the IKEv2 signalling the UE should indicate the target PDN the UE wants to connect to in the IDr payload as specified in 3GPP TS 24.303 [3].

From TS 24.303 clause 5.1.2.2

The UE shall support the IKEv2 protocol (see IETF RFC 4306 [14]) for negotiating the IPsec security association to secure DSMIPv6 signalling and shall support EAP over IKEv2 as described in IETF RFC 4306 [14] to perform authentication with an AAA server. In a case an additional authentication and authorization of the IPSec security association is needed with an external AAA server, then the additional authentication steps during the IKEv2 exchange shall be supported as specified in IETF RFC 4739 [23] and described in 3GPP TS 33.234 [24].

The UE shall support IPsec ESP (see IETF RFC 4303 [11]) in order to provide authentication of Binding Update and Binding Acknowledgement messages as specified in IETF RFC 4877 [4]. The UE shall support multiple authentication exchanges in the IKEv2 protocol as specified in IETF RFC 4739 [23] in order to support authentication with an external AAA server. The UE shall support the redirect mechanism as defined in draft-ietf-ipsecme-ikev2-redirect [30].

The UE shall initiate the security association establishment procedure by sending the IKE_SA_INIT request message defined in IETF RFC 4306 [14] to the HA. The UE shall indicate support for the HA reallocation by including a REDIRECT_SUPPORTED payload in the IKE_SA_INIT request as specified in draft-ietf-ipsecme-ikev2-redirect [30]. On receipt of an IKE_SA_INIT response, the UE shall send an IKE_AUTH request message including the MN-NAI in the IDi payload and the Access Point Name (APN) of the target PDN the UE wants to connect to in the IDr payload. The APN shall be formatted as defined in 3GPP TS 23.003 [17]. The username part of the MN-NAI included in "IDi"

payload may be an IMSI, pseudonym or re-authentication ID. The UE shall include in the IDi payload the same MN-NAI it includes in the EAP-Response/Identity within the EAP-AKA exchange.

In the very first EAP-Response/Identity within the IKEv2 exchange the UE shall include a NAI whose username is derived from IMSI. In subsequent exchanges the UE should use pseudonyms and re-authentication identities provided by the 3GPP AAA server as specified in IETF RFC 4187 [26].

NOTE: Fast re-authentication mechanism is optional, and therefore is an implementation option in the UE and operator configuration issue (i.e. it also depends on whether the AAA server sent a re-authentication ID during previous EAP authentication) whether to use it during security association establishment.

EAP-AKA over IKEv2 shall be used to authenticate UE in the IKE_AUTH exchange, while public key signature based authentication with certificates shall be used to authenticate the HA.

During the IKEv2 exchange, the HA may trigger the UE to perform the HA reallocation procedure. If the UE receives as part of the IKE_AUTH response message a REDIRECT payload containing the IP address of a target HA as specified in subclause 5.1.3.1, the UE shall initiate a new IKEv2 security association with the target HA. The UE shall terminate the IKEv2 security association with the initial HA by sending an IKEv2 Informational message with a DELETE payload as specified in IETF RFC 4306 [14].

During the IKEv2 exchange, the UE shall request the allocation of an IPv6 home prefix through the Configuration Payload in the IKE_AUTH. Since in EPS a unique IPv6 prefix is assigned to the UE, the UE shall include a MIP6_HOME_PREFIX attribute in the CFG_REQUEST message as described in IETF RFC 5026 [10]. In addition the UE may include the INTERNAL_IP6_DNS attribute in the CFG_REQUEST as described in IETF RFC 4306 [14] to request the DNS server IPv6 address of the PLMN it is connecting to via DSMIPv6. In the same way the UE may include the INTERNAL_IP4_DNS attribute in the CFG_REQUEST to request the IPv4 address of the DNS server.

The UE shall then auto-configure a Home Address from the IPv6 prefix received from the HA and shall run a CREATE_CHILD_SA exchange to create the security association for the new Home Address. In the CREATE_CHILD_SA exchange the UE shall include the Home Address and the appropriate selectors in the TSi (Traffic Selector-initiator) payload to negotiate the IPsec security association for protecting the Binding Update and Binding Acknowledgement messages as specified in IETF RFC 4877 [4].

Reference(s)

3GPP TS 24.327 clause 5.1.2.3

3GPP TS 24.303 clause 5.1.2.2

#### 17.3.4.3 Test purpose

1. To verify that when the UE has acquired the IP address of the Home Agent, it transmits an IKE_SA_INIT message addressed to the Home Agent to initiate security association establishment.

2. To verify that when the UE receives an IKA_SA_INIT response message, it transmits an IKE_AUTH Request message containing the configuration payload MIP6_HOME_PREFIX to receive the prefix to use for Home Address configuration.

3. To verify that when the UE receives an IKE_AUTH Response message including an EAP-Request/AKA Challenge, it transmits an IKE_AUTH Request message containing the correct EAP-Response/AKA-Challenge.

4. To verify that when the UE receives an IKE_AUTH Response message including EAP-Success, it transmits an IKE_AUTH Request message with Authentication payload.

5. To verify that when the UE receives an IKE_AUTH Response message with configuration payload MIP6_HOME_PREFIX containing the Home Network Prefix HNP associated to the UE, it transmits a CREATE_CHILD_SA Request message including traffic selectors fields (TSi and TSr) that contain the parameters identifying the Binding Update (BU)/Binding Acknowledgments (BA) messages.

#### 17.3.4.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.

- User Equipment:
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IP address.
  - The UE has discovered the IP address of the Home Agent (either via DNS, IKEv2 signalling or during PDP context activation procedure).

### Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

### Test procedure

a) The UE transmits an IKE_SA_INIT message addressed to the Home Agent.

b) The SS transmits an IKE_SA_INIT message.

c) The UE transmits an IKE_AUTH Request message containing the configuration payload MIP6_HOME_PREFIX, a MN-NAI derived from UE IMSI in the IDi field and an APN in the IDr field.

d) The SS transmits an IKE_AUTH Response message including an EAP-Request/AKA-Challenge.

e) The UE transmits an IKE_AUTH Request message including the EAP-Response/AKA-Challenge.

f) The SS transmits an IKE_AUTH Response message including EAP-Success.

g) The UE transmits an IKE_AUTH Request message with Authentication payload.

h) The SS transmits an IKE_AUTH Response message with configuration payload MIP6_HOME_PREFIX containing the Home Network Prefix HNP associated to the UE.

i) The UE transmits a CREATE_CHILD_SA Request message including traffic selectors fields (TSi and TSr) that contain the parameters identifying the Binding Update (BU) / Binding Acknowledgments (BA) messages.

j) The SS transmits a CREATE_CHILD_SA Response message.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | → | | IKE_SA_INIT | IKE_SA_INIT addressed to the Home Agent |
| 2 | ← | | IKE_SA_INIT | |
| 3 | → | | IKE_AUTH Request | IKE_AUTH Request message contains the configuration payload MIP6_HOME_PREFIX, a MN-NAI derived from UE IMSI in the IDi field and an APN in the IDr field |
| 4 | ← | | IKE_AUTH Response | IKE_AUTH Response message includes an EAP-Request/AKA-Challenge |
| 5 | → | | IKE_AUTH Request | IKE_AUTH Request message includes the EAP-Response/AKA-Challenge |
| 6 | ← | | IKE_AUTH Response | IKE_AUTH Response message includes EAP-Success |
| 7 | → | | IKE_AUTH Request | IKE_AUTH Request message with Authentication payload |
| 8 | ← | | IKE_AUTH Response | IKE_AUTH Response message with configuration payload MIP6_HOME_PREFIX containing the Home Network Prefix HNP associated to the UE |
| 9 | → | | CREATE_CHILD_SA Request | CREATE_CHILD_SA Request message includes traffic selectors fields (TSi and TSr) that contain the parameters identifying the Binding Update (BU) / Binding Acknowledgments (BA) messages |
| 10 | ← | | CREATE_CHILD_SA Response | |

Specific Message Contents

IKE_SA_INIT (Step 1)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Set by the UE |
| - Responder's IKE_SA SPI | '0'B (First message in IKE_SA_INIT exchange) |
| - Next Payload | '00100001'B (SA) |
| - Exchange Type | '00100010'B (IKE_SA_INIT) |
| Security Association Payload | |
| - Next Payload | '00100010'B (KE) |
| - More Proposal | '00000010'B |
| - Proposal # | '00000001'B |
| - Protocol ID | '00000001'B (IKE) |

| Key Exchange Payload | |
| - Next Payload | '00101000'B (Nonce) |
| - DH Group # | '0000000000000010'B (DH group 2) |
| - Key Exchange Data | Set by the UE |
| Nonce Payload | |
| - Next Payload | '00101001'B (Notify REDIRECT_SUPPORTED) |
| - Nonce data | Random number set by the UE |
| REDIRECT_SUPPORTED Notify Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000000'B (Notification not specific to a particular SA) |
| - SPI size | '00000000'B (SPI field not present) |
| - Notify Message Type | '0100000000010110'B (REDIRECT_SUPPORTED) |

IKE_SA_INIT (Step 2)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Set by the SS |
| - Next Payload | '00100001'B (SA) |
| - Exchange Type | '00100010'B (IKE_SA_INIT) |
| Security Association Payload | |
| - Next Payload | '00100010'B (KE) |
| - Proposal | One of the 2 proposals included in IKE_SA_INIT at Step 1 |
| Key Exchange Payload | |
| - Next Payload | '00101000'B (Nonce) |
| - DH Group # | '0000000000000010'B (DH group 2) |
| - Key Exchange Data | Set by the SS |
| Nonce Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Nonce data | Set by the SS |

IKE_AUTH Request (Step 3)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100011'B (IKE_AUTH) |
| Encrypted Payload | |
| - Next Payload | '00100011'B (IDi) |
| - Initialization Vector | Random value set by the UE |
| - Encrypted IKE Payloads | |
| - Identification – Initiator Payload | |
| - Next Payload | '00101111'B (CP) |
| - ID Type | '00000010'B |
| - ID | Set to MN-NAI |
| - Configuration Payload | |
| - Next Payload | '00100001'B (SA) |
| - CFG Type | '00000001'B (Request) |
| - Configuration Attribute | '00010000'B (MIP6_HOME_PREFIX attribute) |
| - Length | '0000000000000000'B |
| - Security Association Payload | |
| - Next Payload | '00101100'B (TSi) |
| - Proposals | Any set of allowed values |
| - Traffic Selector – Initiator Payload | |
| - Next Payload | '00101100'B (TSr) |
| - Traffic selector data | Any set of allowed values |
| - Traffic Selector – Responder Payload | |
| - Next Payload | '00100100'B (IDr) |
| - Traffic selector data | Any set of allowed values |
| - Identification – Responder Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - ID Type | '00000010'B |
| - ID | APN |
| - Padding | Set by the UE |
| - Pad Length | Set by the UE |
| - Integrity checksum data | Set by the UE |

IKE_AUTH Response (Step 4)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100011'B (IKE_AUTH) |
| Encrypted Payload | |
| - Next Payload | '00100100'B (IDr) |
| - Initialization Vector | Set by the SS |
| - Encrypted IKE Payloads | |
| - Identification – Responder Payload | |
| - Next Payload | '00100101'B (CERT) |
| - ID Type | '00000010'B |
| - ID | APN |
| - Certificate Payload | |
| - Next Payload | '00110000'B (EAP) |
| - Cert encoding | '00000100'B (X.509 certificate - signature) |
| - Certificate data | Set by the SS (DER encoded X.509 certificate) |
| - Length | '0000000000000000'B |
| - Extensible Authentication Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Code | '00000001'B (Request) |
| - Type | '00010111'B (AKA) |
| - Subtype | AKA-Challenge |
| - Attribute Type | '00000001'B (AT_RAND) |
| - AT_RAND | An arbitrarily selected 128 bits value |
| - Attribute Type | '00000010'B (AT_AUTN) |
| - AT_AUTN | See TS 24.301 subclause 9.9.3.2 |
| - Padding | Set by the SS |
| - Pad Length | Set by the SS |
| - Integrity checksum data | Set by the SS |

IKE_AUTH Request (Step 5)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100011'B (IKE_AUTH) |
| Encrypted Payload | |
| - Next Payload | '00110000'B (EAP) |
| - Initialization Vector | Random value set by the UE |
| - Encrypted IKE Payloads | |
| - Extensible Authentication Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Code | '00000010'B (Response) |
| - Type | '00010111'B (AKA) |
| - Subtype | AKA-Challenge |
| - Attribute Type | '00000011'B (AT_RES) |
| - AT_RES | See TS 24.301 subclause 9.9.3.4 |
| - Padding | Set by the UE |
| - Pad Length | Set by the UE |
| - Integrity checksum data | Set by the UE |

IKE_AUTH Response (Step 6)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100011'B (IKE_AUTH) |
| Encrypted Payload | |
| - Next Payload | '00110000'B (EAP) |
| - Initialization Vector | Set by the SS |
| - Encrypted IKE Payloads | |
| - Extensible Authentication Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Code | '00000011'B (Success) |
| - Padding | Set by the SS |
| - Pad Length | Set by the SS |
| - Integrity checksum data | Set by the SS |

IKE_AUTH Request (Step 7)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100011'B (IKE_AUTH) |
| Encrypted Payload | |
| - Next Payload | '00100111'B (AUTH) |
| - Initialization Vector | Random value set by the UE |
| - Encrypted IKE Payloads | |
| - Authentication Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Auth Method | '00000010'B (Shared Key Integrity code) |
| - Auth Data | Derived from the MSK obtained from AKA exchange |
| - Padding | Set by the UE |
| - Pad Length | Set by the UE |
| - Integrity checksum data | Set by the UE |

IKE_AUTH Response (Step 8)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100011'B (IKE_AUTH) |
| Encrypted Payload | |
| - Next Payload | '00100111'B (AUTH) |
| - Initialization Vector | Set by the SS |
| - Encrypted IKE Payloads | |
| - Authentication Payload | |
| - Next Payload | '00101111'B (CP) |
| - Auth Method | '00000010'B (Shared Key Integrity code) |
| - Auth Data | Derived from the MSK obtained from AKA exchange |
| - Configuration Payload | |
| - Next Payload | '00100001'B (SA) |
| - CFG Type | '00000010'B (Reply) |
| - Configuration Attribute | '00010000'B (MIP6_HOME_PREFIX attribute) |
| - Length | '0000000000010101'B |
| - Prefix lifetime | Any allowed value |
| - Home Prefix | IPv6 prefix – 16 bytes |
| - Prefix length | '10000000'B |
| - Security Association Payload | |
| - Next Payload | '00101101'B (TSi) |
| - Proposal | One of the 2 proposals included in IKE_AUTH Request at Step 3 |
| - Traffic Selector – Initiator Payload | |
| - Next Payload | '00101100'B (TSr) |
| - Traffic Selector data | Any allowed set of values |
| - Traffic Selector – Responder Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Traffic Selector data | Any allowed set of values |
| - Padding | Set by the SS |
| - Pad Length | Set by the SS |
| - Integrity checksum data | Set by the SS |

CREATE_CHILD_SA Request (Step 9)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00 100100'B (CREATE_CHILD_SA) |
| Encrypted Payload | |
| - Next Payload | '00100001'B (SA) |
| - Initialization Vector | Random value set by the UE |
| - Encrypted IKE Payloads | |
| - Security Association Payload | |
| - Next Payload | '00101000'B (Ni) |
| - More proposal | '00000010'B |
| - Proposal # | '00000001'B (First cryptographic suite) |
| - Protocol ID | '00000011'B |
| - SPI size | '00000100'B |
| - Number of transforms | '00000010'B |
| - SPI | Set by the UE |
| - More transform | '00000011'B (This is the transform for confidentiality) |
| - Transform type | '00000001'B (Encryption) |
| - Transform ID | '00000011'B (3DES in CBC mode) |
| - Last transform | '00000011'B (This is the transform for integrity) |
| - Transform type | '00000011'B (Integrity) |
| - Transform ID | '00000010'B (HMAC-SHA1-96) |
| - Last proposal | '00000000'B |
| - Proposal # | '00000010'B (Second cryptographic suite) |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | '00000100'B |
| - Number of transforms | '00000010'B |
| - SPI | Set by the UE |
| - More transform | '00000011'B (This is the transform for confidentiality) |
| - Transform type | '00000001'B (Encryption) |
| - Transform ID | '00001011'B (AES with 128-bit keys in CBC mode) |
| - Last transform | '00000011'B (This is the transform for integrity) |
| - Transform type | '00000011'B (Integrity) |
| - Transform ID | '00000101'B (AES-XCBC-MAC-96) |
| - Nonce Payload | |
| - Next Payload | '00101100'B (TSi) |
| - Nonce data | Random number set by the UE |
| - Traffic Selector – Initiator Payload | |
| - Next Payload | '00101101'B (TSr) |
| - Traffic Selector data | Any set of values containing the traffic selector of the CREATE_CHILD_SA Response at Step 10 |
| - Traffic Selector – Responder Payload | '00000000'B (SPI field not present) |
| - Next Payload | '00101001'B (Notify – Use transport mode) |
| - Traffic Selector data | Any set of values containing the traffic selector of the CREATE_CHILD_SA Response at Step 10 |
| - Use transport mode Notify Payload | |
| - Next Payload | '00101001'B (Notify – Use transport mode) |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | '00000100'B |
| - Notify Message Type | '1000000000000111'B (Use transport mode) |
| - SPI | Same as that set by the UE in SA proposal #1 |
| - Use transport mode Notify Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | '00000100'B |
| - Notify Message Type | '1000000000000111'B (Use transport mode) |
| - SPI | Same as that set by the UE in SA proposal #1 |
| - Padding | Set by the UE |
| - Pad Length | Set by the UE |
| - Integrity checksum data | Set by the UE |

CREATE_CHILD_SA Response (Step 10)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA_INIT as Step 1 |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA_INIT as Step 2 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00 100100'B (CREATE_CHILD_SA) |
| Encrypted Payload | |
| - Next Payload | '00100001'B (SA) |
| - Initialization Vector | Set by the SS |
| - Encrypted IKE Payloads | |
| - Security Association Payload | |
| - Next Payload | '00101000'B (Nr) |
| - Last proposal | '00000000'B |
| - Proposal # | One of the 2 proposals included in the CREATE_CHILD_SA Request at Step 9 |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | '00000100'B |
| - SPI | Set by the SS |
| - First transform | '00000011'B (This is the transform for confidentiality) |
| - Transform type | '00000001'B (Encryption) |
| - Transform attribute type | The corresponding value of the chosen proposal |
| - Last transform | '00000011'B (This is the transform for integrity) |
| - Transform type | '00000011'B (Integrity) |
| - Transform attribute type | The corresponding value of the chosen proposal |
| - Nonce Payload | |
| - Next Payload | |
| - Nonce data | '00101100'B (TSi) |
| - Traffic Selector – Initiator Payload | Set by the SS |
| - Next Payload | '00101101'B (TSr) |
| - Number of traffic selectors | '00000010'B |
| - TS type | '00001000'B (IPv6 range) |
| - IP protocol | '10000111B (Mobility header) |
| - Start port | '0000010100000000'B (BU) |
| - End port | '0000010100000000'B (BU) |
| - Starting address | HoA address derived from HNP |
| - Ending address | HoA address derived from HNP |
| - TS type | '00001000'B (IPv6 range) |
| - IP protocol | '10000111B (Mobility header) |
| - Start port | '0000011000000000'B (BA) |
| - End port | '0000011000000000'B (BA) |
| - Starting address | HoA address derived from HNP |
| - Ending address | HoA address derived from HNP |
| - Traffic Selector – Responder Payload | |
| - Next Payload | '00101001'B (Notify – Use transport mode) |
| - Number of traffic selectors | '00000010'B |
| - TS type | '00001000'B (IPv6 range) |
| - IP protocol | '10000111B (Mobility header) |
| - Start port | '0000010100000000'B (BU) |
| - End port | '0000010100000000'B (BU) |
| - Starting address | HA address |
| - Ending address | HA address |
| - TS type | '00001000'B (IPv6 range) |
| - IP protocol | '10000111B (Mobility header) |
| - Start port | '0000011000000000'B (BA) |
| - End port | '0000011000000000'B (BA) |
| - Starting address | HA address |
| - Ending address | HA address |
| - Use transport mode Notify Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | Set by the SS |
| - Notify Message Type | '1000000000000111'B (Use transport mode) |
| - SPI | Same as that set by the SS in the accepted proposal |
| - Padding | Set by the UE |
| - Pad Length | Set by the UE |
| - Integrity checksum data | Set by the UE |

#### 17.3.4.5 Test requirements

1. At Step 1, UE shall send an IKE_SA_INIT message addressed to the Home Agent to initiate security association establishment.
2. At Step 3, UE shall send an IKE_AUTH Request message containing the configuration payload MIP6_HOME_PREFIX.
3. At Step 5, UE shall send an IKE_AUTH Request message containing the correct EAP-Response/AKA-Challenge.
4. At Step 7, UE shall send an IKE_AUTH Request message with Authentication payload.
5. At Step 9, UE shall send a CREATE_CHILD_SA Request message including traffic selectors fields (TSi and TSr) that contain the parameters identifying the Binding Update (BU)/Binding Acknowledgments (BA) messages.

### 17.3.5 Registration of a new IPv6 CoA (Binding Update/Acknowledgment procedure in IPv6 network)

#### 17.3.5.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.5.2 Conformance requirement

From TS 24.327 clause 5.1.2.5

After establishing the security association and obtaining the IPv6 home network prefix and after performing the home link detection, if not on the home link, the UE shall send a Binding Update message as specified in 3GPP TS 24.303 [3] to register its IPv6 home address with its care-of address.

The UE may also request in the Binding Update an IPv4 home address based on the procedure specified in 3GPP TS 24.303 [3].

From TS 24.303 clause 5.1.2.3

The DSMIPv6 Home Link Detection Function is used by the UE to detect if an access interface is on the home link for a PDN from a DSMIPv6 perspective. The Home Link Detection function shall be performed before sending DSMIPv6 Binding Update via the same access interface.

To perform the Home Link Detection procedure, the UE shall compare the assigned Home Network Prefix for a PDN with the IPv6 prefix or prefixes included in the Prefix Information Option in the Router Advertisements received on the local link. The Home Network Prefix can be assigned in a 3GPP access via PCO, as specified in 3GPP TS 24.301 [15], or via IKEv2 as specified in subclause 5.1.2.2. If there is a match between the Home Network Prefix and one of the local prefixes, the UE is attached on the home link over the respective access interface and shall not send a Binding Update to the HA unless the UE currently has a valid DSMIPv6 Binding Update list entry. If the UE has a valid DSMIPv6 Binding Update list entry, the UE shall proceed to perform the action specified in subclause 5.2.2.4. If there is not any match, the UE shall proceed as specified in subclause 5.1.2.4.

NOTE: The UE does not need to run IKEv2 for home link detection if the Home Network prefix is dynamically received in a PCO Information Element.

From TS 24.303 clause 5.1.2.4

After establishing the security association and obtaining the IPv6 Home Address, the UE shall send a Binding Update message as specified in IETF RFC 3775 [6] and IETF RFC 5555 [2] in order to register its Home Address and Care-of Address at the HA, if it detects it is in the foreign network.

If both IPv4 and IPv6 Care-of Address are received at the foreign network, the UE shall first attempt to use the IPv6 Care-of Address for its binding registration. The UE shall not register both IPv4 and IPv6 Care-of Address to its HA.

If IPv6 Care-of Address is used for initial binding registration, the UE shall send the Binding Update message to the IPv6 address of the HA. In this Binding Update message the H (home registration) and A (acknowledge) bits shall be set. If the UE needs an IPv4 Home Address, the UE shall include the 0.0.0.0 address in the IPv4 Home Address option to request a dynamic IPv4 Home Address.

When IPv6 Care-of Address is used for initial binding registration, the Alternate Care-of Address option shall be used by the UE to carry the Care-of Address inside a Mobility Header which is protected by ESP. If this option is present, the address included in this option is the same address present in the source address of the IPv6 packet.

If IPv4 Care-of Address is used for initial binding registration, the UE shall send the Binding Update as follows (see IETF RFC 5555 [2]):

- The IPv6 packet, with the IPv6 Home Address as the Source Address field of the IPv6 header, shall be encapsulated in UDP.
- The UE shall include the IPv4 Care-of Address as the Source Address field of the IPv4 header and the HA IPv4 address as the Destination Address field of the IPv4 header.
- The UE shall include the IPv4 Care-of Address option containing the IPv4 Care-of Address.
- The UE shall set the H (home registration) and A (acknowledge) flags.
- The UE shall set the F (UDP encapsulation required) flag to 0.
- The UE shall set the R (Mobile Router Flag) flag to 1.
- If the UE needs an IPv4 Home Address, the UE shall include an IPv4 Home Address option with the 0.0.0.0 address in the Binding Update message, as defined in IETF RFC 5555 [2].

When the UE receives the Binding Acknowledgement from the HA, it shall validate it based on the rules described in IETF RFC 3775 [6] and IETF RFC 5555 [2]. If the Binding Acknowledgement contains the successful status code 0 ("Binding Update Accepted"), the UE shall create an entry for the registered Home Address in its Binding Update List and may start sending packets containing its IPv6 Home Address or other IPv6 addresses auto-configured from the assigned home network prefix.

If the Binding Acknowledgement contains a value of 128, the UE may re-send the BU as specified in IETF RFC 3775 [6]. If the Binding Acknowledgement contains a value from 129 to 133 as specified in IETF RFC 3775 [6] or a value from 140 to 143 as specified in IETF RFC 3963 [29], the UE shall not send the BU to the HA and should discover another HA.

If the Binding Acknowledgment contains an IPv4 Address Acknowledgement option with status code value from 0 to 127 (indicating success), the UE shall create two entries in its Binding Update List, one for the IPv6 Home Address and another for the IPv4 Home Address. If the Binding Acknowledgement contains an IPv4 Address Acknowledgment option with status code indicating error (i.e. 128 or higher), the UE shall create an entry only for the IPv6 HoA in its binding update list. Moreover, if the status code is 129 ("Administratively prohibited") or 132 ("Dynamic IPv4 home address assignment not available"), the UE shall not re-send the Binding Update and it shall use only the IPv6 HoA. If the Binding Acknowledgement contains an IPv4 Address Acknowledgement option with status 128 ("Failure, reason unspecified"), 130 ("Incorrect IPv4 home address"), 131 ("Invalid IPv4 address") or 133 ("Prefix allocation unauthorized") it shall re-send the Binding Update including the 0.0.0.0 address in the IPv4 Home Address option. If the Binding Acknowledgement does not contain an IPv4 Address Acknowledgment option, the UE shall create an entry only for the IPv6 HoA in its binding update list.

NOTE: The value to be used to identify the IPv4 address acknowledgement option in the mobility header is 30;

The UE may then send data traffic either with the IPv6 Home Address or with the IPv4 Home Address. If the UE is located on an IP6-enabled link, it shall send IPv6 packets as described in IETF RFC 3775 [6]; IPv4 traffic shall be encapsulated in IPv6 packets as described in IETF RFC 5555 [2]. If the UE is located on an IPv4-only link and the Binding Acknowledgement contains the NAT detection option with the F flag set, the UE shall send IPv6 and IPv4 packets following the vanilla UDP encapsulation rules specified in IETF RFC 5555 [2]. Otherwise the UE shall send IPv6 and IPv4 packets encapsulated in IPv4 as specified in IETF RFC 5555 [2].

Once the DSMIPv6 tunnel is established, the UE may build a DHCPv4 or DHCPv6 message as described in IETF RFC 4039 [26] or IETF RFC 3736 [13] respectively and send it via the DSMIPv6 tunnel as described in IETF RFC 3775 [6] in order to retrieve additional parameters, e.g. Vendor-specific options.

From TS 24.303 clause 5.2.2.3

If the access network supports IPv6, as soon as the UE has received via a Router Advertisement at least an IPv6 prefix which is not present in its Prefix List, the UE shall perform the Home Link detection as specified in subclause 5.1.2.3.

If the UE detects it is not attached to the home link, the UE shall send a Binding Update to the HA including the newly configured IP address as the Care-of Address in the Source IP address of the packet and optionally in the Alternate Care-of Address Option [6]. The UE build the Binding Update message as specified in IETF RFC 3775 [6].

If the UE has been assigned also an IPv4 Home Address and wants to update also the binding for it, the UE shall include the IPv4 Home Address option including the assigned IPv4 Home Address in the same Binding Update message.

If the UE has been assigned also an IPv4 Home Address and wants to release it, the UE shall not include any IPv4 Home Address option in the same Binding Update.

If the UE does not have an IPv4 Home Address but wants to configure one, the UE shall include the IPv4 Home Address option with the 0.0.0.0 address as specified in subclause 5.1.2.4.

If the access network supports only IPv4, as soon as the UE has configured an IPv4 Care-of Address which is different from the previous Care-of Address, the UE shall send a Binding Update tunnelled in UDP as specified in IETF RFC 5555 [2]. The UE shall set the F flag to "0". The UE shall set the R flag to "1".

Independent of an IPv6 or IPv4 access network the UE shall set the Key Management Capability (K) bit in the Binding Update message.

### 17.3.5.3 Test purpose

To verify that when the UE has established a security association with the Home Agent and received the IPv6 Home Address, upon detecting that it is not on the Home Link, it transmits a Binding Update message in order to register it Home Address and Care-of-Address at the Home Agent.

### 17.3.5.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE’s Prefix List has been cleared.
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IP address.
  - The UE has established a security association with the Home Agent and obtained an IPv6 Home Address, by executing the steps in test case 17.3.4 with the following exception: the IPv6 home prefix assigned to the UE by the SS shall be the same as the prefix used during IP address acquisition by the UE.

Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

Test procedure

a) The SS broadcasts a Router Advertisement with a Prefix Information Option containing an IPv6 prefix different from the Home Network Prefix assigned to the UE during the preamble.

b) The UE transmits a Binding Update with its IPv6 CoA in the IP Source Address field of the IP Header and the IPv6 Home Agent address in the IP destination Address field of the IP header.

c) The SS transmits a Binding Acknowledgement accepting the Binding Update.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | Router Advertisement | The Prefix Information Option in the Router Advertisement contains an IPv6 prefix different from the Home Network Prefix assigned to the UE during the preamble |
| 2 | → | | Binding Update | Binding Update contains UE's IPv6 CoA in the IP Source Address field of the IP Header and the IPv6 Home Agent address in the IP destination Address field of the IP header |
| 3 | ← | | Binding Acknowledgement | Binding Acknowledgement accepting the Binding Update |

Specific Message Contents

Router Advertisement (Step 1)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Prefix | IPv6 prefix different from the Home Network Prefix assigned to the UE during the preamble |

Binding Update (Step 2)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| IPv4 Home Address option | Optional: Set to the value "0.0.0.0" to request allocation for the UE. The "P" flag is set to '0'B. |
| Alternate Care-of Address option | The Prefix Length is set to the requested prefix length of '32'.<br>Same IPv6 address as that inserted in the IP Source Address field |

Binding Acknowledgement (Step 3)

Use the default message contents found in TS 34.108, clause 9.1.4.

| | |
|---|---|
| | |

17.3.5.5 Test requirements

1. At Step 2, UE shall send a Binding Update with its IPv6 CoA in the IP Source Address field of the IP Header and the IPv6 Home Agent address in the IP destination Address field of the IP header.

## 17.3.6 Registration of a new IPv4 CoA (Binding Update/Acknowledgment procedure in IPv4 network)

### 17.3.6.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

### 17.3.6.2 Conformance requirement

From TS 24.327 clause 5.1.2.5

After establishing the security association and obtaining the IPv6 home network prefix and after performing the home link detection, if not on the home link, the UE shall send a Binding Update message as specified in 3GPP TS 24.303 [3] to register its IPv6 home address with its care-of address.

The UE may also request in the Binding Update an IPv4 home address based on the procedure specified in 3GPP TS 24.303 [3].

From TS 24.303 clause 5.1.2.3

The DSMIPv6 Home Link Detection Function is used by the UE to detect if an access interface is on the home link for a PDN from a DSMIPv6 perspective. The Home Link Detection function shall be performed before sending DSMIPv6 Binding Update via the same access interface.

To perform the Home Link Detection procedure, the UE shall compare the assigned Home Network Prefix for a PDN with the IPv6 prefix or prefixes included in the Prefix Information Option in the Router Advertisements received on the local link. The Home Network Prefix can be assigned in a 3GPP access via PCO, as specified in 3GPP TS 24.301 [15], or via IKEv2 as specified in subclause 5.1.2.2. If there is a match between the Home Network Prefix and one of the local prefixes, the UE is attached on the home link over the respective access interface and shall not send a Binding Update to the HA unless the UE currently has a valid DSMIPv6 Binding Update list entry. If the UE has a valid DSMIPv6 Binding Update list entry, the UE shall proceed to perform the action specified in subclause 5.2.2.4. If there is not any match, the UE shall proceed as specified in subclause 5.1.2.4.

NOTE: The UE does not need to run IKEv2 for home link detection if the Home Network prefix is dynamically received in a PCO Information Element.

From TS 24.303 clause 5.1.2.4

After establishing the security association and obtaining the IPv6 Home Address, the UE shall send a Binding Update message as specified in IETF RFC 3775 [6] and IETF RFC 5555 [2] in order to register its Home Address and Care-of Address at the HA, if it detects it is in the foreign network.

If both IPv4 and IPv6 Care-of Address are received at the foreign network, the UE shall first attempt to use the IPv6 Care-of Address for its binding registration. The UE shall not register both IPv4 and IPv6 Care-of Address to its HA.

If IPv6 Care-of Address is used for initial binding registration, the UE shall send the Binding Update message to the IPv6 address of the HA. In this Binding Update message the H (home registration) and A (acknowledge) bits shall be set. If the UE needs an IPv4 Home Address, the UE shall include the 0.0.0.0 address in the IPv4 Home Address option to request a dynamic IPv4 Home Address.

When IPv6 Care-of Address is used for initial binding registration, the Alternate Care-of Address option shall be used by the UE to carry the Care-of Address inside a Mobility Header which is protected by ESP. If this option is present, the address included in this option is the same address present in the source address of the IPv6 packet.

If IPv4 Care-of Address is used for initial binding registration, the UE shall send the Binding Update as follows (see IETF RFC 5555 [2]):

- The IPv6 packet, with the IPv6 Home Address as the Source Address field of the IPv6 header, shall be encapsulated in UDP.
- The UE shall include the IPv4 Care-of Address as the Source Address field of the IPv4 header and the HA IPv4 address as the Destination Address field of the IPv4 header.
- The UE shall include the IPv4 Care-of Address option containing the IPv4 Care-of Address.

- The UE shall set the H (home registration) and A (acknowledge) flags.
- The UE shall set the F (UDP encapsulation required) flag to 0.
- The UE shall set the R (Mobile Router Flag) flag to 1.
- If the UE needs an IPv4 Home Address, the UE shall include an IPv4 Home Address option with the 0.0.0.0 address in the Binding Update message, as defined in IETF RFC 5555 [2].

When the UE receives the Binding Acknowledgement from the HA, it shall validate it based on the rules described in IETF RFC 3775 [6] and IETF RFC 5555 [2]. If the Binding Acknowledgement contains the successful status code 0 ("Binding Update Accepted"), the UE shall create an entry for the registered Home Address in its Binding Update List and may start sending packets containing its IPv6 Home Address or other IPv6 addresses auto-configured from the assigned home network prefix.

If the Binding Acknowledgement contains a value of 128, the UE may re-send the BU as specified in IETF RFC 3775 [6]. If the Binding Acknowledgement contains a value from 129 to 133 as specified in IETF RFC 3775 [6] or a value from 140 to 143 as specified in IETF RFC 3963 [29], the UE shall not send the BU to the HA and should discover another HA.

If the Binding Acknowledgment contains an IPv4 Address Acknowledgement option with status code value from 0 to 127 (indicating success), the UE shall create two entries in its Binding Update List, one for the IPv6 Home Address and another for the IPv4 Home Address. If the Binding Acknowledgement contains an IPv4 Address Acknowledgment option with status code indicating error (i.e. 128 or higher), the UE shall create an entry only for the IPv6 HoA in its binding update list. Moreover, if the status code is 129 ("Administratively prohibited") or 132 ("Dynamic IPv4 home address assignment not available"), the UE shall not re-send the Binding Update and it shall use only the IPv6 HoA. If the Binding Acknowledgement contains an IPv4 Address Acknowledgement option with status 128 ("Failure, reason unspecified"), 130 ("Incorrect IPv4 home address"), 131 ("Invalid IPv4 address") or 133 ("Prefix allocation unauthorized") it shall re-send the Binding Update including the 0.0.0.0 address in the IPv4 Home Address option. If the Binding Acknowledgement does not contain an IPv4 Address Acknowledgment option, the UE shall create an entry only for the IPv6 HoA in its binding update list.

NOTE: The value to be used to identify the IPv4 address acknowledgement option in the mobility header is 30;

The UE may then send data traffic either with the IPv6 Home Address or with the IPv4 Home Address. If the UE is located on an IP6-enabled link, it shall send IPv6 packets as described in IETF RFC 3775 [6]; IPv4 traffic shall be encapsulated in IPv6 packets as described in IETF RFC 5555 [2]. If the UE is located on an IPv4-only link and the Binding Acknowledgement contains the NAT detection option with the F flag set, the UE shall send IPv6 and IPv4 packets following the vanilla UDP encapsulation rules specified in IETF RFC 5555 [2]. Otherwise the UE shall send IPv6 and IPv4 packets encapsulated in IPv4 as specified in IETF RFC 5555 [2].

Once the DSMIPv6 tunnel is established, the UE may build a DHCPv4 or DHCPv6 message as described in IETF RFC 4039 [26] or IETF RFC 3736 [13] respectively and send it via the DSMIPv6 tunnel as described in IETF RFC 3775 [6] in order to retrieve additional parameters, e.g. Vendor-specific options.

From TS 24.303 clause 5.2.2.3

If the access network supports IPv6, as soon as the UE has received via a Router Advertisement at least an IPv6 prefix which is not present in its Prefix List, the UE shall perform the Home Link detection as specified in subclause 5.1.2.3.

If the UE detects it is not attached to the home link, the UE shall send a Binding Update to the HA including the newly configured IP address as the Care-of Address in the Source IP address of the packet and optionally in the Alternate Care-of Address Option [6]. The UE build the Binding Update message as specified in IETF RFC 3775 [6].

If the UE has been assigned also an IPv4 Home Address and wants to update also the binding for it, the UE shall include the IPv4 Home Address option including the assigned IPv4 Home Address in the same Binding Update message.

If the UE has been assigned also an IPv4 Home Address and wants to release it, the UE shall not include any IPv4 Home Address option in the same Binding Update.

If the UE does not have an IPv4 Home Address but wants to configure one, the UE shall include the IPv4 Home Address option with the 0.0.0.0 address as specified in subclause 5.1.2.4.

If the access network supports only IPv4, as soon as the UE has configured an IPv4 Care-of Address which is different from the previous Care-of Address, the UE shall send a Binding Update tunnelled in UDP as specified in IETF RFC 5555 [2]. The UE shall set the F flag to "0". The UE shall set the R flag to "1".

Independent of an IPv6 or IPv4 access network the UE shall set the Key Management Capability (K) bit in the Binding Update message.

### 17.3.6.3 Test purpose

To verify that when the UE has established a security association with the Home Agent and received the IPv6 Home Address, upon detecting that it is not on the Home Link, it transmits a Binding Update message in order to register it Home Address and Care-of-Address at the Home Agent.

### 17.3.6.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE's Prefix List has been cleared.
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IPv4 address.
  - The UE has established a security association with the Home Agent and obtained an IPv6 Home Address, by executing the steps in test case 17.3.4.

Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

Test procedure

a) The UE transmits a Binding Update with its IPv4 CoA in the IP Source Address field of the IP Header and the IPv4 Home Agent address in the IP destination Address field of the outer IP header.

b) The SS transmits a Binding Acknowledgement accepting the Binding Update.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | → | | Binding Update | Binding Update contains UE's IPv4 CoA in the IP Source Address field of the IP Header and the IPv4 Home Agent address in the IP destination Address field of the outer IP header |
| 2 | ← | | Binding Acknowledgement | Binding Acknowledgement accepting the Binding Update |

Specific Message Contents

Binding Update (Step1)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| IPv4 Home Address option | Optional: Set to the value "0.0.0.0" to request allocation for the UE. The "P" flag is set to '0'B.<br>The Prefix Length is set to the requested prefix length of '32'. |
| Alternate Care-of Address option | Not present |

Binding Acknowledgement (Step 2)

Use the default message contents found in TS 34.108, clause 9.1.4.

| | |
|---|---|
| | |

17.3.6.5 Test requirements

1. At Step 1, UE shall send a Binding Update with its IPv4 CoA in the IP Source Address field of the IP Header and the IPv4 Home Agent address in the IP destination Address field of the IP header.

## 17.3.7 Re-registration of IPv6 CoA

17.3.7.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

17.3.7.2 Conformance requirement

From TS 24.303 clause 5.3.2

As specified in IETF RFC 3775 [6], if the UE wants to extend the validity of an existing binding at the HA, the UE shall send a new Binding Update to the HA before the expiration of the lifetime indicated in the received Binding Acknowledgement, even if it is not changing its primary Care-of Address. This Binding Update is usually referred as periodic Binding Update.

The UE shall follow the rules described in IETF RC 3775 [6], IETF RFC 5555 [2] and in subclause 5.1.2.4 to send a periodic Binding Update and handle the associated Binding Acknowledgement. As the UE has not performed any handover, the UE shall confirm the already registered Care of Address and shall indicate the desired lifetime value. In a periodic Binding Update the UE may request an IPv4 Home Address.

Reference(s)

3GPP TS 24.303 clause 5.3.2

17.3.7.3 Test purpose

To verify that when the registration of the UE's Care-of-Address is about to expire, the UE initiates the re-registration procedure to extend the lifetime of the registration of its Care-of-Address.

17.3.7.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE's Prefix List has been cleared.

- The UE shall be in MM-state "Idle, updated".
- The UE has acquired an IP address.
- The UE has established a security association with the Home Agent and obtained an IPv6 Home Address, by executing the steps in test case 17.3.4 with the following exception: the IPv6 home prefix assigned to the UE by the SS shall be the same as the prefix used during IP address acquisition by the UE.

Test procedure

a - c) The UE registers its IPv6 Home Address and IPv6 Care-of-Address at the Home Agent by performing steps a – c) defined in test case 17.3.5.

d) Within 10 min of Step c), the UE transmits a Binding Update with its IPv6 CoA in the IP Source Address field of the IP Header and the IPv6 Home Agent address in the IP Destination Address field of the IP header.

e) The SS transmits a Binding Acknowledgement accepting the Binding Update.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1-3 | | | Steps defined in test case 17.3.5 | The same messages as in test case 17.3.5 Steps 1-3 are used. |
| 4 | → | | Binding Update | Binding Update contains UE's IPv6 CoA in the IP Source Address field of the IP Header and the IPv6 Home Agent address in the IP Destination Address field of the IP header. Message shall be sent within 10 min of Step 3. |
| 5 | ← | | Binding Acknowledgement | Binding Acknowledgement accepting the Binding Update |

Specific Message Contents

Binding Update (Step 4)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| IPv4 Home Address option | Optional: If an IPv4 Home Address was included in the Binding Acknowledgement sent by the SS at Step 3, field should be set to this IPv4 Home Address.<br>Else, set to the value "0.0.0.0" to request allocation for the UE. The "P" flag is set to '0'.<br>The Prefix Length is set to the requested prefix length of '32'. |
| Alternate Care-of Address option | Same IPv6 address as that inserted in the IP Source Address field |

Binding Acknowledgement (Step 5)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| P | Not present |

#### 17.3.7.5 Test requirements

1. Within 10 min of Step 3, UE shall send a Binding Update with its IPv6 CoA in the IP Source Address field of the IP Header and the IPv6 Home Agent address in the IP Destination Address field of the IP header.

### 17.3.8 Re-registration of Ipv4 CoA

#### 17.3.8.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.8.2 Conformance requirement

From TS 24.303 clause 5.3.2

As specified in IETF RFC 3775 [6], if the UE wants to extend the validity of an existing binding at the HA, the UE shall send a new Binding Update to the HA before the expiration of the lifetime indicated in the received Binding Acknowledgement, even if it is not changing its primary Care-of Address. This Binding Update is usually referred as periodic Binding Update.

The UE shall follow the rules described in IETF RC 3775 [6], IETF RFC 5555 [2] and in subclause 5.1.2.4 to send a periodic Binding Update and handle the associated Binding Acknowledgement. As the UE has not performed any handover, the UE shall confirm the already registered Care of Address and shall indicate the desired lifetime value. In a periodic Binding Update the UE may request an IPv4 Home Address.

Reference(s)

3GPP TS 24.303 clause 5.3.2

#### 17.3.8.3 Test purpose

To verify that when the registration of the UE's Care-of-Address is about to expire, the UE initiates the re-registration procedure to extend the lifetime of the registration of its Care-of-Address.

#### 17.3.8.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE's Prefix List has been cleared.
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IPv4 address.
  - The UE has established a security association with the Home Agent and obtained an IPv6 Home Address, by executing the steps in test case 17.3.4.

Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

a - b) The UE registers its IPv6 Home Address and IPv4 Care-of-Address at the Home Agent by performing steps a –b) defined in test case 17.3.6.

c) Within 10 min of Step b), the UE transmits a Binding Update with its IPv4 CoA in the IP Source Address field of the outer IP Header and the IPv4 Home Agent address in the IP Destination Address field of the outer IP header.

d) The SS transmits a Binding Acknowledgement accepting the Binding Update.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1-2 | | | Steps defined in test case 17.3.6 | The same messages as in test case 17.3.6 Steps 1-2 are used. |
| 3 | → | | Binding Update | Binding Update contains UE's IPv4 CoA in the IP Source Address field of the outer IP Header and the IPv4 Home Agent address in the IP Destination Address field of the outer IP header.<br>Message shall be sent within 10 min of Step 2. |
| 4 | ← | | Binding Acknowledgement | Binding Acknowledgement accepting the Binding Update |

Specific Message Contents

Binding Update (Step 3)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| IPv4 Home Address option | Optional: If an IPv4 Home Address was included in the Binding Acknowledgement sent by the SS at Step 2, field should be set to this IPv4 Home Address.<br>Else, set to the value "0.0.0.0" to request allocation for the UE. The "P" flag is set to '0'.<br>The Prefix Length is set to the requested prefix length of '32'. |
| Alternate Care-of Address option | Not present |

Binding Acknowledgement (Step 4)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| P | Not present |

#### 17.3.8.5 Test requirements

1. Within 10 min of Step 2, UE shall send a Binding Update with its IPv4 CoA in the IP Source Address field of the outer IP Header and the IPv4 Home Agent address in the IP Destination Address field of the outer IP header.

## 17.3.9 Return to home link

#### 17.3.9.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.9.2 Conformance requirement

From TS 24.327 clause 5.2.2.1

When the UE is connected to the GPRS systems and wants to move to 3GPP I-WLAN, the UE shall initiate the tunnel establishment procedure towards the PDG as described in 3GPP TS 24.234 [5] and shall then perform the home link detection as described in subclause 5.1.2.4:

…

- If the UE is on the home link, the UE shall send a Binding Update with lifetime set to 0 to remove the binding at the HA as specified in 3GPP TS 24.303 [3].

From TS 24.327 clause 5.2.3.1

Once the UE is attached to the GPRS system and after performing the PDP context activation procedure, it will receive a new PDP address as a Care-of-Address. The UE shall then perform the home link detection procedure as specified in subclause 5.1.2.4:

….

- If the UE is on the home link, the UE shall send a Binding Update with lifetime set to 0 to remove the binding at the HA as specified in 3GPP TS 24.303 [3].

From TS 24.303 clause 5.2.2.4

If the access network supports IPv6, as soon as the UE has received via a Router Advertisement message at least an IPv6 prefix which is not present in its Prefix List, the UE shall perform the Home Link detection as specified in subclause 5.1.2.3 to detect if the UE is attaching to the home link. If the UE detects it is attached to the home link and there is a valid DSMIPv6 Binding Update list entry at the UE, the UE shall send a Binding Update with the Lifetime field set to "0" in order to remove the binding at the HA, as specified in IETF RFC 3775 [6]. If an IPv4 home address was assigned to the UE, as an optimization the UE may not include the IPv4 home address option as the binding for the IPv4 home address will be removed by the HA. Independent of an IPv6 or IPv4 access network the UE shall set the Key Management Capability (K) bit in the de-registration Binding Update message. The UE may preserve the IKEv2 session in order to avoid re-establishing the session when the next handover occurs. If there is not a safe assumption that the UE will remain in the home link (e.g. switching off the non-3GPP radio interface in case of a dual radio terminal), the UE should preserve the IKEv2 session.

### 17.3.9.3 Test purpose

To verify that when the UE detects it is attached to the home link, it transmits a Binding Update message with the lifetime field set to “0”.

### 17.3.9.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IP address.
  - The UE has established a security association with the Home Agent and obtained an IPv6 Home Address, by executing the steps in test case 17.3.4 with the following exception: the IPv6 home prefix assigned to the UE by the SS shall be the same as the prefix used during IP address acquisition by the UE.
  - The UE has registered its IPv6 Home Address and its Care-of-Address (acquired IPv6 address) at the Home Agent, by executing the steps in test case 17.3.5.

Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

Test procedure

a) The SS broadcasts a Router Advertisement with a Prefix Information Option containing an IPv6 prefix matching the Home Network Prefix assigned to the UE during the preamble.

b) The UE transmits a Binding Update message with the lifetime field set to “0”.

c) The SS transmits a Binding Acknowledgement accepting the Binding Update with the lifetime field set to "0".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | Router Advertisement | The Prefix Information Option in the Router Advertisement contains an IPv6 prefix matching the Home Network Prefix assigned to the UE during the preamble |
| 2 | → | | Binding Update | Lifetime field is set to "0" |
| 3 | ← | | Binding Acknowledgement | Binding Acknowledgement accepting the Binding Update with the lifetime field set to "0" |

Specific Message Contents

Router Advertisement (Step 1)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Prefix | IPv6 prefix equal to Home Network Prefix assigned to the UE during preamble |

Binding Update (Step 2)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Lifetime | '0000000000000000'B |
| IPv4 Home Address option | Not present |
| Alternate Care-of Address option | Not present |

Binding Acknowledgement (Step 3)

Use the default message contents found in TS 34.108, clause 9.1.4, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Lifetime | '0000000000000000'B |
| IPv4 Address Acknowledgement option | Not present |
| Binding Refresh Advice option | Not present |

### 17.3.9.5 Test requirements

1. At Step 2, UE shall send a Binding Update message with the lifetime field set to "0".

## 17.3.10 Security association establishment

### 17.3.10.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

### 17.3.10.2 Conformance requirement

Reference(s)

3GPP TS 24.327 clause 5.4.1

UE and HA may create a child security association using the IKEv2 session established as described in subclause 5.1.2.3. This child security association is used to cipher or integrity protect, or both, all data traffic exchanged

within the DSMIPv6 tunnel. The profiles for tunnel mode IPsec ESP are defined in 3GPP TS 33.234 [19]. The procedure is initiated by the HA and may be initiated at any time after the security association between UE and HA has been set up. The support of this procedure is optional for both the HA and the UE.

3GPP TS 24.327 clause 5.4.2

When the UE receives a CREATE_CHILD_SA request from the HA with selectors indicating the DSMIPv6 tunnel traffic, the UE should reply with a CREATE_CHILD_SA response selecting the preferred transform proposed by the HA as specified in IETF RFC 4306 [9].

If the child SA is created successfully, the UE shall start ciphering or integrity protecting, or both, all the uplink packets in the DSMIPv6 tunnel as negotiated with the HA during the CREATE_CHILD_SA procedure.

The UE may stop ciphering or integrity protecting, or both, the DSMIPv6 tunnel traffic. In order to do that, the UE shall delete the respective child security association by sending an INFORMATIONAL request message including the DELETE payload as specified in IETF RFC 4306 [9]. The protocol ID shall be set to 3 in order to indicate that only the ESP SA shall be removed.

3GPP TS 24.327 clause 5.4.3

After establishing the IPsec security association with the UE as described in subclause 5.1.3.3, the HA may optionally trigger the creation of a child security association to protect the traffic send via the DSMIPv6 tunnel.

In order to activate the protection of DSMIPv6 tunnel traffic, the HA shall initiate the creation of a child security association sending a CREATE_CHILD_SA request message to the UE. In the CREATE_CHILD_SA message the HA shall request for an ESP security association; the HA shall also set the SA payload depending if integrity protection or ciphering, or both, are needed as described in IETF RFC 4306 [9]. The traffic selectors shall be set as described in subclause 5.2.4 of IETF RFC 3776 [11].

If the child security association is created successfully, the HA shall start ciphering or integrity protecting, or both, all the downlink packets in the DSMIPv6 tunnel as negotiated with the UE during the CREATE_CHILD_SA procedure.

At any time the HA may stop ciphering or integrity protecting, or both, the DSMIPv6 tunnel traffic. In order to do that, the HA shall delete the respective child security association by sending an INFORMATIONAL request message including the DELETE payload as specified in IETF RFC 4306 [9]. The protocol ID shall be set to 3 in order to indicate that only the ESP SA shall be removed.

After establishing the IPsec security association with the UE as described in subclause 5.1.3.3, the HA may optionally trigger the creation of a child security association to protect the traffic send via the DSMIPv6 tunnel.

In order to activate the protection of DSMIPv6 tunnel traffic, the HA shall initiate the creation of a child security association sending a CREATE_CHILD_SA request message to the UE. In the CREATE_CHILD_SA message the HA shall request for an ESP security association; the HA shall also set the SA payload depending if integrity protection or ciphering, or both, are needed as described in IETF RFC 4306 [9]. The traffic selectors shall be set as described in subclause 5.2.4 of IETF RFC 3776 [11].

If the child security association is created successfully, the HA shall start ciphering or integrity protecting, or both, all the downlink packets in the DSMIPv6 tunnel as negotiated with the UE during the CREATE_CHILD_SA procedure.

At any time the HA may stop ciphering or integrity protecting, or both, the DSMIPv6 tunnel traffic. In order to do that, the HA shall delete the respective child security association by sending an INFORMATIONAL request message including the DELETE payload as specified in IETF RFC 4306 [9]. The protocol ID shall be set to 3 in order to indicate that only the ESP SA shall be removed.

#### 17.3.10.3 Test purpose

To verify that when the HA sets up a Child SA by sending a CREATE_CHILD_SA Request the UE replies with a CREATE_CHILD_SA Response.

#### 17.3.10.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.

- User Equipment:
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IP address.
  - The UE has discovered the IP address of the Home Agent (either via DNS, IKEv2 signalling or during PDP context activation procedure).
  - The UE has set up a Security Association with the Home Agent

Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

Test procedure

a) The SS transmits a CREATE_CHILD_SA Request message including traffic selectors fields (TSi and TSr) that contain the parameters identifying the data traffic to be encrypted.

b) The UE transmits a CREATE_CHILD_SA Response message.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | → | | CREATE_CHILD_SA Request | CREATE_CHILD_SA Request message includes traffic selectors fields (TSi and TSr) that contain the parameters identifying the data traffic to be encrypted |
| 2 | ← | | CREATE_CHILD_SA Response | |

| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | Set by the UE |
| - Notify Message Type | '1000000000000111'B (Use transport mode) |
| - SPI | Set by the UE |
| - Padding | Set by the UE |
| - Pad Length | Set by the UE |
| - Integrity checksum data | Set by the UE |

#### 17.3.10.5 Test requirements

1. At Step 2, UE shall send a CREATE_CHILD_SA response addressed to the Home Agent to initiate data traffic tunnelling.

### 17.3.11 Termination of protection of DSMIPv6 tunnel traffic by Home Agent

#### 17.3.11.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.11.2 Conformance requirement

From TS 24.327 clause 5.4.1

UE and HA may create a child security association using the IKEv2 session established as described in subclause 5.1.2.3. This child security association is used to cipher or integrity protect, or both, all data traffic exchanged within the DSMIPv6 tunnel. The profiles for tunnel mode IPsec ESP are defined in 3GPP TS 33.234 [19]. The procedure is initiated by the HA and may be initiated at any time after the security association between UE and HA has been set up. The support of this procedure is optional for both the HA and the UE.

From TS 24.327 clause 5.4.2

When the UE receives a CREATE_CHILD_SA request from the HA with selectors indicating the DSMIPv6 tunnel traffic, the UE should reply with a CREATE_CHILD_SA response selecting the preferred transform proposed by the HA as specified in IETF RFC 4306 [9].

If the child SA is created successfully, the UE shall start ciphering or integrity protecting, or both, all the uplink packets in the DSMIPv6 tunnel as negotiated with the HA during the CREATE_CHILD_SA procedure.

The UE may stop ciphering or integrity protecting, or both, the DSMIPv6 tunnel traffic. In order to do that, the UE shall delete the respective child security association by sending an INFORMATIONAL request message including the DELETE payload as specified in IETF RFC 4306 [9]. The protocol ID shall be set to 3 in order to indicate that only the ESP SA shall be removed.

From TS 24.327 clause 5.4.3

After establishing the IPsec security association with the UE as described in subclause 5.1.3.3, the HA may optionally trigger the creation of a child security association to protect the traffic send via the DSMIPv6 tunnel.

In order to activate the protection of DSMIPv6 tunnel traffic, the HA shall initiate the creation of a child security association sending a CREATE_CHILD_SA request message to the UE. In the CREATE_CHILD_SA message the HA shall request for an ESP security association; the HA shall also set the SA payload depending if integrity protection or ciphering, or both, are needed as described in IETF RFC 4306 [9]. The traffic selectors shall be set as described in subclause 5.2.4 of IETF RFC 3776 [11].

If the child security association is created successfully, the HA shall start ciphering or integrity protecting, or both, all the downlink packets in the DSMIPv6 tunnel as negotiated with the UE during the CREATE_CHILD_SA procedure.

At any time the HA may stop ciphering or integrity protecting, or both, the DSMIPv6 tunnel traffic. In order to do that, the HA shall delete the respective child security association by sending an INFORMATIONAL request message including the DELETE payload as specified in IETF RFC 4306 [9]. The protocol ID shall be set to 3 in order to indicate that only the ESP SA shall be removed.

After establishing the IPsec security association with the UE as described in subclause 5.1.3.3, the HA may optionally trigger the creation of a child security association to protect the traffic send via the DSMIPv6 tunnel.

In order to activate the protection of DSMIPv6 tunnel traffic, the HA shall initiate the creation of a child security association sending a CREATE_CHILD_SA request message to the UE. In the CREATE_CHILD_SA message the HA shall request for an ESP security association; the HA shall also set the SA payload depending if integrity protection or ciphering, or both, are needed as described in IETF RFC 4306 [9]. The traffic selectors shall be set as described in subclause 5.2.4 of IETF RFC 3776 [11].

If the child security association is created successfully, the HA shall start ciphering or integrity protecting, or both, all the downlink packets in the DSMIPv6 tunnel as negotiated with the UE during the CREATE_CHILD_SA procedure.

At any time the HA may stop ciphering or integrity protecting, or both, the DSMIPv6 tunnel traffic. In order to do that, the HA shall delete the respective child security association by sending an INFORMATIONAL request message including the DELETE payload as specified in IETF RFC 4306 [9]. The protocol ID shall be set to 3 in order to indicate that only the ESP SA shall be removed.

### 17.3.11.3 Test purpose

To verify that when the Home Agent terminates the previously set up Child SA by sending an INFORMATIONAL Request, the UE replies with an INFORMATIONAL Response.

### 17.3.11.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:

- The UE shall be in MM-state "Idle, updated".
- The UE has acquired an IP address.
- The UE has discovered the IP address of the Home Agent (either via DNS, IKEv2 signalling or during PDP context activation procedure).
- The UE has set up a Security Association with the Home Agent.
- The Home Agent has set up a child Security Association to protect data traffic.

Test procedure

a) The SS transmits an INFORMATIONAL Request message including a DELETE payload with the SPI value of the security association set up during preamble to protect data traffic.

b) The UE transmits an INFORMATIONAL Response message including a DELETE payload with the SPI value of the security association set up during preamble to protect data traffic..

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | INFORMATIONAL Request | INFORMATIONAL Request message includes a DELETE payload indicating the SPIs of the CHILD_SA to be removed |
| 2 | → | | INFORMATIONAL Response | |

Specific Message Contents

INFORMATIONAL Request (Step 1)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the SS in IKE_SA exchange |
| - Responder's IKE_SA SPI | Same as that set by the UE in IKE_SA exchange |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00 100101'B (INFORMATIONAL) |
| Encrypted Payload | |
| - Next Payload | '00101010'B (DELETE payload) |
| - Encrypted IKE Payloads | |
| - Delete Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | '00000100'B |
| - SPI | Same as the one set by SS when creating the CHILD_SA |
| - Padding | Set by the SS |
| - Pad Length | Set by the SS |
| - Integrity checksum data | Set by the SS |

INFORMATIONAL Response (Step 2)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE in IKE_SA exchange |
| - Responder's IKE_SA SPI | Same as that set by the SS in IKE_SA exchange |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00 100101'B (INFORMATIONAL) |
| Encrypted Payload | |
| - Next Payload | '00101010'B (DELETE payload) |
| - Encrypted IKE Payloads | |
| - Delete Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000011'B (ESP) |
| - SPI size | '00000100'B |
| - SPI | Same as the one set by UE when creating the CHILD_SA |
| - Padding | Set by the UE |
| - Pad Length | Set by the UE |
| - Integrity checksum data | Set by the UE |

#### 17.3.11.5 Test requirements

1. At Step 2, the UE shall send an INFORMATIONAL response addressed to the Home Agent to stop data traffic encryption.

## 17.3.12 Dual-Stack Mobile IPv6 detach in IPv6 network

#### 17.3.12.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.12.2 Conformance requirement

From TS 24.327 clause 5.3.2.1

The network-initiated detach is based on the usage of the Binding Revocation Indication (BRI) message. When the UE receives a BRI, it shall proceed as described in 3GPP TS 24.303 [3].

From TS 24.303 clause 5.4.2.1

Upon receiving a Binding Revocation Indication (BRI) message according to draft-ietf-mext-binding-revocation [19] from the HA, the UE first shall perform the required validity checks on the BRI according to draft-ietf-mext-binding-revocation [19].

The UE shall send a Binding Revocation Acknowledgement (BRA) as specified in draft-ietf-mext-binding-revocation [19]. In this message the UE shall set the status field to 'Success' to reflect that it has received the BRI message. The BRA message may be tunnelled in UDP or IPv4 as specified in subclause 5.1.2.4 for Binding Update messages.

The UE then shall remove the entry identified in the BRI as deregistered from its binding update list and shall use the procedures defined in IETF RFC 4306 [14] to remove the IPsec security associations associated with the DSMIPv6 registration as described in subclause 5.4.2.2.

From TS 24.303 clause 5.4.2.2

To detach from a specific PDN to which it is connected through a DSMIPv6 session, the UE shall send a Binding Update with the Lifetime field set to 0 as specified in IETF RFC 3775 [6].

The UE shall use the procedures defined in the IKEv2 protocol in IETF RFC 4306 [14] to remove the IPsec security associations associated with the DSMIPv6 registration. The UE shall close the security associations associated with the DSMIPv6 registration and instruct the HA to do the same by sending the INFORMATIONAL request message including a DELETE payload. The Protocol ID in the DELETE payload shall be set to "1" (IKE) to indicate that all IPsec ESP security associations that were negotiated within the IKEv2 exchange shall be deleted.

3GPP TS 24.303 clauses 5.4.2.1 and 5.4.2.2

### 17.3.12.3 Test purpose

To verify that when the UE receives a Binding Revocation Indication message from the HA, it transmits a Binding Revocation Acknowledgement message with the status field set to 'Success', and removes the IPsec security associations associated with the DSMIPv6 registration.

### 17.3.12.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IPv6 address.
  - The UE has established a security association with the Home Agent and obtained an IPv6 Home Address, by executing the steps in test case 17.3.4 with the following exception: the IPv6 home prefix assigned to the UE by the SS shall be the same as the prefix used during IP address acquisition by the UE.
  - The UE has registered its IPv6 Home Address and its Care-of-Address (acquired IPv6 address) at the Home Agent, by executing the steps in test case 17.3.5.

Test procedure

a) The SS transmits a Binding Revocation Indication message to the UE.

b) The UE transmits a Binding Revocation Acknowledgement message with the status field set to 'Success'.

c) The UE transmits an IKEv2 INFORMATIONAL message containing a DELETE payload.

d) The SS transmits an IKEv2 INFORMATIONAL message containing a DELETE payload back to the UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | Binding Revocation Indication | |
| 2 | → | | Binding Revocation Acknowledgement | Status field is set to 'Success' |
| 3 | → | | IKEv2 INFORMATIONAL | Message contains a DELETE payload |
| 4 | ← | | IKEv2 INFORMATIONAL | Message contains a DELETE payload |

Specific Message Contents

Binding Revocation Indication (Step 1)

Use the default message contents found in TS 34.108, clause 9.1.4.

Binding Revocation Acknowledgement (Step 2)

Use the default message contents found in TS 34.108, clause 9.1.4.

IKEv2 INFORMATIONAL (Step 3)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | The one identifying the UE in the SA set up during the preamble |
| - Responder's IKE_SA SPI | The one identifying the HA in the SA set up during the preamble |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100101'B (INFORMATIONAL) |
| Encrypted Payload | |
| - Next Payload | '00101010'B (DELETE) |
| Delete Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000001'B (IKE_SA) |
| Padding | Set by the UE |
| Pad Length | Set by the UE |
| Integrity checksum data | Set by the UE |

IKEv2 INFORMATIONAL (Step 4)

| Information Element | Value/remark |
|---|---|
| IKE Header | |
| - Initiator's IKE_SA SPI | Same as that set by the UE at Step 3 |
| - Responder's IKE_SA SPI | Same as that set by the SS at Step 3 |
| - Next Payload | '00101110'B (E) |
| - Exchange Type | '00100101'B (INFORMATIONAL) |
| Encrypted Payload | |
| - Next Payload | '00101010'B (DELETE) |
| Delete Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000001'B (IKE_SA) |
| Padding | Set by the SS |
| Pad Length | Set by the SS |
| Integrity checksum data | Set by the SS |

#### 17.3.12.5 Test requirements

1. At Step 2, UE shall send a Binding Revocation Acknowledgement message with the status field set to 'Success'.
2. At Step 3, UE shall send an IKEv2 INFORMATIONAL message containing a DELETE payload.

### 17.3.13 Dual-Stack Mobile IPv6 detach in IPv4 network

#### 17.3.13.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems.

#### 17.3.13.2 Conformance requirement

From TS 24.327 clause 5.3.2.1

The network-initiated detach is based on the usage of the Binding Revocation Indication (BRI) message. When the UE receives a BRI, it shall proceed as described in 3GPP TS 24.303 [3].

From TS 24.303 clause 5.4.2.1

Upon receiving a Binding Revocation Indication (BRI) message according to draft-ietf-mext-binding-revocation [19] from the HA, the UE first shall perform the required validity checks on the BRI according to draft-ietf-mext-binding-revocation [19].

The UE shall send a Binding Revocation Acknowledgement (BRA) as specified in draft-ietf-mext-binding-revocation [19]. In this message the UE shall set the status field to 'Success' to reflect that it has received the BRI message. The BRA message may be tunnelled in UDP or IPv4 as specified in subclause 5.1.2.4 for Binding Update messages.

The UE then shall remove the entry identified in the BRI as deregistered from its binding update list and shall use the procedures defined in IETF RFC 4306 [14] to remove the IPsec security associations associated with the DSMIPv6 registration as described in subclause 5.4.2.2.

From TS 24.303 clause 5.4.2.2

The UE shall use the procedures defined in the IKEv2 protocol in IETF RFC 4306 [14] to remove the IPsec security associations associated with the DSMIPv6 registration. The UE shall close the security associations associated with the DSMIPv6 registration and instruct the HA to do the same by sending the INFORMATIONAL request message including a DELETE payload. The Protocol ID in the DELETE payload shall be set to "1" (IKE) to indicate that all IPsec ESP security associations that were negotiated within the IKEv2 exchange shall be deleted.

### 17.3.13.3 Test purpose

To verify that when the UE receives a Binding Revocation Indication message from the HA, it transmits a Binding Revocation Acknowledgement message with the status field set to ‘Success’, and removes the IPsec security associations associated with the DSMIPv6 registration.

### 17.3.13.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall be in MM-state "Idle, updated".
  - The UE has acquired an IPv4 address.
  - The UE has established a security association with the Home Agent and obtained an IPv6 Home Address, by executing the steps in test case 17.3.4.
  - The UE has registered its IPv6 Home Address and its Care-of-Address (acquired IPv4 address) at the Home Agent, by executing the steps in test case 17.3.6.

| Delete Payload | |
| - Next Payload | '00000000'B (No Next Payload) |
| - Protocol ID | '00000001'B (IKE_SA) |
| Padding | Set by the SS |
| Pad Length | Set by the SS |
| Integrity checksum data | Set by the SS |

### 17.3.13.5 Test requirements

1. At Step 2, UE shall send a Binding Revocation Acknowledgement message with the status field set to 'Success'.
2. At Step 3, UE shall send an IKEv2 INFORMATIONAL message containing a DELETE payload.

# 18 Multi-Layer Functional Tests

The present clause specifies the multi-layer functional test cases that are not covered by the interoperability radio bearer test cases in clause 14 or by any other test cases in the present document.

## 18.1 Radio Bearer Tests for 1.28 Mcps TDD option

### 18.1.1 General information for radio bearer tests (1.28 Mcps TDD)

The purpose of these radio bearer test cases is to test properly the Reference Radio Bearer configurations included in TS34.108 [9], clause 6.11 for 1.28 Mcps TDD option.

The applicability of radio bearer tests is dependent on the UE uplink and downlink radio access capabilities and UE support tele- and bearer-services. See TS 34.123-2, annex B for applicability of the specific test cases.

The test procedure for radio bearer for 1.28Mcps option is identical to generic radio bearer test procedure in chap 14.

14.1.1.1 Generic radio bearer test procedure for Single RB configuration is used for generic radio bearer test procedure for single RB configuration of 1.28 Mcps TDD option.

14.1.1.2 Generic test procedure for testing multi-RB combination and simultaneous signalling is used for generic test procedure for testing multi-RB combination and simultaneous signalling of 1.28 Mcps TDD option.

For radio bearer combinations which are representative to multiple traffic classes, such as “Interactive or Background”, “Streaming or Interactive or Background” etc, then it is only required to execute the radio bearer test procedure once using one of the applicable traffic class for the UE under test.

NOTE: As the purpose of the radio bearer test cases is to functionally verify that the UE is able to establish the radio bearer combination, and to verify correct data transfer using the different transport formats, then the necessary test coverage is achieved by performing the radio bearer test procedure once for one of the applicable traffic classes.

#### 18.1.1.1 Generic radio bearer test procedure for Single RB configuration

See 14.1.1for test procedure

#### 18.1.1.2 Generic test procedure for testing multi-RB configuration and simultaneous signalling

See 14.1. 2 for test procedure

#### 18.1.1.3 Generic test procedure radio bearers on MTCH

See 14.1.5 for test procedure

#### 18.1.1.4 General information interoperability radio bearer tests for E-DCH and HS-DSCH combinations

See 14.1.4 for test procedure

#### 18.1.1.5 Generic test procedure for radio bearers on MBSFN MTCH

See 18.2.1.6 for test procedure

#### 18.1.1.6 Generic test procedure for HS-DSCH radio bearer combinations with non-enhanced Layer 2

See 14.1.3.5 for test procedure

## 18.1.1.6a General information interoperability radio bearer tests for HS-DSCH

### 18.1.1.6a.1 HS-DSCH radio bearer test parameters

In the radio bearer tests on radio bearers mapped on HS-DSCH, the following UE specific parameters should be used.

**Table 18.1.1.6a.1.1: 1.28 Mcps TDD HS-DSCH physical layer categories**

| HS-DSCH category | Maximum number of HS-DSCH codes per timeslot | Maximum number of HS-DSCH timeslots per TTI | Maximum number of HS-DSCH transport channel bits that can be received within an HS-DSCH TTI | Total number of soft channel bits | Supported modulations without MIMO operation | Supported modulations simultaneous with MIMO operation |
|---|---|---|---|---|---|---|
| Category 1 | 16 | 2 | 2788 | 11264 | QPSK | Not applicable (MIMO not supported) |
| Category 2 | 16 | 2 | 2788 | 22528 | | |
| Category 3 | 16 | 2 | 2788 | 33792 | | |
| Category 4 | 16 | 2 | 5600 | 22528 | QPSK,16QAM | |
| Category 5 | 16 | 2 | 5600 | 45056 | | |
| Category 6 | 16 | 2 | 5600 | 67584 | | |
| Category 7 | 16 | 3 | 8416 | 33792 | | |
| Category 8 | 16 | 3 | 8416 | 67584 | | |
| Category 9 | 16 | 3 | 8416 | 101376 | | |
| Category 10 | 16 | 4 | 11226 | 45056 | | |
| Category 11 | 16 | 4 | 11226 | 90112 | | |
| Category 12 | 16 | 4 | 11226 | 135168 | | |
| Category 13 | 16 | 5 | 14043 | 56320 | | |
| Category 14 | 16 | 5 | 14043 | 112640 | | |
| Category 15 | 16 | 5 | 14043 | 168960 | | |
| Category 16 | 16 | 3 | 12636 | 50688 | QPSK,16QAM, 64QAM | Not applicable (MIMO not supported) |
| Category 17 | 16 | 3 | 12636 | 101376 | | |
| Category 18 | 16 | 3 | 12636 | 152064 | | |
| Category 19 | 16 | 4 | 16856 | 67584 | | |
| Category 20 | 16 | 4 | 16856 | 135168 | | |
| Category 21 | 16 | 4 | 16856 | 202752 | | |
| Category 22 | 16 | 5 | 21076 | 84480 | | |
| Category 23 | 16 | 5 | 21076 | 168960 | | |
| Category 24 | 16 | 5 | 21076 | 253440 | | |
| Category 25 NOTE 1 | 16 | 3 | 12636 | 152064 | QPSK,16QAM, 64QAM | -- |
| | | | 8416 | 202752 | -- | QPSK,16QAM |
| Category 26 NOTE 2 | 16 | 4 | 16856 | 202752 | QPSK,16QAM, 64QAM | -- |
| | | | 11226 | 270336 | -- | QPSK,16QAM |
| Category 27 NOTE 3 | 16 | 5 | 21076 | 253440 | QPSK,16QAM, 64QAM | -- |
| | | | 14043 | 337920 | -- | QPSK,16QAM |
| Category 28 | 16 | 3 | 12636 | 304128 | QPSK,16QAM, 64QAM | QPSK,16QAM, 64QAM |
| Category 29 | 16 | 4 | 16856 | 405504 | | |
| Category 30 | 16 | 5 | 21076 | 506880 | | |

A UE in CELL_FACH, CELL_PCH or URA_PCH state with HS-DSCH reception shall support the HS-DSCH physical layer category 9 and may support the total number of soft channel bits larger than that of the category 9 in table 5.1c. When HS-DSCH reception in CELL_FACH, CELL_PCH or URA_PCH state is configured, the octet aligned table of transport block size for the HS-DSCH physical layer category 9 shall be used (see [9]).

NOTE 1: A UE of category 25 supports the physical capabilities of categories 18. The first row of category 25 in table 5.1c specifies the capabilities when MIMO is not configured and the capabilities of category 18 apply .The second row of category 25 in table 5.1c specifies the capabilities when MIMO is configured.

NOTE 2: A UE of category 26 supports the physical capabilities of categories 21. The first row of category 26 in table 5.1c specifies the capabilities when MIMO is not configured and the capabilities of category 21 apply .The second row of category 26 in table 5.1c specifies the capabilities when MIMO is configured.

NOTE 3: A UE of category 27 supports the physical capabilities of categories 24. The first row of category 27 in table 5.1c specifies the capabilities when MIMO is not configured and the capabilities of category 24 apply .The second row of category 27 in table 5.1c specifies the capabilities when MIMO is configured.

### 18.1.1.6a.2 Selecting TFRC test points

#### 18.1.1.6a.2.1 Principle for non-enhanced Layer 2

The transport format and resource combination (TFRC) is identified by the UE by the type of modulation, number of channalisation codes and the transport format and resource identifier (TFRI) signalled on the HS-SCCH.

For the HSDPA radio bearer test cases the principle for selecting typical test points for TFRC is:

1. Select one TFRC per modulation scheme and number of MAC-d PDUs.
2. For each number of MAC-d PDUs select the TFRC minimizing padding.
3. Any TFRC that would cause turbo coder irregularities should be avoided.

The problem with turbo coder regularities appears at certain coding rates. The coding rate for a certain TFCR is:

$Coding_rate = (TB_{size} + N_{CRC}) / (N_{timeslots} N_{codes} \cdot N_{phy_bits})$, where

$TB_{size}$ is the selected transport block,

$N_{CRC}$ is the number of CRC bits,

$N_{timeslots}$ is the number of channelisation codes,

$N_{codes}$ is the number of channelisation codes, and

$N_{phy_bits}$ is the number physical bits per code (88 for QPSK, 172 for 16QAM and 344 for 64 QAM).

Table 18.1.1.6a.2.1 lists the coding rates that cause turbo coder irregularities. In case a candidate TFRC value is causing turbo coder irregularities then the closest higher TFRI value, which do not cause any turbo coder irregularities, is selected.

**Table 18.1.1.6a.2.1: Coding rates causing degradation due to turbo coder irregularities**

| Coding rate | Comment |
|---|---|
| 0.77-0.79 | Cause loss up to 3.5 dB |
| 0.835-0.84 | Cause loss up to 1.5 dB |
| 0.871-0.878 | Cause loss up to 2 dB |
| 0.91-0.914 | Cause loss up to 2 dB |

NOTE The coding rates in Table 14.2.3.2.1 is based on the simulations as described in RAN WG1 document R1-030444 (Turbo-coding and puncturing interactions on HS-DSCH in R5 HSDPA)

The selection algorithm for the TFRC test points for a certain UE category and MAC-d PDU size is:

1. Set the number of MAC-d PDUs, N_PDU, to 1
2. Calculate the minimum transport block size to fit the number of MAC-d PDUs.
3. If the transport block size is less or equal to the UE capability for “Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI” in Table 18.1.1.6a.3.1.1 then continue with step 4 else there is no more testing points.

4. Select the QPSK test point:
   If it, for the actual UE category and for the selected transport block size, exists a TFRI for QPSK then select the TFRI that maximises the number of timeslots and number of codes per timeslot.

5. Select the 16QAM test point:
   If it, for the actual UE category and for the selected transport block size, exists a TFRI for 16QAM then select the TFRI that maximises the number of timeslots and number of codes per timeslot.

6. Check that the coding rate for the selected TFRC does not cause turbo coder irregularities, see Table 18.1.1.6a.3.2.1. If the coding rate is ok then accept the testing point and continue with step 8 else continue with step 7.

7. If the coding rate is not ok then select the next higher TFRI value that corresponds to an acceptable coding rate. Calculate the transport block size correspondent to the modified TFRI values and if it is less or equal to the UE capability for "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" in Table 18.1.1.6a.3.1.1 then accept the testing point else skip it.

8. Increment N_PDUs. If N_PDU is less or equal to 48 then repeat from step 2 else there is no more testing points.

### 18.1.1.6a.2.1a Principle for enhanced Layer 2

For the combination of MAC-ehs and Fixed RLC then the same principle to select test points as for the non-enhanced Layer 2 case as described in sub-clause 14.1.3.2.1 is used (MAC-d PDU size 336 and 656 bits).

For the combination of MAC-ehs and Flexible RLC then the same TFRI test points as for the fixed MAC-d PDU size=656 bits case are used.

### 18.1.1.6a.3 TFRC test points for MAC-d PDU size=336

**Table 18.1.1.6a.3.1: TFRC test points for UE category 1 to UE category 3 for MAC-d PDU size=336**

| Number of MAC-d PDUs | Selected transport block size [bits] | Modulation scheme | Number of timeslots | Number of codes per timeslot | TFRI | Comments |
|---|---|---|---|---|---|---|
| 1 | 370 | QPSK | 1 | 5 | 12 | |
| 2 | 698 | QPSK | 1 | 9 | 28 | |
| 3 | 1037 | QPSK | 1 | 13 | 38 | |
| 4 | 1367 | QPSK | 1 | 16 | 45 | |
| 5 | 1734 | QPSK | 2 | 11 | 51 | |
| 6 | 2113 | QPSK | 2 | 13 | 56 | |
| 7 | 2380 | QPSK | 2 | 14 | 59 | |
| 8 | 2788 | QPSK | 2 | 16 | 63 | |

**Table 18.1.1.6a.3.2: TFRC test points for UE category 4 to UE category 6 for MAC-d PDU size=336**

| Number of MAC-d PDUs | Selected transport block size [bits] | Modulation scheme | Number of timeslots | Number of codes per timeslot | TFRI | Comments |
|---|---|---|---|---|---|---|
| 1 | 360 | QPSK | 1 | 5 | 9 | |
| 1 | 360 | 16QAM | 1 | 3 | 9 | |

#### 18.1.1.7 Generic test procedure for HS-DSCH radio bearer combinations with enhanced Layer 2

See 14.1.3.5a for test procedure

#### 18.1.1.8 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with downlink and uplink enhanced Layer 2

See 14.1.4.1b for test procedure

#### 18.1.1.9 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations for enhanced uplink in CELL_FACH

See 14.1.4.3 for test procedure

### 18.1.2 Combinations on DPCH

#### 18.1.2.1 Stand-alone UL:1.7 DL:1.7 kbps SRBs for DCCH

Test to verify establishment and signalling of stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.1.

The test case is performed by running test case 9.4.1 (Location updating / accepted) using the stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.1.

#### 18.1.2.2 Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH

Test to verify establishment and signalling of stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.2.

The test case is performed by running test case 9.4.1 (Location updating / accepted) using the stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.2.

#### 18.1.2.3 Stand-alone UL:13.6 DL:13.6 kbps SRBs for DCCH

Implicitly tested.

NOTE: The stand-alone UL:13.6 DL:13.6 kbps SRBs for DCCH in TS 34.108, clause 6.11.5.4.1.3 is the default signalling radio bearer used in the generic setup procedure as specified in TS 34.108 clause 7.

## 18.1.2.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 18.1.2.4.1 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

Reference(s)

See 18.1.1.1 for test procedure.

#### 18.1.2.4.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.
   - for sub-test 2: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS

### 18.1.2.4a Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH(TDD)

#### 18.1.2.4a.1 Definition and applicability

All UEs which support TDD.

#### 18.1.2.4a.2 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

#### 18.1.2.4a.5 Test requirements

See 18.1.1.1 for definition of step 10 and step 15. (establish the connection on the secondary carrier)

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.

- for sub-test 2: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS

See clause 18.1.1.1 for test procedure.

#### 18.1.2.10.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x49) and RB6/TF1 (1x54).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS

See 18.1.1.1 for test procedure.

#### 18.1.2.18.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 where the first 320 bits have the same content as the RLC SDU sent by the SS.
   - for sub-test 2 to 4: one or more RLC SDUs on RB5 where the first 320 bits have the same content as the RLC SDU sent by the SS.

### 18.1.2.19 Streaming / unknown / UL:64 DL:0 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 18.1.2.19.1 Conformance requirement

See 18.1.2.4.1.

18.1.2.19.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.19.

To be able to test the uplink radio bearer using the UE loopback function for the reference radio bearer UL:64 DL: 0 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.11.5.4.1.15.2 (Streaming/unknown/DL:14.4 kbps) is used in downlink.

18.1.2.19.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS:

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
NOTE 2: SS is using a DL RLC SDU with 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return the first 320 bits of the test data.
NOTE 3: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU two times (truncating the last one to fit the UL RLC SDU size of 640 bits).
NOTE 4: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU three times (truncating the last one to fit the UL RLC SDU size of 1280 bits).
NOTE 5: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU five times (truncating the last one to fit the UL RLC SDU size of 2560 bits).

See 18.1.1.1 for test procedure.

### 18.1.2.19.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x320).
   - for sub-test 2: RB5/TF2 (2x320).
   - for sub-test 3: RB5/TF3 (4x320).
   - for sub-test 4: RB5/TF4 (8x320).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as the first 320 bits of the DL RLC SDU sent by the SS.
   - for sub-test 2: an RLC SDU on RB5 for which the first 576 bits are equal to the sent DL RLC SDU bit pattern and the remaining 64 bits are equal to the first 64 bits of the sent DL RLC SDU.
   - for sub-test 3: an RLC SDU on RB5 for which the first 1152 bits are equal to the sent DL RLC SDU bit pattern repeated twice and the remaining 128 bits are equal to the first 128 bits of the sent DL RLC SDU.
   - for sub-test 4: an RLC SDU on RB5 for which the first 2304 bits are equal to the sent DL RLC SDU bit pattern repeated four times and the remaining 256 bits are equal to the first 256 of the sent DL RLC SDU.

| 1 | DL_TFC1 | UL_TFC1 | DL_TFC0, DL_TFC2, UL_TFC0, UL_TFC2 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 | RB5: 312 | RB5: 312 |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. | | | | | | |

See 18.1.1.1 for test procedure.

#### 18.1.2.23.1.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### 18.1.2.23.2 Interactive or background / UL:32 DL:8 kbps / PS RAB / (TC, 20 ms TTI)

#### 18.1.2.23.2.1 Conformance requirement

See 18.1.2.4.1.

#### 18.1.2.23.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.23 for the turbo channel coding and uplink 20 ms TTI case.

#### 18.1.2.23.2.3 Method of test

See 18.1.1.1 for test procedure.

#### 18.1.2.23.2.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
3. At step 15 the UE shall return
   - for sub-test 1 and 2: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### 18.1.2.23.3 Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.23 for the convolutional channel coding and uplink 10 ms TTI case.

See test case 18.1.2.23.1 for test procedure and test requirement.

### 18.1.2.23.4 Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.23 for the convolutional channel coding and uplink 20 ms TTI case.

See test case 18.1.2.23.2 for test procedure and test requirement.

## 18.1.2.24 Interactive or background / UL:64 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 18.1.2.24.1 Interactive or background / UL:64 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / TC

#### 18.1.2.24.1.1 Conformance requirement

See 18.1.2.4.1.1.

18.1.2.24.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.24 for the downlink turbo coding case.

18.1.2.24.1.3 Method of test

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 18.1.1.1 for test procedure.

#### 18.1.2.26.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

| 4 | DL_TFC4 | UL_TFC4 | DL_TFC0, DL_TFC5, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 2552 | RB5: 2552 |

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 18.1.1.1 for test procedure.

#### 18.1.2.31.1.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1, 2 and 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the test data sent by the SS in downlink.

### 18.1.2.31.2 Interactive or background / UL:64 DL:256 kbps / PS RAB / 20 ms TTI

#### 18.1.2.31.2.1 Conformance requirement

See 18.1.2.4.1.

#### 18.1.2.31.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.31 for the downlink 20 ms TTI case.

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals. | | | | | | |

See 18.1.1.1 for test procedure.

### 18.1.2.33.1.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (4x336).
   - for sub-test 4 and 5: RB5/TF4 (8x336).
3. At step 15 the UE shall return

- for sub-test 1 to 5: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### 18.1.2.33.2 Interactive or background / UL:128 DL:384 kbps / PS RAB / 20 ms TTI

#### 18.1.2.33.2.1 Conformance requirement

See 18.1.2.4.1.

#### 18.1.2.33.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.33 for the 20 ms TTI case.

#### 18.1.2.33.2.3 Method of test

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals. | | | | | | |

See 18.1.1.1 for test procedure.

### 18.1.2.35.1.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).

- for sub-test 4 to 10: RB5/TF4 (4x336).

3. At step 15 the UE shall return

   - for sub-test 1 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### 18.1.2.35.2 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 20 ms TTI

#### 18.1.2.35.2.1 Conformance requirement

See 18.1.2.4.1.

#### 18.1.2.35.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.35 for the 20 ms TTI case.

#### 18.1.2.35.2.3 Method of test
