4> if the transport channel this logical channel is mapped on in this multiplexing option is different from RACH, and if a "Transport format set" for that transport channel is not included in the same message, and the value (index) of any IE "RLC size index" in the IE "Explicit list" does not correspond to an "RLC size" in the stored transport format set of that transport channel; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is included in the same message, and the value of any IE "Logical channel list" in the transport format set is not set to "Configured"; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is not included in the same message, and the value of any IE "Logical channel list" in the stored transport format set of that transport channel is not set to "Configured":

5> set the variable INVALID_CONFIGURATION to TRUE.

3> if the value of the IE "RLC size list" is set to "All":

4> if the transport channel this logical channel is mapped on is RACH; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is included in the same message, and the value of any IE "Logical channel list" in the transport format set is not set to "Configured"; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is not included in the same message, and the value of any IE "Logical channel list" in the stored transport format set of that transport channel is not set to "Configured":

5> set the variable INVALID_CONFIGURATION to TRUE.

3> if the value of the IE "RLC size list" is set to "Configured":

4> if the transport channel this logical channel is mapped on is RACH; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is included in the same message, and for none of the RLC sizes defined for that transport channel in the "Transport format set", the "Logical Channel List" is set to "All" or given as an "Explicit List" which contains this logical channel; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is not included in the same message, and for none of the RLC sizes defined in the transport format set stored for that transport channel, the "Logical Channel List" is set to "All" or given as an "Explicit List" which contains this logical channel:

5> set the variable INVALID_CONFIGURATION to TRUE.

1> if, as a result of the message this IE is included in, several radio bearers can be mapped onto the same transport channel, and the IE "Logical Channel Identity" was not included in the RB mapping info of any of those radio bearers for a multiplexing option on that transport channel or the same "Logical Channel Identity" was used more than once in the RB mapping info of those radio bearers for the multiplexing options on that transport channel:

2> set the variable INVALID_CONFIGURATION to TRUE.

1> delete all previously stored multiplexing options for that radio bearer;

1> store each new multiplexing option for that radio bearer;

1> if the IE "Uplink transport channel type" is set to the value "RACH":

2> refer the IE "RLC size index" to the RACH Transport Format Set of the first PRACH received in the IE "PRACH system information list" received in System Information Block type 5 or System Information Block type 6.

1> determine the sets of RLC sizes that apply to the logical channels used by that RB, based on the IEs "RLC size list" and/or the IEs "Logical Channel List" included in the applicable "Transport format set" (either the ones received in the same message or the ones stored if none were received); and

1> in case the selected multiplexing option is a multiplexing option on RACH:

2> ignore the RLC size indexes that do not correspond to any RLC size within the Transport Format Set stored for RACH.

1> if RACH is the transport channel to be used on the uplink, if that RB has a multiplexing option on RACH and if it is using AM:

2> apply the largest size amongst the ones derived according to the previous bullet for the RLC size (or RLC sizes in case the RB is realised using two logical channels) for the corresponding RLC entity.

NOTE: The IE "RB mapping info" is only included in IE "Predefined RB configurations" in system information when used for Inter-RAT handover to UTRAN and there is no AM RLC size change involved in this case.

1> if that RB is using AM and the RLC size applicable to the logical channel transporting data PDUs is different from the one derived from the previously stored configuration:

2> re-establish the corresponding RLC entity;

2> configure the corresponding RLC entity with the new RLC size;

2> for each AM RLC radio bearer in the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" in the variable ESTABLISHED_RABS whose RLC size is changed; and

2> for each AM RLC signalling radio bearer in the CN domain as indicated in the IE "CN domain identity" in the variable LATEST_CONFIGURED_CN_DOMAIN whose RLC size is changed:

3> if the IE "Status" in the variable CIPHERING_STATUS of this CN domain is set to "Started":

4> if this IE was included in CELL UPDATE CONFIRM:

5> set the HFN values for the corresponding RLC entity equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if this IE was included in a reconfiguration message:

5> set the HFN values for the corresponding RLC entity equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

1> if that RB is using UM:

2> indicate the largest applicable RLC size to the corresponding RLC entity.

1> configure MAC multiplexing according to the selected multiplexing option (MAC multiplexing shall only be configured for a logical channel if the transport channel it is mapped on according to the selected multiplexing option is the same as the transport channel another logical channel is mapped on according to the multiplexing option selected for it);

1> configure the MAC with the logical channel priorities according to selected multiplexing option;

1> configure the MAC with the set of applicable RLC Sizes for each of the logical channels used for that RB;

1> if there is no multiplexing option applicable for the transport channels to be used in the RRC state indicated in the IE "RRC State Indicator" included in the received message:

2> set the variable INVALID_CONFIGURATION to TRUE.

1> if there is more than one multiplexing option applicable for the transport channels to be used in the RRC state indicated in the IE "RRC State Indicator" included in the received message:

2> set the variable INVALID_CONFIGURATION to TRUE.

In case IE "RLC info" includes IE "Downlink RLC mode " ("DL RLC logical channel info" is mandatory present) but IE "Number of downlink RLC logical channels" is absent in the corresponding IE "RB mapping info", the parameter values are exactly the same as for the corresponding UL logical channels. In case two multiplexing options are specified for the UL, the first options shall be used as default for the DL. As regards the IE "Channel type", the following rule should be applied to derive the DL channel type from the UL channel included in the IE:

| Channel used in UL | DL channel type implied by "same as" |
|---|---|
| DCH | DCH |
| RACH | FACH |
| USCH | DSCH |

If ciphering is applied, UTRAN should not map Transparent Mode RBs of different CN domains on the same transport channel. In such case the UE behaviour is not specified.

Reference

3GPP TS 25.331 clause 8.6.4.6, 8.6.4.8.

### 8.2.2.35.3 Test purpose

To confirm that the UE transit from CELL_DCH to CELL_FACH state according to a RADIO BEARER RECONFIGURATION message when having two radio access bearers established.

To confirm that the UE transit from CELL_FACH to CELL_DCH state according to a RADIO BEARER RECONFIGURATION message when having two radio access bearers established.

To confirm that the UE release two radio access bearers included in a single RADIO BEARER RELEASE message.

### 8.2.2.35.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH + DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

### Related ICS/IXIT statements

| | |
|---|---|
| Support of PS service | Yes/No |
| Secondary PDP context activation procedure | Yes/No |

### Test Procedure

The UE is in CELL_DCH state of cell 1. The UE initiates the activation of a second PDP context, upon which the SS establishes a PS domain RAB and confirms the PDP context activation. The Radio Bearer Configuration will be based on the reference configuration in 34.108 section 6.10.2.4.1.57.( Interactive or background / UL:64 DL:64 kbps / PS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH).

Next, the SS transmits a RADIO BEARER RECONFIGURATION message to move the UE to CELL_FACH state. The UE shall apply the new configuration and return the RADIO BEARER RECONFIGURATION COMPLETE message.

The SS will then transmit a RADIO BEARER RECONFIGURATION message to move the UE to CELL_DCH state. The UE shall apply the new configuration and return the RADIO BEARER RECONFIGURATION COMPLETE message.

A DEACTIVATE PDP CONTEXT REQUEST message is then sent by the SS to request the UE to deactivate both PDP contexts. The UE shall reply with a DEACTIVATE PDP CONTEXT ACCEPT message. After this procedure, the SS transmits a RADIO BEARER RELEASE. The UE shall release both radio bearers and transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1. |
| 2 | → | | UPLINK DIRECT TRANSFER (ACTIVATE SECONDARY PDP CONTEXT REQUEST) | SM |
| 3 | ← | | RADIO BEARER SETUP | Establishment of second PS domain RAB |
| 4 | → | | RADIO BEARER SETUP COMPLETE | |
| 5 | ← | | DOWNLINK DIRECT TRANSFER (ACTIVATE SECONDARY PDP CONTEXT ACCEPT) | SM |
| 6 | ← | | RADIO BEARER RECONFIGURATION | To move the UE to CELL_FACH. RB reconfiguration procedure is used to:<br>- Modify RLC timer values<br>The message includes a C-RNTI and the Primary Scrambling code of cell 1. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ← | | RADIO BEARER RECONFIGURATION | To move the UE to CELL_DCH. RB reconfiguration procedure is used to:<br>- Re- specify the DCH configuration (don't re- use stored multiplexing option)<br>- Modify RLC timer values |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | DEACTIVATE PDP CONTEXT REQUEST | Request a deactivation both PDP contexts |
| 11 | → | | DEACTIVATE PDP CONTEXT ACCEPT | Accept the PDP context deactivation |
| 12 | ← | | RADIO BEARER RELEASE | Release of two PS domain RABs |
| 13 | → | | RADIO BEARER RELEASE COMPLETE | |

For Steps 2, 3, 4, 5 see also Test Case 12.9.13 "Service Request / RAB re-establishment / UE initiated / multiple PDP contexts" for additional details.

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 3)

The contents of RADIO BEARER SETUP message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | |
| - RAB identity | 0000 0110B or a value that is different from the one used for setting up the primary PDP Context. The first/ leftmost bit of the bit string contains the most significant bit of the RAB identity. |
| RB information to setup | |
| - RB identity | 22 |
| - RB mapping info | |
| - Information for each multiplexing option | 2 RBMuxOptions |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 1 |
| - Logical channel identity | 8 |
| - CHOICE RLC size list | Configured |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 6 |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 8 |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 8 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | Reference to clause 6 Parameter Set |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 8 |
| RB information to be affected | |
| - RB identity | 20 |
| - RB mapping info | |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 1 |
| - Logical channel identity | 7 |
| - CHOICE RLC size list | Configured |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 6 |
| - DL DSCH Transport channel identity | Not Present |
| - DL HS-DSCH MAC-d flow identity | Not Present |
| - Logical channel identity | 7 |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 7 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | Reference to clause 6 Parameter Set |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |

| | |
|---|---|
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 7 |

RADIO BEARER RECONFIGURATION (Step 6) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

| -Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 1 |

RADIO BEARER RECONFIGURATION (Step 6) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |
| RB information to reconfigure list | |
| - RB information to reconfigure | |
| - RB identity | 20 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 700 |
| - Max_RST | 6 |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | Not Present |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | FALSE |
| - Timer_STATUS_periodic | Not Present |
| - RB information to reconfigure | |
| - RB identity | 22 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 700 |
| - Max_RST | 6 |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | Not Present |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | FALSE |
| - Timer_STATUS_periodic | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CCPCH info | Set to same as used for cell 1 |

RADIO BEARER RECONFIGURATION (Step 8) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | |
| - RB identity | 20 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |

RADIO BEARER RELEASE (Step 12)

The contents of RADIO BEARER RELEASE message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| RB information to release | |
| - RB identity | 20 |
| RB information to release | |
| - RB identity | 22 |

#### 8.2.2.35.5 Test requirement

After step 3 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 7 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 12 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.2.36 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception)

#### 8.2.2.36.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

8.2.2.36.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in FDD or 1.28 Mcps TDD caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.36.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.36.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (step 1)(FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |
| Downlink information for each radio link | |
| - Serving HS-DSCH radio link indicator | TRUE |

### 8.2.2.36.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.36a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception)

### 8.2.2.36a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

### 8.2.2.36a.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in FDD or 1.28 Mcps TDD caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.36a.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH on the secondary carrier according to the received RADIO BEARER RECONFIGURATION message.

To confirm the UE recognizes correctly the position of UpPCH indicated by the network and completes the access procedure according to the configuration sent by the network.

### 8.2.2.36a.4 Method of test

Initial Condition

System Simulator: 1 cell configures three carriers, one primary carrier with two secondary carriers.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17 on the secondary carrier) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state on the secondary carrier and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (step 1) ( 1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

8.2.2.36a.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.36b Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success ( (inter-band frequency hard handover, Start and stop of HS-DSCH reception, LCR TDD band a-f))

### 8.2.2.36b.1 Definition and applicability

All UEs which support LCR TDD and HS-PDSCH.

### 8.2.2.36b.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in FDD or 1.28 Mcps TDD caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.36b.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message in a different band cell..

### 8.2.2.36b.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive. cell 1 and cell 6 belong to different frequency bands.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports LCR TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.2.36b.4**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.2.36b.4 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.36b.4 The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

If UE support a+f frequency band, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH .It includes IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. It includes IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | IF UE supports a+f frequency band, then next step. The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.36b.4. |
| 7 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception. including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set cell 6 parameters. |
| 8 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception. including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set cell 6 parameters. |
| 11 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 12 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (step 1) ( 1.28 Mcps TDD)

8.2.2.36b.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 1.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 1.

After step 9, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 6.

After step 12, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 6.

## 8.2.2.36c Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success ( Start and stop of HS-DSCH reception)( In a different frequency band)

8.2.2.36c.1 Definition and applicability

Same conformance requirement as in clause 8.2.2.36 except that UE supports different frequency bands for TDD.

8.2.2.36c.2 Conformance requirement

Same conformance requirement as in clause 8.2.2.36.

8.2.2.36c.3 Test purpose

Same conformance requirement as in clause 8.2.2.36. except that UE can work in different frequency band.

8.2.2.36c.4 Method of test

Same conformance requirement as in clause 8.2.2.36 except for Expected sequence

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | UE will run test procedure for 2 kinds of condition. The first,. primary carrier and the secondary carriers of the UE work in same frequency band. Secondly,, primary carrier and the secondary carriers of the UE work in different frequency band. |

8.2.2.36c.5 Test requirements

Same conformance requirement as in clause 8.2.2.36.

## 8.2.2.37 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and from CELL_FACH to CELL_DCH: Success (start and stop of HS-DSCH reception)

### 8.2.2.37.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

### 8.2.2.37.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> clear any stored IE “Downlink HS-PDSCH information”;

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25

### 8.2.2.37.3 Test purpose

To confirm that the UE transits to CELL_FACH state from CELL_DCH state and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

To confirm that the UE transits to CELL_DCH state from CELL_FACH state and starts receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.37.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_FACH (state 6-8) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_FACH state and SS establishes a radio bearer mapped on HS-DSCH by transmitting a RADIO BEARER SETUP message. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, resumes HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | ACTIVATE PDP CONTEXT ACCEPT | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and transit to CELL_FACH state, |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and transit to CELL_DCH state |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_FACH in PS" in 34.108.

RADIO BEARER RECONFIGURATION (Step 4)(FDD)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| - RB stop/continue | Not Present |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Downlink information for each radio link | |
| - Serving HS-DSCH radio link indicator | TRUE |

#### 8.2.2.37.5 Test requirements

After step 4, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 6, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.38 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception)

#### 8.2.2.38.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.2.38.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.6.3.1, 8.2.2.3, 8.5.25

### 8.2.2.38.3 Test purpose

To confirm that the UE reconfigures the radio bearer while being mapped to HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.38.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)(FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following:

#### 8.2.2.38.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.39 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, start and stop of HS-DSCH reception)

#### 8.2.2.39.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.2.39.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.3.5.1.2, 8.5.25, 8.6.3.1

### 8.2.2.39.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.39.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.2.39**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.2.39 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.39. SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1. The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 0a | SS | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.39. |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, stop of HS-DSCH reception |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 2a | SS | | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.39. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, start of HS-DSCH reception |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 1. |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RECONFIGURATION (step 1) (FDD)

| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 1 | |
| - SCTD indicator | FALSE | |

#### 8.2.2.39.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.40 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and from CELL_FACH to CELL_DCH: Success (frequency modification, start and stop of HS-DSCH reception)

#### 8.2.2.40.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

8.2.2.40.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if "DPCH frame offset" is included for one or more RLs in the active set:

2> use its value to determine the beginning of the DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

8.2.2.40.3 Test purpose

To confirm that the UE transits to CELL_FACH state from CELL_DCH state in another cell and frequency and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

To confirm that the UE transits to CELL_DCH state from CELL_FACH state in another cell and frequency and starts receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.40.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.2.40**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -65 | Off | -60 |
| PCCPCH (1.28Mcps TDD) | dBM | -60 | -65 | Off | -60 |

Table 8.2.2.40 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.40.

The SS then applies the power levels according to “T1” in table 8.2.2.40 and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 1 | SS | | | The SS applies the power settings according to “T1” in table 8.2.2.40. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and transit to CELL_FACH state in cell 6, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and transit to CELL_DCH state in cell 1 |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RECONFIGURATION (Step 2) (FDD)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

#### 8.2.2.40.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC on the uplink DCCH in cell 6.

After step 4, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC on the uplink DCCH in cell 1.

### 8.2.2.41 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception, during an active CS bearer)

#### 8.2.2.41.1 Definition and applicability

All UEs which support FDD or TDD, HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.2.41.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.41.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message when a circuit-switched radio bearer is established and mapped to DCH.

### 8.2.2.41.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services

Test Procedure

The UE has only signalling radio bearers established. A PS radio bearer is established mapped to HS-DSCH with HS-DSCH reception activated. Then, a CS radio bearer is established.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | P25 | SS establishes a PS RAB mapped to HS-DSCH. See below for the specific message content used in the RADIO BEARER SETUP message. |
| 2 | ←→ | | | SS establishes a CS RAB. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 4 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 7 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RECONFIGURATION (step 3)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 200 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| - Logical channel identity | Not Present |
| - CHOICE RLC size list | Configured |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |
| - Logical channel identity | Not Present |
| - RB stop/continue | Not Present |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL HS-DSCH MAC-d flow identity | 0 |

RADIO BEARER RECONFIGURATION (step 6) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined in RADIO BEARER SETUP message in Step 1. |
| - RB stop/continue | Not Present |
| Deleted DL TrCH information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |

| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |
| Downlink information for each radio link | |
| - Serving HS-DSCH radio link indicator | TRUE |

RADIO BEARER RECONFIGURATION (step 6) ( 1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined in RADIO BEARER SETUP message in Step 1. |
| - RB stop/continue | Not Present |
| Deleted DL TrCH information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |

| - DCH quality target | Not Present |

### 8.2.2.41.5 Test requirements

After step 4, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 7, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.42 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, start and stop of HS-DSCH reception, during an active CS bearer)

### 8.2.2.42.1 Definition and applicability

All UEs which support FDD or TDD, HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

### 8.2.2.42.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.3.5.1.2, 8.5.25, 8.6.3.1

### 8.2.2.42.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message when a circuit-switched radio bearer is established and mapped to DCH.

8.2.2.42.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

System Information Block type 1 (Cell 1 and Cell 6)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services

Test Procedure

**Table 8.2.2.42**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -55 | OFF | -55 |
| P-CCPCH RSCP (TDD) | dBm | -55 | -55 | OFF | -55 |

Table 8.2.2.42 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.2.42. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. Then, a CS radio bearer is established.

SS switches its downlink transmission power setting to columns “T1” in table 8.2.2.42.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | | SS establishes a CS RAB. |
| 2 | SS | | | SS switches its downlink transmission power setting to columns “T1” in table 8.2.2.42. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, stop of HS-DSCH reception |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | This message is received in cell 6. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, start of HS-DSCH reception |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | This message is received in cell 1. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (step 3) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| Activation time | Now | |
| RB information to reconfigure list | | |
| - RB information to reconfigure | (high-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | | |
| - CHOICE Uplink RLC mode | AM RLC | |
| - Transmission RLC discard | | |
| - CHOICE SDU discard mode | No Discard | |
| - MAX_DAT | 15 | |
| - Transmission window size | 128 | |
| - Timer_RST | 500 | |
| - Max_RST | 4 | |
| - Polling info | | |
| - Timer_poll_prohibit | 200 | |
| - Timer_poll | 200 | |
| - Poll_PDU | Not Present | |
| - Poll_SDU | 1 | |
| - Last transmission PDU poll | TRUE | |
| - Last retransmission PDU poll | TRUE | |
| - Poll_Windows | 99 | |
| - Timer_poll_periodic | Not Present | |
| - CHOICE Downlink RLC mode | AM RLC | |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set | |
| - In-sequence delivery | TRUE | |
| - Receiving window size | 128 | |
| - Downlink RLC status info | | |
| - Timer_status_prohibit | 200 | |
| - Timer_EPC | Not Present | |
| - Missing PDU indicator | TRUE | |
| - Timer_STATUS_periodic | Not Present | |
| - One sided RLC re-establishment | FALSE | |
| - RB mapping info | Not Present | |
| - RB stop/continue | Not Present | |
| Deleted DL TrCH information | | |
| - Downlink transport channel type | HS-DSCH | |
| - DL HS-DSCH MAC-d flow identity | 0 | |
| Frequency info | | |
| - UARFCN uplink(Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] | |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |
| - CFN-targetSFN frame offset | 0 | |
| - Downlink DPCH power control information | Not Present | |
| - Downlink rate matching restriction information | Not Present | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Fixed or flexible position | Reference to TS34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE SF | Reference to TS34.108 clause 6.10 | |

| Information Element | Value/remark | Version |
|---|---|---|
| | Parameter Set | |
| - DPCH compressed mode info | Not present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information per radio link list | 1 radio link | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Set to the scrambling code for cell 6 | |
| - Cell ID | Not present | |
| - Serving HS-DSCH radio link indicator | FALSE | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value of DPCH Frame Offset modulo 38400 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Secondary scrambling code | 2 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Any value between 0 and Spreading factor-1 | |
| - Scrambling code change | Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

RADIO BEARER RECONFIGURATION (step 3) (1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| Activation time | Now | |
| RB information to reconfigure list | | |
| - RB information to reconfigure | (high-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | | |
| - CHOICE Uplink RLC mode | AM RLC | |
| - Transmission RLC discard | | |
| - CHOICE SDU discard mode | No Discard | |
| - MAX_DAT | 15 | |
| - Transmission window size | 128 | |
| - Timer_RST | 500 | |
| - Max_RST | 4 | |
| - Polling info | | |
| - Timer_poll_prohibit | 200 | |
| - Timer_poll | 200 | |
| - Poll_PDU | Not Present | |
| - Poll_SDU | 1 | |
| - Last transmission PDU poll | TRUE | |
| - Last retransmission PDU poll | TRUE | |
| - Poll_Windows | 99 | |
| - Timer_poll_periodic | Not Present | |
| - CHOICE Downlink RLC mode | AM RLC | |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set | |
| - In-sequence delivery | TRUE | |
| - Receiving window size | 128 | |
| - Downlink RLC status info | | |
| - Timer_status_prohibit | 200 | |
| - Timer_EPC | Not Present | |
| - Missing PDU indicator | TRUE | |
| - Timer_STATUS_periodic | Not Present | |
| - One sided RLC re-establishment | FALSE | |
| - RB mapping info | Not Present | |
| - RB stop/continue | Not Present | |
| Deleted DL TrCH information | | |
| - Downlink transport channel type | HS-DSCH | |
| - DL HS-DSCH MAC-d flow identity | 0 | |
| Frequency info | | |
| - Choice mode | TDD | |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |
| - CFN-targetSFN frame offset | 0 | |
| - Downlink DPCH power control information | Not Present | |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 | |
| Downlink information per radio link list | 1 radio link | |
| - Downlink information for each radio link | | |
| - CHOICE mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Same Cell parameters ID as used for cell 6 | |
| - SCTD indicator | FALSE | |

RADIO BEARER RECONFIGURATION COMPLETE (steps 4 and 6) (FDD)

Use the same message as specified in 34.108, except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| Uplink counter synchronization info | This IE is checked to see if it is present in the case ciphering is activated | |

RADIO BEARER RECONFIGURATION (step 5) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RB information to reconfigure list | | |
| - RB information to reconfigure | (high-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | | |
| - CHOICE Uplink RLC mode | AM RLC | |
| - Transmission RLC discard | | |
| - CHOICE SDU discard mode | No Discard | |
| - MAX_DAT | 15 | |
| - Transmission window size | 128 | |
| - Timer_RST | 500 | |
| - Max_RST | 4 | |
| - Polling info | | |
| - Timer_poll_prohibit | 100 | |
| - Timer_poll | 100 | |
| - Poll_PDU | Not Present | |
| - Poll_SDU | 1 | |
| - Last transmission PDU poll | TRUE | |
| - Last retransmission PDU poll | TRUE | |
| - Poll_Windows | 99 | |
| - Timer_poll_periodic | Not Present | |
| - CHOICE Downlink RLC mode | AM RLC | |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set | |
| - In-sequence delivery | TRUE | |
| - Receiving window size | 768 | |
| - Downlink RLC status info | | |
| - Timer_status_prohibit | 100 | |
| - Timer_EPC | Not Present | |
| - Missing PDU indicator | TRUE | |
| - Timer_STATUS_periodic | Not Present | |
| - One sided RLC re-establishment | FALSE | |
| - RB mapping info | Not Present | |
| - RB stop/continue | Not Present | |
| Added or Reconfigured DL TrCH information | | |
| - Downlink transport channel type | HS-DSCH | |
| - DL Transport channel identity | Not Present | |
| - CHOICE DL parameters | HS-DSCH | |
| - HARQ Info | Not Present | |
| - Added or reconfigured MAC-d flow | | |
| - MAC-hs queue to add or reconfigure list | | |
| - MAC-hs queue Id | 0 | |
| - MAC-d Flow Identity | 0 | |
| - T1 | 50 | |
| - MAC-hs window size | 16 | |
| - MAC-d PDU size Info | | |
| - MAC-d PDU size | 336 | |
| - MAC-d PDU size index | 0 | |
| - MAC-hs queue to delete list | Not Present | |
| - DCH quality target | Not Present | |
| Frequency info | | |
| - UARFCN uplink(Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] | |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 1 | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |

| Information Element | Value/remark | Version |
|---|---|---|
| - CFN-targetSFN frame offset | 0 | |
| - Downlink DPCH power control information | Not Present | |
| - Downlink rate matching restriction information | Not Present | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Fixed or flexible position | Reference to TS34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE SF | Reference to TS34.108 clause 6.10 Parameter Set | |
| - DPCH compressed mode info | Not present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information per radio link list | 1 radio link | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Set to the scrambling code for cell 1 | |
| - Cell ID | Not present | |
| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value of DPCH Frame Offset modulo 38400 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Secondary scrambling code | 2 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Any value between 0 and Spreading factor-1 | |
| - Scrambling code change | Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

RADIO BEARER RECONFIGURATION (step 5) ( 1.28Mcps TDD )

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RB information to reconfigure list | | |
| - RB information to reconfigure | (high-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | | |
| - CHOICE Uplink RLC mode | AM RLC | |
| - Transmission RLC discard | | |
| - CHOICE SDU discard mode | No Discard | |
| - MAX_DAT | 15 | |
| - Transmission window size | 128 | |
| - Timer_RST | 500 | |
| - Max_RST | 4 | |
| - Polling info | | |
| - Timer_poll_prohibit | 100 | |
| - Timer_poll | 100 | |
| - Poll_PDU | Not Present | |
| - Poll_SDU | 1 | |
| - Last transmission PDU poll | TRUE | |
| - Last retransmission PDU poll | TRUE | |
| - Poll_Windows | 99 | |
| - Timer_poll_periodic | Not Present | |
| - CHOICE Downlink RLC mode | AM RLC | |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set | |
| - In-sequence delivery | TRUE | |
| - Receiving window size | 768 | |
| - Downlink RLC status info | | |
| - Timer_status_prohibit | 100 | |
| - Timer_EPC | Not Present | |
| - Missing PDU indicator | TRUE | |
| - Timer_STATUS_periodic | Not Present | |
| - One sided RLC re-establishment | FALSE | |
| - RB mapping info | Not Present | |
| - RB stop/continue | Not Present | |
| Added or Reconfigured DL TrCH information | | |
| - Downlink transport channel type | HS-DSCH | |
| - DL Transport channel identity | Not Present | |
| - CHOICE DL parameters | HS-DSCH | |
| - HARQ Info | Not Present | |
| - Added or reconfigured MAC-d flow | | |
| - MAC-hs queue to add or reconfigure list | | |
| - MAC-hs queue Id | 0 | |
| - MAC-d Flow Identity | 0 | |
| - T1 | 50 | |
| - MAC-hs window size | 16 | |
| - MAC-d PDU size Info | | |
| - MAC-d PDU size | 336 | |
| - MAC-d PDU size index | 0 | |
| - MAC-hs queue to delete list | Not Present | |
| - DCH quality target | Not Present | |
| Frequency info | | |
| - Choice mode | TDD | |
| - UARFCN (Nt) | Same UARFCN as used for cell 1 | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |
| - CFN-targetSFN frame offset | 0 | |
| - Downlink DPCH power control information | Not Present | |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 | |

| Information Element | Value/remark | Version |
|---|---|---|
| - MAC-hs reset indicator | TRUE | |
| Downlink information per radio link list | 1 radio link | |
| Downlink information for each radio link | | |
| - CHOICE mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Same Cell parameters ID as used for cell 1 | |
| - SCTD indicator | FALSE | |

#### 8.2.2.42.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.43 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, without pending of ciphering, frequency modification)

#### 8.2.2.43.1 Definition

#### 8.2.2.43.2 Conformance requirement

1> if the reconfiguration procedure is simultaneous with SRNS relocation procedure:

2> if the transmitted message is a RADIO BEARER RECONFIGURATION:

3> include the IE "New U-RNTI".

The UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> re-establish the RLC entity for RB2;

2> set the new uplink and downlink HFN component of COUNT-C of RB2 to MAX(uplink HFN component of COUNT-C of RB2, downlink HFN component of COUNT-C of RB2);

2> increment by one the downlink and uplink values of the HFN component of COUNT-C for RB2;

2> calculate the START value according to subclause 8.5.9 in TS 25.331;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

1> if the IE "Integrity protection mode info" was present in the received reconfiguration message:

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RB2 from and including the transmitted response message.

If the new state is CELL_DCH or CELL_FACH, the response message shall be transmitted using the new configuration after the state transition, and the UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> when RLC has confirmed the successful transmission of the response message:

3> re-establish all AM and UM RLC entities with RB identities larger than 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the corresponding CN domain;

3> re-establish the RLC entities with RB identities 1, 3 and 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the CN domain stored in the variable LATEST_CONFIGURED_CN_DOMAIN;

3> set the remaining bits of the HFN component of COUNT-C values of all UM RLC entities to zero;

3> re-initialise the PDCP header compression entities of each radio bearer in the variable ESTABLISHED_RABS as specified in TS 25.323.

…

The UE shall:

1> if IE "Integrity protection mode command" has the value "start" and the IE "Status" in the variable INTEGRITY_PROTECTION_INFO has the value "Started" and this IE was not included SECURITY MODE COMMAND:

NOTE: This case is used in SRNS relocation and in handover from GERAN *Iu mode*.

2> perform integrity protection on the received message, applying the new integrity protection configuration, as described in subclause 8.5.10.1 in TS 25.331 by:

3> using the algorithm (UIA [TS 33.102]) indicated by the IE "Integrity protection algorithm" contained in the IE "Integrity protection mode info";

3> using the IE "Integrity protection initialisation number", contained in the IE "Integrity protection mode info" as the value of FRESH [TS 33.102].

2> let RBm be the signalling radio bearer where the reconfiguration message was received and let RBn be the signalling radio bearer where the response message is transmitted;

2> for the downlink, for each signalling radio bearer, if for the signalling radio bearer, a security configuration triggered by a previous SECURITY MODE COMMAND has not yet been applied, due to the activation time for the signalling radio bearer not having been reached:

3> set "Down link RRC Message sequence number" for this signalling radio bearer in the variable INTEGRITY_PROTECTION_INFO to (activation time -1), where the activation time is the corresponding activation time for this signalling radio bearer;

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new integrity protection configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new Integrity Protection configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN associated with the previously received SECURITY MODE COMMAND.

2> start applying the new integrity protection configuration in the downlink for each signalling radio bearer in the IE "ESTABLISHED_RABS" except RBm at the next received RRC message for the corresponding signalling radio bearer;

2> start applying the new integrity protection configuration in the downlink for signalling radio bearer RBm from and including the received configuration message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RBn from and including the transmitted response message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearers other than RBn from the first message onwards.

Reference

3GPP TS 25.331 clause 8.2.2, .8.6.3.5.2.

8.2.2.43.3 Test purpose

1. To confirm that the UE performs a combined inter-frequency hard handover and SRNS relocation and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message in the new cell.

2. To confirm that the UE correctly applies integrity protection after the SRNS relocation.

3. To confirm that the UE accepts a gap in the downlink RRC message sequence numbering for integrity protection on signalling radio bearer 3 after SRNS relocation.

4. In the case that ciphering is applied by the network, to confirm that the UE restarts ciphering following a successful SRNS relocation.

8.2.2.43.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 6

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.2.43**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |
| P-CCPCH (TDD) | dBm | -60 | -75 | -75 | -60 |

Table 8.2.2.43 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.43. The SS sends a RADIO BEARER RECONFIGURATION message requesting the UE to do a timing re-initialised inter-frequency hard handover combined with SRNS relocation. This message includes the IE "RRC State Indicator" set to "CELL_DCH", IE “New U-RNTI”, the IE “Integrity protection mode info” and the IE “Timing Indication” set to “initialise”.

UE shall reselect to cell 6 and SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, a calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in the IE “Integrity protection mode info” in the RADIO BEARER RECONFIGURATION message and a COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity protection configuration, including using a gap in the downlink RRC message sequence number. The UE shall respond with an IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.43. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | If IE “Ciphering mode info” is present in the SECURITY MODE COMMAND during initial condition set-up, this message is sent after last ciphering activation time has elapsed and there is no pending ciphering activation time. New integrity protection configuration is applied on DL SRB2. LAI and RAI of cell 6 are given to the UE, and are the same as cell 1. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 6. New calculated START value is included. New integrity protection configuration is applied on UL SRB2. |
| 4 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. |
| 5 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration is applied on UL SRB3 by UE. SS uses a gap in the downlink RRC message sequence numbering. |

Specific Message Contents

System Information Block type 1 (Cell 1)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 2) – for PS domain testing only (FDD)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_DCH from CELL_DCH in PS", with the following exception:

| Information Element | Value/remark | Version |
|---|---|---|
| Integrity protection mode info | | |
| - Integrity protection mode command | Start | |
| - Downlink integrity protection activation info | Not Present | |
| - Integrity protection algorithm | UIA1 | |
| - Integrity protection initialisation number | SS selects an arbitrary 32 bit number for FRESH | |
| Activation time | Not present | |
| New U-RNTI | | |
| - SRNC identity | 0000 0000 0010B | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| CN Information info | | |
| - PLMN identity | Not present | |
| - CN common GSM-MAP NAS system information | | |
| - GSM-MAP NAS system information | 00 01H | |
| - CN domain related information | | |
| - CN domain identity | PS | |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | 05 00H | |
| - CN domain identity | CS | |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | 1E 01H | |
| RB information to reconfigure list | | |
| - RB information to reconfigure | (UM DCCH for RRC) | |
| - RB identity | 1 | |
| - PDCP info | Not Present | |

| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

RADIO BEARER RECONFIGURATION COMPLETE (Step 3) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION COMPLETE (Step 3) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| COUNT-C activation time | Check that this IE is present. |
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

DOWNLINK DIRECT TRANSFER (Step 4)

Use the same message content as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Integrity check info | |
| Message authentication code | Calculated result in SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| RRC Message sequence number | Current RRC SN + 3 |
| CN domain identity | CS domain or PS domain (whichever applicable) |
| NAS message | IDENTITY REQUEST |

NOTE: "Current RRC SN" is defined as the RRC message sequence number of the next transmitted RRC message on the particular radio bearer.

### 8.2.2.43.5 Test requirement

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in RADIO BEARER RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the RADIO BEARER RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received RADIO BEARER

RECONFIGURATION message (DL) and the sent RADIO BEARER RECONFIGURATION COMPLETE message (UL).

After step 3, the UE shall respond with an IDENTITY RESPONSE message to SS and apply the new integrity protection configuration on this message.

## 8.2.2.43a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, UEA2/UIA2, without pending of ciphering, frequency modification)

### 8.2.2.43a.1 Definition

Applicable to all Rel-7 UEs which support FDD.

### 8.2.2.43a.2 Conformance requirement

Same conformance requirement as clause 8.2.2.43.2.

### 8.2.2.43a.3 Test purpose

1. To confirm that the UE performs a combined inter-frequency hard handover and SRNS relocation and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message in the new cell.
2. To confirm that the UE correctly applies integrity protection using UIA2 after the SRNS relocation.
3. To confirm that the UE accepts a gap in the downlink RRC message sequence numbering for integrity protection using UIA2 on signalling radio bearer 3 after SRNS relocation.
4. To confirm that the UE restarts ciphering using UEA2 following a successful SRNS relocation.

### 8.2.2.43a.4 Method of test

#### Initial Condition

System Simulator: 2 cells – Cell 1 and 6

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE, UEA2 and UIA2 are configured.

#### Test Procedure

Same test procedure as clause 8.2.2.43.4 except that ciphering algorithm used is UEA2 and integrity protection algorithm used is UIA2.

#### Expected sequence

Same expected sequence as clause 8.2.2.43.4

#### Specific Message Contents

Same specific message contents as clause 8.2.2.43.4 except for the following:

#### RADIO BEARER RECONFIGURATION (Step 2) – for PS domain testing only (FDD)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled “Packet to CELL_DCH from CELL_DCH in PS”, with the following exception:

| Information Element | Value/remark | Version |
|---|---|---|
| Integrity protection mode info<br>- Integrity protection algorithm | UIA2 | |

RADIO BEARER RECONFIGURATION (Step 2) – for CS domain testing only (FDD)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled “Non speech in CS” or “Speech in CS”, with the following exception:

| Information Element | Value/remark | Version |
|---|---|---|

#### 8.2.2.43a.5 Test requirement

Same test requirement as clause 8.2.2.43.5.

### 8.2.2.43b Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, change of ciphering and integrity protection algorithms, frequency modification)

#### 8.2.2.43b.1 Definition

Applicable to all Rel-7 UEs which support FDD.

#### 8.2.2.43b.2 Conformance requirement

1> if the reconfiguration procedure is simultaneous with SRNS relocation procedure:

2> if the transmitted message is a RADIO BEARER RECONFIGURATION:

3> include the IE "New U-RNTI".

The UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> if the variable PDCP_SN_INFO is empty:

3> configure the corresponding RLC entity for all AM and UM radio bearers and AM and UM signalling radio bearers except RB2 to "stop".

2> else:

3> configure the RLC entity for signalling radio bearers RB1, RB3 and RB4 to "stop";

3> configure the RLC entity for UM and AM radio bearers for which the IE "PDCP SN Info" is not included to "stop".

2> re-establish the RLC entity for RB2;

2> for the downlink and the uplink, apply the ciphering configuration as follows:

3> if the received re-configuration message included the IE "Ciphering Mode Info":

4> use the ciphering configuration in the received message when transmitting the response message.

3> if the ciphering configuration for RB2 from a previously received SECURITY MODE COMMAND has not yet been applied because the activation times not having been reached:

4> if the previous SECURITY MODE COMMAND was received due to new keys being received:

5> consider the new ciphering configuration to include the received new keys;

5> initialise the HFN component of the uplink COUNT-C and downlink COUNT-C of SRB2 as indicated in subclause 8.1.12.3.1.

4> else if the ciphering configuration for RB2 from a previously received SECURITY MODE COMMAND has not yet been applied because of the corresponding activation times not having been

reached and the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

5> consider the new ciphering configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN;

5> initialise the HFN component of the uplink COUNT-C and downlink COUNT-C of SRB2 to the most recently transmitted IE "START list" or IE "START" for the LATEST_CONFIGURED_CN_DOMAIN at the reception of the previous SECURITY MODE COMMAND.

4> apply the new ciphering configuration immediately following RLC re-establishment.

3> else:

4> continue using the current ciphering configuration.

2> set the new uplink and downlink HFN component of COUNT-C of RB2 to MAX(uplink HFN component of COUNT-C of RB2, downlink HFN component of COUNT-C of RB2);

2> increment by one the downlink and uplink values of the HFN of COUNT-C for RB2;

2> calculate the START value according to subclause 8.5.9;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

…

1> if the received reconfiguration message contained the IE "Ciphering mode info" or contained the IE "Integrity protection mode info":

2> set the IE "Status" in the variable SECURITY_MODIFICATION for all the CN domains in the variable SECURITY_MODIFICATION to "Affected".

1> if the received reconfiguration message contained the IE "Ciphering mode info":

2> if the reconfiguration message is not used to perform SRNS relocation or a handover from GERAN *Iu mode* with change of ciphering algorithm:

3> the UE behaviour is not specified.

2> if the message is used to perform a timing re-initialised hard handover:

3> if IE "Ciphering activation time for DPCH" is included:

4> the UE behaviour is not specified.

2> else:

3> if the reconfiguration message is used to setup radio bearer(s) using RLC-TM; or

3> if radio bearer(s) using RLC-TM already exist:

4> if IE "Ciphering activation time for DPCH" is not included:

5> the UE behaviour is not specified.

1> if the received reconfiguration message contained the IE "Integrity Protection mode info":

2> if the reconfiguration message is not used to perform SRNS relocation or a handover from GERAN *Iu mode*:

3> the UE behaviour is not specified.

1> if the received reconfiguration message did not contain the IE "Ciphering activation time for DPCH" in IE "Ciphering mode info":

2> if prior to this procedure there exist no transparent mode RLC radio bearers:

3> if, at the conclusion of this procedure, the UE will be in CELL_DCH state; and

3> if, at the conclusion of this procedure, at least one transparent mode RLC radio bearer exists:

4> include the IE "COUNT-C activation time" and specify a CFN value for this IE that is a multiple of 8 frames (CFN mod 8 = 0) and lies at least 200 frames ahead of the CFN in which the response message is first transmitted.

NOTE: UTRAN should not include the IE "Ciphering mode info" in any reconfiguration message unless it is also used to perform an SRNS relocation with change of ciphering algorithm.

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

1> if the variable PDCP_SN_INFO is not empty:

2> include the IE "RB with PDCP information list" and set it to the value of the variable PDCP_SN_INFO.

1> in TDD, if the procedure is used to perform a handover to a cell where timing advance is enabled, and the UE can calculate the timing advance value in the new cell (i.e. in a synchronous TDD network):

2> set the IE "Uplink Timing Advance" according or the IE "Extended UL Timing Advance" to subclause 8.6.6.26.

1> if the IE "Integrity protection mode info" was present in the received reconfiguration message:

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RB2 from and including the transmitted response message.

…

If the new state is CELL_DCH or CELL_FACH, the response message shall be transmitted using the new configuration after the state transition, and the UE shall:

1> if the IE "Downlink counter synchronisation info" was included in the reconfiguration message; or

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> when RLC has confirmed the successful transmission of the response message:

3> if the variable PDCP_SN_INFO is empty:

4> configure the RLC entity for all AM and UM radio bearers and AM and UM signalling radio bearers except RB2 to "continue".

3> else:

4> configure the RLC entity for signalling radio bearers RB1, RB3 and RB4 to "continue";

4> configure the RLC entity for UM and AM radio bearers for which the IE "PDCP SN Info" is not included to "continue".

3> re-establish all AM and UM RLC entities with RB identities larger than 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the corresponding CN domain;

3> re-establish the RLC entities with RB identities 1, 3 and 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the CN domain stored in the variable LATEST_CONFIGURED_CN_DOMAIN;

3> set the remaining bits of the HFN component of COUNT-C values of all UM RLC entities to zero;

3> if the IE "PDCP context relocation info" is not present:

4> re-initialise the PDCP header compression entities of each radio bearer in the variable ESTABLISHED_RABS as specified in [36].

3> if the IE "PDCP context relocation info" is present:

4> perform the actions as specified in subclause 8.6.4.13.

…

1> set the IE "Status" in the variable CIPHERING_STATUS of the CN domains for which the IE "Status" of the variable SECURITY_MODIFICATION is set to "Affected" to "Started";

1> apply the new ciphering configuration in the lower layers for all RBs that belong to a CN domain for which the IE "Status" of the variable SECURITY_MODIFICATION is set to "Affected" and all signalling radio bearers:

2> using the ciphering algorithm (UEA [40]) indicated by the IE "Ciphering algorithm" as part of the new ciphering configuration;

2> for each radio bearer that belongs to a CN domain for which the IE "Status" of the variable SECURITY_MODIFICATION is set to "Affected" and all signalling radio bearers:

3> using the value of the IE "RB identity" in the variable ESTABLISHED_RABS minus one as the value of BEARER [40] in the ciphering algorithm.

1> for the downlink and the uplink, apply the new ciphering configuration as follows:

2> if the ciphering configuration for a AM or UM radio bearer or signalling radio bearer from a previously received SECURITY MODE COMMAND has not yet been applied because of the corresponding activation times not having been reached and the current received message includes the IE "DL Counter Synch Info" or the current received message is a RADIO BEARER RECONFIGURATION message and includes the IE "New U-RNTI":

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new ciphering configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new ciphering configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN.

3> apply the new ciphering configuration in uplink and downlink immediately following RLC re-establishment.

2> if the IE "Ciphering activation time for DPCH" is present in the IE "Ciphering mode info" and the UE was in CELL_DCH state prior to this procedure:

3> for radio bearers using RLC-TM:

4> apply the old ciphering configuration for CFN less than the number indicated in the IE "Ciphering activation time for DPCH";

4> apply the new ciphering configuration for CFN greater than or equal to the number indicated in IE "Ciphering activation time for DPCH".

2> if the IE "Radio bearer downlink ciphering activation time info" is present:

3> apply the following procedure for each radio bearer and signalling radio bearers using RLC-AM or RLC-UM indicated by the IE "RB identity":

4> suspend uplink transmission on the radio bearer or the signalling radio bearer (except for the SRB where the response message is transmitted) according to the following:

5> do not transmit RLC PDUs with sequence number greater than or equal to the uplink activation time, where the uplink activation time is selected according to the rules below.

4> select an "RLC sequence number" at which (activation) time the new ciphering configuration shall be applied in uplink for that radio bearer according to the following:

5> consider a ciphering activation time in uplink to be pending until the RLC sequence number of the next RLC PDU to be transmitted for the first time is equal to or larger than the selected activation time;

5> for each radio bearer and signalling radio bearer that has no pending ciphering activation time in uplink as set by a previous procedure changing the security configuration:

6> set a suitable value that would ensure a minimised delay in the change to the latest ciphering configuration.

5> for each radio bearer and signalling radio bearer that has a pending ciphering activation time in uplink as set by a previous procedure changing the security configuration:

6> for radio bearers and signalling radio bearers except SRB2:

7> set the same value as the pending ciphering activation time.

6> for signalling radio bearer SRB2:

7> set a suitable value that would ensure a minimised delay in the change to the latest ciphering configuration.

4> store the selected "RLC sequence number" for that radio bearer in the entry for the radio bearer in the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

4> switch to the new ciphering configuration according to the following:

5> use the old ciphering configuration for the transmitted and received RLC PDUs with RLC sequence numbers smaller than the corresponding RLC sequence numbers indicated in the IE "Radio bearer uplink ciphering activation time info" sent to UTRAN and in the received IE "Radio bearer downlink ciphering activation time info" received from UTRAN, respectively;

5> use the new ciphering configuration for the transmitted and received RLC PDUs with RLC sequence numbers greater than or equal to the corresponding RLC sequence numbers indicated in the IE "Radio bearer uplink ciphering activation time info" sent to UTRAN and in the received IE "Radio bearer downlink ciphering activation time info" received from UTRAN, respectively;

5> for a radio bearer using RLC-AM, when the RLC sequence number indicated in the IE "Radio bearer downlink ciphering activation time info" falls below the RLC receiving window and the RLC sequence number indicated in the IE "Radio bearer uplink ciphering activation time info" falls below the RLC transmission window, the UE may release the old ciphering configuration for that radio bearer;

5> if an RLC reset or re-establishment of the transmitting side of an RLC entity occurs before the activation time for the new ciphering configuration has been reached in uplink, ignore the activation time and apply the new ciphering configuration in uplink immediately after the RLC reset or RLC re-establishment;

5> if an RLC reset or re-establishment of the receiving side of an RLC entity occurs before the activation time for the new ciphering configuration has been reached in downlink, ignore the activation time and apply the new ciphering configuration in downlink immediately after the RLC reset or RLC re-establishment.

2> if the current received message includes the IE "Downlink counter synchronisation info" or the current received message is a RADIO BEARER RECONFIGURATION message and includes the IE "New U-RNTI":

3> apply the new ciphering configuration in uplink and downlink immediately following RLC re-establishment.

…

The UE shall:

1> if IE "Integrity protection mode command" has the value "start" and the IE "Status" in the variable INTEGRITY_PROTECTION_INFO has the value "Started" and this IE was not included SECURITY MODE COMMAND:

NOTE: This case is used in SRNS relocation and in handover from GERAN *Iu mode*.

2> perform integrity protection on the received message, applying the new integrity protection configuration, as described in subclause 8.5.10.1 in TS 25.331 by:

3> using the algorithm (UIA [TS 33.102]) indicated by the IE "Integrity protection algorithm" contained in the IE "Integrity protection mode info";

3> using the IE "Integrity protection initialisation number", contained in the IE "Integrity protection mode info" as the value of FRESH [TS 33.102].

2> let RBm be the signalling radio bearer where the reconfiguration message was received and let RBn be the signalling radio bearer where the response message is transmitted;

2> for the downlink, for each signalling radio bearer, if for the signalling radio bearer, a security configuration triggered by a previous SECURITY MODE COMMAND has not yet been applied, due to the activation time for the signalling radio bearer not having been reached:

3> set "Down link RRC Message sequence number" for this signalling radio bearer in the variable INTEGRITY_PROTECTION_INFO to (activation time -1), where the activation time is the corresponding activation time for this signalling radio bearer;

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new integrity protection configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new Integrity Protection configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN associated with the previously received SECURITY MODE COMMAND.

2> start applying the new integrity protection configuration in the downlink for each signalling radio bearer in the IE "ESTABLISHED_RABS" except RBm at the next received RRC message for the corresponding signalling radio bearer;

2> start applying the new integrity protection configuration in the downlink for signalling radio bearer RBm from and including the received configuration message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RBn from and including the transmitted response message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearers other than RBn from the first message onwards.

### Reference

3GPP TS 25.331 clause 8.2.2, 8.6.3.4, 8.6.3.5.2.

### 8.2.2.43b.3 Test purpose

1. To confirm that the UE performs a combined inter-frequency hard handover and SRNS relocation and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message in the new cell.

2. To confirm that the UE correctly applies new ciphering and integrity protection algorithms after the SRNS relocation from UEA1/UIA1 to UEA2/UIA2

3. To confirm that the UE correctly applies new ciphering and integrity protection algorithms after the SRNS relocation from UEA2/UIA2 to UEA1/UIA1

8.2.2.43b.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 6

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE. UEA1 and UIA1 are configured.

Test Procedure

**Table 8.2.2.43b**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |

Table 8.2.2.43b illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1 with UEA1 and UIA1 configured. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.43b. The SS sends a RADIO BEARER RECONFIGURATION message requesting the UE to do a timing re-initialised inter-frequency hard handover combined with SRNS relocation, with change of ciphering and integrity algorithms. This message includes the IE "RRC State Indicator" set to "CELL_DCH", IE “New U-RNTI”, the IE “Integrity protection mode info” with UIA2, the UE “Ciphering Mode Info” with UEA2, and the IE “Timing Indication” set to “initialise”.

UE shall reselect to cell 6 and SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, a calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in the IE “Integrity protection mode info” in the RADIO BEARER RECONFIGURATION message and a COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity protection configuration, including using a gap in the downlink RRC message sequence number. The UE shall respond with an IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.43b. The SS sends a RADIO BEARER RECONFIGURATION message requesting the UE to do a timing re-initialised inter-frequency hard handover to Cell 1 combined with SRNS relocation, with change of ciphering and integrity algorithms. This message includes the IE "RRC State Indicator" set to "CELL_DCH", IE “New U-RNTI”, the IE “Integrity protection mode info” with UIA1, the UE “Ciphering Mode Info” with UEA1, and the IE “Timing Indication” set to “initialise”.

UE shall reselect to cell 1 and SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, a calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in the IE “Integrity protection mode info” in the RADIO BEARER RECONFIGURATION message and a COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity protection configuration, including using a gap in the downlink RRC message sequence number. The UE shall respond with an IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.43. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | This message is sent after last ciphering activation time has elapsed and there is no pending ciphering activation time, to configure UEA2 and UIA2. LAI and RAI of cell 6 are given to the UE, and are the same as cell 1. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 6. New calculated START value is included. New integrity protection configuration using UIA2 is applied on UL SRB2. |
| 4 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. |
| 5 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration UIA2 and ciphering algorithm UEA2 is applied on UL SRB3 by UE. |
| 6 | SS | | | SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.2.2.43. |
| 7 | ← | | RADIO BEARER RECONFIGURATION | To configure UEA1 and UIA1. LAI and RAI of cell 1 are given to the UE, and are the same as cell 6. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 1. New calculated START value is included. New integrity protection configuration using UIA1 is applied on UL SRB2. |
| 9 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. |
| 10 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration UIA1 and ciphering algorithm UEA1 is applied on UL SRB3 by UE. |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 3 and 8) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 3 and 8) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| COUNT-C activation time | Check that this IE is present. |
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

DOWNLINK DIRECT TRANSFER (Steps 4 and 9)

Use the same message content as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Integrity check info | |
| Message authentication code | Calculated result in SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| RRC Message sequence number | Current RRC SN + 3 |
| CN domain identity | CS domain or PS domain (whichever applicable) |
| NAS message | IDENTITY REQUEST |

NOTE: "Current RRC SN" is defined as the RRC message sequence number of the next transmitted RRC message on the particular radio bearer.

#### 8.2.2.43.5 Test requirement

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in RADIO BEARER RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the RADIO BEARER RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received RADIO BEARER RECONFIGURATION message (DL) and the sent RADIO BEARER RECONFIGURATION COMPLETE message (UL).

After step 4, the UE shall respond with an IDENTITY RESPONSE message to SS and apply the new integrity protection algorithm UIA2 and ciphering algorithm UEA1 on this message.

After step 7, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in RADIO BEARER RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the RADIO BEARER RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received RADIO BEARER RECONFIGURATION message (DL) and the sent RADIO BEARER RECONFIGURATION COMPLETE message (UL).

After step 9, the UE shall respond with an IDENTITY RESPONSE message to SS and apply the new integrity protection algorithm UIA1 and ciphering algorithm UEA1 on this message.

### 8.2.2.44 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active E-DCH transmission)

#### 8.2.2.44.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.44.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28

### 8.2.2.44.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters during active E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.44.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A12, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure Timer_poll_prohibit_, Timer_poll & Timer_status_prohibit to 200ms. After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |

#### 8.2.2.44.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.44a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active E-DCH transmission, F-DPCH configured)

#### 8.2.2.44a.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH and fully support F-DPCH.

#### 8.2.2.44a.2 Conformance requirement

Same conformance requirement as in clause 8.2.2.44.2

8.2.2.44a.3 Test purpose

Same test purpose as in clause 8.2.2.44.3

8.2.2.44a.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A14, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH
- UE supports E-DPDCH
- UE fully supports F-DPCH

Test Procedure

Same test procedure as in clause 8.2.2.44.4 except that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE using AM RLC on E-DCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

Same specific message content as in clause 8.2.2.44.4

8.2.2.44a.5 Test requirements

Same test requirements as in clause 8.2.2.44.5.

## 8.2.2.45 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of E-DCH transmission)

8.2.2.45.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH or all UEs which support TDD and HS-PDSCH and E-PUCH.

8.2.2.45.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in increasing transmission power, by correct setting of the reference E-TFCI power offsets.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.45.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.45.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A13 (FDD or 3.84Mcps TDD or 7.68Mcps TDD )/A11(1.28Mcps TDD) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/DCH.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH transmission and HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, resumes E-DCH transmission and HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission and HS-DSCH reception and transit to CELL_FACH state, |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission and HS-DSCH reception and transit to CELL_DCH state |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |

### 8.2.2.45.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.45a Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only)

### 8.2.2.45a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

### 8.2.2.45a.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in increasing transmission power, by correct setting of the reference E-TFCI power offsets.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.1,8.6.6.4, 8.6.6.37, 8.6.6.43.

### 8.2.2.45a.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message, in the multi-frequency network environment.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message, in the multi-frequency network environment.

### 8.2.2.45a.4 Method of test

Initial Condition

System Simulator: 1 cell, 3 frequency (one is primary frequency, others are secondary frequency)

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A11(1.28Mcps TDD) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports E-PUCH

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/DCH on one secondary frequency of cell 1.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, and IE "Frequency info" set as primary frequency of cell 1. After the UE receives this message, it stops E-DCH transmission and HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE, and IE "Frequency info " set as primary frequency of cell 1,and IE "Multi-frequency Info" set as one secondary frequency of cell 1. After the UE receives this message, it moves to CELL_DCH state, resumes E-DCH transmission and HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission and HS-DSCH reception and transit to CELL_FACH state, |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission and HS-DSCH reception and transit to CELL_DCH state |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| Downlink information for each radio link list | |

#### 8.2.2.45a.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.46 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start and stop of E-DCH transmission)

#### 8.2.2.46.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH or all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.46.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in increasing transmission power, by correct setting of the reference E-TFCI power offsets.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.46.3 Test purpose

To confirm that the UE starts and stops transmitting the E-DCH, while maintaining HS-DSCH reception, in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.46.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A12 (FDD or 3.84Mcps TDD or 7.68Mcps TDD )/A11(1.28Mcps TDD) in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

**Table 8.2.2.46**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.2.46 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.46.

The UE is in cell 1 and has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on DCH/DCH.

The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop E-DCH transmission but keep HS-DSCH reception. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and resume E-DCH transmission. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.46. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and stop of E-DCH transmission, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 4 | SS | | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.46. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and start of E-DCH transmission. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 1. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.46.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.46a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH Success (inter-band frequency hard handover, start and stop of E-DCH transmission, LCR TDD band a-f)

#### 8.2.2.46a.1 Definition and applicability

All UEs which support LCR TDD and both band a and band f.

#### 8.2.2.46.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

…

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

…

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

…

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for TDD:

…

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

…

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

…

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

…

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

…

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

…

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

…

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

…

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.46a.3 Test purpose

To confirm that the UE starts and stops transmitting the E-DCH, while maintaining HS-DSCH reception, in conjunction with a inter-band frequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.46a.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A11(1.28Mcps TDD) in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports E-PUCH
- UE supports band a and band f

Test Procedure

**Table 8.2.2.46a: Time instances of cell power level**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency of the band a | | Mid Range Test Frequency of the band f | |
| P-CCPCH RSCP (TDD) | dBm/1.28MHz | -60 | -70 | -70 | -60 |

Table 8.2.2.46 illustrate the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.46.

The UE is in cell 1 and has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on DCH/DCH.

The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.46 and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop E-DCH transmission but keep HS-DSCH reception. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" in the table 8.2.2.46 and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and resume E-DCH transmission. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.46 |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and stop of E-DCH transmission, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 4 | | SS | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.46. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and start of E-DCH transmission. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 1. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.46a.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.47 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of E-DCH transmission)

#### 8.2.2.47.1 Definition

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.47.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…

If the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" (FDD only) are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the new value(s) in the variable E_RNTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New Primary E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

NOTE: In case of multiple E-DCH MAC-d flows, IE "Added or Reconfigured UL TrCH information" is only included once. If the IE "Added or Reconfigured UL TrCH information" is included more than once with the IE "Uplink transport channel type" set to 'E-DCH', the UE behaviour is unspecified.

…

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

If the received "E-DCH Transmission Time Interval" is 2 ms and the previously stored TTI was 10 ms:

1> not send any data on E-DPDCH in first 8 TTIs after activation time of new TTI.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU’s from the E-DCH MAC-d flow indicated in the IE “E-DCH MAC-d flow identity” with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE “E-DCH MAC-d flow multiplexing list”.

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e or MAC-i PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to 'FALSE' and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New Primary E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in strictly increasing order of transmission power prior to quantization, by correct setting of the reference E-TFCI power offsets otherwise the UE behaviour is unspecified.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e or MAC-i/is entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.7, 8.6.5.16 (FDD only), 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.47.3 Test purpose

1) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state with frequency modification and stops E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message.

2) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state with frequency modification and starts E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message.

### 8.2.2.47.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A13, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

**Table 8.2.2.47**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -60 | -70 |

Table 8.2.2.47 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH in cell 1.The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.47.

The SS then applies the power level according to "T1" in table 8.2.2.47 and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception and E-DCH transmission, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, the SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes the HS-DSCH reception and E-DCH transmission and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS calls for generic procedure C.3 to check the UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and E-DCH transmission |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and E-DCH transmission |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

### 8.2.2.47.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.47a Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of E-DCH transmission, F-DPCH Configured)

### 8.2.2.47a.1 Definition

All UEs which support FDD and HS-PDSCH and E-DPDCH.

### 8.2.2.47a.2 Conformance requirement

Same conformance requirement as in clause 8.2.2.47.2

### 8.2.2.47a.3 Test purpose

Same test purpose as in clause 8.2.2.47.3

### 8.2.2.47a.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A14, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports FDD
- UE supports HS-PDSCH
- UE supports E-DPDCH
- UE fully supports F-DPCH

Test Procedure

Same test procedure as in clause 8.2.2.47.4

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in TS34.108 clause 9 with the following exceptions:

#### 8.2.2.47a.5 Test requirements

Same test requirement as in clause 8.2.2.47.5

### 8.2.2.47b Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification in the multi-frequency network environment, start and stop of E-DCH transmission, for 1.28Mcps TDD only)

#### 8.2.2.47b.1 Definition

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.47b.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…

If the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" (FDD only) are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the new value(s) in the variable E_RNTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New Primary E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

NOTE: In case of multiple E-DCH MAC-d flows, IE "Added or Reconfigured UL TrCH information" is only included once. If the IE "Added or Reconfigured UL TrCH information" is included more than once with the IE "Uplink transport channel type" set to 'E-DCH', the UE behaviour is unspecified.

…

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

If the received "E-DCH Transmission Time Interval" is 2 ms and the previously stored TTI was 10 ms:

1> not send any data on E-DPDCH in first 8 TTIs after activation time of new TTI.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e or MAC-i PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New Primary E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in strictly increasing order of transmission power prior to quantization, by correct setting of the reference E-TFCI power offsets otherwise the UE behaviour is unspecified.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e or MAC-i/is entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.7, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.1, 8.6.6.4, 8.6.6.37, 8.6.6.43.

### 8.2.2.47b.3 Test purpose

1) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state with frequency modification and stops E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message in the multi-frequency network environment.

2) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state with frequency modification and starts E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message in the multi-frequency network environment.

### 8.2.2.47b.4 Method of test

Initial Condition

System Simulator:

2 cells

- Cell 1 is active, 3 frequency (one is primary frequency, others are secondary frequency)
- Cell 6 is inactive, 1 frequency

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A13, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH
- UE supports E-PUCH

Test Procedure

**Table 8.2.2.47b**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| P-CCPCH RSCP | dBm | -60 | -70 | -60 | -70 |

Table 8.2.2.47b illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH at the secondary frequency in cell 1.The SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.2.47b.

The SS then applies the power level according to “T1” in table 8.2.2.47b and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception and E-DCH transmission, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, the SS transmits a RADIO BEARER RECONFIGURATION message to the UE, and IE "Frequency info " set as primary frequency of cell 1 , IE "Multi-frequency Info " set as one secondary frequency of cell 1 and IE “Cell parameters ID” set as Cell ID of cell 1. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes the HS-DSCH reception and E-DCH transmission and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS calls for generic procedure C.3 to check the UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and E-DCH transmission |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and E-DCH transmission |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in TS34.108 clause 9 with the following exceptions:

#### 8.2.2.47b.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.48 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of E-DCH transmission)

#### 8.2.2.48.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.48.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…….

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…….

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e or MAC-i PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

……..

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an Uplink transport channel is requested to be deleted:

2> delete any information about the transport channel identified by the IE "UL TrCH identity" and the IE "Uplink transport channel type".

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28, 8.6.5.18 , 8.6.5.7

### 8.2.2.48.3 Test purpose

1. To confirm that the UE reconfigures the radio bearer parameters and stops E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.48.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A12 (FDD) /A11(1.28Mcps TDD), as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission |
| 2 | | | | At the activation time, SS stops E-DCH reception from the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission |
| 5 | | | | At the activation time, SS resumes E-DCH reception from the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - CHOICE RLC info type | RLC info |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 200 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | Not Present |
| - MAC-hs queue to delete list | |
| - MAC-hs queue Id | 0 |
| - DCH quality target | Not present |
| - Downlink transport channel type | DCH |
| - DL Transport channel identity | 6 |
| - CHOICE DL parameters | Explicit |
| - TFS | |
| - CHOICE Transport channel type | Dedicated transport channel |
| - Dynamic transport format information | |
| - RLC Size | Reference to clause 6.10 Parameter Set |
| - Number of TBs and TTI List | (This IE is repeated for TFI number.) |
| - Dynamic transport format information | |
| - Transmission Time Interval | Not Present |
| - Number of Transport blocks | Reference to clause 6.10 Parameter Set |
| - Semi-static Transport Format information | |
| - Transmission time interval | Reference to clause 6.10 Parameter Set |

| | |
|---|---|
| - Type of channel coding | Reference to clause 6.10 Parameter Set |
| - Coding Rate | Reference to clause 6.10 Parameter Set |
| - Rate matching attribute | Reference to clause 6.10 Parameter Set |
| - CRC size | Reference to clause 6.10 Parameter Set |
| - DCH quality target | |
| - BLER Quality value | -20 (-2.0) |

RADIO BEARER RECONFIGURATION (Step 1)( 1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - CHOICE RLC info type | RLC info |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 200 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | Not Present |
| - MAC-hs queue to delete list | |
| - MAC-hs queue Id | 0 |
| - DCH quality target | Not present |
| - Downlink transport channel type | DCH |
| - DL Transport channel identity | 6 |
| - CHOICE DL parameters | Explicit |
| - TFS | |
| - CHOICE Transport channel type | Dedicated transport channel |
| - Dynamic transport format information | |
| - RLC Size | Reference to clause 6.11 Parameter Set |
| - Number of TBs and TTI List | (This IE is repeated for TFI number.) |
| - Dynamic transport format information | |
| - Transmission Time Interval | Not Present |
| - Number of Transport blocks | Reference to clause 6.11 Parameter Set |
| - Semi-static Transport Format information | |
| - Transmission time interval | Reference to clause 6.11 Parameter Set |
| - Type of channel coding | Reference to clause 6.11 Parameter Set |
| - Coding Rate | Reference to clause 6.11 Parameter Set |

| | |
|---|---|
| - Rate matching attribute | Reference to clause 6.11 Parameter Set |
| - CRC size | Reference to clause 6.11 Parameter Set |
| - DCH quality target | |
| - BLER Quality value | -20 (-2.0) |

RADIO BEARER RECONFIGURATION (Step 1) (3.84Mcps TDD and 7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - CHOICE RLC info type | RLC info |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 200 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | Not Present |
| - MAC-hs queue to delete list | |
| - MAC-hs queue Id | 0 |
| - DCH quality target | Not present |
| - Downlink transport channel type | DCH |
| - DL Transport channel identity | 6 |
| - CHOICE DL parameters | Explicit |
| - TFS | |
| - CHOICE Transport channel type | Dedicated transport channel |
| - Dynamic transport format information | |
| - RLC Size | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Number of TBs and TTI List | (This IE is repeated for TFI number.) |
| - Dynamic transport format information | |
| - Transmission Time Interval | Not Present |
| - Number of Transport blocks | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |

| | |
|---|---|
| - Semi-static Transport Format information | |
| - Transmission time interval | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Type of channel coding | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Coding Rate | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Rate matching attribute | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - CRC size | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - DCH quality target | |
| - BLER Quality value | -20 (-2.0) |

RADIO BEARER RECONFIGURATION (Step 4) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H –RNTI | '1010 1010 1010 1010' |
| New Primary E –RNTI | '1010 1010 1010 1010' |
| New Secondary E-RNTI | Not Present |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 256 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| UL Transport channel information common for all transport channels | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | DCH-USCH |
| - UL TrCH type | DCH |
| - UL TrCH identity | 1 |
| Added or Reconfigured UL TrCH information | 1 E-DCH added |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - E-DCH Transmission Time Interval | 10 ms |
| - HARQ info for E-DCH | |
| - HARQ RV Configuration | rvtable |
| - Added or reconfigured E-DCH MAC-d flow | |
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| DL Transport channel information common for all transport channel | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |

| Downlink information for each radio link | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11 |

RADIO BEARER RECONFIGURATION (Step 4) (3.84Mcps TDD and 7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H –RNTI | '1010 1010 1010 1010' |
| New Primary E –RNTI | '1010 1010 1010 1010' |
| New Secondary E-RNTI | Not Present |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 256 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| UL Transport channel information common for all transport channels | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | DCH-USCH |
| - UL TrCH type | DCH |
| - UL TrCH identity | 1 |
| Added or Reconfigured UL TrCH information | 1 E-DCH added |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - CHOICE mode | TDD |
| - HARQ info for E-DCH | |
| - HARQ RV Configuration | rvtable |
| - Added or reconfigured E-DCH MAC-d flow | |
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| DL Transport channel information common for all transport channel | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Deleted DL TrCH information | |
| - CHOICE DL TrCH type | DCH |
| - DL Transport channel identity | 6 |

| | |
|---|---|
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |
| Uplink DPCH info | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 but without HARQ information which is already stored in the UE |
| - Uplink DPCH power control info | |
| - CHOICE mode | TDD |
| - UL target SIR | Not Present |
| - CHOICE UL OL PC info | Broadcast UL OL PC info |
| - CHOICE mode | TDD |
| - Uplink Timing Advance Control | |
| - CHOICE Timing Advance | Enabled |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - UL Timing Advance | Determined by observed timing deviation of the RACH at the node B |
| - UL CCTrCH List | 1 CCTrCh |
| - TFCS Id | 1 |
| - UL target SIR | +20dB |
| - Activation time | Not present |
| - Duration | Not present |
| - Common timeslot info | |
| - 2nd interleaving mode | Reference to clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) |

#### 8.2.2.48.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.49 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_PCH: Success (stop of E-DCH transmission)

#### 8.2.2.49.1 Definition and applicability

All UEs which support FDD, HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.49.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…

If the IE "RB information to reconfigure" is included, the UE shall apply the following actions on the radio bearer identified with the value of the IE "RB identity". The UE shall:

1> perform the actions for the IE "RB mapping info", according to subclause 8.6.4.8, applied for the radio bearer;

…

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an Uplink transport channel is requested to be deleted:

2> delete any information about the transport channel identified by the IE "UL TrCH identity" and the IE" Uplink transport channel type".

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Deleted DL TrCH information" is included the UE shall:

1> if a Downlink transport channel is requested to be deleted:

2> delete any information about the transport channel identified by the IE "DL TrCH identity".

1> if a DL MAC-d flow is requested to be deleted:

2> delete any information about the DL HS-DSCH MAC-d flow identified by the IE "MAC-d Flow Identity", i.e. delete any information about MAC-hs queue(s) mapped onto this MAC-d flow.

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> clear any stored IE "Downlink HS-PDSCH information";

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

1> clear any stored IE "E-DCH information";

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.28, 8.6.4.5, 8.6.5.7, 8.6.5.8,.

### 8.2.2.49.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_PCH state, and stops E-DCH transmission and HS-DSCH reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.49.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A13 (FDD) /A12 (1.28Mcps TDD) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/DCH.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH transmission and HS-DSCH reception, transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and moves to CELL_PCH state.

SS calls for generic procedure C.4 to check that the UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ← | RADIO BEARER RECONFIGURATION | |
| 2 | | → | RADIO BEARER RECONFIGURATION COMPLETE | Stop of E-DCH transmission and HS-DSCH reception and transit to CELL_PCH state. |
| 3 | | ←→ | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

### 8.2.2.49.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.50 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (from speech to speech plus PS data with modification of downlink spreading factor)

### 8.2.2.50.1 Definition

-

### 8.2.2.50.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

- clear that entry;

1bis> in TDD, if the procedure is used to perform a handover to a cell where timing advance is enabled, and the UE can calculate the timing advance value in the new cell (i.e. in a synchronous TDD network):

2> set the IE "Uplink Timing Advance" according to subclause 8.6.6.26.In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.2.50.3 Test purpose

To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which indicates a change of radio bearer configuration from a single radio bearer (speech) to a multi radio bearer configuration (speech + PS data) including reconfiguration of downlink spreading factor.

### 8.2.2.50.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: Idle state (State 7) as specified in clause 7.4 of TS 34.108.

### Test Procedure

The UE is brought to the CELL_DCH state after a successful incoming call attempt. The SS follows the procedure in TS 34.108 clause 7.1.3 (Mobile Terminated), to set up a user radio bearer, but with the default radio bearer replaced by the one specified in TS 34.108, clause 6.10.2.4.1.9: Conversational / speech / UL:5.9 DL:5.9 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH (the speech RB uses DL SF=256). The radio bearer is placed into UE test loop mode 1 as described in 34.109 clause 5.3. The SS sends RLC SDUs on the speech radio bearer in downlink and verifies that the UE returns RLC SDUs with the same content in uplink. The SS opens the UE test loop.

A PS service request is triggered by a PAGING TYPE 2 message from the SS causing a SERVICE REQUEST to be sent from the UE to the SS. The SS transmits a RADIO BEARER SETUP message, which commands the UE to reconfigure its user RB from the speech radio bearer to the combined speech and PS radio bearer as specified in TS 34.108, clause 6.10.2.4.1.40: Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH. This reconfiguration involves reconfiguration of the downlink spreading factor from 256 to 128. The radio bearers are placed into UE test loop mode 1 as described in 34.109 clause 5.3. The SS sends RLC SDUs on the speech and PS radio bearers in downlink and verifies that the UE returns RLC SDUs with the same content in uplink on both the speech and PS radio bearers. The SS opens the UE test loop.

SS calls for the generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE 1 (PCCH) | RRC |
| 2 | → | | RRC CONNECTION REQUEST | RRC |
| 3 | ← | | RRC CONNECTION SETUP | RRC |
| 4 | → | | RRC CONNECTION SETUP COMPLETE | RRC |

| 25 | ← | | CLOSE UE TEST LOOP | TC<br>UE Test Loop Mode1 |
| 26 | → | | CLOSE UE TEST LOOP COMPLETE | TC |
| 27 | → ← | | Data | The SS sends data on the speech RB and the PS RB and verifies that the UE returned data in uplink for the speech RB and the PS RB has the same content as sent in downlink. |
| 28 | ← | | OPEN UE TEST LOOP | TC |
| 29 | → | | OPEN UE TEST LOOP COMPLETE | TC |
| 30 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Note 1. The SECURITY MODE COMMAND procedure in steps 20 and 21 is performed in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.

Specific Message Contents

RADIO BEARER SETUP (Step 12)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Speech in CS" as found in clause 9 of TS 34.108 using the speech RB as specified in TS 34.108, clause 6.10.2.4.1.9: Conversational / speech / UL:5.9 DL:5.9 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs.

RADIO BEARER SETUP (Step 23)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Packet RAB Setup after Speech RAB Setup in CELL_DCH" (condition A11) as found in clause 9 of TS 34.108 using the speech RB + PS RB as specified in TS 34.108, clause 6.10.2.4.1.40: Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH, except for the following:

#### 8.2.2.50.5 Test requirement

At step 16 the UE shall return data on the speech RB in uplink with the same content as sent by the SS in downlink.

At step 26 the UE shall return data on the speech RB and the PS RB in uplink with the same content as sent by the SS in downlink.

### 8.2.2.51 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active discontinuous uplink transmission)

#### 8.2.2.51.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.51.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.51.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters during active DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.51.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1, DTX and, if supported, DRX are active.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure Timer_poll_prohibit_, Timer_poll & Timer_status_prohibit to 200ms. After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used (i.e. duration of 10 consecutive DTX cycle 2). |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.51.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 3 the time between 11 consecutive CQI indications shall be 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

### 8.2.2.52 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of discontinuous uplink transmission)

#### 8.2.2.52.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.52.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.52.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.52.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/HS-DSCH, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH / DPCCH discontinuous transmission and HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, resumes E-DCH transmission with DTX and HS-DSCH reception (with DRX if supported) and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission with DTX and HS-DSCH reception and transit to CELL_FACH state, |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission with DTX and HS-DSCH reception (with DRX if supported) and transit to CELL_DCH state |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.52.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.2.53 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start and stop of discontinuous uplink transmission)

#### 8.2.2.53.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.53.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.53.3 Test purpose

To confirm that the UE starts and stops transmitting the E-DCH (with DTX), while maintaining HS-DSCH reception, in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.53.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20 in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

**Table 8.2.2.53**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.2.53 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.53.

The UE is in cell 1 and has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/ HS-DSCH, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active. .

The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop E-DCH / DPCCH discontinuous transmission but keep HS-DSCH reception (DRX will be deactivated if enabled by the UE). The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and resume E-DCH transmission with DTX. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.53. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and stop of E-DCH transmission with DTX, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 4 | | SS | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.53. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and start of E-DCH transmission with DTX (and DRX if supported). |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 1. |
| 7 | | SS | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 2)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

#### 8.2.2.53.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

At step 7 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.2.54 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of discontinuous uplink transmission)

#### 8.2.2.54.1 Definition

All UEs which support FDD and UL DTX.

#### 8.2.2.54.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN

corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

8.2.2.54.3 Test purpose

1) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state with frequency modification and stops E-DCH / DPCCH discontinuous transmission according to the received a RADIO BEARER RECONFIGURATION message.

2) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state with frequency modification and starts E-DCH / DPCCH discontinuous transmission according to the received a RADIO BEARER RECONFIGURATION message.

8.2.2.54.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

**Table 8.2.2.54**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.2.54 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH in cell 1, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active. .The SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.2.54.

The SS then applies the power level according to “T1” in table 8.2.2.54 and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception and E-DCH / DPCCH discontinuous transmission, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, the SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes the HS-DSCH reception and E-DCH transmission, with DTX (and DRX if supported) and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms. The SS calls for generic procedure C.3 to check the UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception (with DRX if supported) and E-DCH transmission with DTX |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and E-DCH transmission with DTX/DRX |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in TS34.108 clause 9 with the following exceptions:

#### 8.2.2.54.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.2.55 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of discontinuous uplink transmission)

#### 8.2.2.55.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.55.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.55.3 Test purpose

1. To confirm that the UE reconfigures the radio bearer parameters and stops E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters and starts E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.55.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the discontinuous transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the discontinuous transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission and HS-DSCH reception. |
| 2 | | | | At the activation time, SS stops E-DCH reception with DTX from the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission with DTX and HS-DSCH reception (with DRX if supported) |
| 5 | | | | At the activation time, SS resumes E-DCH reception with DTX from the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

### 8.2.2.55.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7 the time between 11 consecutive CQI indications shall be 400ms.

## 8.2.2.56 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_PCH: Success (stop of discontinuous uplink transmission)

### 8.2.2.56.1 Definition and applicability

All UEs which support FDD and UL DTX.

### 8.2.2.56.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE

DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.56.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_PCH state, and stops E-DCH / DPCCH discontinuous transmission and HS-DSCH reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.56.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/HS-DSCH, DTX and, if supported, DRX are active.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications shall be 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH / DPCCH discontinuous transmission and HS-DSCH reception, transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and moves to CELL_PCH state.

SS calls for generic procedure C.4 to check that the UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used (i.e. duration of 10 consecutive DTX cycle 2). |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | Stop of E-DCH transmission and HS-DSCH reception with DTX (and DRX if supported) and transit to CELL_PCH state. |
| 3 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

#### 8.2.2.56.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.57 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving HS-DSCH cell change between MAC-hs and MAC-ehs)

#### 8.2.2.57.1 Definition and applicability

All UEs which support FDD or 1.28Mcps TDD and MAC-ehs.

#### 8.2.2.57.2 Conformance requirement

Upon reception of the IE "RLC Info", the UE shall:

[…]

1> if the IE "Downlink RLC mode" is present and is set to "AM RLC":

2> if IE "DL RLC PDU size" is not present:

3> determining the downlink RLC PDU size will be handled at RLC level as described in [16], without any configuration from RRC.

NOTE: The case where this mandatory IE is not present is meant to handle the interaction with a network using an earlier release of the specification.

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the downlink RLC PDU size.

2> else, if the DL RLC PDU size is set to "flexible size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 7 bits:

3> configure the corresponding RLC entity with flexible RLC PDU size and the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and DL RLC PDU size value is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is set to "flexible size" and the indicated RLC length indicator size is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is changed to" fixed size" from "flexible size"; or

2> the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 15 bits:

NOTE: The downlink RLC PDU size set in the RLC entity can either be explicitly configured or, in case no explicit configuration is provided, derived by the first received RLC PDU [16].

3> if the IE "one sided RLC re-establishment" is set to TRUE:

4> re-establish the receiving side of the corresponding RLC entity.

3> else:

4> re-establish the corresponding RLC entity.

3> if the DL RLC PDU size is set to "fixed size":

4> configure the corresponding RLC entity with the new downlink RLC PDU size.

3> if the DL RLC PDU size is set to "flexible size":

4> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

3> if the UE supports the lossless DL RLC PDU size change and PDCP was configured for that radio bearer with the IE "Support for lossless SRNS relocation or for lossless DL RLC PDU size change" set to TRUE:

4> include the current DL PDCP receive sequence number and the radio bearer identity for that radio bearer in the variable PDCP_SN_INFO.

3> if the IE "Status" in the variable CIPHERING_STATUS of the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" for this radio bearer is set to "Started":

4> if the RLC re-establishment is caused by a CELL UPDATE CONFIRM:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if the RLC re-establishment is caused by a reconfiguration message:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

…

1> if the received reconfiguration message did not include the IE "Downlink counter synchronisation info":

2> if the variable START_VALUE_TO_TRANSMIT is set:

3> include and set the IE "START" to the value of that variable.

2> if the variable START_VALUE_TO_TRANSMIT is not set and the IE "New U-RNTI" is included:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

2> if the received reconfiguration message caused a change in the RLC PDU size, a change from flexible to fixed DL RLC PDU size or a change of the RLC LI size for any RB using RLC-AM:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for the CN domain associated with the corresponding RB identity in the IE "START list" in the IE "Uplink counter synchronisation info".

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the IE "HS-PDSCH Midamble Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored "PLCCH Info".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RBs mapped to HS-DSCH, there is either:

2> at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow; or

2> at least one MAC-ehs reordering queue configured for the associated logical channel.

NOTE 1: For TDD and for FDD in CELL_DCH, to enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the concerning MAC-ehs reordering queue, add/remove the serving HS-DSCH radio link or, for TDD add/remove H-RNTI upon hard handover.

NOTE 2: For TDD and for FDD in CELL_DCH, if HS_DSCH_RECEPTION is set to TRUE and a reconfiguration, an inter-RAT handover from UTRAN, or a cell change order procedure is initiated, the UE checks the conditions only when the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure is successfully completed. Doing so ensures that, in case of failure in the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure, the UE can return to the old configuration as if the message was not received, e.g. without performing a MAC-HS reset.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> for TDD and for FDD in CELL_DCH:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-hs/ehs entity [15];

2> release all HARQ resources;

2> no long consider any radio link to be the HS-DSCH serving radio link.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, if no downlink DPCH is assigned the UE shall clear the uplink DPCH configuration and initiate the Cell Update procedure according to subclause 8.3.1, cause "radio link failure".

NOTE 3: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "Added or Reconfigured MAC-ehs reordering queue", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

2> for 1.28 Mcps TDD, when performing reception on signalling radio bearer before RAB has been established.

3> if MAC-ehs is not configured,

4> use the table of transport block size for the HS-DSCH physical layer category 1 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 1 as specified in [35].

3> else,

4> use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 9 as specified in [35].

NOTE 4: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest HSDPA capability category, as specified in [35], when performing scheduling and signalling the control information on HS-SCCH, as it is not possible for Node B to be aware of the UE's HSDPA capability category during this period.

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

In CELL_DCH, whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

[…]

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

[…]

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

[…]

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

[…]

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

NOTE: The Release '99 RADIO BEARER RECONFIGURATION message always includes at least one IE "Downlink information for each radio link" containing the mandatory IEs, even if UTRAN does not require the reconfiguration of any radio link.

…

If the IE "Downlink information common for all radio links " is included the UE shall:

1> if the IE "Downlink DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28.

1> if the IE "Downlink F-DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28a.

1> if the IE choice "mode" is set to 'FDD':

2> perform actions for the IE "DPCH compressed mode info" as specified in subclause 8.6.6.15;

2> perform actions for the IE "Tx Diversity mode" as specified in subclause 8.6.6.24.

1> if the IE "MAC-hs reset indicator" is included:

2> if the serving HS-DSCH radio link is the same radio link as prior to the reception of the message; and

2> if, as a result of the reconfiguration message where this IE is received, the MAC header type (i.e., either MAC-hs or MAC-ehs) is unchanged:

3> the UE behaviour is unspecified.

2> reset the MAC-hs/ehs entity [15].

NOTE: If the MAC header type is changed, either from MAC-hs to MAC-ehs or from MAC-ehs to MAC-hs, UTRAN should include the IE "MAC-hs reset indicator" in order to ensure a reset of the MAC-hs/ehs entity in the UE prior to MAC-hs/ehs reconfiguration, otherwise the UE behaviour is unspecified.

3GPP TS 25.331 clauses 8.6.4.9, 8.2.2.3, 8.5.25, 8.6.6.4, 8.6.6.27.

### 8.2.2.57.3 Test purpose

1. To verify that the UE is able to successfully perform an RLC AM reconfiguration from fixed RLC to flexible RLC, and that:
   a. When the RLC Length Indicator size is unchanged, the RLC AM entity is not re-established.
   b. When the RLC Length Indicator size is changed, the RLC AM entity is re-established.

2. To verify that the UE is able to successfully perform an RLC AM reconfiguration from flexible RLC to fixed RLC and that the RLC AM entity is re-established.

3. To verify that the UE is able to successfully perform a serving HS-DSCH cell change:
   a. With reconfiguration from using a MAC-hs entity to using a MAC-ehs entity.
   b. With reconfiguration from using a MAC-ehs entity to using a MAC-hs entity.

8.2.2.57.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and Cell 2 is inactive.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A14 (FDD)/A13(1.28Mcps TDD), as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28Mcps TDD
- UE supports MAC-ehs

Test Procedure

**Table 8.2.2.57**

| Parameter | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | OFF | -60 | -60 |
| P-CCPCH RSCP | dBm | -60 | -66 | | -66 | -60 | |

Table 8.2.2.57 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0", "T1" and "T2", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for Cell 1 and Cell 2. Columns marked "T0" denote the initial conditions.

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-hs).

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57 . The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RBs from fixed to flexible with no change of LI size. The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall not re-establish its configured DL AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS configures its downlink transmission power settings according to columns "T2" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 1 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-hs), and with reconfiguration of the AM data RBs from flexible to fixed with no change of LI size. The UE shall move to Cell 1 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1. The SS shall re-establish its configured AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS configures its downlink transmission power settings according to columns "T0" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a

timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RBs from fixed to flexible with change of LI size (from 7 bits LI to 15 bits LI). The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall re-establish its configured AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS calls generic procedure C.3 to check that the UE is in CELL_DCH state on Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57 |
| 1a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) / 1g (1.28Mcps TDD). |
| 2 | ← | | RADIO BEARER RECONFIGURATION | |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2. |
| 4 | ← | | UE CAPABILITY ENQUIRY | |

| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 7 | SS | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.2.2.57. Then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. |
| 7a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) / 1g (1.28Mcps TDD). |
| 8 | ← | | RADIO BEARER RECONFIGURATION | |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 1.<br>SS applies the new start value for 25 in UL and DL. |
| 10 | ← | | UE CAPABILITY ENQUIRY | |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 13 | SS | | | SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.57. Then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. |
| 13a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) / 1g (1.28Mcps TDD). |
| 14 | ← | | RADIO BEARER RECONFIGURATION | |
| 15 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2.<br>SS applies the new start value for 25 in UL and DL. |
| 16 | ← | | UE CAPABILITY ENQUIRY | |
| 17 | → | | UE CAPABILITY INFORMATION | |
| 18 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 19 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Steps 1a and 13a) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

MEASUREMENT REPORT (Steps 1a and 13a)(1.28Mcps TDD)

| Information Element | Value/remark |
|---|---|

RADIO BEARER RECONFIGURATION COMPLETE (Step 3)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY ENQUIRY (Steps 4, 10, 16)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION (Steps 5, 11, 17)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Steps 6, 12, 18)

Use the same message sub-type found in TS 34.108 clause 9.

MEASUREMENT REPORT (Step 7a) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |

MEASUREMENT REPORT (Step 7a)(1.28Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 2 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 1 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1g |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 1 |

RADIO BEARER RECONFIGURATION (Step 8) (FDD)

Use the same message as specified in step 2, except for the following.

| Information Element | Value/remark |
|---|---|

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 9, 15)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION (Step 14)

Use the same message as specified in step 2, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Flexible size |
| - Length indicator size | 15-bit |

### 8.2.2.57.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 4, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 1a).

After step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3b).

After step 10, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 2).

After step 14, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 16, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 1b).

## 8.2.2.57a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving HS-DSCH cell change between MAC-hs and MAC-ehs) with SRBs mapped on E-DCH/DCH

### 8.2.2.57a.1 Definition and applicability

All UEs which support FDD and MAC-ehs or 1.28Mcps TDD and MAC-ehs.

### 8.2.2.57a.2 Conformance requirement

Upon reception of the IE "RLC Info", the UE shall:

[…]

1> if the IE "Downlink RLC mode" is present and is set to "AM RLC":

2> if IE "DL RLC PDU size" is not present:

3> determining the downlink RLC PDU size will be handled at RLC level as described in [16], without any configuration from RRC.

NOTE: The case where this mandatory IE is not present is meant to handle the interaction with a network using an earlier release of the specification.

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the downlink RLC PDU size.

2> else, if the DL RLC PDU size is set to "flexible size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 7 bits:

3> configure the corresponding RLC entity with flexible RLC PDU size and the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and DL RLC PDU size value is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is set to "flexible size" and the indicated RLC length indicator size is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is changed to "fixed size" from "flexible size"; or

2> the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 15 bits:

NOTE: The downlink RLC PDU size set in the RLC entity can either be explicitly configured or, in case no explicit configuration is provided, derived by the first received RLC PDU [16].

3> if the IE "one sided RLC re-establishment" is set to TRUE:

4> re-establish the receiving side of the corresponding RLC entity.

3> else:

4> re-establish the corresponding RLC entity.

3> if the DL RLC PDU size is set to "fixed size":

4> configure the corresponding RLC entity with the new downlink RLC PDU size.

3> if the DL RLC PDU size is set to "flexible size":

4> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

3> if the UE supports the lossless DL RLC PDU size change and PDCP was configured for that radio bearer with the IE "Support for lossless SRNS relocation or for lossless DL RLC PDU size change" set to TRUE:

4> include the current DL PDCP receive sequence number and the radio bearer identity for that radio bearer in the variable PDCP_SN_INFO.

3> if the IE "Status" in the variable CIPHERING_STATUS of the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" for this radio bearer is set to "Started":

4> if the RLC re-establishment is caused by a CELL UPDATE CONFIRM:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if the RLC re-establishment is caused by a reconfiguration message:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

…

1> if the received reconfiguration message did not include the IE "Downlink counter synchronisation info":

2> if the variable START_VALUE_TO_TRANSMIT is set:

3> include and set the IE "START" to the value of that variable.

2> if the variable START_VALUE_TO_TRANSMIT is not set and the IE "New U-RNTI" is included:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

2> if the received reconfiguration message caused a change in the RLC PDU size, a change from flexible to fixed DL RLC PDU size or a change of the RLC LI size for any RB using RLC-AM:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for the CN domain associated with the corresponding RB identity in the IE "START list" in the IE "Uplink counter synchronisation info".

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the IE "HS-PDSCH Midamble Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored "PLCCH Info".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RBs mapped to HS-DSCH, there is either:

2> at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow; or

2> at least one MAC-ehs reordering queue configured for the associated logical channel.

NOTE 1: For TDD and for FDD in CELL_DCH, to enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the concerning MAC-ehs reordering queue, add/remove the serving HS-DSCH radio link or, for TDD add/remove H-RNTI upon hard handover.

NOTE 2: For TDD and for FDD in CELL_DCH, if HS_DSCH_RECEPTION is set to TRUE and a reconfiguration, an inter-RAT handover from UTRAN, or a cell change order procedure is initiated, the UE checks the conditions only when the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure is successfully completed. Doing so ensures that, in case of failure in the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure, the UE can return to the old configuration as if the message was not received, e.g. without performing a MAC-HS reset.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> for TDD and for FDD in CELL_DCH:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-hs/ehs entity [15];

2> release all HARQ resources;

2> no long consider any radio link to be the HS-DSCH serving radio link.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, if no downlink DPCH is assigned the UE shall clear the uplink DPCH configuration and initiate the Cell Update procedure according to subclause 8.3.1, cause "radio link failure".

NOTE 3: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "Added or Reconfigured MAC-ehs reordering queue", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

2> for 1.28 Mcps TDD, when performing reception on signalling radio bearer before RAB has been established.

3> if MAC-ehs is not configured,

4> use the table of transport block size for the HS-DSCH physical layer category 1 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 1 as specified in [35].

3> else,

4> use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 9 as specified in [35].

NOTE 4: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest HSDPA capability category, as specified in [35], when performing scheduling and signalling the control information on HS-SCCH, as it is not possible for Node B to be aware of the UE's HSDPA capability category during this period.

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

In CELL_DCH, whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

[…]

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

[…]

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

[…]

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

[…]

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

NOTE: The Release '99 RADIO BEARER RECONFIGURATION message always includes at least one IE "Downlink information for each radio link" containing the mandatory IEs, even if UTRAN does not require the reconfiguration of any radio link.

…

If the IE "Downlink information common for all radio links " is included the UE shall:

1> if the IE "Downlink DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28.

1> if the IE "Downlink F-DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28a.

1> if the IE choice "mode" is set to 'FDD':

2> perform actions for the IE "DPCH compressed mode info" as specified in subclause 8.6.6.15;

2> perform actions for the IE "Tx Diversity mode" as specified in subclause 8.6.6.24.

1> if the IE "MAC-hs reset indicator" is included:

2> if the serving HS-DSCH radio link is the same radio link as prior to the reception of the message; and

2> if, as a result of the reconfiguration message where this IE is received, the MAC header type (i.e., either MAC-hs or MAC-ehs) is unchanged:

3> the UE behaviour is unspecified.

2> reset the MAC-hs/ehs entity [15].

NOTE: If the MAC header type is changed, either from MAC-hs to MAC-ehs or from MAC-ehs to MAC-hs, UTRAN should include the IE "MAC-hs reset indicator" in order to ensure a reset of the MAC-hs/ehs entity in the UE prior to MAC-hs/ehs reconfiguration, otherwise the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.6.4.9, 8.2.2.3, 8.5.25, 8.6.6.4, 8.6.6.27.

### 8.2.2.57a.3 Test purpose

1. To verify that the UE is able to successfully perform an RLC AM reconfiguration from fixed RLC to flexible RLC, and that:
   a. When the RLC Length Indicator size is unchanged, the RLC AM entity is not re-established.
   b. When the RLC Length Indicator size is changed, the RLC AM entity is re-established.

2. To verify that the UE is able to successfully perform an RLC AM reconfiguration from flexible RLC to fixed RLC and that the RLC AM entity is re-established.

3. To verify that the UE is able to successfully perform a serving HS-DSCH cell change:
   a. With reconfiguration from using a MAC-hs entity to using a MAC-ehs entity.
   b. With reconfiguration from using a MAC-ehs entity to using a MAC-hs entity.

### 8.2.2.57a.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and Cell 2 is inactive.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A13 (FDD)/A13(1.28Mcps TDD), as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28Mcps TDD
- UE supports MAC-ehs

Test Procedure

**Table 8.2.2.57a-1**

| Parameter | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | OFF | -60 | -60 |
| P-CCPCH RSCP | dBm | -60 | -66 | | -66 | -60 | |

Table 8.2.2.57a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0", "T1" and "T2", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for Cell 1 and Cell 2. Columns marked "T0" denote the initial conditions.

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-hs).

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RBs from fixed to flexible with no change of LI size. The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall not re-establish its configured DL AM RLC entities.

The SS configures its downlink transmission power settings according to columns "T2" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 1 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-hs), and with reconfiguration of the AM data RBs from flexible to fixed with no change of LI size. The UE shall move to Cell 1 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1. The SS shall re-establish its configured AM RLC entities.

The SS configures its downlink transmission power settings according to columns "T0" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RBs from fixed to flexible with change of LI size (from 7 bits LI to 15 bits LI). The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall re-establish its configured AM RLC entities.

The SS calls generic procedure C.3 to check that the UE is in CELL_DCH state on Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |

| 20 | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Steps 2 and 16) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

| - Cell parameters Id | Check to see if it's the same for cell 2 |

RADIO BEARER RECONFIGURATION (Step 7) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | |
| - Support for lossless SRNS relocation | FALSE |
| - Max PDCP SN window size | Not Present |
| - PDCP PDU Header | Absent |
| - Header Compression information | Not Present |
| - CHOICE RLC info type | RLC info |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 256 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |

| Information Element | Value/remark |
|---|---|
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Flexible Size |
| - Length indicator size | 7-bit |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 7 |
| - E-DCH MAC-d flow identity | 2 |
| - Include in scheduling info | TRUE |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | HS-DSCH |
| - DL DCH Transport channel identity | Not present |
| - DL DSCH Transport channel identity | Not present |
| - CHOICE DL MAC header type | MAC-ehs |
| - DL HS-DSCH MAC-ehs Queue Id | 0 |
| - Logical channel identity | 7 |
| - RB stop/continue | Not Present |
| UL Transport channel information common for all transport channels | Not Present |
| Deleted UL TrCH information | Not Present |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-hs |
| - DL HS-DSCH MAC-d flow identity | 0 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | |
| - Number of Processes | Reference to clause 6.10.2.4.5 Parameter Set |

| - Treset | 2 |
| - MAC-ehs window size | 16 |
| - MAC-ehs queue to delete list | Not Present |
| Frequency info | |
| - CHOICE mode | TDD<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN (Nt) | Same UARFCN as used for Cell 2 |
| CHOICE channel requirement | Not Present |

| Information Element | Value/remark |
|---|---|
| E-DCH Info | Not Present |

RADIO BEARER RECONFIGURATION COMPLETE (Step 8)

Use the same message sub-type found in TS 34.108 clause 9.

MEASUREMENT REPORT (Step 11) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |

MEASUREMENT REPORT (Step 11)(1.28Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 2 |
| - Proposed TGSN | Checked that this IE is absent |

RADIO BEARER RECONFIGURATION (Step 12) (FDD)

Use the same message as specified in step 7, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Fixed size |
| - DL RLC PDU size | 336 bits |
| - RB mapping info | |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-hs |
| - DL HS-DSCH MAC-d flow identity | 0 |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-ehs |
| - DL HS-DSCH MAC-ehs Queue Id | 0 |
| Added or Reconfigured DL TrCH information | |
| - CHOICE DL MAC header type | MAC-hs |

| Information Element | Value/remark |
|---|---|
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 (for DTCH) |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not present |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code for Cell 1 |

RADIO BEARER RECONFIGURATION (Step 12)(1.28Mcps TDD)

Use the same message as specified in step 7, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Fixed size |
| - DL RLC PDU size | 336 bits |
| - RB mapping info | |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-hs |
| - DL HS-DSCH MAC-d flow identity | 0 |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-ehs |
| - DL HS-DSCH MAC-ehs Queue Id | 0 |
| Added or Reconfigured DL TrCH information | |
| - CHOICE DL MAC header type | MAC-hs |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 (for DTCH) |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not present |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - Cell parameters ID | Set to the Cell parameters ID for Cell 1 |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 13, 18)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION (Step 17)

Use the same message as specified in step 7, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Flexible size |
| - Length indicator size | 15-bit |

#### 8.2.2.57a.5 Test requirements

After step 7, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 8, the UE shall return data on the uplink DCCH using AM RLC has the same content as sent in downlink (verifies test purpose 1a).

After step 12, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3b).

After step 13, the UE shall return data on the uplink DCCH using AM RLC has the same content as sent in downlink (verifies test purpose 2).

After step 17, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 18, the UE shall return data on the uplink DCCH using AM RLC has the same content as sent in downlink (verifies test purpose 1b).

### 8.2.2.58 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Reconfigurations between CS voice over DCH and CS voice over HSPA)

#### 8.2.2.58.1 Definition and applicability

All UEs which support FDD and CS voice over HSPA.

#### 8.2.2.58.2 Conformance requirement

If the IE "RAB information for setup" is included, the procedure is used to establish or establish/release (only if CS domain RAB mapping is reconfigured between DCH and EDCH/HSPA) radio bearers belonging to a radio access bearer, and the UE shall:

1> if the radio access bearer identified with the IE "RAB info" does not exist in the variable ESTABLISHED_RABS:

2> create a new entry for the radio access bearer in the variable ESTABLISHED_RABS;

2> store the content of the IE "RAB info" in the entry for the radio access bearer in the variable ESTABLISHED_RABS;

2> indicate the establishment of each radio access bearer to the upper layer entity using the IE "CN domain identity", forwarding the content of the IE "RAB identity" and the IEs NAS Synchronization Indicator as well as the following IEs if included in the IE "RAB info": "MBMS Session identity" and/ or "MBMS Service Identity";

2> if prior to this procedure there exists no transparent mode radio bearer for the CN domain included in the IE "CN domain identity" and at least one transparent mode radio bearer is included in the IE "RB information to setup"; or

2> if at least one RLC-AM or RLC-UM radio bearer is included in the IE "RB information to setup":

3> calculate the START value only once during this procedure (the same START value shall be used on all new radio bearers created for this radio access bearer) according to subclause 8.5.9 for the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" part of the IE "RAB information to setup";

3> store the calculated START value in the variable START_VALUE_TO_TRANSMIT.

1> if the radio access bearer identified with the IE "RAB identity" in the IE "RAB info" already exists in the variable ESTABLISHED_RABS:

2> for each radio bearer in the variable ESTABLISHED_RABS for that radio access bearer:

3> release the PDCP and RLC entities for that radio bearer;

3> release the RAB subflow associated with the radio bearer;

3> delete the information about the radio bearer from the variable ESTABLISHED_RABS.

1> for each radio bearer in the IE "RB information to setup":

2> if the radio bearer identified with the IE "RB identity" does not exist in the variable ESTABLISHED_RABS:

3> perform the actions specified in subclause 8.6.4.3;

3> store information about the new radio bearer in the entry for the radio access bearer identified by "RAB info" in the variable ESTABLISHED_RABS;

3> create a new RAB subflow for the radio access bearer;

3> number the RAB subflow in ascending order, assigning the smallest number to the RAB subflow corresponding to the first radio bearer in the list;

3> if the IE "CN domain identity" in the IE "RAB info" is set to "PS domain" and the number of RAB subflows for the radio access bearer is greater than 1:

4> set the variable INVALID_CONFIGURATION to TRUE.

2> if the radio bearer identified with the IE "RB identity" already exists in the variable ESTABLISHED_RABS:

3> set the variable INVALID_CONFIGURATION to TRUE.

1> If CS voice service is configured over HSDPA and EDCH:

2> if the IE "UL AMR rate" is included in the IE "RAB information for setup", UE shall forward the content to upper layers;

2> if the IE "Max CS delay" is included in the IE "RAB information for setup", UE shall use the information in the IE "Max CS delay" to determine the maximum buffering of the voice frames (see [36]).

Reference

3GPP TS 25.331 clause 8.6.4.2

### 8.2.2.58.3 Test purpose

1 To confirm that the UE reconfigures CS domain RAB mapping from DCH to EDCH/HSPA according to the received RADIO BEARER SETUP message.

2 To confirm that the UE reconfigures CS domain RAB mapping from EDCH/HSPA to DCH according to the received RADIO BEARER SETUP message.

### 8.2.2.58.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports CS voice over HSPA

Test Procedure

The UE is in CELL_DCH state.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to reconfigure CS domain RAB mapping from DCH to EDCH/HSPA. The UE reconfigures the new bearers and transmits a RADIO BEARER SETUP COMPLETE on the DCCH.

Then, SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to reconfigure CS domain RAB mapping from EDCH/HSPA to DCH. The UE reconfigures the new bearers and transmits a RADIO BEARER SETUP COMPLETE on the DCCH.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Reconfiguration of CS RAB mapping from DCH to EDCH/HSPA |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER SETUP | Reconfiguration of CS RAB mapping from EDCH/HSPA to DCH |
| 4 | → | | RADIO BEARER SETUP COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Speech to CELL_DCH / E-DCH / HS-DSCH CS RAB with DTX/DRX and enhanced data rate using one multiplexing option (1/1) and SRBs mapped on E-DCH/HSDSCH" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| - RAB information for setup | |

#### 8.2.2.58.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

### 8.2.2.59 Radio Bearer Reconfiguration from Cell FACH ( Cell supporting HS-DSCH in Cell FACH) to CELL_FACH( Cell not supporting HS-DSCH in Cell FACH): Success (Cell re-selection)

#### 8.2.2.59.1 Definition and applicability

All UEs which support FDD and HS-PDSCH in CELL_FACH.

#### 8.2.2.59.2 Conformance requirement

If the UE performs cell re-selection during the reconfiguration procedure, the UE shall:

1> initiate a cell update procedure, as specified in subclause 8.3.1;

1> continue with the reconfiguration procedure.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS_SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4 ,8.2.2.8,8.3.1.7,8.5.36, 8.5.37

### 8.2.2.59.3 Test purpose

1. To confirm that the UE stops HS-DSCH reception, starts FACH reception on S-CCPCH, and transmits RADIO BEARER RECONFIGURATION COMPLETE message in cell 2 when a cell re-selection occurs after receiving a RADIO BEARER RECONFIGURATION message via HS-DSCH in CELL_FACH.

### 8.2.2.59.4 Method of test

Initial Condition

System Simulator: 2 cells: Cell 1 configures HS-DSCH for CELL_FACH in System Information Type 5/5bis, Cell 2 sends the default system information (HS-DSCH for CELL_FACH not configured)

UE:CELL_FACH state as specified in clause 7.4 of TS 34.108, with a valid H-RNTI

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH in CELL_FACH

SYSTEM INFORMATION BLOCK TYPE 5/5bis (see specific message contents).

Test Procedure

**Table 8.2.2.59**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -75 | -75 | -60 |

Table 8.2.2.59 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_FACH state in Cell 1 and has a radio bearer established that is mapped to HS-DSCH and RACH. The SS configures RB2 to stop transmission and reception of RLC PDUs. On transmitting a RADIO BEARER RECONFIGURATION message to the UE on RB 1 with radio bearers mapping information updated, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.59. The UE shall initiate the cell reselection procedure, which may occur either before or after submitting the RADIO BEARER RECONFIGURATION COMPLETE message for transmission on the DCCH using AM RLC. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH and configure RB2 to continue transmission and reception of RLC PDUs after receiving CELL UPDATE message. Any RADIO BEARER RECONFIGURATION COMPLETE message that was previously submitted for transmission in the UE will now be received by the SS. UE transmit a UTRAN MOBILTY INFORMATION CONFIRM message on the DCCH using AM RLC. If not already done so, the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE 1: The RADIO BEARER RECONFIGURATION COMPLETE message may be received by the SS either after transmission of CELL UPDATE CONFIRM (Option 1) or after reception UTRAN MOBILITY INFORMATION CONFIRM (Option 2).

NOTE 2: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | SS | | | The SS configures RB 2 to stop transmission and reception of RLC PDUs. |
| 1 | ← | | RADIO BEARER RECONFIGURATION | The message is transmitted on RB 1. Transmitted by the SS on HS-DSCH. IE "RRC State Indicator" is set to "CELL_FACH" and radio bearer mapped to RACH/SCCPCH |
| 2 | | | | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.59. |
| | | | | The following messages are transmitted in cell 2. |
| 3 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" and “HS-PDSCH in CELL_FACH” is set to TRUE. |
| 4 | ← | | CELL UPDATE CONFIRM | See message content. |
| 5 | SS | | | The SS configures RB 2 to continue transmission and reception of RLC PDUs. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 1) | Transmitted by the UE on RACH |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | Transmitted by the UE on RACH. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 2) | Transmitted by the UE on RACH. |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (UM DCCH for RRC) |
| - RB identity | 1 |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |
| HS-PDSCH in CELL_FACH | Check to see if set to TRUE |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 7)

Only the message type is checked.

#### 8.2.2.59.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "cell update cause" set to "cell reselection" and “HS-PDSCH in CELL_FACH” set to TRUE.

After step 5 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

The UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. This message may be received by the SS earliest after step 5 and at latest after step 7.

### 8.2.2.59a Radio Bearer Reconfiguration from Cell FACH ( Cell supporting E-DCH and HS-DSCH in Cell FACH) to CELL_FACH( Cell not supporting E-DCH and HS-DSCH in Cell FACH): Success (Cell re-selection)(1.28Mcps TDD only)

#### 8.2.2.59a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and E-DCH and HS-PDSCH in CELL_FACH.

#### 8.2.2.59a.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

2> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE performs cell re-selection during the reconfiguration procedure, the UE shall:

1> initiate a cell update procedure, as specified in subclause 8.3.1;

1> continue with the reconfiguration procedure.

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and

- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":
- includes the IE "Downlink counter synchronisation info" and the IE "New U-RNTI":

NOTE: In the case of a cell update procedure during an ongoing reconfiguration procedure moving the UE into CELL_PCH/URA_PCH the CELL UPDATE CONFIRM message should include the IE "New C-RNTI".

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information".

1> for 1.28 Mcps TDD, System Information Block type 5 includes IE "Common E-DCH system info".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> for FDD, receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> for 1.28 Mcps TDD, receive the HS-SCCH(s) according to the stored HS-SCCH configuration, applying the HS-PDSCH midamble code according to the stored HS-PDSCH midamble configuration;

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for FDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

1> and for 1.28 Mcps TDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH according to the stored HS-SCCH configuration with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

NOTE: For 1.28 Mcps TDD, when performing HS-DSCH reception in CELL_FACH state, the UE shall use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15].

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS-SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

3GPP TS 25.331 clauses 8.2.2.4 ,8.2.2.8,8.3.1.7,8.5.36

### 8.2.2.59a.3 Test purpose

1. To confirm that the UE stops E-DCH transmission and HS-DSCH reception, starts RACH transmission and FACH reception on S-CCPCH, and transmits RADIO BEARER RECONFIGURATION COMPLETE message in cell 2 when a cell re-selection occurs after receiving a RADIO BEARER RECONFIGURATION message via E-DCH and HS-DSCH in CELL_FACH.

### 8.2.2.59a.4 Method of test

#### Initial Condition

System Simulator: 2 cells: Cell 1 configures E-DCH and HS-DSCH for CELL_FACH in System Information Type 5/5bis, Cell 2 sends the default system information (E-DCH and HS-DSCH for CELL_FACH not configured)

UE:CELL_FACH state as specified in clause 7.4 of TS 34.108, with a valid H-RNTI

#### Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports E-DCH and HS-PDSCH in CELL_FACH

SYSTEM INFORMATION BLOCK TYPE 5 (see specific message contents).

Test Procedure

**Table 8.2.2.59a**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

Table 8.2.2.59a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_FACH state in Cell 1 and has a radio bearer established that is mapped to HS-DSCH and E-DCH. The SS configures RB2 to stop transmission and reception of RLC PDUs. On transmitting a RADIO BEARER RECONFIGURATION message to the UE on RB 1 with radio bearers mapped to RACH and SCCPCH, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.59a. The UE shall initiate the cell reselection procedure, which may occur either before or after submitting the RADIO BEARER RECONFIGURATION COMPLETE message for transmission on the DCCH using AM RLC. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH and configure RB2 to continue transmission and reception of RLC PDUs after receiving CELL UPDATE message. Any RADIO BEARER RECONFIGURATION COMPLETE message that was previously submitted for transmission in the UE will now be received by the SS. UE transmit a UTRAN MOBILTY INFORMATION CONFIRM message on the DCCH using AM RLC. If not already done so, the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE 1: The RADIO BEARER RECONFIGURATION COMPLETE message may be received by the SS either after transmission of CELL UPDATE CONFIRM (Option 1) or after reception UTRAN MOBILITY INFORMATION CONFIRM (Option 2).

NOTE 2: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | SS | | | The SS configures RB 2 to stop transmission and reception of RLC PDUs. |
| 1 | ← | | RADIO BEARER RECONFIGURATION | The message is transmitted on RB 1. Transmitted by the SS on HS-DSCH. IE "RRC State Indicator" is set to "CELL_FACH" and radio bearer mapped to RACH/SCCPCH |
| 2 | | | | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.59a. |
| | | | | The following messages are transmitted in cell 2. |
| 3 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" and “HS-PDSCH in CELL_FACH” is set to TRUE. |
| 4 | ← | | CELL UPDATE CONFIRM | See message content. |
| 5 | SS | | | The SS configures RB 2 to continue transmission and reception of RLC PDUs. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 1) | Transmitted by the UE on RACH |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | Transmitted by the UE on RACH. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 2) | Transmitted by the UE on RACH. |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (UM DCCH for RRC) |
| - RB identity | 1 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 1 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 1 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 1 |
| - RB stop/continue | Not Present |
| - RB information to reconfigure | (AM DCCH for RRC) |
| - RB identity | 2 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 2 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 2 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 2 |
| - RB stop/continue | Not Present |
| - RB information to reconfigure | (AM DCCH for NAS_DT High priority) |
| - RB identity | 3 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 3 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 3 |

| | |
|---|---|
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 3 |
| - RB stop/continue | Not Present |
| - RB information to reconfigure | (AM DCCH for NAS_DT Low priority) |
| - RB identity | 4 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 4 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |

| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 4 |
| - RB stop/continue | Not Present |
| - RB information to reconfigure | (AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 7 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 7 |
| - RB stop/continue | Not Present |
| Maximum allowed UL TX power | Not Present |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |
| HS-PDSCH in CELL_FACH | Check to see if set to TRUE |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 7)

Only the message type is checked.

#### 8.2.2.59a.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "cell update cause" set to "cell reselection" and “HS-PDSCH in CELL_FACH” set to TRUE.

After step 5 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

The UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. This message may be received by the SS earliest after step 5 and at latest after step 7.

### 8.2.2.60 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and CELL_FACH to CELL_DCH: Success (with HS-DSCH reception in Enhanced FACH DL)

#### 8.2.2.60.1 Definition and applicability

All UEs which support FDD and HS-PDSCH in CELL_FACH.

#### 8.2.2.60.2 Conformance requirement

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4] on that frequency;

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> 2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> 2> select a suitable UTRA cell according to [4];

3> 2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received

reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select PRACH according to subclause 8.5.17;

1> for TDD; or

1> for FDD, if the UE does not support HS-DSCH reception; or

1> if the IE "HS-DSCH common system information" is not included in System Information Block type 5 or System Information Block type 5bis:

2> select Secondary CCPCH according to subclause 8.5.19;

2> use the transport format set given in system information;

2> take the actions related to the HS_DSCH_RECEPTION_GENERAL variable as described in subclause 8.5.37a.

1> else:

2> if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "RACH" in the UL; and

2> if variable H_RNTI and variable C_RNTI are set:

3> start to receive HS-DSCH according to the procedure in subclause 8.5.36.

2> else:

3> clear variable C_RNTI and delete any stored C-RNTI value;

3> clear variable H_RNTI and delete any stored H-RNTI value;

3> clear any stored IE "HARQ Info".

…

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

1> in TDD when "Primary CCPCH Info" is included indicating a new target cell and "New C-RNTI" is not specified:

2> remove any C-RNTI from MAC;

2> clear the variable C_RNTI.

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> if any IEs related to HS-DSCH are stored in the UE:

2> clear any stored IE "Downlink HS-PDSCH information";

2> for 1.28Mcps TDD, clear the IE "HS-PDSCH Midamble Configuration" and the IE "HS-SCCH Set Configuration" in the IE "DL Multi Carrier Information";

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

1> if any IEs related to E-DCH are stored in the UE:

2> clear any stored IE "E-DCH info";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

4> 2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

5> 2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

6> 2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

7> 2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS_SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.25, 8.5.36

### 8.2.2.60.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state and back again, according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters and transits from CELL_FACH to CELL_DCH state, and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.60.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DPDCH (FDD only)

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, with signalling radio bearers mapped on E-DCH/HS-DSCH. After the UE receives this message, it establishes a radio bearer and maps it to the E-DCH/HS-DSCH. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts E-DCH transmission HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Radio bearer mapping onto E-DCH/HS-DSCH with SRB mapped onto E-DCH/HS-DSCH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission, ongoing HS-DSCH transmission and transit to CELL_FACH state, |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission, ongoing HS-DSCH transmission and transit to CELL_DCH state |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH (1/1) and SRBs mapped on E-DCH/HS-DSCH" (condition A14) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| **RAB information for setup** | |
| - RAB identity | (high-speed AM DTCH for PS domain)<br>0000 0101B |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH information<br>- Uplink transport channel type<br>- E-DCH MAC-d flow identity<br>- Uplink transport channel type<br>- E-DCH MAC-d flow identity | <br>E-DCH<br>1<br>E-DCH<br>2 |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code<br>- Serving HS-DSCH radio link indicator | Set to same code as used for cell 1<br>TRUE |

RADIO BEARER RECONFIGURATION (Step 5)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20. |
| Uplink DPCH info<br>E-DCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20. |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20 with the following exception |
| - HS-DSCH TB size table | Octet Aligned |
| Downlink information for each radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20. |

#### 8.2.2.60.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.60a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and CELL_FACH to CELL_DCH: Success (with ongoing E-DCH transmission and HS-DSCH reception) (1.28Mcps TDD only)

#### 8.2.2.60a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and E-DCH, HS-PDSCH in CELL_FACH.

#### 8.2.2.60a.2 Conformance requirement

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4] on that frequency;

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state:

6> if variable READY_FOR_COMMON_EDCH is set to TRUE:

7> move to CELL_FACH state and proceed as below.

6> else:

7> if variable H_RNTI and variable C_RNTI are set:

8> proceed as below.

7> else:

8> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state:

5> if variable READY_FOR_COMMON_EDCH is set to TRUE:

6> move to CELL_FACH state and proceed as below.

5> else:

6> if variable H_RNTI and variable C_RNTI are set:

7> proceed as below.

6> else:

7> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4];

2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state:

6> if variable READY_FOR_COMMON_EDCH is set to TRUE:

7> move to CELL_FACH state and proceed as below.

6> else:

7> if variable H_RNTI and variable C_RNTI are set:

8> proceed as below.

7> else:

8> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state:

5> if variable READY_FOR_COMMON_EDCH is set to TRUE:

6> move to CELL_FACH state and proceed as below.

5> else:

6> if variable H_RNTI and variable C_RNTI are set:

7> proceed as below.

6> else:

7> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> if variable READY_FOR_COMMON_EDCH is set to FALSE:

2> select PRACH according to subclause 8.5.17;

1> else:

2> configure the Enhanced Uplink in CELL_FACH state and Idle mode as specified in subclause 8.5.45 for FDD and 8.5.45a for 1.28 Mcps TDD.

1> for 3.84 Mcps and 1.28 Mcps TDD; or

1> for FDD, if the UE does not support HS-DSCH reception in CELL_FACH state; or

1> if the IE "HS-DSCH common system information" is not included in System Information Block type 5 or System Information Block type 5bis; or

1> for 1.28 Mcps TDD, if the IE "Common E-DCH system info" is not included in System Information Block type 5:

2> select Secondary CCPCH according to subclause 8.5.19;

2> use the transport format set given in system information;

2> take the actions related to the HS_DSCH_RECEPTION_GENERAL variable as described in subclause 8.5.37a.

1> else:

2> for FDD if variable READY_FOR_COMMON_EDCH is set to FALSE:

3> if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "RACH" in the UL; and

3> if variable H_RNTI and variable C_RNTI are set:

4> start to receive HS-DSCH according to the procedure in subclause 8.5.36.

3> else:

4> clear variable C_RNTI and delete any stored C-RNTI value;

4> clear variable H_RNTI and delete any stored H-RNTI value;

4> clear any stored IE "HARQ Info".

2> else:

3> if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "E-DCH" in the UL; and

3> if the IEs "new Primary E-RNTI", "new H-RNTI" and "new C-RNTI" are included:

4> store the "new Primary E-RNTI" according to subclause 8.6.3.14;

4> store the "new H-RNTI" according to subclause 8.6.3.1b;

4> store the "new C-RNTI" according to subclause 8.6.3.9;

4> and start to receive HS-DSCH according to the procedure in subclause 8.5.36.

3> else:

4> clear variable C_RNTI and delete any stored C-RNTI value;

4> clear variable H_RNTI and delete any stored H-RNTI value;

4> clear variable E_RNTI and delete any stored E-RNTI value;

4> clear any stored IE "HARQ Info";

4> set the variable INVALID_CONFIGURATION to TRUE.

…

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

1> in TDD when "Primary CCPCH Info" is included indicating a new target cell and "New C-RNTI" is not specified:

2> remove any C-RNTI from MAC;

2> clear the variable C_RNTI.

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> if the IE "E-DCH info" was not included in the message:

2> for FDD:

3> stop any E-AGCH, E-RGCH and E-HICH reception procedures;

3> stop any E-DPCCH and E-DPDCH transmission procedures;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

2> for 1.28 Mcps TDD:

3> stop any E-AGCH and E-HICH reception procedures;

3> stop any E-RUCCH and E-PUCH transmission procedure;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

If after state transition the UE leaves CELL_DCH state, the UE shall, before state transition:

1> clear any stored IE "E-DCH info";

1> clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> if any IEs related to HS-DSCH are stored in the UE:

2> clear any stored IE "Downlink HS-PDSCH information";

2> clear any stored IE "Downlink Secondary Cell Info FDD";

2> clear all the entries from the variable TARGET_CELL_PRECONFIGURATION;

2> for 1.28Mcps TDD, clear the IE "HS-PDSCH Midamble Configuration" and the IE "HS-SCCH Set Configuration" in the IE "DL Multi Carrier Information";

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

1> if any IEs related to E-DCH are stored in the UE:

2> clear any stored IE "E-DCH info";

2> clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the IE "HS-PDSCH Midamble Configuration":

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RBs mapped to HS-DSCH, there is either:

2> at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow; or

2> at least one MAC-ehs reordering queue configured for the associated logical channel.

NOTE 1: In CELL_DCH, to enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the concerning MAC-ehs reordering queue, add/remove the serving HS-DSCH radio link or, for TDD add/remove H-RNTI upon hard handover.

NOTE 2: In CELL_DCH, if HS_DSCH_RECEPTION is set to TRUE and a reconfiguration, an inter-RAT handover from UTRAN, or a cell change order procedure is initiated, the UE checks the conditions only when the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure is successfully completed. Doing so ensures that, in case of failure in the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure, the UE can return to the old configuration as if the message was not received, e.g. without performing a MAC-HS reset.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information";

1> for 1.28 Mcps TDD, System Information Block type 5 includes IE "Common E-DCH system info".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_OF_ETWS_ENABLED to FALSE;

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS-SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> for FDD, receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> for 1.28 Mcps TDD, receive the HS-SCCH(s) according to the stored HS-SCCH configuration, applying the HS-PDSCH midamble code according to the stored HS-PDSCH midamble configuration;

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for FDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

1> and for 1.28 Mcps TDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH according to the stored HS-SCCH configuration with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

NOTE: For 1.28 Mcps TDD, when performing HS-DSCH reception in CELL_FACH state, the UE shall use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15].

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS-SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.25, 8.5.36

### 8.2.2.60a.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state and back again, with ongoing E-DCH transmission and HS-DSCH reception, according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters and transits from CELL_FACH to CELL_DCH state, with ongoing E-DCH transmission and HS-DSCH reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.60a.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DCH

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, with signalling radio bearers mapped on E-DCH/HS-DSCH. After the UE receives this message, it establishes a radio bearer and maps it to the E-DCH/HS-DSCH. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_FACH state, with continuous E-DCH transmission, HS-DSCH reception, and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts E-DCH transmission whilst maintaining HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Radio bearer mapping onto E-DCH/HS-DSCH with SRB mapped onto E-DCH/HS-DSCH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Continue E-DCH transmission, HS-DSCH transmission and transit to CELL_FACH state, |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission, ongoing HS-DSCH transmission and transit to CELL_DCH state |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH (1/1) and SRBs mapped on E-DCH/HS-DSCH" (condition A13) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| **RAB information for setup** | |
| - RAB identity | (high-speed AM DTCH for PS domain)<br>0000 0101B |
| - CN domain identity | PS domain |
| - NAS Synchronisation | Not Present |
| - Re-establishment timer | Use T315 |
| - RB information to setup | |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| New E-RNTI | '1010 1010 1010 1010' |
| E-DCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |

RADIO BEARER RECONFIGURATION (Step 5)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Uplink DPCH info<br>E-DCH info<br>Downlink HS-PDSCH Information<br>Downlink information for each radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |

#### 8.2.2.60a.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.61 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving E-DCH cell change between MAC-e/es and MAC-i/is)

#### 8.2.2.61.1 Definition and applicability

All UEs which support FDD or 1.28Mcps TDD and MAC-i/is

#### 8.2.2.61.2 Conformance requirement

1> if the uplink RLC PDU size is set to "flexible size" and no uplink RLC PDU size is currently set in the RLC entity:

2> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

1> if the uplink RLC PDU size is changed from "fixed" to "flexible size" and the RLC length indicator size is 7 bits:

2> configure the corresponding RLC entity with flexible RLC PDU size and the RLC length indicator size indicated in the IE "Length indicator size".

1> if that RB is using AM and the RLC size applicable to the uplink logical channel transporting data PDUs is different from the one derived from the previously stored configuration; or

1> if that RB is using AM and the RLC size applicable to the uplink logical channel transporting data PDUs changed from "flexible size" to "fixed size"; or

1> if that RB is using AM and "flexible size" RLC PDUs and the Length Indicator size applicable to the uplink logical channel transporting data PDUs is different from the one derived from the previously stored configuration; or

1> if that RB is using AM and the RLC PDU size applicable to the uplink logical channel transporting data PDUs changed from "fixed size" to "flexible size" and the indicated RLC length indicator size is 15 bits; and

1> none of the following conditions is met:

- the RLC size change is caused by a CELL UPDATE CONFIRM and the CELL UPDATE CONFIRM message includes the IE "Downlink counter synchronisation info".

- the RLC size change is caused by a reconfiguration message, and a cell update procedure occurs during the reconfiguration procedure and the CELL UPDATE CONFIRM message includes the IE "Downlink counter synchronisation info".

- the RLC size change is caused by a reconfiguration message, and a cell update procedure occurs during this reconfiguration procedure and the CELL UPDATE CONFIRM message includes the IE "RLC re-establish indicator" being set to TRUE for the corresponding radio bearer.

2> if the RLC size change is caused by a reconfiguration message or a CELL UPDATE CONFIRM; and

2> the IE "one sided RLC re-establishment" is included in that message and is set to TRUE:

3> re-establish the transmitting side of the corresponding RLC entity.

2> else:

3> re-establish the corresponding RLC entity.

2> if the RLC PDU size is set to "fixed size":

3> configure the corresponding RLC entity with the new uplink RLC size.

2> if the RLC PDU size is set to "flexible size":

3> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

2> for each AM RLC radio bearer in the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" in the variable ESTABLISHED_RABS whose RLC size is changed; and

2> for each AM RLC signalling radio bearer in the CN domain as indicated in the IE "CN domain identity" in the variable LATEST_CONFIGURED_CN_DOMAIN whose RLC size is changed:

3> if the IE "Status" in the variable CIPHERING_STATUS of this CN domain is set to "Started":

4> if the information causing the RLC re-establishment was included in system information:

5> set the HFN values for the corresponding RLC entity equal to the value of the IE "START" for this CN domain that will be included in the CELL UPDATE message following cell reselection.

NOTE: Since the UE cannot predict the START value at the time of the next CELL UPDATE transmission in the future, UTRAN should desist from changing the RLC size for a signalling radio bearer within a cell. Other than this case the change in RLC size for a signalling radio bearer is known to the UE when reading system information following cell reselection.

4> if the RLC re-establishment is caused by a CELL UPDATE CONFIRM:

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

5> if only the transmitting side of the RLC entity was re-established:

6> set the HFN value for the corresponding RLC entity in the uplink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if the RLC re-establishment is caused by a reconfiguration message:

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

5> if only the transmitting side of the RLC entity was re-established:

6> set the HFN value for the corresponding RLC entity in the direction uplink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

NOTE1: If the UTRAN modifies the RLC size for RB2 on any reconfiguration message or Cell Update Confirm message, the UE behaviour is unspecified in this version of the specification.

NOTE2: The UE cannot rely on the configured Transport Formats to determine the RLC sizes to be used in downlink for a particular logical channel. This size can be signalled explicitly in the RLC Info IE.

1> if that RB is using AM or UM; and

1> MAC-i/is is configured and the RLC PDU size is set to "flexible size":

2> indicate the largest RLC size applicable for uplink to the corresponding RLC entity;

2> indicate the minimum RLC size applicable for the uplink to the corresponding RLC entity.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

[…]

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e or MAC-i/is entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

NOTE 4: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the UL MAC header type is reconfigured from MAC-es/e to MAC-is/i or from MAC-is/i to MAC-e/es, the UE behaviour is unspecified.

NOTE 5: If the IE "MAC-es/e reset indicator" is not included in the IE "E-DCH Info" and 16QAM operation starts or stops, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

[…]

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E-AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]).

2> for 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established,

3> if MAC-i/is is not configured,

4> use the tables of transport block size for the E-DCH physical layer category 1 as specified in [15].

3> else,

4> use the tables of transport block size for the E-DCH physical layer category 3 as specified in [15].

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the same rules with the UE as described above, when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE in CELL_DCH state shall:

1> not perform E-AGCH, E-HICH and/or E-RGCH reception procedures;

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

[…]

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

[…]

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New Primary E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

Reference

3GPP TS 25.331 clauses 8.5.21, 8.5.28, 8.6.6.4, 8.6.6.37,

### 8.2.2.61.3 Test purpose

1. To verify that the UE is able to successfully perform an RLC AM reconfiguration from fixed RLC to flexible RLC, and that:

a. When the RLC Length Indicator size is unchanged, the RLC AM entity is not re-established.

b. When the RLC Length Indicator size is changed, the RLC AM entity is re-established.

2. To verify that the UE is able to successfully perform an RLC AM reconfiguration from flexible RLC to fixed RLC and that the RLC AM entity is re-established.

3. To verify that the UE is able to successfully perform a serving E-DCH cell change:

a. With reconfiguration from using a MAC-e/es entity to using a MAC-i/is entity.

b. With reconfiguration from using a MAC-i/is entity to using a MAC-e/es entity.

### 8.2.2.61.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and Cell 2 is inactive.

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the RB according to 34.108 clause 6.10.2.4.6.3 (FDD) / 6.11.5.4.7.4 (1.28Mcps TDD) configured according to Alt 2 (Fixed RLC + MAC-e/es ) with MAC-d flow, associated with PS RAB, configured for scheduled transmissions.

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28Mcps TDD
- UE supports MAC-i/is

Test Procedure

**Table 8.2.2.61**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.2.61 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for Cell 1 and Cell 2.

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH(MAC-e/es)/HS-DSCH.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61 and transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard

handover with serving E-DCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH(MAC-i/is)/HS-DSCH, and with reconfiguration of the UL AM data RBs from fixed to flexible with no change of LI size. The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall not re-establish its configured UL AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.61 and transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard handover with serving E-DCH cell change to Cell 1 with the SRBs and the PS RAB mapped on E-DCH(MAC-e/es)/HS-DSCH, and with reconfiguration of the UL AM data RBs from flexible to fixed with no change of LI size. The UE shall move to Cell 1 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1. The SS shall re-establish its configured AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61 and transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard handover with serving E-DCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH(MAC-i/is)/HS-DSCH, and with reconfiguration of the AM data RBs from fixed to flexible with change of LI size (from 7 bits LI to 15 bits LI). The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall re-establish its configured UL AM RLC entities. SS initiates the data transmission on RB25 in the downlink which is returned by the UE on the uplink. The SS calls generic procedure C.3 to check that the UE is in CELL_DCH state on Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61 |
| 1A | ← | | ACTIVATE RB TEST MODE | |
| 1B | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 1C | ← | | CLOSE UE TEST LOOP | Loop back mode 1 is activated |
| 1D | → | | CLOSE UE TEST LOOP COMPLETE | |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Establish RB 25 with uplink RLC PDU size as fixed size |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2. |
| 3A | ← | | RADIO BEARER RECONFIGURATION | Reconfigure RB 25 with uplink RLC PDU size as flexible size with length indicator size as 7-bit |
| 3B | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | UE CAPABILITY ENQUIRY | |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 7 | SS | | | SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.61. |
| 8 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure RB 25 with uplink RLC PDU size as fixed size |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 1.<br>SS applies the new start value for RB 25 in UL and DL. |
| 10 | ← | | UE CAPABILITY ENQUIRY | |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 13 | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61. |
| 14 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure RB 25 with uplink RLC PDU size as flexible size with length indicator size as 15-bit |
| 15 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2.<br>SS applies the new start value for RB 25 in UL and DL. |
| 16 | | | VOID | |
| 17 | | | VOID | |
| 18 | | | VOID | |
| 19 | →<br>← | | Data | The SS sends data on the RB25 in downlink and verifies that the UE returned data in uplink has the same content as sent in downlink. |
| 20 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| - Cell parameters ID | Set to the cell parameters id for Cell 1 |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 9, 15)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION (Step 14)

Use the same message as specified in step 2, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 7 |
| - E-DCH MAC-d flow identity | 2 |
| - CHOICE *RLC PDU Size* | Flexible size |
| - Length indicator size | 15-bit |
| - Minimum UL RLC PDU size | See clause 6.10 |
| - Largest UL RLC PDU size | See clause 6.10 |

#### 8.2.2.61.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 4, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 1a).

After step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3b).

After step 10, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 2).

After step 14, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 15, the UE shall return data on the uplink DCCH using AM RLC has the same content as sent in downlink (verifies test purpose 1b).

### 8.2.2.62 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (activation and deactivation of MIMO)

#### 8.2.2.62.1 Definition and applicability

All UE categories which support MIMO

8.2.2.62.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

1> trigger lower layers to stop operation in MIMO mode.

[…]

With the exception of the provisions of subclause 6A.3, the following shall apply when the UE is configured in MIMO mode:

1) The UE derives the PCI value as defined in subclause 6A.4 and either a type A or a type B CQI value as defined in subclause 6A.2.2 depending on which type of CQI shall be reported as defined below.

Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33

3GPP TS 25.214 clause 6A.1.2.2

8.2.2.62.3 Test purpose

1. To confirm that the UE reconfigures the radio bearer parameters and starts MIMO reception according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE configures the physical channels to stop MIMO reception according to the received PHYSICAL CHANNEL RECONFIGURATION message.

#### 8.2.2.62.4 Method of test

##### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

##### Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports MIMO

##### Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with MIMO configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, using MIMO configuration, to the UE to deactivate MIMO and reconfigure SRB and user plane bearers for normal HS-DSCH reception i.e. non MIMO. The UE shall respond with PHYSICAL CHANNEL RECONFIGURATION COMPLETE. UE sends CQI reports every 8ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | | | | UE should transmit composite CQI/PCI reports of type A or type B. The SS should check that for 10 consecutive CQI reports, 5 are type A and 5 of type B |
| 4 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SRB2 on HS-DSCH with MIMO parameters absent |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 9 | | | | UE should transmit CQI reports without PCI values every 8ms |
| 10 | | | UE CAPABILITY ENQUIRY | Use default message. SRB2 sent on HS-DSCH |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH |

#### 8.2.2.62.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 3, the UE shall transmit CQI reports of type A and type B.

At step 5 and step 12, the UE shall transmit UE CAPABILITY INFORMATION using AM RLC.

At step 8, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.2.63 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (activation and de-activation of 64QAM)

#### 8.2.2.63.1 Definition and Applicability

All UEs which support FDD ,mac-ehs and 64QAM

#### 8.2.2.63.2 Conformance Requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Extract From 25.331 clause 8.6.6.36:

If the IE "Downlink HS-PDSCH Information" is included and the UE would be in CELL_DCH state after completion of this procedure, the UE shall:

1> for 1.28 Mcps TDD, if the HS-PDSCH has been configured by the IE "DL Multi-carrier information":

2> clear other stored carriers configuration in the IE "DL Multi-carrier information".

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34.

1> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

[…]

| | | | | | |
|---|---|---|---|---|---|
| >FDD | | | | | |
| >>Downlink 64QAM configured | OP | | Enumerated (TRUE) | Absence of this IE means that the HS-SCCH does not use the 64QAM format. The presence of this IE means the UE uses the octet aligned table [15]. | REL-7 |
| >>HS-DSCH TB size table | CV-*Not64QAM* | | Enumerated (octet aligned) | If this IE is present, octet aligned table [15] is used, else bit aligned table [15] is used. | REL-7 |

| Condition | Explanation |
|---|---|
| *Not64QAM* | This IE is optionally present if 64QAM is not configured and MAC-ehs is configured. Otherwise it is not needed. |

Reference(s)

TS 25.331 clause 8.6.6.36, 10.3.6.23a

### 8.2.2.63.3 Test purpose

1. To confirm that the UE starts HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.
2. To confirm that the UE stops HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.

### 8.2.2.63.4 Method of test

Initial conditions

System Simulator:

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17b, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports mac-ehs
- UE supports 64QAM

Test Procedure

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs).

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure for DL 64QAM reception which includes IE " Downlink HS-PDSCH Information". After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the configured 64QAM parameters. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE using 64QAM configuration. The SS transmits RADIO BEARER RECONFIGURATION message using SRB2 on HS-DSCH which omits DL 64 QAM settings. The UE shall deactivate DL 64 QAM and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using HS-DSCH. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE using SRB2 on HS-DSCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Activation of 64QAM on HS-DSCH Including IE "Downlink HS-PDSCH Information". |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH using 64QAM |
| 4 | → | | UE CAPABILITY INFORMATION | |
| 5 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH using 64QAM |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Deactivation of 64QAM on HS-DSCH. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH |
| 9 | → | | UE CAPABILITY INFORMATION | |
| 10 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH |

| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | TRUE |
| - HS-DSCH TB size table | Not Present |

RADIO BEARER RECONFIGURATION (Step 6)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 1 HS-SCCH |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| - HS-DSCH TB size table | Octet aligned |

#### 8.2.2.63.5 Test requirements

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 3 the UE should receive UE CAPABILITY ENQUIRY mapped on DL 64QAM HS-DSCH-mac-ehs

At step 5 the UE should receive UE CAPABILITY INFORMATION CONFIRM mapped on DL 64QAM HS-DSCH-mac-ehs

At step 7 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 8 the UE should receive SRB UE CAPABILITY ENQUIRY mapped on DLQPSK HS-DSCH.

### 8.2.2.63a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH with SRBs on E-DCH/DCH : Success (activation and de-activation of 64QAM)

#### 8.2.2.63a.1 Definition and Applicability

All UEs which support FDD ,mac-ehs and 64QAM

#### 8.2.2.63a.2 Conformance Requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

2> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Extract From 25.331 clause 8.6.6.36:

If the IE "Downlink HS-PDSCH Information" is included and the UE would be in CELL_DCH state after completion of this procedure, the UE shall:

1> for 1.28 Mcps TDD, if the HS-PDSCH has been configured by the IE "DL Multi-carrier information":

2> clear other stored carriers configuration in the IE "DL Multi-carrier information".

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34.

2> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

[…]

| | | | | | |
|---|---|---|---|---|---|
| >FDD | | | | | |
| >>Downlink 64QAM configured | OP | | Enumerated (TRUE) | Absence of this IE means that the HS-SCCH does not use the 64QAM format. The presence of this IE means the UE uses the octet aligned table [15]. | REL-7 |
| >>HS-DSCH TB size table | CV-*Not64QAM* | | Enumerated (octet aligned) | If this IE is present, octet aligned table [15] is used, else bit aligned table [15] is used. | REL-7 |

| Condition | Explanation |
|---|---|
| *Not64QAM* | This IE is optionally present if 64QAM is not configured and MAC-ehs is configured. Otherwise it is not needed. |

Reference(s)

TS 25.331 clause 8.6.6.36, 10.3.6.23a

### 8.2.2.63a.3 Test purpose

1. To confirm that the UE starts HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.

2. To confirm that the UE stops HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.

### 8.2.2.63a.4 Method of test

Initial conditions

System Simulator:

UE: PS_DCCH_DCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17e, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports mac-ehs
- UE supports 64QAM

Test Procedure

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs).

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure for DL 64QAM reception which includes IE " Downlink HS-PDSCH Information". After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. . The SS transmits RADIO BEARER RECONFIGURATION message using SRB2 and omits DL 64 QAM settings. The UE shall deactivate DL 64 QAM and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC..

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Activation of 64QAM on HS-DSCH Including IE "Downlink HS-PDSCH Information". |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Deactivation of 64QAM on HS-DSCH. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 2 HS-SCCH |
| - HS-SCCH Channelisation Code | 6 |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | TRUE |
| - HS-DSCH TB size table | Octet aligned |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 1 HS-SCCH |
| - HS-SCCH Channelisation Code | 7 |

| | |
|---|---|
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| - HS-DSCH TB size table | Not present |

#### 8.2.2.63a.5 Test requirements

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.2.2.64 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (simultaneous activation and deactivation of 64QAM and MIMO)

#### 8.2.2.64.1 Definition and applicability

UE category supports combined 64QAM and MIMO activation. UE support FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.64.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

4> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

[…]

With the exception of the provisions of subclause 6A.3, the following shall apply when the UE is configured in MIMO mode:

1) The UE derives the PCI value as defined in subclause 6A.4 and either a type A or a type B CQI value as defined in subclause 6A.2.2 depending on which type of CQI shall be reported as defined below.

3GPP TS 25.331 clause 8.5.32, 8.5.33, 10.3.6.23a

3GPP TS 25.214 clause 6A.1.2.2

### 8.2.2.64.3 Test purpose

3. To confirm that the UE reconfigures the radio bearer parameters and starts simultaneous 64QAM and MIMO reception according to the received RADIO BEARER SETUP message.

4. To confirm that the UE configures the physical channels to stop simultaneous 64QAM and MIMO reception according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.2.64.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD

- UE category supports combined 64QAM and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with MIMO and 64QAM simultaneously configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO and 64QAM configuration with separate parallel data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, using MIMO and 64QAMconfiguration, to the UE to deactivate MIMO and reconfigure SRB and user plane bearers for normal HS-DSCH reception i.e. non MIMO, non 64QAM. The UE shall respond with PHYSICAL CHANNEL RECONFIGURATION COMPLETE. UE sends CQI reports every 8ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA and configuration of 64QAM and MIMO |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | | | | UE should transmit composite CQI/PCI reports of type A or type B. The SS should check that for 10 consecutive CQI reports, 5 are type A and 5 of type B |
| 4 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. parallel data stream on antenna 1 and antenna 2 with separate modulation patterns on P-CPICH and 64QAM |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO and 64QAM |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SRB2 on HS-DSCH to deactivate MIMO and 64QAM |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 9 | | | | UE should transmit CQI reports without PCI values every 8ms |
| 10 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 sent on HS-DSCH |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / HS-DSCH with enhanced data rate and RLC AM using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH (MAC-ehs)" except for the following

| Information Element | Value/remark |

| Downlink information for each radio link list | Not Present |

### 8.2.2.64.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 3, the UE shall transmit CQI reports of type A and type B.

At step 5 and step 11, the UE shall transmit UE CAPABILITY INFORMATION using AM RLC.

At step 8, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

## 8.2.2.65 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH (Enhanced UL/DL) Success

### 8.2.2.65.1 Definition and applicability

UE supports FDD and Enhanced Uplink in CELL_FACH state.

### 8.2.2.65.2 Conformance requirement

Extract from 25.331

If variable READY_FOR_COMMON_EDCH is set to TRUE the UE shall:

1> configure and use the MAC and the physical layer for the PRACH preamble transmission according to the parameters included in the selected "PRACH preamble control parameters (for Enhanced Uplink)" IE according [15];

1> compile a list of candidate common E-DCH resource configuration in the order of appearance as contained in IE "Common E-DCH Resource Configuration information list".

If variable READY_FOR_COMMON_EDCH is set to TRUE, then after receiving the "E-DCH resource index" by MAC with the CMAC-STATUS primitive, the UE selects the Common E-DCH Resource Configuration from the list of candidate common E-DCH resource configuration as follows:

"Index of the selected Common E-DCH resource configuration" = "E-DCH resource index".

After selection of a common E-DCH resource configuration, the UE shall configure MAC and the physical layer for E-DCH and HSDPA transmission according to the following:

1> configure Uplink DPCH in accordance with the uplink DPCCH slot format 1 [26], the IE "Uplink DPCH code info" and IE "Uplink DPCH power control info";

1> if IE "ACK/NACK support on HS-DPCCH" is set to TRUE:

2> configure the HS-DPCCH in accordance with HS-DPCCH slot format [26], the HS-DPCCH code [28] and IE "Uplink DPCH power control info".

1> configure the common E-DCH MAC-d flows as described in subclause 8.6.5.24;

1> configure the UL E-DPCCH in accordance with the IE "E-DPCCH info" configuration;

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH;

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration";

1> use the same scrambling code for F-DPCH, E-RGCH, E-HICH and E-AGCH reception as configured for the Primary CPICH;

1> use a channelization code for F-DPCH reception as configured by IE "F-DPCH Code number";

1> configure F-DPCH in accordance with the F-DPCH slot format #0 [26];

1> apply the DPC_Mode=0 for F-DPCH according to [29];

1> configure the MAC with the stored IE "E-DPDCH info" configuration and/or the information contained in IE "Scheduled Transmission configuration";

1> configure the E-HICH in accordance with the IE "E-HICH info" configuration;

1> configure the E-AGCH in accordance with the IE "E-AGCH info" configuration;

1> configure the E-RGCH in accordance with the IE "E-RGCH info" configuration if an E-RGCH configuration has been provided with the system information;

1> configure the radio link as the serving E-DCH radio link;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46.

[…]

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

[…]

The variable READY_FOR_COMMON_EDCH shall be set to TRUE only when all the following conditions are met:

1> if the UE is in CELL_FACH state or in Idle mode:

2> the UE supports E-DCH transmission in CELL_FACH state and Idle mode;

2> the IE "HS-DSCH common system information" is included in system information block type 5 or 5bis;

2> the IE "Common E-DCH system info" is included system information block type 5 or 5bis.

[…]

3GPP TS 25.331 clauses 8.2.2.3, 8.5.45, 8.5.46, 8.5.47,

### 8.2.2.65.3 Test Purpose

1. To confirm that the UE successfully transits to Enhanced CELL_FACH state (common E-DCH / HS-DSCH) from CELL_DCH, according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.65.4 Method of test

Initial Conditions

System Simulator: 1 cell.

UE: PS-DCCH+DTCH DCH (state 6-10) as specified in clause 7.4 of TS 34.108 with SRB and user plane mappings on E-DCH /HS-DSCH under condition A30 RADIO BEARER SETUP.

The SS transmits SIB5 with common E-DCH/HS-DSCH information.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports of common E-DCH

Test Procedure

The UE is in CELL_DCH state,

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to release dedicated resources and transit to Enhanced CELL_FACH state. After receiving this message, the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC with HS-DSCH reception and E-DCH transmission. UE shall obtain the configuration for Enhanced UL/DL for CELL_FACH from SIB5. The SS calls generic procedure C.2 to check that the UE is in CELL_FACH state.

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Transit to CELL_FACH state and release dedicated resources. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | - | | Void | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

#### 8.2.2.65.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 4, the UE shall be in Enhanced CELL_FACH state.

### 8.2.2.66 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of SPS operation)

#### 8.2.2.66.1 Definition and applicability

All UEs which support TDD and SPS operation.

#### 8.2.2.66.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or
- a RADIO BEARER RECONFIGURATION message; or
- a RADIO BEARER RELEASE message; or
- a TRANSPORT CHANNEL RECONFIGURATION message; or
- a PHYSICAL CHANNEL RECONFIGURATION message; or

…

it shall:

…

1> for 1.28 Mcps TDD, if the IE "SPS information" is stored in the UE:

2> determine the value for the E_DCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.54;

2> determine the value for the HS_DSCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.55.

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the E_DCH_SPS_STATUS variable.

The variable E_DCH_SPS_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_DCH_TRANSMISSION is set to TRUE;

1> the IE "E-DCH SPS information" is included in the received message.

If any of the above conditions is not met and the variable E_DCH_SPS_STATUS is set to TRUE, the UE shall:

1> set the variable E_DCH_SPS_STATUS to FALSE;

1> clear the variable E_DCH_SPS_PARAMS;

1> stop all E-DCH SPS related activities.

Whenever the variable E_DCH_SPS_STATUS is set to TRUE, the UE shall:

1> configure the physical and MAC layers to operate according to the E_DCH_SPS_PARAMS.

If variable E_DCH_SPS_STATUS is set to TRUE and the serving E-DCH cell was changed as a result of the received message and the value of IE "E-DCH SPS Information" included in this message is "Continue E-DCH SPS operation", then UE behaviour is unspecified.

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the HS_DSCH_SPS_STATUS variable.

The variable HS_DSCH_SPS_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> the IE "HS-DSCH SPS information" is included in the received message.

If any of the above conditions is not met and the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> set the variable HS_DSCH_SPS_STATUS to FALSE;

1> clear the variable HS_DSCH_SPS_PARAMS;

1> stop all HS-DSCH SPS related activities.

Whenever the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> configure the physical and MAC layers to operate according to the HS_DSCH_SPS_PARAMS.

If variable HS_DSCH_SPS_STATUS is set to TRUE and the serving HS-DSCH cell was changed as a result of the received message and the value of IE "HS-DSCH SPS information" included in this message is "Continue HS-DSCH SPS operation", then UE behaviour is unspecified.

If the IE "SPS information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the IE "E-DCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "E-DCH SPS operation" is set to "New E-DCH SPS operation":

3> after the UE has received IE "E-HICH Information":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> if the IE "EI" is included:

6> consider the E-HICH has the same configuration as that in the IE "E-HICH Info" for 1.28Mcps TDD which has the same value of EI indicated by the IE "EI" in this message.

5> else:

6> use the same configuration as the E-HICH for non-schedule transmission.

4> else:

5> store the E-HICH configuration according to the IEs "Timeslot Number", "Channelisation Code" and midamble configuration IEs.

4> store and use the Signature Sequence indicated by the IE "Signature Sequence Group Index".

3> if the IE "Transmission Pattern List" is included:

4> store the contents of the IE in the variable E_DCH_SPS_PARAMS.

3> if the IE "Initial SPS info for E-DCH" is included:

4> perform E-DCH SPS operation on the semi-persistent E-PUCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the E_DCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.54.

1> else if the IE "E-DCH SPS Information" is not included, the UE shall:

2> set the variable E_DCH_SPS_STATUS to FALSE;

2> clear the variable E_DCH_SPS_PARAMS;

2> stop all E-DCH SPS related activities.

1> if the IE "HS-DSCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "HS-DSCH SPS operation" is set to "New HS-DSCH SPS operation":

3> if the IE "Transport Block Size List" or the IE "Reception Pattern List" is included:

4> store the contents of the IE in the variable HS_DSCH_SPS_PARAMS.

3> if the IE "HARQ Info for Semi-Persistent Scheduling" is included:

4> calculate the size of each virtual IR buffer according to following equation:

Size of virtual IR soft buffer = Total buffer for HS-SCCH SPS operation / $N_{IR}$

where

- Total buffer for HS-SCCH SPS operation is signalled in the IE "Process Memory size", and the IE is the total size of the virtual IR buffers which could be used in HS-SCCH SPS operation;
- $N_{IR}$ is the value of the IE "Number of Processes", and the IE is the number of HARQ processes which could be used in HS-SCCH SPS operation.

3> after the UE has received IE "HS-SICH List":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> transmit the HS-SICH according to the configuration in the IE "HS-SCCH Configuration" for 1.28Mcps TDD, of which the position listed in the IE "HS-SCCH Set Configuration" in ascending order is indicated by the IE "HS-SCCH Index" in this message.

4> else:

5> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

3> if the IE "Initial SPS info for HS-DSCH" is included:

4> perform HS-SCCH SPS operation on the semi-persistent HS-PDSCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the HS_DSCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.55.

1> else if the IE "HS-DSCH SPS Information" is not included, the UE shall:

2> set the variable HS_DSCH_SPS_STATUS to FALSE;

2> clear the variable HS_DSCH_SPS_PARAMS;

2> stop all HS-DSCH SPS related activities.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.54, 8.5.55, 8.6.6.47

### 8.2.2.66.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops SPS operation according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts SPS operation according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.66.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DCH
- UE supports SPS operation

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, and configure the SPS operation. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops SPS operation, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a UE CAPABILITY ENQUIRY message without SPS operation. The UE shall respond with a UE CAPABILITY INFORMATION message and finally the SS replies with UE CAPABILITY INFORMATION CONFIRM without SPS operation.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts SPS operation and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a UE CAPABILITY ENQUIRY message with SPS operation. The UE shall respond with a UE CAPABILITY INFORMATION message and finally the SS replies with UE CAPABILITY INFORMATION CONFIRM, send with SPS operation.

The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Radio bearer mapping onto E-DCH/HS-DSCH with SRB mapped onto E-DCH/HS-DSCH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Move to CELL_FACH state and stop of SPS operation |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | UE CAPABILITY ENQUIRY | The SS transmits this message without SPS operation |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | ← | | UE CAPABILITY INFORMATION CONFIRM | The SS transmits this message without SPS operation |
| 8 | ← | | RADIO BEARER RECONFIGURATION | Move to CELL_DCH state and start SPS operation |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | UE CAPABILITY ENQUIRY | The SS transmits this message with SPS operation |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | The SS transmits this message with SPS operation |
| 13 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH (1/1) and SRBs mapped on E-DCH/HS-DSCH" (condition A13) in TS 34.108 clause 9, except for the following:

| SPS Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A19 |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |

RADIO BEARER RECONFIGURATION (Step 8)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| SPS Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A19 |

#### 8.2.2.66.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 5, the UE shall transmit a UE CAPABILITY INFORMATION message without SPS operation.

After step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 10, the UE shall transmit a UE CAPABILITY INFORMATION message with SPS operation.

### 8.2.2.67 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of Control Channel DRX operation)

#### 8.2.2.67.1 Definition and applicability

All UEs which support TDD and Control Channel DRX operation.

8.2.2.67.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or
- a RADIO BEARER RECONFIGURATION message; or
- a RADIO BEARER RELEASE message; or
- a TRANSPORT CHANNEL RECONFIGURATION message; or
- a PHYSICAL CHANNEL RECONFIGURATION message; or

…

it shall:

…

1> for 1.28 Mcps TDD, if the IEs "Control Channel DRX Information" is stored in the UE:

2> determine the value for the CONTROL_CHANNEL_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.53.

…

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the CONTROL_CHANNEL_DRX_STATUS variable.

The variable CONTROL_CHANNEL_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH RECEPTION is set to TRUE;

1> the IE "Control Channel DRX information" is included in the received message.

If any of the above conditions is not met and the variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable CONTROL_CHANNEL_DRX_STATUS to FALSE;

1> clear the variable CONTROL_CHANNEL_DRX_PARAMS;

1> disable the Control Channel DRX related activities.

If variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE and the serving HS-DSCH cell was changed as a result of the received message, the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE after receiving this message and the value of IE "Control Channel DRX information" included in this message is "Continue Control Channel DRX operation ", the UE shall:

1> continue the Control Channel DRX related activities with the IE in the variable CONTROL_CHANNEL_DRX_PARAMS.

If the IE "Control Channel DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "*Control Channel DRX operation*" is set to "New Control Channel DRX operation":

2> store the contents of the IE in the variable CONTROL_CHANNEL_DRX_PARAMS, replacing or clearing any previously stored "Control Channel DRX operation";

2> use the newly received Control Channel DRX configuration.

2> if the IE "E-AGCH DRX Information" is not included:

3> not perform E-AGCH discontinuous reception.

1> if the CHOICE "*Control Channel DRX operation*" is set to "Continue", and the message is used to perform a hard handover (as specified in subclause 8.6.6.3a):

2> the UE behaviour is unspecified.

1> determine the value for the CONTROL_CHANNEL_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.53.

1> if the IE "E-AGCH DRX Information" is included, and the variable E_DCH_TRANSMISSION is set to FALSE:

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.53, 8.6.6.46

### 8.2.2.67.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops Control Channel DRX operation according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts Control Channel DRX operation according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.67.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DCH
- UE supports Control Channel DRX operation

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, and configure the Control Channel DRX operation. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops Control Channel DRX operation, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts Control Channel DRX operation and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Radio bearer mapping onto E-DCH/HS-DSCH with SRB mapped onto E-DCH/HS-DSCH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Move to CELL_FACH state and stop Control Channel DRX operation |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | SS | | | The SS waits sufficient time and verifies that the DRX operation has not been activated. |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Move to CELL_DCH state and start Control Channel DRX operation |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | SS | | | The SS waits to allow sufficient time for control channel DRX be active, and timer inactivity Threshold for HS-SCCH DRX cycle to expire, and then verifies that the DRX operation has been activated successfully. |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| - DCH quality target | Not Present |
| Control Channel DRX information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20 |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |

RADIO BEARER RECONFIGURATION (Step 6)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Control Channel DRX information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20 |

### 8.2.2.67.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 5, the control channel DRX operation has not been activated.

After step 6, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 8, the control channel DRX operation has been activated successfully.

## 8.2.2.68 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell and MIMO)

### 8.2.2.68.1 Definition and applicability

All UE categories which support combination of DC-HSDPA and MIMO. UE supports FDD and F-DPCH or Enhanced F-DPCH.

### 8.2.2.68.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

5> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

3> trigger lower layers to stop operation in MIMO mode.

[…]

The variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the IE "Downlink Secondary Cell Info FDD" is not empty;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on both or neither of the serving HS-DSCH cell and the secondary serving HS-DSCH cell.

If any of the above conditions is not met and the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the IE "Downlink Secondary Cell Info FDD";

1> flush the HARQ buffers of the HARQ entity associated to the secondary serving HS-DSCH cell;

1> release HARQ resources associated to the secondary serving HS-DSCH cell.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message which includes the IE "Downlink secondary cell info FDD" for the secondary serving HS-DSCH cell, the UE shall:

1> if the IE "Secondary cell MIMO parameters" is not included in the IE "Downlink secondary cell info FDD":

2> clear the SECONDARY_CELL_MIMO_PARAMS variable;

1> if the CHOICE "Configuration Info" in the IE "Secondary cell MIMO parameters" has the value "Continue":

2> continue using the stored parameters in the SECONDARY_CELL_MIMO_PARAMS variable;

1> otherwise:

2> if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the SECONDARY_CELL_MIMO_PARAMS variable.

2> if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the SECONDARY_CELL_MIMO_PARAMS variable.

1> determine the value of the SECONDARY_CELL_MIMO_STATUS variable.

[…]

Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33, 8.5.51, 8.5.57

### 8.2.2.68.3 Test purpose

5. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop simultaneous Dual-Cell, MIMO and 16QAM reception according to the received RADIO BEARER RECONFIGURATION message.

6. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous Dual-Cell, MIMO and 16QAM reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.68.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 DC HSDPA cell(s) with Cell 1 (Anchor Carrier) and Cell 2 (Secondary Carrier)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A31 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 16QAM, DC-HSDPA and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate DC-HSDPA and MIMO feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on EDCH/HSDPA (with DC-HSDPA and MIMO simultaneously configured for L1). SRB is mapped to EDCH/HSDPA. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS checks that UE sends composite CQI/PCI reports on each stream for Cell 1 and Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivate DC-HSDPA and MIMO. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | | SS checks during 100ms that UE not should transmit any CQI reports. |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on EDCH/HSDPA, using DC-HSDPA and MIMO configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | | | | SS starts monitoring CQI reports on HS-DPCCH received from the UE on Primary Cell 2 and Secondary Cell 3. SS waits for 10 CQI reports and verifies that UE on each stream transmits composite CQI/PCI reports. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list | | |
| - RB information to reconfigure | (High-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | | |
| - CHOICE Uplink RLC mode | AM RLC | |
| - Transmission RLC discard | | |
| - SDU discard mode | No discard | |

#### 8.2.2.69.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 3, the UE shall not transmit any CQI report.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 6, the UE shall on each stream on both Cell 1 and Cell 2 transmit CQI reports.

### 8.2.2.69 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell, MIMO and 64QAM)

#### 8.2.2.69.1 Definition and applicability

All UE categories which support combination of 64QAM, DC-HSDPA and MIMO. UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.69.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

6> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

4> trigger lower layers to stop operation in MIMO mode.

[…]

The variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the IE "Downlink Secondary Cell Info FDD" is not empty;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on both or neither of the serving HS-DSCH cell and the secondary serving HS-DSCH cell.

If any of the above conditions is not met and the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the IE "Downlink Secondary Cell Info FDD";

1> flush the HARQ buffers of the HARQ entity associated to the secondary serving HS-DSCH cell;

1> release HARQ resources associated to the secondary serving HS-DSCH cell.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message which includes the IE "Downlink secondary cell info FDD" for the secondary serving HS-DSCH cell, the UE shall:

1> if the IE "Secondary cell MIMO parameters" is not included in the IE "Downlink secondary cell info FDD":

2> clear the SECONDARY_CELL_MIMO_PARAMS variable;

1> if the CHOICE "Configuration Info" in the IE "Secondary cell MIMO parameters" has the value "Continue":

2> continue using the stored parameters in the SECONDARY_CELL_MIMO_PARAMS variable;

1> otherwise:

2> if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the SECONDARY_CELL_MIMO_PARAMS variable.

2> if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the SECONDARY_CELL_MIMO_PARAMS variable.

1> determine the value of the SECONDARY_CELL_MIMO_STATUS variable.

[…]

Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33, 8.5.51, 8.5.57

### 8.2.2.69.3 Test purpose

7. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop simultaneous 64QAM, Dual-Cell and MIMO reception according to the received RADIO BEARER RECONFIGURATION message.

8. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous 64QAM, Dual-Cell and MIMO reception according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.69.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 DC HSDPA cell(s) with Cell 1 (Anchor Carrier) and Cell 2 (Secondary Carrier)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A32 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, DC-HSDPA and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate DC-HSDPA and MIMO feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on EDCH/HSDPA (with DC-HSDPA and MIMO simultaneously configured for L1). SRB is mapped to EDCH/HSDPA. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS checks that UE sends composite CQI/PCI reports on each stream for Cell 1 and Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivate DC-HSDPA and MIMO. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | | SS checks during 100ms that UE not should transmit any CQI reports. |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on EDCH/HSDPA, using DC-HSDPA and MIMO configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | | | | SS starts monitoring CQI reports on HS-DPCCH received from the UE on Primary Cell 2 and Secondary Cell 3. SS waits for 10 CQI reports and verifies that UE on each stream transmits composite CQI/PCI reports. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list | | |
| - RB information to reconfigure | (High-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | | |
| - CHOICE Uplink RLC mode | AM RLC | |
| - Transmission RLC discard | | |
| - SDU discard mode | No discard | |
| - MAX_DAT | 15 | |
| - Transmission window size | 128 | |
| - Timer_RST | 600 | |
| - Max_RST | 4 | |
| - Polling info | | |
| - Timer_poll_prohibit | 250 | |
| - Timer_poll | 250 | |
| - Poll_PDU | Not Present | |
| - Poll_SDU | 1 | |
| - Last transmission PDU poll | TRUE | |
| - Last retransmission PDU poll | TRUE | |
| - Poll_Window | 99 | |
| - Timer_poll_periodic | Not Present | |
| - CHOICE Downlink RLC mode | AM RLC | |
| - CHOICE Downlink RLC PDU Size | Reference to TS34.108 clause 6 Parameter Set | |
| - In-sequence delivery | TRUE | |
| - Receiving window size | 128 | |
| - Downlink RLC status info | | |
| - Timer_status_prohibit | 200 | |
| - Timer_EPC | Not Present | |
| - Missing PDU indicator | TRUE | |
| - Timer_STATUS_periodic | Not Present | |
| - One sided RLC re-establishment | FALSE | |
| - RB mapping info | | |
| - Information for each multiplexing option | 1 RBMuxOption | |

#### 8.2.2.69.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 3, the UE shall not transmit any CQI report.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 6, the UE shall on each stream on both Cell 1 and Cell 2 transmit CQI reports.

## 8.2.3 Radio Bearer Release

### 8.2.3.1 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success

#### 8.2.3.1.1 Definition

-

#### 8.2.3.1.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> perform the physical layer synchronisation procedure as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.3.1.3 Test purpose

To confirm that the UE releases the existing radio bearer according to a RADIO BEARER RELEASE message.

8.2.3.1.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | Release the radio bearer. |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE

None.

8.2.3.1.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.3.1a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (TDD Only)

### 8.2.3.1a.1 Definition

The features and operation of UpPCH shifting have been introduced to core specification (TS25.331 clause 8.6.6.26) for LCR TDD.

### 8.2.3.1a.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> perform the physical layer synchronisation procedure as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.3.1a.3 Test purpose

To confirm that the UE releases the existing radio bearer according to a RADIO BEARER RELEASE message.

### 8.2.3.1a.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | Release the radio bearer. |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

RADIO BEARER RELEASE(Setp 1)

Use the same message sub-type titled in [9] TS 34.108 clause 9 with the following exception:

| Information Element | Value/Remarks |
|---|---|
| Deleted TrCH information list | A1,A2, A3,A4, A5, A6,A7, A8 |
| radioBearerSetup-r4-add-ext | |
| radioBearerSetup-r4-TDD128-add-ext | |
| UpPCHpositionInfo | 22 |

#### 8.2.3.1a.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.2 Void

### 8.2.3.3 Void

### 8.2.3.4 Void

### 8.2.3.5 Void

### 8.2.3.6 Void

### 8.2.3.7 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success

#### 8.2.3.7.1 Definition

#### 8.2.3.7.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.3.7.3 Test purpose

To confirm that the UE release the existing the radio bearer according to a RADIO BEARER RELEASE message.

#### 8.2.3.7.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DTCH+DCCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | SS releases the radio bearer in the fashion specified in the message and allocate common channel resources to carry the remaining radio bearers. |
| 2 | | | | The UE selects PRACH and S-CCPCH indicated in SIB5/SIB5bis and SIB6 after entering CELL FACH state.<br>The UE shall release dedicated channels, and reconfigure the remaining radio bearers using the common channel. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

#### 8.2.3.7.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.8 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection)

#### 8.2.3.8.1 Definition

#### 8.2.3.8.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304

1> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.3.1.7.

8.2.3.8.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message after the UE completes a cell update procedure.

8.2.3.8.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

NOTE: The 'timer poll' value in the SS RLC transmit entity should be set to 800 ms.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to request the UE to transit from CELL_DCH to CELL_FACH. The UE initiates the cell update procedure because the UE cannot detect the specified cell in this message. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving CELL UPDATE message. The UE then transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC. The UE transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | RADIO BEARER RELEASE | Assigned the transition from CELL_DCH to CELL_FACH |
| 4 | → | | CELL UPDATE | The value "cell reselection" shall be set in IE "cell update cause". |
| 5 | ← | | CELL UPDATE CONFIRM | See message content. |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 3) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>150 |

RADIO BEARER RELEASE (Step 3) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | <br><br>4 |

CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 5)

Use the same message type found in clause [9] TS 34.108 clause 9, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 6)

Only the message type is checked.

#### 8.2.3.8.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 5 UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

After step 6 UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

### 8.2.3.9 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success

#### 8.2.3.9.1 Definition

#### 8.2.3.9.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.3.9.3 Test purpose

To confirm that an UE, in state CELL_FACH, releases the radio access bearers using common physical channel. After the release, it shall access the affected radio bearers on the DPCH.

8.2.3.9.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. In this message, SS commands the UE to release radio access bearers on common physical channel. At the same time, SS allocates DPCH to support the affected radio bearers. The UE shall release the indicated radio access bearers and transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | | | | UE shall release the radio access bearers carried by common physical channel. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RELEASE (Step 1)

Use the same message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9.

#### 8.2.3.9.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using the dedicated physical channel allocated.

### 8.2.3.10 Void

### 8.2.3.11 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration)

#### 8.2.3.11.1 Definition

#### 8.2.3.11.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to TS 25.304;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

The UE shall:

1> in case of reception of a RADIO BEARER RELEASE message:

…

2> transmit a RADIO BEARER RELEASE FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

#### 8.2.3.11.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearers in accordance with the specified settings in RADIO BEARER RELEASE message before T312 timer expires.

8.2.3.11.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits a RADIO BEARER RELEASE message and keeps its current physical channel configuration. The UE is expected to encounter a failure while releasing the radio bearer. After T312 timer expires, the UE shall revert to the old radio bearer configuration, so the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | | | | The SS does not configure the specified L1. |
| 3 | → | | RADIO BEARER RELEASE FAILURE | After T312 expiry the UE fails to release a radio bearer and reverts to the old configuration. |
| 4 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Measurement Identity | 1 | |
| Measurement Command | Setup | |
| Measurement reporting mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting | |
| Additional measurement list | Not Present | |
| CHOICE measurement type | Traffic Volume Measurement | |
| - Traffic volume measurement object list | | |
| - Uplink transport channel type | RACHorCPCH | R99 and Rel-4 |
| | RACH | Rel-5 |
| - UL Target Transport Channel ID | Not Present | |
| - Traffic volume measurement quantity | | |
| - Measurement quantity | RLC Buffer Payload | |
| - Traffic volume reporting quantity | | |
| - RLC Buffer Payload for each RB | True | |
| - Average of RLC Buffer Payload for each RB | False | |
| - Variance of RLC Buffer Payload for each RB | False | |
| - Measurement validity | | |
| - UE state | All states | |
| - CHOICE Reporting criteria | Periodical Reporting Criteria | |
| - Amount of reporting | Infinity | |
| - Reporting interval | 8000 | |
| DPCH compressed mode status | Not Present | |

MEASUREMENT REPORT (Step 0b and 4)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 20 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

RADIO BEARER RELEASE (Step 1)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Clause 9 of TS 34.108.

RADIO BEARER RELEASE FAILURE (Step 2)

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

### 8.2.3.11.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 2 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE "failure cause".

After step 3, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

### 8.2.3.12 Void

### 8.2.3.13 Void

### 8.2.3.14 Void

### 8.2.3.15 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Success

#### 8.2.3.15.1 Definition

#### 8.2.3.15.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency;

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

If the IE "RAB information to reconfigure" is included then the UE shall:

1> if the entry for the radio access bearer identified by the IE "CN domain identity" together with the IE "RAB Identity" in the variable ESTABLISHED_RABS already exists:

…

1> else:

2> set the variable INVALID_CONFIGURATION to TRUE.

If the variable INVALID_CONFIGURATION is set to TRUE the UE shall:

1> keep the configuration existing before the reception of the message;

1> transmit a failure response message, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

3> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

3> clear that entry.

2> set the IE "failure cause" to "invalid configuration".

1> set the variable INVALID_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

…

1> in case of reception of a RADIO BEARER RECONFIGURATION message:

2> if the radio bearer reconfiguration procedure affects several radio bearers:

3> (may) include the identities of the radio bearers for which the procedure would have been successful into the RADIO BEARER RECONFIGURATION FAILURE message.

2> transmit a RADIO BEARER RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.4.2a, 8.2.2.11, 8.2.2.9.

### 8.2.3.15.3 Test purpose

To confirm that the UE releases the existing the radio bearer(s) according to the RADIO BEARER RELEASE message.

### 8.2.3.15.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | | | Void | |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | The IE "RAB information to reconfigure" is included with the same RAB identity as was released with the RADIO BEARER RELEASE message. |
| 5 | → | | RADIO BEARER RECONFIGURATION FAILURE | The UE responds with failure, in case the RB is properly removed |
| 6 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9.

RADIO BEARER RECONFIGURATION (Step 4)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_FACH in PS" as found in clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark | Version |

RADIO BEARER RECONFIGURATION FAILURE (step 5)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

#### 8.2.3.15.5 Test requirement

After step 1 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC on the common physical channel.

After step 4, UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message to verify that the RAB is properly removed.

### 8.2.3.16 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (Subsequently received)

#### 8.2.3.16.1 Definition

#### 8.2.3.16.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- RADIO BEARER RELEASE; or

…

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

…

Reference

3GPP TS 25.331 clause 8.6.3.11.

8.2.3.16.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER RELEASE message before the UE releases the radio bearer according to a previous RADIO BEARER RELEASE message it ignore the new RADIO BEARER RELEASE message and configures according to the previous RADIO BEARER RELEASE message received.

8.2.3.16.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio access bearer, the UE ignores the second RADIO BEARER RELEASE message and releases the radio bearer according to the previous RADIO BEARER RELEASE message received. Finally, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | For FDD, the SS sets its UL scrambling code number to "1". |
| 2 | ← | | RADIO BEARER RELEASE | Message sent before the expiry of "activation time" specified in message in step 1. For FDD, the IE "Scrambling code number" is set to "2". For TDD the code combination assigned is different from that assigned in stage 1. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE ignores the RADIO BEARER RELEASE message in step 2 and release radio bearer according to the RADIO BEARER RELEASE message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256 |
| - Uplink DPCH Info<br>- Scrambling code number | <br>1 |

RADIO BEARER RELEASE (Step 1) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256 |
| Uplink DPCH timeslots and codes<br>- First timeslot code list | <br>Assigned by SS |

RADIO BEARER RELEASE (Step 2) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH Info<br>- Scrambling code number | Not Present<br><br>2 |

RADIO BEARER RELEASE (Step 2) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.3.16.5 Test requirement

After step 2 the UE shall transmit an RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

### 8.2.3.17 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success (Subsequently received)

#### 8.2.3.17.1 Definition

#### 8.2.3.17.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- RADIO BEARER RELEASE; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.3.17.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER RELEASE message before the UE releases the radio bearer according to a previous RADIO BEARER RELEASE message, it ignores the new RADIO BEARER RELEASE message and configures according to the previous RADIO BEARER RELEASE message received.

### 8.2.3.17.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio access bearer, the UE ignores the second RADIO BEARER RELEASE message and releases the radio bearers according to the previous RADIO BEARER RELEASE message received. Finally, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 2 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | For FDD, the SS sets its UL scrambling code to "1". |
| 2 | ← | | RADIO BEARER RELEASE | For TDD the IE "Secondary scrambling code" is set to "2". For TDD, the code combination assigned is different from that assigned in stage 1. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE ignores the RADIO BEARER RELEASE message in step 2 and release radio bearers according to the RADIO BEARER RELEASE message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RELEASE (Step 1) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>- Uplink DPCH Info<br>- Scrambling code number | Not present<br><br>1 |

RADIO BEARER RELEASE (Step 1) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned by SS |

RADIO BEARER RELEASE (Step 2) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH Info<br>- Scrambling code number | Not Present<br><br>2 |

RADIO BEARER RELEASE (Step 2) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

8.2.3.17.5 Test requirement

After step 2 the UE shall transmit an RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

## 8.2.3.18 Radio Bearer Release from CELL_DCH to CELL_PCH: Success

### 8.2.3.18.1 Definition

### 8.2.3.18.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_PCH or URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.3.18.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE before entering CELL_PCH state after it received a RADIO BEARER RELEASE message and released its radio access bearers.

### 8.2.3.18.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters into CELL_PCH state. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 2a | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 3 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>100 |

RADIO BEARER RELEASE (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| -Cell parameters ID | 4 |

#### 8.2.3.18.5 Test requirement

After step 1 the UE transmits a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC.

### 8.2.3.19 Radio Bearer Release from CELL_DCH to URA_PCH: Success

#### 8.2.3.19.1 Definition

#### 8.2.3.19.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_PCH or URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS 25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS 25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

If the new state is URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (URA_PCH);

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.3.19.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE before entering URA_PCH state after it received a RADIO BEARER RELEASE message and released its radio bearers.

### 8.2.3.19.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters into URA_PCH state. SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 2a | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 3 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>100 |

RADIO BEARER RELEASE (Step 1) (TDD)

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio links<br>- Primary CCPCH info<br>-Cell parameters ID | <br><br>4 |

#### 8.2.3.19.5 Test requirement

After step 1 the UE transmits a RADIO BEARER RELEASE COMPLETE message to the UE on uplink DCCH using AM RLC.

### 8.2.3.20 Radio Bearer Release for transition from CELL_DCH to CELL_FACH (Frequency modification): Success

#### 8.2.3.20.1 Definition

#### 8.2.3.20.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS5.304.

1> if the received reconfiguration message included the IE "Primary CPICH info"), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" :

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

1> select PRACH according to TS25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.20.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_FACH according to the RADIO BEARER RELEASE message.

2. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

8.2.3.20.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.3.20**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.3.20 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.20. The SS and UE execute procedure P3 or P5. Next The SS and the UE execute procedure P7 or P9 and then execute procedure P11 or P13. The SS switches its downlink transmission power settings to columns "T1" transmits a RADIO BEARER RELEASE message with no IE "Frequency info" to the UE. The UE releases the radio access bearer and moves into cell 6. The UE transmits CELL UPDATE message with IE "Cell update cause" set to "cell reselection". SS then transmit CELL UDPATE CONFIRM with IE "New C_RNTI". The UE shall respond with an UTRAN MOBILITY INFORMATION CONFIRM message, and then transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. The SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P3 (clause 7.4.2.1.2) or P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure P7 (clause 7.4.2.3.2) or P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 1c | ←→ | | SS executes procedure P11 (clause 7.4.2.5.2) or P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.20. |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RELEASE | Not including frequency information. |
| 5 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 6 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | → | | RADIO BEARER RELEASE COMPLETE | |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 4)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" or "Non speech to CELL_FACH from CELL_DCH in CS" or "Speech to CELL_FACH from CELL_DCH in CS" in [9] TS 34.108 clause 9 with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>Downlink information for each radio link | <br>Not present |

CELL UPDATE (Step 5)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 6)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 7)

The contents of UTRAN MOBILITY UPDATE CONFIRM message are identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

#### 8.2.3.20.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 6 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 7 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 6.

After step 8 the UE shall be in CELL_FACH state of cell 6.

### 8.2.3.21 Radio Bearer Release from CELL_DCH to CELL_PCH (Frequency modification): Success

#### 8.2.3.21.1 Definition

#### 8.2.3.21.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC.

If after state transition the UE enters CELL_PCH state from CELL_DCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

…

If the new state is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.3.21.3 Test purpose

1. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to CELL_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases the radio access bearer and selects a common physical channel in a different frequency indicated by SS.

8.2.3.21.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 is active and cell 6 is inactive.

UE: "Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.3.21**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.3.21 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode in cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.21. The SS and UE execute procedure P3 or P5. Next The SS and the UE execute procedure P7 or P9 and then execute procedure P11 or P13. The SS switches its downlink transmission power settings to columns "T1" and then transmits a RADIO BEARER RELEASE message with no IE "Frequency info". The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters CELL_PCH state of cell 6, then the UE shall transmit CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection", to complete the procedure. The SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P3 (clause 7.4.2.1.2) or P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure P7 (clause 7.4.2.3.2) or P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 1c | ←→ | | SS executes procedure P11 (clause 7.4.2.5.2) or P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.21. |
| 3 | ← | | Void | |
| 4 | ← | | RADIO BEARER RELEASE | Not including new frequency information. |
| 5 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message before it completes state transition. UE sends this message in cell 1. |
| 5a | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 6 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 7 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 4)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" or "Non speech to CELL_FACH from CELL_DCH in CS" or "Speech to CELL_FACH from CELL_DCH in CS" in [9] TS 34.108 clause 9, with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | Not Present |
| Downlink information for each radio link | Not Present |

CELL UPDATE (Step 6)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 7)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.3.21.5 Test requirement

After step 4 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC in cell 1.

After step 5 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection" in cell 6.

After step 8 the UE shall be in CELL_PCH state in cell 6.

### 8.2.3.22 Radio Bearer Release for transition from CELL_FACH to CELL_PCH: Success

#### 8.2.3.22.1 Definition

#### 8.2.3.22.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.3, 8.5 and 8.6.

### 8.2.3.22.3 Test purpose

1. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases the radio access bearer and selects a common physical channel.

### 8.2.3.22.4 Method of test

Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a RADIO BEARER RELEASE message. The UE shall release all radio access bearer and enter CELL_PCH state after it transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | RADIO BEARER RELEASE | |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE transmits this message on uplink DCCH using AM RLC. |
| 4 | | | | The SS waits for 5 s. |
| 5 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.3.22.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in CELL_PCH state in cell 1.

### 8.2.3.23 Radio Bearer Release for transition from CELL_FACH to URA_PCH: Success

#### 8.2.3.23.1 Definition

#### 8.2.3.23.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS5.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS5.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.3, 8.5 and 8.6.

### 8.2.3.23.3 Test purpose

1. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases the radio access bearer and selects a common physical channel.

### 8.2.3.23.4 Method of test

Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a RADIO BEARER RELEASE message. The UE shall release all radio access bearers and enter URA_PCH state after it transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | RADIO BEARER RELEASE | |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE transmits this message on uplink DCCH using AM RLC. |
| 4 | | | | The SS waits for 5 s. |
| 5 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |

NOTE: It is to be noted that IE “URA identity” is not included in this message, for the purpose of wider test coverage. The scenario in which IE “URA identity” is included, is tested in other test cases.

#### 8.2.2.23.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in URA_PCH state.

### 8.2.3.24 Radio Bearer Release for transition from CELL_DCH to CELL_DCH (Frequency modification): Success

#### 8.2.3.24.1 Definition

#### 8.2.3.24.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

#### 8.2.3.24.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_DCH according to the RADIO BEARER RELEASE message.
2. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

#### 8.2.3.24.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

CS-DCCH_DTCH_DCH (state 6-9) or PS_DCCH_DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.3.24**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -72 |

Table 8.2.3.24 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.24. The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code which is assigned to P-CPICH of cell 6. The UE shall select cell 6 and release the radio access bearer after receiving this message, and then remain in CELL_DCH state. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC after it completes reconfiguration according to received RADIO BEARER RELEASE message. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.24. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.24. |
| 3 | ← | | RADIO BEARER RELEASE | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. |
| 4 | | | | The UE select cell 6. |
| 5 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 3)

The contents RADIO BEARER RELEASE message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" or "Speech in CS" or "Non speech in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

#### 8.2.3.24.5 Test requirement

After step 4 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 6.

After step 5 the UE shall be in CELL_DCH state in cell 6.

### 8.2.3.25 Radio Bearer Release for transition from CELL_DCH to URA_PCH (Frequency modification): Success

#### 8.2.3.25.1 Definition

#### 8.2.3.25.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

…

If the new state is URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (URA_PCH);

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.25.3 Test purpose

1. To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to URA_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases radio access bearer, dedicated physical channel and selects a common physical channel in a different frequency.

### 8.2.3.25.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: "Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.3.25**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.3.25 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.25. SS requests operator to make an outgoing call. The SS and UE execute procedure P3 or P5. Next The SS and the UE execute procedure P7 or P9 and then execute procedure P11 or P13. The SS switches its

downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message including no IE "Frequency info". The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC and enter URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.25. SS requests operator to make an outgoing call. |
| 2 | | | SS executes procedure P3 (clause 7.4.2.1.2) or P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | | | SS executes procedure P7 (clause 7.4.2.3.2) or P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | | | SS executes procedure P11 (clause 7.4.2.5.2) or P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.25. |
| 6 | ← | | RADIO BEARER RELEASE | Not including IE "Frequency info" and IE "Primary CPICH info" |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | UE transmit this message on the dedicated physical channel in cell 1 |
| 8 | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message and then waits for 5 s to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 9 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled "Speech to CELL_FACH from CELL_DCH in CS" or "Non speech to CELL_FACH from CELL_DCH in CS" or "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | Not present |
| Downlink information for each radio link | Not present |

#### 8.2.3.25.5 Test requirement

After step 6 the UE shall transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in URA_PCH state in cell 6.

### 8.2.3.26 Radio Bearer Release for transition from CELL_FACH to CELL_PCH (Frequency modification): Success

#### 8.2.3.26.1 Definition

#### 8.2.3.26.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info" , and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.26.3 Test purpose

1. To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases radio access bearer and selects a common physical channel in a different frequency.

### 8.2.3.26.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.3.26**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.3.26 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in cell 1. The SS shall transmit a RADIO BEARER RELEASE message on downlink DCCH using UM RLC, . The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC. The SS shall acknowledge the RADIO BEARER RELEASE COMPLETE message and then switches its downlink transmission power settings to columns “T1”. . Upon completion of the procedure, the SS waits for 5 seconds and calls for generic procedure C.4 in cell 6 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | | | Void | |
| 5 | | | Void | |
| 6 | ← | | RADIO BEARER RELEASE | This message is sent on RB 1. IE "Frequency info" and IE "Primary CPICH info" set to that of cell 6. |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | After SS acknowledges this message, SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.26. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | (In cell 6) If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | |
| - CHOICE mode | FDD |
| - UARFCN uplink (Nu) | Not present |
| - UARFCN downlink (Nd) | Set to the frequency of cell 6 |
| Downlink information for each radio link | |
| - Primary CPICH Info | |
| - Primary scrambling code | Set to same code as used for cell 6 |

#### 8.2.3.26.5 Test requirement

After step 6 the UE shall transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in CELL_PCH state in cell 6.

### 8.2.3.27 Radio Bearer Release for transition from CELL_FACH to URA_PCH (Frequency modification): Success

#### 8.2.3.27.1 Definition

#### 8.2.3.27.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9.

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.27.3 Test purpose

1. To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases radio access bearer and selects a common physical channel in a different frequency.

### 8.2.3.27.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.3.27**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.3.27 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is on cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.27. The SS transmits a RADIO BEARER RELEASE including IE "Frequency info" and not including IE "Primary CPICH info". The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC and the SS shall switch its downlink power settings to columns “T1”. The UE enters URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | | | Void | |
| 5 | | | Void | |
| 6 | ← | | RADIO BEARER RELEASE | Including IE "Frequency info" and not including IE "Primary CPICH info" |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | UE transmit this message on the common physical channel in cell 1. The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.27. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.5 | If the test result of C. 5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator<br>UTRAN DRX cycle length coefficient | URA_PCH<br>3 |
| URA identity | URA-ID 1 |
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |

8.2.3.27.5 Test requirement

After step 6 the UE shall transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 1.

After step 7 the UE shall be in URA_PCH state in cell 6.

## 8.2.3.28 Radio Bearer Release for transition from CELL_FACH to CELL_FACH (Frequency modification): Success

### 8.2.3.28.1 Definition

### 8.2.3.28.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency;

2> if the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info":

3> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

3> when the cell update procedure completed successfully:

4> proceed as below.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.28.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_FACH according to the RADIO BEARER RELEASE message.

2. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

### 8.2.3.28.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.3.28**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.3.28 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.28. SS requests operator to make an outgoing call. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info". The UE shall select cell 6 and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection" . The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC after it completes reconfiguration according to the received RADIO BEARER RELEASE message. Upon completion of the procedure, the SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.28. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.28. |
| 6 | ← | | RADIO BEARER RELEASE | Including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info" set to Primary Scrambling Code |
| 7 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 8 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message on a common physical channel in cell 6. |
| 11 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

The contents of RADIO BEARER RELEASE message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- UARFCN uplink(Nu)<br>- UARFCN downlink(Nd) | <br>Same uplink UARFCN as used for cell 6<br>Same downlink UARFCN as used for cell 6 |

CELL UPDATE (Step 7)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 8)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 9)

The contents of UTRAN MOBILITY UPDATE CONFIRM message is identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

#### 8.2.3.28.5 Test requirement

After step 6 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 8 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 9 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 6.

After step 10 the UE shall be in CELL_FACH state in cell 6.

### 8.2.3.29 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Associated with signalling connection release during simultaneous PS and CS call

#### 8.2.3.29.1 Definition

#### 8.2.3.29.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message:

it shall:

1> set the variable ORDERED_RECONFIGURATION to TRUE;

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE may first release the physical channel configuration used at reception of the reconfiguration message. The UE shall then:

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent:

2> not change its current UL Physical channel configuration.1> in TDD:

2> if "Primary CCPCH Info" is included indicating a new target cell and "New C-RNTI" is not specified:

3> remove any C-RNTI from MAC;

3> clear the variable C_RNTI.

…

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE message as response message on the uplink DCCH using AM RLC.

….

If the IE "Signalling Connection release indication" is present in a message, the UE shall:

1> if all radio access bearers for the CN domain identified with the value of the IE "Signalling Connection release indication" would have been released in the variable ESTABLISHED_RABS after processing of the received message:

2> indicate release of the signalling connection identified with the value of the IE "Signalling Connection release indication" to the upper layers;

2> remove the signalling connection identified with the value of the IE "Signalling Connection release indication" from the variable ESTABLISHED_SIGNALLING_CONNECTIONS.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.1.3.

### 8.2.3.29.3 Test purpose

To confirm that the UE releases the existing radio access bearer and signalling connection according to a RADIO BEARER RELEASE message.

### 8.2.3.29.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state of cell 1. The UE initiates a session setup to establish a PS signalling connection. Then UE and SS establish a PS session while the CS call is still active. The SS transmits a DISCONNECT message to release a CS domain signalling connection. After the CC procedure, SS transmit a RADIO BEARER RELEASE message which includes IE "Signalling Connection release indication" set to "CS domain" and new configuration for remained service to the UE. The UE shall configure the specified channel and transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1. |
| 2 | → | | INITIAL DIRECT TRANSFER (SERVICE REQUEST) | GMM (PS Session setup is initiated from the UE side.) |
| 3 | ← | | DOWNLINK DIRECT TRANSFER (AUTHENTICATION AND CIPHERING REQUEST) | GMM |
| 4 | → | | UPLINK DIRECT TRANSFER (AUTHENTICATION AND CIPHERING RESPONSE) | GMM |
| 5 | ← | | SECURITY MODE COMMAND | |
| 6 | → | | SECURITY MODE COMPLETE | |
| 7 | → | | UPLINK DIRECT TRANSFER (ACTIVATE PDP CONTEXT REQUEST) | SM |

Specific Message Contents

RADIO BEARER RELEASE (STEP 14)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type titled as "Non speech in CS" or "Speech in CS" as found in Clause 9 of TS 34.108, with the following exceptions

| Information Element | Value/remark |
|---|---|
| Signalling Connection release indication<br>- CN domain identity | CS domain |

8.2.3.29.5 Test requirement

After step 14 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.3.30 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception)

### 8.2.3.30.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

### 8.2.3.30.2 Conformance requirement

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: In FDD an "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

3GPP TS 25.331 clause8.5.25, 8.6.3.1

### 8.2.3.30.3 Test purpose

To confirm that the UE releases a radio bearer mapped to HS-DSCH according to the received RADIO BEARER RELEASE message.

### 8.2.3.30.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state with a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RELEASE message to the UE . This message requests the release of the radio access bearer mapped to HS-DSCH. After the UE receives this message, it releases the radio access bearer. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108.

8.2.3.30.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.3.30a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception) ( In a different frequency band)

### 8.2.3.30a.1 Definition and applicability

Same conformance requirement as in clause 8.2.3.30 except that UE is support for different frequency band for TDD.

### 8.2.3.30a.2 Conformance requirement

Same conformance requirement as in clause 8.2.3.30.

### 8.2.3.30a.3 Test purpose

Same conformance requirement as in clause 8.2.3.30 except that UE can work in different frequency bands.

### 8.2.3.30a.4 Method of test

Same conformance requirement as in clause 8.2.3.30 except for Expected sequence

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | UE will run test procedure for 2 kinds of condition. The first,. primary carrier and the secondary carriers of the UE work in same frequency band. Secondly,, primary carrier and the secondary carriers of the UE work in different frequency band. |

#### 8.2.3.30a.5 Test requirements

Same conformance requirement as in clause 8.2.3.30.

### 8.2.3.31 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (With active HS-DSCH reception)

#### 8.2.3.31.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.31.2 Conformance requirement

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if "DPCH frame offset" is included for one or more RLs in the active set:

2> use its value to determine the beginning of the DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

…

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

3GPP TS 25.331 clause 8.2.2, 8.3.5.1.2, 8.6.3.1

### 8.2.3.31.3 Test purpose

To confirm that the UE releases a radio bearer according to the received RADIO BEARER RELEASE message while keeping HS-DSCH reception active for a second radio bearer mapped to HS-DSCH.

### 8.2.3.31.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

#### Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services.

#### Test Procedure

The UE is in cell 1 with only signalling radio bearers established. A PS radio bearer is established mapped to HS-DSCH with HS-DSCH reception activated. Then, a CS radio bearer is established.

The SS transmits a RADIO BEARER RELEASE message to the UE. This message requests the release of the radio bearer mapped to DCH. After the UE receives this message, it releases this radio bearer but keeps the radio bearer

mapped to HS-DSCH and continues HS-DSCH reception. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | | SS establishes a PS RAB mapped to HS-DSCH. See below for contents of the RADIO BEARER SETUP message. |
| 2 | ←→ | | | SS establishes a CS RAB. |
| 3 | ← | | RADIO BEARER RELEASE | |
| 4 | → | | RADIO BEARER RELEASE COMPLETE | The UE releases the CS radio bearer mapped to DCH but keeps the PS radio bearer mapped to HS-DSCH and continues HS-DSCH reception |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RELEASE (Step 3)(FDD)

Use the same message as specified for “Speech in CS” or "Non speech in CS" in 34.108 except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| Added or Reconfigured UL TrCH information | Not Present | |
| Added or Reconfigured DL TrCH information | Not Present | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) | |
| - Cell ID | Not Present | |
| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38400 | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 3 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | 0 | |
| - Scrambling code change | No change | |
| - TPC combination index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

RADIO BEARER RELEASE (Step 3) ( 1.28 Mcps TDD)

Use the same message as specified for “Speech in CS” or "Non speech in CS" in 34.108 except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| Added or Reconfigured UL TrCH information | Not Present | |
| Added or Reconfigured DL TrCH information | Not Present | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |

#### 8.2.3.31.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.31a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (With active HS-DSCH reception)

#### 8.2.3.31a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.31a.2 Conformance requirement

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if "DPCH frame offset" is included for one or more RLs in the active set:

2> use its value to determine the beginning of the DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

…

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

### 8.2.3.31a.3 Test purpose

To confirm that the UE releases a radio bearer according to the received RADIO BEARER RELEASE message while keeping HS-DSCH reception active for a second radio bearer mapped to HS-DSCH.

### 8.2.3.31a.4 Method of test

Initial Condition

System Simulator: 1 cell configures three carriers, one primary carrier with two secondary carriers.

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services.

Test Procedure

The UE is in cell 1 with only signalling radio bearers established. A PS radio bearer is established mapped to HS-DSCH with HS-DSCH reception activated. Then, a CS radio bearer is established.

The SS transmits a RADIO BEARER RELEASE message to the UE. This message requests the release of the radio bearer mapped to DCH. After the UE receives this message, it releases this radio bearer but keeps the radio bearer mapped to HS-DSCH and continues HS-DSCH reception. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | | SS establishes a PS RAB mapped to HS-DSCH. See below for contents of the RADIO BEARER SETUP message. |
| 2 | ←→ | | | SS establishes a CS RAB. |
| 3 | ← | | RADIO BEARER RELEASE | |
| 4 | → | | RADIO BEARER RELEASE COMPLETE | The UE releases the CS radio bearer mapped to DCH but keeps the PS radio bearer mapped to HS-DSCH and continues HS-DSCH reception |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |

3GPP TS 25.331 clause 8.2.2, 8.6.3.1

### 8.2.3.32.3 Test purpose

To confirm that the UE releases a radio bearer according to the received RADIO BEARER RELEASE message while keeping HS-DSCH reception active for a second radio bearer mapped to HS-DSCH.

### 8.2.3.32.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services

Test Procedure

The UE is in cell 1 with only signalling radio bearers established. A PS radio bearer is established mapped to HS-DSCH with HS-DSCH reception activated. Then, a CS radio bearer is established.

The SS transmits a RADIO BEARER RELEASE message to the UE. This message requests the release of the CS radio bearer mapped to DCH as well as a timing re-initialised interfrequency hard handover to cell 6. After the UE receives this message, it releases this radio bearer but keeps the radio bearer mapped to HS-DSCH and continues HS-DSCH reception. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC in cell 6.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | | SS establishes a PS RAB mapped to HS-DSCH. See below for contents of the RADIO BEARER SETUP message. |
| 2 | ←→ | | | SS establishes a CS RAB. |
| 3 | ← | | RADIO BEARER RELEASE | |
| 4 | → | | RADIO BEARER RELEASE COMPLETE | The UE releases the CS radio bearer mapped to DCH but keeps the PS radio bearer mapped to HS-DSCH and continues HS-DSCH reception |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| **Information Element** | **Value/remark** |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |

RADIO BEARER RELEASE (Step 3) (FDD)

Use the same message as specified for “Speech in CS” or "Non speech in CS" in 34.108 except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Added or Reconfigured UL TrCH information | Not Present | |
| Added or Reconfigured DL TrCH information | Not Present | |

| - SCTD indicator | FALSE | |

#### 8.2.3.32.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC in cell 6.

### 8.2.3.33 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception with frequency modification)

#### 8.2.3.33.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

8.2.3.33.2 Conformance requirement

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

…

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

Reference

3GPP TS 25.331 clauses 8.5.25.

### 8.2.3.33.3 Test purpose

To confirm that the UE stops HS-DSCH reception when UE releases PS RAB according to the received RADIO BEARER RELEASE message.

### 8.2.3.33.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS service

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS initiates P24 to set up CS RAB.
Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ←→ | | P24 | SS establishes CS RAB. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |

RADIO BEARER RELEASE (Step 2) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Not Present |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | Not Present |

| - Cell parameters ID | Same Cell parameters ID as used for cell 6 |
| - SCTD indicator | FALSE |

#### 8.2.3.33.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.34 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success (stop of HS-DSCH reception with frequency modification)

#### 8.2.3.34.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.34.2 Conformance requirement

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> stop any HS-DSCH reception procedures according to the stored HS-PDSCH configuration;

1> clear any stored HS-PDSCH configuration;

1> remove any H-RNTI stored;

1> clear the variable H_RNTI;

1> set the variable HS_DSCH_RECEPTION to FALSE.

Reference

3GPP TS 25.331 clauses 8.2.2.3.

#### 8.2.3.34.3 Test purpose

To confirm that the UE stops HS-DSCH reception when UE releases CS RAB according to the received RADIO BEARER RELEASE message.

#### 8.2.3.34.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services

Test Procedure

**Table 8.2.3.34**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec(FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.3.34 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.3.34. The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS initiates P24 to set up CS RAB.

Then SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step0). |
| 1 | ←→ | | P24 | SS establishes CS RAB |
| 1a | SS | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.34. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases CS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108.Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |

| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |

RADIO BEARER RELEASE (Step 2) (FDD)

Use the same message as specified for "Speech to CELL_FACH from CELL_DCH in CS" or "Non speech to CELL_FACH from CELL_DCH in CS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- UARFCN uplink (Nu)<br><br>- UARFCN downlink (Nd) | <br>This IE should be present, if the default duplex distance defined for the operating frequency band is not used<br>Same downlink UARFCN as used for cell 6 |

RADIO BEARER RELEASE (Step 2) (1.28 Mcps TDD)

Use the same message as specified for "Speech to CELL_FACH from CELL_DCH in CS" or "Non speech to CELL_FACH from CELL_DCH in CS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- Choice mode | <br>TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |

#### 8.2.3.34.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.35 Radio Bearer Release for transition from CELL_DCH to CELL_PCH: Success (stop of HS-DSCH reception)

#### 8.2.3.35.1 Definition and applicability

All UEs which support FDD or TDD, HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.35.2 Conformance requirement

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.6.3.1,8.5.25

#### 8.2.3.35.3 Test purpose

To confirm that the UE releases CS bearer and stops receiving the HS-DSCH reception according to the received RADIO BEARER RELEASE message.

#### 8.2.3.35.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports both CS domain speech or transparent CS data services and PS services

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS initiates P24 to set up CS RAB.

Then SS transmits a RADIO BEARER RELEASE message to the UE. This message requests to release CS bearer and CS Signalling Connection, stop receiving the HS-DSCH reception and move to CELL_PCH state. After the UE receives this message, it configures them. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 1) |
| 2 | ←→ | | P24 | SS establishes CS RAB. |
| 3 | ← | | RADIO BEARER RELEASE | SS releases CS RAB and CS Signalling Connection |
| 4 | → | | RADIO BEARER RELEASE COMPLETE | |
| 5 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for “Packet to CELL_DCH /HS-DSCH from CELL_DCH in PS ” in TS34.108, except for the followings;

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RELEASE (Step 3)(FDD)

Use the same message as specified for “Speech to CELL_FACH from CELL_DCH in CS” or "Non Speech to CELL_FACH from CELL_DCH in CS" in TS34.108, except for the followings;

| Information Element | Value/remark |
|---|---|
| Activation time | Not present |
| RRC state indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.3.35.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.36 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of E-DCH transmission)

#### 8.2.3.36.1 Definition and applicability

All UEs which support FDD and speech and HS-PDSCH and E-DCH or all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.3.36.2 Conformance requirement

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info";

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH, E-HICH and E-RGCH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

Reference

3GPP TS 25.331 clause 8.5.28

### 8.2.3.36.3 Test purpose

To confirm that the UE releases a radio bearer mapped on E-DCH / HS-DSCH and stops E-DCH transmission / HS-DSCH reception according to the received RADIO BEARER RELEASE message with frequency modification.

### 8.2.3.36.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports CS speech
- UE supports HS-PDSCH
- UE supports E-DPDCH(FDD) or E-PUCH (1.28Mcps TDD)

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P26 to make the UE to move to state 6-18 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH established. The SS initiates P24 to set up CS speech RAB.

Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P26 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ←→ | | P24 | SS establishes CS speech RAB. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt) | <br>TDD<br>Same UARFCN as used for cell 6 |
| Downlink information per radio link list<br>Downlink information for each radio link | 1 radio link |
| - Choice mode<br>- Primary CCPCH info<br>- Cell parameters ID | TDD<br><br>Set to the same as cell 6 |

### 8.2.3.36.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.3.36a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only)

### 8.2.3.36a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

### 8.2.3.36a.2 Conformance requirement

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info";

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH, E-HICH and E-RGCH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second

Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.331 clause 8.5.28, 8.6.6.1,8.6.6.43.

### 8.2.3.36a.3 Test purpose

To confirm that the UE releases a radio bearer mapped on E-DCH / HS-DSCH and stops E-DCH transmission / HS-DSCH reception according to the received RADIO BEARER RELEASE message with frequency modification in the multi-frequency network environment.

### 8.2.3.36a.4 Method of test

Initial Condition

System Simulator:

2 cells

- Cell 1 is active, 3 frequency (one is primary frequency, others are secondary frequency)
- Cell 6 is inactive, 1 frequency

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports CS speech
- UE supports HS-PDSCH
- UE supports E-PUCH (1.28Mcps TDD)

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established at the primary frequency of cell 1. SS initiates P26 to make the UE to move to state 6-18 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH

state and has a radio bearer mapped on HS-DSCH and E-DCH established at one secondary frequency of cell 1. The SS initiates P24 to set up CS speech RAB.

Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P26 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ←→ | | P24 | SS establishes CS speech RAB. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH using three multiplexing options (3/3) and SRBs mapped on DCH/DCH" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| - RAB information for setup | |
| - RB mapping info | |
| - Information for each multiplexing option | 3 RBMuxOptions |
| - RLC logical channel mapping indicator | Not Present |

RADIO BEARER RELEASE (Step 2)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

| **Information Element** | **Value/remark** |
|---|---|
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Not Present |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Multi-frequency Info | Not Present |
| Downlink information per radio link list<br>Downlink information for each radio link | 1 radio link |
| - Choice mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Set to the same as cell 6 |

#### 8.2.3.36a.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.37 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of discontinuous uplink transmission)

#### 8.2.3.37.1 Definition

All UEs, which support FDD, UL DTX.

#### 8.2.3.37.2 Conformance requirement

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> store the contents of the IE in the variable DTX_DRX_PARAMS.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clause 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.3.37.3 Test purpose

To confirm that the UE releases a radio bearer mapped on E-DCH / HS-DSCH and stops discontinuous uplink transmission according to the received RADIO BEARER RELEASE message with frequency modification.

### 8.2.3.37.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission.

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers mapped on E-DCH/HS-DSCH have been established. SS initiates P26 and transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer with RB mapping to HS-DSCH and E-DCH, with UL DTX configured. After the UE receives this message, it establishes a radio bearer and maps it to the HS-DSCH and E-DCH. The UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH with DTX and, if supported, DRX active.

Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P26 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 0a | | SS | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used (i.e. duration of 10 consecutive DTX cycle 2). |
| 1 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | |
| | | | Void | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

The contents of RADIO BEARER SETUP message in this test case are identical to the message sub-type indicated by "Packet to CELL_DCH / E-DCH / HS-DSCH with DTX/DRX using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH".

RADIO BEARER RELEASE (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| New Primary E-RNTI | '1010 1010 1010 1010' |

| Downlink HS-PDSCH Information | Use the message as specified in A20 condition of RB setup message. |
| Downlink information common for all radio links | Use the message as specified in A20 condition of RB setup message expect the following |
| - MAC-hs reset indicator | TRUE |
| Downlink information for each radio links<br><br>- Primary CPICH info<br>- Primary Scrambling Code | Use the message as specified in A20 condition of RB setup message expect the following<br><br>Set to the same code as used for cell 6 |

### 8.2.3.37.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.4 Transport channel reconfiguration

### 8.2.4.1 Transport channel reconfiguration (Timing re-initialised hard handover with transmission rate modification) from CELL_DCH to CELL_DCH: Success

#### 8.2.4.1.1 Definition

#### 8.2.4.1.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATIONmessage; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.4.1.3 Test purpose

To confirm that the UE reconfigures the channel configuration according to a TRANSPORT CHANNEL RECONFIGURATION message, which is used to change the TFCS and the TFS while replacing the RL(s) in the active set with a set of RL(s) disjunct with the previous active set.

#### 8.2.4.1.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and cell 2 are active

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE. Either a streaming CS domain RAB (state 6-9) or an interactive/ background PS domain RAB (state 6-10) has been established. UE connected to cell 1.

### Test Procedure

The UE is in CELL_DCH state, connected to cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new configuration parameters. The message is used to replace the RL(s) in the active set with a set of RL(s) disjunct with the previous active set In this case, the connection to cell 1 is discontinued while a new connection to cell 2 is established at the same time. The TRANSPORT CHANNEL RECONFIGURATION message is used to also change the TFCS and TFS e.g. because the currently used rate is not available on cell 2. The TFCS and TFS change from a value corresponding with one reference configuration in 34.108 (an interactive PS domain RAB from UL:64 DL:64 or a streaming CS RAB from UL:57.6 DL:57.6) to another reference configuration (interactive PS domain RAB from UL:32 DL:32 or a streaming CS RAB from UL:28.8 DL:28.8). The UE shall apply the new configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

### Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | The TFCS and the TFS are changed while replacing the RL(s) in the active set with a set of RL(s) disjunct with the previous active set |
| 4 | | | Void | |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

### Specific Message Contents

#### TRANSPORT CHANNEL RECONFIGURATION (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions.

For non-speech in CS:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| Added or Reconfigured UL TrCH information | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| DL Transport channel information common for all transport channel | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| Added or Reconfigured DL TrCH information | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Set to the same values as for " Non speech in CS " unless explicitly indicated otherwise in the following |
| -Uplink DPCH power control info | Not present |
| Downlink information common for all radio links | Set to the same values as for "Non speech in CS" unless explicitly indicated otherwise in the following |
| - Downlink DPCH info common for all RL | |
| - Timing indicator | Initialise |
| - Downlink DPCH power control information | Not present |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| Downlink information for each radio link list | Set to the same values as for "Non speech in CS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) for cell 2: 150 |
| - Downlink DPCH info for each RL | |
| - DPCH frame offset | Set to value : Default DPCH Offset Value mod 38400 |
| - DL channelisation code | |
| - Scrambling code change | Not present |

For packet in PS:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| DL Transport channel information common for all transport channel | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" unless explicitly indicated otherwise in the following |
| -Uplink DPCH power control info | Not present |
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" unless explicitly indicated otherwise in the following |
| - Downlink DPCH info common for all RL | |
| - Timing indicator | Initialise |
| - Downlink DPCH power control information | Not present |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) for cell 2: 150 |
| - Downlink DPCH info for each RL | |
| - DPCH frame offset | Set to value : Default DPCH Offset Value mod 38400 |
| - DL channelisation code | |
| - Scrambling code change | Not Present |

TRANSPORT CHANNEL RECONFIGURATION (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| DL Transport channel information common for all transport channel | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" unless explicitly indicated otherwise in the following |
| -Uplink DPCH power control info | Not present |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Initialise |
| - Downlink DPCH power control information | Not present |
| Downlink information for each radio link list | |
| - Downlink information for each radio links | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |

#### 8.2.4.1.5 Test requirement

After step 3 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC on a dedicated physical channel using another radio link.

### 8.2.4.1a Transport channel reconfiguration (Transmission Rate Modification) from CELL_DCH to CELL_DCH of the same cell: Success

#### 8.2.4.1a.1 Definition

#### 8.2.4.1a.2 Conformance requirement

1. If the UE receives:

   - a TRANSPORT CHANNEL RECONFIGURATIONmessage; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

2. If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent:

2> not change its current UL Physical channel configuration.

…

3. The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

…

4. In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

5. If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.6.4.

### 8.2.4.1a.3 Test purpose

To confirm that the UE reconfigures the transport channel configuration according to a TRANSPORT CHANNEL RECONFIGURATION message, which specifies a reconfiguration by changing the TFCS.

To confirm that the UE receives the RLC SDU and sends it according to the new UL TFCS.

### 8.2.4.1a.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH_TEST_LOOP (state 6-10a) as specified in clause 7.4 of TS 34.108. The UL RLC_SDU size for the loopback scheme is set to the size correspondent to the maximum uplink TFS as indicated in RADIO BEARER SETUP message during radio bearer establishment procedure. The Contents of the Radio Bearer Setup message is specified in specific message contents.

NOTE: Transmission rate shall be set to the maximum rate for the UE during the radio bearer establishment procedure.

Test Procedure

The UE is in CELL_DCH state.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to modify the UL transmission rate which includes information about uplink TFCS to restrict the use of the highest rate TFCIs.

The UE shall reconfigure the new configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

UL MAC restriction is imposed on the SS so that SS can restrict the use of highest rate TFCI in the uplink

Then the SS transmits a RLC_SDU whose size is the same as the UL RLC_SDU size for the loopback scheme. The UE receives this RLC_SDU and decode it according to the new TFCS.

The RLC_SDU is then looped backed to the SS. The SS should receive the expected data as a RLC_SDU exactly as the one transmitted to the UE.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 2a | ← | | DOWNLINK RLC SDU | |
| 2b | → | | UPLINK RLC SDU | RLC SDU sent back shall be the same as the one sent from the SS. |
| 3 | | | Void | |
| 4 | | | Void | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1)(FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Not Present |
| - PRACH TFCS | Not Present |
| - CHOICE mode | FDD |
| - TFC subset | |
| - UL DCH TFCS | |
| - CHOICE TFCI signalling | Normal |
| - TFCI Field 1 information | |
| - CHOICE TFCS representation | Complete reconfiguration |
| - TFCS complete reconfigure information | |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from TS34.108 clause 6.10.2.4 Parameter Set. |
| - CTFC information | This IE is repeated for TFC numbers and reference to TS34.108 clause 6.10.2.4 Parameter Set |
| - CTFC | Reference to TS34.108 clause 6.10.2.4 Parameter Set as defined in the RADIO BEARER SETUP message with highest rate TF of RAB removed. |
| - Power offset information | |
| - CHOICE Gain Factors | Computed Gain Factors(The last TFC is set to Signalled Gain Factors) |
| - Gain factor βc | 11 (below 64 kbps)<br>9 (higher than 64 kbps) (Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Gain factor βd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Reference TFC ID | 0 |
| - CHOICE mode | FDD |
| - Power offset $P_{p\text{-}m}$ | Not Present |
| Added or Reconfigured UL TrCH information | Not Present |

| Added or Reconfigured DL TrCH information | Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 1)(TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Not Present |
| - PRACH TFCS | Not Present |
| - CHOICE mode | TDD |
| - UL TFCS Identity | |
| - UL TFCS | |
| - CHOICE TFCI signalling | Normal |
| - TFCI Field 1 information | |
| - CHOICE TFCS representation | Complete reconfiguration |
| - TFCS complete reconfigure information | |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from TS34.108 clause 6.10.2.4 Parameter Set. |
| - CTFC information | This IE is repeated for TFC numbers and reference to TS34.108 clause 6.10.2.4 Parameter Set |
| - CTFC | Reference to TS34.108 clause 6.10.2.4 Parameter Set as defined in the RADIO BEARER SETUP message with highest rate TF of RAB removed. |
| - Power offset information | |
| - CHOICE Gain Factors | Computed Gain Factors(The last TFC is set to Signalled Gain Factors) |
| - Gain factor βd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Reference TFC ID | 0 |
| - CHOICE mode | TDD |
| - TFC subset | |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | |
| - RB information to setup | |
| - PDCP info | OMIT |

#### 8.2.4.1a.5 Test requirement

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 2a the UE shall transmit a RLC_SDU that is same as the transmitted data from SS in step 2a on the radio access bearer.

### 8.2.4.2 Void

### 8.2.4.3 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

#### 8.2.4.3.1 Definition

#### 8.2.4.3.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a TRANSPORT CHANNEL RECONFIGURATION message:

…

2> transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

### 8.2.4.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new configuration according to a TRANSPORT CHANNEL RECONFIGURATION message.

### 8.2.4.3.4 Method of test

Initial Condition

System Simulator: 2 cells. – Cell 1 is active and cell 2 is inactive.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.3**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | -75 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | OFF | -75 |

Table 8.2.4.3 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. Then the SS configures its downlink transmission power settings according to column "T1" in table 8.2.4.3. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to restrict transmission on the uplink DCH used by the signalling radio bearer RB2. The message specifies a new configuration in cell 2 but the SS does not configure the new physical channel in cell 2 specified in this message and keep its old configuration in cell 1. Therefore, the UE cannot synchronise with the SS on the new physical channel in cell 2 and shall revert to the old configuration in cell 1 after T312 expires. Then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "physical channel failure" in IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | | | | The SS does not reconfigure the new configuration in cell 2. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE reverts to the old configuration and transmits this message. |
| 4 | → | | MEASUREMENT REPORT | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b and 4)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Non speech in CS", "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- TFC subset<br>- Restricted TrCH information<br>- Uplink transport channel type<br>- Restricted UL TrCh identity<br>- Allowed TFIs<br>- Allowed TFI | <br><br><br>DCH<br>5 <UL DCH for SRB 2><br><br>0 |
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links<br>- CHOICE mode<br>- Primary CPICH info<br>- Primary CPICH scrambling code | <br>FDD<br><br>Ref. to the Default setting for cell 2 in TS34.108 clause 6.1 (FDD) |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Non speech in CS", "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- TFC subset<br>- Restricted TrCH information<br>- Uplink transport channel type<br>- Restricted UL TrCh identity<br>- Allowed TFIs<br>- Allowed TFI | <br><br><br>DCH<br>5 <UL DCH for SRB 2><br><br>0 |
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links<br>- CHOICE mode<br>- Primary CCPCH info | <br>TDD<br>Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |

TRANSPORT CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

### 8.2.4.3.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 2 the UE shall revert to the old configuration in cell 1 and transmit a TRANPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and it shall set the value "physical channel failure" in IE "failure cause".

After step 3, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

### 8.2.4.4 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection)

#### 8.2.4.4.1 Definition

#### 8.2.4.4.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- includes "Physical channel information elements":

the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

The UE shall:

1> in case of reception of a TRANSPORT CHANNEL RECONFIGURATION message:

…

2> transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.3.1.7.

8.2.4.4.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message after it completes a cell update procedure when the UE cannot synchronise with the SS on the new channel before T312 expires and fails to revert to the old configuration.

8.2.4.4.4 Method of test

Initial Condition

System Simulator: 2 cells. – Cell 1 is active and cell 2 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.4**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | -75 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | OFF | -75 |

Table 8.2.4.4 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. Then the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.4.4. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE. The message specifies a new configuration in cell 2 but the SS does not reconfigure the new channel in cell 2 specified in this message and release the old configuration in cell 1. The UE cannot synchronise with SS before T312 expires and shall attempt to revert to the old configuration in cell 1. The UE cannot revert to the old configuration and then transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1. The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | | | | The SS does not reconfigure L1 in accordance with TRANSPORT CHANNEL RECONFIGURTION message and release the old configuration. |
| 3 | → | | CELL UPDATE | This message includes the value "radio link failure" set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | This message includes IE "Physical channel information elements". |
| 5 | | | | The SS changes physical channel configuration according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | → | | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure" |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary CPICH scrambling code | Ref. to the Default setting for cell 2 in TS34.108 clause 6.1 (FDD) |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0000 0001' |
| Cell Update Cause | "radio link failure" |

CELL UPDATE CONFIRM (Step 4) (FDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| UplinkDPCH Info | Set to the same values as RADIO BEARER SETUP message for "Packet to CELL_DCH from CELL_FACH in PS" or "Non speech to CELL_DCH from CELL_FACH in CS" or "Speech to CELL_DCH from CELL_FACH in CS" |
| Downlink information common for all radio links | Set to the same values as RADIO BEARER SETUP message for "Packet to CELL_DCH from CELL_FACH in PS" or "Non speech to CELL_DCH from CELL_FACH in CS" or "Speech to CELL_DCH from CELL_FACH in CS" |
| Downlink information for each radio link list | Set to the same values as RADIO BEARER SETUP message for "Packet to CELL_DCH from CELL_FACH in PS" or "Non speech to CELL_DCH from CELL_FACH in CS" or "Speech to CELL_DCH from CELL_FACH in CS" |

CELL UPDATE CONFIRM (Step 4) (TDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_DCH |
| Uplink DPCH timeslots and codes | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information common for all radio links | Same as RADIO BEARER SETUP message used to move to intial condition |
| Downlink information for each radio link list | Same as RADIO BEARER SETUP message used to move to initial condition |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 6)

Use the same message found in TS 34.108 clause 9, with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | This IE is not checked. |

TRANSPORT CHANNEL RECONGURATION FAILURE (Step 7)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | "physical channel failure" |

#### 8.2.4.4.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

### 8.2.4.4a Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection) (1.28 Mcps TDD Only)

#### 8.2.4.4a.1 Definition

#### 8.2.4.4a.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- includes "Physical channel information elements":

the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

The UE shall:

1> in case of reception of a TRANSPORT CHANNEL RECONFIGURATION message:

…

2> transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.3.1.7.

### 8.2.4.4a.3 Test purpose

1. To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message after it completes a cell update procedure when the UE cannot synchronise with the SS on the new channel before T312 expires and fails to revert to the old configuration.

2. To confirm that the UE reconfigures the transport channel in secondary carrier.

### 8.2.4.4a.4 Method of test

Initial Condition

System Simulator: 2 cells. – Cell 1 is active and cell 2 is inactive. In each cell configure 3 carriers, one is the primary carrier, the other two aresecondary carriers.

Detail in the table as follows:

| Parameter | Cell 1 | Cell 2 |
|---|---|---|
| UTRA RF Channel Number1 | Ch.1 | Ch. 1 |
| UTRA RF Channel Number1 | Ch. 2 | Ch. 2 |
| UTRA RF Channel Number1 | Ch. 3 | Ch. 3 |

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.4a**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | OFF | -75 |

Table 8.2.4.4a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. Then the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.4.4a. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE. The message specifies a new configuration in cell 2 but the SS does not reconfigure the new channel in cell 2

specified in this message and release the old configuration in cell 1. The UE cannot synchronise with SS before T312 expires and shall attempt to revert to the old configuration in cell 1. The UE cannot revert to the old configuration and then transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1. The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence:

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | | | | The SS does not reconfigure L1 in accordance with TRANSPORT CHANNEL RECONFIGURTION message and release the old configuration. |
| 3 | → | | CELL UPDATE | This message includes the value "radio link failure" set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | This message includes IE "Physical channel information elements". |
| 5 | | | | The SS changes physical channel configuration according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | → | | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure" |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| 8 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Info UE go into CELL_DCH state of secondary carrier1 |
| 9 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | UE response the message on DCH ofsecondary carrier1 |
| 10 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Info UE go into CELL_DCH state of secondary carrier2 |
| 11 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | UE response the message on DCH of secondary carrier.2 |
| 12 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Info UE go into CELL_DCH state of primary carrier |
| 13 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | UE response the message on DCH of primary carrier. |
| 14 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state of primary carrier, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |
| Uplink DPCH info | |
| -Uplink Timing Advance Control | |
| - Frequency info | |
| -UpPCH position info | 0 |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0000 0001' |
| Cell Update Cause | "radio link failure" |

CELL UPDATE CONFIRM (Step 4) (TDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_DCH |
| Uplink DPCH timeslots and codes | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information common for all radio links | Same as RADIO BEARER SETUP message used to move to intial condition |
| Downlink information for each radio link list | Same as RADIO BEARER SETUP message used to move to initial condition |
| Uplink DPCH info | |
| -Uplink Timing Advance Control | |
| - Frequency info | |
| -UpPCH position info | 0 |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 6)

Use the same message found in TS 34.108 clause 9, with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | This IE is not checked. |

TRANSPORT CHANNEL RECONGURATION FAILURE (Step 7)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | "physical channel failure" |

TRANSPORT CHANNEL RECONFIGURATION (Step 8 - 10 ) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|

| frequencyInfo | secondary carrier 2 frequency (step 8)<br>secondary carrier1frequency (step 10) |
| Uplink DPCH info | |
| -Uplink Timing Advance Control | |
| -UpPCH position info | 0 |

TRANSPORT CHANNEL RECONFIGURATION (Step 12 ) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt)<br>Uplink DPCH info<br>-Uplink Timing Advance Control<br>-UpPCH position info | <br>TDD<br>primary carrier frequency<br><br><br>0 |

Contents of System Information Block type 3

Use the same message found in TS 34.108 , with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Qrxlevmin | −81dBm |
| Sintrasearch | 21db |
| Sintersearch | 21db |
| -v4b0NonCriticalExtensions | |
| -sysInfoType3-v4b0ext | |
| - mapping-LCR | 0 |

### 8.2.4.4a.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

After step 8 , the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 10 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH of another secondary carrier using AM RLC.

### 8.2.4.5 Void

### 8.2.4.6 Void

### 8.2.4.7 Void

### 8.2.4.8 Void

### 8.2.4.9 Void

### 8.2.4.10 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Success

#### 8.2.4.10.1 Definition

#### 8.2.4.10.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.4.10.3 Test purpose

To confirm that the UE reconfigures a new channel using dedicated physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

#### 8.2.4.10.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The UE has previously stored radio bearer and transport channel parameters for use in CELL_DCH. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which modifies the rate as compared to the stored configuration to the UE. The message also includes the physical layer parameters e.g. IE "Uplink DPCH info" and IE "Downlink DPCH info" leading to a state transition from CELL_FACH to CELL_DCH in the same cell, to the UE. The UE shall reconfigure the new channel according to this message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Includes both IE "Uplink DPCH Info" and IE "Downlink DPCH Info" in the message. |
| 2 | | | | Reconfiguration of transport channel |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (FDD)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS". Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS". Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| Downlink information for each radio link list | |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Downlink DPCH info for each RL | |
| - DL channelisation code | |
| - Scrambling code change | Not Present |

TRANSPORT CHANNEL RECONFIGURATION (TDD)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS".<br>Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS".<br>Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |

TRANSPORT CHANNEL RECONFIGURATION COMPLETE

Use the message with the same message type specified in Annex A.

#### 8.2.4.10.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT RECONFIGURATION COMPLETE message on the newly configured DPCH.

### 8.2.4.10a Transport channel reconfiguration from CELL_FACH to CELL_DCH: Success(1.28 Mcps TDD Only)

#### 8.2.4.10a.1 Definition

#### 8.2.4.10a.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.4.10a.3 Test purpose

1.To confirm that the UE reconfigures a new channel using dedicated physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

2. To confirm that the UE reconfigures the transport channel in secondary carrier.

3. To confirm that the UE can indicate the UpPCH shifting position according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS and complete the process.

8.2.4.10a.4 Method of test

Initial Condition

System Simulator: 1 cell. Congfigure 3 carriers,one is primary carrier, the others are secondary carriers. SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The UE has previously stored radio bearer and transport channel parameters for use in CELL_DCH. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which modifies the rate as compared to the stored configuration to the UE. The message also includes the physical layer parameters e.g. IE "Uplink DPCH info" and IE "Downlink DPCH info" leading to a state transition from CELL_FACH to CELL_DCH in the same cell but in the secondary carrier, to the UE. The UE shall reconfigure the new channel according to this message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Includes both IE "Uplink DPCH Info" and IE "Downlink DPCH Info" in the message in secondary carrier,. |
| 2 | | | | Reconfiguration of transport channel in secondary carrier, |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state in secondary carrier,, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 3 (TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| -v4b0NonCriticalExtensions | |
| -sysInfoType3-v4b0ext | |
| - mapping-LCR | 22 |

TRANSPORT CHANNEL RECONFIGURATION (TDD)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS". Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS". Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Maximum allowed UL TX power | Not Present |
| TransportChannelReconfiguration-r4-TDD128-add-ext-IEs | |
| frequencyInfo | secondary carrier |
| TransportChannelReconfiguration-r4-TDD128-add-ext-IEs | |
| UpPCHpositionInfo | 22 |

TRANSPORT CHANNEL RECONFIGURATION COMPLETE

Use the message with the same message type specified in Annex A.

8.2.4.10a.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT RECONFIGURATION COMPLETE message on the newly configured DPCH in secondary carrier.

8.2.4.11 Void

8.2.4.12 Void

8.2.4.13 Void

8.2.4.14 Void

## 8.2.4.18 Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (Subsequently received)

### 8.2.4.18.1 Definition

### 8.2.4.18.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- TRANSPORT CHANNEL RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

…

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.4.18.3 Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message it ignores the second TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message.

### 8.2.4.18.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous TRANSPORT CHANNEL RECONFIGURATION message elapses, the UE ignores the new TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | For FDD, Scrambling code number is set to "1" and for TDD , the code combination is assigned by SS. |
| 2 | ← | | TRANSPORT CHANNEL RECONFIGURATION | SS send this message before the expiry of "activation time" specified in TRANSPORT CHANNEL SETUP message of step 1. For FDD the IE "Scrambling code number" is set to "2". For TDD the code combination assigned is different from that assigned in stage 1. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE ignores the TRANSPORT CHANNEL RECONFIGURATION message in step 2 and configures according to the TRANSPORT CHANNEL RECONFIGURATION message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|

TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.4.18.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.19 Transport Channel Reconfiguration from CELL_FACH to CELL_DCH: Success (Subsequently received)

#### 8.2.4.19.1 Definition

#### 8.2.4.19.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- TRANSPORT CHANNEL RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.4.19.3 Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message it ignores the second TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message.

### 8.2.4.19.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous TRANSPORT CHANNEL RECONFIGURATION message elapses, the UE ignores the new TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | For FDD, Scrambling code number is set to "1" and for TDD, the code combination is assigned by SS. |
| 2 | ← | | TRANSPORT CHANNEL RECONFIGURATION | For FDD the IE "Scrambling code number" is set to "2". For TDD the code combination assigned is different that assigned in stage 1. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE ignores the TRANSPORT CHANNEL RECONFIGURATION message in step 2 and configures according to the TRANSPORT CHANNEL RECONFIGURATION message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|

TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.4.19.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.20 Void

### 8.2.4.21 Void

### 8.2.4.22 Void

### 8.2.4.23 Void

### 8.2.4.24 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Success with uplink transmission rate modification

#### 8.2.4.24.1 Definition

#### 8.2.4.24.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATION message:

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

#### 8.2.4.24.3 Test purpose

To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC after reconfigure its available uplink TFC according to a TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.24.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state of cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to modify the transmission rate. This message includes a new uplink transport channel information in order to restricts available uplink TFC within assigned uplink TFCS. The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC after reconfiguring its transport channel parameters. Next the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes a new uplink transport channel information in order to reconfigure uplink TFCS. The UE transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC after reconfiguring its transport channel parameters according to the TRANSPORT CHANNEL RECONFIGURATION message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_DCH state of cell 1. |
| 2 | ← | | TRANSPORT CHANNEL RECONFIGURATION | This message includes the IE"TFC subset" and don't include UL/DL physical channel information. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | |
| - CHOICE mode | FDD |
| - TFC subset | |
| - CHOICE Subset representation | Allowed transport format combination list |
| - Allowed transport format combination | Indicate TFCs which are a part of the TFCS defined in this message to restrict uplink allowed TFC subset. |
| - UL DCH TFCS | Same contents as a RADIO BEARER SETUP message used in initial procedure. |
| CHOICE channel requirement | Not present |
| Downlink information per radio link list | Not present |

TRANSPORT CHANNEL RECONFIGURATION (Step 4)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | |
| - CHOICE mode | FDD |
| - TFC subset | |
| - UL DCH TFCS | |
| - CHOICE TFCI signalling | Normal |
| - TFCI Field 1 information | |
| - CHOICE TFCS representation | Complete reconfiguration |
| - TFCS complete reconfiguration | |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from TS34.108 clause 6.10.2.4 Parameter Set. |
| - CTFC information | This IE is repeated for TFC numbers and reference to TS34.108 clause 6.10.2.4 Parameter Set |
| - CTFC | Reference to TS34.108 clause 6.10.2.4 Parameter Set as defined in the RADIO BEARER SETUP message with highest rate CTFC removed. |
| - Power offset information | |
| - CHOICE Gain Factors | Computed Gain Factors except for the TFC for 64 kbps and the last TFC which are set to Signalled Gain Factors |
| - Gain factor βc | 11 ( TFC for 64 kbps)<br>9 (last TFC, i.e. highest rate)<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Gain factor βd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Reference TFC ID | 0 (64 kbps and below)<br>1 (higher than 64 kbps) |
| - CHOICE mode | FDD |
| - Power offset $P_{p-m}$ | Not Present |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| CHOICE channel requirement | Uplink DPCH info |
| - Uplink DPCH power control info | Same contents as a RADIO BEARER SETUP message used in initial procedure |
| - CHOICE mode | FDD |
| - Scrambling code type | Long |
| - Scrambling code number | 0 (0 to 16777215) |
| - Number of DPDCH | Not Present |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set<br>Set different parameter which is included in a RADIO BEARER SETUP message used in initial procedure. |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set<br>Set different parameter which is included in a RADIO BEARER SETUP message used in initial procedure. |
| - Number of FBI bit | Not Present |
| - Puncturing Limit | Reference to TS34.108 clause 6.10 Parameter Set<br>Set different parameter which is included in a RADIO BEARER SETUP message used in initial procedure. |
| Downlink information per radio link list | Not present |

#### 8.2.4.24.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.25 Transport channel reconfiguration from CELL_FACH to CELL_DCH (Frequency modification): Success

#### 8.2.4.25.1 Definition

#### 8.2.4.25.2 Conformance requirement

If the UE receives:

-a TRANSPORT CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> remove any C-RNTI from MAC;

1> clear the C_RNTI.

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

#### 8.2.4.25.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_DCH according to TRANSPORT CHANNEL RECONFIGURATION message.

2. To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION message on the uplink DCCH using AM RLC on dedicated physical channel in a different frequency.

#### 8.2.4.25.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.4.25**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -55 | Off | -55 |

Table 8.2.4.25 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of ce11 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.25. The SS switches its downlink transmission power settings to columns "T1" and transmits a TRANSPORT CHANNEL RECONFIGURATION message, which includes new frequency information leading to a state transition from CELL_FACH to CELL_DCH in cell 6. The UE shall reconfigure transport channel parameter and frequency band according to this message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC in cell 6. The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.25. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.4.25. |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 4 | | | | Reconfiguration of transport channel. |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE sends this message in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 3)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | 350 |

#### 8.2.4.25.5 Test requirement

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 5 the UE shall be in CELL_DCH state of cell 6.

### 8.2.4.26 Void

### 8.2.4.27 Void

### 8.2.4.28 Void

### 8.2.4.29 Transport Channel Reconfiguration for transition from CELL_DCH to CELL_DCH (Frequency modification): Success

#### 8.2.4.29.1 Definition

#### 8.2.4.29.2 Conformance requirement

If the UE receives:

-a TRANSPORT CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.4.29.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_DCH according to the TRANSPORT CHANNEL RECONFIGURATION message.

2. To confirm that the UE transmits the TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

8.2.4.29.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: CS-DCCH_DTCH_DCH (state 6-9) or PS_DCCH_DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.29**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -72 | Off | -55 |
| PCCPCH RSCP (TDD) | dBm | -55 | -72 | off | -55 |

Table 8.2.4.29 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.29. The SS switches its downlink transmission power settings to columns "T1" and transmits a TRANSPORT CHANNEL RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 , and for FDD IE "Primary CPICH info" set to Primary Scrambling Code which is assigned to P-CPICH of cell 6, for TDD IE “Primary CCPCH info” set to cell parameter ID which is assigned to P-CCPCH of cell 6. The UE shall select cell 6 and reconfigure its transport channel parameters after receiving this message, and then remain in CELL_DCH state. The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC after completes configuration according to receiving TRANSPORT CHANNEL RECONFIGURATION message. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.29. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.4.29. |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and for FDD IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. For 1.28 Mcps TDD, IE "Primary CCPCH info" set to cell parameter ID which is assigned to P-CCPCH of cell 6 |
| 4 | | | | The UE select cell 6. |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (FDD)

The contents TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" or "Speech in CS" or "Non speech from in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (1.28 Mcps TDD)

The contents TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" or "Speech in CS" or "Non speech from in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| - Cell parameters ID | Same as cell 6 |

8.2.4.29.5 Test requirement

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 5 the UE shall be in CELL_DCH state in cell 6.

### 8.2.4.30 Void

### 8.2.4.31 Void

### 8.2.4.32 Void

### 8.2.4.33 Void

### 8.2.4.34 Void

### 8.2.4.35 Void

### 8.2.4.36 Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification)

#### 8.2.4.36.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.4.36.2 Conformance requirement

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

…

Reference

3GPP TS 25.331 clauses 8.2.2, 8.6.3.1, 8.2.2.3, 8.5.25

### 8.2.4.36.3 Test purpose

To confirm that the UE reconfigures the transport and physical channel while being mapped to HS-DSCH according to the received TRANSPORT CHANNEL RECONFIGURATION message.

To confirm that the UE keeps the same value of TTI (transmission time interval) during the procedure.

### 8.2.4.36.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established using a 384 kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 64 kbps (1.28Mcps TDD) uplink DCH.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this

message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon successfully received the complete message from the UE, SS transmits another TRANSPORT CHANNEL RECONFIGURATION message to limit the uplink transmission rate to 32kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD). After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Next the SS transmits a new TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes an old UL DCH TFCS for uplink 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate in order to remove the limitation for uplink 32kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD) transmission rate and keeps the transmission time interval. Upon received this message, the UE reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS then transmits one more TRANSPORT CHANNEL RECONFIGURATION message to remove the limitation for uplink 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate and assign a new uplink 384kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) transmission rate. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 64 kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 16 kbps (1.28Mcps TDD) |
| 4 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 5 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 6 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 384kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) |
| 8 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0) (FDD)

Use the same message as specified for "Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, with the following exceptions; |
| - PDCP info | Not present |
| - Transmission RLC discard | |
| - MAX_DAT | 10 |
| - Transmission window size | 256 |
| - Timer_RST | 1000 |
| - Max_RST | 12 |
| - Timer_poll_prohibit | 50 |
| - Timer_poll | 400 |
| - Poll_Windows | 80 |
| - Receiving window size | 2047 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 50 |
| UL Transport channel Information for all transport channels | |
| - CHOICE Gain Factors | Computed Gain Factors (The last TFC is set to Signalled Gain Factors) |
| - Gain factor$\beta$c | 10 (below 64 kbps)<br>8 (higher than 64 kbps) |
| - Gain factor$\beta$d | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| Added or Reconfigured UL TrCH information | |
| - Transmission Time Interval | 10ms (for DCH 1) |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Maximum allowed UL TX power | 24dBm |
| CHOICE channel requirement | |
| - $\Delta_{ACK}$ | 6 |
| - $\Delta_{NACK}$ | 6 |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (FDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>Set according to the radio bearer configuration for “Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br>Not Present |
| CHOICE channel requirement<br>- Uplink DPCH power control info<br><br>- CHOICE mode<br>- Scrambling code type<br>- Scrambling code number<br>- Number of DPDCH<br>- Spreading factor<br><br><br><br>- TFCI existence<br><br><br><br>- Number of FBI bit<br>- Puncturing Limit | Uplink DPCH info<br>Same contents as a RADIO BEARER SETUP message used in the initial procedure<br>FDD<br>Long<br>1<br>Not Present<br>Set according to the radio bearer configuration for “Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set.<br>Set according to the radio bearer configuration for “Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set.<br>Not Present<br>Set according to the radio bearer configuration for “Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Downlink information for each radio link list | Not present |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (1.28Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>Set according to the radio bearer configuration for “Interactive or background / UL:16 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br><br>Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>“Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br><br>Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 7) (FDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel | Not Present<br>Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| CHOICE channel requirement<br>- Uplink DPCH power control info<br><br>- CHOICE mode<br>- Scrambling code type<br>- Scrambling code number<br>- Number of DPDCH<br>- Spreading factor<br><br>- TFCI existence<br><br>- Number of FBI bit<br>- Puncturing Limit | Uplink DPCH info<br>Same contents as a RADIO BEARER SETUP message used in initial procedure<br>FDD<br>Long<br>1<br>Not Present<br>Same contents as the RADIO BEARER SETUP message used in the initial procedure.<br>Same contents as the RADIO BEARER SETUP message used in the initial procedure.<br>Not Present<br>Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Downlink information for each radio link list | Not present |

TRANSPORT CHANNEL RECONFIGURATION (Step 7) (1.28Mcps TDD, 3.84Mcps and 7.68Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |

#### 8.2.4.36.5 Test requirements

After step 1, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 3, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 5, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 7, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.36a Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification) (TDD)

#### 8.2.4.36a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

#### 8.2.4.36a.2 Conformance requirement

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

…

3GPP TS 25.331 clauses 8.2.2, 8.6.3.1, 8.2.2.3, 8.5.25

### 8.2.4.36a.3 Test purpose

To confirm that the UE reconfigures the transport and physical channel while being mapped to HS-DSCH according to the received TRANSPORT CHANNEL RECONFIGURATION message.

To confirm that the UE keeps the same value of TTI (transmission time interval) during the procedure.

### 8.2.4.36a.4 Method of test

Initial Condition

System Simulator: 1 cell is active, the cell configure 3 carriers ，one is the primary carrier，the other two are secondary carrier.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established using a 384 kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 64 kbps (1.28Mcps TDD) uplink DCH.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 64kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon successfully received the complete message from the UE, SS transmits another TRANSPORT CHANNEL RECONFIGURATION message to limit the uplink transmission rate to 32kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD). After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Next the SS transmits a new TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes an old UL DCH TFCS for uplink 64kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate in order to remove the limitation for uplink 32kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD) transmission rate and keeps the transmission time interval. Upon received this message, the UE reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS then transmits one more TRANSPORT CHANNEL RECONFIGURATION message to remove the limitation for uplink 64kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate and assign a new uplink 384kbps (3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) transmission rate. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 64 kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (3.84Mcps TDD and 7.68 Mcps) or 16 kbps (1.28Mcps TDD) |
| 4 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 5 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 64kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 6 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 384kbps (3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) |
| 8 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0) (1.28McpsTDD, 3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS” in 34.108.

| Information Element | Value/remark |
|---|---|
| RadioBearerSetup-r5-TDD128-add-ext-IEs | |
| -frequencyInfo | secondary carrier frequency |
| -UpPCHpositionInfo | 22 |

TRANSPORT CHANNEL RECONFIGURATION (Steps 1 and 5) (1.28Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Include only the CTFC’s defined in the RADIO BEARER SETUP message used in the initial procedure that restrict the uplink transmission rate to 32 kbps. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information<br>TransportChannelReconfiguration -r5-TDD128-add-ext-IEs<br>-frequencyInfo | Not Present<br>Not Present<br>Not Present<br>secondary carrier frequency |

TRANSPORT CHANNEL RECONFIGURATION (Steps 1 and 5) (3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Include only the CTFC’s defined in the RADIO BEARER SETUP message used in the initial procedure that restrict the uplink transmission rate to 64 kbps. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br>Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (1.28Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Set according to the radio bearer configuration for “Interactive or background / UL:16 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Uplink DPCH info | Not Present<br>Not Present |
| -Uplink Timing Advance Control | |
| - Frequency info | secondary carrier frequency |
| -UpPCH position info | 22 |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | “Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br><br>Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 7) (1.28Mcps TDD, 3.84Mcps and 7.68Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Added or Reconfigured UL TrCH information<br>Uplink DPCH info | Not Present |
| -Uplink Timing Advance Control | |
| - Frequency info | secondary carrier frequency |
| -UpPCH position info | 22 |

### 8.2.4.36a.5 Test requirements

After step 1, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 3, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 5, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 7, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## 8.2.4.36b Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification) ( In a different frequency band)

### 8.2.4.36b.1 Definition and applicability

Same conformance requirement as in clause 8.2.4.36a except that UE is support for different frequency band.

### 8.2.4.36b.2 Conformance requirement

Same conformance requirement as in clause 8.2.4.36a .

### 8.2.4.36b.3 Test purpose

Same conformance requirement as in clause 8.2.4.36a except that UE can work in different frequency bands.

### 8.2.4.36b.4 Method of test

Same conformance requirement as in clause 8.2.4.36a except for Expected sequence

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 64 kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (3.84Mcps TDD and 7.68 Mcps) or 16 kbps (1.28Mcps TDD) |
| 4 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 5 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 64kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 6 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 384kbps (3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) |
| 8 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | UE will run test procedure for 2 kinds of condition. The first,. primary carrier and the secondary carriers of the UE work in same frequency band. Secondly,, primary carrier and the secondary carriers of the UE work in different frequency bands. |

### 8.2.4.36b.5 Test requirements

Same conformance requirement as in clause 8.2.4.36a.

## 8.2.4.36c Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (inter-band frequency hard handover,,with active HS-DSCH reception, not changing the value of TTI during UL rate modification, LCR TDD band a-f)

### 8.2.4.36c.1 Definition and applicability

Same conformance requirement as in clause 8.2.4.36a except that UE supports different frequency bands.

### 8.2.4.36c.2 Conformance requirement

Same conformance requirement as in clause 8.2.4.36a.

### 8.2.4.36c.3 Test purpose

Same conformance requirement as in clause 8.2.4.36a except that UE can receive TRANSPORT CHANNEL RECONFIGURATION message on in a different frequency band cell.

### 8.2.4.36c.4 Method of test

Same conformance requirement as in clause 8.2.4.36 except for the following:

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive. cell 1 and cell 6 belong to different frequency bands. Cell 1 is active and configure three carriers,one primary carrier with two secondary carriers.

Test Procedure

**Table 8.2.4.36c.4**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.4.36c.4 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.36c.4. The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established using a 64 kbps (1.28Mcps TDD) uplink DCH.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon successfully received the complete message from the UE, SS transmits another TRANSPORT CHANNEL RECONFIGURATION message to limit the uplink transmission rate to 16 kbps (1.28Mcps TDD). After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Next the SS transmits a new TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes an old UL DCH TFCS for uplink 32 kbps (1.28Mcps TDD) transmission rate in order to remove the limitation for uplink 16 kbps (1.28Mcps TDD) transmission rate and keeps the transmission time interval. Upon received this message, the UE reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS then transmits one more TRANSPORT CHANNEL RECONFIGURATION message to remove the limitation for uplink 32 kbps (1.28Mcps TDD) transmission rate and assign a new uplink 64 kbps (1.28Mcps TDD) transmission rate. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

If UE support a+f frequency band, the The SS switches its downlink transmission power settings to columns "T1". The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message ncluding IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" of cell 6 parameters to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC on cell 6.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 64 kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (3.84Mcps TDD and 7.68 Mcps) or 16 kbps (1.28Mcps TDD) |
| 4 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 5 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 64kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 6 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 384kbps (3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) |
| 8 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.4.36c.4. |
| 10 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (1.28Mcps TDD).It Include IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set cell 6 parameters. |
| 11 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| | | | | The UE TRANSPORT CHANNEL RECONFIGURATION on cell 6. |

### 8.2.4.36c.5 Test requirements

After step 11, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC on cell 6.

## 8.2.5 Transport format combination control

### 8.2.5.1 Void

NOTE: Test case “Transport format combination control in CELL_DCH: restriction” have been removed as being implicitely tested by radio bearer test cases in clause 14.

### 8.2.5.2 Void

NOTE Test case “Transport format combination control in CELL_DCH: release a restriction” have been removed as being implicitely tested by radio bearer test cases in clause 14.

### 8.2.5.3 Void

### 8.2.5.4 Transport format combination control in CELL_DCH: Failure (Invalid configuration)

#### 8.2.5.4.1 Definition

#### 8.2.5.4.2 Conformance requirement

If the variable INVALID_CONFIGURATION is set to TRUE due to the received TRANSPORT FORMAT COMBINATION CONTROL message the UE shall:

1> if the TRANSPORT FORMAT COMBINATION CONTROL message was received on AM RLC:

2> keep the TFC subset existing before the TRANSPORT FORMAT COMBINATION CONTROL message was received;

2> transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC;

2> set the IE "RRC transaction identifier" in the TRANSPORT FORMAT COMBINATION CONTROL FAILURE message to the value of "RRC transaction identifier" in the entry for the TRANSPORT FORMAT COMBINATION CONTROL message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "invalid configuration";

2> when the TRANSPORT FORMAT COMBINATION CONTROL FAILURE message has been submitted to lower layers for transmission the procedure ends.

1> if the TRANSPORT FORMAT COMBINATION CONTROL message was received on UM RLC:

2> ignore the TRANSPORT FORMAT COMBINATION CONTROL message.

Reference

3GPP TS 25.331 clause 8.2.5.4, 8.2.5.5

#### 8.2.5.4.3 Test purpose

To confirm that the UE transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC if it receives a TRANSPORT FORMAT COMBINATION CONTROL message including an invalid configuration.

#### 8.2.5.4.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: DCCH+DTCH_DCH (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message including some IEs set to get an invalid configuration. The UE keeps its current configuration and transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | | | | UE is in CELL_DCH state with a DCH for a signalling radio bearer and a DCH for a radio access bearer. |
| 2 | | | Void | |
| 3 | | | Void | |
| 3a | | | Void | |
| 4 | ← | | TRANSPORT FORMAT COMBINATION CONTROL | This message includes an invalid configuration. |
| 5 | → | | TRANSPORT FORMAT COMBINATION CONTROL FAILURE | The UE shall not change its configuration |
| 6 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0band 6)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions:

The order in which the RBs are reported is not checked.

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

TRANSPORT FORMAT COMBINATION CONTROL (Step 4)

Use the same message sub-type titled "TRANSPORT FORMAT COMBINATION CONTROL" in [9] TS 34.108 clause 9, with following exceptions:

| Information Element | Value/remark |
|---|---|
| TrCH information elements | |
| -DPCH/PUSCH TFCS uplink in uplink | |
| - Restricted TrCH information | |
| - Uplink transport channel type | DCH |
| - Restricted UL TrCH identity | 15 ( for RACH transport channel identity) |
| - Allowed TFI | 0 |

TRANSPORT FORMAT COMBINATION CONTROL FAILURE (Step 5)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

### 8.2.5.4.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 4 the UE shall transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

After step 5, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

## 8.2.6 Physical channel reconfiguration

### 8.2.6.1 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success

#### 8.2.6.1.1 Definition

#### 8.2.6.1.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATIONmessage; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.6.1.3 Test purpose

To confirm that the UE reconfigures the physical channel parameters according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS. After the reconfiguration, the UE shall be able to communicate with the SS on the new physical channel.

#### 8.2.6.1.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new several physical layer parameters. The UE shall reconfigure the physical channel at the activation time specified in this message and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC after its transition. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See message contents |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Maximum allowed UL Tx power | 31dBm |
| Uplink DPCH info | |
| - Scrambling code number | 1 |
| Downlink information common for all radio links | |
| Downlink information for each radio link | |
| - Code number | 1 |

PHYSICAL CHANNEL RECONFIGURATION (3.84 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Uplink DPCH timeslots and codes | |
| - First timeslot code list | Assigned by SS |
| Downlink information common for all radio links | Absent |

PHYSICAL CHANNEL RECONFIGURATION (1.28 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |

| Physical Channel Reconfiguration r4<br>- UL Channel Requirement<br>- Uplink DPCH info<br>- CHOICE mode<br>- Uplink DPCH timeslots and codes<br>- First timeslot Code List<br>- Channelisation Code<br>-DL InformationPerRL List<br>- DL DPCH InfoPerRL<br>- DL TS ChannelisationCodesShort | <br><br><br>TDD<br><br><br>cc8_2<br><br><br>'0011000000000000'B |

PHYSICAL CHANNEL RECONFIGURATION (7.68 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Uplink DPCH timeslots and codes VHCR<br>- First timeslot code list<br>- Channelisation code<br>Downlink information per radio link list<br>- Downlink information for each radio link<br>- Downlink DPCH info for each RL<br>- Downlink DPCH timeslots and codes VHCR<br>- First timeslot channelisation codes channelisation codes VHCR<br>- First Channelisation code<br>- Last Channelisation code | <br><br>(16/1)<br><br><br><br><br><br><br>(32/1)<br>(32/2) |

8.2.6.1.5 Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

## 8.2.6.1a Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success (1.28 Mcps TDD Only)

8.2.6.1a.1 Definition

8.2.6.1a.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATIONmessage; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.1a.3 Test purpose

1.To confirm that the UE reconfigures the physical channel parameters according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS. After the reconfiguration, the UE shall be able to communicate with the SS on the new physical channel.

2. To confirm that the UE can indicate the UpPCH shifting position according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS and complete the process.

### 8.2.6.1a.4 Method of test

Initial Condition

System Simulator: 2 cells. Cell 1at UARFCN 1 and Cell4 at UARFCN 4.

UpPCH shifting position is 22 at Cell4.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.1a**

| Parameter | Unit | Cell 1 | | Cell4 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new several physical layer parameters. The UE shall reconfigure the physical channel at the activation time specified in this message and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC after its transition. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new several physical layer parameters. The UE shall reconfigure the physical channel and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See message contents |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The message indicate that UE is in CELL_DCH state at cell 4 and specify the carrier and UpPCH shifting position. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 3(TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| -v4b0NonCriticalExtensions | | |
| -sysInfoType3-v4b0ext | | |
| - mapping-LCR | 22 | |

PHYSICAL CHANNEL RECONFIGURATION (1.28 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Physical Channel Reconfiguration r4 | |
| - UL Channel Requirement | |
| - Uplink DPCH info | |
| - CHOICE mode | TDD |
| - Uplink DPCH timeslots and codes | |
| - First timeslot Code List | |
| - Channelisation Code | cc8_2 |
| -DL InformationPerRL List | |
| - DL DPCH InfoPerRL | |
| - DL TS ChannelisationCodesShort | '0011000000000000'B |
| Uplink DPCH info | |
| -Uplink Timing Advance Control | |
| - Frequency info | Secondary carrier |
| -UpPCH position info | 22 |

8.2.6.1a.5 Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and t UE is in CELL_DCH state.

### 8.2.6.2 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Unsupported configuration)

#### 8.2.6.2.1 Definition

#### 8.2.6.2.2 Conformance requirement

If the UTRAN instructs the UE to use a configuration, which it does not support and/or if the received message causes the variable UNSUPPORTED_CONFIGURATION to be set to TRUE, the UE shall:

1> transmit a failure response as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "configuration unsupported".

1> set the variable UNSUPPORTED_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

…

The UE should set the variable UNSUPPORTED_CONFIGURATION to TRUE if the received message is not according to the UE capabilities.

Reference

3GPP TS 25.331 clause 8.2.2.6, 8.2.2.9, 8.5.20.

#### 8.2.6.2.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters for the UE.

#### 8.2.6.2.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS.The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes configuration parameters unsupported by the UE. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC . UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Includes configuration unsupported by the UE |
| 2 | → | | PHYISICAL CHANNEL RECONFIGURATION FAILURE | The UE shall not reconfigure and continue to communicate using the old configuration. |
| 3 | → | | MEASUREMENT REPORT | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b and 3)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (FDD) (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 Clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink (Nu) | 0 |
| - UARFCN downlink (Nd) | 950 |

PHYSICAL CHANNEL RECONFIGURATION (TDD) (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in [9] TS 34.108 Clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN (Nt) | 0 |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 Clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Not checked |

#### 8.2.6.2.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC .

After step 2, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

### 8.2.6.3 Void

### 8.2.6.4 Void

### 8.2.6.5 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Incompatible simultaneous reconfiguration)

#### 8.2.6.5.1 Definition

#### 8.2.6.5.2 Conformance requirement

If the received message is any of the messages:

- PHYSICAL CHANNEL RECONFIGURATION; or

…

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

…

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

…

3> else:

4> reject the transaction; and

4> if the IE "Message Type" of the received message is not present in the table "Rejected transactions" in the variable TRANSACTIONS:

5> store the IE "Message type" and the IE "RRC transaction identifier" of the received message in the table "Rejected transactions" in the variable TRANSACTIONS.

…

If the table "Rejected transactions" in the variable TRANSACTIONS is set due to the received message and the variable PROTOCOL_ERROR_REJECT is set to FALSE, the UE shall:

1> not apply the configuration contained in the received reconfiguration message;

1> transmit a failure response message as specified in subclause TS 25.331 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Rejected transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "incompatible simultaneous reconfiguration".

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.9, 8.2.2.12, clause 8.6.3.11.

### 8.2.6.5.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than PHYSICAL CHANNEL RECONFIGURATION, it shall keep its configuration as if the PHYSICAL CHANNEL RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.

### 8.2.6.5.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the PHYSICAL CHANNEL RECONFIGURATION message, the UE shall keep the configuration as if it had not received the PHYSICAL CHANNEL RECONFIGURATION message and shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the PHYSICAL CHANNEL RECONFIGURATION FAILURE message, the UE reconfigures the new physical channel parameters upon the activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Sent before the "activation time" specified in the message in step 1 has elapsed. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE does not change the configuration due to the reception of a PHYSICAL CHANNEL RECONFIGURATION message. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | This message is on DCCH using AM RLC. |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time Info | Current CFN-[current CFN mod 8 + 8 ] |
| Uplink DPCH info | |
| - Scrambling code number | 1 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

RADIO BEARER RECONFIGURATION (Step 1) (TDD)

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| - Uplink DPCH timeslots and codes | |
| - First timeslot code list | Assigned by SS |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time | Not Present |
| Uplink DPCH info | |
| - Scrambling code number | 2 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (TDD)

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| - Uplink DPCH timeslots and codes | |
| - First timeslot code list | Different as assigned in Step 1 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Incompatible simultaneous reconfiguration |

### 8.2.6.5.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC on the DCCH.

## 8.2.6.6 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Invalid message reception and Invalid configuration)

### 8.2.6.6.1 Definition

### 8.2.6.6.2 Conformance requirement

If the received reconfiguration message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to TS 25.331 clause 9, the UE shall perform procedure specific error handling as follows. The UE shall:

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Rejected transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to the cause value "protocol error";

2> include the IE "Protocol error information" with contents set to the value of the variable PROTOCOL_ERROR_INFORMATION.

If the variable INVALID_CONFIGURATION is set to TRUE the UE shall:

1> keep the configuration existing before the reception of the message;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

3> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

3> clear that entry.

2> set the IE "failure cause" to "invalid configuration".

1> set the variable INVALID_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

### Reference

3GPP TS 25.331 clause 8.2.2.13, 8.2.2.11, 8.2.2.9.

#### 8.2.6.6.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives an invalid PHYSICAL CHANNEL RECONFIGURATION message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a PHYSICAL CHANNEL RECONFIGURATION message including some IEs set to give an invalid configuration.

#### 8.2.6.6.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits an invalid PHYSICAL CHANNEL RECONFIGURATION message to the UE, which contains an unexpected critical message extension. The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with a value "protocol error" in IE "failure cause" and also a value "Message extension not comprehended" in IE "Protocol error cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically. SS transmits a PHYSICAL CHANNEL RECONFIGURATION message including some IEs which are set to give an invalid configuration. The UE keeps its initial configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See specific message content. |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE does not change its configuration. |
| 2a | → | | MEASUREMENT REPORT | |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | This message includes IEs which is set to give an invalid configuration |
| 4 | | | | The UE does not change its configuration |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "invalid configuration |
| 6 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b, 2a and 6)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the PHYSICAL CHANNEL RECONFIGURATION message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Critical extensions | 'FF'H |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause<br>- Failure cause<br>- Protocol error information<br>- Protocol error cause | <br>Protocol error<br><br>Message extension not comprehended |

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links<br>- Downlink DPCH info common for all RL<br>- Timing Indicator<br>- Default DPCH Offset Value<br>Downlink information for each radio links<br>- DPCH frame offset | <br><br>Initialise<br>1 (512)<br><br>4 (1024) |

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_FACH from CELL_DCH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links<br>- Downlink DPCH info common for all RL<br>- Timing Indicator<br>- Default DPCH Offset Value<br>- CHOICE mode<br>- Default DPCH Offset Value (DOFF) | <br><br>Initialise<br><br>TDD<br>Not Present |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

### 8.2.6.6.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value "protocol error" in IE "failure cause" and also setting value "Message extension not comprehended" in IE "Protocol error cause".

After step 2, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

After step 5, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

## 8.2.6.7 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success

### 8.2.6.7.1 Definition

### 8.2.6.7.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.6.7.3 Test purpose

To confirm that the UE reconfigures a common physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL_DCH to CELL_FACH.

#### 8.2.6.7.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE shall then reconfigure the specified common physical channel according to this message and the system information messages. Following this, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the DCCH. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

#### 8.2.6.7.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE messageon the common physical channel.

### 8.2.6.8 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection)

#### 8.2.6.8.1 Definition

#### 8.2.6.8.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.3.1.7.

### 8.2.6.8.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after the UE completes a cell update procedure.

### 8.2.6.8.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes IE "Primary CPICH info"" (for FDD) or "Primary CCPCH info" (for TDD) and no dedicated physical channel information to invoke the UE to transit from CELL_DCH to CELL_FACH. As the UE cannot detect the specified cell, the UE shall initiate the cell update procedure. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving a CELL UPDATE message. The UE then transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | This message include IE "Primary CPICH info" for FDD and Primary CCPCH info for TDD. |
| 3 | | | Void | |
| 4 | → | | CELL UPDATE | The value "cell reselection" shall be set in IE "Cell update cause". |
| 5 | ← | | CELL UPDATE CONFIRM | See message content. |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>150 |

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | <br><br>4 |

CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A for FDD and Annex A for TDD with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 5)

Use the same message type found in clause Annex A, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 6)

Only the message type is checked.

#### 8.2.6.8.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 5 UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

After step 6 UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.9 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success

#### 8.2.6.9.1 Definition

#### 8.2.6.9.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.9.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which invoke UE to transit from CELL_FACH to CELL_DCH.

### 8.2.6.9.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_FACH to CELL_DCH. The UE shall reconfigure the new dedicated physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 5 | | | | The UE shall configure the allocated dedicated physical channels. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A for FDD and Annex A for TDD.

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

8.2.6.9.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION message on the new dedicated physical channel.

## 8.2.6.9a Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success(1.28 Mcps TDD Only)

### 8.2.6.9a.1 Definition

### 8.2.6.9a.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.9a.3 Test purpose

1. To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which invoke UE to transit from CELL_FACH to CELL_DCH.

2. To confirm that the UE reconfigures the physical channel in secondary carrier.

### 8.2.6.9a.4 Method of test

Initial Condition

System Simulator: 1 cell, Configure 3 carriers □one is theprimary carrier□the other two are secondary carriers.

Detail in the table as follows:

| Parameter | Cell 1 | Cell 2 | Cell 3 |
|---|---|---|---|
| UTRA RF Channel Number1 | Ch. 1 | Ch. 1 | Ch.2 |
| UTRA RF Channel Number2 | Ch. 2 | Ch. 2 | Ch. 1 |
| UTRA RF Channel Number3 | Ch.3 | Ch.3 | Ch.3 |

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_FACH to CELL_DCH. The UE shall reconfigure the new dedicated physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 5 | | | | The UE shall configure the allocated dedicated physical channels on the secondary carrier. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state of the secondary carrier □, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A for TDD.

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

with the following exceptions:

| Information Element | Value/remark |
|---|---|
| PhysicalChannelReconfiguration-r4-TDD128-add-ext-IEs | |
| frequencyInfo | secondary carrier frequency |

8.2.6.9a.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the new dedicated physical channel.

## 8.2.6.10 Void

## 8.2.6.11 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration)

### 8.2.6.11.1 Definition

### 8.2.6.11.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to TS 25.304;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

### 8.2.6.11.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message before the T312 expiry.

8.2.6.11.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_FACH to CELL_DCH. However, the SS keeps its current physical channel configuration and then the UE cannot synchronise with the SS. After T312 expires, the UE attempt to revert to the old configuration. Then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set "physical channel failure" in IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 3b | → | | MEASUREMENT REPORT | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 5 | | | | The SS does not reconfigure the physical channel, hence the UE shall detect a failure to reconfigure to the new physical channel. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | After T312 expires the UE reverts to the old configuration and transmits this message. |
| 7 | → | | MEASUREMENT REPORT | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in clause 9 of TS 34.108 for FDD or for TDD.

MEASUREMENT CONTROL (Step 3a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Measurement Identity | 1 | |
| Measurement Command | Setup | |
| Measurement reporting mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting | |
| Additional measurement list | Not Present | |
| CHOICE measurement type | Traffic Volume Measurement | |
| - Traffic volume measurement object list | | |
| - Uplink transport channel type | RACHorCPCH | R99 and Rel-4 only |
| | RACH | Rel-5 |
| - UL Target Transport Channel ID | Not Present | |
| - Traffic volume measurement quantity | | |
| - Measurement quantity | RLC Buffer Payload | |
| - Time Interval to take an average or a variance | Not Present | |
| - Traffic volume reporting quantity | | |
| - RLC Buffer Payload for each RB | True | |
| - Average of RLC Buffer Payload for each RB | False | |
| - Variance of RLC Buffer Payload for each RB | False | |
| - Measurement validity | | |
| - UE state | All states except CELL_DCH | |
| - CHOICE Reporting criteria | Periodical Reporting Criteria | |
| - Amount of reporting | Infinity | |
| - Reporting interval | 8000 | |
| DPCH compressed mode status | Not Present | |

MEASUREMENT REPORT (Step 3b and 7)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |

| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in clause 9 of TS 34.108 for FDD or for TDD.

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 6)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

#### 8.2.6.11.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 3a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "physical channel failure" in IE "failure cause".

After step 6, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

### 8.2.6.12 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and cell update )

#### 8.2.6.12.1 Definition

#### 8.2.6.12.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to TS 25.304;

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in TS 25.304 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- does not include "CN information elements"; and
- does not include the IE "Ciphering mode info"; and
- does not include the IE "Integrity protection mode info"; and
- does not include the IE "New C-RNTI"; and
- does not include the IE "New U-RNTI":

the UE shall:

1> transmit no response message.

…

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9,8.3.1.7, 8.5.4

### 8.2.6.12.3 Test purpose

To confirm that the UE initiates a cell update procedure after it fails to reconfigure the new physical channel and selects another cell.

To confirm that UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message after UE completes cell update procedure.

### 8.2.6.12.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

NOTE: The 'timer poll' value in the SS RLC transmit entity should be set to 800 ms.

Test Procedure

**Table 8.2.6.12**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -75 | -75 | -60 |

Table 8.2.6.12 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Then SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, but the SS does not reconfigure L1 accordingly. The SS configures its downlink transmission power settings according to columns "T1"in table 8.2.6.12. As a result, the UE fails to synchronise on the new physical channel before timer T312 expires. UE may send a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure" to cell 1. UE reselects to cell 2 and then the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "Cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving a CELL UPDATE message. If not already done so, the UE may transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure" in cell 2. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 2 to acknowledge the reception of new C-RNTI value. If not already done so, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS does not configure the new dedicated physical channel in accordance with the settings in the message and applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.12. |
| 5 | → | | PHYSICAL CHANNEL RECONGURATION FAILURE (option 1) | UE shall transmit this message in the cell 1. |
| 6 | | | Void | |
| 7 | → | | CELL UPDATE | This message includes the value "cell reselection" set in IE "Cell update cause". |
| 8 | ← | | CELL UPDATE CONFIRM | |
| 8a | → | | PHYSICAL CHANNEL RECONGURATION FAILURE (option 2) | UE shall transmit this message in the cell 2. |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | → | | PHYSICAL CHANNEL RECONGURATION FAILURE (option 3) | UE shall transmit this message in the cell 2. |
| 11 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RRC CONNECTION SETUP (message used in the initial setup)

Use the same message type found in clause 9 of TS 34.108 with the following exception:

| | |
|---|---|
| Signalling RB information to setup | (AM DCCH for RRC) |
| - RB identity | Not Present |
| - CHOICE RLC info type | |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - SDU discard mode | No discard |
| - MAX_DAT | 15 |
| - Transmission window size | 32 |
| - Timer_RST | 500 |
| - Max_RST | 1 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 800 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |
| - Timer_poll_periodic | Not Present |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Clause 9 of TS 34.108 for FDD or for TDD.

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Clause 9 of TS 34.108 for FDD or for TDD.

CELL UPDATE (Step 7)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Clause 9 of TS 34.108 for FDD or for TDD with the following exceptions:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Assigned previously in cell 1 |
| - S-RNTI | Assigned previously in cell 1 |
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 8)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Clause 9 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 9)

The contents of UTRAN MOBILITY INFORMATION CONFIRM message is identical as "Contents of UTRAN MOBILITY INFORMATION CONFIRM message" as found in Clause 9 of TS 34.108 for FDD or for TDD.

PHYSICAL CHANNEL RECONGURATION FAILURE (Steps 5, 8a and 10)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | "physical channel failure" |

#### 8.2.6.12.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 6 the UE shall transmit a CELL UPDATE message using RLC-TM mode on the uplink CCCH with IE "Cell update cause" set to "cell reselection" in cell 2.

After step 8, UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure" after step 4, 8 or 9.

### 8.2.6.13 Void

### 8.2.6.14 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception and Invalid configuration)

#### 8.2.6.14.1 Definition

#### 8.2.6.14.2 Conformance requirement

If the received reconfiguration message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to TS 25.331 clause 9, the UE shall perform procedure specific error handling as follows. The UE shall:

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Rejected transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to the cause value "protocol error";

2> include the IE "Protocol error information" with contents set to the value of the variable PROTOCOL_ERROR_INFORMATION.

If the variable INVALID_CONFIGURATION is set to TRUE the UE shall:

1> keep the configuration existing before the reception of the message;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

3> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

3> clear that entry.

2> set the IE "failure cause" to "invalid configuration".

1> set the variable INVALID_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.13, 8.2.2.11, 8.2.2.9

### 8.2.6.14.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received message does not include any IEs except IE "Message Type".

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a PHYSICAL CHANNEL RECONFIGURATION message including some IEs which are set to give an invalid configuration.

### 8.2.6.14.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits an invalid PHYSICAL CHANNEL RECONFIGURATION message to the UE which contains an unexpected critical message extension. The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "protocol error" in IE "failure cause" and also setting "Message extension not comprehended" in IE "Protocol error cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically. SS transmits PHYSICAL CHANNEL RECONFIGURATION message including some IEs which are set to give an invalid configuration. The UE keeps current configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters CELL_FACH state. |
| 3a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 3b | → | | MEASUREMENT REPORT | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See specific message content. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE does not change the configuration. |
| 5a | → | | MEASUREMENT REPORT | |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | This message includes IEs which are set to give an invalid configuration. |
| 7 | | | | The UE does not change the configuration |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "invalid configuration |
| 9 | → | | MEASUREMENT REPORT | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A for FDD and Annex A for TDD.

MEASUREMENT CONTROL (Step 3a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Measurement Identity | 1 | |
| Measurement Command | Setup | |
| Measurement reporting mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting | |
| Additional measurement list | Not Present | |
| CHOICE measurement type | Traffic Volume Measurement | |
| - Traffic volume measurement object list | | |
| - Uplink transport channel type | RACHorCPCH | R99 and Rel-4 only |
| | RACH | Rel-5 |
| - UL Target Transport Channel ID | Not Present | |
| - Traffic volume measurement quantity | | |
| - Measurement quantity | RLC Buffer Payload | |
| - Time Interval to take an average or a variance | Not Present | |
| - Traffic volume reporting quantity | | |
| - RLC Buffer Payload for each RB | True | |
| - Average of RLC Buffer Payload for each RB | False | |
| - Variance of RLC Buffer Payload for each RB | False | |
| - Measurement validity | | |
| - UE state | All states | |
| - CHOICE Reporting criteria | Periodical Reporting Criteria | |
| - Amount of reporting | Infinity | |
| - Reporting interval | 8000 | |
| DPCH compressed mode status | Not Present | |

MEASUREMENT REPORT (Step 3b, 5a and 9)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 20 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the PHYSICAL CHANNEL RECONFIGURATION message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Critical extensions | 'FF'H |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause<br>- Failure cause<br>- Protocol error information<br>- Protocol error cause | <br>Protocol error<br><br>Message extension not comprehended |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Default DPCH Offset Value<br>- DPCH frame offset | 1 (512)<br>4 (1024) |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| -PRACH TFCS | Present |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 7)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

### 8.2.6.14.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 3a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 4 the UE shall keep its old configuration, transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with "protocol error" in IE "failure cause" and also "Message extension not comprehended" in IE "Protocol error cause".

After step 5, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 7 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

After step 8, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

### 8.2.6.15 Void

### 8.2.6.16 Void

### 8.2.6.17 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success (Subsequently received)

#### 8.2.6.17.1 Definition

#### 8.2.6.17.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- PHYSICAL CHANNEL RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

…

Reference

3GPP TS 25.331 clause 8.6.3.11.

#### 8.2.6.17.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message it ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message.

#### 8.2.6.17.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous PHYSICAL CHANNEL RECONFIGURATION message elapses, the UE ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | For FDD mode Scrambling code number is set to "1". For TDD mode a code combination is assigned by SS. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS send this message before the expiry of "activation time" specified in PHYSICAL CHANNEL RECONFIGURATION message of step 1. For FDD, the IE "Scrambling code number" is set to "2". For TDD, the code combination assigned is different to that assigned in stage 1. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE ignores the PHYSICAL CHANNEL RECONFIGURATION message in step 2 and confirms configuration according to the PHYSICAL CHANNEL RECONFIGURATION message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>- Uplink DPCH info<br>- Scrambling code number | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned in step 1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH info<br>- Scrambling code number | Not Present<br><br>2 |

PHYSICAL CHANNEL RECONFIGURATION (Step2) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.6.17.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.18 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success (Subsequently received)

#### 8.2.6.18.1 Definition

#### 8.2.6.18.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- PHYSICAL CHANNEL RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.6.18.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message it ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.18.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous PHYSICAL CHANNEL RECONFIGURATION message, the UE ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters CELL_FACH state. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Scrambling code number is set to "1" for FDD mode and A code combination is assigned by SS for TDD |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | For FDD the IE "Scrambling code number" is set to "2". For TDD, the code combination assigned is different from that assigned in stage 4. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE ignores the PHYSICAL CHANNEL RECONFIGURATION message in step 5 and confirms configuration according to the PHYSICAL CHANNEL RECONFIGURATION message in step 4. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9.

PHYSICAL CHANNEL RECONFIGURATION (Step 4) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>- Uplink DPCH info<br>- Scrambling code number | Not present<br><br>1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 4) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned in step 1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 5) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH info<br>- Scrambling code number | Not Present<br><br>2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 5) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.6.18.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.19 Physical Channel Reconfiguration from CELL_DCH to CELL_PCH: Success

#### 8.2.6.19.1 Definition

#### 8.2.6.19.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.19.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enter CELL_PCH state after it received a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

### 8.2.6.19.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH. The UE transmits a PHYSICAL CHANNEL

RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 3 | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 4 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>100 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio links<br>- Primary CCPCH info<br>-Cell parameters ID | <br><br>4 |

8.2.6.19.5 Test requirement

After step 1 the UE shall transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## 8.2.6.20 Physical Channel Reconfiguration from CELL_DCH to URA_PCH: Success

### 8.2.6.20.1 Definition

### 8.2.6.20.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the new state is URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (URA_PCH);

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.6.20.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enter URA_PCH state after it received a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH.

8.2.6.20.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state. SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 3 | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 4 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| URA Identity | 0000 0000 0000 0001B |

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (TDD)

|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator<br>UTRAN DRX cycle length coefficient<br>URA Identity | URA_PCH<br>3<br>0000 0000 0000 0001B |

#### 8.2.6.20.5 Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.21 Physical Channel Reconfiguration from CELL_FACH to URA_PCH: Success

#### 8.2.6.21.1 Definition

#### 8.2.6.21.2 Conformance requirement

1. In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

   - transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC;

2. If the new state is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

   - when RLC has confirmed the successful transmission of the response message:

     - for each radio bearer in the variable PDCP_SN_INFO:

       - if the IE "RB started" in the variable ESTABLISHED_RABS is set to "started":

         - configure the RLC entity for that radio bearer to "continue";

     - enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2.4

#### 8.2.6.21.3 Test purpose

1. To verify that the UE, when receiving a PHYSICAL CHANNEL RECONFIGURATION message, responds by transmitting a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

2. To verify that the response message is transmitted using the old configuration before the state transition, and that the UE enters the URA_PCH state.

#### 8.2.6.21.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using AM RLC and enters into URA_PCH state. SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before start state transition. |
| 3 | | | | Reconfiguration of Physical Channel after state transition. |
| 4 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|

| URA identity | URA-ID 1 |

### 8.2.6.21.5 Test requirement

1. After step 1 the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the UE on uplink DCCH using AM RLC.

## 8.2.6.22 Physical Channel Reconfiguration from CELL_FACH to CELL_PCH: Success

### 8.2.6.22.1 Definition

### 8.2.6.22.2 Conformance requirement

1. In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

   - transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC;

2. If the new state is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

   - when RLC has confirmed the successful transmission of the response message:

     - for each radio bearer in the variable PDCP_SN_INFO:

       - if the IE "RB started" in the variable ESTABLISHED_RABS is set to "started":

         - configure the RLC entity for that radio bearer to "continue";

     - enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2.4

#### 8.2.6.22.3 Test purpose

1. To verify that the UE, when receiving a PHYSICAL CHANNEL RECONFIGURATION message, responds by transmitting a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

2. To verify that the response message is transmitted using the old configuration before the state transition, and that the UE enters the CELL_PCH state.

#### 8.2.6.22.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH(state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using AM RLC and enters into CELL_PCH state. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before start state transition. |
| 3 | | | | Reconfiguration of Physical Channel after state transition. |
| 4 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.6.22.5 Test requirement

1. After step 1 the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the UE on uplink DCCH using AM RLC.

### 8.2.6.23 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing maintain): Success

#### 8.2.6.23.1 Definition

#### 8.2.6.23.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message:

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.23.3 Test purpose

To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, on a dedicated physical channel in a different frequency band.

### 8.2.6.23.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 is active and cell 6 is inactive.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.23**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -55 | Off | -55 |

Table 8.2.6.23 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.23. The SS switches its downlink transmission power settings to columns "T1" and

transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes new frequency information and IE "Timing indicator" set to maintain. The UE shall reconfigure the physical channel parameters according to PHYSICAL CHANNEL RECONFIGURATION message and establish a radio link with the SS using a dedicated physical channel in cell 6. The UE then transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 6 on the uplink DCCH AM RLC after its transition. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.23. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.23. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including new frequency information. IE "Timing indicator" is set to maintain. |
| 4 | | | | The UE remains in CELL_DCH state after connecting to the SS on a dedicated physical channel in cell 6. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| Uplink DPCH info | |
| - Scrambling code number | 1 |
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | 350 |

8.2.6.23.5 Test requirement

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC in cell 6.

## 8.2.6.24 Void

## 8.2.6.25 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH (Frequency modification): Success

### 8.2.6.25.1 Definition

### 8.2.6.25.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> if the received reconfiguration message included the IE "Primary CPICH info" (, and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info":

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

1> select PRACH according to TS25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.6.25.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_FACH according to the PHYSICAL CHANNEL RECONFIGURATION message.

2. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency..

8.2.6.25.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.6.25**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.6.25 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.25. The SS and UE execute procedure P5. Next The SS and the UE execute procedure P9 and then execute procedure P13.The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message with no IE "Frequency info" and IE "Primary CPICH info". The UE selects cell 6 and and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection". Upon completion of the cell update procedure, UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the DCCH in cell 6. The SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure) P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 1c | ←→ | | SS executes procedure P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.25. |
| 3 | ← | | Void | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | No including IE "Frequency info" and IE "Primary CPICH info" |
| 5 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 6 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a common physical channel in cell 6. |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | Not Present |
| Downlink information for each radio link | Not Present |

CELL UPDATE (Step 5)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 6)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 7)

The contents of UTRAN MOBILITY UPDATE CONFIRM message are identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

### 8.2.6.25.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 6 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 7 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 8 the UE shall be in CELL_FACH state of cell 6.

## 8.2.6.26 Physical Channel Reconfiguration from CELL_DCH to CELL_PCH (Frequency modification): Success

### 8.2.6.26.1 Definition

### 8.2.6.26.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC.

If after state transition the UE enters CELL_PCH state from CELL_DCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS5.304.

2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

…

If the new state is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH or URA_PCH, respectively);

### Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.26.3 Test purpose

1. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to CELL_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
3. To confirm that the UE releases a dedicated physical channel and selects a common physical channel in a different frequency.

8.2.6.26.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.6.26**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.26 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.26. The SS and UE execute procedure P5. Next The SS and the UE execute procedure P9 and then execute procedure P13. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. The UE selects cell 6 and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection". Upon completion of the procedure, the SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure) P9 (clause 7.4.2.4.2) specified in TS 34.108.. | |
| 1c | ←→ | | SS executes procedure P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.26. |
| 3 | | | Void | |
| 4 | ← | | PHYSICAL CHANNELRECONFIGURATION | Not including IE" frequency info " and IE "Primary CPICH info" |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE transmit this message in cell 1. |
| 5a | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 6 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 7 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |

| | | | |
|---|---|---|---|
| 8 | | | The SS waits for 5 s. |
| 9 | ←→ | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | |
| - UARFCN uplink (Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink (Nd) | Same downlink UARFCN as used for cell 6 |

CELL UPDATE (Step 6)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 7)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indic | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.6.26.5 Test requirement

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 5 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection" in cell 6.

After step 8 the UE shall be in CELL_PCH state in cell 6.

### 8.2.6.27 Physical channel reconfiguration from CELL_FACH to CELL_PCH: Success

#### 8.2.6.27.1 Definition

#### 8.2.6.27.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS5.331 subclause 8.6.3.2.

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

3GPP TS 25.331 clause 8.2.2,8.3, 8.5 and 8.6.

### 8.2.6.27.3 Test purpose

1. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.27.4 Method of test

#### Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. The SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | | | | The SS waits for 5 s. |
| 5 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

### 8.2.6.27.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in CELL_PCH state in cell 6.

## 8.2.6.28 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Downlink channelisation code modification): Success

### 8.2.6.28.1 Definition

### 8.2.6.28.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6..

### 8.2.6.28.3 Test purpose

1. To confirm that the UE change assigned downlink channelisation code by SS according to a PHYSICAL CHANNEL RECONFIGURATION message.

2. To confirm that the UE response PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC

### 8.2.6.28.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state of cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes IE " DL channelisation code " set to New DL channelisation code. The UE shall change its downlink channelisation code for a dedicated physical channel, and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC. The SS transmits UE CAPABILITY ENQUIRY message to confirm whether the UE correctly reconfigure the DL DPCH The UE shall respond with UE CAPABILITY INFORMATION message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1. . |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE " DL channelisation code " set to New DL channelisation code |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | UE CAPABILITY ENQUIRY | The SS transmits this message to confirm whether the UE can correctly reconfigure the DL DPCH. |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio link list<br>- Downlink information for each radio link<br>- Downlink DPCH info for each RL<br>- DL channelisation code<br>- Spreading factor | Same value as a RADIO BEARER SETUP message used in initial procedure. |
| - Code number | Different value as a RADIO BEARER SETUP message used in initial procedure |

### 8.2.6.28.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 4 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC.

## 8.2.6.29 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Compressed mode initiation): Success

### 8.2.6.29.1 Definition

### 8.2.6.29.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> set the variable ORDERED_RECONFIGURATION to TRUE;

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.29.3 Test purpose

1. To confirm that the UE activates compressed mode according to a PHYSICAL CHANNEL RECONFIGURATION message.
2. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
3. To confirm that the UE deactivates compressed mode according to a PHYSICAL CHANNEL RECONFIGURATION message.
4. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.2.6.29.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.29**

| Parameter | Unit | Cell 1 | | | | Cell 6 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | High Range Test Frequency | | | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | -60 | -60 | Off | -60 | -90 | -60 |

Table 8.2.6.29 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1"or "T1" to "T2" or "T2" to "T3", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.29. The SS transmits MEASUREMENT CONTROL message in order for the UE to perform Inter-frequency measurements and report event 2c. The SS switches its downlink transmission power setting according to columns "T1" in table 8.2.6.29, but the UE shall not transmit any MEASUREMENT REPORT messages. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes IE "DPCH compressed mode info" with "TGPS Status Flag" set to "Activate". The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. The UE shall transmit MEASUREMENT REPORT message to report event 2c with the measured CPICH RSCP value for cell 6 to the SS. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes IE"DPCH compressed mode info" with "TGPS Status Flag" set to "deactivate". The UE shall respond with the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. After the SS switches its downlink transmission power settings to columns "T2" in table 8.2.6.29 and 10s is passed, the SS switches its downlink transmission power settings to columns "T3" in table 8.2.6.29. The UE shall not send any MEASUREMENT REPORT messages on the uplink DCCH because the UE cannot measure the CPICH RSCP on non used frequency as the compressed mode operation has been deactivated.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.29. |
| 2 | ← | | MEASUREMENT CONTROL | SS commands the UE to perform Inter-frequency measurements and to report event 2c. |
| 3 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.29. |
| 4 | | | | The SS checks that no MEASUREMENT REPORT messages receives for 10 s. |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE"DPCH compressed mode info", which include parameter "TGPS Status Flag" set to activate. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | → | | MEASUREMENT REPORT | The UE shall report event 2c with the measured CPICH RSCP value for cell 6. |
| 8 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE"DPCH compressed mode info", which include parameter "TGPS Status Flag" set to deactivate. |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 10 | | | | The SS switches its downlink transmission power settings to columns "T2" in table 8.2.6.29. |
| 11 | | | | After 10 s is passed ,the SS switches its downlink transmission power settings to columns "T3" in table 8.2.6.29. |
| 12 | | | | The SS checks that no MEASUREMENT REPORT messages receives for 10 s.. |

Specific Message Contents

MEASUREMENT CONTROL (Step 2)

Use the same message sub-type found in [9] TS 34.108 clause 9, with the following exceptions in the IE(s) concerned:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 15 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency measurement object list | |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency cells | |
| - Inter-frequency cell id | 6 |
| - Frequency info | |
| - UARFCN uplink (Nu) | UARFCN of the uplink frequency for cell 6 |
| - UARFCN downlink (Nd) | UARFCN of the downlink frequency for cell 6 |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | 0 chips |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |
| - Primary CPICH TX power | Not Present |
| - Primary CPICH TX power | |
| - TX Diversity Indicator | Not Present |
| - Cell for measurement | Not Present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - CHOICE Mode | FDD |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - COICE Mode | FDD |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | Not present |
| - Measurement validity | |
| - UE state | CELL_DCH |
| - Inter-frequency set update | On with no reporting |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2c |
| - Threshold used frequency | Not present |
| - W used frequency | Not present |
| - Hysteresis | 2 (1.0 dB) |
| - Time to trigger | 10 [ms] |
| - Reporting cell status | |
| - CHOICH reported cell | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 1 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -68dbm |
| - W non-used frequency | 0 |
| DPCH compressed mode status info | Not present |

PHYSICAL CHANNEL RECONFIGURATION (Step 5)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing Indication | Maintain | |
| - CFN-target SFN frame offset | Not Present | |
| - Downlink DPCH power control information | | |
| - CHOICE Mode | FDD | |
| -DPC Mode | 0 (Single) | |
| - CHOICE Mode | FDD | |
| - Power offset Pilot-DPDCH | 0 | |
| - DL rate matching restriction information | Not Present | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Fixed or flexible position | Flexible | |
| - TFCI existence | FALSE | |
| - Number of bits for Pilot bits (SF=128, 256) | Not Present | |
| - CHOICE mode | FDD | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | activate | |
| - TGCFN | (Current CFN+(256 – TTI/10msec)) mod256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | Undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | mode 0 | |
| - ITP | mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only, or DL only, depending on UE capability | |
| - Downlink compressed mode method | SF/2 or Not present depending on UE capability | |
| - Uplink compressed mode method | SF/2 or Not present depending on UE capability | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity Mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |

MEASUREMENT REPORT (Step 7)

The contents of MEASUREMENT REPORT message is the same as them found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | Check to see if set to 15 |
| Measured Results | |
| - CHOICE Measurement | |
| - Inter frequency measured results list | Check to see if set to "Inter-frequency measured results list" |
| - Inter frequency measurement results | |
| - Frequency info | |
| - CHOICE | FDD |
| - UARFCN uplink (Nu) | Check to see if set to the UARFCN of the uplink frequency for cell 6 |
| - UARFCN downlink (Nd) | Check to see if set to the UARFCN of the downlink frequency for cell 6 |
| - UTRA carrier RSSI | Not checked |
| - Inter frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Not checked |
| - Cell synchronisation information | Not checked |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | Not checked |
| - CPICH Ec/No | Not checked |
| - CPICH RSCP | Check to see if it is present |
| - Pathloss | Not checked |
| Measured Results on RACH | Not checked |
| Additional Measured results | Not checked |
| - Measured Result | |
| Event results | Not checked |

PHYSICAL CHANNEL RECONFIGURATION (Step 8)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | Not present |
| - DPCH compressed mode info | |
| - TGPSI | 1 |
| - TGPS Status Flag | deactivate |
| - TGCFN | Not present |
| - Transmission gap pattern sequence configuration parameters | Not present |

8.2.6.29.5 Test requirement

After step 3 the UE shall not send any MEASUREMENT REPORT messages on the uplink DCCH.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a MEASUREMENT REPORT message containing the IE "measured results" reporting cell 6's CPICH RSCP value, also report the triggering of event '2c' included in IE "Event results".

After step 8 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After 11 the UE shall not transmit any MEASUREMENT REPORT messages on the uplink DCCH.

## 8.2.6.30 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Modify active set cell): Success

### 8.2.6.30.1 Definition

### 8.2.6.30.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message:

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.30.3 Test purpose

To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel of same frequency in another cell.

### 8.2.6.30.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 is active and cell 6 is inactive.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.30**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | Off | -60 |

Table 8.2.6.30 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.30. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 2 and IE "Timing indicator" set to "initialise".. The UE shall reconfigure the physical channel parameters according to PHYSICAL CHANNEL RECONFIGURATION message and initiate to synchronise with new dedicated physical channel in cell 2. The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 2 on the uplink DCCH AM RLC after synchronization.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.30. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.30. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 2 and IE "Timing indicator" which is set to 'initialise'. |
| 4 | | | | The UE remains in CELL_DCH state after connecting to the SS on a dedicated physical channel in cell 2. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmits this message in cell 2. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | initialise |
| - Default DPCH Offset Value | 0 (0) |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 2 |

#### 8.2.6.30.5 Test requirement

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC in cell 2.

### 8.2.6.31 Physical channel reconfiguration transition from CELL_FACH to URA_PCH: Success

#### 8.2.6.31.1 Definition

#### 8.2.6.31.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS5.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.3, 8.5 and 8.6.

### 8.2.6.31.3 Test purpose

1. To confirm that the UE transmits the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.31.4 Method of test

Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE shall enter URA_PCH state according to this message after it transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmits this message on uplink DCCH using AM RLC. |
| 4 | | | | The SS waits for 5 s. |
| 5 | | | | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |

NOTE: It is to be noted that IE "URA identity" is not included in this message, for the purpose of wider test coverage. The scenario in which IE "URA identity" is included, is tested in other test cases.

#### 8.2.6.31.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in URA PCH state.

### 8.2.6.32 Physical channel reconfiguration for transition from CELL_DCH to URA_PCH (Frequency band modification): Success

#### 8.2.6.32.1 Definition

#### 8.2.6.32.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the criteria for URA update caused by "URA reselection" according to subclause 8.3.1 is fulfilled after cell selection:

2> initiate a URA update procedure according to TS25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

…

If the new state is is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.32.3 Test purpose

1. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to URA_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
3. To confirm that the UE releases the dedicated physical channel and selects a common physical channel in a different frequency.

### 8.2.6.32.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.6.32**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.32 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.32. SS requests operator to make an outgoing call. The SS and UE execute procedure P5. Next The SS and the UE execute procedure P9 and then execute procedure P13. The SS switches its downlink

transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "Frequency info" omitted. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enter URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.32. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure) P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.32. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Not including IE "Frequency info" |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE transmit this message on the dedicated physical channel in cell 1 |
| 8 | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits for 5 s to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 9 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | Not present |

8.2.6.32.5 Test requirement

After step 3 the UE shall transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in URA_PCH state in cell 6.

## 8.2.6.33 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH (Frequency band modification): Success

### 8.2.6.33.1 Definition

### 8.2.6.33.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> perform the physical layer synchronisation procedure as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> remove any C-RNTI from MAC;

1> clear the C_RNTI.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.33.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_DCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
2. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

### 8.2.6.33.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.6.33**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.33 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.33. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. The UE shall select cell 6 and change its physical channel configuration after receiving this message and then enter CELL_DCH state. Finally the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.33. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.33. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6 |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 5 | ←→ | | | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

#### 8.2.6.33.5 Test requirement

After step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 4 the UE shall be in CELL_DCH state in cell 6.

### 8.2.6.34 Physical channel reconfiguration from CELL_FACH to CELL_PCH (Frequency band modification): Success

#### 8.2.6.34.1 Definition

#### 8.2.6.34.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state from CELL_FACH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4] on that frequency.

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> if the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD) is included the UE shall either:

3> ignore the content of the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD) and proceed as below;

2> or:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CPCH info" (for TDD), and it is different from the current cell:

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in subclause 8.6.3.2.

1> the procedure ends.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2.

### 8.2.6.34.3 Test purpose

1. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
3. To confirm that the UE selects a common physical channel in a different frequency.

### 8.2.6.34.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.6.34**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.34 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.34. SS requests operator to make an outgoing call. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. The SS switches its downlink transmission power settings to columns "T1" and. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message including IE "Frequency info" and IE "Primary CPICH info" of cell 6. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enter CELL_PCH state in cell 6. Upon completion of the procedure, the SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.34. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.34. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Frequency info" and IE "Primary CPICH info" of Cell 6 |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmit this message on the common physical channel in cell 1. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

### 8.2.6.34.5 Test requirement

After step 6 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC in cell 1.

After step 8 the UE shall be in CELL_PCH state in cell 6.

## 8.2.6.35 Physical channel reconfiguration for transition from CELL_FACH to URA_PCH (Frequency band modification): Success

### 8.2.6.35.1 Definition

### 8.2.6.35.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS5.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

### Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.35.3 Test purpose

1. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
3. To confirm that the UE selects a common physical channel in a different frequency.

8.2.6.35.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 in active and cell 6 is inactive

UE: Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.6.35**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.35 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.35. SS requests operator to make an outgoing call. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message not including IE "Frequency info" and IE "Primary CPICH info". The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enter URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.35. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.35. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Not including IE "Frequency info" and IE "Primary CPICH info" |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmit this message on the common physical channel in cell 1. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator<br>UTRAN DRX cycle length coefficient | URA_PCH<br>3 |
| URA identity | URA-ID 1 |

#### 8.2.6.35.5 Test requirement

After step 3 the UE shall transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in URA_PCH state in cell 6.

### 8.2.6.36 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH (Frequency band modification): Success

#### 8.2.6.36.1 Definition

#### 8.2.6.36.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency;

2> if the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info":

3> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

3> when the cell update procedure completed successfully:

4> proceed as below.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.6.36.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_FACH according to the PHYSICAL CHANNEL RECONFIGURATION message.

2. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

8.2.6.36.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.6.36**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.36 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.36. The SS modifies the contents of System formation block 11 in cell 1, so that include IE "Inter frequency measurement system information" about cell 6. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info". The UE selects cell 6 and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection". The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC after complete configuration according to receiving PHYSICAL CHANNEL RECONFIGURATION message. Upon completion of the procedure, the SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | System Information Block type 11 | The UE is in idle mode and camped onto cell 1. The System Information Block type 11 messages to be transmitted are different from the default settings and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.36. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.36. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info" set to Primary Scrambling Code |
| 7 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 8 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a common physical channel in cell 6. |
| 11 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

The contents PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_FACH from CELL_FACH in PS" in Annex A, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- UARFCN uplink(Nu)<br>- UARFCN downlink(Nd) | <br>Same uplink UARFCN as used for cell 6<br>Same downlink UARFCN as used for cell 6 |

CELL UPDATE (Step 7)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 8)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 9)

The contents of UTRAN MOBILITY UPDATE CONFIRM message is identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

#### 8.2.6.36.5 Test requirement

After step 6 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 8 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 9 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 10 the UE shall be in CELL_FACH state in cell 6.

### 8.2.6.37 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised)

#### 8.2.6.37.1 Definition

#### 8.2.6.37.2 Conformance requirement

The UE shall:

1> be able to receive any of the following messages:

…

2> PHYSICAL CHANNEL RECONFIGURATION message;

1> perform a hard handover and apply physical layer synchronisation procedure A as specified in [29], even if no prior UE measurements have been performed on the target cell and/or frequency.

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

When performing hard handover with change of frequency, the UE shall:

1> stop all intra-frequency and inter-frequency measurement reporting on the cells listed in the variable CELL_INFO_LIST. Each stopped measurement is restarted when a MEASUREMENT CONTROL message is received with the corresponding measurement identity.

…

When the UE is in CELL_DCH state and receives any of the messages causing the UE to perform a hard handover, the UE shall check the IE "Timing indication" in that message and:

1> if IE "Timing indication" has the value "initialise" (i.e. timing re-initialised hard handover):

2> read SFN on target cell identified by the first radio link listed in the IE "Downlink information per radio link list" included in that message;

2> set the CFN according to the following formula:

3> for FDD:

CFN = (SFN - (DOFF div 38400)) mod 256

where the formula gives the CFN of the downlink DPCH frame which starts at the same time as or which starts during the PCCPCH frame with the given SFN.

…

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is not included, the UE shall:

1> if pattern sequence corresponding to IE "TGPSI" is already active (according to "Current TGPS Status Flag" in the variable TGPS_IDENTITY):

2> if the "TGPS Status Flag" in this message is set to "deactivate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time" (see subclause 8.6.3.1 in TS 25.331) received in this message, when the new configuration received in this message is taken into use;

…

If the IE "Downlink DPCH info common for all RL" is included in a message used to perform a Timing re-initialised hard handover or the IE "Downlink DPCH info common for all RL" is included in a message other than RB SETUP used to transfer the UE from a state different from Cell_DCH to Cell_DCH, and ciphering is active for any radio bearer using RLC-TM, the UE shall, after having activated the dedicated physical channels indicated by that IE:

1> if any ciphering configuration for a radio bearer using RLC-TM has not been applied, due to that the activation time from a previous procedure has not elapsed:

2> apply the ciphering configuration immediately and consider the activation time from the previous procedure to be elapsed.

1> if the IE "MAC-d HFN initial value" is included in the IE "Downlink DPCH info common for all RL":

…

1> else:

2> set the 20 MSB of the HFN component of COUNT-C for TM-RLC to the value of the latest transmitted IE "START" or "START List" for this CN domain, while not incrementing the value of the HFN component of COUNT-C at each CFN cycle; and

1> set the remaining LSBs of the HFN component of COUNT-C to zero;

1> start to perform ciphering on the radio bearer in lower layers while not incrementing the HFN;

1> include the IE "COUNT-C activation time" in the response message and specify a CFN value other than the default, "Now", that is a multiple of 8 frames (CFN mod 8 =0) and lies at least 200 frames ahead of the CFN in which the response message is first transmitted;

1> calculate the START value according to subclause 8.5.9 in TS 25.331;

1> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info" in the response message;

1> at the CFN value as indicated in the response message in the IE "COUNT-C activation time":

2> set the 20 MSB of the HFN component of the COUNT-C variable common for all transparent mode radio bearers of this CN domain to the START value as indicated in the IE "START list" of the response message for the relevant CN domain; and

2> set the remaining LSBs of the HFN component of COUNT-C to zero;

2> increment the HFN component of the COUNT-C variable by one even if the "COUNT-C activation time" is equal to zero;

2> set the CFN component of the COUNT-C to the value of the IE "COUNT-C activation time" of the response message. The HFN component and the CFN component completely initialise the COUNT-C variable;

2> step the COUNT-C variable, as normal, at each CFN value, i.e. the HFN component is no longer fixed in value but incremented at each CFN cycle.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4, 8.3.5, 8.5.15.2, 8.6.6.15, 8.6.6.28

### 8.2.6.37.3 Test Purpose

To confirm that the UE is able to perform a hard-handover with change of frequency, with and without prior measurements on the target frequency.

To confirm that the UE answers with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message when the procedure has been initiated with the PHYSICAL CHANNEL RECONFIGURATION message.

To confirm that the UE stops intra-frequency measurements after the inter-frequency handover has been performed, until a MEASUREMENT CONTROL message is received from the SS.

To confirm that the UE computes as it shall the CFN to be used after the handover.

To confirm that the UE deactivates compressed mode (if required) when it has been ordered to do so in the PHYSICAL CHANNEL RECONFIGURATION message.

To confirm that the UE includes the IE "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info") in the response message if ciphering is active for any radio bearer using RLC-TM.

### 8.2.6.37.4 Method of test

Initial Condition

System Simulator: 4 cells – Cell 1 and cell 2 on frequency $f_1$, cell 4 and cell 5 on frequency $f_2$. Cells 2 and 5 shall have the same primary scrambling code.

UE: "CS-DCCH+DTCH_DCH" (state 6-9) or "PS-DCCH+DTCH_DCH" (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the test case shall be run twice, once starting from state 6-9, once starting from state 6-10. Ciphering shall be activated.

Related ICS/IXIT statements

- Compressed mode required yes/no

Test Procedure

Table 8.2.6.37-1 illustrates the downlink power to be applied for the 4 cells, as well as the frequency and scrambling code for each cell.

**Table 8.2.6.37-1**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | | Cell 4 | | | | Cell 5 | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | | $f_1$ | | | | $f_2$ | | | | $f_2$ | | | |
| Scrambling code | | Scrambling code 1 | | | | Scrambling code 2 | | | | Scrambling code 3 | | | | Scrambling code 2 | | | |
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| CPICH Ec | dBm/3.84 MHz | -60 | -60 | -75 | -75 | OFF | -60 | -75 | -50 | -60 | -60 | -60 | -60 | -60 | -60 | -60 | -70 |

The UE is initially in CELL_DCH, and has only cell 1 in its active set.

At instant T1, the downlink power is changed according to what is shown in table 8.2.6.37 -1. Cell 2 should then trigger event 1a as has been configured through the default System Information Block Type 11. The UE shall thus send a MEASUREMENT REPORT to the SS, triggered by cell 2.

The SS adds then cell 2 to the active set of the Ue, by sending an ACTIVE SET UPDATE message to the UE. The UE shall answer with an ACTIVE SET UPDATE COMPLETE message.

The SS configures then compressed mode (if required), to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE. Compressed mode is started at the same time in that message (if required).

At instant T2, the downlink power is changed according to what is shown in table 8.2.6.37-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 4 on frequency $f_2$. The UE is also ordered to stop compressed mode (if required) after the handover.

The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS when the inter-frequency handover has succeeded. In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable used for ciphering. The SS shall restart incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

The SS then waits for 20 seconds, and checks that no intra-frequency MEASUREMENT REPORT is received from the UE.

The SS sends then a MEASUREMENT CONTROL message to the UE, to modify the intra-frequency cell info list of the UE. About 640 ms after, a MEASUREMENT REPORT message shall be received from the UE, triggered by cell 5. Subsequent MEASUREMENT REPORT messages shall be received at 4 seconds interval.

Only if the UE requires compressed mode for performing interfrequency measurements, the SS sends a MEASUREMENT CONTROL message to the UE that sets up inter-frequency measurements, but does not activate compressed mode in that message.

At instant T3, the downlink power is changed according to what is shown in table 8.2.6.37-1 so as to trigger Event 2b for frequency f1. SS waits then for 20 seconds, and checks that no MEASUREMENT REPORT message triggered by cell 2 is received during this time.

Independent of the UE requiring compressed mode, the SS then continues by sending a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 2 on frequency $f_1$.

The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS when the inter-frequency handover has succeeded. In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable used for ciphering.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.37-1 |
| 2 | → | | MEASUREMENT REPORT | Event 1a is triggered by cell 2 in the UE, which sends a MEASUREMENT REPORT message to the SS |
| 3 | ← | | ACTIVE SET UPDATE | The SS adds cell 2 to the active set of the UE. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE answers with an ACTIVE SET UPDATE COMPLETE message to the SS |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads the compressed mode parameters in the UE (if required). |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowleges the downloading of the compressed mode parameters (only if compressed mode was configured). |
| 7 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE, and activates compressed mode (if required). |
| 8 | | | | The SS changes the power of the cells according to column T2 in table 8.2.6.37-1. |
| 9 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 10 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 4 on frequency $f_2$. |
| 11 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After the UE has succeeded in performing the inter-frequency handover, it shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using the new configuration. |
| 12 | | | | The SS waits for 20 seconds and monitors that no intra-frequency MEASUREMENT REPORT message is received from the UE. |
| 13 | ← | | MEASUREMENT CONTROL | The SS updates the list of intra-frequency cells in the UE. |
| 14 | → | | MEASUREMENT REPORT | Cell 5 triggers event 1a in the UE, which sends a MEASUREMENT REPORT message to the SS. Subsequent MEASUREMENT REPORT messages shall be received from the UE at 4 seconds interval. |
| 15 | ← | | MEASUREMENT CONTROL | The SS sets up an inter-frequency measurement in the UE (if compressed mode is required), but does not activate compressed mode. |
| 16 | | | | The SS changes the power of the cells according to column T3 in table 8.2.6.37-1. |
| 16a | | | | The SS waits for 20 seconds and monitors that no inter-frequency MEASUREMENT REPORT message is received from the UE. |
| 17 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 2 on frequency $f_1$. |
| 18 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After the UE has succeeded in performing the inter-frequency handover, it shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using the new configuration. |
| 19 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

RRC CONNECTION SETUP

The message to be used in this test is defined in TS 34.108, clause 9, Condition A1 with the following exceptions:

| | |
|---|---|
| - Signalling RB information to setup | (RB2 AM DCCH for RRC) |
| - RB identity | Not Present |
| - CHOICE RLC info type | |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - SDU discard mode | No discard |
| - MAX_DAT | 15 |
| - Transmission window size | 32 |
| - Timer_RST | 500 |
| - Max_RST | 1 |
| - Polling info | |
| - Timer_poll_prohibit | 40 |
| - Timer_poll | 40 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - DL RLC PDU size | According to clause 6.10.2.4.1.3 (standalone 13.6 kbps signalling radio bearer) |
| - In-sequence delivery | TRUE |
| - Receiving window size | 32 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |

MEASUREMENT REPORT (Step 2)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 1 (or scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference (This IE is related to scrambling code 2) |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 (or scrambling code 1 if the previous scrambling code included by the UE was scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 |

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is defined in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Scrambling code 2 | |
| - Downlink DPCH info for each RL | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets" | |
| - Code Number | Any value between 0 and Spreading factor-1 (use different values for each DPCH in case several DPCHs are allocated to the UE). | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

PHYSICAL CHANNEL RECONFIGURATION (Step 5 for the CS case)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |
| CHOICE channel requirement | Not Present | |

| - Downlink PDSCH information | Not Present | R99 and Rel-4 only |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |
| Downlink information per radio link list | 2 radio links | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Scrambling code 1 | |
| - Cell ID | Not present | |
| - PDSCH with SHO DCH info | Not present | R99 and Rel-4 only |
| - PDSCH code mapping | Not present | R99 and Rel-4 only |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value | |

| | | |
|---|---|---|
| | (as currently stored in SS) modulo 38400 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Same as the code currently allocated to the UE in cell 1 | |
| - Scrambling code change | Code change | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |
| Downlink information for each radio link | | |

#### 8.2.6.37.5 Test Requirement

After step 1, the UE shall send a MEASUREMENT REPORT message triggered by event 1a for cell 2.

After step 3, the UE shall send an ACTIVE SET UPDATE COMPLETE message to acknowledge that it has added cell 2 to its active set.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the downloading of the compressed mode parameters (only if compressed mode is required), that were sent in the PHYSICAL CHANNEL RECONFIGURATION message of step 4.

After step 8, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. In that message, cell 4 or cell 5 shall be the only cell included in the IE event results.

After step 10, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS in cell 4 to acknowledge the successful timing re-initialised inter-frequency handover, and in case the UE was in state 6-9 as defined in clause 7.4 of 34.108 as initial condition to the test, the IEs "COUNT-C activation time" and "START list" (in the IE "Uplink counter synchronisation info") shall be included in that message. The UE shall also start incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

After step 11, the UE shall not send any intra-frequency MEASUREMENT REPORT message triggered by event 1a for cell 5.

After step 13, the UE sends periodic intra-frequency MEASUREMENT REPORT message triggered by event 1a for cell 5.

For UE's that require compressed mode for performing interfrequency measurements, after step 15 the UE shall not send any inter-frequency MEASUREMENT REPORT message triggered by event 2c for frequency 1.

After step 17, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS in cell 2 to acknowledge the successful timing re-initialised inter-frequency handover, and in case the UE was in state 6-9 as defined in clause 7.4 of 34.108 as initial condition to the test, the IEs "COUNT-C activation time" and "START list" (in the IE "Uplink counter synchronisation info") shall be included in that message.

### 8.2.6.37a Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised) (1.28 Mcps TDD)

#### 8.2.6.37a.1 Definition

#### 8.2.6.37a.2 Conformance requirement

In case the reconfiguration procedure is used to remove all existing RL(s) in the active set while new RL(s) are established the UE shall:

1> perform the maintenance of uplink synchronisation procedure as specified in TS 25.224 [5.2.1.2] or the establishment of uplink synchronization procedure in TS 25.224 [5.2.1.3].

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

When performing hard handover with change of frequency, the UE shall:

1> stop all intra-frequency and inter-frequency measurements on the cells listed in the variable CELL_INFO_LIST. Each stopped measurement is restarted when a MEASUREMENT CONTROL message is received with the corresponding measurement identity.

…

When the UE is in CELL_DCH state and receives any of the messages causing the UE to perform a hard handover, the UE shall check the IE "Timing indication" in that message and:

1> if IE "Timing indication" has the value "initialise" (i.e. timing re-initialised hard handover):

2> read SFN on target cell identified by the first radio link listed in the IE "Downlink information per radio link list" included in that message;

2> set the CFN according to the following formula:

3> for TDD:

$$CFN = (SFN - DOFF) \bmod 256$$

where the formula gives the CFN of the downlink DPCH frame which starts at the same time as or which starts during the PCCPCH frame with the given SFN.

…

If the IE "Downlink DPCH info common for all RL" is included in a message used to perform a Timing re-initialised hard handover or the IE "Downlink DPCH info common for all RL" is included in a message other than RB SETUP used to transfer the UE from a state different from Cell_DCH to Cell_DCH, and ciphering is active for any radio bearer using RLC-TM, the UE shall, after having activated the dedicated physical channels indicated by that IE:

1> set the 20 MSB of the HFN component of COUNT-C for TM-RLC to the value of the latest transmitted IE "START" or "START List" for this CN domain, while not incrementing the value of the HFN component of COUNT-C at each CFN cycle; and

1> set the remaining LSBs of the HFN component of COUNT-C to zero;

1> start to perform ciphering on the radio bearer in lower layers while not incrementing the HFN;

1> include the IE "COUNT-C activation time" in the response message and specify a CFN value other than the default, "Now" for this IE;

1> calculate the START value according to subclause 8.5.9;

1> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info" in the response message;

1> at the CFN value as indicated in the response message in the IE "COUNT-C activation time":

2> set the 20 MSB of the HFN component of the COUNT-C variable to the START value as indicated in the IE "START list" of the response message for the relevant CN domain; and

2> set the remaining LSBs of the HFN component of COUNT-C to zero;

2> increment the HFN component of the COUNT-C variable by one;

2> set the CFN component of the COUNT-C to the value of the IE "COUNT-C activation time" of the response message. The HFN component and the CFN component completely initialise the COUNT-C variable;

2> step the COUNT-C variable, as normal, at each CFN value, i.e. the HFN component is no longer fixed in value but incremented at each CFN cycle.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4, 8.3.5, 8.5.15.2, 8.6.6.15, 8.6.6.28

### 8.2.6.37a.3 Test Purpose

To confirm that the UE is able to perform a hard-handover with change of frequency, with prior measurements on the target frequency.

To confirm that the UE answers with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message when the procedure has been initiated with the PHYSICAL CHANNEL RECONFIGURATION message. There are two kinds of PHYSICAL CHANNEL RECONFIGURATION messages, both of which will initiate the PHYSICAL CHANNEL RECONFIGURATION COMPLETE messages from UE but may lead to different UE behaviours. The first one (configuration 1) with IE "CHOICE *Timing Advance*" enabled and Uplink synchronization parameters will trigger UE to establish the uplink synchronization procedure with UpPCH during handover. The other one (configuration 2) with IE "CHOICE *Timing Advance*" disabled and without Uplink synchronization parameters information will perform uplink pre-synchronisation, which will not initiate UpPCH on the target cell during handover.

To confirm that the UE stops intra-frequency measurements after the inter-frequency handover has been performed, until a MEASUREMENT CONTROL message is received from the SS.

To confirm that the UE computes as it shall the CFN to be used after the handover.

To confirm that the UE includes the IE "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info") in the response message if ciphering is active for any radio bearer using RLC-TM.

### 8.2.6.37a.4 Method of test

Initial Condition

System Simulator: 4 cells – Cell 1 and cell 2 on frequency $f_1$, cell 4 and cell 5 on frequency $f_2$. Cells 2 and 5 shall have the same cell parameters id. Only cell 1 is activated.

UE: "CS-DCCH+DTCH_DCH" (state 6-9) or "PS-DCCH+DTCH_DCH" (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the test case shall be run twice, once starting from state 6-9, once starting from state 6-10. Ciphering shall be activated.

Besides statement as above, the test case shall be run twice for each kind of PHYSICAL CHANNEL RECONFIGURATION messages: configuration 1 and configuration 2.

Test Procedure

Table 8.2.6.37a-1 illustrates the downlink power to be applied for the 4 cells, as well as the frequency and cell parameters id for each cell.

**Table 8.2.6.37a-1**

| Parameter | Unit | Cell 1 | | | Cell 2 | | | Cell 4 | | | Cell 5 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | $f_1$ | | | $f_2$ | | | $f_2$ | | |
| Cell parameters id | | Cell parameters id 1 | | | Cell parameters id 2 | | | Cell parameters id 3 | | | Cell parameters id 2 | | |
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | -75 | -95 | -55 | -75 | -60 | -60 | -60 | -60 | -60 | -70 |

The UE is initially in CELL_DCH in cell 1.

At instant T1, the downlink power is changed according to what is shown in table 8.2.6.37a -1. Cell 2 should then trigger event 1g as has been configured through the default System Information Block Type 11. The UE shall thus send a MEASUREMENT REPORT to the SS, triggered by cell 2.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE.

At instant T2, the downlink power is changed according to what is shown in table 8.2.6.37a-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 4 on frequency $f_2$.

The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS when the inter-frequency handover has succeeded. In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable used for ciphering. The SS shall restart incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

The SS then waits for 20 seconds, and checks that no MEASUREMENT REPORT is received from the UE.

The SS sends then a MEASUREMENT CONTROL message to the UE, to modify the intra-frequency cell info list of the UE. About 640 ms after, a MEASUREMENT REPORT message shall be received from the UE, triggered by cell 5. Subsequent MEASUREMENT REPORT messages shall be received at 4 seconds interval.

In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable used for ciphering.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.37a-1 |
| 2 | → | | MEASUREMENT REPORT | Event 1g is triggered by cell 2 in the UE, which sends a MEASUREMENT REPORT message to the SS |
| 3 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE. |
| 4 | | | | The SS changes the power of the cells according to column T2 in table 8.2.6.37a-1. |
| 5 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 4 on frequency $f_2$. |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After the UE has succeeded in performing the inter-frequency handover, it shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using the new configuration. |
| 8 | | | | The SS waits for 20 seconds and monitors that no MEASUREMENT REPORT message is received from the UE. |
| 9 | ← | | MEASUREMENT CONTROL | The SS updates the list of intra-frequency cells in the UE. |
| 10 | → | | MEASUREMENT REPORT | Cell 5 triggers event 1g in the UE, which sends a MEASUREMENT REPORT message to the SS. Subsequent MEASUREMENT REPORT messages shall be received from the UE at 4 seconds interval. |

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

MEASUREMENT REPORT (Step 2)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is present |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CCPCH info | |
| - Cell parameters ID | cell parameters ID 2 |
| - Timeslot ISCP | Check that this IE is absent |
| - P-CCPCH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is present |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CCPCH info | |
| - Cell parameters ID | Cell parameters ID 1 |
| - Timeslot ISCP | Check that this IE is absent |
| - P-CCPCH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1g |
| - Cell measurement event results | |
| - Primary CCPCH info | |
| - Cell parameters ID | Cell parameters ID 2 |

MEASUREMENT CONTROL (Step 3)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | 2 inter-frequency cells |
| - Inter-frequency cell id | 4 |
| - Frequency info | |
| - UARFCN (Nt) | UARFCN corresponding to $f_2$ |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Cell parameters ID 3 |
| - Inter-frequency cell id | 5 |
| - Frequency info | |
| - UARFCN (Nt) | UARFCN corresponding to $f_2$ |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Cell parameters ID 2 |
| - Cells for measurement | Not present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - Measurement quantity for frequency quality estimate | P-CCPCH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - Timeslot ISCP reporting indicator | FALSE |
| - P-CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | Not present |
| - Measurement validity | |
| - UE State | CELL_DCH |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2b |
| - Threshold used frequency | -70 dBm |
| - W used frequency | 0 (0.0) |
| - Hysteresis | 2 (1.0 dB) |
| - Time to trigger | 100 ms |
| - Reporting cell status | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 2 |
| - Parameters required for each non-used frequency | |

| Information Element | Value/Remark |
|---|---|
| - Threshold non used frequency | -65 dBm |
| - W non-used frequency | 0 |

MEASUREMENT REPORT (Step 5)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | TDD |
| - UARFCN(Nt) | Check that the value of this IE is set to UARFCN corresponding to $f_2$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 2 cells reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is present |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that the value of this IE is set to Cell parameters ID 3 (or Cell parameters ID 2) |
| - Timeslot ISCP | Check that this IE is absent |
| - P-CCPCH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is present |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that the value of this IE is set to Cell parameters ID 2 (or Cell parameters ID 3 if the previous Cell parameters ID included by the UE was Cell parameters ID 2) |
| - Timeslot ISCP | Check that this IE is absent |
| - P-CCPCH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | TDD |
| - UARFCN(Nt) | Check that the value of this IE is set to UARFCN corresponding to $f_2$ |
| - Non freq related measurement event results | |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that the value of this IE is set to Cell parameters ID 3 |

PHYSICAL CHANNEL RECONFIGURATION (Configuration 1) (Step 6)

| Information Element | Value/Remark |
|---|---|
| Activation time | Not Present |
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| New DSCH-RNTI | Not Present |
| RRC State indicator | CELL_DCH |
| UTRAN DRX cycle length coefficient | Not Present |
| CN information info | Not Present |
| URA identity | Not Present |
| Downlink counter synchronisation info | Not Present |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN (Nt) | UARFCN corresponding to $f_2$ |
| Maximum allowed UL TX power | Not Present |
| Uplink DPCH info | |
| - Uplink DPCH power control info | Not Present |
| - CHOICE *mode* | TDD |
| - Uplink Timing Advance Control | |
| - CHOICE *Timing Advance* | Enabled |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - Uplink synchronization parameters | |
| - Uplink synchronization step size | 1 |
| - Uplink synchronization frequency | 1 |
| - Synchronization parameters | |
| - SYNC_UL codes bitmap | 01010101 |
| - FPACH info | |
| - Timeslot number | 0 |
| - Channelisation code | 16/15 |
| - Midamble Shift and burst type | |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - Midamble Allocation Mode | Default midamble |
| - Midamble configuration | 16 |
| - WT | 4 |
| - PRXUpPCHdes | -80dBm |
| - SYNC_UL procedure | |
| - Max SYNC_UL Transmissions | 2 |
| - Power Ramp Step | 2 |
| - Frequency info | Not present |
| - UpPCH position info | 0 |
| E-DCH Info | Not Present |
| CHOICE channel requirement | Not Present |
| CHOICE *mode* | TDD |
| - Downlink HS-PDSCH Information | Not Present |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - CFN-targetSFN frame offset | 0 |
| - Downlink DPCH power control information | Not Present |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Cell parameters ID 3 |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | TDD |
| - TFCS ID | Reference to TS34.108 clause 6.11 Parameter Set |
| - Time info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Common timeslot info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Downlink DPCH timeslots and codes | as used for cell 4 |

PHYSICAL CHANNEL RECONFIGURATION (Configuration 2) (Step 6)

| Information Element | Value/Remark |
|---|---|
| Activation time | Not Present |
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| New DSCH-RNTI | Not Present |
| RRC State indicator | CELL_DCH |
| UTRAN DRX cycle length coefficient | Not Present |
| CN information info | Not Present |
| URA identity | Not Present |
| Downlink counter synchronisation info | Not Present |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN (Nt) | UARFCN corresponding to $f_2$ |
| Maximum allowed UL TX power | Not Present |
| Uplink DPCH info | |
| - Uplink DPCH power control info | Not Present |
| - CHOICE *mode* | TDD |
| - Uplink Timing Advance Control | |
| - CHOICE *Timing Advance* | Disabled |
| E-DCH Info | Not Present |
| CHOICE channel requirement | Not Present |
| CHOICE *mode* | TDD |
| - Downlink HS-PDSCH Information | Not Present |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - CFN-targetSFN frame offset | 0 |
| - Downlink DPCH power control information | Not Present |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Cell parameters ID 3 |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | TDD |
| - TFCS ID | Reference to TS34.108 clause 6.11 Parameter Set |
| - Time info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Common timeslot info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Downlink DPCH timeslots and codes | as used for cell 4 |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Steps 7 for the CS case)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink PHYSICAL CHANNEL RECONFIGURATION message |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Uplink integrity protection activation info | Check that not present |
| CHOICE mode | TDD |
| COUNT-C activation time | Check that this IE shall be present |
| Radio bearer uplink ciphering activation time info | Check that not present |
| Uplink counter synchronisation info | Check that present |
| >RB with PDCP information list | Check that absent |
| >START list | Check that this IE is set to 1 |
| >>CN Domain identity | Check that this IE is set to CS Domain |
| >>START | Not checked |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Steps 7 for the PS case)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink PHYSICAL CHANNEL RECONFIGURATION message |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Uplink integrity protection activation info | Check that not present |
| CHOICE mode | TDD |
| COUNT-C activation time | Check that not present |
| Radio bearer uplink ciphering activation time info | Check that not present |
| Uplink counter synchronisation info | Check that not present |

MEASUREMENT CONTROL (Step 9)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Modify |
| Measurement Reporting Mode | Not present |
| Additional measurements list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove all intra-frequency cells |
| - New intra-frequency info list | 2 new intra-frequency cells |
| - Intra-frequency cell id | 4 |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE mode | TDD |
| - Primary CCPCH Info | |
| - Cell parameters ID | Cell parameters ID 3 (for cell 4) |
| - Primary CCPCH TX power | Not Present |
| - Cells selection and Re-selection info | Not Present |
| - Intra-frequency cell id | 5 |
| - Cell info | |
| - Cell individual offset | 20 (10 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE mode | TDD |
| - Primary CCPCH Info | |
| - Cell parameters ID | Cell parameters ID 2 (for cell 5) |
| - Primary CCPCH TX power | Not Present |
| - Cells selection and Re-selection info | Not Present |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity | Not Present |
| - Reporting cell status | Not Present |
| - Measurement validity | Not Present |
| - CHOICE report criteria | Not Present |

MEASUREMENT REPORT (Step 10)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that this IE is set to Cell parameters ID 2 (or Cell parameters ID 3) |
| - Timeslot ISCP | Check that this IE is absent |
| - P-CCPCH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that this IE is set to Cell parameters ID 3 (or Cell parameters ID 2 if Cell parameters ID 3 was indicated first) |
| - Timeslot ISCP | Checked that this IE is absent |
| - P-CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1g |
| - Cell measurement event results | |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that this IE is set to Cell parameters ID 2 |

### 8.2.6.37a.5 Test Requirement

After step 2, the UE shall send a MEASUREMENT REPORT message triggered by event 1g for cell 2.

After step 4, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. In that message, cell 4 shall be the only cell included in the IE event results.

After step 6, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS in cell 4 to acknowledge the successful timing re-initialised inter-frequency handover, and in case the UE was in state 6-9 as defined in clause 7.4 of 34.108 as initial condition to the test, the IEs "COUNT-C activation time" and "START list" (in the IE "Uplink counter synchronisation info") shall be included in that message. The UE shall also start incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

After step 8, the UE shall not send any MEASUREMENT REPORT message.

After step 9, the UE send a MEASUREMENT REPORT message triggered by event 1g for cell 5.

## 8.2.6.37b Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency band cell with timing re-initialised)

### 8.2.6.37b.1 Definition

This test case is identical to test case 8.2.6.37 except that the cells belong to different frequency bands.

### 8.2.6.37b.2 Conformance requirement

Same conformance requirement as in clause 8.2.6.37.2.

### 8.2.6.37b.3 Test purpose

Same test purpose as described in clause 8.2.6.37.3 except that the target frequency is in a different frequency band.

### 8.2.6.37b.4 Method of test

#### Initial Condition

Same initial conditions as in clause 8.2.6.37.4 except that frequencies $f_1$ and $f_2$ are selected from different frequency bands.

#### Related ICS/IXIT statement(s)

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

#### Test Procedure

Same test procedure as in clause 8.2.6.37.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

#### Expected sequence

Same expected sequence as in clause 8.2.6.37.4.

#### Specific Message Contents

Same specific message contents as in clause 8.2.6.37.4.

### 8.2.6.37b.5 Test requirement

Same test requirements as in clause 8.2.6.37.5.

## 8.2.6.37c Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised) (1.28 Mcps TDD) (TDD a-f band)

### 8.2.6.37c.1 Definition

This test case is identical to test case 8.2.6.37a except that the cells belong to different frequency bands.

### 8.2.6.37c.2 Conformance requirement

Same conformance requirement as in clause 8.2.6.37a.2.

### 8.2.6.37c.3 Test purpose

Same test purpose as described in clause 8.2.6.37a.3 except that the target frequency is in a different frequency band.

#### 8.2.6.37c.4 Method of test

Initial Condition

Same initial conditions as in clause 8.2.6.37a.4 except that frequencies $f_1$ and $f_2$ are selected from different frequency bands.

Related ICS/IXIT statement(s)

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as in clause 8.2.6.37a.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected sequence

Same expected sequence as in clause 8.2.6.37a.4.

Specific Message Contents

Same specific message contents as in clause 8.2.6.37a.4.

#### 8.2.6.37c.5 Test requirement

Same test requirements as in clause 8.2.6.37a.5.

### 8.2.6.38 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised): Failure (Physical channel failure and reversion to old channel)

#### 8.2.6.38.1 Definition

#### 8.2.6.38.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

### 8.2.6.38.3 Test purpose

To confirm that the UE reverts to the old configuration (including measurement configurations, ciphering procedures and compressed mode configurations if required) and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before timer T312 expiry.

### 8.2.6.38.4 Method of test

Initial Condition

System Simulator: 4 cells – Cell 1 and cell 2 on frequency $f_1$, cell 4 on frequency $f_2$and cell 5 on frequency $f_3$.

UE: "CS-DCCH+DTCH_DCH" (state 6-9) or "PS-DCCH+DTCH_DCH" (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the test case shall be run twice, once starting from state 6-9, once starting from state 6-10. Ciphering shall be activated.

Related ICS/IXIT statements

- Compressed mode required yes/no

Test Procedure

Table 8.2.6.38-1 illustrates the downlink power to be applied for the 4 cells, as well as the frequency and scrambling code for each cell.

**Table 8.2.6.38-1a**

| Parameter | Unit | Cell 1 | | | | | Cell 2 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | | | $f_1$ | | | | |
| Scrambling code | | Scrambling code 1 | | | | | Scrambling code 2 | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 |
| CPICH Ec | dBm/3.84 MHz | -60 | -60 | -75 | -60 | -75 | -95 | -60 | -75 | -60 | -75 |

**Table 8.2.6.38-1b**

| Parameter | Unit | Cell 4 | | | | | Cell 5 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_2$ | | | | | $f_3$ | | | | |
| Scrambling code | | Scrambling code 3 | | | | | Scrambling code 4 | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 |
| CPICH Ec | dBm/3.84 MHz | -60 | -60 | -60 | OFF | -73 | -60 | -60 | -73 | OFF | -60 |

The UE is initially in CELL_DCH, and has only cell 1 in its active set.

At instant T1, the downlink power is changed according to what is shown in table 8.2.6.38 -1. Cell 2 should then trigger event 1a as has been configured through the default System Information Block Type 11. The UE shall thus send a MEASUREMENT REPORT to the SS, triggered by cell 2.

The SS adds then cell 2 to the active set of the UE, by sending an ACTIVE SET UPDATE message to the UE. The UE shall answer with an ACTIVE SET UPDATE COMPLETE message.

The SS then configures compressed mode, (if required by the UE) to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE. Compressed mode is started at the same time in that message, (if required).

At instant T2, the downlink power is changed according to what is shown in table 8.2.6.38-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

At instance T3, the downlink power is changed according to what is shown in table 8.2.6.38-1.

SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 4 on frequency $f_2$.

The UE shall revert to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

At instant T4, the downlink power is changed according to what is shown in table 8.2.6.38-1. Frequency $f_3$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.38-1. |
| 2 | → | | MEASUREMENT REPORT | Event 1a is triggered by cell 2 in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 3 | ← | | ACTIVE SET UPDATE | The SS adds cell 2 to the active set of the UE. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE answers with an ACTIVE SET UPDATE COMPLETE message to the SS. |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads the compressed mode parameters in the UE, (if required). |

| | | | |
|---|---|---|---|
| 6 | → | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of the compressed mode parameters (only if compressed mode was configured). |
| 7 | ← | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE, and activates compressed mode (if required). |
| 8 | | | The SS changes the power of the cells according to column T2 in table 8.2.6.38-1. |
| 9 | → | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| | | | The SS changes the power of the cells according to column T3 in table 8.2.6. 38-1. |
| 10 | ← | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 4 on frequency $f_2$. |
| 11 | → | PHYSICAL CHANNEL RECONFIGURATION FAILURE | After T312 expires, the UE shall revert to the old channel and transmits this message. |
| 12 | | | The SS changes the power of the cells according to column T4 in table 8.2.6.38-1. |
| 13 | → | MEASUREMENT REPORT | Frequency $f_3$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions.

MEASUREMENT REPORT (Step 2)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 1 (or scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 (or scrambling code 1 if the previous scrambling code included by the UE was scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 |

ACTIVE SET UPDATE (Step 3)

| Information Element | Value/Remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Scrambling code 2 | |
| - Downlink DPCH info for each RL | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets" | |
| - Code Number | Any value between 0 and Spreading factor-1 (use different values for each DPCH in case several DPCHs are allocated to the UE). | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

PHYSICAL CHANNEL RECONFIGURATION (Step 5 for the CS case)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |
| CHOICE channel requirement | Not Present | |
| CHOICE mode | FDD | |
| - Downlink PDSCH information | Not Present | R99 and Rel-4 only |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |
| Downlink information per radio link list | 2 radio links | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Scrambling code 1 | |
| - Cell ID | Not present | |
| - PDSCH with SHO DCH info | Not present | R99 and Rel-4 only |
| - PDSCH code mapping | Not present | R99 and Rel-4 only |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value | |

| | | |
|---|---|---|
| | (as currently stored in SS) mod 38 400 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Same as the code currently allocated to the UE in cell 1 | |
| - Scrambling code change | Code change | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Scrambling code 2 | |
| - Cell ID | Not present | |
| - PDSCH with SHO DCH info | Not present | R99 and Rel-4 only |
| - PDSCH code mapping | Not present | R99 and Rel-4 only |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to the same value as in step 3 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Same as the code currently allocated to the UE in cell 2 | |
| - Scrambling code change | No code change | |
| - TPC combination index | 0 | |

PHYSICAL CHANNEL RECONFIGURATION MESSAGE (Step 5 for the PS case)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |

| - Secondary scrambling code | 5 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Any value between 0 and Spreading factor-1 | |
| - Scrambling code change | If compressed mode required and CS call: No code change<br>Otherwise: Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

MEASUREMENT REPORT (Step 13)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 4 |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 4 |

### 8.2.6.38.5 Test Requirement

After step 1, the UE shall send a MEASUREMENT REPORT message triggered by event 1a for cell 2.

After step 3, the UE shall send an ACTIVE SET UPDATE COMPLETE message to acknowledge that it has added cell 2 to its active set.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the downloading of the compressed mode parameters that were sent in the PHYSICAL CHANNEL RECONFIGURATION message of step 4 (only if compressed mode was required).

After step 8, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. In that message, cell 4 shall be the only cell included in the IE event results.

After step 10, the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

After step 12, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_3$. In that message, cell 5 shall be the only cell included in the IE event results.

## 8.2.6.39 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation) (without pending of ciphering)

### 8.2.6.39.1 Definition

### 8.2.6.39.2 Conformance requirement

1> if the reconfiguration procedure is simultaneous with SRNS relocation procedure:

2> if the transmitted message is a RADIO BEARER RECONFIGURATION:

3> include the IE "New U-RNTI".

2> else:

3> include the IE "Downlink counter synchronisation info".

The UE shall:

1> if the received reconfiguration message included the IE "Downlink counter synchronisation info"; or

2> re-establish RB2;

2> set the new uplink and downlink HFN component of COUNT-C of RB2 to MAX(uplink HFN component of COUNT-C of RB2, downlink HFN component of COUNT-C of RB2);

2> increment by one the downlink and uplink values of the HFN component of COUNT-C for RB2;

2> calculate the START value according to subclause 8.5.9;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

1> if the IE "Integrity protection mode info" was present in the received reconfiguration message:

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RB2 from and including the transmitted response message.

If the new state is CELL_DCH or CELL_FACH, the response message shall be transmitted using the new configuration after the state transition, and the UE shall:

1> if the IE "Downlink counter synchronisation info" was included in the reconfiguration message; or

2> when RLC has confirmed the successful transmission of the response message:

3> re-establish all AM and UM RLC entities with RB identities larger than 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the corresponding CN domain;

3> re-establish the RLC entities with RB identities 1, 3 and 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the CN domain stored in the variable LATEST_CONFIGURED_CN_DOMAIN;

3> set the remaining bits of the HFN component of COUNT-C values of all UM RLC entities to zero;

3> re-initialise the PDCP header compression entities of each radio bearer in the variable ESTABLISHED_RABS as specified in [36].

Reference

3GPP TS 25.331 clause 8.2.2.

### 8.2.6.39.3 Test purpose

1. To confirm that the UE performs a combined hard handover and SRNS relocation and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in the new cell.

2. In the case that ciphering is applied by the network, to confirm that the UE applies the new ciphering algorithm following a successful SRNS relocation.

### 8.2.6.39.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) or PS+CS-DCCH+DTCH_DCH (state 6-14) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) and services supported by the UE. If UE supports PS+CS but only supports streaming service in CS domain then state 6-9, 6-10 are applied.

Specific Message Contents:

System Information Block type 1 (Cell 1 and Cell 2)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

System Information Block type 11 (Cell 1)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| - CHOICE report criteria | |
| - Intra-frequency measurement reporting criteria | |
| - Parameters required for each event | 2 kinds |
| - Intra-frequency event identity | 1b |
| - Triggering condition 1 | Active set cells |
| - Triggering condition 2 | Not Present |
| - Reporting Range Constant | 10(5dB) |
| - Cells forbidden to affect Reporting range | Not Present |
| - W | 1(1.0) |
| - Hysteresis | 0(0.0) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | Not Present |
| - Replacement activation threshold | Not Present |
| - Time to trigger | 640 |
| - Amount of reporting | Not Present |
| - Reporting interval | Not Present |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Intra-frequency event identity | 1c |
| - Triggering condition 1 | Not Present |
| - Triggering condition 2 | Not Present |
| - Reporting Range Constant | Not Present |
| - Cells forbidden to affect Reporting range | Not Present |
| - W | Not Present |
| - Hysteresis | 0(0.0) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | Not Present |
| - Replacement activation threshold | 3 |
| - Time to trigger | 640 |
| - Amount of reporting | 4 |
| - Reporting interval | 4 000 |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |

Test Procedure

**Table 8.2.6.39**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -66 | OFF | -66 |

Table 8.2.6.39 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39. The SS sends a PHYSICAL CHANNEL RECONFIGURATION message requesting the UE to do a timing re-initialised hard handover combined with SRNS relocation. This message includes IE "RRC State Indicator" set to "CELL_DCH", IE “Downlink counter synchronisation info” and IE “Integrity protection mode info”. UE shall reselect to cell 2 and SS verifies that the UE sends PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in IE “Integrity protection mode info” in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS transmits UE CAPABILITY ENQUIRY message on the downlink DCCH using RLC-AM. The UE shall respond to downlink message with a UE CAPABILITY INFORMATION message on the uplink DCCH using RLC-AM. SS responds with UE CAPABILITY INFORMATION CONFIRM message. SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity configuration. The UE shall respond IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.39. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | If IE “Ciphering mode info” is present in the SECURITY MODE COMMAND during initial condition set-up, this message is sent after last ciphering activation time has elapsed and there is no pending ciphering activation time. New integrity protection configuration is applied on DL SRB2. LAI and RAI of cell 2 are given to the UE, and are the same as cell 1. |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 2. New calculated START value is included. New integrity protection configuration is applied on UL SRB2. If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on UL SRB2 with the downlink and uplink values of the HFN component of COUNT-C for SRB2 incremented by one. |
| 5 | ← | | UE CAPABILITY ENQUIRY | If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on DL SRB2 with the same value as used in step 4. |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 8 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on DL SRB3 using the re-initialised COUNT-C HFN by the start value as stored in step 4. |
| 9 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration is applied on UL SRB3 by UE. If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on UL SRB3 using the re-initialised COUNT-C HFN by the start value as stored in step 4. |
| 10 | ←→ | | Void | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3) – for PS domain testing only

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_DCH from CELL_DCH in PS", with the following exception.

| Information Element | Value/remark |
|---|---|
| Ciphering mode info | If network does not apply ciphering, set this IE to "Not present". If network applies ciphering, this IE present with the values of the sub IEs as stated below. |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Set to another algorithm than the one indicated in the SECURITY MODE COMMAND during the initial condition set-up. |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info<br>- RB with PDCP information list<br>- START list | <br>Not present<br>Check that this IE is present. |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| COUNT-C activation time | In case ciphering is applied by the network, check that this IE is present. |
| Uplink counter synchronisation info<br>- RB with PDCP information list<br>- START list | <br>Not present<br>Check that this IE is present. |

UE CAPABILITY ENQUIRY (Step 5)

Use the same message sub-type found in [9] TS 34.108 clause 9.

UE CAPABILITY INFORMATION (Step 6)

Check that the UE uses the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Step 7)

Use the same message sub-type found in [9] TS 34.108 clause 9.

#### 8.2.6.39.5 Test requirement

After step 3, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the PHYSICAL CHANNEL RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received PHYSICAL CHANNEL RECONFIGURATION message (DL) and the sent PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (UL).

After step 5, the UE shall respond with a UE CAPABILITY INFORMATION message to SS.

After step 8, the UE shall respond with an IDENTITY RESPONSE message to SS and apply new ciphering configuration on UL SRB3.

(In the case where ciphering is supported)After step 9, UE shall start new ciphering configuration on the RAB.

### 8.2.6.39a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change without MAC-hs reset)

#### 8.2.6.39a.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.6.39a.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link;

Reference

3GPP TS 25.331 clause 8.2.2, 8.5.25, 8.6.3.1, 8.6.6.4

### 8.2.6.39a.3 Test purpose

To confirm that the UE changes the serving HS-DSCH cell according to the received PHYSICAL CHANNEL RECONFIGURATION message in case of no MAC-hs reset.

### 8.2.6.39a.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.6.39a**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | -60 | -70 | -75 | -60 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | – | – | -70 | -70 | – | – | -60 |

NOTE: For TDD, T1 and T2 are not used.

Table 8.2.6.39a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in CELL_DCH state with the downlink transmission power settings according to values in column “T0” in table 8.2.6.39a and has a radio bearer mapped on HS-DSCH established in cell 1.

For FDD:

SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39a. UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for cell 2.

After the MEASUREMENT REPORT message is received, the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC to add cell 2 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links and cell 1 shall be kept as the serving HS-DSCH cell. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.39a. The SS sends a MEASUREMENT CONTROL message to the UE configuring event 1D “Change of best cell”, and the UE shall send an initial MEASUREMENT REPORT which includes the primary scrambling code of cell 1 according to IE "Intra-frequency event identity" set to 1d.

SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39a. UE shall transmit a MEASUREMENT REPORT message which includes the primary scrambling code for cell 2 according to IE "Intra-frequency event identity" set to 1d.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE . At the activation time the UE changes the serving HS-DSCH radio link to cell 2. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

For TDD:

The SS sends a MEASUREMENT CONTROL message to the UE configuring event 1g “Change of best cell”, and the UE shall send an initial MEASUREMENT REPORT which includes Cell parameters Id of cell 1 according to IE "Intra-frequency event identity" set to 1g.

SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39a. UE shall transmit a MEASUREMENT REPORT message which includes Cell parameters Id of cell 2 ccording to IE "Intra-frequency event identity" set to 1g.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. SS sets up a Radio Link in Cell 2. At the activation time the UE changes the serving HS-DSCH radio link to cell 2. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Then the SS deletes the Radio Link in Cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 0a | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39a (FDD only). |
| 0b | → | | MEASUREMENT REPORT | See specific message contents for this message (FDD only). |
| 1 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 2 in the active set (FDD only). |
| 2 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 2 (FDD only). |
| 2a | SS | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.39a (FDD only). |
| 3 | ← | | MEASUREMENT CONTROL | Configure event 1D (FDD) or 1g (TDD) “Change of best cell” |
| 3a | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 4 | SS | | | SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39a |
| 5 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 7 | SS | | | SS sets up a Radio Link in Cell 2(TDD only). At the activation time, the SS changes the serving HS-DSCH radio link to cell 2. |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE changes the serving HS-DSCH radio link to cell 2 |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

MEASUREMENT REPORT (Step 0b) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 1) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not present | |
| - TFCI combining indicator | FALSE | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

MEASUREMENT CONTROL (Step 3) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| - CHOICE measurement type | Intra-frequency measurement |
| - Intra frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1D |
| - Triggering condition 2 | Active set cells |
| - Hysteresis | 8 (4 dB) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active set |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| DPCH compressed mode status info | Not present |

MEASUREMENT CONTROL (Step 3) (1.28 Mcps TDD, 3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | TDD |
| - Measurement quantity | Primary CCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1g |
| - Hysteresis | 4dB (IE value = 8) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | Report cells within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 3a) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 1" |

MEASUREMENT REPORT (Step 3a) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 3a) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 3a) (7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 2" |

MEASUREMENT REPORT (Step 5) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |

| | |
|---|---|
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5) (7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| CHOICE channel requirement | Uplink DPCH info | |
| - Uplink DPCH power control info | | |
| - DPCCH power offset | -40 (-80 dB) | |
| - PC Preamble | 1 frame | |
| - SRB delay | 7 frames | |
| - Power Control Algorithm | Algorithm1 | |
| - TPC step size | 0 (1 dB) | |
| - $\Delta_{ACK}$ | 6 | |
| - $\Delta_{NACK}$ | 6 | |
| - Ack-Nack repetition factor | 2 | |
| - Scrambling code type | Long | |
| - Scrambling code number | 0 (0 to 16777215) | |
| - Number of DPDCH | Not Present(1) | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Number of FBI bit | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Puncturing Limit | Reference to TS34.108 clause 6.10 Parameter Set | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | | |
| - CHOICE mode | FDD | |
| - DL Scrambling Code | Not present | |
| - HS-SCCH Channelisation Code Information | | |
| - HS-SCCH Channelisation Code | 7 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | FDD | |
| - Measurement Power Offset | 12 (6 dB) | |
| - CQI Feedback cycle, k | 4 ms | |
| - CQI repetition factor | 1 | |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) | |
| - CHOICE mode | FDD (no data) | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | Not Present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | (for cell 1) | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) | |
| - Cell ID | Not Present | |
| - Serving HS-DSCH radio link indicator | FALSE | |
| - Downlink DPCH info for each RL | Not present | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |
| - Downlink information for each radio link | (for cell 2) | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) | |
| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
