#### 8.2.2.85.1.5 Test requirements

At steps 2 and 9 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 4 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 6 the UE shall transmit CQI reports for the 2 cells.

### 8.2.2.85.2 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Successful Activation and Deactivation of 3cell/two frequency on Dual Bands, inter-NodeB, 16 QAM

#### 8.2.2.85.2.1 Definition and applicability

UE categories (Cat 29 or Cat 30) which support combination of Multiflow HSDPA on Dual Frequency/Three Cells on Different bands.

#### 8.2.2.85.2.2 Conformance requirement

Same as in sub-clause 8.2.2.85.1.2.

#### 8.2.2.85.2.3 Test purpose

1. To confirm that the UE establishes radio bearer mapped to HS-DSCH, transits from CELL_FACH to CELL_DCH state, and starts simultaneous 16QAM reception over multiflow HSDPA operation (Dual Frequency/Three Cell Multiflow HSDPA for Dual band) according to the received RADIO BEARER SETUP message.

2. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop Multiflow HSDPA operation (Dual Frequency/Three Cell Multiflow HSDPA for Dual band) according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.85.2.4 Method of test

Initial Condition

System Simulator:

SS configures Cells 2 and 3 as per Table 5.0aC of TS 25.101 [21] and TS 34.108 [9]], clause 5.1.1.

3 cells – Cell 1/2/3 with Cell 1 (f1) (Serving HS-DSCH cell), and Cell 2 (f1) (Assisting Serving HS-DSCH cell) and Cell 3(f2) (Assisting Secondary HS-DSCH cell) – One Carrier on Band A, and One Carrier on Band B (Dual Band DF-3C). Assisting Serving cell (Cell 2) and Assisting Secondary Serving cell (Cell 3) have the same radio frame timing. Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_FACH (state 6-11) as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on three cells on two frequencies (UE Category 29-30)

Test Procedure

The UE is in CELL_FACH state with data radio bearers set up. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. This message includes RAB information to configure PS domain RB on E-DCH/HSDPA (with Dual Frequency/3 Cell Multiflow HSDPA for Dual band, and 16 QAM simultaneously configured for L1). SRBs are mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY on Cell1 and Cell2 using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 4*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1, Cell 2 and Cell 3.

The SS sends a RADIO BEARER RECONFIGURATION message to reconfigure the UE to CELL_FACH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | SS configures three cells. |
| 1 | | ← | RADIO BEARER RECONFIGURATION | Configuration of PS RB on E-DCH/HSDPA, using Multiflow HSDPA, and 16QAM configuration |
| 2 | | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH. |
| 4 | | → | UE CAPABILITY INFORMATION | |
| 5 | | ← | UE CAPABILITY INFORMATION CONFIRM | |
| 6 | | | | SS checks for 2 CQI reports at 4 ms interval with:<br>- CQI Report for Serving cell (Cell 1)<br>- concatenated CQI Report for Assisting Serving cell (Cell 2) and CQI Report for Assisting Secondary cell (Cell3). |
| 7 | | | | Void |
| 8 | | ← | RADIO BEARER RECONFIGURATION | Reconfigure the UE to CELL_FACH which deactivates Multiflow HSDPA operation |
| 9 | | → | RADIO BEARER RECONFIGURATION COMPLETE | |

RADIO BEARER RECONFIGURATION (Step 8)

Use the same message as specified in clause 8.2.2.85.1.4 RADIO BEARER RECONFIGURATION (Step 8).

#### 8.2.2.85.2.5 Test requirements691911

At steps 2 and 9 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 4 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 6 the UE shall transmit CQI reports for the 3 cells.

## 8.2.2.86 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of Multiflow HSDPA

NOTE: The Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH for Multiflow HSDPA have been split into single band (with two cells on one frequency and with three cells on two frequencies), and dual band (with three cells on two frequencies).

### 8.2.2.86.1 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of two cell/Single frequency Multiflow HSDPA / Single Band

#### 8.2.2.86.1.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on two cells on one frequency in single band.

#### 8.2.2.86.1.2 Conformance requirement

[…]

The UE shall:

1> be able to receive any of the following messages:

2> RADIO BEARER SETUP message; or

2> RADIO BEARER RECONFIGURATION message; or

…

If the UE receives:

...

- a RADIO BEARER RECONFIGURATION message; or

it shall:

…

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only).

…

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

The UE may first release the physical channel configuration used at reception of the reconfiguration message. The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> for FDD:

2> determine the value for the SECONDARY_CELL_HS_DSCH_RECEPTION variable and take the corresponding actions as described in TS 25.331subclause 8.5.51.

…

The UE shall transmit a response message as specified in TS 25.331subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

[…]

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in TS 25.331 subclause 8.5.60

…

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

…

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> TS 25.331 subclause 8.6.3.1b for the IE "H-RNTI";

2> TS 25.331 subclause 8.6.5.6b for the IE "HARQ info";

2> TS 25.331 subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> TS 25.331 subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in TS 25.331 subclause 8.5.44.

[…]

1> perform Multiflow data reception as specified in [51];

1> indicate to lower layers value of "Multiflow configuration" IE of each entry in DOWNLINK_SECONDARY_CELL_INFO;

1> for every entry in DOWNLINK_SECONDARY_CELL_INFO:

2> if the stored UARFCN downlink (Nd) in the entry is the same as the value of the serving HS-DSCH cell:

3> if the IE "Multiflow time reference cell" is not present:

4> indicate to lower layers that the serving HS-DSCH cell is time reference for HS-DPCCH;

3> else:

4> indicate to lower layers that the cell is a time reference for HS-DPCCH;

2> else:

3> if the IE "Multiflow time reference cell" is present:

4> indicate to lower layers that the cell and the time reference cell are in the same cell group as specified in [27];

3> else:

4> indicate to lower layers that the cell and the non-time reference cell are in the same cell group as specified in [27];

1> If there is at least one entry in DOWNLINK_SECONDARY_CELL_INFO with the IE "Multiflow cell", value of which is set to "inter-NodeB":

2> configure two MAC-ehs entities;

2> associate with the first MAC-ehs entity the serving HS-DSCH cell and all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "intra-NodeB";

2> associate with the second MAC-ehs entity all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "inter-NodeB";

Whenever the variable MULTIFLOW_STATUS is set to FALSE, the UE shall:

1> stop Multiflow operation;

1> if Timer_Reordering was configured for the receiving RLC entity:

2> configure the receiving RLC entity not to use the corresponding function;

1> if two MAC-ehs entities were configured for the inter-Node B Multiflow operation:

2> configure one MAC-ehs entity;

1> indicate to lower layers that the serving HS-DSCH cell must be used as a time reference for HS-DPCCH.

[…]

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.5.51, 8.5.71;

### 8.2.2.86.1.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_DCH, and to stop Multiflow HSDPA operation according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_DCH to CELL_DCH state, and starts Multiflow HSDPA operation (Single Frequency/2 Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.86.1.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 with Cell 1 (f1) (Serving HS-DSCH Cell), and Cell 2 (f1) (Assisting Serving HS-DSCH Cell) –One Carrier on Band A (Single Band SF-DC). Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A41 as specified in clause 7.4 of TS 34.108 [9]. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on two cells on one frequency (UE Category 21-24)

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-MF configuration, to the UE to deactivate Multiflow HSDPA operation. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HSDPA (with Multiflow HSDPA operation simultaneously configured for L1). SRBs are mapped to DCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE *"HS-DSCH physical layer category extension 2"*. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

To check that the UE has activated Multiflow HSDPA, SS checks that UE sends CQI reports for Cell 1 and Cell 2.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_DCH which deactivates Multiflow HSDPA operation. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB to CELL_DCH on E-DCH/HSDPA, using Multiflow HSDPA operation. SRBs are mapped to DCH |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH. |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on DCH. |
| 8 | | | | SS checks for CQI reports at 2 ms interval with concatenated CQI report for Serving HS-DSCH Cell (Cell 1) and Assisting Serving HS-DSCH Cell (Cell 2) |
| 9 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for A3 "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 [9] clause 9, except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list<br>- RB information to reconfigure<br>- RB identity<br>Added or Reconfigured UL TrCH information | <br>(High-speed AM DTCH)<br>25<br>Not present | |
| Added or Reconfigured DL TrCH information list | Not present | |
| Uplink DPCH info | Not present | |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4)

Use the same message as specified in TS 34.108 [9] clause 9.

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for A3 "Packet to CELL_DCH from CELL_DCH in PS" in TS 34.108 [9] with the exception as follow:

#### 8.2.2.86.1.5 Test requirements

At step 6 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 8 the UE shall transmit CQI reports for the two cells.

### 8.2.2.86.2 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of three cell/Two frequency Multiflow HSDPA / Single Band

#### 8.2.2.86.2.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on three cells on two frequencies in single band.

#### 8.2.2.86.2.2 Conformance requirement

Same as in sub-clause 8.2.2.86.1.2.

#### 8.2.2.86.2.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_DCH, and to stop Multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_DCH to CELL_DCH state, and starts Multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.86.2.4 Method of test

##### Initial Condition

SS configures Cells 1 and 3 as per Table 5.0aB of TS 25.101 [21] and TS 34.108 [9], clause 5.1.1.

System Simulator: 3 cells –Cell 1/2/3 with Cell 1 (f1) (Serving HS-DSCH Cell), and Cell 2 (f1) (Assisting Serving HS-DSCH Cell) and Cell 3(f2) (Secondary Serving HS-DSCH Cell) –One Carrier on Band A. Serving HS-DSCH Cell (Cell1) and Secondary Serving HS-DSCH Cell (Cell 3) have the same radio frame timing. Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A42 as specified in clause 7.4 of TS 34.108 [9] with the exception that cell3 is a secondary serving HS-DSCH cell. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

##### Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on three cells on two frequencies (UE Category 29-30)

##### Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-MF configuration, to the UE to deactivate Multiflow HSDPA operation. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HSDPA (with Multiflow HSDPA operation simultaneously configured for L1). SRBs are mapped to DCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 4*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

To check that the UE has activated Multiflow HSDPA, SS checks that UE sends CQI reports for Cell 1, Cell 2 and Cell 3.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH.

##### Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ← | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_DCH which deactivates Multiflow HSDPA operation. |
| 2 | | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | ← | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB to CELL_DCH on E-DCH/HSDPA, using Multiflow HSDPA operation. SRBs are mapped to DCH |
| 4 | | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH. |
| 6 | | → | UE CAPABILITY INFORMATION | |
| 7 | | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on DCH. |

| | | | |
|---|---|---|---|
| 8 | | | SS checks for CQI reports at 4 ms interval with:<br>- concatenated CQI report for Serving HS-DSCH cell (Cell 1) and Secondary Serving HS-DSCH Cell (Cell 3)<br>- CQI report for Assisting Serving HS-DSCH Cell (Cell 2) |
| 9 | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH. |

#### 8.2.2.86.2.5 Test requirements

At step 6 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 8 the UE shall transmit CQI reports for the three cells.

### 8.2.2.86.3 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of three cell/Two frequency Multiflow HSDPA / Dual Band

#### 8.2.2.86.3.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on three cells on two frequencies in two bands.

#### 8.2.2.86.3.2 Conformance requirement

Same as in sub-clause 8.2.2.86.1.2.

#### 8.2.2.86.3.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_PCH, and to stop Multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Dual band) according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM, reconfigures the radio bearer parameters and starts Multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Dual band) according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.86.3.4 Method of test

##### Initial Condition

SS configures Cells 1 and 3 as per Table 5.0aC of TS 25.101 [21] and TS 34.108 [9], clause 5.1.1.

System Simulator: 3 cells –Cell 1/2/3 with Cell 1 (f1) (Serving HS-DSCH Cell), and Cell 2 (f1) (Assisting Serving HS-DSCH Cell) and Cell 3(f2) (Secondary Serving HS-DSCH Cell) – One Serving Carrier on Band A, and One Assisting Carrier on Band B. Serving HS-DSCH Cell (Cell1) and Secondary Serving HS-DSCH Cell (Cell 3) have the same radio frame timing. Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A42 as specified in clause 7.4 of TS 34.108 [9], with the exception that cell3 is a secondary serving HS-DSCH cell. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

##### Related ICS/IXIT statement(s)

| 7 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on DCH. |
| 8 | | | SS checks for CQI reports at 4 ms interval with:<br>- concatenated CQI report for Serving HS-DSCH Cell (Cell 1) and Secondary Serving HS-DSCH Cell (Cell 3)<br>- CQI report for Assisting Serving HS-DSCH Cell (Cell 2) |
| 9 | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified in clause 8.2.2.86.1.4 RADIO BEARER RECONFIGURATION (Step 1).

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4)

Use the same message as specified in clause 8.2.2.86.1.4 RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4) (FDD).

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified in clause 8.2.2.86. 2.4 RADIO BEARER RECONFIGURATION (Step 3).

#### 8.2.2.86.3.5 Test requirements

Same as sub-clause 8.2.2.86.2.5.

### 8.2.2.87 Radio Bearer Reconfiguration: two cell/single frequency or 3 cell/two frequencies Activation by Assisting Serving Cell Change from Multiflow HSDPA capable cell to Multiflow HSDPA capable cell

NOTE: The Radio Bearer Reconfiguration test case 8.2.2.87 for Multiflow HSDPA have been split in to single band (with two cells on one frequency and with three cells on two frequencies), and dual band (with three cells on two frequencies).

#### 8.2.2.87.1 Radio Bearer Reconfiguration: two cell/single frequency Activation by Assisting Serving Cell Change from Multiflow HSDPA capable cell to Multiflow HSDPA capable cell/Single Band

##### 8.2.2.87.1.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on two cells on one frequency in single band.

##### 8.2.2.87.1.2 Conformance requirement

[…]

The UE shall:

1> be able to receive any of the following messages:

2> RADIO BEARER SETUP message; or

2> RADIO BEARER RECONFIGURATION message; or

…

If the UE receives:

...

- a RADIO BEARER RECONFIGURATION message; or

it shall:

…

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only).

…

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

The UE may first release the physical channel configuration used at reception of the reconfiguration message. The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> for FDD:

2> determine the value for the SECONDARY_CELL_HS_DSCH_RECEPTION variable and take the corresponding actions as described in TS 25.331subclause 8.5.51.

…

The UE shall transmit a response message as specified in TS 25.331subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

[…]

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in TS 25.331 subclause 8.5.60

…

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

…

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> TS 25.331 subclause 8.6.3.1b for the IE "H-RNTI";

2> TS 25.331 subclause 8.6.5.6b for the IE "HARQ info";

2> TS 25.331 subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> TS 25.331 subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in TS 25.331 subclause 8.5.44.

[…]

1> perform Multiflow data reception as specified in [51];

1> indicate to lower layers value of "Multiflow configuration" IE of each entry in DOWNLINK_SECONDARY_CELL_INFO;

1> for every entry in DOWNLINK_SECONDARY_CELL_INFO:

2> if the stored UARFCN downlink (Nd) in the entry is the same as the value of the serving HS-DSCH cell:

3> if the IE "Multiflow time reference cell" is not present:

4> indicate to lower layers that the serving HS-DSCH cell is time reference for HS-DPCCH;

3> else:

4> indicate to lower layers that the cell is a time reference for HS-DPCCH;

2> else:

3> if the IE "Multiflow time reference cell" is present:

4> indicate to lower layers that the cell and the time reference cell are in the same cell group as specified in [27];

3> else:

4> indicate to lower layers that the cell and the non-time reference cell are in the same cell group as specified in [27];

1> If there is at least one entry in DOWNLINK_SECONDARY_CELL_INFO with the IE "Multiflow cell", value of which is set to "inter-NodeB":

2> configure two MAC-ehs entities;

2> associate with the first MAC-ehs entity the serving HS-DSCH cell and all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "intra-NodeB";

2> associate with the second MAC-ehs entity all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "inter-NodeB";

Whenever the variable MULTIFLOW_STATUS is set to FALSE, the UE shall:

1> stop Multiflow operation;

1> if Timer_Reordering was configured for the receiving RLC entity:

2> configure the receiving RLC entity not to use the corresponding function;

1> if two MAC-ehs entities were configured for the inter-Node B Multiflow operation:

2> configure one MAC-ehs entity;

1> indicate to lower layers that the serving HS-DSCH cell must be used as a time reference for HS-DPCCH.

[…]

If the IE "Downlink information common for all radio links" is included the UE shall:

…

1> if the IE "MAC-hs reset indicator" is included:

2> if the serving HS-DSCH radio link is the same radio link as prior to the reception of the message; and

2> if, as a result of the reconfiguration message where this IE is received, the MAC header type (i.e., either MAC-hs or MAC-ehs) is unchanged; and

2> if, as a result of the reconfiguration message where this IE is received, the UE does not perform a state transition between CELL_FACH state and CELL_DCH state:

3> the UE behaviour is unspecified.

2> if inter-Node B Multiflow operation is not configured:

3> reset the MAC-hs/ehs entity [15].

2> else:

3> reset the MAC-hs/ehs entity related to the serving cell [15].

1> if the IE "MAC-hs reset indicator for Multiflow assisting cells" is included:

2> if inter-Node B Multiflow operation is configured:

3> reset the MAC-hs/ehs entity related to the configured assisting cells [15].

2> else:

3> the UE behaviour is unspecified.

[…]

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.5.51, 8.5.71, 8.6.27;

### 8.2.2.87.1.3 Test purpose

1. To confirm that the UE resets the MAC-hs/ehs entity related to the configured Assisting Carrier Cell according to the received RADIO BEARER RECONFIGURATION message.
2. To confirm that the UE performs inter-Node B Assisting Carrier Cell change in Multiflow HSDPA operation (Single Frequency/2 Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.87.1.4 Method of test

Initial Condition

System Simulator:

3 cells:

Node B 1: Cell 1 (Serving HS-DSCH Cell)

Node B 2: Cell 2 (Assisting Serving HS-DSCH Cell before the Radio Bearer Reconfiguration)

Node B 3: Cell 3 (Assisting Serving HS-DSCH Cell after the Radio Bearer Reconfiguration)

Tcell of Cell 2 or Cell 3 is set to 3840 chips (1.5 slots).

One Serving Carrier on Band A (Single Band SF-DC)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A41 as specified in clause 7.4 of TS 34.108 [9]. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on two cells on one frequency (UE Category 21-24)

Test Procedure

**Table 8.2.2.87.1**

| Parameter | Unit | Cell 2 (Node B 2) | | Cell 3 (Node B 3) | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid-Range Test Frequency | | Mid-Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| | | | | | |

Table 8.2.2.87.1 illustrates the downlink power to be applied for all cells at various time instants of the test execution.

The downlink transmission power is set according to values in column “T0” in table 8.2.2.87.1. The UE has user plane bearers mapped to the E-DCH/HS-DSCH of the Multiflow HSDPA operation on Single Frequency/2 Cell (SF-DC) /Single Band and signalling bearers mapped to DCH/DCH.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.87.1. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling codes for Cell 3 according to IE "Intra-frequency event identity" set to 1a. The SS transmits to the UE an ACTIVE SET UPDATE messageon DCCH using AM RLC to add cell 3 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform Assisting Carrier Cell change to Cell 3 in the Node B 3. When the UE receives this message, at the activation time, the UE shall configure layer 1 to begin E-DCH transmission and HS-DSCH reception using the new radio link on Cell 3 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated Multiflow HSDPA, SS checks that UE sends CQI reports for Cell 1 and Cell 3.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures its downlink transmission power settings according to column "T1" in table 8.2.2.87.1 |
| 2 | → | | MEASUREMENT REPORT | See specific message contents for this message (event ‘1a’ for Cell 3). |
| 3 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 3 in the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 3. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | SS transmits this message on downlink DCCH using AM RLC. |
| 6 | SS | | | At the activation time Cell 3 becomes the assisting serving HS-DSCH Cell. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | | SS checks for CQI reports at 2 ms interval with concatenated CQI report for Serving HS-DSCH Cell (Cell 1) and Assisting Serving HS-DSCH Cell (Cell 3) |
| 9 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | Cell 1. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the primary scrambling code of cell 1 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | Cell 3. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the primary scrambling code of cell 3 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the primary scrambling code of cell 3 |

NOTE 1: Cell measured results for Cells 1 and 3 may appear in any order.

ACTIVE SET UPDATE (Step 3)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 3 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not present | |
| - TPC combination index | 1 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not present | |
| - TFCI combining indicator | FALSE | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

RADIO BEARER RECONFIGURATION (Step 5) (FDD)

Use the same message as specified "Packet to CELL_DCH from CELL_DCH in PS" in TS 34.108 [9] with the exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list | | |
| - RB information to reconfig | (High-speed AM DTCH) | |
| - RB identity | 25 | |
| Added or Reconfigured UL TrCH information | Not present1 | |
| Added or Reconfigured DL TrCH information list | Not present1 | |
| Uplink DPCH info | Not present | |
| Downlink secondary cell info FDD | | Rel-8 |
| - CHOICE Configuration info | New configuration | |
| - New HRNTI | '1010 1010 1010 1010' | |
| - Downlink 64QAM configured | Not Present | |
| - HS-DSCH TB size table | Octet Aligned | |
| - Primary CPICH info | | |
| - Primary scrambling code | Set to the primary scrambling code of cell 3 | |
| - DL Scrambling Code | Not Present. | |
| - HS-SCCH Channelisation Code Information | 1 HS-SCCH code | |
| - HS-SCCH Channelisation Code | Refer to TS 34.108 Table 5.5.1.3.1 | |
| - Measurement Power Offset | 6 dB | |
| - UARFCN downlink (Nd) | Set to the frequency of cell 3 | |
| - Multiflow configuration | | Rel-11 |
| - Multiflow cell | inter-NodeB (NodeB 3) | |
| - Multiflow time reference cell | Not Present | |

8.2.2.87.1.5 Test requirements

At step 2 the UE shall transmit a MEASUREMENT REPORT message on SRB2.

At step 4 the UE shall transmit an ACTIVE SET UPDATE COMPLETE message to SS.

At step 7 the UE shall transmit an RADIO BEARER RECONFIGURATION COMPLETE message on SRB2.

At step 8 the UE shall transmit CQI reports for the 2 cells.

### 8.2.2.87.2 Radio Bearer Reconfiguration: 3 cell/two frequencies Activation by Assisting Serving Cell Change from Multiflow capable cell to Multiflow capable cell/Single Band

#### 8.2.2.87.2.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on three cells on two frequencies in single band.

#### 8.2.2.87.2.2 Conformance requirement

Same as in sub-clause 8.2.2.87.1.2.

#### 8.2.2.87.2.3 Test purpose

1. To confirm that the UE resets the MAC-hs/ehs entity related to the configured Assisting Carrier Cell according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE performs inter-Node B Assisting Carrier Cell change in Multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.87.2.4 Method of test

Initial Condition

SS configures Cells 1 and 3 as per Table 5.0aB of TS 25.101 [21] and TS 34.108 [9], clause 5.1.1.

System Simulator:

4 cells:

Node B 1: Cell 1 (Serving HS-DSCH Cell), Cell 4 (Secondary Serving HS-DSCH Cell)

Node B 2: Cell 2 (Assisting Serving HS-DSCH Cell before the Radio Bearer Reconfiguration)

Node B 3: Cell 3 (Assisting Serving HS-DSCH Cell after the Radio Bearer Reconfiguration)

Serving HS-DSCH Cell (Cell1) and Secondary Serving HS-DSCH Cell (Cell 4) have the same radio frame timing. Tcell of Cell 2 or Cell 3 is set to 3840 chips (1.5 slots).

One Serving Carrier on Band A and One Assisting Carrier on Band B (Single Band DF-3C)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A42 as specified in clause 7.4 of TS 34.108 [9] with the exception that cell3 is a secondary serving HS-DSCH cell. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on three cells on two frequencies (UE Category 29-30)

Test Procedure

**Table 8.2.2.87.2**

| Parameter | Unit | Cell 2 (Node B 2) | | Cell 3 (Node B 3) | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid-Range Test Frequency | | Mid-Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| | | | | | |

Table 8.2.2.87.2 illustrates the downlink power to be applied for all cells at various time instants of the test execution.

The downlink transmission power is set according to values in column “T0” in table 8.2.2.87.2 The UE has user plane bearers mapped to the E-DCH/HS-DSCH of the Multiflow HSDPA operation on Dual Frequency/3 Cell (DF-3C) /Single Band and signalling bearers mapped to DCH/DCH.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.87.2. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for Cell 3 according to IE "Intra-frequency event identity" set to 1a. The SS transmits to the UE an ACTIVE SET UPDATE messageon DCCH using AM RLC to add cell 3 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform Assisting Carrier Cell change to Cell 3 in the Node B 3. When the UE receives this message, at the activation time, the UE shall configure layer 1 to begin E-DCH transmission and HS-DSCH reception using the new radio link on Cell 3 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated Multiflow HSDPA, SS checks that UE sends CQI reports for Cell 1, Cell 3 and Cell 4.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures its downlink transmission power settings according to column "T1" in table 8.2.2.87.2 |
| 2 | → | | MEASUREMENT REPORT | See specific message contents for this message (event ‘1a’ for Cell 3). |
| 3 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 3 in the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 3. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | SS transmits this message on downlink DCCH using AM RLC. |
| 6 | SS | | | At the activation time Cell 3 becomes the assisting serving HS-DSCH Cell. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | | SS checks for 2 CQI reports at 4 ms interval with:<br>- concatenated CQI report for Serving HS-DSCH Cell (Cell 1) and Secondary Serving HS-DSCH Cell (Cell 4)<br>- CQI report for Assisting Serving HS-DSCH Cell (Cell 3) |
| 9 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

Use the same message as specified in clause 8.2.2.87.1.4 MEASUREMENT REPORT (Step 2).

ACTIVE SET UPDATE (Step 3)

Use the same message as specified in clause 8.2.2.87.1.4 ACTIVE SET UPDATE (Step 3).

RADIO BEARER RECONFIGURATION (Step 5)

Use the same message as specified in clause 8.2.2.87.1.4 RADIO BEARER RECONFIGURATION (Step 5) with additional elements as follow.

| Information Element | Value/remark | Version |
|---|---|---|
| Additional downlink secondary cell info list FDD | | Rel-10 |
| Downlink secondary cell info FDD | | |
| - CHOICE Configuration info | New configuration | |
| - New HRNTI | '1010 1010 1010 1010' | |
| - Downlink 64QAM configured | Not present | |
| - HS-DSCH TB size table | Octet Aligned | |
| - Primary CPICH info | | |
| - Primary scrambling code | Set to the primary scrambling code of cell 4 | |
| - DL Scrambling Code | Not Present. | |
| - HS-SCCH Channelisation Code Information | 1 HS-SCCH code | |
| - HS-SCCH Channelisation Code | Refer to TS 34.108 Table 5.5.1.3.1 | |
| - Measurement Power Offset | 6 dB | |
| - UARFCN downlink (Nd) | Set to the frequency of cell 4 | |
| - Multiflow configuration | | Rel-11 |
| - Multiflow cell | Intra-NodeB | |
| - Multiflow time reference cell | TRUE | |

#### 8.2.2.87.2.5 Test requirements

At step 4 the UE shall transmit an ACTIVE SET UPDATE COMPLETE message to SS.

At step 7 the UE shall transmit an RADIO BEARER RECONFIGURATION COMPLETE message on SRB2.

At step 8 the UE shall transmit CQI reports for the 3 cells.

### 8.2.2.87.3 Radio Bearer Reconfiguration: 3 cell/two frequencies Activation by Assisting Serving Cell Change from Multiflow capable cell to Multiflow capable cell/Dual Band

#### 8.2.2.87.3.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on three cells on two frequencies in two bands.

#### 8.2.2.87.3.2 Conformance requirement

Same as in sub-clause 8.2.2.87.1.2.

#### 8.2.2.87.3.3 Test purpose

1. To confirm that the UE resets the MAC-hs/ehs entity related to the configured Assisting Carrier Cell according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE performs inter-Node B Assisting Carrier Cell change in Multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Dual band) according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.87.3.4 Method of test

Initial Condition

SS configures Cells 1 and 3 as per Table 5.0aC of TS 25.101 [21] and TS 34.108 [9], clause 5.1.1.

System Simulator:

4 cells:

Node B 1: Cell 1 (Serving HS-DSCH Cell), Cell 4 (Secondary Serving HS-DSCH Cell)

Node B 2: Cell 2 (Assisting Serving HS-DSCH Cell before the Radio Bearer Reconfiguration)

Node B 3: Cell 3 (Assisting Serving HS-DSCH Cell after the Radio Bearer Reconfiguration)

Serving HS-DSCH Cell (Cell1) and Secondary Serving HS-DSCH Cell (Cell 4) have the same radio frame timing. Tcell of Cell 2 or Cell 3 is set to 3840 chips (1.5 slots).

One Serving Carrier on Band A and One Assisting Carrier on Band B (Dual Band DF-3C).

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A42 as specified in clause 7.4 of TS 34.108 [9] with the exception that cell3 is a secondary serving HS-DSCH cell. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on three cells on two frequencies (UE Category 29-30)

Test Procedure

**Table 8.2.2.87.3**

| Parameter | Unit | Cell 2 (Node B 2) | | Cell 3 (Node B 3) | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid-Range Test Frequency | | Mid-Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.2.87.2 illustrates the downlink power to be applied for all cells at various time instants of the test execution.

The downlink transmission power is set according to values in column “T0” in table 8.2.2.87.3 The UE has user plane bearers mapped to the E-DCH/HS-DSCH of the Multiflow HSDPA operation on Dual Frequency/3 Cell (DF-3C) /Dual Band and signalling bearers mapped to DCH/DCH.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.87.3. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for Cell 3 according to IE "Intra-frequency event identity" set to 1a. The SS transmits to the UE an ACTIVE SET UPDATE messageon DCCH using AM RLC to add cell 3 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform Assisting Carrier Cell change to Cell 3 in the Node B 3. When the UE receives this message, at the activation time, the UE shall configure layer 1 to begin E-DCH transmission and HS-DSCH reception using the new radio link on Cell 3 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated Multiflow HSDPA, SS checks that UE sends CQI reports for Cell 1, Cell 3 and Cell 4.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH.

Expected sequence

| Step | Direction | | Message | Comment |

| 8 | | | | SS checks for 2 CQI reports at 4 ms interval with:<br>- concatenated CQI report for Serving HS-DSCH Cell (Cell 1) and Secondary Serving HS-DSCH Cell (Cell 4)<br>- CQI report for Assisting Serving HS-DSCH Cell (Cell 3) |
| 97 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

Use the same message as specified in clause 8.2.2.87.1.4 MEASUREMENT REPORT (Step 2).

ACTIVE SET UPDATE (Step 3)

Use the same message as specified in clause 8.2.2.87.1.4 ACTIVE SET UPDATE (Step 3).

RADIO BEARER RECONFIGURATION (Step 5)

Use the same message as specified in clause 8.2.2.87.2.4 RADIO BEARER RECONFIGURATION (Step 5).

#### 8.2.2.87.3.5 Test requirements

Same as sub-clause 8.2.2.87.2.5.

## 8.2.2.88 Radio Bearer Reconfiguration for transition between CELL_PCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of Multiflow HSDPA

NOTE: The Radio Bearer Reconfiguration for transition between CELL_PCH & CELL_DCH for Multiflow HSDPA have been split in to single band two cells on one frequency and three cells on two frequencies, dual band three cells on two frequencies.

### 8.2.2.88.1 Radio Bearer Reconfiguration for transition between CELL_PCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of two cell/Single frequency Multiflow HSDPA/Single Band

#### 8.2.2.88.1.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on two cells on one frequency in single band.

#### 8.2.2.88.1.2 Conformance requirement

…

If the UE receives:

...

- a RADIO BEARER RECONFIGURATION message; or

it shall:

…

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only).

…

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in TS 25.331 subclause 8.5.60

…

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

…

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> TS 25.331 subclause 8.6.3.1b for the IE "H-RNTI";

2> TS 25.331 subclause 8.6.5.6b for the IE "HARQ info";

2> TS 25.331 subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> TS 25.331 subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in TS 25.331 subclause 8.5.44.

[…]

…

1> perform Multiflow data reception as specified in [51];

1> indicate to lower layers value of "Multiflow configuration" IE of each entry in DOWNLINK_SECONDARY_CELL_INFO;

1> for every entry in DOWNLINK_SECONDARY_CELL_INFO:

2> if the stored UARFCN downlink (Nd) in the entry is the same as the value of the serving HS-DSCH cell:

3> if the IE "Multiflow time reference cell" is not present:

4> indicate to lower layers that the serving HS-DSCH cell is time reference for HS-DPCCH;

3> else:

4> indicate to lower layers that the cell is a time reference for HS-DPCCH;

2> else:

3> if the IE "Multiflow time reference cell" is present:

4> indicate to lower layers that the cell and the time reference cell are in the same cell group as specified in [27];

3> else:

4> indicate to lower layers that the cell and the non-time reference cell are in the same cell group as specified in [27];

1> If there is at least one entry in DOWNLINK_SECONDARY_CELL_INFO with the IE "Multiflow cell", value of which is set to "inter-NodeB":

2> configure two MAC-ehs entities;

2> associate with the first MAC-ehs entity the serving HS-DSCH cell and all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "intra-NodeB";

2> associate with the second MAC-ehs entity all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "inter-NodeB";

Whenever the variable MULTIFLOW_STATUS is set to FALSE, the UE shall:

1> stop Multiflow operation;

1> if Timer_Reordering was configured for the receiving RLC entity:

2> configure the receiving RLC entity not to use the corresponding function;

1> if two MAC-ehs entities were configured for the inter-Node B Multiflow operation:

2> configure one MAC-ehs entity;

1> indicate to lower layers that the serving HS-DSCH cell must be used as a time reference for HS-DPCCH.

[…]

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.5.32, 8.5.33, 8.5.71

### 8.2.2.88.1.3 Test purpose

1. To confirm that the UE configures the physical channels and transits from CELL_DCH to CELL_PCH according to the received RADIO BEARER RECONFIGURATION message.
2. To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM, reconfigures the radio bearer parameters and starts Multiflow HSDPA operation according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.88.1.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 with Cell 1 (f1) (Serving cell), and Cell 2 (f1) (Assisting serving cell) –One Carrier on Band A. Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A17f as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on two cells on one frequency (UE Category 21-24)

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE and enter the CELL_PCH state.

The UE is in CELL_PCH state. The SS transmits a PAGING TYPE 1 message. The UE enters the CELL_FACH state to transmit a CELL UPDATE message using uplink CCCH in Cell 1 in response to the paging.

The SS transmits a CELL UPDATE CONFIRM message to the UE(with Multiflow HSDPA operation simultaneously configured for L1). SRBs are mapped to DCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY using SRB2 mapped onto DCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE *"HS-DSCH physical layer category extension 2"*. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1 and Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure the UE to CELL_PCH. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | SS | | SS sends the L2 ack on the RADIO BEARER RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. |
| 4 | ← | | PAGING TYPE 1 | |
| 5 | → | | CELL UPDATE | The UE enters the CELL_FACH state |
| 6 | ← | | CELL UPDATE CONFIRM | Reconfiguration of a UE to CELL_DCH with Multiflow HSDPA operation. SRBs are mapped to DCH |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH. |
| 9 | → | | UE CAPABILITY INFORMATION | |
| 10 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on DCH. |
| 11 | | | | SS checks for CQI reports at 4 ms interval with concatenated CQI report for Serving cell (Cell 1) and Assisting serving cell (Cell 2) |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

Paging Type 1 (Step 4)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | Equal to the U-RNTI assigned earlier. |
| - SRNC Identity | |
| - S-RNTI | |
| - CN originated page to connected mode UE | Not Present |
| BCCH modification info | Not Present |

CELL UPDATE (Step 5)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Paging response” |

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|

#### 8.2.2.88.1.5 Test requirements

At step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 9 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 11 the UE shall transmit CQI reports.

### 8.2.2.88.2 Radio Bearer Reconfiguration for transition between CELL_PCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of three cell/Two frequency Multiflow HSDPA/Single Band

#### 8.2.2.88.2.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on three cells on two frequencies in single band.

#### 8.2.2.88.2.2 Conformance requirement

Same as in sub-clause 8.2.2.88.1.2.

#### 8.2.2.88.2.3 Test purpose

1. To confirm that the UE configures the physical channels and transits from CELL_DCH to CELL_PCH according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM, reconfigures the radio bearer parameters and starts Multiflow HSDPA operation according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.88.2.4 Method of test

Initial Condition

System Simulator: 3 cells –Cell 1/2/3 with Cell 1 (f1) (Serving cell), and Cell 2 (f1) (Assisting serving cell) and Cell 3(f2) (Secondary serving cell) –One Carrier on Band A. Tcell of Cell 2 is set to 3840 chips (1.5 slots).

(Ref. to Table 5.0aB of TS 25.101 [21])

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A17f as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD

- UE category supports Multiflow HSDPA operation on three cells on two frequencies (UE Category 29)

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE and enter the CELL_PCH state.

The UE is in CELL_PCH state. The SS transmits a PAGING TYPE 1 message. The UE enters the CELL_FACH state to transmit a CELL UPDATE message using uplink CCCH in Cell 1 in response to the paging.

The SS transmits a CELL UPDATE CONFIRM message to the UE including RAB information (with Multiflow HSDPA operation simultaneously configured for L1). SRBs are mapped to DCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY using SRB2 mapped onto DCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE *"HS-DSCH physical layer category extension 4"*. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1, Cell 2 and Cell 3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure the UE to CELL_PCH. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | SS | | SS sends the L2 ack on the RADIO BEARER RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. |
| 4 | ← | | PAGING TYPE 1 | |
| 5 | → | | CELL UPDATE | The UE enters the CELL_FACH state |

CELL UPDATE (Step 5)

Use the same message as specified in clause 8.2.2.88.1.4 CELL UPDATE (Step 5).

CELL UPDATE CONFIRM (Step 6)

Use the same message as specified in clause 8.2.2.88.2.4 CELL UPDATE CONFIRM (Step 6).

#### 8.2.2.88.3.5 Test requirements

Same as sub-clause 8.2.2.88.1.5.

## 8.2.2.89 Void

## 8.2.2.90 Void

## 8.2.2.91 Radio Bearer Reconfiguration for transition to CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of DCH Enhancement in Basic Mode

### 8.2.2.91.1 Definition and applicability

All UEs which support FDD and Rel-12 DCH Enhancements.

### 8.2.2.91.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the IE "DCH Enhancements info FDD" as specified in subclause 8.6.6.64;

1> determine the value of the DCH_ENHANCEMENTS_STATUS variable.

The DCH_ENHANCEMENTS_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the UE supports DCH Enhancements;

1> the UE has stored IE "DCH Enhancements info FDD".

If any of the above conditions is not met and the DCH_ENHANCEMENTS_STATUS variable is set to TRUE, the UE shall:

1> set the DCH_ENHANCEMENTS_STATUS variable to FALSE;

1> trigger the lower layers to stop operation with DCH Enhancements.

Whenever the variable DCH_ENHANCEMENTS_STATUS is set to TRUE, the UE shall:

1> if the UE indicates basic support for DCH Enhancements and choice "DL FET Mode" is set to Full; or

1> if the IE "Power offset $P_{TPC\text{-}DPDCH}$" is not included for any one or more of the radio links in the active set; or

1> if the IE "Power offset $PO_{SRB}$" is not included for any one or more of the radio links in the active set; or

1> if the IE "Number of bits for Pilot bits" is not set to 0; or

1> if both the variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE, the variable DTX_DRX_STATUS is set to FALSE, and choice "UL Transmission Mode" is not set to 20ms:

2> set the variable INVALID_CONFIGURATION to TRUE.

1> else:

2> trigger the lower layers to operate with DCH Enhancements in DL FET Basic mode or DL FET Full mode as indicated in the IE "DL FET Mode".

Whenever the variable DCH_ENHANCEMENTS_STATUS is set to FALSE, the UE shall:

1> if the IE "Number of bits for Pilot bits" is set to 0:

2> if the UE is in CELL_DCH state:

3> set the variable INVALID_CONFIGURATION to TRUE.

…

When operating with DCH Enhancements in DL FET Full mode, the UE shall:

1> set, at physical channel establishment, the initial downlink target SIR based on either the IE "Early DCH quality target" or the IE "DCH quality target" if included, whichever requires a higher value, for transport channel(s) undergoing concatenation at the physical layer as indicated in the IE "TrCh Concatenation Info";

1> adjust the downlink target SIR for the downlink power control to meet either the early quality target received in the IE "Early DCH quality target" at the end of the slot number received in the IE "Early DCH quality target slot" or the quality target received in the IE "DCH quality target" at the end of slot number 29, whichever requires a higher value, for those transport channel(s).

…

If the IE "DCH Enhancements info FDD" is included, the UE shall:

1> if the CHOICE "Configuration info" is set to "New configuration":

2> store the IE "DCH Enhancements info FDD", replacing any stored IE "DCH Enhancements info FDD".

1> if the CHOICE "Configuration info" is set to "Continue" and the UE has any stored IE "DCH Enhancements info FDD":

2> keep the stored IE "DCH Enhancements info FDD".

If the IE "DCH Enhancements info FDD" is not included and the UE has any stored IE "DCH Enhancements info FDD", the UE shall:

1> clear the stored IE "DCH Enhancements info FDD".

…

References

1. TS 25.331, Clause 8.5.84, 8.6.5.25, 8.6.6.64

#### 8.2.2.91.3 Test purpose

1. To confirm that the UE configures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which activates DCH Enhancement parameters in Basic mode.

2. To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which deactivates DCH Enhancement parameters.

#### 8.2.2.91.4 Method of test

Initial conditions

System Simulator: 1 cell - Cell 1

UE: CS-DCCH+DTCH_DCH (state 6-9) in cell 1 as specified in clause 7.4 of TS 34.108 supported by the UE.

Radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which activates DCH Enhancement state in Basic Mode. The UE configures the new parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

SS sends Transport FORMAT COMBINATION CONTROL message to restrict data on TFCIs specified in 14.2.4.3. The UE is placed into UE test loop mode 1 with the UL SDU as specified in 14.2.4.3 subtest 2. UE responds with CLOSED UE LOOP MODE COMPLETE message. SS sends test data using the downlink transport format combination under test which is responded to by UE on the uplink.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which deactivates DCH Enhancement state. The UE configures the new parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

SS sends test data using the downlink transport format combination under test which is responded to by UE on the uplink.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Activation of DCH Enhancement. RLC configuration is modified. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT FORMAT COMBINATION CONTROL (DCCH) | RRC Transport format combinations is limited to "Restricted UL TFCIs", as specified for the sub-test 2 in 14.2.4.3 |
| 4 | ← | | CLOSED UE TEST LOOP (DCCH) | UE Test Loop Mode1 |
| 5 | → | | CLOSED UE TEST LOOP COMPLETE (DCCH) | |
| 6 | ← | | DOWNLINK RLC SDU | Send test data using the downlink transport format combination under test |
| 7 | → | | UPLINK RLC SDU | If UE returns RLC SDU with the same size and content as the transmitted SDU, the test passes, otherwise it fails. |
| 8 | ← | | RADIO BEARER RECONFIGURATION | Deactivation of DCH Enhancement. RLC configuration is modified. |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | DOWNLINK RLC SDU | Send test data using the downlink transport format combination under test |
| 11 | → | | UPLINK RLC SDU | If UE returns RLC SDU with the same size and content as the transmitted SDU, the test passes, otherwise it fails. |
| 12 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

8.2.2.91.5 Test requirement

1. After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the new DPCH after the specified activation time has expired.

2. At step 7 the UE shall return an RLC SDU on each of RB10, RB11 and RB12 with transmitted transport format by the SS, having the same content as sent by SS.

3. At step 9 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the new DPCH after the specified activation time has expired.

4. At step 11 the UE shall return an RLC SDU on each of RB10, RB11 and RB12 with transmitted transport format by the SS, having the same content as sent by SS.

## 8.2.2.92 Radio Bearer Reconfiguration for transition to CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of DCH Enhancement in Full Mode

### 8.2.2.92.1 Definition and applicability

All UEs which support FDD and Full Mode of Rel-12 DCH Enhancements.

### 8.2.2.92.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the IE "DCH Enhancements info FDD" as specified in subclause 8.6.6.64;

1> determine the value of the DCH_ENHANCEMENTS_STATUS variable.

The DCH_ENHANCEMENTS_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the UE supports DCH Enhancements;

1> the UE has stored IE "DCH Enhancements info FDD".

If any of the above conditions is not met and the DCH_ENHANCEMENTS_STATUS variable is set to TRUE, the UE shall:

1> set the DCH_ENHANCEMENTS_STATUS variable to FALSE;

1> trigger the lower layers to stop operation with DCH Enhancements.

Whenever the variable DCH_ENHANCEMENTS_STATUS is set to TRUE, the UE shall:

1> if the UE indicates basic support for DCH Enhancements and choice "DL FET Mode" is set to Full; or

1> if the IE "Power offset $P_{TPC-DPDCH}$" is not included for any one or more of the radio links in the active set; or

1> if the IE "Power offset $PO_{SRB}$" is not included for any one or more of the radio links in the active set; or

1> if the IE "Number of bits for Pilot bits" is not set to 0; or

1> if both the variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE, the variable DTX_DRX_STATUS is set to FALSE, and choice "UL Transmission Mode" is not set to 20ms:

2> set the variable INVALID_CONFIGURATION to TRUE.

1> else:

2> trigger the lower layers to operate with DCH Enhancements in DL FET Basic mode or DL FET Full mode as indicated in the IE "DL FET Mode".

Whenever the variable DCH_ENHANCEMENTS_STATUS is set to FALSE, the UE shall:

1> if the IE "Number of bits for Pilot bits" is set to 0:

2> if the UE is in CELL_DCH state:

3> set the variable INVALID_CONFIGURATION to TRUE.

…

When operating with DCH Enhancements in DL FET Full mode, the UE shall:

1> set, at physical channel establishment, the initial downlink target SIR based on either the IE "Early DCH quality target" or the IE "DCH quality target" if included, whichever requires a higher value, for transport channel(s) undergoing concatenation at the physical layer as indicated in the IE "TrCh Concatenation Info";

1> adjust the downlink target SIR for the downlink power control to meet either the early quality target received in the IE "Early DCH quality target" at the end of the slot number received in the IE "Early DCH quality target slot" or the quality target received in the IE "DCH quality target" at the end of slot number 29, whichever requires a higher value, for those transport channel(s).

…

If the IE "DCH Enhancements info FDD" is included, the UE shall:

1> if the CHOICE "Configuration info" is set to "New configuration":

2> store the IE "DCH Enhancements info FDD", replacing any stored IE "DCH Enhancements info FDD".

1> if the CHOICE "Configuration info" is set to "Continue" and the UE has any stored IE "DCH Enhancements info FDD":

2> keep the stored IE "DCH Enhancements info FDD".

If the IE "DCH Enhancements info FDD" is not included and the UE has any stored IE "DCH Enhancements info FDD", the UE shall:

1> clear the stored IE "DCH Enhancements info FDD".

…

References

1. TS 25.331, Clause 8.5.84, 8.6.5.25, 8.6.6.64

### 8.2.2.92.3 Test purpose

1. To confirm that the UE configures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which activates DCH Enhancement parameters in Full mode.

2. To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which deactivates DCH Enhancement parameters.

### 8.2.2.92.4 Method of test

Initial conditions

System Simulator: 1 cell - Cell 1

UE: CS-DCCH+DTCH_DCH (state 6-9) in cell 1 as specified in clause 7.4 of TS 34.108 supported by the UE.

Radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which activates DCH Enhancement state in Full Mode. The UE configures the new parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

SS sends Transport FORMAT COMBINATION CONTROL message to restrict data on TFCIs specified in 14.2.4.3. The UE is placed into UE test loop mode 1 with the UL SDU as specified in 14.2.4.3 subtest 2. UE responds with

CLOSED UE LOOP MODE COMPLETE message. SS sends test data using the downlink transport format combination under test which is responded to by UE on the uplink.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which deactivates DCH Enhancement state. The UE configures the new parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

SS sends test data using the downlink transport format combination under test which is responded to by UE on the uplink.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Activation of DCH Enhancement. RLC configuration is modified. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT FORMAT COMBINATION CONTROL (DCCH) | RRC<br>Transport format combinations is limited to "Restricted UL TFCIs", as specified for the sub-test 2 in 14.2.4.3 |
| 4 | ← | | CLOSED UE TEST LOOP (DCCH) | UE Test Loop Mode1 |
| 5 | → | | CLOSED UE TEST LOOP COMPLETE (DCCH) | |
| 6 | ← | | DOWNLINK RLC SDU | Send test data using the downlink transport format combination under test |
| 7 | → | | UPLINK RLC SDU | If UE returns RLC SDU with the same size and content as the transmitted SDU, the test passes, otherwise it fails. |
| 8 | ← | | RADIO BEARER RECONFIGURATION | Deactivation of DCH Enhancement. RLC configuration is modified. |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | DOWNLINK RLC SDU | Send test data using the downlink transport format combination under test |
| 11 | → | | UPLINK RLC SDU | If UE returns RLC SDU with the same size and content as the transmitted SDU, the test passes, otherwise it fails. |
| 12 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.92.5 Test requirement

1. After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the new DPCH after the specified activation time has expired.

2. At step 7 the UE shall return an RLC SDU on each of RB10, RB11 and RB12 with transmitted transport format by the SS, having the same content as sent by SS.

3. At step 9 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the new DPCH after the specified activation time has expired.

4. At step 11 the UE shall return an RLC SDU on each of RB10, RB11 and RB12 with transmitted transport format by the SS, having the same content as sent by SS.

## 8.2.3 Radio Bearer Release

### 8.2.3.1 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success

#### 8.2.3.1.1 Definition

-

#### 8.2.3.1.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> perform the physical layer synchronisation procedure as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.3.1.3 Test purpose

To confirm that the UE releases the existing radio bearer according to a RADIO BEARER RELEASE message.

#### 8.2.3.1.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | Release the radio bearer. |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE

None.

#### 8.2.3.1.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.1a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (TDD Only)

#### 8.2.3.1a.1 Definition

The features and operation of UpPCH shifting have been introduced to core specification (TS 25.331 clause 8.6.6.26) for LCR TDD.

#### 8.2.3.1a.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> perform the physical layer synchronisation procedure as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.3.1a.3 Test purpose

To confirm that the UE releases the existing radio bearer according to a RADIO BEARER RELEASE message.

### 8.2.3.1a.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | Release the radio bearer. |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

### 8.2.3.3 Void

### 8.2.3.4 Void

### 8.2.3.5 Void

### 8.2.3.6 Void

### 8.2.3.7 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success

#### 8.2.3.7.1 Definition

#### 8.2.3.7.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.3.7.3 Test purpose

To confirm that the UE release the existing the radio bearer according to a RADIO BEARER RELEASE message.

### 8.2.3.7.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DTCH+DCCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | SS releases the radio bearer in the fashion specified in the message and allocate common channel resources to carry the remaining radio bearers. |
| 2 | | | | The UE selects PRACH and S-CCPCH indicated in SIB5/SIB5bis and SIB6 after entering CELL FACH state.<br>The UE shall release dedicated channels, and reconfigure the remaining radio bearers using the common channel. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

#### 8.2.3.7.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.8 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection)

#### 8.2.3.8.1 Definition

#### 8.2.3.8.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304

1> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.3.1.7.

### 8.2.3.8.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message after the UE completes a cell update procedure.

### 8.2.3.8.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

NOTE: The 'timer poll' value in the SS RLC transmit entity should be set to 800 ms.

#### Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to request the UE to transit from CELL_DCH to CELL_FACH. The UE initiates the cell update procedure because the UE cannot detect the specified cell in this message. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving CELL UPDATE message. The UE then transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC. The UE transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | RADIO BEARER RELEASE | Assigned the transition from CELL_DCH to CELL_FACH |
| 4 | → | | CELL UPDATE | The value "cell reselection" shall be set in IE "cell update cause". |
| 5 | ← | | CELL UPDATE CONFIRM | See message content. |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 3) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>150 |

RADIO BEARER RELEASE (Step 3) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | <br><br>4 |

CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 5)

Use the same message type found in clause [9] TS 34.108 clause 9, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 6)

Only the message type is checked.

#### 8.2.3.8.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 5 UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

After step 6 UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

### 8.2.3.9 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success

#### 8.2.3.9.1 Definition

#### 8.2.3.9.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.3.9.3 Test purpose

To confirm that an UE, in state CELL_FACH, releases the radio access bearers using common physical channel. After the release, it shall access the affected radio bearers on the DPCH.

#### 8.2.3.9.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. In this message, SS commands the UE to release radio access bearers on common physical channel. At the same time, SS allocates DPCH to support the affected radio bearers. The UE shall release the indicated radio access bearers and transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | | | | UE shall release the radio access bearers carried by common physical channel. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RELEASE (Step 1)

Use the same message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9.

#### 8.2.3.9.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using the dedicated physical channel allocated.

### 8.2.3.10 Void

### 8.2.3.11 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration)

#### 8.2.3.11.1 Definition

#### 8.2.3.11.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to TS 25.304;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

The UE shall:

1> in case of reception of a RADIO BEARER RELEASE message:

…

2> transmit a RADIO BEARER RELEASE FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

### 8.2.3.11.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearers in accordance with the specified settings in RADIO BEARER RELEASE message before T312 timer expires.

### 8.2.3.11.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits a RADIO BEARER RELEASE message and keeps its current physical channel configuration. The UE is expected to encounter a failure while releasing the radio bearer. After T312 timer expires, the UE shall revert to the old radio bearer configuration, so the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | | | | The SS does not configure the specified L1. |
| 3 | → | | RADIO BEARER RELEASE FAILURE | After T312 expiry the UE fails to release a radio bearer and reverts to the old configuration. |
| 4 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Measurement Identity | 1 | |
| Measurement Command | Setup | |
| Measurement reporting mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting | |
| Additional measurement list | Not Present | |
| CHOICE measurement type | Traffic Volume Measurement | |
| - Traffic volume measurement object list | | |
| - Uplink transport channel type | RACHorCPCH | R99 and Rel-4 |
| | RACH | Rel-5 |
| - UL Target Transport Channel ID | Not Present | |
| - Traffic volume measurement quantity | | |
| - Measurement quantity | RLC Buffer Payload | |
| - Traffic volume reporting quantity | | |
| - RLC Buffer Payload for each RB | True | |
| - Average of RLC Buffer Payload for each RB | False | |
| - Variance of RLC Buffer Payload for each RB | False | |
| - Measurement validity | | |
| - UE state | All states | |
| - CHOICE Reporting criteria | Periodical Reporting Criteria | |
| - Amount of reporting | Infinity | |
| - Reporting interval | 8000 | |
| DPCH compressed mode status | Not Present | |

MEASUREMENT REPORT (Step 0b and 4)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 20 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

RADIO BEARER RELEASE (Step 1)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Clause 9 of TS 34.108.

RADIO BEARER RELEASE FAILURE (Step 2)

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

### 8.2.3.11.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 2 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE "failure cause".

After step 3, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

### 8.2.3.12 Void

### 8.2.3.13 Void

### 8.2.3.14 Void

### 8.2.3.15 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Success

#### 8.2.3.15.1 Definition

#### 8.2.3.15.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency;

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

If the IE "RAB information to reconfigure" is included then the UE shall:

1> if the entry for the radio access bearer identified by the IE "CN domain identity" together with the IE "RAB Identity" in the variable ESTABLISHED_RABS already exists:

…

1> else:

2> set the variable INVALID_CONFIGURATION to TRUE.

If the variable INVALID_CONFIGURATION is set to TRUE the UE shall:

1> keep the configuration existing before the reception of the message;

1> transmit a failure response message, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

3> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

3> clear that entry.

2> set the IE "failure cause" to "invalid configuration".

1> set the variable INVALID_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

…

1> in case of reception of a RADIO BEARER RECONFIGURATION message:

2> if the radio bearer reconfiguration procedure affects several radio bearers:

3> (may) include the identities of the radio bearers for which the procedure would have been successful into the RADIO BEARER RECONFIGURATION FAILURE message.

2> transmit a RADIO BEARER RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.4.2a, 8.2.2.11, 8.2.2.9.

### 8.2.3.15.3 Test purpose

To confirm that the UE releases the existing the radio bearer(s) according to the RADIO BEARER RELEASE message.

### 8.2.3.15.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | | | Void | |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | The IE "RAB information to reconfigure" is included with the same RAB identity as was released with the RADIO BEARER RELEASE message. |
| 5 | → | | RADIO BEARER RECONFIGURATION FAILURE | The UE responds with failure, in case the RB is properly removed |
| 6 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9.

RADIO BEARER RECONFIGURATION (Step 4)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_FACH in PS" as found in clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Message Type<br>RRC transaction identifier<br>Integrity check info<br>- message authentication code<br><br><br><br>- RRC message sequence number<br><br>Integrity protection mode info<br>Ciphering mode info<br>Activation time<br>New U-RNTI<br>New C-RNTI | <br>Arbitrarily selects an integer between 0 and 3<br><br>SS calculates the value of MAC-I for this message and writes to this IE. RADIO BEARER RECONFIGURATION FAILURE (step 5)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

#### 8.2.3.15.5 Test requirement

After step 1 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC on the common physical channel.

After step 4, UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message to verify that the RAB is properly removed.

### 8.2.3.16 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (Subsequently received)

#### 8.2.3.16.1 Definition

#### 8.2.3.16.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- RADIO BEARER RELEASE; or

…

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

…

Reference

3GPP TS 25.331 clause 8.6.3.11.

8.2.3.16.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER RELEASE message before the UE releases the radio bearer according to a previous RADIO BEARER RELEASE message it ignore the new RADIO BEARER RELEASE message and configures according to the previous RADIO BEARER RELEASE message received.

8.2.3.16.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio access bearer, the UE ignores the second RADIO BEARER RELEASE message and releases the radio bearer according to the previous RADIO BEARER RELEASE message received. Finally, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | For FDD, the SS sets its UL scrambling code number to "1". |
| 2 | ← | | RADIO BEARER RELEASE | Message sent before the expiry of "activation time" specified in message in step 1. For FDD, the IE "Scrambling code number" is set to "2". For TDD the code combination assigned is different from that assigned in stage 1. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE ignores the RADIO BEARER RELEASE message in step 2 and release radio bearer according to the RADIO BEARER RELEASE message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256 |
| - Uplink DPCH Info<br>- Scrambling code number | <br>1 |

RADIO BEARER RELEASE (Step 1) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256 |
| Uplink DPCH timeslots and codes<br>- First timeslot code list | <br>Assigned by SS |

RADIO BEARER RELEASE (Step 2) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH Info<br>- Scrambling code number | Not Present<br><br>2 |

RADIO BEARER RELEASE (Step 2) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.3.16.5 Test requirement

After step 2 the UE shall transmit an RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

### 8.2.3.17 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success (Subsequently received)

#### 8.2.3.17.1 Definition

#### 8.2.3.17.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- RADIO BEARER RELEASE; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

Reference

3GPP TS 25.331 clause 8.6.3.11.

8.2.3.17.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER RELEASE message before the UE releases the radio bearer according to a previous RADIO BEARER RELEASE message, it ignores the new RADIO BEARER RELEASE message and configures according to the previous RADIO BEARER RELEASE message received.

8.2.3.17.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio access bearer, the UE ignores the second RADIO BEARER RELEASE message and releases the radio bearers according to the previous RADIO BEARER RELEASE message received. Finally, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 2 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | For FDD, the SS sets its UL scrambling code to "1". |
| 2 | ← | | RADIO BEARER RELEASE | For TDD the IE "Secondary scrambling code" is set to "2". For TDD, the code combination assigned is different from that assigned in stage 1. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE ignores the RADIO BEARER RELEASE message in step 2 and release radio bearers according to the RADIO BEARER RELEASE message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RELEASE (Step 1) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>- Uplink DPCH Info<br>- Scrambling code number | Not present<br><br>1 |

RADIO BEARER RELEASE (Step 1) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned by SS |

RADIO BEARER RELEASE (Step 2) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH Info<br>- Scrambling code number | Not Present<br><br>2 |

RADIO BEARER RELEASE (Step 2) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

8.2.3.17.5 Test requirement

After step 2 the UE shall transmit an RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

## 8.2.3.18 Radio Bearer Release from CELL_DCH to CELL_PCH: Success

### 8.2.3.18.1 Definition

### 8.2.3.18.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_PCH or URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.3.18.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE before entering CELL_PCH state after it received a RADIO BEARER RELEASE message and released its radio access bearers.

### 8.2.3.18.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters into CELL_PCH state. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 2a | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 3 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>100 |

RADIO BEARER RELEASE (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| -Cell parameters ID | 4 |

#### 8.2.3.18.5 Test requirement

After step 1 the UE transmits a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC.

### 8.2.3.19 Radio Bearer Release from CELL_DCH to URA_PCH: Success

#### 8.2.3.19.1 Definition

#### 8.2.3.19.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_PCH or URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS 25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS 25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

If the new state is URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (URA_PCH);

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.3.19.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE before entering URA_PCH state after it received a RADIO BEARER RELEASE message and released its radio bearers.

### 8.2.3.19.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters into URA_PCH state. SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 2a | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 3 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code | 100 |

RADIO BEARER RELEASE (Step 1) (TDD)

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| -Cell parameters ID | 4 |

#### 8.2.3.19.5 Test requirement

After step 1 the UE transmits a RADIO BEARER RELEASE COMPLETE message to the UE on uplink DCCH using AM RLC.

### 8.2.3.20 Radio Bearer Release for transition from CELL_DCH to CELL_FACH (Frequency modification): Success

#### 8.2.3.20.1 Definition

#### 8.2.3.20.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS5.304.

1> if the received reconfiguration message included the IE "Primary CPICH info"), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" :

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.20.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_FACH according to the RADIO BEARER RELEASE message.

2. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

8.2.3.20.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.3.20**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.3.20 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.20. The SS and UE execute procedure P3 or P5. Next The SS and the UE execute procedure P7 or P9 and then execute procedure P11 or P13. The SS switches its downlink transmission power settings to columns "T1" transmits a RADIO BEARER RELEASE message with no IE "Frequency info" to the UE. The UE releases the radio access bearer and moves into cell 6. The UE transmits CELL UPDATE message with IE "Cell update cause" set to "cell reselection". SS then transmit CELL UDPATE CONFIRM with IE "New C_RNTI". The UE shall respond with an UTRAN MOBILITY INFORMATION CONFIRM message, and then transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. The SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P3 (clause 7.4.2.1.2) or P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure P7 (clause 7.4.2.3.2) or P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 1c | ←→ | | SS executes procedure P11 (clause 7.4.2.5.2) or P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.20. |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RELEASE | Not including frequency information. |
| 5 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 6 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | → | | RADIO BEARER RELEASE COMPLETE | |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 4)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" or "Non speech to CELL_FACH from CELL_DCH in CS" or "Speech to CELL_FACH from CELL_DCH in CS" in [9] TS 34.108 clause 9 with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>Downlink information for each radio link | <br>Not present |

CELL UPDATE (Step 5)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 6)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 7)

The contents of UTRAN MOBILITY UPDATE CONFIRM message are identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

#### 8.2.3.20.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 6 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 7 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 6.

After step 8 the UE shall be in CELL_FACH state of cell 6.

### 8.2.3.21 Radio Bearer Release from CELL_DCH to CELL_PCH (Frequency modification): Success

#### 8.2.3.21.1 Definition

#### 8.2.3.21.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC.

If after state transition the UE enters CELL_PCH state from CELL_DCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

…

If the new state is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.3.21.3 Test purpose

1. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to CELL_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases the radio access bearer and selects a common physical channel in a different frequency indicated by SS.

8.2.3.21.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 is active and cell 6 is inactive.

UE: "Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.3.21**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.3.21 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode in cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.21. The SS and UE execute procedure P3 or P5. Next The SS and the UE execute procedure P7 or P9 and then execute procedure P11 or P13. The SS switches its downlink transmission power settings to columns "T1" and then transmits a RADIO BEARER RELEASE message with no IE "Frequency info". The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters CELL_PCH state of cell 6, then the UE shall transmit CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection", to complete the procedure. The SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P3 (clause 7.4.2.1.2) or P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure P7 (clause 7.4.2.3.2) or P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 1c | ←→ | | SS executes procedure P11 (clause 7.4.2.5.2) or P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.21. |
| 3 | ← | | Void | |
| 4 | ← | | RADIO BEARER RELEASE | Not including new frequency information. |
| 5 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message before it completes state transition. UE sends this message in cell 1. |
| 5a | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 6 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 7 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 4)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" or "Non speech to CELL_FACH from CELL_DCH in CS" or "Speech to CELL_FACH from CELL_DCH in CS" in [9] TS 34.108 clause 9, with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | Not Present |
| Downlink information for each radio link | Not Present |

CELL UPDATE (Step 6)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 7)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.3.21.5 Test requirement

After step 4 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC in cell 1.

After step 5 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection" in cell 6.

After step 8 the UE shall be in CELL_PCH state in cell 6.

### 8.2.3.22 Radio Bearer Release for transition from CELL_FACH to CELL_PCH: Success

#### 8.2.3.22.1 Definition

#### 8.2.3.22.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS 25.331subclause 8.2.2.9

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.3, 8.5 and 8.6.

### 8.2.3.22.3 Test purpose

1. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases the radio access bearer and selects a common physical channel.

### 8.2.3.22.4 Method of test

Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a RADIO BEARER RELEASE message. The UE shall release all radio access bearer and enter CELL_PCH state after it transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | RADIO BEARER RELEASE | |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE transmits this message on uplink DCCH using AM RLC. |
| 4 | | | | The SS waits for 5 s. |
| 5 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.3.22.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in CELL_PCH state in cell 1.

### 8.2.3.23 Radio Bearer Release for transition from CELL_FACH to URA_PCH: Success

#### 8.2.3.23.1 Definition

#### 8.2.3.23.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS5.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS 25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS5.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS 25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.3, 8.5 and 8.6.

### 8.2.3.23.3 Test purpose

1. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases the radio access bearer and selects a common physical channel.

### 8.2.3.23.4 Method of test

Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a RADIO BEARER RELEASE message. The UE shall release all radio access bearers and enter URA_PCH state after it transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | RADIO BEARER RELEASE | |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | The UE transmits this message on uplink DCCH using AM RLC. |
| 4 | | | | The SS waits for 5 s. |
| 5 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |

NOTE: It is to be noted that IE “URA identity” is not included in this message, for the purpose of wider test coverage. The scenario in which IE “URA identity” is included, is tested in other test cases.

#### 8.2.2.23.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in URA_PCH state.

### 8.2.3.24 Radio Bearer Release for transition from CELL_DCH to CELL_DCH (Frequency modification): Success

#### 8.2.3.24.1 Definition

#### 8.2.3.24.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

#### 8.2.3.24.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_DCH according to the RADIO BEARER RELEASE message.
2. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

#### 8.2.3.24.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

CS-DCCH_DTCH_DCH (state 6-9) or PS_DCCH_DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.3.24**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -72 |

Table 8.2.3.24 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.24. The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code which is assigned to P-CPICH of cell 6. The UE shall select cell 6 and release the radio access bearer after receiving this message, and then remain in CELL_DCH state. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC after it completes reconfiguration according to received RADIO BEARER RELEASE message. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.24. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.24. |
| 3 | ← | | RADIO BEARER RELEASE | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. |
| 4 | | | | The UE select cell 6. |
| 5 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 3)

The contents RADIO BEARER RELEASE message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" or "Speech in CS" or "Non speech in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

#### 8.2.3.24.5 Test requirement

After step 4 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 6.

After step 5 the UE shall be in CELL_DCH state in cell 6.

### 8.2.3.25 Radio Bearer Release for transition from CELL_DCH to URA_PCH (Frequency modification): Success

#### 8.2.3.25.1 Definition

#### 8.2.3.25.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS 25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS 25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS 25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

…

If the new state is URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (URA_PCH);

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.25.3 Test purpose

1. To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to URA_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases radio access bearer, dedicated physical channel and selects a common physical channel in a different frequency.

### 8.2.3.25.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: "Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.3.25**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.3.25 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.25. SS requests operator to make an outgoing call. The SS and UE execute procedure P3 or P5. Next The SS and the UE execute procedure P7 or P9 and then execute procedure P11 or P13. The SS switches its

downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message including no IE "Frequency info". The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC and enter URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.25. SS requests operator to make an outgoing call. |
| 2 | | | SS executes procedure P3 (clause 7.4.2.1.2) or P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | | | SS executes procedure P7 (clause 7.4.2.3.2) or P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | | | SS executes procedure P11 (clause 7.4.2.5.2) or P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.25. |
| 6 | ← | | RADIO BEARER RELEASE | Not including IE "Frequency info" and IE "Primary CPICH info" |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | UE transmit this message on the dedicated physical channel in cell 1 |
| 8 | | | Void | SS sends the L2 ack on the RADIO BEARER RELEASE COMPLETE message and then waits for 5 s to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 9 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled "Speech to CELL_FACH from CELL_DCH in CS" or "Non speech to CELL_FACH from CELL_DCH in CS" or "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | Not present |
| Downlink information for each radio link | Not present |

#### 8.2.3.25.5 Test requirement

After step 6 the UE shall transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in URA_PCH state in cell 6.

### 8.2.3.26 Radio Bearer Release for transition from CELL_FACH to CELL_PCH (Frequency modification): Success

#### 8.2.3.26.1 Definition

#### 8.2.3.26.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS 25.331subclause 8.2.2.9

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info" , and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.26.3 Test purpose

1. To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases radio access bearer and selects a common physical channel in a different frequency.

### 8.2.3.26.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.3.26**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.3.26 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in cell 1. The SS shall transmit a RADIO BEARER RELEASE message on downlink DCCH using UM RLC, . The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC. The SS shall acknowledge the RADIO BEARER RELEASE COMPLETE message and then switches its downlink transmission power settings to columns “T1”. . Upon completion of the procedure, the SS waits for 5 seconds and calls for generic procedure C.4 in cell 6 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | | | Void | |
| 5 | | | Void | |
| 6 | ← | | RADIO BEARER RELEASE | This message is sent on RB 1. IE "Frequency info" and IE "Primary CPICH info" set to that of cell 6. |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | After SS acknowledges this message, SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.26. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | (In cell 6) If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | |
| - CHOICE mode | FDD |
| - UARFCN uplink (Nu) | Not present |
| - UARFCN downlink (Nd) | Set to the frequency of cell 6 |
| Downlink information for each radio link | |
| - Primary CPICH Info | |
| - Primary scrambling code | Set to same code as used for cell 6 |

#### 8.2.3.26.5 Test requirement

After step 6 the UE shall transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in CELL_PCH state in cell 6.

### 8.2.3.27 Radio Bearer Release for transition from CELL_FACH to URA_PCH (Frequency modification): Success

#### 8.2.3.27.1 Definition

#### 8.2.3.27.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS 25.331subclause 8.2.2.9.

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS 25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS 25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.27.3 Test purpose

1. To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the RADIO BEARER RELEASE message.
3. To confirm that the UE releases radio access bearer and selects a common physical channel in a different frequency.

### 8.2.3.27.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.3.27**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.3.27 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is on cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.27. The SS transmits a RADIO BEARER RELEASE including IE "Frequency info" and not including IE "Primary CPICH info". The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC and the SS shall switch its downlink power settings to columns “T1”. The UE enters URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | | | Void | |
| 5 | | | Void | |
| 6 | ← | | RADIO BEARER RELEASE | Including IE "Frequency info" and not including IE "Primary CPICH info" |
| 7 | → | | RADIO BEARER RELEASE COMPLETE | UE transmit this message on the common physical channel in cell 1. The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.27. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.5 | If the test result of C. 5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator<br>UTRAN DRX cycle length coefficient | URA_PCH<br>3 |
| URA identity | URA-ID 1 |
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |

8.2.3.27.5 Test requirement

After step 6 the UE shall transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 1.

After step 7 the UE shall be in URA_PCH state in cell 6.

## 8.2.3.28 Radio Bearer Release for transition from CELL_FACH to CELL_FACH (Frequency modification): Success

### 8.2.3.28.1 Definition

### 8.2.3.28.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RELEASE message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency;

2> if the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info":

3> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "cell reselection";

3> when the cell update procedure completed successfully:

4> proceed as below.

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.3.28.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_FACH according to the RADIO BEARER RELEASE message.

2. To confirm that the UE transmits RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

### 8.2.3.28.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.3.28**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.3.28 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.28. SS requests operator to make an outgoing call. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info". The UE shall select cell 6 and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection" . The UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC after it completes reconfiguration according to the received RADIO BEARER RELEASE message. Upon completion of the procedure, the SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.3.28. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.28. |
| 6 | ← | | RADIO BEARER RELEASE | Including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info" set to Primary Scrambling Code |
| 7 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 8 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | → | | RADIO BEARER RELEASE COMPLETE | The UE sends this message on a common physical channel in cell 6. |
| 11 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (Step 6)

The contents of RADIO BEARER RELEASE message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- UARFCN uplink(Nu)<br>- UARFCN downlink(Nd) | <br>Same uplink UARFCN as used for cell 6<br>Same downlink UARFCN as used for cell 6 |

CELL UPDATE (Step 7)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 8)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 9)

The contents of UTRAN MOBILITY UPDATE CONFIRM message is identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

#### 8.2.3.28.5 Test requirement

After step 6 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 8 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 9 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC in cell 6.

After step 10 the UE shall be in CELL_FACH state in cell 6.

### 8.2.3.29 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Associated with signalling connection release during simultaneous PS and CS call

#### 8.2.3.29.1 Definition

#### 8.2.3.29.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RELEASE message:

it shall:

1> set the variable ORDERED_RECONFIGURATION to TRUE;

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE may first release the physical channel configuration used at reception of the reconfiguration message. The UE shall then:

…

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent:

2> not change its current UL Physical channel configuration.1> in TDD:

2> if "Primary CCPCH Info" is included indicating a new target cell and "New C-RNTI" is not specified:

3> remove any C-RNTI from MAC;

3> clear the variable C_RNTI.

…

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE message as response message on the uplink DCCH using AM RLC.

….

If the IE "Signalling Connection release indication" is present in a message, the UE shall:

1> if all radio access bearers for the CN domain identified with the value of the IE "Signalling Connection release indication" would have been released in the variable ESTABLISHED_RABS after processing of the received message:

2> indicate release of the signalling connection identified with the value of the IE "Signalling Connection release indication" to the upper layers;

2> remove the signalling connection identified with the value of the IE "Signalling Connection release indication" from the variable ESTABLISHED_SIGNALLING_CONNECTIONS.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.1.3.

### 8.2.3.29.3 Test purpose

To confirm that the UE releases the existing radio access bearer and signalling connection according to a RADIO BEARER RELEASE message.

### 8.2.3.29.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state of cell 1. The UE initiates a session setup to establish a PS signalling connection. Then UE and SS establish a PS session while the CS call is still active. The SS transmits a DISCONNECT message to release a CS domain signalling connection. After the CC procedure, SS transmit a RADIO BEARER RELEASE message which includes IE "Signalling Connection release indication" set to "CS domain" and new configuration for remained service to the UE. The UE shall configure the specified channel and transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1. |
| 2 | → | | INITIAL DIRECT TRANSFER (SERVICE REQUEST) | GMM (PS Session setup is initiated from the UE side.) |
| 3 | ← | | DOWNLINK DIRECT TRANSFER (AUTHENTICATION AND CIPHERING REQUEST) | GMM |
| 4 | → | | UPLINK DIRECT TRANSFER (AUTHENTICATION AND CIPHERING RESPONSE) | GMM |
| 5 | ← | | SECURITY MODE COMMAND | |
| 6 | → | | SECURITY MODE COMPLETE | |
| 7 | → | | UPLINK DIRECT TRANSFER (ACTIVATE PDP CONTEXT REQUEST) | SM |
| 8 | ← | | RADIO BEARER SETUP | |
| 9 | → | | RADIO BEARER SETUP COMPLETE | |
| 10 | ← | | DOWNLINK DIRECT TRANSFER (ACTIVATE PDP CONTEXT ACCEPT) | SM |
| 11 | ← | | DOWNLINK DIRECT TRANSFER (DISCONNECT) | CC |
| 12 | → | | UPLINK DIRECT TRANSFER (RELEASE) | CC |
| 13 | ← | | DOWNLINK DIRECT TRANSFER (RELEASE COMPLETE) | CC |
| 14 | ← | | RADIO BEARER RELEASE | Including IE "signalling connection release indication" set to "CS domain" |
| 15 | → | | RADIO BEARER RELEASE COMPLETE | |
| 16 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE (STEP 14)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type titled as "Non speech in CS" or "Speech in CS" as found in Clause 9 of TS 34.108, with the following exceptions

| Information Element | Value/remark |
|---|---|
| Signalling Connection release indication<br>- CN domain identity | CS domain |

8.2.3.29.5 Test requirement

After step 14 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.3.30 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception)

### 8.2.3.30.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

### 8.2.3.30.2 Conformance requirement

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: In FDD an "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

3GPP TS 25.331 clause8.5.25, 8.6.3.1

### 8.2.3.30.3 Test purpose

To confirm that the UE releases a radio bearer mapped to HS-DSCH according to the received RADIO BEARER RELEASE message.

### 8.2.3.30.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state with a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RELEASE message to the UE . This message requests the release of the radio access bearer mapped to HS-DSCH. After the UE receives this message, it releases the radio access bearer. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RELEASE

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108.

8.2.3.30.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.3.30a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception) ( In a different frequency band)

### 8.2.3.30a.1 Definition and applicability

Same conformance requirement as in clause 8.2.3.30 except that UE is support for different frequency band for TDD.

### 8.2.3.30a.2 Conformance requirement

Same conformance requirement as in clause 8.2.3.30.

### 8.2.3.30a.3 Test purpose

Same conformance requirement as in clause 8.2.3.30 except that UE can work in different frequency bands.

### 8.2.3.30a.4 Method of test

Same conformance requirement as in clause 8.2.3.30 except for Expected sequence

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RELEASE | |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.3.30a.5 Test requirements

Same conformance requirement as in clause 8.2.3.30.

### 8.2.3.31 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (With active HS-DSCH reception)

#### 8.2.3.31.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.31.2 Conformance requirement

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if "DPCH frame offset" is included for one or more RLs in the active set:

2> use its value to determine the beginning of the DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

…

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

3GPP TS 25.331 clause 8.2.2, 8.3.5.1.2, 8.6.3.1

8.2.3.31.3 Test purpose

To confirm that the UE releases a radio bearer according to the received RADIO BEARER RELEASE message while keeping HS-DSCH reception active for a second radio bearer mapped to HS-DSCH.

8.2.3.31.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services.

Test Procedure

The UE is in cell 1 with only signalling radio bearers established. A PS radio bearer is established mapped to HS-DSCH with HS-DSCH reception activated. Then, a CS radio bearer is established.

The SS transmits a RADIO BEARER RELEASE message to the UE. This message requests the release of the radio bearer mapped to DCH. After the UE receives this message, it releases this radio bearer but keeps the radio bearer mapped to HS-DSCH and continues HS-DSCH reception. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ←→ | | SS establishes a PS RAB mapped to HS-DSCH. See below for contents of the RADIO BEARER SETUP message. |
| 2 | | ←→ | | SS establishes a CS RAB. |
| 3 | | ← | RADIO BEARER RELEASE | |
| 4 | | → | RADIO BEARER RELEASE COMPLETE | The UE releases the CS radio bearer mapped to DCH but keeps the PS radio bearer mapped to HS-DSCH and continues HS-DSCH reception |
| 5 | | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RELEASE (Step 3)(FDD)

Use the same message as specified for “Speech in CS” or "Non speech in CS" in 34.108 except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| Added or Reconfigured UL TrCH information | Not Present | |
| Added or Reconfigured DL TrCH information | Not Present | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in TS 34.108 clause 6.1 (FDD) | |
| - Cell ID | Not Present | |
| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38400 | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 3 | |
| - Spreading factor | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - Code number | 0 | |
| - Scrambling code change | No change | |
| - TPC combination index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

RADIO BEARER RELEASE (Step 3) ( 1.28 Mcps TDD)

Use the same message as specified for “Speech in CS” or "Non speech in CS" in 34.108 except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| Added or Reconfigured UL TrCH information | Not Present | |
| Added or Reconfigured DL TrCH information | Not Present | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |

#### 8.2.3.31.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.31a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (With active HS-DSCH reception) (TDD only)

#### 8.2.3.31a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.31a.2 Conformance requirement

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if "DPCH frame offset" is included for one or more RLs in the active set:

2> use its value to determine the beginning of the DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

…

In case the procedure was triggered by reception of a RADIO BEARER RELEASE message, the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message on the uplink DCCH using AM RLC.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

RADIO BEARER RELEASE (Step 3) (1.28Mcps TDD)

Use the same message as specified for “Speech in CS” or "Non speech in CS" in 34.108 except for the following.

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Added or Reconfigured UL TrCH information | Not Present | |
| Added or Reconfigured DL TrCH information | Not Present | |
| Frequency info | | |
| - Choice mode | TDD | |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 | |
| Maximum allowed UL TX power | Not present | |
| CHOICE channel requirement | Uplink DPCH info | |
| - Uplink DPCH power control info | | |
| - CHOICE mode | TDD | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - $PRX_{PDPCHdes}$ | -80dB | |
| - CHOICE UL OL PC info | Individually Signalled | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - TPC step size | 1dB | |
| - Primary CCPCH Tx Power | 20 | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | TDD (no data) | |
| - CHOICE mode | TDD | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - HS-PDSCH Midamble Configuration | | |
| - Midamble Allocation Mode | Default midamble | |
| - Midamble Configuration | 8 | |
| - Midamble Shift | Not present | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |

| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28 Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Ref. to the Default setting for cell 6 in TS 34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

#### 8.2.3.32.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC in cell 6.

### 8.2.3.33 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception with frequency modification)

#### 8.2.3.33.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

8.2.3.33.2 Conformance requirement

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

…

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

Reference

3GPP TS 25.331 clauses 8.5.25.

8.2.3.33.3 Test purpose

To confirm that the UE stops HS-DSCH reception when UE releases PS RAB according to the received RADIO BEARER RELEASE message.

8.2.3.33.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS service

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS initiates P24 to set up CS RAB.
Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ←→ | | P24 | SS establishes CS RAB. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |

RADIO BEARER RELEASE (Step 2) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Not Present |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info<br>- UARFCN uplink (Nu)<br><br><br><br>- UARFCN downlink (Nd) | <br>Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21]<br>Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links<br>- Primary CPICH info<br>- Primary Scrambling Code<br>- DPCH frame offset | <br><br>350<br>The Value is calculated based on internal SS timing difference |

RADIO BEARER RELEASE (Step 2) (1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Not Present |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - Choice mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio link | |
| - Choice mode | TDD |
| - Primary CCPCH info | |
| - Choice mode | TDD |
| - Choice TDD Option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Same Cell parameters ID as used for cell 6 |
| - SCTD indicator | FALSE |

#### 8.2.3.33.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.34 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success (stop of HS-DSCH reception with frequency modification)

#### 8.2.3.34.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.34.2 Conformance requirement

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> stop any HS-DSCH reception procedures according to the stored HS-PDSCH configuration;

1> clear any stored HS-PDSCH configuration;

1> remove any H-RNTI stored;

1> clear the variable H_RNTI;

1> set the variable HS_DSCH_RECEPTION to FALSE.

Reference

3GPP TS 25.331 clauses 8.2.2.3.

#### 8.2.3.34.3 Test purpose

To confirm that the UE stops HS-DSCH reception when UE releases CS RAB according to the received RADIO BEARER RELEASE message.

#### 8.2.3.34.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services

Test Procedure

**Table 8.2.3.34**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec(FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.3.34 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.3.34. The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS initiates P24 to set up CS RAB.

Then SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step0). |
| 1 | ←→ | | P24 | SS establishes CS RAB |
| 1a | SS | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.3.34. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases CS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108.Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, except for the following |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |

RADIO BEARER RELEASE (Step 2) (FDD)

Use the same message as specified for "Speech to CELL_FACH from CELL_DCH in CS" or "Non speech to CELL_FACH from CELL_DCH in CS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- UARFCN uplink (Nu)<br><br>- UARFCN downlink (Nd) | <br>This IE should be present, if the default duplex distance defined for the operating frequency band is not used<br>Same downlink UARFCN as used for cell 6 |

RADIO BEARER RELEASE (Step 2) (1.28 Mcps TDD)

Use the same message as specified for "Speech to CELL_FACH from CELL_DCH in CS" or "Non speech to CELL_FACH from CELL_DCH in CS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- Choice mode | <br>TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |

#### 8.2.3.34.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.35 Radio Bearer Release for transition from CELL_DCH to CELL_PCH: Success (stop of HS-DSCH reception)

#### 8.2.3.35.1 Definition and applicability

All UEs which support FDD or TDD, HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.3.35.2 Conformance requirement

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.6.3.1,8.5.25

8.2.3.35.3 Test purpose

To confirm that the UE releases CS bearer and stops receiving the HS-DSCH reception according to the received RADIO BEARER RELEASE message.

8.2.3.35.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports both CS domain speech or transparent CS data services and PS services

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS initiates P24 to set up CS RAB.

Then SS transmits a RADIO BEARER RELEASE message to the UE. This message requests to release CS bearer and CS Signalling Connection, stop receiving the HS-DSCH reception and move to CELL_PCH state. After the UE receives this message, it configures them. Finally the UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 1) |
| 2 | ←→ | | P24 | SS establishes CS RAB. |
| 3 | ← | | RADIO BEARER RELEASE | SS releases CS RAB and CS Signalling Connection |
| 4 | → | | RADIO BEARER RELEASE COMPLETE | |
| 5 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for “Packet to CELL_DCH /HS-DSCH from CELL_DCH in PS ” in TS 34.108, except for the followings;

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| - UL Transport channel identity | 4(speech) or 2(other cs services) |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| - UL Transport channel identity | 4(speech) or 2(other cs services) |

RADIO BEARER RELEASE (Step 3)(FDD)

Use the same message as specified for “Speech to CELL_FACH from CELL_DCH in CS” or "Non Speech to CELL_FACH from CELL_DCH in CS" in TS 34.108, except for the followings;

| Information Element | Value/remark |
|---|---|
| Activation time | Not present |

#### 8.2.3.35.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.36 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of E-DCH transmission)

#### 8.2.3.36.1 Definition and applicability

All UEs which support FDD and speech and HS-PDSCH and E-DCH or all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.3.36.2 Conformance requirement

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info";

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH, E-HICH and E-RGCH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

Reference

3GPP TS 25.331 clause 8.5.28

### 8.2.3.36.3 Test purpose

To confirm that the UE releases a radio bearer mapped on E-DCH / HS-DSCH and stops E-DCH transmission / HS-DSCH reception according to the received RADIO BEARER RELEASE message with frequency modification.

### 8.2.3.36.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports CS speech
- UE supports HS-PDSCH
- UE supports E-DPDCH(FDD) or E-PUCH (1.28Mcps TDD)

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P26 to make the UE to move to state 6-18 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH established. The SS initiates P24 to set up CS speech RAB.

Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P26 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ←→ | | P24 | SS establishes CS speech RAB. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0) (FDD)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH using three multiplexing options (3/3) and SRBs mapped on DCH/DCH" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| - RAB information for setup | |

RADIO BEARER RELEASE (Step 2) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

| **Information Element** | **Value/remark** |
|---|---|
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Not Present |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - UARFCN uplink (Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink (Nd) | Same downlink UARFCN as used for cell 6 |
| - CHOICE channel requirement | Uplink DPCH info |
| - Scrambling code number | Set to the same code number as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to the same code as used for cell 6 |

RADIO BEARER RELEASE (Step 2)( 1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

| **Information Element** | **Value/remark** |
|---|---|
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Not Present |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - Choice mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Set to the same as cell 6 |

### 8.2.3.36.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.3.36a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only)

### 8.2.3.36a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

### 8.2.3.36a.2 Conformance requirement

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info";

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH, E-HICH and E-RGCH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.331 clause 8.5.28, 8.6.6.1,8.6.6.43.

### 8.2.3.36a.3 Test purpose

To confirm that the UE releases a radio bearer mapped on E-DCH / HS-DSCH and stops E-DCH transmission / HS-DSCH reception according to the received RADIO BEARER RELEASE message with frequency modification in the multi-frequency network environment.

### 8.2.3.36a.4 Method of test

Initial Condition

System Simulator:

2 cells

- Cell 1 is active, 3 frequency (one is primary frequency, others are secondary frequency)
- Cell 6 is inactive, 1 frequency

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports CS speech
- UE supports HS-PDSCH
- UE supports E-PUCH (1.28Mcps TDD)

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established at the primary frequency of cell 1. SS initiates P26 to make the UE to move to state 6-18 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH

state and has a radio bearer mapped on HS-DSCH and E-DCH established at one secondary frequency of cell 1. The SS initiates P24 to set up CS speech RAB.

Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P26 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ←→ | | P24 | SS establishes CS speech RAB. |
| 2 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 3 | → | | RADIO BEARER RELEASE COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH using three multiplexing options (3/3) and SRBs mapped on DCH/DCH" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| - RAB information for setup | |
| - RB mapping info | |
| - Information for each multiplexing option | 3 RBMuxOptions |
| - RLC logical channel mapping indicator | Not Present |

| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Multi-frequency Info | Not Present |
| Downlink information per radio link list<br>Downlink information for each radio link | 1 radio link |
| - Choice mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Set to the same as cell 6 |

#### 8.2.3.36a.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.37 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of discontinuous uplink transmission)

#### 8.2.3.37.1 Definition

All UEs, which support FDD, UL DTX.

#### 8.2.3.37.2 Conformance requirement

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> store the contents of the IE in the variable DTX_DRX_PARAMS.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clause 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.3.37.3 Test purpose

To confirm that the UE releases a radio bearer mapped on E-DCH / HS-DSCH and stops discontinuous uplink transmission according to the received RADIO BEARER RELEASE message with frequency modification.

### 8.2.3.37.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission.

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers mapped on E-DCH/HS-DSCH have been established. SS initiates P26 and transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer with RB mapping to HS-DSCH and E-DCH, with UL DTX configured. After the UE receives this message, it establishes a radio bearer and maps it to the HS-DSCH and E-DCH. The UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH with DTX and, if supported, DRX active.

Then SS transmits a RADIO BEARER RELEASE message to the UE. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P26 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 0a | | SS | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used (i.e. duration of 10 consecutive DTX cycle 2). |
| 1 | ← | | RADIO BEARER RELEASE | SS releases PS RAB. |
| 2 | → | | RADIO BEARER RELEASE COMPLETE | |
| | | | Void | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

The contents of RADIO BEARER SETUP message in this test case are identical to the message sub-type indicated by "Packet to CELL_DCH / E-DCH / HS-DSCH with DTX/DRX using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH".

RADIO BEARER RELEASE (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH / HS-DSCH in PS" in 34.108, except for the following:

### 8.2.3.37.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

## 8.2.4 Transport channel reconfiguration

### 8.2.4.1 Transport channel reconfiguration (Timing re-initialised hard handover with transmission rate modification) from CELL_DCH to CELL_DCH: Success

#### 8.2.4.1.1 Definition

#### 8.2.4.1.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.4.1.3 Test purpose

To confirm that the UE reconfigures the channel configuration according to a TRANSPORT CHANNEL RECONFIGURATION message, which is used to change the TFCS and the TFS while replacing the RL(s) in the active set with a set of RL(s) disjoint with the previous active set.

#### 8.2.4.1.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and cell 2 are active

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE. Either a streaming CS domain RAB (state 6-9) or an interactive/ background PS domain RAB (state 6-10) has been established. UE connected to cell 1.

### Test Procedure

The UE is in CELL_DCH state, connected to cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new configuration parameters. The message is used to replace the RL(s) in the active set with a set of RL(s) disjoint with the previous active set. In this case, the connection to cell 1 is discontinued while a new connection to cell 2 is established at the same time. The TRANSPORT CHANNEL RECONFIGURATION message is used to also change the TFCS and TFS e.g. because the currently used rate is not available on cell 2. The TFCS and TFS change from a value corresponding with one reference configuration in 34.108 (an interactive PS domain RAB from UL:64 DL:64 or a streaming CS RAB from UL:57.6 DL:57.6) to another reference configuration (interactive PS domain RAB from UL:32 DL:32 or a streaming CS RAB from UL:28.8 DL:28.8). The UE shall apply the new configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

### Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | The TFCS and the TFS are changed while replacing the RL(s) in the active set with a set of RL(s) disjoint with the previous active set |
| 4 | | | Void | |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

### Specific Message Contents

#### TRANSPORT CHANNEL RECONFIGURATION (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions.

For non-speech in CS:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| Added or Reconfigured UL TrCH information | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| DL Transport channel information common for all transport channel | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| Added or Reconfigured DL TrCH information | Set to the same values as for " Non speech to CELL_DCH from CELL_DCH in CS " in radio bearer setup message. |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Set to the same values as for " Non speech in CS " unless explicitly indicated otherwise in the following |
| -Uplink DPCH power control info | Not present |
| Downlink information common for all radio links | Set to the same values as for "Non speech in CS" unless explicitly indicated otherwise in the following |
| - Downlink DPCH info common for all RL | |
| - Timing indicator | Initialise |
| - Downlink DPCH power control information | Not present |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| Downlink information for each radio link list | Set to the same values as for "Non speech in CS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) for cell 2: 150 |
| - Downlink DPCH info for each RL | |
| - DPCH frame offset | Set to value : Default DPCH Offset Value mod 38400 |
| - DL channelisation code | |
| - Scrambling code change | Not present |

For packet in PS:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| DL Transport channel information common for all transport channel | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" unless explicitly indicated otherwise in the following |
| -Uplink DPCH power control info | Not present |

| - Downlink DPCH info common for all RL | |
| - Timing indicator | Initialise |
| - Downlink DPCH power control information | Not present |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) for cell 2: 150 |
| - Downlink DPCH info for each RL | |
| - DPCH frame offset | Set to value : Default DPCH Offset Value mod 38400 |
| - DL channelisation code | |
| - Scrambling code change | Not Present |

TRANSPORT CHANNEL RECONFIGURATION (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| DL Transport channel information common for all transport channel | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS" unless explicitly indicated otherwise in the following |
| -Uplink DPCH power control info | Not present |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Initialise |
| - Downlink DPCH power control information | Not present |
| Downlink information for each radio link list | |
| - Downlink information for each radio links | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |

8.2.4.1.5 Test requirement

After step 3 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC on a dedicated physical channel using another radio link.

## 8.2.4.1a Transport channel reconfiguration (Transmission Rate Modification) from CELL_DCH to CELL_DCH of the same cell: Success

8.2.4.1a.1 Definition

8.2.4.1a.2 Conformance requirement

1. If the UE receives:

   - a TRANSPORT CHANNEL RECONFIGURATION message; or

it shall:

   1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

      2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

   1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

   1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

2. If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

   1> if the IE "Uplink DPCH Info" is absent:

      2> not change its current UL Physical channel configuration.

…

3. The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

   1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

   1> clear that entry;

…

4. In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

5. If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

   1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

      2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.6.4.

### 8.2.4.1a.3 Test purpose

To confirm that the UE reconfigures the transport channel configuration according to a TRANSPORT CHANNEL RECONFIGURATION message, which specifies a reconfiguration by changing the TFCS.

To confirm that the UE receives the RLC SDU and sends it according to the new UL TFCS.

### 8.2.4.1a.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH_TEST_LOOP (state 6-10a) as specified in clause 7.4 of TS 34.108. The UL RLC_SDU size for the loopback scheme is set to the size correspondent to the maximum uplink TFS as indicated in RADIO BEARER SETUP message during radio bearer establishment procedure. The Contents of the Radio Bearer Setup message is specified in specific message contents.

NOTE: Transmission rate shall be set to the maximum rate for the UE during the radio bearer establishment procedure.

Test Procedure

The UE is in CELL_DCH state.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to modify the UL transmission rate which includes information about uplink TFCS to restrict the use of the highest rate TFCIs.

The UE shall reconfigure the new configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

UL MAC restriction is imposed on the SS so that SS can restrict the use of highest rate TFCI in the uplink

Then the SS transmits a RLC_SDU whose size is the same as the UL RLC_SDU size for the loopback scheme. The UE receives this RLC_SDU and decode it according to the new TFCS.

The RLC_SDU is then looped backed to the SS. The SS should receive the expected data as a RLC_SDU exactly as the one transmitted to the UE.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 2a | ← | | DOWNLINK RLC SDU | |
| 2b | → | | UPLINK RLC SDU | RLC SDU sent back shall be the same as the one sent from the SS. |
| 3 | | | Void | |
| 4 | | | Void | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1)(FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Not Present |
| - PRACH TFCS | Not Present |
| - CHOICE mode | FDD |

| - UL DCH TFCS | |
| - CHOICE TFCI signalling | Normal |
| - TFCI Field 1 information | |
| - CHOICE TFCS representation | Complete reconfiguration |
| - TFCS complete reconfigure information | |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from TS34.108 clause 6.10.2.4 Parameter Set. |
| - CTFC information | This IE is repeated for TFC numbers and reference to TS34.108 clause 6.10.2.4 Parameter Set |
| - CTFC | Reference to TS34.108 clause 6.10.2.4 Parameter Set as defined in the RADIO BEARER SETUP message with highest rate TF of RAB removed. |
| - Power offset information | |
| - CHOICE Gain Factors | Computed Gain Factors(The last TFC is set to Signalled Gain Factors) |
| - Gain factor βc | 11 (below 64 kbps)<br>9 (higher than 64 kbps) (Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Gain factor βd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Reference TFC ID | 0 |
| - CHOICE mode | FDD |
| - Power offset P p-m | Not Present |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 1)(TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | Not Present |
| - PRACH TFCS | Not Present |
| - CHOICE mode | TDD |
| - UL TFCS Identity | |
| - UL TFCS | |
| - CHOICE TFCI signalling | Normal |
| - TFCI Field 1 information | |
| - CHOICE TFCS representation | Complete reconfiguration |
| - TFCS complete reconfigure information | |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from TS34.108 clause 6.10.2.4 Parameter Set. |
| - CTFC information | This IE is repeated for TFC numbers and reference to TS34.108 clause 6.10.2.4 Parameter Set |
| - CTFC | Reference to TS34.108 clause 6.10.2.4 Parameter Set as defined in the RADIO BEARER SETUP message with highest rate TF of RAB removed. |
| - Power offset information | |
| - CHOICE Gain Factors | Computed Gain Factors(The last TFC is set to Signalled Gain Factors) |
| - Gain factor βd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Reference TFC ID | 0 |
| - CHOICE mode | TDD |
| - TFC subset | |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | |
| - RB information to setup | |
| - PDCP info | OMIT |

#### 8.2.4.1a.5 Test requirement

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 2a the UE shall transmit a RLC_SDU that is same as the transmitted data from SS in step 2a on the radio access bearer.

### 8.2.4.2 Void

### 8.2.4.3 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

#### 8.2.4.3.1 Definition

#### 8.2.4.3.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a TRANSPORT CHANNEL RECONFIGURATION message:

…

2> transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

### 8.2.4.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new configuration according to a TRANSPORT CHANNEL RECONFIGURATION message.

### 8.2.4.3.4 Method of test

Initial Condition

System Simulator: 2 cells. – Cell 1 is active and cell 2 is inactive.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.3**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | -75 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | OFF | -75 |

Table 8.2.4.3 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. Then the SS configures its downlink transmission power settings according to column "T1" in table 8.2.4.3. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to restrict transmission on the uplink DCH used by the signalling radio bearer RB2. The message specifies a new configuration in cell 2 but the SS does not configure the new physical channel in cell 2 specified in this message and keep its old configuration in cell 1. Therefore, the UE cannot synchronise with the SS on the new physical channel in cell 2 and shall revert to the old configuration in cell 1 after T312 expires. Then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "physical channel failure" in IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | | | | The SS does not reconfigure the new configuration in cell 2. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE reverts to the old configuration and transmits this message. |
| 4 | → | | MEASUREMENT REPORT | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b and 4)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Non speech in CS", "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- TFC subset<br>- Restricted TrCH information<br>- Uplink transport channel type<br>- Restricted UL TrCh identity<br>- Allowed TFIs<br>- Allowed TFI | <br><br><br>DCH<br>5 <UL DCH for SRB 2><br><br>0 |
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links<br>- CHOICE mode<br>- Primary CPICH info<br>- Primary CPICH scrambling code | <br>FDD<br><br>Ref. to the Default setting for cell 2 in TS34.108 clause 6.1 (FDD) |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Non speech in CS", "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- TFC subset<br>- Restricted TrCH information<br>- Uplink transport channel type<br>- Restricted UL TrCh identity<br>- Allowed TFIs<br>- Allowed TFI | <br><br><br>DCH<br>5 <UL DCH for SRB 2><br><br>0 |
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links<br>- CHOICE mode<br>- Primary CCPCH info | <br>TDD<br>Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |

TRANSPORT CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

### 8.2.4.3.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 2 the UE shall revert to the old configuration in cell 1 and transmit a TRANPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and it shall set the value "physical channel failure" in IE "failure cause".

After step 3, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

### 8.2.4.4 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection)

#### 8.2.4.4.1 Definition

#### 8.2.4.4.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- includes "Physical channel information elements":

the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

The UE shall:

1> in case of reception of a TRANSPORT CHANNEL RECONFIGURATION message:

…

2> transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.3.1.7.

8.2.4.4.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message after it completes a cell update procedure when the UE cannot synchronise with the SS on the new channel before T312 expires and fails to revert to the old configuration.

8.2.4.4.4 Method of test

Initial Condition

System Simulator: 2 cells. – Cell 1 is active and cell 2 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.4**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | -75 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | OFF | -75 |

Table 8.2.4.4 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. Then the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.4.4. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE. The message specifies a new configuration in cell 2 but the SS does not reconfigure the new channel in cell 2 specified in this message and release the old configuration in cell 1. The UE cannot synchronise with SS before T312 expires and shall attempt to revert to the old configuration in cell 1. The UE cannot revert to the old configuration and then transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1. The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | | | | The SS does not reconfigure L1 in accordance with TRANSPORT CHANNEL RECONFIGURTION message and release the old configuration. |
| 3 | → | | CELL UPDATE | This message includes the value "radio link failure" set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | This message includes IE "Physical channel information elements". |
| 5 | | | | The SS changes physical channel configuration according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | → | | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure" |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary CPICH scrambling code | Ref. to the Default setting for cell 2 in TS34.108 clause 6.1 (FDD) |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0000 0001' |
| Cell Update Cause | "radio link failure" |

CELL UPDATE CONFIRM (Step 4) (FDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| UplinkDPCH Info | Set to the same values as RADIO BEARER SETUP message for "Packet to CELL_DCH from CELL_FACH in PS" or "Non speech to CELL_DCH from CELL_FACH in CS" or "Speech to CELL_DCH from CELL_FACH in CS" |
| Downlink information common for all radio links | Set to the same values as RADIO BEARER SETUP message for "Packet to CELL_DCH from CELL_FACH in PS" or "Non speech to CELL_DCH from CELL_FACH in CS" or "Speech to CELL_DCH from CELL_FACH in CS" |
| Downlink information for each radio link list | Set to the same values as RADIO BEARER SETUP message for "Packet to CELL_DCH from CELL_FACH in PS" or "Non speech to CELL_DCH from CELL_FACH in CS" or "Speech to CELL_DCH from CELL_FACH in CS" |

CELL UPDATE CONFIRM (Step 4) (TDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_DCH |
| Uplink DPCH timeslots and codes | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information common for all radio links | Same as RADIO BEARER SETUP message used to move to intial condition |
| Downlink information for each radio link list | Same as RADIO BEARER SETUP message used to move to initial condition |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 6)

Use the same message found in TS 34.108 clause 9, with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | This IE is not checked. |

TRANSPORT CHANNEL RECONGURATION FAILURE (Step 7)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | "physical channel failure" |

#### 8.2.4.4.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

### 8.2.4.4a Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection) (1.28 Mcps TDD Only)

#### 8.2.4.4a.1 Definition

#### 8.2.4.4a.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- includes "Physical channel information elements":

the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

The UE shall:

1> in case of reception of a TRANSPORT CHANNEL RECONFIGURATION message:

…

2> transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.3.1.7.

### 8.2.4.4a.3 Test purpose

1. To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message after it completes a cell update procedure when the UE cannot synchronise with the SS on the new channel before T312 expires and fails to revert to the old configuration.

2. To confirm that the UE reconfigures the transport channel in secondary carrier.

### 8.2.4.4a.4 Method of test

Initial Condition

System Simulator: 2 cells. – Cell 1 is active and cell 2 is inactive. In each cell configure 3 carriers, one is the primary carrier, the other two aresecondary carriers.

Detail in the table as follows:

| Parameter | Cell 1 | Cell 2 |
|---|---|---|
| UTRA RF Channel Number1 | Ch.1 | Ch. 1 |
| UTRA RF Channel Number1 | Ch. 2 | Ch. 2 |
| UTRA RF Channel Number1 | Ch. 3 | Ch. 3 |

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.4a**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | OFF | -75 |

Table 8.2.4.4a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. Then the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.4.4a. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE. The message specifies a new configuration in cell 2 but the SS does not reconfigure the new channel in cell 2 specified in this message and release the old configuration in cell 1. The UE cannot synchronise with SS before T312

expires and shall attempt to revert to the old configuration in cell 1. The UE cannot revert to the old configuration and then transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1. The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence:

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 2 | | | | The SS does not reconfigure L1 in accordance with TRANSPORT CHANNEL RECONFIGURTION message and release the old configuration. |
| 3 | → | | CELL UPDATE | This message includes the value "radio link failure" set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | This message includes IE "Physical channel information elements". |
| 5 | | | | The SS changes physical channel configuration according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | → | | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure" |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| 8 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Info UE go into CELL_DCH state of secondary carrier1 |
| 9 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | UE response the message on DCH ofsecondary carrier1 |
| 10 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Info UE go into CELL_DCH state of secondary carrier2 |
| 11 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | UE response the message on DCH of secondary carrier.2 |
| 12 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Info UE go into CELL_DCH state of primary carrier |
| 13 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | UE response the message on DCH of primary carrier. |
| 14 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state of primary carrier, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| Downlink information for each radio link list | Set to the same values as for "Packet to CELL_DCH from CELL_DCH in PS" unless explicitly indicated otherwise in the following |
| - Downlink information for each radio links | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Ref. to the Default setting in TS34.108 clause 6.1 (TDD) for cell 2 |
| Uplink DPCH info | |
| -Uplink Timing Advance Control | |
| - Frequency info | |
| -UpPCH position info | 0 |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0000 0001' |
| Cell Update Cause | "radio link failure" |

CELL UPDATE CONFIRM (Step 4) (TDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_DCH |
| Uplink DPCH timeslots and codes | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information common for all radio links | Same as RADIO BEARER SETUP message used to move to intial condition |
| Downlink information for each radio link list | Same as RADIO BEARER SETUP message used to move to initial condition |
| Uplink DPCH info | |
| -Uplink Timing Advance Control | |
| - Frequency info | |
| -UpPCH position info | 0 |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 6)

Use the same message found in TS 34.108 clause 9, with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | This IE is not checked. |

TRANSPORT CHANNEL RECONGURATION FAILURE (Step 7)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | "physical channel failure" |

TRANSPORT CHANNEL RECONFIGURATION (Step 8 - 10 ) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| TransportChannelReconfiguration-r4-TDD128-add-ext-IEs | |
| frequencyInfo | secondary carrier 2 frequency (step 8)<br>secondary carrier1frequency (step 10) |
| Uplink DPCH info | |
| -Uplink Timing Advance Control | |
| -UpPCH position info | 0 |

TRANSPORT CHANNEL RECONFIGURATION (Step 12 ) (TDD)

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt)<br>Uplink DPCH info<br>-Uplink Timing Advance Control<br>-UpPCH position info | <br>TDD<br>primary carrier frequency<br><br><br>0 |

Contents of System Information Block type 3

Use the same message found in TS 34.108 , with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Qrxlevmin | −81dBm |
| Sintrasearch | 21db |
| Sintersearch | 21db |
| -v4b0NonCriticalExtensions | |
| -sysInfoType3-v4b0ext | |
| - mapping-LCR | 0 |

8.2.4.4a.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "radio link failure" in cell 1.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

After step 8 , the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 10 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH of another secondary carrier using AM RLC.

### 8.2.4.10 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Success

#### 8.2.4.10.1 Definition

#### 8.2.4.10.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.4.10.3 Test purpose

To confirm that the UE reconfigures a new channel using dedicated physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

#### 8.2.4.10.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The UE has previously stored radio bearer and transport channel parameters for use in CELL_DCH. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which modifies the rate as compared to the stored configuration to the UE. The message also includes the physical layer parameters e.g. IE "Uplink DPCH info" and IE "Downlink DPCH info" leading to a state transition from CELL_FACH to CELL_DCH in the same cell, to the UE. The UE shall reconfigure the new channel according to this message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Includes both IE "Uplink DPCH Info" and IE "Downlink DPCH Info" in the message. |
| 2 | | | | Reconfiguration of transport channel |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (FDD)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS". Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS". Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| Downlink information for each radio link list | |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Downlink DPCH info for each RL | |
| - DL channelisation code | |
| - Scrambling code change | Not Present |

TRANSPORT CHANNEL RECONFIGURATION (TDD)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS".<br>Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Added or Reconfigured DL TrCH information | Set to the same values as for "Packet to CELL_DCH from CELL_FACH in PS".<br>Only the DCH for DTCH is included and the rate for this DCH should be different compared to the stored CELL_DCH configuration. |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |

TRANSPORT CHANNEL RECONFIGURATION COMPLETE

Use the message with the same message type specified in Annex A.

#### 8.2.4.10.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT RECONFIGURATION COMPLETE message on the newly configured DPCH.

### 8.2.4.10a Transport channel reconfiguration from CELL_FACH to CELL_DCH: Success(1.28 Mcps TDD Only)

#### 8.2.4.10a.1 Definition

#### 8.2.4.10a.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.4.10a.3 Test purpose

1.To confirm that the UE reconfigures a new channel using dedicated physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

2. To confirm that the UE reconfigures the transport channel in secondary carrier.

3. To confirm that the UE can indicate the UpPCH shifting position according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS and complete the process.

8.2.4.10a.4 Method of test

Initial Condition

System Simulator: 1 cell. Congfigure 3 carriers,one is primary carrier, the others are secondary carriers. SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The UE has previously stored radio bearer and transport channel parameters for use in CELL_DCH. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which modifies the rate as compared to the stored configuration to the UE. The message also includes the physical layer parameters e.g. IE "Uplink DPCH info" and IE "Downlink DPCH info" leading to a state transition from CELL_FACH to CELL_DCH in the same cell but in the secondary carrier, to the UE. The UE shall reconfigure the new channel according to this message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Includes both IE "Uplink DPCH Info" and IE "Downlink DPCH Info" in the message in secondary carrier,. |
| 2 | | | | Reconfiguration of transport channel in secondary carrier, |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state in secondary carrier,, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 3 (TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| -v4b0NonCriticalExtensions | |
| -sysInfoType3-v4b0ext | |
| - mapping-LCR | 22 |

TRANSPORT CHANNEL RECONFIGURATION (TDD)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.4.18.3 Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message it ignores the second TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message.

### 8.2.4.18.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous TRANSPORT CHANNEL RECONFIGURATION message elapses, the UE ignores the new TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | For FDD, Scrambling code number is set to "1" and for TDD , the code combination is assigned by SS. |
| 2 | ← | | TRANSPORT CHANNEL RECONFIGURATION | SS send this message before the expiry of "activation time" specified in TRANSPORT CHANNEL SETUP message of step 1. For FDD the IE "Scrambling code number" is set to "2". For TDD the code combination assigned is different from that assigned in stage 1. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE ignores the TRANSPORT CHANNEL RECONFIGURATION message in step 2 and configures according to the TRANSPORT CHANNEL RECONFIGURATION message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH Info<br>- Scrambling code number | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>1 |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned in step 1 |

TRANSPORT CHANNEL RECONFIGURATION (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH Info<br>- Scrambling code number | Not Present<br><br>2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |

| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.4.18.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.19 Transport Channel Reconfiguration from CELL_FACH to CELL_DCH: Success (Subsequently received)

#### 8.2.4.19.1 Definition

#### 8.2.4.19.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- TRANSPORT CHANNEL RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.4.19.3 Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message it ignores the second TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message.

### 8.2.4.19.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous TRANSPORT CHANNEL RECONFIGURATION message elapses, the UE ignores the new TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | For FDD, Scrambling code number is set to "1" and for TDD, the code combination is assigned by SS. |
| 2 | ← | | TRANSPORT CHANNEL RECONFIGURATION | For FDD the IE "Scrambling code number" is set to "2". For TDD the code combination assigned is different that assigned in stage 1. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE ignores the TRANSPORT CHANNEL RECONFIGURATION message in step 2 and configures according to the TRANSPORT CHANNEL RECONFIGURATION message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>- Uplink DPCH Info<br>- Scrambling code number | Not present<br><br>1 |

TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned in step 1 |

TRANSPORT CHANNEL RECONFIGURATION (Step 2) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH Info<br>- Scrambling code number | Not Present<br><br>2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.4.19.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.20 Void

### 8.2.4.21 Void

### 8.2.4.22 Void

### 8.2.4.23 Void

### 8.2.4.24 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Success with uplink transmission rate modification

#### 8.2.4.24.1 Definition

#### 8.2.4.24.2 Conformance requirement

If the UE receives:

- a TRANSPORT CHANNEL RECONFIGURATION message:

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

#### 8.2.4.24.3 Test purpose

To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC after reconfigure its available uplink TFC according to a TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.24.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state of cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to modify the transmission rate. This message includes a new uplink transport channel information in order to restricts available uplink TFC within assigned uplink TFCS. The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC after reconfiguring its transport channel parameters. Next the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes a new uplink transport channel information in order to reconfigure uplink TFCS. The UE transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC after reconfiguring its transport channel parameters according to the TRANSPORT CHANNEL RECONFIGURATION message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_DCH state of cell 1. |
| 2 | ← | | TRANSPORT CHANNEL RECONFIGURATION | This message includes the IE"TFC subset" and don't include UL/DL physical channel information. |
| 3 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | |
| - CHOICE mode | FDD |
| - TFC subset | |
| - CHOICE Subset representation | Allowed transport format combination list |
| - Allowed transport format combination | Indicate TFCs which are a part of the TFCS defined in this message to restrict uplink allowed TFC subset. |
| - UL DCH TFCS | Same contents as a RADIO BEARER SETUP message used in initial procedure. |
| CHOICE channel requirement | Not present |
| Downlink information per radio link list | Not present |

TRANSPORT CHANNEL RECONFIGURATION (Step 4)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels | |
| - CHOICE mode | FDD |
| - TFC subset | |
| - UL DCH TFCS | |
| - CHOICE TFCI signalling | Normal |
| - TFCI Field 1 information | |
| - CHOICE TFCS representation | Complete reconfiguration |
| - TFCS complete reconfiguration | |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from TS34.108 clause 6.10.2.4 Parameter Set. |
| - CTFC information | This IE is repeated for TFC numbers and reference to TS34.108 clause 6.10.2.4 Parameter Set |
| - CTFC | Reference to TS34.108 clause 6.10.2.4 Parameter Set as defined in the RADIO BEARER SETUP message with highest rate CTFC removed. |
| - Power offset information | |
| - CHOICE Gain Factors | Computed Gain Factors except for the TFC for 64 kbps and the last TFC which are set to Signalled Gain Factors |
| - Gain factor βc | 11 ( TFC for 64 kbps)<br>9 (last TFC, i.e. highest rate)<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Gain factor βd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| - Reference TFC ID | 0 (64 kbps and below)<br>1 (higher than 64 kbps) |
| - CHOICE mode | FDD |
| - Power offset $P_{p-m}$ | Not Present |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| CHOICE channel requirement | Uplink DPCH info |
| - Uplink DPCH power control info | Same contents as a RADIO BEARER SETUP message used in initial procedure |
| - CHOICE mode | FDD |
| - Scrambling code type | Long |
| - Scrambling code number | 0 (0 to 16777215) |
| - Number of DPDCH | Not Present |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set<br>Set different parameter which is included in a RADIO BEARER SETUP message used in initial procedure. |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set<br>Set different parameter which is included in a RADIO BEARER SETUP message used in initial procedure. |
| - Number of FBI bit | Not Present |
| - Puncturing Limit | Reference to TS34.108 clause 6.10 Parameter Set<br>Set different parameter which is included in a RADIO BEARER SETUP message used in initial procedure. |
| Downlink information per radio link list | Not present |

#### 8.2.4.24.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.25 Transport channel reconfiguration from CELL_FACH to CELL_DCH (Frequency modification): Success

#### 8.2.4.25.1 Definition

#### 8.2.4.25.2 Conformance requirement

If the UE receives:

-a TRANSPORT CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> remove any C-RNTI from MAC;

1> clear the C_RNTI.

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

#### 8.2.4.25.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_DCH according to TRANSPORT CHANNEL RECONFIGURATION message.

2. To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION message on the uplink DCCH using AM RLC on dedicated physical channel in a different frequency.

#### 8.2.4.25.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.4.25**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -55 | Off | -55 |

Table 8.2.4.25 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of ce11 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.25. The SS switches its downlink transmission power settings to columns "T1" and transmits a TRANSPORT CHANNEL RECONFIGURATION message, which includes new frequency information leading to a state transition from CELL_FACH to CELL_DCH in cell 6. The UE shall reconfigure transport channel parameter and frequency band according to this message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC in cell 6. The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.25. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.4.25. |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | |
| 4 | | | | Reconfiguration of transport channel. |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE sends this message in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

TRANSPORT CHANNEL RECONFIGURATION (Step 3)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | 350 |

#### 8.2.4.25.5 Test requirement

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 5 the UE shall be in CELL_DCH state of cell 6.

### 8.2.4.26 Void

### 8.2.4.27 Void

### 8.2.4.28 Void

### 8.2.4.29 Transport Channel Reconfiguration for transition from CELL_DCH to CELL_DCH (Frequency modification): Success

#### 8.2.4.29.1 Definition

#### 8.2.4.29.2 Conformance requirement

If the UE receives:

-a TRANSPORT CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.4.29.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_DCH according to the TRANSPORT CHANNEL RECONFIGURATION message.

2. To confirm that the UE transmits the TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

8.2.4.29.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: CS-DCCH_DTCH_DCH (state 6-9) or PS_DCCH_DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.4.29**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -72 | Off | -55 |
| PCCPCH RSCP (TDD) | dBm | -55 | -72 | off | -55 |

Table 8.2.4.29 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.29. The SS switches its downlink transmission power settings to columns "T1" and transmits a TRANSPORT CHANNEL RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 , and for FDD IE "Primary CPICH info" set to Primary Scrambling Code which is assigned to P-CPICH of cell 6, for TDD IE “Primary CCPCH info” set to cell parameter ID which is assigned to P-CCPCH of cell 6. The UE shall select cell 6 and reconfigure its transport channel parameters after receiving this message, and then remain in CELL_DCH state. The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC after completes configuration according to receiving TRANSPORT CHANNEL RECONFIGURATION message. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.29. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.4.29. |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and for FDD IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. For 1.28 Mcps TDD, IE "Primary CCPCH info" set to cell parameter ID which is assigned to P-CCPCH of cell 6 |
| 4 | | | | The UE select cell 6. |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (FDD)

The contents TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" or "Speech in CS" or "Non speech from in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (1.28 Mcps TDD)

The contents TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" or "Speech in CS" or "Non speech from in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| - Cell parameters ID | Same as cell 6 |

8.2.4.29.5 Test requirement

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 5 the UE shall be in CELL_DCH state in cell 6.

### 8.2.4.30 Void

### 8.2.4.31 Void

### 8.2.4.32 Void

### 8.2.4.33 Void

### 8.2.4.34 Void

### 8.2.4.35 Void

### 8.2.4.36 Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification)

#### 8.2.4.36.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.4.36.2 Conformance requirement

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

…

Reference

3GPP TS 25.331 clauses 8.2.2, 8.6.3.1, 8.2.2.3, 8.5.25

### 8.2.4.36.3 Test purpose

To confirm that the UE reconfigures the transport and physical channel while being mapped to HS-DSCH according to the received TRANSPORT CHANNEL RECONFIGURATION message.

To confirm that the UE keeps the same value of TTI (transmission time interval) during the procedure.

### 8.2.4.36.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established using a 384 kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 64 kbps (1.28Mcps TDD) uplink DCH.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this

message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon successfully received the complete message from the UE, SS transmits another TRANSPORT CHANNEL RECONFIGURATION message to limit the uplink transmission rate to 32kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD). After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Next the SS transmits a new TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes an old UL DCH TFCS for uplink 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate in order to remove the limitation for uplink 32kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD) transmission rate and keeps the transmission time interval. Upon received this message, the UE reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS then transmits one more TRANSPORT CHANNEL RECONFIGURATION message to remove the limitation for uplink 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate and assign a new uplink 384kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) transmission rate. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 64 kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 16 kbps (1.28Mcps TDD) |
| 4 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 5 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 64kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 6 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 384kbps (FDD, 3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) |
| 8 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0) (FDD)

Use the same message as specified for "Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, with the following exceptions; |
| - PDCP info | Not present |
| - Transmission RLC discard | |
| - MAX_DAT | 10 |
| - Transmission window size | 256 |
| - Timer_RST | 1000 |
| - Max_RST | 12 |
| - Timer_poll_prohibit | 50 |
| - Timer_poll | 400 |
| - Poll_Windows | 80 |
| - Receiving window size | 2047 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 50 |
| UL Transport channel Information for all transport channels | |
| - CHOICE Gain Factors | Computed Gain Factors (The last TFC is set to Signalled Gain Factors) |
| - Gain factorβc | 10 (below 64 kbps)<br>8 (higher than 64 kbps) |
| - Gain factorβd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| Added or Reconfigured UL TrCH information | |
| - Transmission Time Interval | 10ms (for DCH 1) |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Maximum allowed UL TX power | 24dBm |
| CHOICE channel requirement | |
| - $\Delta_{ACK}$ | 6 |
| - $\Delta_{NACK}$ | 6 |

| Downlink information for each radio link list | Not present |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (1.28Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>Set according to the radio bearer configuration for “Interactive or background / UL:16 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br><br>Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>“Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br><br>Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 7) (FDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel | Not Present<br>Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| CHOICE channel requirement<br>- Uplink DPCH power control info<br><br>- CHOICE mode<br>- Scrambling code type<br>- Scrambling code number<br>- Number of DPDCH<br>- Spreading factor<br><br>- TFCI existence<br><br>- Number of FBI bit<br>- Puncturing Limit | Uplink DPCH info<br>Same contents as a RADIO BEARER SETUP message used in initial procedure<br>FDD<br>Long<br>1<br>Not Present<br>Same contents as the RADIO BEARER SETUP message used in the initial procedure.<br>Same contents as the RADIO BEARER SETUP message used in the initial procedure.<br>Not Present<br>Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Downlink information for each radio link list | Not present |

TRANSPORT CHANNEL RECONFIGURATION (Step 7) (1.28Mcps TDD, 3.84Mcps and 7.68Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | <br>Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel | Not Present<br>Not Present |

#### 8.2.4.36.5 Test requirements

After step 1, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 3, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 5, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 7, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.36a Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification) (TDD)

#### 8.2.4.36a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

#### 8.2.4.36a.2 Conformance requirement

In case the procedure was triggered by reception of a TRANSPORT CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

…

3GPP TS 25.331 clauses 8.2.2, 8.6.3.1, 8.2.2.3, 8.5.25

### 8.2.4.36a.3 Test purpose

To confirm that the UE reconfigures the transport and physical channel while being mapped to HS-DSCH according to the received TRANSPORT CHANNEL RECONFIGURATION message.

To confirm that the UE keeps the same value of TTI (transmission time interval) during the procedure.

### 8.2.4.36a.4 Method of test

Initial Condition

System Simulator: 1 cell is active, the cell configure 3 carriers， one is the primary carrier， the other two are secondary carrier.

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD

- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established using a 384 kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 64 kbps (1.28Mcps TDD) uplink DCH.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 64kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon successfully received the complete message from the UE, SS transmits another TRANSPORT CHANNEL RECONFIGURATION message to limit the uplink transmission rate to 32kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD). After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Next the SS transmits a new TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes an old UL DCH TFCS for uplink 64kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate in order to remove the limitation for uplink 32kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 16 kbps (1.28Mcps TDD) transmission rate and keeps the transmission time interval. Upon received this message, the UE reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS then transmits one more TRANSPORT CHANNEL RECONFIGURATION message to remove the limitation for uplink 64kbps (3.84Mcps TDD and 7.68 Mcps TDD) or 32 kbps (1.28Mcps TDD) transmission rate and assign a new uplink 384kbps (3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) transmission rate. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Include only the CTFC’s defined in the RADIO BEARER SETUP message used in the initial procedure that restrict the uplink transmission rate to 32 kbps. |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| TransportChannelReconfiguration -r5-TDD128-add-ext-IEs<br>-frequencyInfo | secondary carrier frequency |

TRANSPORT CHANNEL RECONFIGURATION (Steps 1 and 5) (3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Include only the CTFC’s defined in the RADIO BEARER SETUP message used in the initial procedure that restrict the uplink transmission rate to 64 kbps. |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (1.28Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Set according to the radio bearer configuration for “Interactive or background / UL:16 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Uplink DPCH info | Not Present<br>Not Present |
| -Uplink Timing Advance Control | |
| - Frequency info | secondary carrier frequency |
| -UpPCH position info | 22 |

TRANSPORT CHANNEL RECONFIGURATION (Step 3) (3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | “Interactive or background / UL:32 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” in 34.108 clause 6.10 Parameter Set. |
| Added or Reconfigured UL TrCH information<br>DL Transport channel information common for all transport channel<br>Added or Reconfigured DL TrCH information | Not Present<br>Not Present<br><br>Not Present |

TRANSPORT CHANNEL RECONFIGURATION (Step 7) (1.28Mcps TDD, 3.84Mcps and 7.68Mcps TDD)

Use the same message as specified for “Packet to CELL_DCH from CELL_DCH in PS” in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| UL Transport channel information for all transport channels<br>- UL DCH TFCS | Same contents as the RADIO BEARER SETUP message used in the initial procedure. |
| Added or Reconfigured UL TrCH information<br>Uplink DPCH info | Not Present |
| -Uplink Timing Advance Control | |
| - Frequency info | secondary carrier frequency |
| -UpPCH position info | 22 |

### 8.2.4.36a.5 Test requirements

After step 1, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 3, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 5, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 7, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## 8.2.4.36b Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification) ( In a different frequency band)

### 8.2.4.36b.1 Definition and applicability

Same conformance requirement as in clause 8.2.4.36a except that UE is support for different frequency band.

### 8.2.4.36b.2 Conformance requirement

Same conformance requirement as in clause 8.2.4.36a.

### 8.2.4.36b.3 Test purpose

Same conformance requirement as in clause 8.2.4.36a except that UE can work in different frequency bands.

### 8.2.4.36b.4 Method of test

Same conformance requirement as in clause 8.2.4.36a except for Expected sequence

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 64 kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (3.84Mcps TDD and 7.68 Mcps) or 16 kbps (1.28Mcps TDD) |
| 4 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 5 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 64kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 6 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 384kbps (3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) |
| 8 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | UE will run test procedure for 2 kinds of condition. The first,. primary carrier and the secondary carriers of the UE work in same frequency band. Secondly,, primary carrier and the secondary carriers of the UE work in different frequency bands. |

### 8.2.4.36b.5 Test requirements

Same conformance requirement as in clause 8.2.4.36a.

## 8.2.4.36c Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (inter-band frequency hard handover,,with active HS-DSCH reception, not changing the value of TTI during UL rate modification, LCR TDD band a-f)

### 8.2.4.36c.1 Definition and applicability

Same conformance requirement as in clause 8.2.4.36a except that UE supports different frequency bands.

### 8.2.4.36c.2 Conformance requirement

Same conformance requirement as in clause 8.2.4.36a.

### 8.2.4.36c.3 Test purpose

Same conformance requirement as in clause 8.2.4.36a except that UE can receive TRANSPORT CHANNEL RECONFIGURATION message on in a different frequency band cell.

### 8.2.4.36c.4 Method of test

Same conformance requirement as in clause 8.2.4.36 except for the following:

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive. cell 1 and cell 6 belong to different frequency bands. Cell 1 is active and configure three carriers,one primary carrier with two secondary carriers.

Test Procedure

**Table 8.2.4.36c.4**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.4.36c.4 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.4.36c.4. The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established using a 64 kbps (1.28Mcps TDD) uplink DCH.

The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon successfully received the complete message from the UE, SS transmits another TRANSPORT CHANNEL RECONFIGURATION message to limit the uplink transmission rate to 16 kbps (1.28Mcps TDD). After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Next the SS transmits a new TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes an old UL DCH TFCS for uplink 32 kbps (1.28Mcps TDD) transmission rate in order to remove the limitation for uplink 16 kbps (1.28Mcps TDD) transmission rate and keeps the transmission time interval. Upon received this message, the UE reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS then transmits one more TRANSPORT CHANNEL RECONFIGURATION message to remove the limitation for uplink 32 kbps (1.28Mcps TDD) transmission rate and assign a new uplink 64 kbps (1.28Mcps TDD) transmission rate. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

If UE support a+f frequency band, the The SS switches its downlink transmission power settings to columns "T1". The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message ncluding IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" of cell 6 parameters to the UE to limit the uplink transmission rate. This message includes a new UL DCH TFCS for uplink 32 kbps (1.28Mcps TDD) transmission rate, but the TTI remains unchanged. After the UE receives this message, it reconfigures the transport and physical channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC on cell 6.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 64 kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 2 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (3.84Mcps TDD and 7.68 Mcps) or 16 kbps (1.28Mcps TDD) |
| 4 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 5 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 64kbps (3.84Mcps TDD and 7.68 Mcps) or 32 kbps (1.28Mcps TDD) |
| 6 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Remove the limitation on the uplink rate and move to 384kbps (3.84Mcps TDD and 7.68 Mcps) or 64 kbps (1.28Mcps TDD) |
| 8 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.4.36c.4. |
| 10 | ← | | TRANSPORT CHANNEL RECONFIGURATION | Limit the uplink transmission rate to 32 kbps (1.28Mcps TDD).It Include IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set cell 6 parameters. |
| 11 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| | | | | The UE TRANSPORT CHANNEL RECONFIGURATION on cell 6. |

### 8.2.4.36c.5 Test requirements

After step 11, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC on cell 6.

## 8.2.5 Transport format combination control

### 8.2.5.1 Void

NOTE: Test case “Transport format combination control in CELL_DCH: restriction” have been removed as being implicitely tested by radio bearer test cases in clause 14.

### 8.2.5.2 Void

NOTE Test case “Transport format combination control in CELL_DCH: release a restriction” have been removed as being implicitely tested by radio bearer test cases in clause 14.

### 8.2.5.3 Void

### 8.2.5.4 Transport format combination control in CELL_DCH: Failure (Invalid configuration)

#### 8.2.5.4.1 Definition

#### 8.2.5.4.2 Conformance requirement

If the variable INVALID_CONFIGURATION is set to TRUE due to the received TRANSPORT FORMAT COMBINATION CONTROL message the UE shall:

1> if the TRANSPORT FORMAT COMBINATION CONTROL message was received on AM RLC:

2> keep the TFC subset existing before the TRANSPORT FORMAT COMBINATION CONTROL message was received;

2> transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC;

2> set the IE "RRC transaction identifier" in the TRANSPORT FORMAT COMBINATION CONTROL FAILURE message to the value of "RRC transaction identifier" in the entry for the TRANSPORT FORMAT COMBINATION CONTROL message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "invalid configuration";

2> when the TRANSPORT FORMAT COMBINATION CONTROL FAILURE message has been submitted to lower layers for transmission the procedure ends.

1> if the TRANSPORT FORMAT COMBINATION CONTROL message was received on UM RLC:

2> ignore the TRANSPORT FORMAT COMBINATION CONTROL message.

Reference

3GPP TS 25.331 clause 8.2.5.4, 8.2.5.5

#### 8.2.5.4.3 Test purpose

To confirm that the UE transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC if it receives a TRANSPORT FORMAT COMBINATION CONTROL message including an invalid configuration.

#### 8.2.5.4.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: DCCH+DTCH_DCH (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message including some IEs set to get an invalid configuration. The UE keeps its current configuration and transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | | | | UE is in CELL_DCH state with a DCH for a signalling radio bearer and a DCH for a radio access bearer. |
| 2 | | | Void | |
| 3 | | | Void | |
| 3a | | | Void | |
| 4 | ← | | TRANSPORT FORMAT COMBINATION CONTROL | This message includes an invalid configuration. |
| 5 | → | | TRANSPORT FORMAT COMBINATION CONTROL FAILURE | The UE shall not change its configuration |
| 6 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0band 6)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions:

The order in which the RBs are reported is not checked.

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

TRANSPORT FORMAT COMBINATION CONTROL (Step 4)

Use the same message sub-type titled "TRANSPORT FORMAT COMBINATION CONTROL" in [9] TS 34.108 clause 9, with following exceptions:

| Information Element | Value/remark |
|---|---|
| TrCH information elements | |
| -DPCH/PUSCH TFCS uplink in uplink | |
| - Restricted TrCH information | |
| - Uplink transport channel type | DCH |
| - Restricted UL TrCH identity | 15 ( for RACH transport channel identity) |
| - Allowed TFI | 0 |

TRANSPORT FORMAT COMBINATION CONTROL FAILURE (Step 5)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

### 8.2.5.4.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 4 the UE shall transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

After step 5, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

## 8.2.6 Physical channel reconfiguration

### 8.2.6.1 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success

#### 8.2.6.1.1 Definition

#### 8.2.6.1.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATIONmessage; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.6.1.3 Test purpose

To confirm that the UE reconfigures the physical channel parameters according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS. After the reconfiguration, the UE shall be able to communicate with the SS on the new physical channel.

#### 8.2.6.1.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new several physical layer parameters. The UE shall reconfigure the physical channel at the activation time specified in this message and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC after its transition. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See message contents |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Maximum allowed UL Tx power | 31dBm |
| Uplink DPCH info | |
| - Scrambling code number | 1 |
| Downlink information common for all radio links | |
| Downlink information for each radio link | |
| - Code number | 1 |

PHYSICAL CHANNEL RECONFIGURATION (3.84 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Uplink DPCH timeslots and codes | |
| - First timeslot code list | Assigned by SS |
| Downlink information common for all radio links | Absent |

PHYSICAL CHANNEL RECONFIGURATION (1.28 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Physical Channel Reconfiguration r4<br>- UL Channel Requirement<br>- Uplink DPCH info<br>- CHOICE mode<br>- Uplink DPCH timeslots and codes<br>- First timeslot Code List<br>- Channelisation Code<br>-DL InformationPerRL List<br>- DL DPCH InfoPerRL<br>- DL TS ChannelisationCodesShort | <br><br><br>TDD<br><br><br>cc8_2<br><br><br>'0011000000000000'B |

PHYSICAL CHANNEL RECONFIGURATION (7.68 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Uplink DPCH timeslots and codes VHCR<br>- First timeslot code list<br>- Channelisation code<br>Downlink information per radio link list<br>- Downlink information for each radio link<br>- Downlink DPCH info for each RL<br>- Downlink DPCH timeslots and codes VHCR<br>- First timeslot channelisation codes channelisation codes VHCR<br>- First Channelisation code<br>- Last Channelisation code | <br><br>(16/1)<br><br><br><br><br><br><br>(32/1)<br>(32/2) |

### 8.2.6.1.5 Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

## 8.2.6.1a Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success (1.28 Mcps TDD Only)

### 8.2.6.1a.1 Definition

### 8.2.6.1a.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATIONmessage; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.1a.3 Test purpose

1.To confirm that the UE reconfigures the physical channel parameters according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS. After the reconfiguration, the UE shall be able to communicate with the SS on the new physical channel.

2. To confirm that the UE can indicate the UpPCH shifting position according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS and complete the process.

### 8.2.6.1a.4 Method of test

Initial Condition

System Simulator: 2 cells. Cell 1at UARFCN 1 and Cell4 at UARFCN 4.

UpPCH shifting position is 22 at Cell4.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.1a**

| Parameter | Unit | Cell 1 | | Cell4 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new several physical layer parameters. The UE shall reconfigure the physical channel at the activation time specified in this message and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC after its transition. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new several physical layer parameters. The UE shall reconfigure the physical channel and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See message contents |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The message indicate that UE is in CELL_DCH state at cell 4 and specify the carrier and UpPCH shifting position. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 3(TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| -v4b0NonCriticalExtensions<br>-sysInfoType3-v4b0ext<br>- mapping-LCR | 22 | |

PHYSICAL CHANNEL RECONFIGURATION (1.28 Mcps TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Physical Channel Reconfiguration r4<br>- UL Channel Requirement<br>- Uplink DPCH info<br>- CHOICE mode<br>- Uplink DPCH timeslots and codes<br>- First timeslot Code List<br>- Channelisation Code<br>-DL InformationPerRL List<br>- DL DPCH InfoPerRL<br>- DL TS ChannelisationCodesShort<br><br>Uplink DPCH info<br>-Uplink Timing Advance Control<br>- Frequency info<br>-UpPCH position info | <br><br><br>TDD<br><br><br>cc8_2<br><br><br>'0011000000000000'B<br><br><br><br>Secondary carrier<br>22 |

8.2.6.1a.5 Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and t UE is in CELL_DCH state.

### 8.2.6.2 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Unsupported configuration)

#### 8.2.6.2.1 Definition

#### 8.2.6.2.2 Conformance requirement

If the UTRAN instructs the UE to use a configuration, which it does not support and/or if the received message causes the variable UNSUPPORTED_CONFIGURATION to be set to TRUE, the UE shall:

1> transmit a failure response as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "configuration unsupported".

1> set the variable UNSUPPORTED_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

…

The UE should set the variable UNSUPPORTED_CONFIGURATION to TRUE if the received message is not according to the UE capabilities.

Reference

3GPP TS 25.331 clause 8.2.2.6, 8.2.2.9, 8.5.20.

#### 8.2.6.2.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters for the UE.

#### 8.2.6.2.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS.The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes configuration parameters unsupported by the UE. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Includes configuration unsupported by the UE |
| 2 | → | | PHYISICAL CHANNEL RECONFIGURATION FAILURE | The UE shall not reconfigure and continue to communicate using the old configuration. |
| 3 | → | | MEASUREMENT REPORT | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b and 3)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (FDD) (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 Clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink (Nu) | 0 |
| - UARFCN downlink (Nd) | 950 |

PHYSICAL CHANNEL RECONFIGURATION (TDD) (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in [9] TS 34.108 Clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN (Nt) | 0 |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in [9] TS 34.108 Clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Not checked |

#### 8.2.6.2.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC.

After step 2, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

### 8.2.6.3 Void

### 8.2.6.4 Void

### 8.2.6.5 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Incompatible simultaneous reconfiguration)

#### 8.2.6.5.1 Definition

#### 8.2.6.5.2 Conformance requirement

If the received message is any of the messages:

- PHYSICAL CHANNEL RECONFIGURATION; or

…

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

…

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

…

3> else:

4> reject the transaction; and

4> if the IE "Message Type" of the received message is not present in the table "Rejected transactions" in the variable TRANSACTIONS:

5> store the IE "Message type" and the IE "RRC transaction identifier" of the received message in the table "Rejected transactions" in the variable TRANSACTIONS.

…

If the table "Rejected transactions" in the variable TRANSACTIONS is set due to the received message and the variable PROTOCOL_ERROR_REJECT is set to FALSE, the UE shall:

1> not apply the configuration contained in the received reconfiguration message;

1> transmit a failure response message as specified in subclause TS 25.331 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Rejected transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "incompatible simultaneous reconfiguration".

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.9, 8.2.2.12, clause 8.6.3.11.

### 8.2.6.5.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than PHYSICAL CHANNEL RECONFIGURATION, it shall keep its configuration as if the PHYSICAL CHANNEL RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.

### 8.2.6.5.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the PHYSICAL CHANNEL RECONFIGURATION message, the UE shall keep the configuration as if it had not received the PHYSICAL CHANNEL RECONFIGURATION message and shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the PHYSICAL CHANNEL RECONFIGURATION FAILURE message, the UE reconfigures the new physical channel parameters upon the activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Sent before the "activation time" specified in the message in step 1 has elapsed. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE does not change the configuration due to the reception of a PHYSICAL CHANNEL RECONFIGURATION message. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | This message is on DCCH using AM RLC. |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time Info | Current CFN-[current CFN mod 8 + 8 ] |
| Uplink DPCH info | |
| - Scrambling code number | 1 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

RADIO BEARER RECONFIGURATION (Step 1) (TDD)

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| - Uplink DPCH timeslots and codes | |
| - First timeslot code list | Assigned by SS |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time | Not Present |
| Uplink DPCH info | |
| - Scrambling code number | 2 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (TDD)

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| - Uplink DPCH timeslots and codes | |
| - First timeslot code list | Different as assigned in Step 1 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Incompatible simultaneous reconfiguration |

### 8.2.6.5.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC on the DCCH.

## 8.2.6.6 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Invalid message reception and Invalid configuration)

### 8.2.6.6.1 Definition

### 8.2.6.6.2 Conformance requirement

If the received reconfiguration message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to TS 25.331 clause 9, the UE shall perform procedure specific error handling as follows. The UE shall:

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Rejected transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to the cause value "protocol error";

2> include the IE "Protocol error information" with contents set to the value of the variable PROTOCOL_ERROR_INFORMATION.

If the variable INVALID_CONFIGURATION is set to TRUE the UE shall:

1> keep the configuration existing before the reception of the message;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

3> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

3> clear that entry.

2> set the IE "failure cause" to "invalid configuration".

1> set the variable INVALID_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.13, 8.2.2.11, 8.2.2.9.

#### 8.2.6.6.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives an invalid PHYSICAL CHANNEL RECONFIGURATION message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a PHYSICAL CHANNEL RECONFIGURATION message including some IEs set to give an invalid configuration.

#### 8.2.6.6.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits an invalid PHYSICAL CHANNEL RECONFIGURATION message to the UE, which contains an unexpected critical message extension. The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with a value "protocol error" in IE "failure cause" and also a value "Message extension not comprehended" in IE "Protocol error cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically. SS transmits a PHYSICAL CHANNEL RECONFIGURATION message including some IEs which are set to give an invalid configuration. The UE keeps its initial configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See specific message content. |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE does not change its configuration. |
| 2a | → | | MEASUREMENT REPORT | |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | This message includes IEs which is set to give an invalid configuration |
| 4 | | | | The UE does not change its configuration |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "invalid configuration |
| 6 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b, 2a and 6)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the PHYSICAL CHANNEL RECONFIGURATION message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Critical extensions | 'FF'H |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause<br>- Failure cause<br>- Protocol error information<br>- Protocol error cause | <br>Protocol error<br><br>Message extension not comprehended |

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links<br>- Downlink DPCH info common for all RL<br>- Timing Indicator<br>- Default DPCH Offset Value<br>Downlink information for each radio links<br>- DPCH frame offset | <br><br>Initialise<br>1 (512)<br><br>4 (1024) |

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_FACH from CELL_DCH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links<br>- Downlink DPCH info common for all RL<br>- Timing Indicator<br>- Default DPCH Offset Value<br>- CHOICE mode<br>- Default DPCH Offset Value (DOFF) | <br><br>Initialise<br><br>TDD<br>Not Present |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

### 8.2.6.6.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value "protocol error" in IE "failure cause" and also setting value "Message extension not comprehended" in IE "Protocol error cause".

After step 2, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

After step 5, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

## 8.2.6.7 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success

### 8.2.6.7.1 Definition

### 8.2.6.7.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.6.7.3 Test purpose

To confirm that the UE reconfigures a common physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL_DCH to CELL_FACH.

#### 8.2.6.7.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE shall then reconfigure the specified common physical channel according to this message and the system information messages. Following this, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the DCCH. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

#### 8.2.6.7.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE messageon the common physical channel.

### 8.2.6.8 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection)

#### 8.2.6.8.1 Definition

#### 8.2.6.8.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.3.1.7.

### 8.2.6.8.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after the UE completes a cell update procedure.

### 8.2.6.8.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes IE "Primary CPICH info"" (for FDD) or "Primary CCPCH info" (for TDD) and no dedicated physical channel information to invoke the UE to transit from CELL_DCH to CELL_FACH. As the UE cannot detect the specified cell, the UE shall initiate the cell update procedure. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving a CELL UPDATE message. The UE then transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | This message include IE "Primary CPICH info" for FDD and Primary CCPCH info for TDD. |
| 3 | | | Void | |
| 4 | → | | CELL UPDATE | The value "cell reselection" shall be set in IE "Cell update cause". |
| 5 | ← | | CELL UPDATE CONFIRM | See message content. |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>150 |

PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | <br><br>4 |

CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A for FDD and Annex A for TDD with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 5)

Use the same message type found in clause Annex A, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 6)

Only the message type is checked.

#### 8.2.6.8.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 5 UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

After step 6 UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.9 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success

#### 8.2.6.9.1 Definition

#### 8.2.6.9.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.9.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which invoke UE to transit from CELL_FACH to CELL_DCH.

### 8.2.6.9.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_FACH to CELL_DCH. The UE shall reconfigure the new dedicated physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 5 | | | | The UE shall configure the allocated dedicated physical channels. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A for FDD and Annex A for TDD.

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

8.2.6.9.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION message on the new dedicated physical channel.

## 8.2.6.9a Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success(1.28 Mcps TDD Only)

### 8.2.6.9a.1 Definition

### 8.2.6.9a.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.9a.3 Test purpose

1. To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which invoke UE to transit from CELL_FACH to CELL_DCH.

2. To confirm that the UE reconfigures the physical channel in secondary carrier.

### 8.2.6.9a.4 Method of test

Initial Condition

System Simulator: 1 cell, Configure 3 carriers，one is theprimary carrier，the other two are secondary carriers.

Detail in the table as follows:

| Parameter | Cell 1 | Cell 2 | Cell 3 |
|---|---|---|---|
| UTRA RF Channel Number1 | Ch. 1 | Ch. 1 | Ch.2 |
| UTRA RF Channel Number2 | Ch. 2 | Ch. 2 | Ch. 1 |
| UTRA RF Channel Number3 | Ch.3 | Ch.3 | Ch.3 |

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_FACH to CELL_DCH. The UE shall reconfigure the new dedicated physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 5 | | | | The UE shall configure the allocated dedicated physical channels on the secondary carrier. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state of the secondary carrier 3, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A for TDD.

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

with the following exceptions:

| Information Element | Value/remark |
|---|---|
| PhysicalChannelReconfiguration-r4-TDD128-add-ext-IEs | |
| frequencyInfo | secondary carrier frequency |

8.2.6.9a.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the new dedicated physical channel.

## 8.2.6.10 Void

## 8.2.6.11 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration)

### 8.2.6.11.1 Definition

### 8.2.6.11.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to TS 25.304;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

### 8.2.6.11.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message before the T312 expiry.

8.2.6.11.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_FACH to CELL_DCH. However, the SS keeps its current physical channel configuration and then the UE cannot synchronise with the SS. After T312 expires, the UE attempt to revert to the old configuration. Then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set "physical channel failure" in IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 3b | → | | MEASUREMENT REPORT | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 5 | | | | The SS does not reconfigure the physical channel, hence the UE shall detect a failure to reconfigure to the new physical channel. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | After T312 expires the UE reverts to the old configuration and transmits this message. |
| 7 | → | | MEASUREMENT REPORT | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in clause 9 of TS 34.108 for FDD or for TDD.

MEASUREMENT CONTROL (Step 3a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Measurement Identity | 1 | |
| Measurement Command | Setup | |
| Measurement reporting mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting | |
| Additional measurement list | Not Present | |
| CHOICE measurement type | Traffic Volume Measurement | |
| - Traffic volume measurement object list | | |
| - Uplink transport channel type | RACHorCPCH | R99 and Rel-4 only |
| | RACH | Rel-5 |
| - UL Target Transport Channel ID | Not Present | |
| - Traffic volume measurement quantity | | |
| - Measurement quantity | RLC Buffer Payload | |
| - Time Interval to take an average or a variance | Not Present | |
| - Traffic volume reporting quantity | | |
| - RLC Buffer Payload for each RB | True | |
| - Average of RLC Buffer Payload for each RB | False | |
| - Variance of RLC Buffer Payload for each RB | False | |
| - Measurement validity | | |
| - UE state | All states except CELL_DCH | |
| - CHOICE Reporting criteria | Periodical Reporting Criteria | |
| - Amount of reporting | Infinity | |
| - Reporting interval | 8000 | |
| DPCH compressed mode status | Not Present | |

MEASUREMENT REPORT (Step 3b and 7)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 20 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in clause 9 of TS 34.108 for FDD or for TDD.

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 6)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

#### 8.2.6.11.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 3a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "physical channel failure" in IE "failure cause".

After step 6, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

### 8.2.6.12 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and cell update )

#### 8.2.6.12.1 Definition

#### 8.2.6.12.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to TS 25.304;

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in TS 25.304 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- does not include "CN information elements"; and
- does not include the IE "Ciphering mode info"; and
- does not include the IE "Integrity protection mode info"; and
- does not include the IE "New C-RNTI"; and
- does not include the IE "New U-RNTI":

the UE shall:

1> transmit no response message.

…

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9,8.3.1.7, 8.5.4

### 8.2.6.12.3 Test purpose

To confirm that the UE initiates a cell update procedure after it fails to reconfigure the new physical channel and selects another cell.

To confirm that UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message after UE completes cell update procedure.

### 8.2.6.12.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

NOTE: The 'timer poll' value in the SS RLC transmit entity should be set to 800 ms.

Test Procedure

**Table 8.2.6.12**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -75 | -75 | -60 |

Table 8.2.6.12 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state in cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Then SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, but the SS does not reconfigure L1 accordingly. The SS configures its downlink transmission power settings according to columns "T1"in table 8.2.6.12. As a result, the UE fails to synchronise on the new physical channel before timer T312 expires. UE may send a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure" to cell 1. UE reselects to cell 2 and then the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "Cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving a CELL UPDATE message. If not already done so, the UE may transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure" in cell 2. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 2 to acknowledge the reception of new C-RNTI value. If not already done so, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS does not configure the new dedicated physical channel in accordance with the settings in the message and applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.12. |
| 5 | → | | PHYSICAL CHANNEL RECONGURATION FAILURE (option 1) | UE shall transmit this message in the cell 1. |
| 6 | | | Void | |
| 7 | → | | CELL UPDATE | This message includes the value "cell reselection" set in IE "Cell update cause". |
| 8 | ← | | CELL UPDATE CONFIRM | |
| 8a | → | | PHYSICAL CHANNEL RECONGURATION FAILURE (option 2) | UE shall transmit this message in the cell 2. |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | → | | PHYSICAL CHANNEL RECONGURATION FAILURE (option 3) | UE shall transmit this message in the cell 2. |
| 11 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RRC CONNECTION SETUP (message used in the initial setup)

Use the same message type found in clause 9 of TS 34.108 with the following exception:

| | |
|---|---|
| Signalling RB information to setup | (AM DCCH for RRC) |
| - RB identity | Not Present |
| - CHOICE RLC info type | |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - SDU discard mode | No discard |
| - MAX_DAT | 15 |
| - Transmission window size | 32 |
| - Timer_RST | 500 |
| - Max_RST | 1 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 800 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |
| - Timer_poll_periodic | Not Present |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Clause 9 of TS 34.108 for FDD or for TDD.

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Clause 9 of TS 34.108 for FDD or for TDD.

CELL UPDATE (Step 7)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Clause 9 of TS 34.108 for FDD or for TDD with the following exceptions:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Assigned previously in cell 1 |
| - S-RNTI | Assigned previously in cell 1 |
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 8)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Clause 9 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 9)

The contents of UTRAN MOBILITY INFORMATION CONFIRM message is identical as "Contents of UTRAN MOBILITY INFORMATION CONFIRM message" as found in Clause 9 of TS 34.108 for FDD or for TDD.

PHYSICAL CHANNEL RECONGURATION FAILURE (Steps 5, 8a and 10)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | "physical channel failure" |

#### 8.2.6.12.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 6 the UE shall transmit a CELL UPDATE message using RLC-TM mode on the uplink CCCH with IE "Cell update cause" set to "cell reselection" in cell 2.

After step 8, UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure" after step 4, 8 or 9.

### 8.2.6.13 Void

### 8.2.6.14 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception and Invalid configuration)

#### 8.2.6.14.1 Definition

#### 8.2.6.14.2 Conformance requirement

If the received reconfiguration message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to TS 25.331 clause 9, the UE shall perform procedure specific error handling as follows. The UE shall:

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Rejected transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to the cause value "protocol error";

2> include the IE "Protocol error information" with contents set to the value of the variable PROTOCOL_ERROR_INFORMATION.

If the variable INVALID_CONFIGURATION is set to TRUE the UE shall:

1> keep the configuration existing before the reception of the message;

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

3> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

3> clear that entry.

2> set the IE "failure cause" to "invalid configuration".

1> set the variable INVALID_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.13, 8.2.2.11, 8.2.2.9

### 8.2.6.14.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received message does not include any IEs except IE "Message Type".

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a PHYSICAL CHANNEL RECONFIGURATION message including some IEs which are set to give an invalid configuration.

### 8.2.6.14.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits an invalid PHYSICAL CHANNEL RECONFIGURATION message to the UE which contains an unexpected critical message extension. The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "protocol error" in IE "failure cause" and also setting "Message extension not comprehended" in IE "Protocol error cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically. SS transmits PHYSICAL CHANNEL RECONFIGURATION message including some IEs which are set to give an invalid configuration. The UE keeps current configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters CELL_FACH state. |
| 3a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 3b | → | | MEASUREMENT REPORT | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See specific message content. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE does not change the configuration. |
| 5a | → | | MEASUREMENT REPORT | |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | This message includes IEs which are set to give an invalid configuration. |
| 7 | | | | The UE does not change the configuration |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "invalid configuration |
| 9 | → | | MEASUREMENT REPORT | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A for FDD and Annex A for TDD.

MEASUREMENT CONTROL (Step 3a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Measurement Identity | 1 | |
| Measurement Command | Setup | |
| Measurement reporting mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting | |
| Additional measurement list | Not Present | |
| CHOICE measurement type | Traffic Volume Measurement | |
| - Traffic volume measurement object list | | |
| - Uplink transport channel type | RACHorCPCH | R99 and Rel-4 only |
| | RACH | Rel-5 |
| - UL Target Transport Channel ID | Not Present | |
| - Traffic volume measurement quantity | | |
| - Measurement quantity | RLC Buffer Payload | |
| - Time Interval to take an average or a variance | Not Present | |
| - Traffic volume reporting quantity | | |
| - RLC Buffer Payload for each RB | True | |
| - Average of RLC Buffer Payload for each RB | False | |
| - Variance of RLC Buffer Payload for each RB | False | |
| - Measurement validity | | |
| - UE state | All states | |
| - CHOICE Reporting criteria | Periodical Reporting Criteria | |
| - Amount of reporting | Infinity | |
| - Reporting interval | 8000 | |
| DPCH compressed mode status | Not Present | |

MEASUREMENT REPORT (Step 3b, 5a and 9)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 20 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the PHYSICAL CHANNEL RECONFIGURATION message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Critical extensions | 'FF'H |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause<br>- Failure cause<br>- Protocol error information<br>- Protocol error cause | <br>Protocol error<br><br>Message extension not comprehended |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Default DPCH Offset Value<br>- DPCH frame offset | 1 (512)<br>4 (1024) |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| -PRACH TFCS | Present |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 7)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Invalid configuration |

### 8.2.6.14.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 3a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 4 the UE shall keep its old configuration, transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with "protocol error" in IE "failure cause" and also "Message extension not comprehended" in IE "Protocol error cause".

After step 5, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

After step 7 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

After step 8, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on RACH at every 8s interval.

### 8.2.6.15 Void

### 8.2.6.16 Void

### 8.2.6.17 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success (Subsequently received)

#### 8.2.6.17.1 Definition

#### 8.2.6.17.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- PHYSICAL CHANNEL RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

…

Reference

3GPP TS 25.331 clause 8.6.3.11.

#### 8.2.6.17.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message it ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message.

#### 8.2.6.17.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous PHYSICAL CHANNEL RECONFIGURATION message elapses, the UE ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | For FDD mode Scrambling code number is set to "1". For TDD mode a code combination is assigned by SS. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS send this message before the expiry of "activation time" specified in PHYSICAL CHANNEL RECONFIGURATION message of step 1. For FDD, the IE "Scrambling code number" is set to "2". For TDD, the code combination assigned is different to that assigned in stage 1. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE ignores the PHYSICAL CHANNEL RECONFIGURATION message in step 2 and confirms configuration according to the PHYSICAL CHANNEL RECONFIGURATION message in step 1. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>- Uplink DPCH info<br>- Scrambling code number | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned in step 1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH info<br>- Scrambling code number | Not Present<br><br>2 |

PHYSICAL CHANNEL RECONFIGURATION (Step2) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.6.17.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.18 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success (Subsequently received)

#### 8.2.6.18.1 Definition

#### 8.2.6.18.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- PHYSICAL CHANNEL RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.6.18.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message it ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.18.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL_DCH to CELL_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous PHYSICAL CHANNEL RECONFIGURATION message, the UE ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2 | | | | UE shall perform the reconfiguration |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters CELL_FACH state. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Scrambling code number is set to "1" for FDD mode and A code combination is assigned by SS for TDD |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | For FDD the IE "Scrambling code number" is set to "2". For TDD, the code combination assigned is different from that assigned in stage 4. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE ignores the PHYSICAL CHANNEL RECONFIGURATION message in step 5 and confirms configuration according to the PHYSICAL CHANNEL RECONFIGURATION message in step 4. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9.

PHYSICAL CHANNEL RECONFIGURATION (Step 4) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time Info<br>- Uplink DPCH info<br>- Scrambling code number | Not present<br><br>1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 4) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256<br><br>Assigned in step 1 |

PHYSICAL CHANNEL RECONFIGURATION (Step 5) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH info<br>- Scrambling code number | Not Present<br><br>2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 5) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Activation Time<br>- Uplink DPCH timeslots and codes<br>- First timeslot code list | Not Present<br><br>A different code combination to that used in step 1. |

#### 8.2.6.18.5 Test requirement

After step 2 the UE shall transit from CELL_DCH to CELL_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.19 Physical Channel Reconfiguration from CELL_DCH to CELL_PCH: Success

#### 8.2.6.19.1 Definition

#### 8.2.6.19.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

#### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.19.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enter CELL_PCH state after it received a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

### 8.2.6.19.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

#### Test Procedure

The UE is in CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH. The UE transmits a PHYSICAL CHANNEL

RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 3 | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 4 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |

|---|---|
| New C-RNTI<br>Downlink information for each radio links<br>- Primary CCPCH info<br>-Cell parameters ID | Not Present<br><br><br>0 |

#### 8.2.6.19.5 Test requirement

After step 1 the UE shall transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.20 Physical Channel Reconfiguration from CELL_DCH to URA_PCH: Success

#### 8.2.6.20.1 Definition

#### 8.2.6.20.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the new state is URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (URA_PCH);

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.6.20.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enter URA_PCH state after it received a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH.

8.2.6.20.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state. SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 3 | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step. Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 4 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| URA Identity | 0000 0000 0000 0001B |

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (TDD)

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| URA Identity | 0000 0000 0000 0001B |

#### 8.2.6.20.5 Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.21 Physical Channel Reconfiguration from CELL_FACH to URA_PCH: Success

#### 8.2.6.21.1 Definition

#### 8.2.6.21.2 Conformance requirement

1. In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:
   - transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC;
2. If the new state is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:
   - when RLC has confirmed the successful transmission of the response message:
     - for each radio bearer in the variable PDCP_SN_INFO:
       - if the IE "RB started" in the variable ESTABLISHED_RABS is set to "started":
         - configure the RLC entity for that radio bearer to "continue";
     - enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2.4

#### 8.2.6.21.3 Test purpose

1. To verify that the UE, when receiving a PHYSICAL CHANNEL RECONFIGURATION message, responds by transmitting a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To verify that the response message is transmitted using the old configuration before the state transition, and that the UE enters the URA_PCH state.

#### 8.2.6.21.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using AM RLC and enters into URA_PCH state. SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before start state transition. |
| 3 | | | | Reconfiguration of Physical Channel after state transition. |
| 4 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to URA_PCH from CELL_FACH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| URA identity | URA-ID 1 |

#### 8.2.6.21.5 Test requirement

1. After step 1 the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the UE on uplink DCCH using AM RLC.

### 8.2.6.22 Void

### 8.2.6.23 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing maintain): Success

#### 8.2.6.23.1 Definition

#### 8.2.6.23.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message:

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.6.23.3 Test purpose

To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, on a dedicated physical channel in a different frequency band.

8.2.6.23.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 is active and cell 6 is inactive.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.23**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -55 | Off | -55 |

Table 8.2.6.23 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.23. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes new frequency information and IE "Timing indicator" set to maintain. The UE shall reconfigure the physical channel parameters according to PHYSICAL CHANNEL RECONFIGURATION message and establish a radio link with the SS using a dedicated physical channel in cell 6. The UE then transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 6 on the uplink DCCH AM RLC after its transition. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.23. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.23. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including new frequency information. IE "Timing indicator" is set to maintain. |
| 4 | | | | The UE remains in CELL_DCH state after connecting to the SS on a dedicated physical channel in cell 6. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| Uplink DPCH info | |
| - Scrambling code number | 1 |
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | Maintain |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | 350 |

#### 8.2.6.23.5 Test requirement

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC in cell 6.

### 8.2.6.24 Void

### 8.2.6.25 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH (Frequency modification): Success

#### 8.2.6.25.1 Definition

#### 8.2.6.25.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> if the received reconfiguration message included the IE "Primary CPICH info" (, and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info":

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

1> select PRACH according to TS25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

3> if the UE is in CELL_PCH or URA_PCH state:

4> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "Uplink data transmission";

4> proceed as below.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

### Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.6.25.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_FACH according to the PHYSICAL CHANNEL RECONFIGURATION message.

2. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

8.2.6.25.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.6.25**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -85 | Off | -55 |

Table 8.2.6.25 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.25. The SS and UE execute procedure P5. Next The SS and the UE execute procedure P9 and then execute procedure P13.The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message with no IE "Frequency info" and IE "Primary CPICH info". The UE selects cell 6 and and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection". Upon completion of the cell update procedure, UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the DCCH in cell 6. The SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure) P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 1c | ←→ | | SS executes procedure P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.25. |
| 3 | ← | | Void | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | No including IE "Frequency info" and IE "Primary CPICH info" |
| 5 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 6 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a common physical channel in cell 6. |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | Not Present |
| Downlink information for each radio link | Not Present |

CELL UPDATE (Step 5)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 6)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 7)

The contents of UTRAN MOBILITY UPDATE CONFIRM message are identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

### 8.2.6.25.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 6 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 7 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 8 the UE shall be in CELL_FACH state of cell 6.

## 8.2.6.26 Physical Channel Reconfiguration from CELL_DCH to CELL_PCH (Frequency modification): Success

### 8.2.6.26.1 Definition

### 8.2.6.26.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC.

If after state transition the UE enters CELL_PCH state from CELL_DCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS5.304.

2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

…

If the new state is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.26.3 Test purpose

1. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to CELL_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
3. To confirm that the UE releases a dedicated physical channel and selects a common physical channel in a different frequency.

8.2.6.26.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.6.26**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.26 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.26. The SS and UE execute procedure P5. Next The SS and the UE execute procedure P9 and then execute procedure P13. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. The UE selects cell 6 and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection". Upon completion of the procedure, the SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1a | ←→ | | SS executes procedure P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 1b | ←→ | | SS executes procedure) P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 1c | ←→ | | SS executes procedure P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.26. |
| 3 | | | Void | |
| 4 | ← | | PHYSICAL CHANNELRECONFIGURATION | Not including IE "Primary CPICH info" |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE transmit this message in cell 1. |
| 5a | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 6 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 7 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- UARFCN uplink (Nu)<br>- UARFCN downlink (Nd) | <br>Same uplink UARFCN as used for cell 6<br>Same downlink UARFCN as used for cell 6 |

CELL UPDATE (Step 6)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 7)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indic | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.6.26.5 Test requirement

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 5 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection" in cell 6.

After step 8 the UE shall be in CELL_PCH state in cell 6.

### 8.2.6.27 Physical channel reconfiguration from CELL_FACH to CELL_PCH: Success

#### 8.2.6.27.1 Definition

#### 8.2.6.27.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS5.331 subclause 8.6.3.2.

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

3GPP TS 25.331 clause 8.2.2,8.3, 8.5 and 8.6.

### 8.2.6.27.3 Test purpose

1. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.27.4 Method of test

#### Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. The SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

#### Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | | | | The SS waits for 5 s. |
| 5 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

#### Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.2.6.27.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in CELL_PCH state in cell 6.

### 8.2.6.28 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Downlink channelisation code modification): Success

#### 8.2.6.28.1 Definition

#### 8.2.6.28.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

#### 8.2.6.28.3 Test purpose

1. To confirm that the UE change assigned downlink channelisation code by SS according to a PHYSICAL CHANNEL RECONFIGURATION message.

2. To confirm that the UE response PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC

#### 8.2.6.28.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state of cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes IE " DL channelisation code " set to New DL channelisation code. The UE shall change its

downlink channelisation code for a dedicated physical channel, and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC. The SS transmits UE CAPABILITY ENQUIRY message to confirm whether the UE correctly reconfigure the DL DPCH The UE shall respond with UE CAPABILITY INFORMATION message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE " DL channelisation code " set to New DL channelisation code |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | UE CAPABILITY ENQUIRY | The SS transmits this message to confirm whether the UE can correctly reconfigure the DL DPCH. |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio link list<br>- Downlink information for each radio link<br>- Downlink DPCH info for each RL<br>- DL channelisation code<br>- Spreading factor | Same value as a RADIO BEARER SETUP message used in initial procedure. |
| - Code number | Different value as a RADIO BEARER SETUP message used in initial procedure |

### 8.2.6.28.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 4 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC.

## 8.2.6.29 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Compressed mode initiation): Success

### 8.2.6.29.1 Definition

### 8.2.6.29.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> set the variable ORDERED_RECONFIGURATION to TRUE;

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.6.29.3 Test purpose

1. To confirm that the UE activates compressed mode according to a PHYSICAL CHANNEL RECONFIGURATION message.
2. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
3. To confirm that the UE deactivates compressed mode according to a PHYSICAL CHANNEL RECONFIGURATION message.
4. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.2.6.29.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.29**

| Parameter | Unit | Cell 1 | | | | Cell 6 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | High Range Test Frequency | | | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | -60 | -60 | Off | -60 | -90 | -60 |

Table 8.2.6.29 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1"or "T1" to "T2" or "T2" to "T3", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.29. The SS transmits MEASUREMENT CONTROL message in order for the UE to

perform Inter-frequency measurements and report event 2c. The SS switches its downlink transmission power setting according to columns "T1" in table 8.2.6.29, but the UE shall not transmit any MEASUREMENT REPORT messages. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes IE "DPCH compressed mode info" with "TGPS Status Flag" set to "Activate". The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. The UE shall transmit MEASUREMENT REPORT message to report event 2c with the measured CPICH RSCP value for cell 6 to the SS. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes IE"DPCH compressed mode info" with "TGPS Status Flag" set to "deactivate". The UE shall respond with the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. After the SS switches its downlink transmission power settings to columns "T2" in table 8.2.6.29 and 10s is passed, the SS switches its downlink transmission power settings to columns "T3" in table 8.2.6.29. The UE shall not send any MEASUREMENT REPORT messages on the uplink DCCH because the UE cannot measure the CPICH RSCP on non used frequency as the compressed mode operation has been deactivated.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.29. |
| 2 | ← | | MEASUREMENT CONTROL | SS commands the UE to perform Inter-frequency measurements and to report event 2c. |
| 3 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.29. |
| 4 | | | | The SS checks that no MEASUREMENT REPORT messages receives for 10 s. |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE"DPCH compressed mode info", which include parameter "TGPS Status Flag" set to activate. |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | → | | MEASUREMENT REPORT | The UE shall report event 2c with the measured CPICH RSCP value for cell 6. |
| 8 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE"DPCH compressed mode info", which include parameter "TGPS Status Flag" set to deactivate. |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 10 | | | | The SS switches its downlink transmission power settings to columns "T2" in table 8.2.6.29. |
| 11 | | | | After 10 s is passed ,the SS switches its downlink transmission power settings to columns "T3" in table 8.2.6.29. |
| 12 | | | | The SS checks that no MEASUREMENT REPORT messages receives for 10 s. |

Specific Message Contents

MEASUREMENT CONTROL (Step 2)

Use the same message sub-type found in [9] TS 34.108 clause 9, with the following exceptions in the IE(s) concerned:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 15 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency measurement object list | |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency cells | |
| - Inter-frequency cell id | 6 |
| - Frequency info | |
| - UARFCN uplink (Nu) | UARFCN of the uplink frequency for cell 6 |
| - UARFCN downlink (Nd) | UARFCN of the downlink frequency for cell 6 |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | 0 chips |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |
| - Primary CPICH TX power | Not Present |
| - Primary CPICH TX power | |
| - TX Diversity Indicator | Not Present |
| - Cell for measurement | Not Present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - CHOICE Mode | FDD |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - COICE Mode | FDD |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | Not present |
| - Measurement validity | |
| - UE state | CELL_DCH |
| - Inter-frequency set update | On with no reporting |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2c |
| - Threshold used frequency | Not present |
| - W used frequency | Not present |
| - Hysteresis | 2 (1.0 dB) |
| - Time to trigger | 10 [ms] |
| - Reporting cell status | |
| - CHOICH reported cell | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 1 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -68dbm |
| - W non-used frequency | 0 |
| DPCH compressed mode status info | Not present |

PHYSICAL CHANNEL RECONFIGURATION (Step 5)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing Indication | Maintain | |
| - CFN-target SFN frame offset | Not Present | |
| - Downlink DPCH power control information | | |
| - CHOICE Mode | FDD | |
| -DPC Mode | 0 (Single) | |
| - CHOICE Mode | FDD | |
| - Power offset Pilot-DPDCH | 0 | |
| - DL rate matching restriction information | Not Present | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Fixed or flexible position | Flexible | |
| - TFCI existence | FALSE | |
| - Number of bits for Pilot bits (SF=128, 256) | Not Present | |
| - CHOICE mode | FDD | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | activate | |
| - TGCFN | (Current CFN+(256 – TTI/10msec)) mod256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | Undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | mode 0 | |
| - ITP | mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only, or DL only, depending on UE capability | |
| - Downlink compressed mode method | SF/2 or Not present depending on UE capability | |
| - Uplink compressed mode method | SF/2 or Not present depending on UE capability | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity Mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |

MEASUREMENT REPORT (Step 7)

The contents of MEASUREMENT REPORT message is the same as them found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | Check to see if set to 15 |
| Measured Results | |
| - CHOICE Measurement | |
| - Inter frequency measured results list | Check to see if set to "Inter-frequency measured results list" |
| - Inter frequency measurement results | |
| - Frequency info | |
| - CHOICE | FDD |
| - UARFCN uplink (Nu) | Check to see if set to the UARFCN of the uplink frequency for cell 6 |
| - UARFCN downlink (Nd) | Check to see if set to the UARFCN of the downlink frequency for cell 6 |
| - UTRA carrier RSSI | Not checked |
| - Inter frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Not checked |

| - Measured Result | |
| Event results | Not checked |

PHYSICAL CHANNEL RECONFIGURATION (Step 8)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | Not present |
| - DPCH compressed mode info | |
| - TGPSI | 1 |
| - TGPS Status Flag | deactivate |
| - TGCFN | Not present |
| - Transmission gap pattern sequence configuration parameters | Not present |

### 8.2.6.29.5 Test requirement

After step 3 the UE shall not send any MEASUREMENT REPORT messages on the uplink DCCH.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a MEASUREMENT REPORT message containing the IE "measured results" reporting cell 6's CPICH RSCP value, also report the triggering of event '2c' included in IE "Event results".

After step 8 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After 11 the UE shall not transmit any MEASUREMENT REPORT messages on the uplink DCCH.

## 8.2.6.30 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Modify active set cell): Success

### 8.2.6.30.1 Definition

### 8.2.6.30.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message:

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.30.3 Test purpose

To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel of same frequency in another cell.

### 8.2.6.30.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 is active and cell 6 is inactive.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.30**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | Off | -60 |

Table 8.2.6.30 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 2.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.30. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 2 and IE "Timing indicator" set to "initialise". The UE shall reconfigure the physical channel parameters according to PHYSICAL CHANNEL RECONFIGURATION message and initiate to synchronise with new dedicated physical channel in cell 2. The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 2 on the uplink DCCH AM RLC after synchronization.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.30. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.30. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 2 and IE "Timing indicator" which is set to 'initialise'. |
| 4 | | | | The UE remains in CELL_DCH state after connecting to the SS on a dedicated physical channel in cell 2. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmits this message in cell 2. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Activation Time | Current CFN-[current CFN mod 8 + 8 ] |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing Indicator | initialise |
| - Default DPCH Offset Value | 0 (0) |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 2 |

#### 8.2.6.30.5 Test requirement

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC in cell 2.

### 8.2.6.31 Physical channel reconfiguration transition from CELL_FACH to URA_PCH: Success

#### 8.2.6.31.1 Definition

#### 8.2.6.31.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS5.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.3, 8.5 and 8.6.

### 8.2.6.31.3 Test purpose

1. To confirm that the UE transmits the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.31.4 Method of test

Initial Condition

System Simulator: 1 cell– Cell 1 is active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state of cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE shall enter URA_PCH state according to this message after it transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmits this message on uplink DCCH using AM RLC. |
| 4 | | | | The SS waits for 5 s. |
| 5 | | | | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type titled "Packet to URA_PCH from CELL_FACH in PS" in [9] TS 34.108 clause 9.

NOTE: It is to be noted that IE "URA identity" is not included in this message, for the purpose of wider test coverage. The scenario in which IE "URA identity" is included, is tested in other test cases.

#### 8.2.6.31.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall be in URA PCH state.

### 8.2.6.32 Physical channel reconfiguration for transition from CELL_DCH to URA_PCH (Frequency band modification): Success

#### 8.2.6.32.1 Definition

#### 8.2.6.32.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the criteria for URA update caused by "URA reselection" according to subclause 8.3.1 is fulfilled after cell selection:

2> initiate a URA update procedure according to TS25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

…

If the new state is is CELL_PCH or URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH or URA_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.32.3 Test purpose

1. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_DCH to URA_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
3. To confirm that the UE releases the dedicated physical channel and selects a common physical channel in a different frequency.

### 8.2.6.32.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.6.32**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.32 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.32. SS requests operator to make an outgoing call. The SS and UE execute procedure P5. Next The SS and the UE execute procedure P9 and then execute procedure P13. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "Frequency info" omitted. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enter URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.32. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure) P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.32. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Not including IE "Frequency info" |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE transmit this message on the dedicated physical channel in cell 1 |
| 8 | | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits for 5 s to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 9 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in [9] TS 34.108 clause 9.

#### 8.2.6.32.5 Test requirement

After step 3 the UE shall transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in URA_PCH state in cell 6.

### 8.2.6.33 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH (Frequency band modification): Success

#### 8.2.6.33.1 Definition

#### 8.2.6.33.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> perform the physical layer synchronisation procedure as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> remove any C-RNTI from MAC;

1> clear the C_RNTI.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.33.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_DCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
2. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

### 8.2.6.33.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.6.33**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.33 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.33. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. The UE shall select cell 6 and change its physical channel configuration after receiving this message and then enter CELL_DCH state. Finally the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE

message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.33. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.33. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6 |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 5 | ←→ | | | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

8.2.6.33.5 Test requirement

After step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 4 the UE shall be in CELL_DCH state in cell 6.

## 8.2.6.34 Physical channel reconfiguration from CELL_FACH to CELL_PCH (Frequency band modification): Success

### 8.2.6.34.1 Definition

### 8.2.6.34.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters CELL_PCH state from CELL_FACH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4] on that frequency.

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "cell reselection";

4> proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> if the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD) is included the UE shall either:

3> ignore the content of the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD) and proceed as below;

2> or:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CPCH info" (for TDD), and it is different from the current cell:

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> proceed as below.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select Secondary CCPCH according to subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in subclause 8.6.3.2.

1> the procedure ends.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters CELL_PCH state from CELL_FACH state, and the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE:

2> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

2> when the cell update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2.

### 8.2.6.34.3 Test purpose

1. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to CELL_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.

3. To confirm that the UE selects a common physical channel in a different frequency.

8.2.6.34.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.6.34**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.34 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.34. SS requests operator to make an outgoing call. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. The SS switches its downlink transmission power settings to columns "T1" and. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message including IE "Frequency info" and IE "Primary CPICH info" of cell 6. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enter CELL_PCH state in cell 6. Upon completion of the procedure, the SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.34. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.34. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Frequency info" and IE "Primary CPICH info" of Cell 6 |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmit this message on the common physical channel in cell 1. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

#### 8.2.6.34.5 Test requirement

After step 6 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC in cell 1.

After step 8 the UE shall be in CELL_PCH state in cell 6.

### 8.2.6.35 Physical channel reconfiguration for transition from CELL_FACH to URA_PCH (Frequency band modification): Success

#### 8.2.6.35.1 Definition

#### 8.2.6.35.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to TS25.331 subclause 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS5.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.35.3 Test purpose

1. To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the PHYSICAL CHANNEL RECONFIGURATION message.
3. To confirm that the UE selects a common physical channel in a different frequency.

### 8.2.6.35.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 in active and cell 6 is inactive

UE: Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.6.35**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.35 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.35. SS requests operator to make an outgoing call. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message not including IE "Frequency info" and IE "Primary CPICH info". The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enter URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.35. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.35. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Not including IE "Frequency info" and IE "Primary CPICH info" |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmit this message on the common physical channel in cell 1. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type titled "Packet to URA_PCH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| URA identity | URA-ID 1 |

#### 8.2.6.35.5 Test requirement

After step 3 the UE shall transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in URA_PCH state in cell 6.

### 8.2.6.36 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH (Frequency band modification): Success

#### 8.2.6.36.1 Definition

#### 8.2.6.36.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS25.304 on that frequency;

2> if the received reconfiguration message included the IE "Primary CPICH info", and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info":

3> initiate a cell update procedure according to TS25.331 subclause 8.3.1 using the cause "cell reselection";

3> when the cell update procedure completed successfully:

4> proceed as below.

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.6.36.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_FACH according to the PHYSICAL CHANNEL RECONFIGURATION message.
2. To confirm that the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

### 8.2.6.36.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.6.36**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -55 | -72 | Off | -55 |

Table 8.2.6.36 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.36. The SS modifies the contents of System formation block 11 in cell 1, so that include IE "Inter frequency measurement system information" about cell 6. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info". The UE selects cell 6 and initiates CELL UPDATE procedure with IE "Cell update cause" set to "cell reselection". The UE transmits a

PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC after complete configuration according to receiving PHYSICAL CHANNEL RECONFIGURATION message. Upon completion of the procedure, the SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | System Information Block type 11 | The UE is in idle mode and camped onto cell 1. The System Information Block type 11 messages to be transmitted are different from the default settings and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.36. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.36. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and no IE "Primary CPICH info" set to Primary Scrambling Code |
| 7 | → | | CELL UPDATE | The IE "Cell update cause" is set to "cell reselection". |
| 8 | ← | | CELL UPDATE CONFIRM | Including the IE" New C-RNTI" |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message on a common physical channel in cell 6. |
| 11 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

The contents PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to CELL_FACH from CELL_FACH in PS" in Annex A, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- UARFCN uplink(Nu)<br>- UARFCN downlink(Nd) | <br>Same uplink UARFCN as used for cell 6<br>Same downlink UARFCN as used for cell 6 |

CELL UPDATE (Step 7)

The contents of CELL UPDATE message are identical as "Contents of CELL UPDATE message" as found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 8)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9. with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

UTRAN MOBILITY UPDATE CONFIRM (Step 9)

The contents of UTRAN MOBILITY UPDATE CONFIRM message is identical as "UTRAN MOBILITY UPDATE CONFIRM message" as found in [9] TS 34.108 clause 9.

#### 8.2.6.36.5 Test requirement

After step 6 the UE shall transmit a CELL UPDATE message on the CCCH in cell 6.

After step 8 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC in cell 6.

After step 9 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 10 the UE shall be in CELL_FACH state in cell 6.

### 8.2.6.37 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised)

#### 8.2.6.37.1 Definition

#### 8.2.6.37.2 Conformance requirement

The UE shall:

1> be able to receive any of the following messages:

…

2> PHYSICAL CHANNEL RECONFIGURATION message;

1> perform a hard handover and apply physical layer synchronisation procedure A as specified in [29], even if no prior UE measurements have been performed on the target cell and/or frequency.

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

When performing hard handover with change of frequency, the UE shall:

1> stop all intra-frequency and inter-frequency measurement reporting on the cells listed in the variable CELL_INFO_LIST. Each stopped measurement is restarted when a MEASUREMENT CONTROL message is received with the corresponding measurement identity.

…

When the UE is in CELL_DCH state and receives any of the messages causing the UE to perform a hard handover, the UE shall check the IE "Timing indication" in that message and:

1> if IE "Timing indication" has the value "initialise" (i.e. timing re-initialised hard handover):

2> read SFN on target cell identified by the first radio link listed in the IE "Downlink information per radio link list" included in that message;

2> set the CFN according to the following formula:

3> for FDD:

$$CFN = (SFN - (DOFF \text{ div } 38400)) \bmod 256$$

where the formula gives the CFN of the downlink DPCH frame which starts at the same time as or which starts during the PCCPCH frame with the given SFN.

…

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is not included, the UE shall:

1> if pattern sequence corresponding to IE "TGPSI" is already active (according to "Current TGPS Status Flag" in the variable TGPS_IDENTITY):

2> if the "TGPS Status Flag" in this message is set to "deactivate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time" (see subclause 8.6.3.1 in TS 25.331) received in this message, when the new configuration received in this message is taken into use;

…

If the IE "Downlink DPCH info common for all RL" is included in a message used to perform a Timing re-initialised hard handover or the IE "Downlink DPCH info common for all RL" is included in a message other than RB SETUP used to transfer the UE from a state different from Cell_DCH to Cell_DCH, and ciphering is active for any radio bearer using RLC-TM, the UE shall, after having activated the dedicated physical channels indicated by that IE:

1> if any ciphering configuration for a radio bearer using RLC-TM has not been applied, due to that the activation time from a previous procedure has not elapsed:

2> apply the ciphering configuration immediately and consider the activation time from the previous procedure to be elapsed.

1> if the IE "MAC-d HFN initial value" is included in the IE "Downlink DPCH info common for all RL":

…

1> else:

2> set the 20 MSB of the HFN component of COUNT-C for TM-RLC to the value of the latest transmitted IE "START" or "START List" for this CN domain, while not incrementing the value of the HFN component of COUNT-C at each CFN cycle; and

1> set the remaining LSBs of the HFN component of COUNT-C to zero;

1> start to perform ciphering on the radio bearer in lower layers while not incrementing the HFN;

1> include the IE "COUNT-C activation time" in the response message and specify a CFN value other than the default, "Now", that is a multiple of 8 frames (CFN mod 8 =0) and lies at least 200 frames ahead of the CFN in which the response message is first transmitted;

1> calculate the START value according to subclause 8.5.9 in TS 25.331;

1> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info" in the response message;

1> at the CFN value as indicated in the response message in the IE "COUNT-C activation time":

2> set the 20 MSB of the HFN component of the COUNT-C variable common for all transparent mode radio bearers of this CN domain to the START value as indicated in the IE "START list" of the response message for the relevant CN domain; and

2> set the remaining LSBs of the HFN component of COUNT-C to zero;

2> increment the HFN component of the COUNT-C variable by one even if the "COUNT-C activation time" is equal to zero;

2> set the CFN component of the COUNT-C to the value of the IE "COUNT-C activation time" of the response message. The HFN component and the CFN component completely initialise the COUNT-C variable;

2> step the COUNT-C variable, as normal, at each CFN value, i.e. the HFN component is no longer fixed in value but incremented at each CFN cycle.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4, 8.3.5, 8.5.15.2, 8.6.6.15, 8.6.6.28

### 8.2.6.37.3 Test Purpose

To confirm that the UE is able to perform a hard-handover with change of frequency, with and without prior measurements on the target frequency.

To confirm that the UE answers with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message when the procedure has been initiated with the PHYSICAL CHANNEL RECONFIGURATION message.

To confirm that the UE stops intra-frequency measurements after the inter-frequency handover has been performed, until a MEASUREMENT CONTROL message is received from the SS.

To confirm that the UE computes as it shall the CFN to be used after the handover.

To confirm that the UE deactivates compressed mode (if required) when it has been ordered to do so in the PHYSICAL CHANNEL RECONFIGURATION message.

To confirm that the UE includes the IE "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info") in the response message if ciphering is active for any radio bearer using RLC-TM.

### 8.2.6.37.4 Method of test

Initial Condition

System Simulator: 4 cells – Cell 1 and cell 2 on frequency $f_1$, cell 4 and cell 5 on frequency $f_2$. Cells 2 and 5 shall have the same primary scrambling code.

UE: "CS-DCCH+DTCH_DCH" (state 6-9) or "PS-DCCH+DTCH_DCH" (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the test case shall be run twice, once starting from state 6-9, once starting from state 6-10. Ciphering shall be activated.

Related ICS/IXIT statements

- Compressed mode required yes/no

Test Procedure

Table 8.2.6.37-1 illustrates the downlink power to be applied for the 4 cells, as well as the frequency and scrambling code for each cell.

**Table 8.2.6.37-1**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | | Cell 4 | | | | Cell 5 | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | | $f_1$ | | | | $f_2$ | | | | $f_2$ | | | |
| Scrambling code | | Scrambling code 1 | | | | Scrambling code 2 | | | | Scrambling code 3 | | | | Scrambling code 2 | | | |
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| CPICH Ec | dBm/3.84 MHz | -60 | -60 | -75 | -75 | OFF | -60 | -75 | -50 | -60 | -60 | -60 | -60 | -60 | -60 | -60 | -70 |

The UE is initially in CELL_DCH, and has only cell 1 in its active set.

At instant T1, the downlink power is changed according to what is shown in table 8.2.6.37 -1. Cell 2 should then trigger event 1a as has been configured through the default System Information Block Type 11. The UE shall thus send a MEASUREMENT REPORT to the SS, triggered by cell 2.

The SS adds then cell 2 to the active set of the Ue, by sending an ACTIVE SET UPDATE message to the UE. The UE shall answer with an ACTIVE SET UPDATE COMPLETE message.

The SS configures then compressed mode (if required), to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE. Compressed mode is started at the same time in that message (if required).

At instant T2, the downlink power is changed according to what is shown in table 8.2.6.37-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 4 on frequency $f_2$. The UE is also ordered to stop compressed mode (if required) after the handover.

The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS when the inter-frequency handover has succeeded. In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable used for ciphering. The SS shall restart incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

The SS then waits for 20 seconds, and checks that no intra-frequency MEASUREMENT REPORT is received from the UE.

The SS sends then a MEASUREMENT CONTROL message to the UE, to modify the intra-frequency cell info list of the UE. About 640 ms after, a MEASUREMENT REPORT message shall be received from the UE, triggered by cell 5. Subsequent MEASUREMENT REPORT messages shall be received at 4 seconds interval.

Only if the UE requires compressed mode for performing interfrequency measurements, the SS sends a MEASUREMENT CONTROL message to the UE that sets up inter-frequency measurements, but does not activate compressed mode in that message.

At instant T3, the downlink power is changed according to what is shown in table 8.2.6.37-1 so as to trigger Event 2b for frequency f1. SS waits then for 20 seconds, and checks that no MEASUREMENT REPORT message triggered by cell 2 is received during this time.

Independent of the UE requiring compressed mode, the SS then continues by sending a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 2 on frequency $f_1$.

The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS when the inter-frequency handover has succeeded. In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable used for ciphering.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.37-1 |
| 2 | → | | MEASUREMENT REPORT | Event 1a is triggered by cell 2 in the UE, which sends a MEASUREMENT REPORT message to the SS |
| 3 | ← | | ACTIVE SET UPDATE | The SS adds cell 2 to the active set of the UE. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE answers with an ACTIVE SET UPDATE COMPLETE message to the SS |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads the compressed mode parameters in the UE (if required). |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowleges the downloading of the compressed mode parameters (only if compressed mode was configured). |
| 7 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE, and activates compressed mode (if required). |
| 8 | | | | The SS changes the power of the cells according to column T2 in table 8.2.6.37-1. |
| 9 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 10 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 4 on frequency $f_2$. |
| 11 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After the UE has succeeded in performing the inter-frequency handover, it shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using the new configuration. |
| 12 | | | | The SS waits for 20 seconds and monitors that no intra-frequency MEASUREMENT REPORT message is received from the UE. |
| 13 | ← | | MEASUREMENT CONTROL | The SS updates the list of intra-frequency cells in the UE. |
| 14 | → | | MEASUREMENT REPORT | Cell 5 triggers event 1a in the UE, which sends a MEASUREMENT REPORT message to the SS. Subsequent MEASUREMENT REPORT messages shall be received from the UE at 4 seconds interval. |
| 15 | ← | | MEASUREMENT CONTROL | The SS sets up an inter-frequency measurement in the UE (if compressed mode is required), but does not activate compressed mode. |
| 16 | | | | The SS changes the power of the cells according to column T3 in table 8.2.6.37-1. |
| 16a | | | | The SS waits for 20 seconds and monitors that no inter-frequency MEASUREMENT REPORT message is received from the UE. |
| 17 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 2 on frequency $f_1$. |
| 18 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After the UE has succeeded in performing the inter-frequency handover, it shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using the new configuration. |
| 19 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

RRC CONNECTION SETUP

The message to be used in this test is defined in TS 34.108, clause 9, Condition A1 with the following exceptions:

| | |
|---|---|
| - Signalling RB information to setup | (RB2 AM DCCH for RRC) |
| - RB identity | Not Present |
| - CHOICE RLC info type | |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - SDU discard mode | No discard |
| - MAX_DAT | 15 |
| - Transmission window size | 32 |
| - Timer_RST | 500 |
| - Max_RST | 1 |
| - Polling info | |
| - Timer_poll_prohibit | 40 |
| - Timer_poll | 40 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - DL RLC PDU size | According to clause 6.10.2.4.1.3 (standalone 13.6 kbps signalling radio bearer) |
| - In-sequence delivery | TRUE |
| - Receiving window size | 32 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |

MEASUREMENT REPORT (Step 2)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 1 (or scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference (This IE is related to scrambling code 2) |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 (or scrambling code 1 if the previous scrambling code included by the UE was scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 |

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is defined in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Scrambling code 2 | |
| - Downlink DPCH info for each RL | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets" | |
| - Code Number | Any value between 0 and Spreading factor-1 (use different values for each DPCH in case several DPCHs are allocated to the UE). | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

PHYSICAL CHANNEL RECONFIGURATION (Step 5 for the CS case)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |
| CHOICE channel requirement | Not Present | |
| CHOICE mode | FDD | |
| - Downlink PDSCH information | Not Present | R99 and Rel-4 only |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |
| Downlink information per radio link list | 2 radio links | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Scrambling code 1 | |
| - Cell ID | Not present | |
| - PDSCH with SHO DCH info | Not present | R99 and Rel-4 only |
| - PDSCH code mapping | Not present | R99 and Rel-4 only |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value | |

| | | |
|---|---|---|
| | (as currently stored in SS) modulo 38400 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Same as the code currently allocated to the UE in cell 1 | |
| - Scrambling code change | Code change | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Scrambling code 2 | |
| - Cell ID | Not present | |
| - PDSCH with SHO DCH info | Not present | R99 and Rel-4 only |
| - PDSCH code mapping | Not present | R99 and Rel-4 only |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to the same value as in step 3 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Same as the code currently allocated to the UE in cell 2 | |
| - Scrambling code change | No code change | |
| - TPC combination index | 0 | |

PHYSICAL CHANNEL RECONFIGURATION MESSAGE (Step 5 for the PS case)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |
| CHOICE channel requirement | Not Present | |
| CHOICE *mode* | FDD | |
| - Downlink PDSCH information | Not Present | R99 and Rel-4 only |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |
| Downlink information for each radio link | Not Present | |

MEASUREMENT CONTROL (Step 7)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | 2 inter-frequency cells |
| - Inter-frequency cell id | 4 |
| - Frequency info | |
| - UARFCN uplink (Nu) | Not Present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink (Nd) | UARFCN for the downlink corresponding to $f_2$ |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Scrambling code 3 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Inter-frequency cell id | 5 |
| - Frequency info | |
| - UARFCN uplink (Nu) | Not Present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink (Nd) | UARFCN for the downlink corresponding to $f_2$ |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Scrambling code 2 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cells for measurement | Not present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | Not present |
| - Measurement validity | |

| Information Element | Value/Remark |
|---|---|
| - UE State | CELL_DCH |
| - Inter-frequency set update | |
| - UE autonomous update | On with no reporting |
| - Non autonomous update mode | Not present |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2b |
| - Threshold used frequency | -70 dBm |
| - W used frequency | 0 (0.0) |
| - Hysteresis | 2 (1.0 dB) |
| - Time to trigger | 1280 ms |
| - Reporting cell status | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 2 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -68 dBm |
| - W non-used frequency | 0 |
| DPCH compressed mode status info | |
| - TGPS reconfiguration CFN | (Current CFN + (256 – TTI/10msec))mod 256 |
| - Transmission gap pattern sequence | |
| - TGPSI | 1 |
| - TGPS Status Flag | Activate |
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 |

MEASUREMENT REPORT (Step 9)

Note 1: UE may include either Cell Measurement Events for one of the cells or both of the Cells 4 and 5.

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 2 cells reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 (or scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 2 (or scrambling code 3 if the previous scrambling code included by the UE was scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 2 |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 |

PHYSICAL CHANNEL RECONFIGURATION (Step 10)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | | |
| - CHOICE mode | FDD | |
| - UARFCN uplink (Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] | |
| - UARFCN downlink (Nd) | UARFCN for the downlink corresponding to $f_2$ | |
| Maximum allowed UL TX power | Not Present | |
| CHOICE channel requirement | Not Present | |
| CHOICE *mode* | FDD | |
| - Downlink PDSCH information | Not Present | R99 and Rel-4 only |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |
| - CFN-targetSFN frame offset | 0 | |
| - Downlink DPCH power control information | Not Present | |
| - Downlink rate matching restriction information | Not Present | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Fixed or flexible position | Reference to TS34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE SF | Reference to TS34.108 clause 6.10 Parameter Set | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | Not present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Arbitrary value between 0..306688 by step of 512 | |
| Downlink information per radio link list | 1 radio link | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Scrambling code 3 | |
| - Cell ID | Not present | |
| - PDSCH with SHO DCH info | Not present | R99 and Rel-4 only |
| - PDSCH code mapping | Not present | R99 and Rel-4 only |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value of Default DPCH Offset Value modulo 38400 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | Reference to TS34.108 clause 6.10 Parameter | |

| | | |
|---|---|---|
| | Set | |
| - Secondary scrambling code | 5 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Any value between 0 and Spreading factor-1 | |
| - Scrambling code change | If compressed mode required and CS call: No code change<br>Otherwise: Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Steps 11 and 18 for the CS case)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink PHYSICAL CHANNEL RECONFIGURATION message |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Uplink integrity protection activation info | Check that not present |
| CHOICE mode | FDD |
| COUNT-C activation time | Check that this IE is present and that the CFN value is a multiple of 8 frames (CFN mod 8 =0) and lies at least 200 frames ahead of the CFN in which the response message is first transmitted. |
| Radio bearer uplink ciphering activation time info | Check that not present |
| Uplink counter synchronisation info | Check that present |
| >RB with PDCP information list | Check that absent |
| >START list | Check that this IE is present. |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Steps 11 and 18 for the PS case)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink PHYSICAL CHANNEL RECONFIGURATION message |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Uplink integrity protection activation info | Check that not present |
| CHOICE mode | FDD |
| COUNT-C activation time | Check that not present |
| Radio bearer uplink ciphering activation time info | Check that not present |
| Uplink counter synchronisation info | Check that not present |

MEASUREMENT CONTROL (Step 13)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Modify |
| Measurement Reporting Mode | Not present |
| Additional measurements list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove all intra-frequency cells |
| - New intra-frequency info list | 2 new intra-frequency cells |
| - Intra-frequency cell id | 4 |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Scrambling code 3 (for cell 4) |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cells selection and Re-selection info | Not Present |
| - Intra-frequency cell id | 5 |
| - Cell info | |
| - Cell individual offset | 20 (10 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | TRUE |
| - CHOICE mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Scrambling code 2 (for cell 5) |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cells selection and Re-selection info | Not Present |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity | Not Present |
| - Reporting cell status | Not Present |
| - Measurement validity | Not Present |

MEASUREMENT REPORT (Step 14)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that this IE is set to Scrambling code 2 (or scrambling code 3) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference (This IE is related to scrambling code 2) |
| - Primary CPICH info | |
| - Primary scrambling code | Check that this IE is set to Scrambling code 3 (or scrambling code 2 if scrambling code 3 was indicated first) |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that this IE is set to Scrambling code 2 |

MEASUREMENT CONTROL (Step 15)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |

#### 8.2.6.37.5 Test Requirement

After step 1, the UE shall send a MEASUREMENT REPORT message triggered by event 1a for cell 2.

After step 3, the UE shall send an ACTIVE SET UPDATE COMPLETE message to acknowledge that it has added cell 2 to its active set.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the downloading of the compressed mode parameters (only if compressed mode is required), that were sent in the PHYSICAL CHANNEL RECONFIGURATION message of step 4.

After step 8, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. In that message, cell 4 or cell 5 shall be the only cell included in the IE event results.

After step 10, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS in cell 4 to acknowledge the successful timing re-initialised inter-frequency handover, and in case the UE was in state 6-9 as defined in clause 7.4 of 34.108 as initial condition to the test, the IEs "COUNT-C activation time" and "START list" (in the IE "Uplink counter synchronisation info") shall be included in that message. The UE shall also start incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

After step 11, the UE shall not send any intra-frequency MEASUREMENT REPORT message triggered by event 1a for cell 5.

After step 13, the UE sends periodic intra-frequency MEASUREMENT REPORT message triggered by event 1a for cell 5.

For UE's that require compressed mode for performing interfrequency measurements, after step 15 the UE shall not send any inter-frequency MEASUREMENT REPORT message triggered by event 2c for frequency 1.

After step 17, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS in cell 2 to acknowledge the successful timing re-initialised inter-frequency handover, and in case the UE was in state 6-9 as defined in clause 7.4 of 34.108 as initial condition to the test, the IEs "COUNT-C activation time" and "START list" (in the IE "Uplink counter synchronisation info") shall be included in that message.

### 8.2.6.37a Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised) (1.28 Mcps TDD)

#### 8.2.6.37a.1 Definition

#### 8.2.6.37a.2 Conformance requirement

In case the reconfiguration procedure is used to remove all existing RL(s) in the active set while new RL(s) are established the UE shall:

1> perform the maintenance of uplink synchronisation procedure as specified in TS 25.224 [5.2.1.2] or the establishment of uplink synchronization procedure in TS 25.224 [5.2.1.3].

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

When performing hard handover with change of frequency, the UE shall:

1> stop all intra-frequency and inter-frequency measurements on the cells listed in the variable CELL_INFO_LIST. Each stopped measurement is restarted when a MEASUREMENT CONTROL message is received with the corresponding measurement identity.

…

When the UE is in CELL_DCH state and receives any of the messages causing the UE to perform a hard handover, the UE shall check the IE "Timing indication" in that message and:

1> if IE "Timing indication" has the value "initialise" (i.e. timing re-initialised hard handover):

2> read SFN on target cell identified by the first radio link listed in the IE "Downlink information per radio link list" included in that message;

2> set the CFN according to the following formula:

3> for TDD:

$$CFN = (SFN - DOFF) \bmod 256$$

where the formula gives the CFN of the downlink DPCH frame which starts at the same time as or which starts during the PCCPCH frame with the given SFN.

…

If the IE "Downlink DPCH info common for all RL" is included in a message used to perform a Timing re-initialised hard handover or the IE "Downlink DPCH info common for all RL" is included in a message other than RB SETUP used to transfer the UE from a state different from Cell_DCH to Cell_DCH, and ciphering is active for any radio bearer using RLC-TM, the UE shall, after having activated the dedicated physical channels indicated by that IE:

1> set the 20 MSB of the HFN component of COUNT-C for TM-RLC to the value of the latest transmitted IE "START" or "START List" for this CN domain, while not incrementing the value of the HFN component of COUNT-C at each CFN cycle; and

1> set the remaining LSBs of the HFN component of COUNT-C to zero;

1> start to perform ciphering on the radio bearer in lower layers while not incrementing the HFN;

1> include the IE "COUNT-C activation time" in the response message and specify a CFN value other than the default, "Now" for this IE;

1> calculate the START value according to subclause 8.5.9;

1> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info" in the response message;

1> at the CFN value as indicated in the response message in the IE "COUNT-C activation time":

2> set the 20 MSB of the HFN component of the COUNT-C variable to the START value as indicated in the IE "START list" of the response message for the relevant CN domain; and

2> set the remaining LSBs of the HFN component of COUNT-C to zero;

2> increment the HFN component of the COUNT-C variable by one;

2> set the CFN component of the COUNT-C to the value of the IE "COUNT-C activation time" of the response message. The HFN component and the CFN component completely initialise the COUNT-C variable;

2> step the COUNT-C variable, as normal, at each CFN value, i.e. the HFN component is no longer fixed in value but incremented at each CFN cycle.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4, 8.3.5, 8.5.15.2, 8.6.6.15, 8.6.6.28

### 8.2.6.37a.3 Test Purpose

To confirm that the UE is able to perform a hard-handover with change of frequency, with prior measurements on the target frequency.

To confirm that the UE answers with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message when the procedure has been initiated with the PHYSICAL CHANNEL RECONFIGURATION message.

To confirm that the UE stops intra-frequency measurements after the inter-frequency handover has been performed, until a MEASUREMENT CONTROL message is received from the SS.

To confirm that the UE computes as it shall the CFN to be used after the handover.

To confirm that the UE includes the IE "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info") in the response message if ciphering is active for any radio bearer using RLC-TM.

### 8.2.6.37a.4 Method of test

Initial Condition

System Simulator: 4 cells – Cell 1 and cell 2 on frequency $f_1$, cell 4 and cell 5 on frequency $f_2$. Cells 2 and 5 shall have the same cell parameters id. Only cell 1 is activated.

UE: "CS-DCCH+DTCH_DCH" (state 6-9) or "PS-DCCH+DTCH_DCH" (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the test case shall be run twice, once starting from state 6-9, once starting from state 6-10. Ciphering shall be activated.

Test Procedure

Table 8.2.6.37a-1 illustrates the downlink power to be applied for the 4 cells, as well as the frequency and cell parameters id for each cell.

**Table 8.2.6.37a-1**

| Parameter | Unit | Cell 1 | | | Cell 2 | | | Cell 4 | | | Cell 5 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | $f_1$ | | | $f_2$ | | | $f_2$ | | |
| Cell parameters id | | Cell parameters id 1 | | | Cell parameters id 2 | | | Cell parameters id 3 | | | Cell parameters id 2 | | |
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | -75 | -95 | -55 | -75 | -60 | -60 | -60 | -60 | -60 | -70 |

The UE is initially in CELL_DCH in cell 1.

At instant T1, the downlink power is changed according to what is shown in table 8.2.6.37a -1. Cell 2 should then trigger event 1g as has been configured through the default System Information Block Type 11. The UE shall thus send a MEASUREMENT REPORT to the SS, triggered by cell 2.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE.

At instant T2, the downlink power is changed according to what is shown in table 8.2.6.37a-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 4 on frequency $f_2$.

The UE shall then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS when the inter-frequency handover has succeeded. In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable

used for ciphering. The SS shall restart incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

The SS then waits for 20 seconds, and checks that no MEASUREMENT REPORT is received from the UE.

The SS sends then a MEASUREMENT CONTROL message to the UE, to modify the intra-frequency cell info list of the UE. About 640 ms after, a MEASUREMENT REPORT message shall be received from the UE, triggered by cell 5. Subsequent MEASUREMENT REPORT messages shall be received at 4 seconds interval.

In case the initial condition was CS-DCCH+DTCH_DCH, that message shall contain the IEs "COUNT-C activation time" and the IE "START list" (in the IE "Uplink counter synchronisation info"), indicating to the SS when and from which value to start incrementing the HFN part of the COUNT-C variable used for ciphering.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.37a-1 |
| 2 | → | | MEASUREMENT REPORT | Event 1g is triggered by cell 2 in the UE, which sends a MEASUREMENT REPORT message to the SS |
| 3 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE. |
| 4 | | | | The SS changes the power of the cells according to column T2 in table 8.2.6.37a-1. |
| 5 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 4 on frequency $f_2$. |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After the UE has succeeded in performing the inter-frequency handover, it shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using the new configuration. |
| 8 | | | | The SS waits for 20 seconds and monitors that no MEASUREMENT REPORT message is received from the UE. |
| 9 | ← | | MEASUREMENT CONTROL | The SS updates the list of intra-frequency cells in the UE. |
| 10 | → | | MEASUREMENT REPORT | UE sends a MEASUREMENT REPORT message to the SS. Subsequent MEASUREMENT REPORT messages shall be received from the UE at 4 seconds interval. |

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

MEASUREMENT REPORT (Step 2)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is present |
| - SFN-SFN observed time difference | Check that this IE is absent |

| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that this IE is set to Cell parameters ID 2 (or Cell parameters ID 3) |
| - Timeslot ISCP | Check that this IE is absent |
| - P-CCPCH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CCPCH info | |
| - Cell parameters ID | Check that this IE is set to Cell parameters ID 3 (or Cell parameters ID 2 if Cell parameters ID 3 was indicated first) |
| - Timeslot ISCP | Checked that this IE is absent |
| - P-CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | Checked that this IE is absent |

#### 8.2.6.37a.5 Test Requirement

After step 2, the UE shall send a MEASUREMENT REPORT message triggered by event 1g for cell 2.

After step 4, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. In that message, cell 4 shall be the only cell included in the IE event results.

After step 6, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS in cell 4 to acknowledge the successful timing re-initialised inter-frequency handover, and in case the UE was in state 6-9 as defined in clause 7.4 of 34.108 as initial condition to the test, the IEs "COUNT-C activation time" and "START list" (in the IE "Uplink counter synchronisation info") shall be included in that message. The UE shall also start incrementing the HFN part of the COUNT-C variable from the value specified in the IE START from the CFN indicated in the IE COUNT-C activation time.

After step 8, the UE shall not send any MEASUREMENT REPORT message.

After step 9, the UE send a MEASUREMENT REPORT message.

### 8.2.6.37b Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency band cell with timing re-initialised)

#### 8.2.6.37b.1 Definition

This test case is identical to test case 8.2.6.37 except that the cells belong to different frequency bands.

#### 8.2.6.37b.2 Conformance requirement

Same conformance requirement as in clause 8.2.6.37.2.

#### 8.2.6.37b.3 Test purpose

Same test purpose as described in clause 8.2.6.37.3 except that the target frequency is in a different frequency band.

#### 8.2.6.37b.4 Method of test

Initial Condition

Same initial conditions as in clause 8.2.6.37.4 except that frequencies $f_1$ and $f_2$ are selected from different frequency bands.

Related ICS/IXIT statement(s)

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as in clause 8.2.6.37.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected sequence

Same expected sequence as in clause 8.2.6.37.4.

Specific Message Contents

Same specific message contents as in clause 8.2.6.37.4.

#### 8.2.6.37b.5 Test requirement

Same test requirements as in clause 8.2.6.37.5.

### 8.2.6.37c Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised) (1.28 Mcps TDD) (TDD a-f band)

#### 8.2.6.37c.1 Definition

This test case is identical to test case 8.2.6.37a except that the cells belong to different frequency bands.

#### 8.2.6.37c.2 Conformance requirement

Same conformance requirement as in clause 8.2.6.37a.2.

#### 8.2.6.37c.3 Test purpose

Same test purpose as described in clause 8.2.6.37a.3 except that the target frequency is in a different frequency band.

#### 8.2.6.37c.4 Method of test

Initial Condition

Same initial conditions as in clause 8.2.6.37a.4 except that frequencies $f_1$ and $f_2$ are selected from different frequency bands.

Related ICS/IXIT statement(s)

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as in clause 8.2.6.37a.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected sequence

Same expected sequence as in clause 8.2.6.37a.4.

Specific Message Contents

Same specific message contents as in clause 8.2.6.37a.4.

8.2.6.37c.5 Test requirement

Same test requirements as in clause 8.2.6.37a.5.

## 8.2.6.37d Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with uplink pre-synchronisation) (1.28 Mcps TDD)

8.2.6.37d.1 Definition

This test case is identical to test case 8.2.6.37a except that the cells belong to different frequency bands.

8.2.6.37d.2 Conformance requirement

Same conformance requirement as in clause 8.2.6.37a.2.

8.2.6.37d.3 Test purpose

Same test purpose as described in clause 8.2.6.37a.3 except following purpose:

To confirm that the UE answers with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message when the procedure has been initiated with the PHYSICAL CHANNEL RECONFIGURATION message which the IE "CHOICE *Timing Advance*" disabled and without Uplink synchronization parameters information, UE will perform uplink pre-synchronisation, which will not initiate UpPCH on the target cell during handover.

8.2.6.37d.4 Method of test

Initial Condition

Same initial conditions as in clause 8.2.6.37a.4.

Related ICS/IXIT statement(s)

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as in clause 8.2.6.37a.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected sequence

Same expected sequence as in clause 8.2.6.37a.4.

Specific Message Contents

Same specific message contents as in clause 8.2.6.37a.4 except step 6.

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

| Information Element | Value/Remark |
|---|---|
| Activation time | Not Present |
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| New DSCH-RNTI | Not Present |

| - CFN-targetSFN frame offset | 0 |
| - Downlink DPCH power control information | Not Present |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Cell parameters ID 3 |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | TDD |
| - TFCS ID | Reference to TS34.108 clause 6.11 Parameter Set |
| - Time info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Common timeslot info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Downlink DPCH timeslots and codes | as used for cell 4 |

### 8.2.6.37d.5 Test requirement

Same test requirements as in clause 8.2.6.37a.5.

## 8.2.6.37e Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency band cell with uplink pre-synchronisation) (1.28 Mcps TDD)

### 8.2.6.37e.1 Definition

This test case is identical to test case 8.2.6.37d except that the cells belong to different frequency bands.

### 8.2.6.37e.2 Conformance requirement

Same conformance requirement as in clause 8.2.6.37d.2.

### 8.2.6.37e.3 Test purpose

Same test purpose as described in clause 8.2.6.37d.3 except that the target frequency is in a different frequency band.

#### 8.2.6.37e.4 Method of test

Initial Condition

Same initial conditions as in clause 8.2.6.37d.4 except that frequencies $f_1$ and $f_2$ are selected from different frequency bands.

Related ICS/IXIT statement(s)

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as in clause 8.2.6.37d.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected sequence

Same expected sequence as in clause 8.2.6.37d.4.

Specific Message Contents

Same specific message contents as in clause 8.2.6.37d.4.

#### 8.2.6.37e.5 Test requirement

Same test requirements as in clause 8.2.6.37d.5.

### 8.2.6.38 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised): Failure (Physical channel failure and reversion to old channel)

#### 8.2.6.38.1 Definition

#### 8.2.6.38.2 Conformance requirement

When a physical dedicated channel establishment is initiated by the UE, the UE shall start a timer T312 and wait for layer 1 to indicate N312 "in sync" indications. On receiving N312 "in sync" indications, the physical channel is considered established and the timer T312 is stopped and reset.

If the timer T312 expires before the physical channel is established, the UE shall consider this as a "physical channel establishment failure".

…

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

The UE shall:

1> in case of reception of a PHYSICAL CHANNEL RECONFIGURATION message:

…

2> transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.5.4.

### 8.2.6.38.3 Test purpose

To confirm that the UE reverts to the old configuration (including measurement configurations, ciphering procedures and compressed mode configurations if required) and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before timer T312 expiry.

### 8.2.6.38.4 Method of test

Initial Condition

System Simulator: 4 cells – Cell 1 and cell 2 on frequency $f_1$, cell 4 on frequency $f_2$and cell 5 on frequency $f_3$.

UE: "CS-DCCH+DTCH_DCH" (state 6-9) or "PS-DCCH+DTCH_DCH" (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the test case shall be run twice, once starting from state 6-9, once starting from state 6-10. Ciphering shall be activated.

Related ICS/IXIT statements

- Compressed mode required yes/no

Test Procedure

Table 8.2.6.38-1 illustrates the downlink power to be applied for the 4 cells, as well as the frequency and scrambling code for each cell.

**Table 8.2.6.38-1a**

| Parameter | Unit | Cell 1 | | | | | Cell 2 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | | | $f_1$ | | | | |
| Scrambling code | | Scrambling code 1 | | | | | Scrambling code 2 | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 |
| CPICH Ec | dBm/3.84 MHz | -60 | -60 | -75 | -60 | -75 | -95 | -60 | -75 | -60 | -75 |

**Table 8.2.6.38-1b**

| Parameter | Unit | Cell 4 | | | | | Cell 5 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_2$ | | | | | $f_3$ | | | | |
| Scrambling code | | Scrambling code 3 | | | | | Scrambling code 4 | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 |
| CPICH Ec | dBm/3.84 MHz | -60 | -60 | -60 | OFF | -73 | -60 | -60 | -73 | OFF | -60 |

The UE is initially in CELL_DCH, and has only cell 1 in its active set.

At instant T1, the downlink power is changed according to what is shown in table 8.2.6.38 -1. Cell 2 should then trigger event 1a as has been configured through the default System Information Block Type 11. The UE shall thus send a MEASUREMENT REPORT to the SS, triggered by cell 2.

The SS adds then cell 2 to the active set of the UE, by sending an ACTIVE SET UPDATE message to the UE. The UE shall answer with an ACTIVE SET UPDATE COMPLETE message.

The SS then configures compressed mode, (if required by the UE) to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE. Compressed mode is started at the same time in that message, (if required).

At instant T2, the downlink power is changed according to what is shown in table 8.2.6.38-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

At instance T3, the downlink power is changed according to what is shown in table 8.2.6.38-1.

SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE on DCCH using AM-RLC, to order it to perform timing reinitialised inter-frequency handover to cell 4 on frequency $f_2$.

The UE shall revert to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

At instant T4, the downlink power is changed according to what is shown in table 8.2.6.38-1. Frequency $f_3$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.38-1. |
| 2 | → | | MEASUREMENT REPORT | Event 1a is triggered by cell 2 in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 3 | ← | | ACTIVE SET UPDATE | The SS adds cell 2 to the active set of the UE. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE answers with an ACTIVE SET UPDATE COMPLETE message to the SS. |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads the compressed mode parameters in the UE, (if required). |

| | | | |
|---|---|---|---|
| 6 | → | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of the compressed mode parameters (only if compressed mode was configured). |
| 7 | ← | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE, and activates compressed mode (if required). |
| 8 | | | The SS changes the power of the cells according to column T2 in table 8.2.6.38-1. |
| 9 | → | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| | | | The SS changes the power of the cells according to column T3 in table 8.2.6.38-1. |
| 10 | ← | PHYSICAL CHANNEL RECONFIGURATION | The SS orders the UE to perform timing re-initialised inter-frequency handover to cell 4 on frequency $f_2$. |
| 11 | → | PHYSICAL CHANNEL RECONFIGURATION FAILURE | After T312 expires, the UE shall revert to the old channel and transmits this message. |
| 12 | | | The SS changes the power of the cells according to column T4 in table 8.2.6.38-1. |
| 13 | → | MEASUREMENT REPORT | Frequency $f_3$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions.

MEASUREMENT REPORT (Step 2)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 1 (or scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 (or scrambling code 1 if the previous scrambling code included by the UE was scrambling code 2) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Scrambling code 2 |

ACTIVE SET UPDATE (Step 3)

| Information Element | Value/Remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Scrambling code 2 | |
| - Downlink DPCH info for each RL | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets" | |
| - Code Number | Any value between 0 and Spreading factor-1 (use different values for each DPCH in case several DPCHs are allocated to the UE). | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

PHYSICAL CHANNEL RECONFIGURATION (Step 5 for the CS case)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |
| CHOICE channel requirement | Not Present | |
| CHOICE mode | FDD | |
| - Downlink PDSCH information | Not Present | R99 and Rel-4 only |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |

MEASUREMENT REPORT (Step 9)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 |

PHYSICAL CHANNEL RECONFIGURATION (Step 10)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |

| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Any value between 0 and Spreading factor-1 | |
| - Scrambling code change | If compressed mode required and CS call: No code change<br>Otherwise: Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

MEASUREMENT REPORT (Step 13)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 4 |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 4 |

### 8.2.6.38.5 Test Requirement

After step 1, the UE shall send a MEASUREMENT REPORT message triggered by event 1a for cell 2.

After step 3, the UE shall send an ACTIVE SET UPDATE COMPLETE message to acknowledge that it has added cell 2 to its active set.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the downloading of the compressed mode parameters that were sent in the PHYSICAL CHANNEL RECONFIGURATION message of step 4 (only if compressed mode was required).

After step 8, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. In that message, cell 4 shall be the only cell included in the IE event results.

After step 10, the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

After step 12, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_3$. In that message, cell 5 shall be the only cell included in the IE event results.

## 8.2.6.39 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation) (without pending of ciphering)

### 8.2.6.39.1 Definition

### 8.2.6.39.2 Conformance requirement

1> if the reconfiguration procedure is simultaneous with SRNS relocation procedure:

2> if the transmitted message is a RADIO BEARER RECONFIGURATION:

3> include the IE "New U-RNTI".

2> else:

3> include the IE "Downlink counter synchronisation info".

The UE shall:

1> if the received reconfiguration message included the IE "Downlink counter synchronisation info"; or

2> re-establish RB2;

2> set the new uplink and downlink HFN component of COUNT-C of RB2 to MAX(uplink HFN component of COUNT-C of RB2, downlink HFN component of COUNT-C of RB2);

2> increment by one the downlink and uplink values of the HFN component of COUNT-C for RB2;

2> calculate the START value according to subclause 8.5.9;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

1> if the IE "Integrity protection mode info" was present in the received reconfiguration message:

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RB2 from and including the transmitted response message.

If the new state is CELL_DCH or CELL_FACH, the response message shall be transmitted using the new configuration after the state transition, and the UE shall:

1> if the IE "Downlink counter synchronisation info" was included in the reconfiguration message; or

2> when RLC has confirmed the successful transmission of the response message:

3> re-establish all AM and UM RLC entities with RB identities larger than 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the corresponding CN domain;

3> re-establish the RLC entities with RB identities 1, 3 and 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the CN domain stored in the variable LATEST_CONFIGURED_CN_DOMAIN;

3> set the remaining bits of the HFN component of COUNT-C values of all UM RLC entities to zero;

3> re-initialise the PDCP header compression entities of each radio bearer in the variable ESTABLISHED_RABS as specified in [36].

Reference

3GPP TS 25.331 clause 8.2.2.

### 8.2.6.39.3 Test purpose

1. To confirm that the UE performs a combined hard handover and SRNS relocation and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in the new cell.

2. In the case that ciphering is applied by the network, to confirm that the UE applies the new ciphering algorithm following a successful SRNS relocation.

### 8.2.6.39.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) or PS+CS-DCCH+DTCH_DCH (state 6-14) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) and services supported by the UE. If UE supports PS+CS but only supports streaming service in CS domain then state 6-9, 6-10 are applied.

Specific Message Contents:

System Information Block type 1 (Cell 1 and Cell 2)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

System Information Block type 11 (Cell 1)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| - CHOICE report criteria | |
| - Intra-frequency measurement reporting criteria | |
| - Parameters required for each event | 2 kinds |
| - Intra-frequency event identity | 1b |
| - Triggering condition 1 | Active set cells |
| - Triggering condition 2 | Not Present |
| - Reporting Range Constant | 10(5dB) |
| - Cells forbidden to affect Reporting range | Not Present |
| - W | 1(1.0) |
| - Hysteresis | 0(0.0) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | Not Present |
| - Replacement activation threshold | Not Present |
| - Time to trigger | 640 |
| - Amount of reporting | Not Present |
| - Reporting interval | Not Present |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Intra-frequency event identity | 1c |
| - Triggering condition 1 | Not Present |
| - Triggering condition 2 | Not Present |
| - Reporting Range Constant | Not Present |
| - Cells forbidden to affect Reporting range | Not Present |
| - W | Not Present |
| - Hysteresis | 0(0.0) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | Not Present |
| - Replacement activation threshold | 3 |
| - Time to trigger | 640 |
| - Amount of reporting | 4 |
| - Reporting interval | 4 000 |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |

Test Procedure

**Table 8.2.6.39**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -66 | OFF | -66 |

Table 8.2.6.39 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39. The SS sends a PHYSICAL CHANNEL RECONFIGURATION message requesting the UE to do a timing re-initialised hard handover combined with SRNS relocation. This message includes IE "RRC State Indicator" set to "CELL_DCH", IE “Downlink counter synchronisation info” and IE “Integrity protection mode info”. UE shall reselect to cell 2 and SS verifies that the UE sends PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in IE “Integrity protection mode info” in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS transmits UE CAPABILITY ENQUIRY message on the downlink DCCH using RLC-AM. The UE shall respond to downlink message with a UE CAPABILITY INFORMATION message on the uplink DCCH using RLC-AM. SS responds with UE CAPABILITY INFORMATION CONFIRM message. SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity configuration. The UE shall respond IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.39. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | If IE “Ciphering mode info” is present in the SECURITY MODE COMMAND during initial condition set-up, this message is sent after last ciphering activation time has elapsed and there is no pending ciphering activation time. New integrity protection configuration is applied on DL SRB2. LAI and RAI of cell 2 are given to the UE, and are the same as cell 1. |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 2. New calculated START value is included. New integrity protection configuration is applied on UL SRB2. If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on UL SRB2 with the downlink and uplink values of the HFN component of COUNT-C for SRB2 incremented by one. |
| 5 | ← | | UE CAPABILITY ENQUIRY | If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on DL SRB2 with the same value as used in step 4. |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 8 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on DL SRB3 using the re-initialised COUNT-C HFN by the start value as stored in step 4. |
| 9 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration is applied on UL SRB3 by UE. If IE “Ciphering mode info” is present in step 3, new ciphering configuration is applied on UL SRB3 using the re-initialised COUNT-C HFN by the start value as stored in step 4. |
| 10 | ←→ | | Void | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3) – for PS domain testing only

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_DCH from CELL_DCH in PS", with the following exception.

| Information Element | Value/remark |
|---|---|
| Ciphering mode info | If network does not apply ciphering, set this IE to "Not present". If network applies ciphering, this IE present with the values of the sub IEs as stated below. |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Set to another algorithm than the one indicated in the SECURITY MODE COMMAND during the initial condition set-up. |
| - Ciphering activation time for DPCH | Not Present |
| - Radio bearer downlink ciphering activation time info | Not Present |

PHYSICAL CHANNEL RECONFIGURATION (Step 3) – for CS domain testing only

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Non speech in CS" or "Speech in CS", with the following exception:

| Information Element | Value/remark |
|---|---|
| Ciphering mode info | If network does not apply ciphering, set this IE to "Not present". If network applies ciphering, this IE present with the values of the sub IEs as stated below. |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Set to another algorithm than the one indicated in the SECURITY MODE COMMAND during the initial condition set-up |
| - Ciphering activation time for DPCH | Not Present |
| - Radio bearer downlink ciphering activation time info | Not Present |
| Integrity protection mode info<br>- Integrity protection mode command<br>- Downlink integrity protection activation info<br>- Integrity protection algorithm<br>- Integrity protection initialisation number | <br>Start<br>Not Present<br>UIA1<br>SS selects an arbitrary 32 bits number for FRESH |

| Downlink information for each radio links<br>- Primary CPICH info<br>- Primary Scrambling Code | <br><br>Set to same code as used for cell 2 |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info<br>- RB with PDCP information list<br>- START list | <br>Not present<br>Check that this IE is present. |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| COUNT-C activation time | In case ciphering is applied by the network, check that this IE is present. |
| Uplink counter synchronisation info<br>- RB with PDCP information list<br>- START list | <br>Not present<br>Check that this IE is present. |

UE CAPABILITY ENQUIRY (Step 5)

Use the same message sub-type found in [9] TS 34.108 clause 9.

UE CAPABILITY INFORMATION (Step 6)

Check that the UE uses the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Step 7)

Use the same message sub-type found in [9] TS 34.108 clause 9.

#### 8.2.6.39.5 Test requirement

After step 3, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the PHYSICAL CHANNEL RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received PHYSICAL CHANNEL RECONFIGURATION message (DL) and the sent PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (UL).

After step 5, the UE shall respond with a UE CAPABILITY INFORMATION message to SS.

After step 8, the UE shall respond with an IDENTITY RESPONSE message to SS and apply new ciphering configuration on UL SRB3.

(In the case where ciphering is supported)After step 9, UE shall start new ciphering configuration on the RAB.

### 8.2.6.39a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change without MAC-hs reset)

#### 8.2.6.39a.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.6.39a.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link;

Reference

3GPP TS 25.331 clause 8.2.2, 8.5.25, 8.6.3.1, 8.6.6.4

### 8.2.6.39a.3 Test purpose

To confirm that the UE changes the serving HS-DSCH cell according to the received PHYSICAL CHANNEL RECONFIGURATION message in case of no MAC-hs reset.

### 8.2.6.39a.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.6.39a**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | -60 | -70 | -75 | -60 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | – | – | -70 | -70 | – | – | -60 |

NOTE: For TDD, T1 and T2 are not used.

Table 8.2.6.39a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in CELL_DCH state with the downlink transmission power settings according to values in column “T0” in table 8.2.6.39a and has a radio bearer mapped on HS-DSCH established in cell 1.

For FDD:

SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39a. UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for cell 2.

After the MEASUREMENT REPORT message is received, the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC to add cell 2 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links and cell 1 shall be kept as the serving HS-DSCH cell. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.39a. The SS sends a MEASUREMENT CONTROL message to the UE configuring event 1D “Change of best cell”, and the UE shall send an initial MEASUREMENT REPORT which includes the primary scrambling code of cell 1 according to IE "Intra-frequency event identity" set to 1d.

SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39a. UE shall transmit a MEASUREMENT REPORT message which includes the primary scrambling code for cell 2 according to IE "Intra-frequency event identity" set to 1d.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. At the activation time the UE changes the serving HS-DSCH radio link to cell 2. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

For TDD:

The SS sends a MEASUREMENT CONTROL message to the UE configuring event 1g “Change of best cell”, and the UE shall send an initial MEASUREMENT REPORT which includes Cell parameters Id of cell 1 according to IE "Intra-frequency event identity" set to 1g.

SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39a. UE shall transmit a MEASUREMENT REPORT message which includes Cell parameters Id of cell 2 ccording to IE "Intra-frequency event identity" set to 1g.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. SS sets up a Radio Link in Cell 2. At the activation time the UE changes the serving HS-DSCH radio link to cell 2. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Then the SS deletes the Radio Link in Cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 0a | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39a (FDD only). |
| 0b | → | | MEASUREMENT REPORT | See specific message contents for this message (FDD only). |
| 1 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 2 in the active set (FDD only). |
| 2 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 2 (FDD only). |
| 2a | SS | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.39a (FDD only). |
| 3 | ← | | MEASUREMENT CONTROL | Configure event 1D (FDD) or 1g (TDD) “Change of best cell” |
| 3a | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 4 | SS | | | SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39a |
| 5 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 7 | SS | | | SS sets up a Radio Link in Cell 2(TDD only). At the activation time, the SS changes the serving HS-DSCH radio link to cell 2. |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE changes the serving HS-DSCH radio link to cell 2 |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

MEASUREMENT REPORT (Step 0b) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 1) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not present | |
| - TFCI combining indicator | FALSE | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

MEASUREMENT CONTROL (Step 3) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| - CHOICE measurement type | Intra-frequency measurement |
| - Intra frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1D |
| - Triggering condition 2 | Active set cells |
| - Hysteresis | 8 (4 dB) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active set |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| DPCH compressed mode status info | Not present |

MEASUREMENT CONTROL (Step 3) (1.28 Mcps TDD, 3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | TDD |
| - Measurement quantity | Primary CCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1g |
| - Hysteresis | 4dB (IE value = 8) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | Report cells within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 3a) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 1" |

MEASUREMENT REPORT (Step 3a) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 3a) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |

| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 3a) (7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 2" |

MEASUREMENT REPORT (Step 5) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |

| | |
|---|---|
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5) (7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| CHOICE channel requirement | Uplink DPCH info | |
| - Uplink DPCH power control info | | |
| - DPCCH power offset | -40 (-80 dB) | |
| - PC Preamble | 1 frame | |
| - SRB delay | 7 frames | |
| - Power Control Algorithm | Algorithm1 | |
| - TPC step size | 0 (1 dB) | |
| - $\Delta_{ACK}$ | 6 | |
| - $\Delta_{NACK}$ | 6 | |
| - Ack-Nack repetition factor | 2 | |
| - Scrambling code type | Long | |
| - Scrambling code number | 0 (0 to 16777215) | |
| - Number of DPDCH | Not Present(1) | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Number of FBI bit | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Puncturing Limit | Reference to TS34.108 clause 6.10 Parameter Set | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | | |
| - CHOICE mode | FDD | |
| - DL Scrambling Code | Not present | |
| - HS-SCCH Channelisation Code Information | | |
| - HS-SCCH Channelisation Code | 7 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | FDD | |
| - Measurement Power Offset | 12 (6 dB) | |
| - CQI Feedback cycle, k | 4 ms | |
| - CQI repetition factor | 1 | |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) | |
| - CHOICE mode | FDD (no data) | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | Not Present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | (for cell 1) | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) | |
| - Cell ID | Not Present | |
| - Serving HS-DSCH radio link indicator | FALSE | |
| - Downlink DPCH info for each RL | Not present | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |
| - Downlink information for each radio link | (for cell 2) | |
| - Choice mode | FDD | |

| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |

| Information Element | Value/remark | Version |
|---|---|---|
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | 1 | |
| - Scrambling code change | No change | |
| - TPC combination index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | TDD (no data) | |
| - CHOICE mode | TDD | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - HS-PDSCH Midamble Configuration | | |
| - Midamble Allocation Mode | Default midamble | |
| - Midamble Configuration | 8 | |
| - Midamble Shift | Not present | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | Not Present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28 Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Ref. To the Default setting for cell 1 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (3.84 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | Not Present | |
| Downlink information per radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 3.84 Mcps TDD | |
| - CHOICE SyncCase | SyncCase 2 | |
| - Timeslot | 0 | |
| - Cell parameters ID | Ref. To the Default setting for cell 1 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (7.68 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | Not Present | |
| Downlink information per radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 7.68 Mcps TDD | |
| - CHOICE SyncCase | SyncCase 2 | |
| - Timeslot | 0 | |
| - Cell parameters ID | Ref. To the Default setting for cell 1 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

#### 8.2.6.39a.5 Test requirements

After step 0a, the UE shall transmit a MEASUREMENT REPORT message (FDD only).

After step 4, the UE shall transmit a MEASUREMENT REPORT message.

After step 7, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.6.39b Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change with MAC-hs reset)

#### 8.2.6.39b.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

8.2.6.39b.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link;

…

If the IE "Downlink information common for all radio links " is included the UE shall:

1> if the IE "MAC-hs reset indicator" is included:

2> reset the MAC-hs entity [TS 25.321].

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1, 8.6.6.4, 8.6.6.27

8.2.6.39b.3 Test purpose

To confirm that the UE changes the serving HS-DSCH cell according to the received PHYSICAL CHANNEL RECONFIGURATION message, in case of MAC-hs reset.

8.2.6.39b.4 Method of test

Initial Condition

System Simulator:2 cells - Cell 1 and 2 are active

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.6.39b**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | -60 | -70 | -75 | -60 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | – | – | -70 | -70 | – | – | -60 |

NOTE: For TDD, T1 and T2 are not used.

Table 8.2.6.39b illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is initially in CELL_DCH state with the downlink transmission power settings according to values in column “T0” in table 8.2.6.39b, and has a radio bearer mapped on HS-DSCH established in cell 1.

For FDD

SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39b. UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for cell 2.

After the MEASUREMENT REPORT message is received, the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC to add cell 2 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links and cell 1 shall be kept as the serving HS-DSCH cell. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.39b. The SS configures reporting of event 1d “change of best cell” by transmitting a MEASUREMENT CONTROL message to the UE, and the UE shall send an initial MEASUREMENT REPORT which includes the primary scrambling code of cell 1 according to IE "Intra-frequency event identity" set to 1d.

The SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39b. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for cell 2 according to IE "Intra-frequency event identity" set to 1d.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. At the activation time the UE changes the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

For TDD

The SS configures reporting of event 1g "change of best cell" by transmitting a MEASUREMENT CONTROL message to the UE, and the UE shall send an initial MEASUREMENT REPORT which includes the Cell parameters Id of cell 1 according to IE "Intra-frequency event identity" set to 1g.

The SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39b. The UE transmits a MEASUREMENT REPORT message, which includes the Cell parameters Id of cell 2 according to IE "Intra-frequency event identity" set to 1g.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. SS sets up a Radio Link in Cell 2 At the activation time the UE changes the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS deletes the Radio Link in Cell 1

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 2a | | SS | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.39b (FDD only). |
| 2b | → | | MEASUREMENT REPORT | See specific message contents for this message (FDD only) |
| 3 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 2 in the active set (FDD only). |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 2 (FDD only). |
| 4a | | SS | | SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.39b (FDD only). |
| 5 | ← | | MEASUREMENT CONTROL | Configure event 1D (FDD) or 1g (TDD) "Change of best cell" |
| 5a | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 6 | | SS | | SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39b |
| 7 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 8 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 9 | | SS | | SS sets up a Radio Link in Cell 2(TDD only). At the activation time, the SS changes the serving HS-DSCH radio link to cell 2 and performs a MAC-hs reset. |
| 10 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 11 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 2b) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 3) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark | Revision |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not present | |
| - TPC combination index | 1 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not present | |
| - TFCI combining indicator | FALSE | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

MEASUREMENT CONTROL (Step 5) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| - CHOICE measurement type | Intra-frequency measurement |
| - Intra frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1D |
| - Triggering condition 2 | Active set cells |
| - Hysteresis | 8 (4 dB) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active set |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| DPCH compressed mode status info | Not present |

MEASUREMENT CONTROL (Step 5) (1.28 Mcps TDD, 3.84Mcps TDD and 7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | TDD |
| - Measurement quantity | Primary CCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1G |
| - Hysteresis | 4dB (IE value = 8) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | Report cells within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 5a) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 1" |

MEASUREMENT REPORT (Step 5a) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |

| | |
|---|---|
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5a) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5a) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 7) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 2" |

MEASUREMENT REPORT (Step 7) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |

| | |
|---|---|
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 7) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 7) (7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

PHYSICAL CHANNEL RECONFIGURATION (Step 8) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Revision |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| CHOICE channel requirement | Uplink DPCH info | |
| - Uplink DPCH power control info | | |
| - DPCCH power offset | -40 (-80 dB) | |
| - PC Preamble | 1 frame | |
| - SRB delay | 7 frames | |
| - Power Control Algorithm | Algorithm1 | |
| - TPC step size | 0 (1 dB) | |
| - $\Delta_{ACK}$ | 6 | |
| - $\Delta_{NACK}$ | 6 | |
| - Ack-Nack repetition factor | 2 | |
| - Scrambling code type | Long | |
| - Scrambling code number | 0 (0 to 16777215) | |
| - Number of DPDCH | Not Present(1) | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Number of FBI bit | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Puncturing Limit | Reference to TS34.108 clause 6.10 Parameter Set | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | | |
| - CHOICE mode | FDD | |
| - DL Scrambling Code | Not present | |
| - HS-SCCH Channelisation Code Information | | |
| - HS-SCCH Channelisation Code | 7 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | FDD | |
| - Measurement Power Offset | 12 (6 dB) | |
| - CQI Feedback cycle, k | 4 ms | |
| - CQI repetition factor | 1 | |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) | |
| - CHOICE mode | FDD (no data) | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | (for cell 1) | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) | |
| - Cell ID | Not Present | |
| - Serving HS-DSCH radio link indicator | FALSE | |
| - Downlink DPCH info for each RL | Not present | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |
| - Downlink information for each radio link | (for cell 2) | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |

| - Cell ID | Not Present | |
| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |

| | | |
|---|---|---|
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | 1 | |
| - Scrambling code change | No change | |
| - TPC combination index | 1 | |
| - SSDT Cell Identity | Not Present | |
| - Closed loop timing adjustment mode | Not Present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

PHYSICAL CHANNEL RECONFIGURATION (Step 8) (1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | TDD (no data) | |
| - CHOICE mode | TDD | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - HS-PDSCH Midamble Configuration | | |
| - Midamble Allocation Mode | Default midamble | |
| - Midamble Configuration | 8 | |
| - Midamble Shift | Not present | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28 Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Ref. to the Default setting for cell 2 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (3.84 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information per radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 3.84 Mcps TDD | |
| - CHOICE SyncCase | SyncCase 2 | |
| - Timeslot | 0 | |
| - Cell parameters ID | Ref. To the Default setting for cell 1 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (7.68 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information per radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 7.68 Mcps TDD | |
| - CHOICE SyncCase | SyncCase 2 | |
| - Timeslot | 0 | |
| - Cell parameters ID | Ref. To the Default setting for cell 1 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

#### 8.2.6.39b.5 Test requirements

After step 2a, the UE shall transmit a MEASUREMENT REPORT message (FDD only).

After step 5, the UE shall transmit a MEASUREMENT REPORT message.

After step 6, the UE shall transmit a MEASUREMENT REPORT message.

After step 9, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.6.39c Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change without MAC-hs reset) (TDD)

#### 8.2.6.39c.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

8.2.6.39c.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link;

Reference

3GPP TS 25.331 clause 8.2.2, 8.5.25, 8.6.3.1, 8.6.6.4

### 8.2.6.39c.3 Test purpose

To confirm that the UE changes the serving HS-DSCH cell according to the received PHYSICAL CHANNEL RECONFIGURATION message in case of no MAC-hs reset.

### 8.2.6.39c.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active. Each cell configure 3 carriers，one is the primary carrier，the other two are secondary carrier.

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.6.39c**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| P-CCPCH RSCP (TDD) | dBm | -60 | – | – | -70 | -70 | – | – | -60 |

NOTE: For TDD, T1 and T2 are not used.

Table 8.2.6.39c illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in CELL_DCH state with the downlink transmission power settings according to values in column “T0” in table 8.2.6.39c and has a radio bearer mapped on HS-DSCH established in cell 1.

For TDD:

The SS sends a MEASUREMENT CONTROL message to the UE configuring event 1g “Change of best cell”, and the UE shall send an initial MEASUREMENT REPORT which includes Cell parameters Id of cell 1 according to IE "Intra-frequency event identity" set to 1g.

SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39c. UE shall transmit a MEASUREMENT REPORT message which includes Cell parameters Id of cell 2 ccording to IE "Intra-frequency event identity" set to 1g.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. SS sets up a Radio Link in Cell 2. At the activation time the UE changes the serving HS-DSCH radio link to cell 2. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. Then the SS deletes the Radio Link in Cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 0a | SS | | | |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | ACTIVE SET UPDATE | |
| 2 | → | | ACTIVE SET UPDATE COMPLETE | |
| 2a | SS | | | |
| 3 | ← | | MEASUREMENT CONTROL | Configure event 1g (TDD) “Change of best cell” |
| 3a | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 4 | SS | | | SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39c |
| 5 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 7 | SS | | | SS sets up a Radio Link in Cell 2(TDD only). At the activation time, the SS changes the serving HS-DSCH radio link to cell 2. |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE changes the serving HS-DSCH radio link to cell 2 |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

MEASUREMENT CONTROL (Step 3)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | TDD |
| - Measurement quantity | Primary CCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1g |
| - Hysteresis | 4dB (IE value = 8) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | Report cells within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 3a)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 5)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |

| | |
|---|---|
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1g" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | TDD (no data) | |
| - CHOICE mode | TDD | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - HS-PDSCH Midamble Configuration | | |
| - Midamble Allocation Mode | Default midamble | |
| - Midamble Configuration | 8 | |
| - Midamble Shift | Not present | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | Not Present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28 Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Ref. To the Default setting for cell 1 in TS34.108 clause 6.1 (TDD) | |
| PhysicalChannelReconfiguration -r5-TDD128-add-ext-IEs | | |
| –frequencyInfo | secondary carrier frequency | |
| –UpPCHpositionInfo | 22 | |

8.2.6.39c.5 Test requirements

After step 4, the UE shall transmit a MEASUREMENT REPORT message.

After step 7, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

## 8.2.6.39d Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change with MAC-hs reset) (1.28 Mcps TDD)

### 8.2.6.39d.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

### 8.2.6.39d.2 Conformance requirement

In case the reconfiguration procedure is used to remove all existing RL(s) in the active set while new RL(s) are established the UE shall:

1> perform the maintenance of uplink synchronisation procedure as specified in TS 25.224 [5.2.1.2] or the establishment of uplink synchronization procedure in TS 25.224 [5.2.1.3].

1> apply the hard handover procedure as specified (below).

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link;

…

If the IE "Downlink information common for all radio links " is included the UE shall:

1> if the IE "MAC-hs reset indicator" is included:

2> reset the MAC-hs entity [TS 25.321].

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1, 8.6.6.4, 8.6.6.27

8.2.6.39d.3 Test purpose

To confirm that the UE changes the serving HS-DSCH cell according to the received PHYSICAL CHANNEL RECONFIGURATION message, in case of MAC-hs reset.

To conforn that the UE will answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message for the kind of PHYSICAL CHANNEL RECONFIGURATION message which is lack of uplink Synchronisation Parameters.

8.2.6.39d.4 Method of test

Initial Condition

System Simulator:2 cells - Cell 1 and 2 are active

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

**Table 8.2.6.39d**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| P-CCPCH RSCP (TDD) | dBm | -60 | – | – | -70 | -70 | – | – | -60 |

NOTE: For TDD, T1 and T2 are not used.

Table 8.2.6.39d illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is initially in CELL_DCH state with the downlink transmission power settings according to values in column “T0” in table 8.2.6.39d, and has a radio bearer mapped on HS-DSCH established in cell 1.

The SS configures reporting of event 1g “change of best cell” by transmitting a MEASUREMENT CONTROL message to the UE, and the UE shall send an initial MEASUREMENT REPORT which includes the Cell parameters Id of cell 1 according to IE "Intra-frequency event identity" set to 1g.

The SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39d. The UE transmits a MEASUREMENT REPORT message, which includes the Cell parameters Id of cell 2 according to IE "Intra-frequency event identity" set to 1g.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. SS sets up a Radio Link in Cell 2 At the activation time the UE changes the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS deletes the Radio Link in Cell 1

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | MEASUREMENT CONTROL | Configure event 1g (TDD) “Change of best cell” |
| 4 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 5 | SS | | | SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.39d |
| 6 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 8 | SS | | | SS sets up a Radio Link in Cell 2(TDD only). At the activation time, the SS changes the serving HS-DSCH radio link to cell 2 and performs a MAC-hs reset. |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT CONTROL (Step 3) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | TDD |
| - Measurement quantity | Primary CCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |

| | |
|---|---|
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1G |
| - Hysteresis | 4dB (IE value = 8) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | Report cells within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 4) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 6) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

PHYSICAL CHANNEL RECONFIGURATION (Step 7) (1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Uplink Timing Advance Control | | |
| -Synchronisation Parameters | Not present | |
| -SYNC_UL codes bitmap | Not present | |
| -FPACH info | Not present | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | TDD (no data) | |
| - CHOICE mode | TDD | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - HS-PDSCH Midamble Configuration | | |
| - Midamble Allocation Mode | Default midamble | |
| - Midamble Configuration | 8 | |
| - Midamble Shift | Not present | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28 Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Ref. to the Default setting for cell 2 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

#### 8.2.6.39d.5 Test requirements

After step 4, the UE shall transmit a MEASUREMENT REPORT message.

After step 6, the UE shall transmit a MEASUREMENT REPORT message.

After step 9, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.6.40 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Two radio links, change of HS-PDSCH configuration)

#### 8.2.6.40.1 Definition and applicability

All UEs which support FDD and HS-PDSCH.

#### 8.2.6.40.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1, 8.6.6.4, 8.6.6.27

8.2.6.40.3 Test purpose

To confirm that, when two radio links are used, the UE changes HS-DSCH specific uplink DPCH power control and measurement feedback configuration according to the received PHYSICAL CHANNEL RECONFIGURATION message.

8.2.6.40.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.6.40**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | -70 | -60 |

Table 8.2.6.40 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1.

SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.40. UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for cell 2 according to IE "Intra-frequency event identity", which is set to '1a' in the SYSTEM INFORMATION BLOCK TYPE 11.The SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC to add cell 2 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting

the current uplink and downlink activities of existing radio links and cell 1 shall be kept as the serving HS-DSCH cell. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. At the activation time the UE changes the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.40. |
| 2 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 3 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 2 in the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 2. |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 3)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not present | |
| - TPC combination index | 1 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not present | |
| - TFCI combining indicator | FALSE | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

PHYSICAL CHANNEL RECONFIGURATION (Step 5)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Uplink DPCH info |
| - Uplink DPCH power control info | |
| - DPCCH power offset | -40 (-80 dB) |
| - PC Preamble | 1 frame |
| - SRB delay | 7 frames |
| - Power Control Algorithm | Algorithm1 |
| - TPC step size | 0 (1 dB) |
| - $\Delta_{ACK}$ | 6 |
| - $\Delta_{NACK}$ | 6 |
| - Ack-Nack repetition factor | 2 |
| - Scrambling code type | Long |
| - Scrambling code number | 0 (0 to 16777215) |
| - Number of DPDCH | Not Present(1) |
| - spreading factor | Reference to TS34.108 clause 6.10 Parameter Set |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set |
| - Number of FBI bit | Reference to TS34.108 clause 6.10 Parameter Set |
| - Puncturing Limit | Reference to TS34.108 clause 6.10 Parameter Set |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | Not present |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Measurement Power offset | 12 (6 dB) |
| - CQI Feedback cycle, k | 8 ms |
| - CQI repetition factor | 2 |
| - $\Delta_{CQI}$ | 4 |
| - CHOICE mode | FDD (no data) |
| Downlink information common for all radio links | Not present |
| Downlink information for each radio link list | Not present |

#### 8.2.6.40.5 Test requirements

After step 1, the UE shall transmit a MEASUREMENT REPORT message.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.6.40a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (change of HS-PDSCH configuration)

#### 8.2.6.40a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

#### 8.2.6.40a.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

### 8.2.6.40a.3 Test purpose

To confirm that, the UE changes HS-DSCH specific HS-SCCH configuration according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.40a.4 Method of test

Initial Condition

System Simulator:1 cells - Cell 1

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. At the activation time the UE changes the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| **0** | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION<br><br>COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| **Information Element** | **Value/remark** |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps |

#### 8.2.6.40a.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.6.41 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, signalling only)

#### 8.2.6.41.1 Definition and applicability

#### 8.2.6.41.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

1> the procedure ends.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

Reference

3GPP TS 25.331 clause 8.2.2, 8.3.5.1.2.

#### 8.2.6.41.3 Test purpose

To confirm that the UE makes a timing re-initialised interfrequency hard handover on a signalling only configuration without prior measurement on the target frequency according to the received PHYSICAL CHANNEL RECONFIGURATION message.

#### 8.2.6.41.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Test Procedure

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes new frequency information and IE "Timing indicator" set to initialise. The UE shall reconfigure the physical channel parameters according to PHYSICAL CHANNEL RECONFIGURATION message and establish a radio link with the SS using a dedicated physical channel in cell 6. The UE then transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 6 on the uplink DCCH AM RLC after its transition. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

### 8.2.6.41.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC in cell 6.

## 8.2.6.42 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving HS-DSCH cell change)

### 8.2.6.42.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

### 8.2.6.42.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

1> the procedure ends.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in FDD or 1.28 Mcps TDD caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: In FDD an "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

If the IE "New H-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the value in the variable H_RNTI;

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.3.5.1.2, 8.5.25, 8.6.3.1, 8.6.3.1b, 8.6.6.4, 8.6.6.27

### 8.2.6.42.3 Test purpose

To confirm that the UE is able to perform a timing re-initialised hard handover to another frequency without prior measurement on the target frequency in conjunction with a serving HS-DSCH cell change according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.42.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 on frequency $f_1$, and cell2 on frequency $f_2$. Cells 1 and 2 have different primary scrambling codes (FDD only),

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 2 on frequency $f_2$. At the activation time the UE changes to Cell 2 keeping the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 2. |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

#### 8.2.6.42.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.6.42a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving HS-DSCH cell change)
(Cells belong to different frequency bands for LCR TDD)

#### 8.2.6.42a.1 Definition and applicability

Same definition and applicability as in clause 8.2.6.42.1 except that UE supports operating in different frequency band.

#### 8.2.6.42a.2 Conformance requirement

Same conformance requirement as in clause8.2.6.42.2.

#### 8.3.1.32a.3 Test purpose

Same test purpose as in clause 8.2.6.42.3 except that UE can work in different frequency bands.

#### 8.3.1.32a.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 is configured within primary carrier in frequency $f_3$ and secondary carrier in frequency $f_1$, and cell2 works in frequency $f_2$, f1 an f2 belongs to different frequency bands.

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports multiple frequency bands simultaneously

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1 secondary carrier. The secondary carrier and Primary carrier may be in same frequency band or different frequency band.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 2 on frequency $f_{2}$。 At the activation time the UE changes to Cell 2 keeping the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Same Expected sequence and Specific Message Contents as in clause 8.2.6.42.4

#### 8.2.6.42a.5 Test requirements

Same test requirements as in clause 8.2.6.42.

### 8.2.6.43 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation with pending of ciphering)

#### 8.2.6.43.1 Definition

#### 8.2.6.43.2 Conformance requirement

<from sub-clause 8.2.2.3>

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message:

it shall:

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> if the received reconfiguration message included the IE "Downlink counter synchronisation info"; or

…

2> if the variable PDCP_SN_INFO is empty:

3> configure the corresponding RLC entity for all AM and UM radio bearers and AM and UM signalling radio bearers except RB2 to "stop".

2> else:

…

2> re-establish the RLC entity for RB2;

2> for the downlink and the uplink, apply the ciphering configuration as follows:

3> if the received re-configuation message included the IE "Ciphering Mode Info":

4> use the ciphering configuration in the received message when transmitting the response message.

3> if the ciphering configuration for RB2 from a previously received SECURITY MODE COMMAND has not yet been applied because the activation times not having been reached:

4> if the previous SECURITY MODE COMMAND was received due to new keys being received:

5> consider the new ciphering configuration to include the received new keys;

5> initialise the HFN component of the uplink COUNT-C and downlink COUNT-C of SRB2 as indicated in TS 25.331 subclause 8.1.12.3.1.

4> if the ciphering configuration for RB2 from a previously received SECURITY MODE COMMAND has not yet been applied because of the corresponding activation times not having been reached and the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

5> consider the new ciphering configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN;

5> initialise the HFN component of the uplink COUNT-C and downlink COUNT-C of SRB2 to the most recently transmitted IE "START list" or IE "START" for the LATEST_CONFIGURED_CN_DOMAIN at the reception of the previous SECURITY MODE COMMAND.

4> apply the new ciphering configuration immediately following RLC re-establishment.

3> else:

4> continue using the current ciphering configuration.

2> set the new uplink and downlink HFN of RB2 to MAX(uplink HFN of RB2, downlink HFN of RB2);

2> increment by one the downlink and uplink HFN values for RB2;

2> calculate the START value according to TS 25.331 subclause 8.5.9;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

<from sub-clause 8.6.3.4>

1> for the downlink and the uplink, apply the new ciphering configuration as follows:

2> if the ciphering configuration for a AM or UM radio bearer or signalling radio bearer from a previously received SECURITY MODE COMMAND has not yet been applied because of the corresponding activation times not having been reached and the current received message includes the IE "DL Counter Synch Info" or the current received message is a RADIO BEARER RECONFIGURATION message and includes the IE "New U-RNTI":

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new ciphering configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new ciphering configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN.

2> apply the new ciphering configuration in uplink and downlink immediately following RLC re-establishment.

2> if the IE "Ciphering activation time for DPCH" is present in the IE "Ciphering mode info" and the UE was in CELL_DCH state prior to this procedure:

3> for radio bearers using RLC-TM:

4> apply the old ciphering configuration for CFN less than the number indicated in the IE "Ciphering activation time for DPCH";

…

2> if the IE "Radio bearer downlink ciphering activation time info" is present:

3> apply the following procedure for each radio bearer and signalling radio bearers using RLC-AM or RLC-UM indicated by the IE "RB identity":

4> suspend uplink transmission on the radio bearer or the signalling radio bearer (except for the SRB where the response message is transmitted) according to the following:

5> do not transmit RLC PDUs with sequence number greater than or equal to the uplink activation time, where the uplink activation time is selected according to the rules below.

4> select an "RLC sequence number" at which (activation) time the new ciphering configuration shall be applied in uplink for that radio bearer according to the following:

5> consider a ciphering activation time in uplink to be pending until the RLC sequence number of the next RLC PDU to be transmitted for the first time is equal to or larger than the selected activation time;

5> for each radio bearer and signalling radio bearer that has no pending ciphering activation time in uplink as set by a previous procedure changing the security configuration:

...

5> for each radio bearer and signalling radio bearer that has a pending ciphering activation time in uplink as set by a previous procedure changing the security configuration:

6> for radio bearers and signalling radio bearers except SRB2:

7> set the same value as the pending ciphering activation time.

6> for signalling radio bearer SRB2:

7> set a suitable value that would ensure a minimised delay in the change to the latest ciphering configuration.

4> store the selected "RLC sequence number" for that radio bearer in the entry for the radio bearer in the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

4> switch to the new ciphering configuration according to the following:

5> use the old ciphering configuration for the transmitted and received RLC PDUs with RLC sequence numbers smaller than the corresponding RLC sequence numbers indicated in the IE "Radio bearer uplink ciphering activation time info" sent to UTRAN and in the received IE "Radio bearer downlink ciphering activation time info" received from UTRAN, respectively;

5> use the new ciphering configuration for the transmitted and received RLC PDUs with RLC sequence numbers greater than or equal to the corresponding RLC sequence numbers indicated in the IE "Radio bearer uplink ciphering activation time info" sent to UTRAN and in the received IE "Radio bearer downlink ciphering activation time info" received from UTRAN, respectively;

5> for a radio bearer using RLC-AM, when the RLC sequence number indicated in the IE "Radio bearer downlink ciphering activation time info" falls below the RLC receiving window and the RLC sequence number indicated in the IE "Radio bearer uplink ciphering activation time info" falls below the RLC transmission window, the UE may release the old ciphering configuration for that radio bearer;

5> if an RLC reset or re-establishment occurs before the activation time for the new ciphering configuration has been reached, ignore the activation time and apply the new ciphering configuration both in uplink and downlink immediately after the RLC reset or RLC re-establishment.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.6.3.4.

8.2.6.43.3 Test purpose

To confirm that the UE includes the previously received new keys from the last SECURITY MODE COMMAND in the new ciphering configuration in the case the ciphering configuration for RB2 from the last received SECURITY MODE COMMAND has not yet been applied because the activation times not having been reached.

8.2.6.43.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) or PS+CS-DCCH+DTCH_DCH (state 6-14) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.6.43**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |

Table 8.2.6.43 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. SS sends a new ciphering key followed by a SECURITY MODE COMMAND message (step 1) to UE. The UE shall respond with a SECURITY MODE COMPLETE message. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.43. The SS sends a PHYSICAL CHANNEL RECONFIGURATION message requesting the UE to do a handover combined with SRNS relocation, before the activation time indicated in step 1 lapsed. This message includes IE "RRC State Indicator" set to "CELL_DCH", IE “Downlink counter synchronisation info”, IE “Ciphering mode info”, the IE “Integrity protection mode info” and the IE “Timing Indication” set to “initialise”.

UE shall reselect to cell 2 and SS verifies that the UE sends PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the neww $CK_X$ and $IK_X$ from step 1}) + 2”, calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in IE “Integrity protection mode info” in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS transmits UE CAPABILITY ENQUIRY message on the downlink DCCH using RLC-AM. The UE shall respond to downlink message with a UE CAPABILITY INFORMATION message on the uplink DCCH using RLC-AM. SS responds with UE CAPABILITY INFORMATION CONFIRM message. SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity configuration and ciphering configuration. The UE shall respond with an IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | SECURITY MODE COMMAND | |
| 2 | → | | SECURITY MODE COMPLETE | |
| 3 | | | Void | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.43. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | This message is sent before last ciphering activation time has elapsed and hence there is a pending ciphering activation time. New integrity protection configuration is applied on DL SRB2. LAI and RAI of cell 2 are given to the UE, and are the same as cell 1. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 2. New calculated START value is included. New integrity protection configuration is applied on UL SRB2. New ciphering configuration is applied on UL SRB2 with the downlink and uplink values of the HFN component of COUNT-C for SRB2 is incremented by one. |
| 6 | ← | | UE CAPABILITY ENQUIRY | New ciphering configuration is applied on DL SRB2 with the same value as used in step 5. |
| 7 | → | | UE CAPABILITY INFORMATION | |
| 8 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 9 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. New ciphering configuration is applied on DL SRB3 using the re-initialised COUNT-C HFN by the start value as stored in step 5. |
| 10 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration is applied on UL SRB3 by UE. New ciphering configuration is applied on UL SRB3 using the re-initialised COUNT-C HFN by the start value as stored in step 5. |

Specific Message Contents

SECURITY MODE COMMAND (Step 1) – for PS domain testing only

The contents of SECURITY MODE COMMAND message are identical to the same message sub-type found in [9] TS 34.108 clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Ciphering mode info | |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | UEA0 or UEA1 |
| - Ciphering activation time for DPCH | Not Present |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 5) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info<br>- RB with PDCP information list<br>- START list | <br>Not present<br>Check that this IE is present. |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 5) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| COUNT-C activation time | Check that this IE is present. |
| Uplink counter synchronisation info<br>- RB with PDCP information list<br>- START list | <br>Not present<br>Check that this IE is present. |

UE CAPABILITY ENQUIRY (Step 6)

Use the same message sub-type found in [9] TS 34.108 clause 9.

UE CAPABILITY INFORMATION (Step 7)

Check that the UE uses the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Step 8)

Use the same message sub-type found in [9] TS 34.108 clause 9.

#### 8.2.6.43.5 Test requirement

After step 1, UE shall transmit a SECURITY MODE COMPLETE message on the uplink DCCH using AM RLC.

After step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the new $CK_X$ and $IK_X$ from step 1}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the PHYSICAL CHANNEL RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received PHYSICAL CHANNEL RECONFIGURATION message (DL) and the sent PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (UL).

After step 6, the UE shall respond with a UE CAPABILITY INFORMATION message to SS.

After step 9, the UE shall respond with an UPLINK DIRECT TRANSFER message to SS and apply new ciphering configuration on UL SRB3.

### 8.2.6.44 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Radio link failure in new configuration)

#### 8.2.6.44.1 Definition

#### 8.2.6.44.2 Conformance requirement

<from sub-clause 8.2.2.14>

If the criteria for radio link failure is met in the new configuration during the reconfiguration procedure (i.e. while UE is waiting for RLC acknowledgement for a response message.) as specified in subclause 8.5.6, the UE shall:

1> if the received reconfiguration causes either:

- the IE "Reconfiguration" in the variable CIPHERING_STATUS to be set to TRUE; and/or
- the IE "Reconfiguration" in the variable INTEGRITY_PROTECTION_INFO to be set to TRUE:

2> perform the actions specified in subclause 8.2.2.12b.

<from sub-clause 8.2.2.12b>

If:

- a cell update procedure according to subclause 8.3.1 is initiated; and
- the received reconfiguration message causes either:
  - the IE "Reconfiguration" in the variable CIPHERING_STATUS to be set to TRUE; and/or
  - the IE "Reconfiguration" in the variable INTEGRITY_PROTECTION_INFO to be set to TRUE:

the UE shall:

1> release all radio resources;

1> indicate the release of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to upper layers; and

1> clear any entry for the RRC CONNECTION RELEASE message in the tables "Accepted transactions" and "Rejected transactions" in the variable TRANSACTIONS;

1> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

1> clear the variable ESTABLISHED_RABS;

1> if the received reconfiguration message contained the IE "Ciphering mode info":

2> set the IE "Reconfiguration" in the variable CIPHERING_STATUS to FALSE; and

2> clear the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

2> clear the variable SECURITY_MODIFICATION.

1> if the received reconfiguration message contained the IE "Integrity protection mode info":

2> set the IE "Reconfiguration" in the variable INTEGRITY_PROTECTION_INFO to FALSE; and

2> clear the variable INTEGRITY_PROTECTION_ACTIVATION_INFO.

1> enter idle mode;

1> perform the actions specified in subclause 8.5.2 when entering idle mode;

1> and the procedure ends.

NOTE: UTRAN should use RB Control messages to perform an SRNS relocation only in case of state transitions from CELL_DCH to CELL_DCH.

Reference

3GPP TS 25.331 clause 8.2.2, 8.6.3.4.

### 8.2.6.44.3 Test purpose

To confirm that the UE enters idle mode state when UE detects radio link failure after UE started using the new configuration but before receiving the RLC acknowledgement of the reconfiguration complete message.

### 8.2.6.44.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) or PS+CS-DCCH+DTCH_DCH (state 6-14) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) and services supported by the UE. If UE supports PS+CS but only supports streaming service in CS domain then state 6-9, 6-10 are applied.

Specific Message Contents

System Information Block type 1 of Cell 2 to be transmitted before idle update preamble

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |
| - T313 | 0 |
| - N313 | 1 |

System Information Block type 1 (Cell 1)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |
| - T313 | 0 |
| - N313 | 1 |

System Information Block type 11 (Cell 1)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| - CHOICE report criteria | |
| - Intra-frequency measurement reporting criteria | |
| - Parameters required for each event | 2 kinds |
| - Intra-frequency event identity | 1b |
| - Triggering condition 1 | Active set cells |
| - Triggering condition 2 | Not Present |
| - Reporting Range Constant | 10(5dB) |
| - Cells forbidden to affect Reporting range | Not Present |
| - W | 1(1.0) |
| - Hysteresis | 0(0.0) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | Not Present |

| - Time to trigger | 640 |
| - Amount of reporting | Not Present |
| - Reporting interval | Not Present |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Intra-frequency event identity | 1c |
| - Triggering condition 1 | Not Present |
| - Triggering condition 2 | Not Present |
| - Reporting Range Constant | Not Present |
| - Cells forbidden to affect Reporting range | Not Present |
| - W | Not Present |
| - Hysteresis | 0(0.0) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | Not Present |
| - Replacement activation threshold | 3 |
| - Time to trigger | 640 |
| - Amount of reporting | 4 |
| - Reporting interval | 4 000 |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |

Test Procedure

**Table 8.2.6.44**

| Parameter | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -66 | -60 | OFF | -66 | OFF |

Table 8.2.6.44 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.44. The SS sends a PHYSICAL CHANNEL RECONFIGURATION message requesting the UE to do a timing re-initialised hard handover combined with SRNS relocation. This message includes IE "RRC State Indicator" set to "CELL_DCH", IE “Downlink counter synchronisation info”, IE “Ciphering mode info” and IE “Integrity protection mode info”. UE shall reselect to cell 2 and SS verifies that the UE sends PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the new $CK_X$ and $IK_X$ from step 1}) + 2”, calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in IE “Integrity protection mode info” in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. On receiving PHYSICAL CHANNEL RECONFIGURATION COMPLETE message, SS shall not send RLC acknowledgement to UE and the SS shall configure its downlink transmission power settings according to columns "T2" in table 8.2.6.44.

UE shall detect a radio link failure in cell 2 and enters idle mode in cell 1. SS then call for procedure C.1 to verify that UE is in idle mode in cell 1.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.44. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | If IE “Ciphering mode info” is present in the SECURITY MODE COMMAND during initial condition set-up, this message is sent after last ciphering activation time has elapsed and there is no pending ciphering activation time. New integrity protection configuration is applied on DL SRB2. LAI and RAI of cell 2 are given to the UE, and are the same as cell 1. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 2. New calculated START value is included. New integrity protection configuration is applied on UL SRB2. If IE “Ciphering mode info” is present in step 2, new ciphering configuration is applied on UL SRB2 with the downlink and uplink values of the HFN component of COUNT-C for SRB2 is incremented by one. Upon receiving this message, the SS shall not send RLC acknowledgement for this message and apply the downlink transmission power settings, according to the values in columns “T3” of table 8.2.6.44 |
| 4 | ←→ | | Call C.1. | C.1 is performed in cell 1. If the test result of C.1 indicates that UE is in idle mode state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2) – for PS domain testing only

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_DCH from CELL_DCH in PS", with the following exception:

| Information Element | Value/remark |
|---|---|
| Ciphering mode info | If network does not apply ciphering, set this IE to "Not present". If network applies ciphering, this IE shall be included with the values of the sub IEs as stated below. |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Set to another algorithm than the one indicated in the SECURITY MODE COMMAND during the initial condition set-up |
| - Ciphering activation time for DPCH | Not Present |

| Downlink information for each radio links<br>- Primary CPICH info<br>- Primary Scrambling Code | <br><br>Set to same code as used for cell 2 |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 3) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info<br>- RB with PDCP information list<br>- START list | <br>Not present<br>Check that this IE is present. |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Information Element | Value/remark |
| COUNT-C activation time | In case ciphering is applied by the network, check that this IE is present. |
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

#### 8.2.6.44.5 Test requirement

After step 2, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the new $CK_X$ and $IK_X$ from step 1}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in PHYSICAL CHANNEL RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

After step 3, UE shall enter idle mode in cell 1.

### 8.2.6.45 Physical Channel Reconfiguration for transition from CELL_DCH to URA_PCH: Failure (Radio link failure in old configuration)

#### 8.2.6.45.1 Definition

#### 8.2.6.45.2 Conformance requirement

If the criteria for radio link failure are met in the old configuration during the reconfiguration procedure as specified in TS 25.331 subclause 8.5.6, the UE should:

1> if the UE would have entered CELL_PCH or URA_PCH as a result of this reconfiguration procedure and the UE has already submitted a response message to lower layers:

2> act as if the reconfiguration message was not received;

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "radio link failure"; and

2> the procedure ends.

NOTE: UTRAN should consider the reconfiguration procedure as unsuccessful in this case even if a response message had been received.

Reference

3GPP TS 25.331 clause 8.2.2.14.

#### 8.2.6.45.3 Test purpose

To confirm that the UE aborts reconfiguration to URA_PCH and performs cell update when UE detects radio link failure before receiving the RLC acknowledgement of the reconfiguration complete message in the old configuration.

#### 8.2.6.45.4 Method of test

Initial Condition

System Simulator: 1 cell – Cell 1

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Specific Message Contents

System Information Block type 1 of Cell 1 to be transmitted before idle update preamble

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode<br>- T313<br>- N313 | <br>0<br>1 |
| - T315 | 30 |

Test Procedure

**Table 8.2.6.45**

| Parameter | Unit | Cell 1 | |
|---|---|---|---|
| | | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF |

Table 8.2.6.45 illustrates the downlink power to be applied at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. The SS sends a PHYSICAL CHANNEL RECONFIGURATION message requesting the UE to transit to CELL_PCH. UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. On receiving PHYSICAL CHANNEL RECONFIGURATION COMPLETE message, SS shall not send RLC acknowledgement to UE and the SS shall configure its downlink transmission power settings according to column "T1" in table 8.2.6.45. Within 26.32s (Note 1) from the instant SS configures its downlink transmission power settings according to column “T1”, SS reconfigures it power setting according to column “T0”. UE shall send CELL UPDATE message, with the cell update cause set to “radio link failure”. SS sends CELL UPDATE CONFIRM message. UE shall response with PHYSICAL CHANNEL COMPLETE message.

NOTE 1: Considering the timer tolerance of the UE, T315 may expire between 30s±0.75s, therefore the SS must configure it downlink transmission power before 29.25s after it configures to “T1”. Since SS has a timer tolerance of 10% or 2*TTI+55ms (consider the greater value of the two), the test case shall set the SS to reconfigure the power level no later than 26.32s after the SS configures the power settings according to column ‘T1’ in table 8.2.6.45.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.45. SS shall not acknowledge this message. |
| 3 | | | | Within 26.32s from step 2, SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.2.6.45. |
| 4 | → | | CELL UPDATE | |
| 5 | ← | | CELL UPDATE CONFIRM | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled “Packet to URA_PCH from CELL_DCH in PS”.

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 2 and 6)

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

CELL UPDATE (Step 4)

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Cell update cause | Radio link failure |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in [9] TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

#### 8.2.6.45.5 Test requirement

After step 1, UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to SS.

After step 3, UE shall send CELL UPDATE message to SS, with cell update cause set to “radio link failure”.

After step 5, UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to SS.

### 8.2.6.46 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised. Serving HS-DSCH cell change): Failure (Physical channel failure and reversion to old channel)

#### 8.2.6.46.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.6.46.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE according to subclause 8.5.4 failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> if the CM_PATTERN_ACTIVATION_ABORTED flag is not set to TRUE:

2> revert to the configuration prior to the reception of the message (old configuration); including any HS-DSCH configuration if existing;

2> if the UE was in Cell DCH state prior to the reconfiguration:

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only);

3> after the establishment of the uplink physical channel, send DPCCH and no DPDCH according to [26] during the number of frames indicated in the IE "PC preamble" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE; and

3> then not send any data on signalling radio bearers RB0 to RB4 during the number of frames indicated in the IE "SRB delay" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE.

1> if the CM_PATTERN_ACTIVATION_ABORTED flag is set to TRUE or if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration:

2> initiate a cell update procedure according to subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to [4];

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

Reference(s)

TS 25.331 clause 8.2.2.7

### 8.2.6.46.3 Test purpose

To confirm that the UE reverts to the old configuration (including measurement configurations, ciphering procedures and compressed mode configurations if required), and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before timer T312 expiry.

### 8.2.6.46.4 Method of test

Initial conditions

System Simulator: 2 cells - Cell 1 on frequency $f_1$, and cell2 on frequency $f_2$. Cells 1 and 2 have different primary scrambling codes.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 2 on frequency $f_2$ but SS does not configure the channels in cell 2. At the activation time the UE changes to Cell 2 keeping the HS-PDSCH configuration. The UE shall revert to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 2. SS does not configure the channels in cell 2. |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

#### 8.2.6.46.5 Test requirements

After step 1, the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

### 8.2.6.47 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Compressed mode initiation, with active HS-DSCH reception): Success

#### 8.2.6.47.1 Definition

All UEs which support FDD, HS-PDSCH and compressed mode.

#### 8.2.6.47.2 Conformance requirement

If the UE receives:

-a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> set the variable ORDERED_RECONFIGURATION to TRUE;

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS25.214;

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is included, the UE shall:

2> at the time indicated by IE "TGCFN":

3> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" is set to "activate"; and

3> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "active".

### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.6.15.

### 8.2.6.47.3 Test purpose

1. To confirm that the UE configures compressed mode according to a PHYSICAL CHANNEL RECONFIGURATION message during active HS-DSCH reception.
2. To confirm that the UE activates compressed mode according to the previously stored configuration when receiving a MEASUREMENT CONTROL message during active HS-DSCH reception.

### 8.2.6.47.4 Method of test

#### Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

#### Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH

- Compressed mode required yes/no

Test Procedure

**Table 8.2.6.47**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.6.47 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in CELL_DCH state in cell 1 with active HS-DSCH reception and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.47. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes the IE "DPCH compressed mode info" with the IE "TGPS Status Flag" set to "Deactivate". The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

The SS switches its downlink transmission power setting according to columns "T1" in table 8.2.6.47, but the UE shall not transmit any MEASUREMENT REPORT messages.

The SS then sets up inter-frequency measurements (event 2b) and activates compressed mode, by sending a MEASUREMENT CONTROL message to the UE. The SS waits for 1s for the UE to activate compressed mode. The UE shall transmit MEASUREMENT REPORT message to report event 2b with the measured CPICH RSCP and Ec/No values for cell 6 to the SS.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 1 | | | | The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.47. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads compressed mode parameters without activating compressed mode. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.47. |
| 5 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE and activates compressed mode. |
| 6 | → | | MEASUREMENT REPORT | The UE shall report event 2b with the measured CPICH RSCP and Ec/No values for cell 6. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Not present | |
| - Measurement Feedback Info | Not present | |

MEASUREMENT CONTROL (Step 5)

Use the same message sub-type found in [9] TS 34.108 clause 9, with the following exceptions in the IE(s) concerned:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 15 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency measurement object list | |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | Remove all inter-frequency cells |
| - New inter-frequency cells | |
| - Inter-frequency cell id | 6 |
| - Frequency info | Set to the frequency of cell 6 |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | 0 chips |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |
| - Primary CPICH TX power | Not Present |
| - Primary CPICH TX power | |
| - TX Diversity Indicator | Not Present |
| - Cell for measurement | Not Present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - CHOICE Mode | FDD |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - COICE Mode | FDD |
| - CPICH Ec/No reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Measurement validity | |
| - UE state | CELL_DCH |
| - Inter-frequency set update | On with no reporting |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2b |
| - Threshold used frequency | -65 dBm |
| - W used frequency | Not present |
| - Hysteresis | 2 (1.0 dB) |
| - Time to trigger | 100 ms |
| - Reporting cell status | |
| - CHOICH reported cell | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 2 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -68 dBm |
| - W non-used frequency | 0 |
| DPCH compressed mode status info | |
| - TGPS reconfiguration CFN | (Current CFN + (100 – TTI/10msec))mod 256 |

| - TGPS Status Flag | Activate |

| Information Element | Value/remark |
|---|---|
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 |

MEASUREMENT REPORT (Step 6)

The contents of MEASUREMENT REPORT message is the same as them found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | Check to see if set to 15 |
| Measured Results | |
| - CHOICE Measurement | |
| - Inter frequency measured results list | Check to see if set to "Inter-frequency measured results list" |
| - Inter frequency measurement results | |
| - Frequency info | Set to the frequency of cell 6 |
| - UTRA carrier RSSI | Not checked |
| - Inter frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Not checked |
| - Cell synchronisation information | Not checked |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | Not checked |
| - CPICH Ec/No | Check to see if it is present |
| - CPICH RSCP | Check to see if it is present |
| - Pathloss | Not checked |
| Measured Results on RACH | Not checked |
| Additional Measured results | Not checked |
| - Measured Result | |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | Check that the value of this IE is set to the frequency of cell 6 |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code of cell 6 |

#### 8.2.6.47.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 5 the UE shall transmit a MEASUREMENT REPORT message containing the IE "measured results" reporting cell 6's CPICH RSCP and Ec/No values, also report the triggering of event '2b' included in IE "Event results".

### 8.2.6.48 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, serving HS-DSCH cell change, compressed mode)

#### 8.2.6.48.1 Definition and applicability

All UEs which support FDD, HS-PDSCH and compressed mode.

#### 8.2.6.48.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

1> the procedure ends.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

…

If the IE "New H-RNTI" is included, the UE shall:

1> if the IE "Downlink HS-PDSCH Information" is also included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> store the value in the variable H_RNTI.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

If the IE "Downlink HS-PDSCH Information" is included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message, the UE shall:

1> if the IE "New H-RNTI" is included:

2> perform the actions as specified in subclause 8.6.3.1b of TS 25.331.

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33 of TS 25.331

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34 of TS 25.331

1> For FDD, if, as a result of the received message, the variable H_RNTI is set and the UE has a stored IE "HS-SCCH Info" and a stored IE "Measurement Feedback Info"; and

1> For FDD, if the UE has received IE "Uplink DPCH Power Control Info" and stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor; and

1> For FDD, if the UE has stored IEs "MAC-hs queue to add or reconfigure list", "MAC-d PDU size Info" and "RB Mapping Info" corresponding to the HS-PDSCH configuration;

2> set the variable HS_DSCH_RECEPTION to TRUE;

2> start HS-DSCH reception procedures according to the stored HS-PDSCH configuration:

3> as stated in subclause 8.6.3.1b of TS 25.331 for the IE "H-RNTI";

3> in subclause 8.6.6.33 of TS 25.331 for the IE "HS-SCCH Info"; and

3> in subclause 8.6.6.34 of TS 25.331for the IE "Measurement Feedback Info".

…

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is included, the UE shall:

2> at the time indicated by IE "TGCFN":

3> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" is set to "activate"; and

3> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "active".

Reference

3GPP TS 25.331 clauses 8.2.2, 8.3.5.1.2, 8.6.3.1, 8.6.3.1b, 8.6.6.4, 8.6.6.27, 8.6.6.32, 8.6.6.15

### 8.2.6.48.3 Test purpose

To confirm that the UE is able to perform a timing re-initialised hard handover to another frequency after compressed mode measurement on the target frequency in conjunction with a serving HS-DSCH cell change according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.48.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 on frequency $f_1$, and cell 6 on frequency $f_2$. Cells 1 and 6 have different primary scrambling codes.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports HS-PDSCH
- Compressed mode required yes/no

Test Procedure

**Table 8.2.6.48**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.6.48 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.48.

The SS configures then compressed mode (if required), to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE. Compressed mode is started at the same time in that message (if required).

The SS then applies the power settings according to column "T1" in table 8.2.6.48. The UE transmits a MEASUREMENT REPORT message to the SS.

The SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 6 on frequency $f_2$. At the activation time the UE changes to Cell 6 keeping the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads the compressed mode parameters in the UE. |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of the compressed mode parameters. |
| 3 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE, and activates compressed mode. |
| 4 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.48. |
| 5 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 6. |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Not present | |
| - Measurement Feedback Info | Not present | |
| - CHOICE mode | FDD (no data) | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2 | |
| - Uplink compressed mode method | HLS | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |
| Downlink information for each radio link | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. | |

MEASUREMENT CONTROL (Step 3)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | 1 inter-frequency cell |
| - Inter-frequency cell id | 6 |
| - Frequency info | Set to the frequency of cell 6 |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Scrambling code of cell 6 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cells for measurement | Not present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Measurement validity | |
| - UE State | CELL_DCH |

| Information Element | Value/Remark |
|---|---|
| - TGPS Status Flag | Activate |
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 |

MEASUREMENT REPORT (Step 5)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | Check that the value of this IE is set to the frequency of cell 6 |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code of cell 6 |
| - CPICH Ec/N0 | Check that this IE is present |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | Check that the value of this IE is set to the frequency of cell 6 |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code of cell 6 |

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Set to the frequency of cell 6 | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | | |
| - CHOICE mode | FDD | |
| - DL Scrambling Code | | |
| - HS-SCCH Channelisation Code Information | | |
| - HS-SCCH Channelisation Code | 7 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | FDD | |
| - POhsdsch | 6 dB | |
| - CQI Feedback cycle, k | 4 ms | |
| - CQI repetition factor | 1 | |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) | |
| - CHOICE mode | FDD (no data) | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |
| - CFN-targetSFN frame offset | 0 | |
| - Downlink DPCH power control information | Not Present | |
| - Downlink rate matching restriction information | Not Present | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Fixed or flexible position | Reference to TS34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set | |
| - CHOICE SF | Reference to TS34.108 clause 6.10 Parameter Set | |
| - DPCH compressed mode info | Not present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information per radio link list | 1 radio link | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Set to the scrambling code for cell 6 | |
| - Cell ID | Not present | |
| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Secondary scrambling code | 5 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Any value between 0 and Spreading factor-1 | |
| - Scrambling code change | NoCodeChange | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

#### 8.2.6.48.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

After step 4, the UE shall transmit a MEASUREMENT REPORT message with cell 6 as the reported cell.

After step 6, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 6.

### 8.2.6.48a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, serving HS-DSCH cell change, with measurement report) for 3.84 Mcps TDD

#### 8.2.6.48a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

#### 8.2.6.48a.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

…

If the IE "New H-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the value in the variable H_RNTI;

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

#### Reference

3GPP TS 25.331 clauses 8.2.2, 8.3.5.1.2, 8.6.3.1, 8.6.3.1b, 8.6.6.4, 8.6.6.27.

8.2.6.48a.3 Test purpose

To confirm that the UE is able to perform a timing re-initialised hard handover to another frequency after measurement on the target frequency according to the received PHYSICAL CHANNEL RECONFIGURATION message.

8.2.6.48a.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 on frequency $f_1$, and cell 6 on frequency $f_2$. Cells 1 and 6 have different primary scrambling codes.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.6.48a**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| PCCPCH RSCP | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.6.48a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.48a.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE.

The SS then applies the power settings according to column “T1” in table 8.2.6.48a. The UE transmits a MEASUREMENT REPORT message to the SS.

The SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 6 on frequency $f_2$. At the activation time the UE changes to Cell 6 keeping the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE, and activates compressed mode. |
| 2 | | | | The SS changes the power of the cells according to column T1 in table 8.2.6.48a. |
| 3 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 6. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT CONTROL (Step 1)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |

| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |
| - E-AGCH Info | Not Present | Rel-6 |
| - CHOICE E-HICH Information | Not Present | Rel-6 |
| - CHOICE E-RGCH Information | Not Present | Rel-6 |

#### 8.2.6.48a.5 Test requirements

After step 2, the UE shall transmit a MEASUREMENT REPORT message with cell 6 as the reported cell.

After step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 6.

### 8.2.6.49 Physical Channel Reconfiguration from CELL_DCH to URA_PCH: Success (stop of HS-DSCH reception)

#### 8.2.6.49.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.6.49.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the new state is URA_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (URA_PCH);

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.2.5.25.

### 8.2.6.49.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enter URA_PCH state after it received a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH with active HS-DSCH reception to URA_PCH.

### 8.2.6.49.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in the CELL_DCH state and has a radio bearer mapped on HS-DSCH established with active HS-DSCH reception. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL_DCH to URA_PCH. The UE stops HS-DSCH reception, transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state. SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 3 | | | | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 4 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108.

8.2.6.49.5 Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## 8.2.6.50 Physical Channel Reconfiguration for transition from CELL_DCH to URA_PCH: Success (frequency modification, stop of E-DCH transmission)

8.2.6.50.1 Definition

All UEs which support FDD or TDD, HS-PDSCH and E-DPDCH or E-PUCH.

8.2.6.50.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes the Primary E-RNTI or the Secondary E-RNTI or both the the Primary E-RNTI and the Secondary E-RNTI is set;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> For FDD:

2> stop any E-RGCH reception procedures;

1> For FDD

2> stop any E-DPCCH and E-DPDCH transmission procedures;

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> clear any stored IE "Downlink HS-PDSCH information";

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

1> clear any stored IE "E-DCH information";

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.5.28.

### 8.2.6.50.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC;

To confirm that the UE transits from CELL_DCH with active E-DCH transmission and HS-HSCH reception to URA_PCH state on a different frequency after it received a PHYSICAL CHANNEL RECONFIGURATION message;

To confirm that the UE releases the dedicated physical channel and select a common physical channel on a different frequency.

### 8.2.6.50.4 Method of test

Initial Condition

System Simulator: 2 cells– Cell 1 and cell 6 are active.

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A12 in cell 1 as specified in clause 7.4 of TS 34.108

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH(FDD only) or E-PUCH (TDD only)

Test Procedure

**Table 8.2.6.50**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.6.50 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.6.50. The UE is in state 6-18 under condition A12 as specified in TS34.108 clause 7.4 in cell 1 and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state, selects cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to select to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| **1** | | | | The UE is in CELL_DCH state in cell 1 and the SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.50 |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE transmit this message in cell 1. |
| 4 | | | | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br><br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 5 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (FDD)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN uplink (Nu)<br><br><br><br>- UARFCN downlink (Nd) | <br>FDD<br>Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [11]<br>Set to the frequency of cell 6 |

PHYSICAL CHANNEL RECONFIGURATION (Step 2)(1.28Mcps TDD )

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt) | <br>TDD<br>Same UARFCN as used for cell 6 |
| Downlink information for each radio link<br>- Choice mode<br>- Primary CCPCH info<br>- Choice mode<br>- Choice TDD Option<br>- TSTD indicator<br>- Cell parameters ID<br>- SCTD indicator | <br>TDD<br><br>TDD<br>1.28Mcps TDD<br>FALSE<br>Reference TS34.108 clause 6.1 for CELL 6 (TDD)<br>FALSE |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (3.84Mcps TDD and 7.68Mcps TDD)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt) | <br>TDD<br>Set to the frequency of cell 6 |
| Downlink information for each radio link<br>- Choice Mode<br>- Primary CCPCH info<br>- Cell parameters ID | <br>TDD<br><br>Set to the same as used for cell 6 |

#### 8.2.6.50.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 3 the UE shall be in URA_PCH state in cell 6.

### 8.2.6.51 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving E-DCH cell change)

#### 8.2.6.51.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and E-DPDCH or E-PUCH.

8.2.6.51.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

For FDD:

2> stop any E-RGCH reception procedures;

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures;

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

3> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info";

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH".

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configureation as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

If the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the new value(s) in the variable E_RNTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New Primary E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included and E-DCH is included and there is more than one MAC-d flow carried on E-DCH then the UE shall:

1> if any occurrence of the IE E-DCH Transmission Time Interval and, if present, the field HARQ info for E-DCH (IE HARQ RV Configuration):

2> for FDD:

3> apply the values of any occurrence for IE E-DCH Transmission Time Interval and, if present, the field HARQ info to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

NOTE: The IE "Added or Reconfigured DL TrCH information" is iterated for each added or reconfigured MAC-d flow carried on E-DCH.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

NOTE: In case of multiple E-DCH MAC-d flows, IE "Added or Reconfigured UL TrCH information" is only included once. If the IE "Added or Reconfigured UL TrCH information" is included more than once with the IE "Uplink transport channel type" set to 'E-DCH', the UE behaviour is unspecified.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU’s from the E-DCH MAC-d flow indicated in the IE “E-DCH MAC-d flow identity” with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE “E-DCH MAC-d flow multiplexing list”.

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e or MAC-i PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-RGCH information" is included:

4> store this E-RGCH configuration for the concerning radio link.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28;

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New Primary E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in strictly increasing order of transmission power prior to quantization, by correct setting of the reference E-TFCI power offsets otherwise the UE behaviour is unspecified.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e or MAC-i/is entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.6.51.3 Test purpose

To confirm that the UE changes the serving E-DCH cell according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.51.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A13, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only) or E-PUCH (TDD only)

Test Procedure

**Table 8.2.6.51**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | -60 | -70 | -75 | -60 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | -60 | -70 | -75 | -60 | -70 | -60 |

Table 8.2.6.51 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The downlink transmission power is set according to values in column “T0” in table 8.2.6.51. The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/DCH in cell 1.

For FDD

SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.51. UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for cell 2.

After the MEASUREMENT REPORT message is received, the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC to add cell 2 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links and cell 1 shall be kept as the serving E-DCH and HS-DSCH cell. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.51. The SS configures reporting of event 1d “change of best cell” by transmitting a MEASUREMENT CONTROL message to the UE, and the UE shall send an initial MEASUREMENT REPORT which includes the primary scrambling code of cell 1 according to IE "Intra-frequency event identity" set to 1d.

The SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.51. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for cell 2 according to IE "Intra-frequency event identity" set to 1d.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. At the activation time the UE and SS change the E-DCH and HS-DSCH serving cell to cell 2 and perform MAC-hs reset. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

For TDD

The SS configures reporting of event 1g “change of best cell” by transmitting a MEASUREMENT CONTROL message to the UE.

The SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.51. The UE transmits a MEASUREMENT REPORT message, which includes the Cell parameters Id of cell 2 according to IE "Intra-frequency event identity" set to 1g.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. SS sets up a Radio Link in Cell 2 At the activation time the UE changes the HS-PDSCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS deletes the Radio Link in Cell 1

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.51. (FDD only) |
| 0b | → | | MEASUREMENT REPORT | See specific message contents for this message (FDD only) |
| 1 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 2 in the active set. (FDD only) |
| 2 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 2. (FDD only) |
| 2a | SS | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.51. (FDD only) |
| 3 | ← | | MEASUREMENT CONTROL | Configure event 1D “Change of best cell” (FDD only) or 1g (TDD) |
| 4 | → | | MEASUREMENT REPORT | See specific message contents for this message. This step doesn’t apply for 1.28 Mcps TDD. |
| 5 | SS | | | SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.51 |
| 6 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Serving E-DCH and HS-DSCH cell change |
| 8 | SS | | | At the activation time, the SS changes the serving E-DCH and HS-DSCH radio link to cell 2 and performs MAC-hs reset. SS sets up a Radio Link in Cell 2(TDD only). |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 0b) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 1) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Radio link addition information | |
| - Primary CPICH Info | |
| - Primary scrambling code | Primary scrambling code of Cell 2 |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | FDD |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. |
| - DPCH frame offset | Calculated value from Cell synchronisation information |
| - Secondary CPICH info | Not present |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE |
| - Secondary scrambling code | 1 |
| - Spreading factor | Refer to the parameter set in TS 34.108 |
| - Code number | 0 |
| - Scrambling code change | Not present |
| - TPC combination index | 1 |
| - Close loop timing adjustment mode | Not present |
| - TFCI combining indicator | FALSE |

MEASUREMENT CONTROL (Step 3) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| - CHOICE measurement type | Intra-frequency measurement |
| - Intra frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1D |
| - Triggering condition 2 | Active set cells |
| - Hysteresis | 8 (4 dB) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active set |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| DPCH compressed mode status info | Not present |

MEASUREMENT CONTROL (Step 3) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | TDD |
| - Measurement quantity | Primary CCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1G |
| - Hysteresis | 4dB (IE value = 8) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | Report cells within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 4) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 1" |

MEASUREMENT REPORT (Step 4) (3.84 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 4) (7.68 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |

| | |
|---|---|
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - CHOICE SyncCase | Sync Case 2 |
| - Timeslot | 0 |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 1(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 6) (FDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 2" |

MEASUREMENT REPORT (Step 6) (1.28 Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 1 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Refer to clause titled "Default settings for cell 2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | |
| - CHOICE event result | Check to see if set to "Intra-frequency event results" |
| - Intra-frequency event identity | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Check to see if set to "Cell parameters ID of Cell 2(TDD)" |
| - SCTD indicator | FALSE |

MEASUREMENT REPORT (Step 6) (3.84Mcps TDD and 7.68Mcps TDD)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell Parameters ID | Refer to clause titled "Default settings for cell No.2 (TDD)" in clause 6.1 of TS 34.108 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is absent |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell Parameters ID | Refer to clause titled "Default settings for cell No.1 (TDD)" in clause 6.1 of TS 34.108 |

| | |
|---|---|
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is absent |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1G" |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - Cell Parameter ID | Refer to clause titled "Default settings for cell No.2 (TDD)" in clause 6.1 of TS 34.108 |

PHYSICAL CHANNEL RECONFIGURATION (Step 7) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| New Primary E-RNTI | '0101 0101 0101 0101' |
| Frequency info | Not present |
| Maximum allowed UL TX power | Not present |
| Uplink DPCH info | Not present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Measurement Power Offset | 12 (6 dB) |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| Downlink information common for all radio links | |
| - MAC-hs reset indicator | TRUE |
| Downlink information for each radio link list | |
| - Downlink information for each radio link | (for cell 1) |
| - Choice mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) |
| - Cell ID | Not Present |
| - Serving HS-DSCH radio link indicator | FALSE |
| - Serving E-DCH radio link indicator | FALSE |
| - Downlink DPCH info for each RL | Not present |
| - SCCPCH information for FACH | Not present |
| - Downlink information for each radio link | (for cell 2) |
| - Choice mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Ref. to the Default setting in TS34.108 clause 6.1 (FDD) |
| - Cell ID | Not Present |
| - Serving HS-DSCH radio link indicator | TRUE |
| - Serving E-DCH radio link indicator | TRUE |
| - Downlink DPCH info for each RL | Not present |
| - CHOICE mode | FDD |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used |
| - DPCH frame offset | Calculated value from Cell synchronisation information |
| - Secondary CPICH info | Not Present |
| - DL channelisation code | |
| - Secondary scrambling code | 1 |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set |
| - Code number | 0 |
| - Scrambling code change | Not present |
| - TPC combination index | 1 |
| - Closed loop timing adjustment mode | Not Present |
| - E-AGCH Info | |
| - E-AGCH Channelisation Code | 10 |
| - CHOICE E-HICH Information | |
| - E-HICH Information | |
| - Channelisation code | 4 |
| - Signature sequence | 1 |
| - CHOICE E-RGCH Information | |
| - E-RGCH Information | |
| - Signature Sequence | 0 |
| - RG combination index | 0 |

PHYSICAL CHANNEL RECONFIGURATION (Step 7) (1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| Frequency info | Not present | |
| Maximum allowed UL TX power | Not present | |
| Downlink HS-PDSCH Information | | |
| - HS-SCCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9 | |
| - Measurement Feedback Info | | |
| - CHOICE mode | TDD (no data) | |
| - CHOICE mode | TDD | |
| - CHOICE TDD option | 1.28 Mcps TDD | |
| - HS-PDSCH Midamble Configuration | | |
| - Midamble Allocation Mode | Default midamble | |
| - Midamble Configuration | 8 | |
| - Midamble Shift | Not present | |
| Downlink information common for all radio links | | |
| - MAC-hs reset indicator | TRUE | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28 Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Ref. to the Default setting for cell 2 in TS34.108 clause 6.1 (TDD) | |
| - SCTD indicator | FALSE | |

PHYSICAL CHANNEL RECONFIGURATION (Step 7) (3.84Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| New Primary E-RNTI | '0101 0101 0101 0101' |
| Frequency info | Not present |
| Maximum allowed UL TX power | Not present |
| Uplink DPCH info | Not present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84Mcps |
| - Ack-Nack Power Offset | 0dB |
| - HS-SICH Power Control Info | |
| - UL SIR target | 0dB |
| - HS-SICH Constant Value | -10dB |
| - $D_{hs-sync}$ | Not present |
| - HS-SCCH Set Configuration | 4 |
| - Timeslot number | The timeslot in which HS-SCCH is to be configured |
| - Channelisation code | CC16/x where x is a previously unassigned channelisation code in this TS |
| - Midamble Allocation mode | Default |
| - Midamble configuration | 8 |
| - BLER target | -2.4 (note that this equates to a BLER target of 0.4%, log10(0.004) = -2.4) |
| - HS-SICH configuration | |
| - Timeslot number | The timeslot in which HS-SICH is to be configured |
| - Channelisation code | CC16/x where x is a previously unassigned channelisation code in this TS |
| - Midamble Allocation mode | Default |
| - Midamble configuration | 8 |
| - Measurement Feedback Info | Not Present |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - HS-PDSCH Timeslot Configuration | |
| - HS-PDSCH Timeslot Configuration List | Reference to clause 6.10 Parameter Set |
| - Timeslot Number | The timeslot(s) in which HS-HS-DSCH is to be configured |
| - CHOICE Burst Type | Reference to clause 6.10 Parameter Set |
| - Midamble Allocation Mode | Default |
| - Midamble configuration burst type 1 and 3 | 8 |
| Downlink information common for all radio links | |
| - MAC-hs reset indicator | TRUE |
| Downlink information for each radio link list | |
| - Downlink information for each radio link | |
| - Choice mode | TDD |
| - Primary CCPCH info | |
| - Choice mode | TDD |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - CHOICE SyncCase | Refer to clause titled "Default settings for cell No.2 (TDD)" in clause 6.1 of TS 34.108 |
| - Timeslot | Refer to clause titled "Default settings for cell No.2 (TDD)" in clause 6.1 of TS 34.108 |
| - Cell parameters ID | Refer to clause titled "Default settings for cell No.2 (TDD)" in clause 6.1 of TS 34.108 |
| - SCTD indicator | FALSE |
| - CHOICE DPCH info | Not present |
| - E-AGCH Info | Present |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84Mcps |
| - Long Term Grant Indicator | FALSE |
| - Length of TTRI field | Reference to clause 6.10 Parameter Set |
| - E-AGCH set configuration | Reference to clause 6.10 Parameter Set |
| - TS number | Reference to clause 6.10 Parameter Set |
| - Channelisation code | Reference to clause 6.10 Parameter Set |
| - CHOICE Burst Type | Reference to clause 6.10 Parameter Set |

| | |
|---|---|
| - Midamble allocation | Reference to clause 6.10 Parameter Set |
| - E-AGCH BLER Target | -2 |
| - CHOICE mode | TDD |
| - E-HICH info | Present |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84Mcps |
| - $N_{E-HICH}$ | 4 |
| - TS Number | Reference to clause 6.10 Parameter Set |
| - Channelisation code | Reference to clause 6.10 Parameter Set |
| - Burst Type | Reference to clause 6.10 Parameter Set |
| - Midamble allocation mode | Reference to clause 6.10 Parameter Set |

PHYSICAL CHANNEL RECONFIGURATION (Step 7) (7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| New Primary E-RNTI | '0101 0101 0101 0101' |
| Frequency info | Not present |
| Maximum allowed UL TX power | Not present |
| Uplink DPCH info | Not present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84Mcps |
| - Ack-Nack Power Offset | 0dB |
| - HS-SICH Power Control Info | |
| - UL SIR target | 0dB |
| - HS-SICH Constant Value | -10dB |
| - $D_{hs-sync}$ | Not present |
| - HS-SCCH Set Configuration | 4 |
| - Timeslot number | The timeslot in which HS-SCCH is to be configured |
| - Channelisation code | CC16/x where x is a previously unassigned channelisation code in this TS |
| - Midamble Allocation mode | Default |
| - Midamble configuration | 8 |
| - BLER target | -2.4 (note that this equates to a BLER target of 0.4%, log10(0.004) = -2.4) |
| - HS-SICH configuration | |
| - Timeslot number | The timeslot in which HS-SICH is to be configured |
| - Channelisation code | CC16/x where x is a previously unassigned channelisation code in this TS |
| - Midamble Allocation mode | Default |
| - Midamble configuration | 8 |
| - Measurement Feedback Info | Not Present |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68 Mcps TDD |
| - HS-PDSCH Timeslot Configuration | |
| - HS-PDSCH Timeslot Configuration List | Reference to clause 6.11 Parameter Set |
| - Timeslot Number | The timeslot(s) in which HS-HS-DSCH is to be configured |
| - CHOICE Burst Type | Reference to clause 6.11 Parameter Set |
| - Midamble Allocation Mode | Default |
| - Midamble configuration burst type 1 and 3 | 8 |
| Downlink information common for all radio links | |
| - MAC-hs reset indicator | TRUE |
| Downlink information for each radio link list | |

#### 8.2.6.51.5 Test requirements

After step 0a, the UE shall transmit a MEASUREMENT REPORT message (FDD only).

After step 3, the UE shall transmit a MEASUREMENT REPORT message. This step doesn't apply for 1.28 Mcps TDD.

After step 5, the UE shall transmit a MEASUREMENT REPORT message.

After step 8, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.6.52 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving E-DCH cell change, compressed mode)

#### 8.2.6.52.1 Definition

All UEs which support FDD, HS-PDSCH, E-DPDCH and fully support F-DPCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.6.52.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> set the variable ORDERED_RECONFIGURATION to TRUE;

…

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is included, the UE shall:

2> at the time indicated by IE "TGCFN":

3> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" is set to "activate"; and

3> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "active".

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.6.15 (FDD only).

### 8.2.6.52.3 Test purpose

To confirm that the UE is able to perform a timing re-initialised hard handover to another frequency after compressed mode measurement on the target frequency in conjunction with a serving E-DCH cell change according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.52.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 and cell 6 are active

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A14 in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE fully supports F-DPCH (FDD only)
- UE supports E-PUCH (TDD only)Test Procedure

**Table 8.2.6.52**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| PCCPCH RSCP | dBm | -60 | -70 | -70 | -60 |

Table 8.2.6.52 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in state 6-18 under condition A14 as specified in TS34.108 clause 7.4 in cell 1 and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.52.

The SS configures compressed mode (if required) by sending a PHYSICAL CHANNEL RECONFIGURATION message, which includes the IE "DPCH compressed mode info" with the IE "TGPS Status Flag" set to "Deactivate" (FDD only). The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (FDD only).

The SS switches its downlink transmission power setting according to columns "T1" in table 8.2.6.52, but the UE shall not transmit any MEASUREMENT REPORT messages.

The SS then sets up inter-frequency measurements (event 2b) and activates compressed mode (if required), by sending a MEASUREMENT CONTROL message to the UE. The SS waits for 1s for the UE to activate compressed mode. The UE shall transmit MEASUREMENT REPORT message to report event 2b with the measured CPICH RSCP and Ec/No values for cell 6 to the SS.

The SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 6. At the activation time the UE changes to Cell 6 keeping the E-DCH configuration. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

The SS calls for the generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.52. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads compressed mode parameters without activating compressed mode (if required) (FDD only). |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowleges the downloading of the compressed mode parameters (only if compressed mode was configured) (FDD only). |
| 4 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.52. |
| 5 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE and activates compressed mode (if required). |
| 6 | → | | MEASUREMENT REPORT | The UE shall report event 2b with the measured CPICH RSCP and Ec/No values for cell 6 for FDD. The UE shall report event 2b with the measured PCCPCH RSCP for cell 6 for TDD. |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 6. |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message in cell 6. |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink DPCH info | |
| - Uplink DPCH power control info | |
| - DPCCH power offset | -40 (-80dB) |
| - PC Preamble | 1 frame |
| - SRB delay | 7 frames |
| - Power Control Algorithm | Algorithm1 |
| - TPC step size | 0 (1dB) |
| - $\Delta_{ACK}$ | 3 |
| - $\Delta_{NACK}$ | 3 |
| - Ack-Nack repetition factor | 1 |
| - HARQ_preamble_mode | 0 |
| - Scrambling code type | Long |
| - Scrambling code number | 0 (0 to 16777215) |
| - Number of DPDCH | 0 |
| - spreading factor | Not Present |
| - TFCI existence | FALSE |
| - Number of FBI bit | Not Present |
| - Puncturing Limit | Not Present |
| E-DCH Info | Not present |
| Downlink HS-PDSCH Information | Not present |
| Downlink information common for all radio links | |
| - Downlink F-DPCH info common for all RL | |
| - Timing Indication | Maintain |
| - Timing maintained Synchronization indicator | FALSE |
| - Downlink DPCH power control information | |
| - CHOICE Mode | FDD |
| -DPC Mode | 0 (Single) |
| - TPC command error rate target | 0.04 |
| - CHOICE mode | FDD |

| - CHOICH reported cell | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 2 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -68 dBm |
| - W non-used frequency | 0 |

MEASUREMENT REPORT (Step 6)

The contents of MEASUREMENT REPORT message is the same as them found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | Check to see if set to 15 |
| Measured Results | |
| - CHOICE Measurement | |
| - Inter frequency measured results list | Check to see if set to "Inter-frequency measured results list" |
| - Inter frequency measurement results | |
| - Frequency info | Set to the frequency of cell 6 |
| - UTRA carrier RSSI | Check to see if absent |
| - Inter frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | Check that the value of this IE is set to Scrambling code of cell 6 |
| - CPICH Ec/No | Check to see if it is present |
| - CPICH RSCP | Check to see if it is present |
| - Pathloss | Check to see if it is absent |
| Measured Results on RACH | Check to see if it is absent |
| Additional Measured results | Check to see if it is absent |
| - Measured Result | |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | Check that the value of this IE is set to the frequency of cell 6 |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code of cell 6 |

MEASUREMENT REPORT (Step 6) (3.84Mcps TDD and 7.68Mcps TDD)

The contents of MEASUREMENT REPORT message is the same as them found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | Check to see if set to 15 |
| Measured Results | |
| - CHOICE Measurement | |
| - Inter frequency measured results list | Check to see if set to "Inter-frequency measured results list" |
| - Inter frequency measurement results | |
| - Frequency info | Set to the frequency of cell 6 |
| - UTRA carrier RSSI | Check to see if absent |
| - Inter frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - CHOICE Mode | TDD |
| - Cell Parameters ID | Check that the value of this IE is set to cell parameters ID cell 6 |
| - Proposed TGSN | Check to see if it is absent |
| - Primary CCPCH RSCP | Check to see if it is present |
| - Pathloss | Check to see if it is absent |
| - Timeslot list | Check to see if it is absent |
| Measured Results on RACH | Check to see if it is absent |
| Additional Measured results | Check to see if it is absent |
| - Measured Result | |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | Check that the value of this IE is set to the frequency of cell 6 |
| - Non freq related measurement event results | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - Cell Parameters ID | Check that the value of this IE is set to the cell parameters ID of cell 6 |

PHYSICAL CHANNEL RECONFIGURATION (Step 7)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| New Primary E-RNTI | '0101 0101 0101 0101' |
| New Secondary E-RNTI | Not Present |
| Frequency info | |
| - UARFCN uplink(Nu) | Not Present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |

### 8.2.6.52.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (FDD only).

After step 5 the UE shall transmit a MEASUREMENT REPORT message containing the IE "measured results" reporting cell 6's CPICH RSCP and Ec/No values, also report the triggering of event '2b' included in IE "Event results".

After step 7, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 6.

## 8.2.6.53 Void

## 8.2.6.54 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH cell change, physical channel failure and reversion to old channel)

### 8.2.6.54.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH and E-DPDCH or E-PUCH.

### 8.2.6.54.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE according to subclause 8.5.4 failed to establish the dedicated physical channel(s) indicated in the received message or for 3.84 Mcps TDD and 7.68 Mcps TDD failed to establish the physical channel(s) indicated in the received message to which DCCH(s) are mapped the UE shall:

1> For TDD or For FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is not set to TRUE:

2> revert to the configuration prior to the reception of the message (old configuration), including any HS-DSCH and E-DCH configuration if existing;

2> For FDD: if the UE was in Cell DCH state prior to the reconfiguration:

3> perform the physical layer synchronisation procedure A as specified in [29];

3> apply power control preamble according to [26] during the number of frames indicated in the IE "PC preamble" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE; and

3> then not send any data on signalling radio bearers RB0 to RB4 during the number of frames indicated in the IE "SRB delay" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE or while the physical channel is not considered established;.

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration or for FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is set to TRUE:

2> initiate a cell update procedure according to subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to [4];

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

Reference(s)

TS 25.331 clause 8.2.2.7

8.2.6.54.3 Test purpose

To confirm that the UE reverts to the old E-DCH / HS-DSCH configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before the expiry of timer T312.

8.2.6.54.4 Method of test

Initial conditions

System Simulator: 2 cells - Cell 1 & Cell 6.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A13, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only) or E-PUCH (TDD only)

Test Procedure

The UE is in the CELL_DCH state and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to perform a timing re-initialized hard handover to Cell 6, but the SS does not configure the dedicated physical channels in Cell 6. At the activation time the UE attempts to establish dedicated physical channels on Cell 6, but fails to do so.
The UE shall then revert to the old E-DCH / HS-DSCH configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

The SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to perform a timing re-initialized hard handover to Cell 6. The SS does not configure the physical channels in Cell 6. |
| 2 | | | | The UE attempts to establish dedicated physical channels on Cell 6, but fails to do so. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE sends this message on Cell 1. The IE “failure cause” is set to “physical channel failure”. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 3)

Use the same message as specified in 34.108 Clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

### 8.2.6.54.5 Test requirements

After step 2, the UE shall revert to the old E-DCH / HS-DSCH configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

## 8.2.6.54a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH and HS-DSCH cell change with MIMO activated, physical channel failure and reversion to old channel)

### 8.2.6.54a.1 Definition and applicability

All UEs which support FDD and MIMO.

### 8.2.6.54a.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE according to subclause 8.5.4 failed to establish the dedicated physical channel(s) indicated in the received message or for 3.84 Mcps TDD or 7.68 Mcps TDD failed to establish the physical channel(s) indicated in the received message to which DCCH(s) are mapped the UE shall:

1> For TDD or for FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is not set to TRUE:

2> revert to the configuration prior to the reception of the message (old configuration), including any HS-DSCH and E-DCH configuration if existing;

2> For FDD: if the UE was in Cell DCH state prior to the reconfiguration:

3> perform the physical layer synchronisation procedure A as specified in [29];

3> apply power control preamble according to [26] during the number of frames indicated in the IE "PC preamble" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE; and

3> then not send any data on signalling radio bearers RB0 to RB4 during the number of frames indicated in the IE "SRB delay" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE or while the physical channel is not considered established;.

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration or for FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is set to TRUE:

2> initiate a cell update procedure according to subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to [4];

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

Reference(s)

TS 25.331 clause 8.2.2.7

### 8.2.6.54a.3 Test purpose

To confirm that the UE reverts to the original E-DCH / HS-DSCH with MIMO configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before the expiry of timer T312.

### 8.2.6.54a.4 Method of test

Initial conditions

System Simulator: 2 cells - Cell 1 and Cell 6.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports MIMO

Test Procedure

The UE is in CELL_DCH state.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with MIMO configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to perform a timing re-initialized hard handover to Cell 6 with MIMO active, but the SS does not configure the dedicated physical channels in Cell 6. At the activation time the UE attempts to establish dedicated physical channels on Cell 6, but fails to do so.

The UE shall then revert to the old E-DCH / HS-DSCH with MIMO configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the configured MIMO parameters. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE using the MIMO configuration.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEAER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to perform a timing re-initialized hard handover to Cell 6. The SS does not configure the physical channels in Cell 6. |
| 4 | | | | The UE attempts to establish dedicated physical channels on Cell 6, but fails to do so. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE sends this message on Cell 1. The IE “failure cause” is set to “physical channel failure”. |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)

Use the same message as specified in 34.108 Clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

#### 8.2.6.54a.5 Test requirements

At step 5, the UE shall revert to the old E-DCH / HS-DSCH configuration on Cell 1with MIMO active and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

### 8.2.6.54b Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH and HS-DSCH cell change with MIMO and 64QAM activated, physical channel failure and reversion to old channel)

#### 8.2.6.54b.1 Definition and applicability

UE category supports combined 64QAM and MIMO activation. UE support FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.6.54b.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE according to subclause 8.5.4 failed to establish the dedicated physical channel(s) indicated in the received message or for 3.84 Mcps TDD or 7.68 Mcps TDD failed to establish the physical channel(s) indicated in the received message to which DCCH(s) are mapped the UE shall:

1> For TDD or for FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is not set to TRUE:

2> revert to the configuration prior to the reception of the message (old configuration), including any HS-DSCH and E-DCH configuration if existing;

2> For FDD: if the UE was in Cell DCH state prior to the reconfiguration:

3> perform the physical layer synchronisation procedure A as specified in [29];

3> apply power control preamble according to [26] during the number of frames indicated in the IE "PC preamble" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE; and

3> then not send any data on signalling radio bearers RB0 to RB4 during the number of frames indicated in the IE "SRB delay" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE or while the physical channel is not considered established;.

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration or for FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is set to TRUE:

2> initiate a cell update procedure according to subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to [4];

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

Reference(s)

TS 25.331 clause 8.2.2.7

### 8.2.6.54b.3 Test purpose

To confirm that the UE reverts to the original E-DCH / HS-DSCH with 64QAM and MIMO configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before the expiry of timer T312.

### 8.2.6.54b.4 Method of test

Initial conditions

System Simulator: 2 cells - Cell 1 and Cell 6.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The UE is in CELL_DCH state.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with 64QAM and MIMO configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to perform a timing re-initialized hard handover to Cell 6 with 64QAM and MIMO active, but the SS does not configure the dedicated physical channels in Cell 6. At the activation time the UE attempts to establish dedicated physical channels on Cell 6, but fails to do so.

The UE shall then revert to the old E-DCH / HS-DSCH with 64QAM and MIMO configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the configured 64QAM and MIMO parameters. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE using the 64QAM and MIMO configuration.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEAER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA with 64QAM and MIMO configuration |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to perform a timing re-initialized hard handover to Cell 6. The SS does not configure the physical channels in Cell 6. |
| 4 | | | | The UE attempts to establish dedicated physical channels on Cell 6, but fails to do so. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE sends this message on Cell 1. The IE “failure cause” is set to “physical channel failure”. |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)

Use the same message as specified in 34.108 Clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

### 8.2.6.54b.5 Test requirements

At step 5, the UE shall revert to the old E-DCH / HS-DSCH configuration on Cell 1with 64QAM and MIMO active and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

## 8.2.6.54c Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH cell change, physical channel failure and reversion to old channel, in the multi-frequency network environment, for 1.28Mcps TDD only)

### 8.2.6.54c.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

### 8.2.6.54c.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE according to subclause 8.5.4 failed to establish the dedicated physical channel(s) indicated in the received message or for 3.84 Mcps TDD and 7.68 Mcps TDD failed to establish the physical channel(s) indicated in the received message to which DCCH(s) are mapped the UE shall:

1> For TDD or For FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is not set to TRUE:

2> revert to the configuration prior to the reception of the message (old configuration), including any HS-DSCH and E-DCH configuration if existing;

2> For FDD: if the UE was in Cell DCH state prior to the reconfiguration:

3> perform the physical layer synchronisation procedure A as specified in [29];

3> apply power control preamble according to [26] during the number of frames indicated in the IE "PC preamble" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE; and

3> then not send any data on signalling radio bearers RB0 to RB4 during the number of frames indicated in the IE "SRB delay" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE or while the physical channel is not considered established;.

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration or for FDD if the CM_PATTERN_ACTIVATION_ABORTED flag is set to TRUE:

2> initiate a cell update procedure according to subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to [4];

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Positon Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference(s)

TS 25.331 clause 8.2.2.7, 8.6.6.1,8.6.6.43.

### 8.2.6.54c.3 Test purpose

To confirm that the UE reverts to the old E-DCH / HS-DSCH configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before the expiry of timer T312, in the multi-frequency network environment.

### 8.2.6.54c.4 Method of test

Initial conditions

System Simulator:

2 cells

– Cell 1,3 frequency (one is primary frequency, others are secondary frequency)

–Cell 6, 1 frequency

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A13, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports E-PUCH

Test Procedure

The UE is in the CELL_DCH state and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception at one secondary frequency of cell 1.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to perform a timing re-initialized hard handover to Cell 6, but the SS does not configure the dedicated physical channels in Cell 6. At the activation time the UE attempts to establish dedicated physical channels on Cell 6, but fails to do so.
The UE shall then revert to the old E-DCH / HS-DSCH configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

The SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to perform a timing re-initialized hard handover to Cell 6. The SS does not configure the physical channels in Cell 6. |
| 2 | | | | The UE attempts to establish dedicated physical channels on Cell 6, but fails to do so. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE sends this message on Cell 1. The IE “failure cause” is set to “physical channel failure”. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| - SCTD indicator | FALSE | |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 3)

Use the same message as specified in 34.108 Clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

#### 8.2.6.54c.5 Test requirements

After step 2, the UE shall revert to the old E-DCH / HS-DSCH configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

### 8.2.6.55 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of discontinuous uplink transmission and downlink reception)

#### 8.2.6.55.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.6.55.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

….

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> store the contents of the IE in the variable DTX_DRX_PARAMS.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clause 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.6.55.3 Test purpose

To confirm that the UE reconfigures the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the IE DTX_DRX_Information received in PHYSICAL CHANNEL RECONFIGURATION message from the SS.

### 8.2.6.55.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A14 in cell 1 as specified in clause 7.4 of TS 34.108

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission

Test Procedure

The UE is in state 6-18 under condition A14 as specified in TS 34.108 clause 7.4 in cell 1 and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. UE re-configures the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations

according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration. The UE then transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | Physical Channel reconfiguration | |
| 2 | → | | Physical Channel reconfiguration complete | |
| 3 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used (i.e. duration of 10 consecutive DTX cycle 2). |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS34.108, with the following exceptions:

#### 8.2.6.55.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 3 the time between 11 consecutive CQI indications shall be 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

After step 3, the UE shall be in Cell_DCH state

### 8.2.6.56 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of HS-SCCH less operation)

#### 8.2.6.56.1 Definition and applicability

All UEs, which support FDD and HS-SCCH less.

#### 8.2.6.56.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

….

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message;

1> the UE shall determine the value for the HS_SCCH_LESS_STATUS variable.

The variable HS_SCCH_LESS_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> no DCH transport channel is configured;

1> the UE is not configured in MIMO mode;

1> the variable HS_SCCH_LESS_PARAMS is set;

1> the UE has received IE "HS-SCCH less information".

If any of the above conditions is not met and the variable HS_SCCH_LESS_STATUS is set to TRUE and the value of IE "HS-SCCH less information" included in this message is not "Continue HS-SCCH less operation", the UE shall:

1> set the variable HS_SCCH_LESS_STATUS to FALSE;

1> clear the variable HS_SCCH_LESS_PARAMS;

1> stop all HS-SCCH less related activities.

Whenever the variable HS_SCCH_LESS_STATUS is set to TRUE, the UE shall:

1> configure the physical and MAC layers to operate according to the HS_SCCH_LESS_PARAMS;

1> configure the physical layer to use a virtual IR buffer size of at least 4536 bits for HS-SCCH less HS-DSCH transmissions.

After step 2, the UE shall be in Cell_DCH state

### 8.2.6.57 Physical Channel Reconfiguration for transition from CELL_DCH to URA_PCH: Success (frequency modification, stop of discontinuous uplink transmission)

#### 8.2.6.57.1 Definition

All UEs, which support FDD and UL DTX.

8.2.6.57.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

2> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> store the contents of the IE in the variable DTX_DRX_PARAMS.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

…

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> if any IEs related to HS-DSCH are stored in the UE:

2> clear any stored IE "Downlink HS-PDSCH information";

2> for 1.28Mcps TDD, clear the IE "HS-PDSCH Midamble Configuration" and the IE " HS-SCCH Set Configuration" in the IE "DL-MultiCarrier-Information";

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

1> if any IEs related to E-DCH are stored in the UE:

2> clear any stored IE "E-DCH info";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> if any of the IEs "DTX-DRX timing information" or "DTX-DRX information" are stored in the UE:

2> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

1> if the IE "HS-SCCH less information" is stored in the UE:

2> determine the value for the HS_SCCH_LESS_STATUS variable and take the corresponding actions as described in subclause 8.5.35.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.5.34, 8.6.6.38, 8.6.6.39.

8.2.6.57.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC;

To confirm that the UE transits from CELL_DCH with UL DTX and DL DRX configured to URA_PCH state on a different frequency after it received a PHYSICAL CHANNEL RECONFIGURATION message;

To confirm that the UE releases the HS channels and selects a common physical channel on a different frequency.

8.2.6.57.4 Method of test

Initial Condition

System Simulator: 2 cells– Cell 1 and cell 6 are active.

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A20 in cell 1 as specified in clause 7.4 of TS 34.108

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission.

Test Procedure

**Table 8.2.6.57**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.6.57 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.6.57. The UE is in state 6-18 under condition A20 as specified in TS34.108 clause 7.4 in cell 1. The SS switches its downlink transmission power settings to columns "T1" and transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state, selects cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to select to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state with UL DTX and DL DRX configured in cell 1 and the SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.57 |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE transmit this message in cell 1. |
| 4 | | | | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br><br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 5 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 with following exceptions:

| Frequency info<br>- CHOICE mode<br>- UARFCN uplink (Nu)<br><br><br><br>- UARFCN downlink (Nd) | <br>FDD<br>Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [11]<br>Set to the frequency of cell 6 |
| Downlink information for each radio link<br>- Primary CPICH Info<br>- Primary scrambling code | <br><br>Set to same code as used for cell 6 |

### 8.2.6.57.5 Test requirement

At step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

At step 4 the UE shall be in URA_PCH state in cell 6.

## 8.2.6.58 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving E-DCH cell change with discontinuous uplink transmission)

### 8.2.6.58.1 Definition and applicability

All UEs which support FDD and UL DTX.

8.2.6.58.2 Conformance requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

3> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> store the contents of the IE in the variable DTX_DRX_PARAMS.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

…

If the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the new value(s) in the variable E_RNTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included and E-DCH is included and there is more than one MAC-d flow carried on E-DCH then the UE shall:

1> if any occurrence of the IE E-DCH Transmission Time Interval and, if present, the field HARQ info for E-DCH (IE HARQ RV Configuration):

2> apply the values of any occurrence for IE E-DCH Transmission Time Interval and, if present, the field HARQ info to all E-DCH MAC-d flows.

NOTE: The IE "Added or Reconfigured DL TrCH information" is iterated for each added or reconfigured MAC-d flow carried on E-DCH.

1> if the choice "UL parameters" is set to 'EDCH':

2> if the IE "HARQ Info" is included:

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow" is included:

3> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> if the IE "Non-scheduled transmission grant info" is included:

2> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled grant HARQ process allocation" is configured for this MAC-d flow:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms HARQ process allocation", with a total size not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> else:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total size not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

1> if the IE "Scheduled transmission grant info" is included:

2> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

2> if the IE "E-AGCH Info" is included:

3> store the newly received E-AGCH configuration.

2> if the IE "E-HICH information" is included:

3> store this E-HICH configuration for the concerning radio link.

2> if the IE "E-RGCH information" is included:

3> store this E-RGCH configuration for the concerning radio link.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link;

3> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

4> clear the variable H_RNTI.

2> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

3> no longer consider this radio link as the serving HS-DSCH radio link.

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving E-DCH radio link;

3> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

4> if the IE "New Primary E-RNTI" is not included:

5> clear the Primary E-RNTI stored in the variable E_RNTI.

4> if the IE "New Secondary E-RNTI" is not included:

5> clear the Secondary E-RNTI stored in the variable E_RNTI.

2> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

3> no longer consider this radio link as the serving E-DCH radio link.

2> if the IE "E-HICH release indicator" is present:

3> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

2> if the IE "E-RGCH release indicator" is present:

3> delete the stored E-RGCH configuration for this RL.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28;

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the IE "E-DPCCH Info" is included:

2> store the newly received E-DPCCH configuration.

1> if the IE "E-DPDCH Info" is included:

2> store the newly received E-DPDCH configuration.

NOTE: The UTRAN should ensure the ordering of the E-TFCI table in increasing transmission power, by correct setting of the reference E-TFCI power offsets.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

1> configure the MAC with the stored IE "E-DPDCH" configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37, 8.6.6.38, 8.6.6.39.

### 8.2.6.58.3 Test purpose

To confirm that the UE changes the serving E-DCH cell with discontinuous uplink transmission according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.58.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission.

Test Procedure

**Table 8.2.6.58**

| Parameter | Unit | Cell 1 | | | | Cell 2 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | -60 | -70 | -75 | -60 | -70 | -60 |

Table 8.2.6.58 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The downlink transmission power is set according to values in column “T0” in table 8.2.6.58. The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/ HS-DCH in cell 1, E-DCH transmission Time Interval is set to 10ms, and UL DTX is active.

SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.58. UE shall be triggered to transmit a MEASUREMENT REPORT message, which includes the primary scrambling code for cell 2.

After the MEASUREMENT REPORT message is received, the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC to add cell 2 to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links and cell 1 shall be kept as the serving E-DCH and HS-DSCH cell. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.58. The SS configures reporting of event 1d “change of best cell” by transmitting a MEASUREMENT CONTROL message to the UE, and the UE shall send an initial MEASUREMENT REPORT which includes the primary scrambling code of cell 1 according to IE "Intra-frequency event identity" set to 1d.

The SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.58. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for cell 2 according to IE "Intra-frequency event identity" set to 1d.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. This message requests the change of serving E-DCH cell with UL DTX Configured. At the activation time the UE and SS change the E-DCH and HS-DSCH serving cell to cell 2 and perform MAC-hs reset. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS checks that the UE does not transmit on UL DPCCH during DTX

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.58. |
| 1 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 2 | ← | | ACTIVE SET UPDATE | The SS instructs the UE to add cell 2 in the active set. |
| 3 | → | | ACTIVE SET UPDATE COMPLETE | The UE adds the radio link in cell 2. |
| 4 | SS | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.2.6.58. |
| 5 | ← | | MEASUREMENT CONTROL | Configure event 1D “Change of best cell” |
| 6 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 7 | SS | | | SS configures its downlink transmission power settings according to columns "T3" in table 8.2.6.58 |
| 8 | → | | MEASUREMENT REPORT | See specific message contents for this message |
| 9 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Serving E-DCH and HS-DSCH cell change with UL DTX Configured |
| 10 | SS | | | At the activation time, the SS changes the serving E-DCH and HS-DSCH radio link to cell 2 and performs MAC-hs reset. |
| 11 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 12 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 13 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 2)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| DTX-DRX timing information | |
| CHOICE *timing* | Continue |
| DTX-DRX Information | Not Present |
| DRX Information | |
| - UE DRX cycle | 10 |
| - Inactivity Threshold for UE DRX cycle | 32 |
| - Inactivity Threshold for UE Grant Monitoring | 8 |
| - UE DRX Grant Monitoring | TRUE |
| Uplink DPCCH slot format information | 1 |
| Radio link addition information | |
| - Primary CPICH Info | |
| - Primary scrambling code | Primary scrambling code of Cell 2 |
| - Downlink F-DPCH info for each RL | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used |
| - F-DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38 400 |
| - F-DPCH slot format | 3 if UE supports enhanced F-DPCH, otherwise Not Present |
| - Secondary CPICH info | Not Present |
| - Secondary scrambling code | Not Present |
| - Code number | 12 |
| - TPC combination index | 1 |
| - CHOICE E-HICH Information | |
| - E-HICH Information | |
| - Channelisation code | 4 |
| - Signature sequence | 2 |
| - CHOICE E-RGCH Information | |
| - E-RGCH Information | |
| - Signature Sequence | 3 |
| - RG combination index | 1 |
| Serving HS-DSCH cell information | |
| $\Delta_{ACK}$ | OMIT |
| $\Delta_{NACK}$ | OMIT |
| HARQ_preamble_mode | 0 |
| Primary CPICH info | OMIT |
| Downlink HS-PDSCH Information | Same as radio bearer setup message. |
| HARQ Info | OMIT |
| MAC-hs reset indicator | OMIT |

MEASUREMENT CONTROL (Step 5)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| - CHOICE measurement type | Intra-frequency measurement |
| - Intra frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 3 |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1D |
| - Triggering condition 2 | Active set cells |
| - Hysteresis | 8 (4 dB) |
| - Time to trigger | 20 mSec |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active set |
| - Maximum number of reported cells | 3 |
| - Use CIO | FALSE |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 6)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 1" |

MEASUREMENT REPORT (Step 8)

Use the same message as specified in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is present |
| - CPICH RSCP | Checked that this IE is present |
| - DeltaRSCP | Not checked |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 2" |

PHYSICAL CHANNEL RECONFIGURATION (Step 9)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| New Primary E-RNTI | '0101 0101 0101 0101' |
| Frequency info | Not present |
| DTX-DRX timing information | |
| CHOICE timing | |
| - New timing | |
| - Enabling Delay | 0 |
| - UE DTX DRX Offset | 0 |
| DTX-DRX Information | |
| - CHOICE E-DCH TTI length | 10ms |
| - UE DTX cycle 1 | 10 |
| - UE DTX cycle 2 | 20 |
| - MAC DTX cycle | 10 |
| - Inactivity Threshold for UE DTX cycle 2 | 8 |

#### 8.2.6.58.5 Test requirements

At step 1, the UE shall transmit a MEASUREMENT REPORT message.

At step 6, the UE shall transmit a MEASUREMENT REPORT message.

At step 8, the UE shall transmit a MEASUREMENT REPORT message.

At step 11, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

At step 12 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.6.59 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving E-DCH cell change with discontinuous uplink transmission)

#### 8.2.6.59.1 Definition

All UEs, which support FDD and UL DTX.

#### 8.2.6.59.2 Conformance requirement

If the UE receives:

- a PHYSICAL CHANNEL RECONFIGURATION message;

it shall:

1> set the variable ORDERED_RECONFIGURATION to TRUE;

…

1> act upon all received information elements as specified in TS25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is included, the UE shall:

2> at the time indicated by IE "TGCFN":

3> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" is set to "activate"; and

3> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "active".

…

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

4> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> store the contents of the IE in the variable DTX_DRX_PARAMS.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.6.6.15, 8.5.34, 8.6.6.38, 8.6.6.39.

### 8.2.6.59.3 Test purpose

To confirm that the UE is able to perform a timing re-initialized hard handover to another frequency after compressed mode measurement on the target frequency in conjunction with a serving E-DCH cell change and UL DTX configured according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.59.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 and cell 6 are active

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A20 in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission

Test Procedure

**Table 8.2.6.59**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.6.59 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in state 6-18 under condition A20 as specified in TS34.108 clause 7.4 in cell 1 and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception. E-DCH transmission Time Interval is set to 10ms. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.59.

The SS configures compressed mode (if required) by sending a PHYSICAL CHANNEL RECONFIGURATION message, which includes the IE "DPCH compressed mode info" with the IE "TGPS Status Flag" set to "Deactivate". The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

The SS switches its downlink transmission power setting according to columns "T1" in table 8.2.6.59, but the UE shall not transmit any MEASUREMENT REPORT messages.

The SS then sets up inter-frequency measurements (event 2b) and activates compressed mode (if required), by sending a MEASUREMENT CONTROL message to the UE. The SS waits for 1s for the UE to activate compressed mode. The UE shall transmit MEASUREMENT REPORT message to report event 2b with the measured CPICH RSCP and Ec/No values for cell 6 to the SS.

The SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 6 and configure UL DTX. At the activation time the UE changes to Cell 6 keeping the E-DCH configuration with UL DTX configured. Finally the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. SS verifies that UE does not transmit on UL DPCCH during DTX.The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms.

The SS calls for the generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.6.59. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads compressed mode parameters without activating compressed mode (if required). |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of the compressed mode parameters (only if compressed mode was configured). |
| 4 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.6.59. |
| 5 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE and activates compressed mode (if required). |
| 6 | → | | MEASUREMENT REPORT | The UE shall report event 2b with the measured CPICH RSCP and Ec/No values for cell 6. |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 6 and configure UL DTX. |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message in cell 6. |
| 9 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink DPCH info | |
| - Uplink DPCH power control info | |
| - DPCCH power offset | -40 (-80dB) |
| - PC Preamble | 1 frame |
| - SRB delay | 7 frames |
| - Power Control Algorithm | Algorithm1 |
| - TPC step size | 0 (1dB) |
| - $\Delta_{ACK}$ | 3 |
| - $\Delta_{NACK}$ | 3 |
| - Ack-Nack repetition factor | 1 |
| - HARQ_preamble_mode | 0 |
| - Scrambling code type | Long |
| - Scrambling code number | 0 (0 to 16777215) |
| - Number of DPDCH | 0 |
| - spreading factor | Not Present |
| - TFCI existence | FALSE |
| - Number of FBI bit | Not Present |
| - Puncturing Limit | Not Present |
| E-DCH Info | Not present |
| Downlink HS-PDSCH Information | Not present |
| Downlink information common for all radio links | |
| - Downlink F-DPCH info common for all RL | |
| - Timing Indication | Maintain |
| - Timing maintained Synchronization indicator | FALSE |
| - Downlink DPCH power control information | |
| - CHOICE Mode | FDD |
| -DPC Mode | 0 (Single) |
| - TPC command error rate target | 0.04 |
| - CHOICE mode | FDD |
| - DPCH compressed mode info | |
| - TGPSI | 1 |
| - TGPS Status Flag | Deactivate |

| - TGPL1 | 3 |
| - RPP | mode 0 |
| - ITP | mode 0 |
| - CHOICE UL/DL Mode | UL and DL, UL only, or DL only, depending on UE capability |
| - Downlink compressed mode method | SF/2 (Comment: If F-DPCH is configured this IE shall not be used by the UE.) |
| - Uplink compressed mode method | SF/2 |
| - Downlink frame type | B |
| - DeltaSIR1 | 20 (2.0) |
| - DeltaSIRAfter1 | 10 (1.0) |
| - DeltaSIR2 | Not Present |
| - DeltaSIRAfter2 | Not Present |
| - N identify abort | Not Present |
| - T Reconfirm abort | Not Present |
| - TX Diversity Mode | Not Present |
| - Default DPCH Offset Value | Not Present |
| - MAC-hs reset indicator | Not Present |

| Information Element | Value/remark |
|---|---|
| - Downlink information for each radio link list | OMIT |

MEASUREMENT CONTROL (Step 5)

Use the same message sub-type found in [9] TS 34.108 clause 9, with the following exceptions in the IE(s) concerned:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 15 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency measurement object list | |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | Remove all inter-frequency cells |
| - New inter-frequency cells | |
| - Inter-frequency cell id | 6 |
| - Frequency info | Set to the frequency of cell 6 |
| - Cell info | |
| - Cell individual offset | 0 (0 dB) |
| - Reference time difference to cell | OMIT |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |
| - Primary CPICH TX power | Not Present |
| - Primary CPICH TX power | |
| - TX Diversity Indicator | Not Present |
| - Cell for measurement | FALSE |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - CHOICE Mode | FDD |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - COICE Mode | FDD |
| - CPICH Ec/No reporting indicator | TRUE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Measurement validity | |
| - UE state | CELL_DCH |
| - Inter-frequency set update | On with no reporting |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2b |
| - Threshold used frequency | -65 dBm |
| - W used frequency | 0 |
| - Hysteresis | 2 (1.0 dB) |
| - Time to trigger | 100 ms |
| - Reporting cell status | |
| - CHOICH reported cell | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 2 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -68 dBm |
| - W non-used frequency | 0 |
| DPCH compressed mode status info | |
| - TGPS reconfiguration CFN | (Current CFN + (100 – TTI/10msec))mod 256 |
| - Transmission gap pattern sequence | |
| - TGPSI | 1 |
| - TGPS Status Flag | Activate |

| Information Element | Value/remark |
|---|---|
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 |

MEASUREMENT REPORT (Step 6)

The contents of MEASUREMENT REPORT message is the same as them found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | Check to see if set to 15 |
| Measured Results | |
| - CHOICE Measurement | |
| - Inter frequency measured results list | Check to see if set to "Inter-frequency measured results list" |
| - Inter frequency measurement results | |
| - Frequency info | Set to the frequency of cell 6 |
| - UTRA carrier RSSI | Check to see if absent |
| - Inter frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is present |
| - Cell synchronisation information | Check to see if it is absent |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | Check that the value of this IE is set to Scrambling code of cell 6 |
| - CPICH Ec/No | Check to see if it is present |
| - CPICH RSCP | Check to see if it is present |
| - Pathloss | Check to see if it is absent |
| Measured Results on RACH | Check to see if it is absent |
| Additional Measured results | Check to see if it is absent |
| - Measured Result | |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | Check that the value of this IE is set to the frequency of cell 6 |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code of cell 6 |

PHYSICAL CHANNEL RECONFIGURATION (Step 7)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |

| - MAC Inactivity Threshold | 8 |
| - CQI DTX Timer | 32 |
| - UE DPCCH burst_1 | 1 |
| - UE DPCCH burst_2 | 1 |
| DRX Information | |
| - UE DRX cycle | 10 |
| - Inactivity Threshold for UE DRX cycle | 32 |
| - Inactivity Threshold for UE Grant Monitoring | 8 |
| - UE DRX Grant Monitoring | TRUE |
| Uplink DPCCH slot format information | 1 |
| Downlink information common for all radio links | |
| - Downlink F-DPCH info common for all RL | |
| - Timing indication | Initialise |
| - Downlink F-DPCH power control information | Not Present |
| - TPC command error rate target | 0.04 |
| - DPCH compressed mode info | Not present |
| - TX Diversity mode | Not Present |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| - MAC-hs reset indicator | TRUE |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code of cell 6 |
| - Cell ID | Not present |
| - Serving HS-DSCH radio link indicator | TRUE |
| - Serving E-DCH radio link indicator | TRUE |
| - Downlink DPCH info for each RL | Not present |
| - Downlink F-DPCH info for each RL | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used |
| - F-DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38400 |
| - F-DPCH slot format | 3 if UE supports enhanced F-DPCH, otherwise Not Present |
| - Secondary CPICH info | Not present |
| - Secondary scrambling code | Not present |
| - Code number | 12 |
| - TPC combination index | 0 |
| - E-AGCH information | |
| - E-AGCH channelisation code | 10 |
| - CHOICE E-HICH information | E-HICH information |

| Information Element | Value/remark |
|---|---|
| - Channelisation code | 4 |
| - Signature sequence | 2 |
| - CHOICE E-RGCH Information | E-RGCH information |
| - Signature sequence | 3 |
| - RG combination index | 1 |

## 8.2.6.60 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialised hard handover, Serving E-DCH cell change with discontinuous uplink transmission, physical channel failure and reversion to old channel)

### 8.2.6.60.1 Definition

All UEs which support FDD and UL DTX.

### 8.2.6.60.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE according to subclause 8.5.4 failed to establish the dedicated physical channel(s) indicated in the received message or for 3.84 Mcps TDD and 7.68 Mcps TDD failed to establish the physical channel(s) indicated in the received message to which DCCH(s) are mapped the UE shall:

1> if the CM_PATTERN_ACTIVATION_ABORTED flag is not set to TRUE:

2> revert to the configuration prior to the reception of the message (old configuration), including any HS-DSCH and E-DCH configuration if existing;

2> if the UE was in Cell DCH state prior to the reconfiguration:

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only);

3> apply power control preamble according to [26] during the number of frames indicated in the IE "PC preamble" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE; and

3> then not send any data on signalling radio bearers RB0 to RB4 during the number of frames indicated in the IE "SRB delay" in the variable LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE or while the physical channel is not considered established;.

1> if the CM_PATTERN_ACTIVATION_ABORTED flag is set to TRUE or if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration:

2> initiate a cell update procedure according to subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

1> if the old configuration does not include dedicated physical channels (CELL_FACH state):

2> select a suitable UTRA cell according to [4];

2> if the UE selects another cell than the cell the UE camped on upon reception of the reconfiguration message:

3> initiate a cell update procedure according to subclause 8.3.1, using the cause "Cell reselection";

3> after the cell update procedure has completed successfully:

4> proceed as below.

1> transmit a failure response message as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

Reference(s)

TS 25.331 clause 8.2.2.7

### 8.2.6.60.3 Test purpose

To confirm that the UE reverts to the old E-DCH / HS-DSCH configuration with UL DTX and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before the expiry of timer T312.

### 8.2.6.60.4 Method of test

Initial conditions

System Simulator: 2 cells - Cell 1 & Cell 6.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission.

Test Procedure

The UE is in the CELL_DCH state and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception. E-DCH transmission Time Interval is set to 10ms.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to perform a timing re-initialized hard handover to Cell 6 and UL DTX configured, but the SS does not configure the dedicated physical channels in Cell 6. At the activation time the UE attempts to establish dedicated physical channels on Cell 6, but fails to do so.
The UE shall then revert to the old E-DCH / HS-DSCH configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message to the SS on the DCCH using AM RLC, with the value "physical channel failure" in the IE "failure cause".

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms.

The SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to perform a timing re-initialized hard handover to Cell 6. The SS does not configure the physical channels in Cell 6. |
| 2 | | | | The UE attempts to establish dedicated physical channels on Cell 6, but fails to do so. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE sends this message on Cell 1. The IE “failure cause” is set to “physical channel failure”. |
| 4 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 Clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| New Primary E-RNTI | ‘0101 0101 0101 0101’ |
| New Secondary E-RNTI | Not Present |
| Frequency info | |

| - RG combination index | 1 |

PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 3)

Use the same message as specified in 34.108 Clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Failure cause | Physical channel failure |

### 8.2.6.60.5 Test requirements

At step 3, the UE shall revert to the old E-DCH / HS-DSCH configuration on Cell 1 and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message.

At step 4 the time between 11 consecutive CQI indications shall be 400ms.

## 8.2.6.61 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (CQI reporting reduction)

### 8.2.6.61.1 Definition and applicability

All UEs, which support FDD and UL DTX.

### 8.2.6.61.2 Conformance requirement

If the IE "Measurement Feedback Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the received configuration;

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

…

When UL_DTX_Active is FALSE (see section 6C), the UE shall always transmit the Channel-Quality Indication (CQI) in the CQI transmission pattern defined in 6A.1.2.

When UL_DTX_Active is TRUE (see section 6C), the UE shall perform the following procedures:

The UE shall set the initial value of the variable CQI_DTX_Priority to 1.

Afterwards the UE sets the CQI_DTX_Priority based on the status of a "CQI nominal reporting timer" which is counting down to zero in subframes from the value CQI_DTX_TIMER which is configured by higher layers.

The setting of CQI_DTX_Priority to 1 is described in subclause 6A.1.1.

Upon the expiration of the CQI nominal reporting timer, the UE shall set CQI_DTX_Priority to 0.

CQI_DTX_Priority=0 indicates that CQI reports have lower priority than the Uplink DPCCH burst pattern. If CQI_DTX_Priority is set to 0, the UE shall transmit the Channel-Quality Indication (CQI) only if the start of the CQI field in the CQI transmission pattern as defined in 6A.1.2 overlaps with a DPCCH transmission burst of the Uplink DPCCH burst pattern as indicated in 6C.2.1.

CQI_DTX_Priority=1 indicates that CQI reports have higher priority than the Uplink DPCCH burst pattern. If CQI_DTX_Priority is set to 1, the UE shall always transmit the Channel-Quality Indication (CQI) in the CQI transmission pattern defined in 6A.1.2.

Reference

3GPP TS 25.331 clause 8.6.6.34, 8.6.6.39,

3GPP TS 25.214 clause 6C.1

### 8.2.6.61.3 Test purposes

1. To confirm that the UE correctly performs the HS-DPCCH CQI reporting procedure using some of the extended values for the IE CQI feedback cycle, according to the received RADIO BEARER SETUP message.

2. To confirm that the UE correctly performs the CQI reporting reduction procedure according to the received PHYSICAL CHANNEL RECONFIGURATION message:
   a. When the CQI nominal reporting timer is running the CQI reporting is higher priority than the UL DTX.
   b. When the CQI nominal reporting timer is expired the CQI reporting is lower priority than the UL DTX.

### 8.2.6.61.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH (state 6-7) with SRBs mapped to E-DCH/HS-DSCH as specified in clause 7.4 of TS 34.108

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports discontinuous uplink transmission

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The test operator is prompted to make an outgoing call. The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer with RB mapping to E-DCH/HS-DSCH with use of F-DPCH, and requests to use one (64ms) of the new CQI feedback values. The UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. The SS checks that the UE transmits CQI information according to the CQI feedback cycle of 64ms, by measuring the delay between 11 consecutive CQI reports (the first CQI report to be taken into account must be taken after the reception of the RADIO BEARER SETUP COMPLETE message).

The SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. This message requests activation of UL DTX in the UE and changes the CQI feedback cycle according to the values in the table below.

| Parameter | Value |
|---|---|
| UE DTX Cycle 1 | 20 ms |
| UE DTX Cycle 2 | 320 ms |
| Inactivity Threshold for UE DTX Cycle 2 | 320 ms (10ms E-DCH TTI) |
| CQI DTX Timer | 512 ms |
| CQI feedback cycle | 32 ms |

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS checks that the UE transmits CQI information according to the CQI feedback cycle of 32ms regardless of the active UL DTX, by measuring the delay between 11 consecutive CQI reports (the first CQI report being taken into account must

be taken after the reception of the PHYSICAL CHANNEL RECONFIGURATION message). Thereafter the SS waits for 1s and then checks that the UE transmits CQI information according to the UL DTX timing (i.e. only every 320 ms), measuring the delay between 11 consecutive CQI reports.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | CQI feedback cycle = 64 ms. |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | SS | | | The SS verifies that the delay between 11 consecutive CQI reports is 640 ms (i.e. duration of 10 consecutive CQI feedback cycles). |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | UL DTX is activated,<br>CQI feedback cycle = 32 ms. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 6 | SS | | | The SS verifies that the delay between 11 consecutive CQI reports is 320 ms (i.e. duration of 10 consecutive CQI feedback cycles). |
| 7 | SS | | | The SS waits for 1s. |
| 8 | SS | | | The SS verifies that the delay between 11 consecutive CQI reports is 3200 ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH" (condition A14) in TS 34.108 clause 9, except for the following:

### 8.2.6.61.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the uplink DCCH using AM RLC.

After step 2, the UE shall transmit CQI reports every 64 ms. The time between 11 consecutive CQI reports shall be 640 ms (verifies test purpose 1).

After step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 5, the UE shall transmit CQI reports every 32 ms. The timebetween 11 consecutive CQI reports shall be 320 ms (verifies test purpose 2a).

After step 7, the UE shall transmit CQI reports every 320ms. The time between 11 consecutive CQI reports shall be 3200 ms (verifies test purpose 2b).

## 8.2.6.62 Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (activation and de-activation of 64QAM)

### 8.2.6.62.1 Definition and Applicability

All UEs which support FDD, mac-ehs and 64QAM

### 8.2.6.62.2 Conformance Requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL COMPLETE as response message on the uplink DCCH using AM RLC.

Extract From 25.331 clause 8.6.6.36:

If the IE "Downlink HS-PDSCH Information" is included and the UE would be in CELL_DCH state after completion of this procedure, the UE shall:

1> for 1.28 Mcps TDD, if the HS-PDSCH has been configured by the IE "DL Multi-carrier information":

2> clear other stored carriers configuration in the IE "DL Multi-carrier information".

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34.

1> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

[…]

| | | | | | |
|---|---|---|---|---|---|
| >FDD | | | | | |
| >>Downlink 64QAM configured | OP | | Enumerated (TRUE) | Absence of this IE means that the HS-SCCH does not use the 64QAM format. The presence of this IE means the UE uses the octet aligned table [15]. | REL-7 |
| >>HS-DSCH TB size table | CV-*Not64QAM* | | Enumerated (octet aligned) | If this IE is present, octet aligned table [15] is used, else bit aligned table [15] is used. | REL-7 |

|---|---|
| *Not64QAM* | This IE is optionally present if 64QAM is not configured and MAC-ehs is configured. Otherwise it is not needed. |

Reference(s)

TS 25.331 clause 8.6.6.36, 10.3.6.23a

8.2.6.62.3 Test purpose

1. To confirm that the UE starts HS-DSCH transmission using DL 64QAM mode according to PHYSICAL CHANNEL RECONFIGURATION message on DCCH.
2. To confirm that the UE stops HS-DSCH transmission using DL 64QAM mode according to PHYSICAL CHANNEL RECONFIGURATION message on DCCH.

8.2.6.62.4 Method of test

Initial conditions

System Simulator:

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17b, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports MAC-ehs and 64QAM
- UE fully supports F-DPCH

Test Procedure

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs).

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, to reconfigure for DL 64 QAM which includes IE " Downlink HS-PDSCH Information". After the UE receives this message, it reconfigures the radio bearer and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the configured 64QAM parameters. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE. The SS transmits PHYSICAL CHANNEL RECONFIGURATION message which omits DL 64 QAM settings. The UE should deactivate DL 64 QAM and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using HS-DSCH. The UE shall respond with a UE CAPABILITY

INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE using SRB2 on HS-DSCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Activation of 64QAM on HS-DSCH Including IE " Downlink HS-PDSCH Information ". |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH using 64QAM |
| 4 | → | | UE CAPABILITY INFORMATION | |
| 5 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH using 64QAM |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Deactivation of 64QAM on HS-DSCH. |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 8 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH using QPSK |
| 9 | → | | UE CAPABILITY INFORMATION | |
| 10 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH using QPSK |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 2 HS-SCCH |
| - HS-SCCH Channelisation Code | 6 |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | TRUE |
| - HS-DSCH TB size table | Not present |

PHYSICAL CHANNEL RECONFIGURATION (Step 6)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 1 HS-SCCH |
| - HS-SCCH Channelisation Code | 7 |

| | |
|---|---|
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| - HS-DSCH TB size table | Octet aligned |

#### 8.2.6.62.5 Test requirements

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 3 the UE should receive UE CAPABILITY ENQUIRY mapped on DL 64QAM HS-DSCH(mac-ehs)

At step 5 the UE should receive UE CAPABILITY INFORMATION CONFIRM mapped on DL 64QAM HS-DSCH(mac-ehs)

After step 6 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 8 the UE should receive SRB UE CAPABILITY ENQUIRY mapped on DL QPSK HS-DSCH(mac-ehs).

At step 10 the UE should receive SRB UE CAPABILITY INFORMATION CONFIRM mapped on DL QPSK HS-DSCH(mac-ehs).

### 8.2.6.62a Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (activation and de-activation of 64QAM) with SRBs mapped in E-DCH/DCH

#### 8.2.6.62a.1 Definition and Applicability

All UEs which support FDD, mac-ehs and 64QAM

#### 8.2.6.62a.2 Conformance Requirement

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

2> transmit a PHYSICAL CHANNEL COMPLETE as response message on the uplink DCCH using AM RLC.

Extract From 25.331 clause 8.6.6.36:

If the IE "Downlink HS-PDSCH Information" is included and the UE would be in CELL_DCH state after completion of this procedure, the UE shall:

1> for 1.28 Mcps TDD, if the HS-PDSCH has been configured by the IE "DL Multi-carrier information":

2> clear other stored carriers configuration in the IE "DL Multi-carrier information".

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34.

2> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

[…]

| | | | | | |
|---|---|---|---|---|---|
| >FDD | | | | | |
| >>Downlink 64QAM configured | OP | | Enumerated (TRUE) | Absence of this IE means that the HS-SCCH does not use the 64QAM format. The presence of this IE means the UE uses the octet aligned table [15]. | REL-7 |
| >>HS-DSCH TB size table | CV-*Not64QAM* | | Enumerated (octet aligned) | If this IE is present, octet aligned table [15] is used, else bit aligned table [15] is used. | REL-7 |

TS 25.331 clause 8.6.6.36, 10.3.6.23a

### 8.2.6.62a.3 Test purpose

1. To confirm that the UE starts HS-DSCH transmission using DL 64QAM mode according to PHYSICAL CHANNEL RECONFIGURATION message on DCCH.

2. To confirm that the UE stops HS-DSCH transmission using DL 64QAM mode according to PHYSICAL CHANNEL RECONFIGURATION message on DCCH.

### 8.2.6.62a.4 Method of test

Initial conditions

System Simulator:

UE: PS_DCCH DCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition, A17e, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD

- UE supports MAC-ehs and 64QAM

Test Procedure

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs).

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, to reconfigure for DL 64 QAM which includes IE " Downlink HS-PDSCH Information". After the UE receives this message, it reconfigures the radio bearer and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits PHYSICAL CHANNEL RECONFIGURATION message which omits DL 64 QAM settings. The UE should deactivate DL 64 QAM and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Activation of 64QAM on HS-DSCH Including IE " Downlink HS-PDSCH Information". |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Deactivation of 64QAM on HS-DSCH. |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 2 HS-SCCH |
| - HS-SCCH Channelisation Code | 6 |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | TRUE |
| - HS-DSCH TB size table | Octet Aligned |

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 1 HS-SCCH |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| - HS-DSCH TB size table | Not present |

#### 8.2.6.62a.5 Test requirements

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.2.6.63 Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, Serving HS-DSCH cell change with MIMO enabled)

#### 8.2.6.63.1 Definition and applicability

All UEs which support FDD and MIMO.

#### 8.2.6.63.2 Conformance requirement

Extract from 25.331

1> if any IEs related to MIMO are stored in the UE:

2> determine the value for the MIMO_STATUS variable and take the corresponding actions as described in subclause 8.5.33.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

- 2> clear the MIMO_PARAMS variable;
- 2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

- 2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

- 2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

1> trigger lower layers to stop operation in MIMO mode.

NOTE: This subclause applies to FDD and 1.28 Mcps TDD only.

[…]

If the IE "MIMO parameters" is included, the UE shall:

1> act as specified in clauses 8.5.32 and 8.5.33;

1> If the IE "MIMO operation" is set to "start":

2> If the MIMO_STATUS variable is set to FALSE:

3> the UE behaviour is undefined.

2> otherwise:

3> indicate to lower layers to start operation in MIMO mode, using the parameter values stored in the variable MIMO_PARAMS.

1> If the IE "MIMO operation" is set to "continue":

2> If the MIMO_STATUS variable is set to FALSE:

3> the UE behaviour is undefined.

1> for FDD, if the IE "Primary CPICH usage for Channel Estimation" is set to "FALSE":

2> the UE behavior is undefined.

1> for FDD, if the IE "S-CPICH Info" is included and if the IE "Channelisation code" in MIMO pilot configuration is different from the IE "Channelisation Code" in Secondary CPICH info:

2> the UE behavior is undefined.

NOTE: This subclause applies to FDD and 1.28 Mcps TDD only.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.32, 8.5.33, 8.6.6.41

### 8.2.6.63.3 Test purpose

1. To confirm that the UE is able to perform a timing re-initialised hard handover to another frequency without prior measurement on the target frequency in conjunction with a serving HS-DSCH cell change and with MIMO enabled according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.63.4 Method of test

Initial Condition

System Simulator: 2 cells –2 cells - Cell 1 on frequency $f_1$, and cell2 on frequency $f_2$. Cells 1 and 2 have different primary scrambling codes (FDD only)

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports MIMO

Test Procedure

The UE is initially in CELL_DCH state of Cell 1 and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with MIMO configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. UE sends combined CQI/PCI reports of type A/B continuosly every 2 ms.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard handover with serving HS-DSCH cell change to Cell 2 on frequency $f_2$. At the activation time, the UE changes to Cell 2, keeping the HS-PDSCH configuration, and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on Cell 2.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the configured MIMO parameters. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE using the MIMO configuration.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEAER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | After RRC message reception, UE should continuously transmit composite CQI/PCI reports of type A or type B. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 2 |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | SRB2 on Cell 2 |
| 5 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH using MIMO configuration on Cell 2 |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH using MIMO configuration on Cell 2 |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH with enhanced data rate and RLC AM using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH (MAC-ehs)", condition A17b except for the following:

| Information Element | Value/remark |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY ENQUIRY (Step 5)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY INFORMATION (Step 6)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY INFORMATION CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108 clause 9.1

#### 8.2.6.63.5 Test requirements

At step 2, the UE shall transmit a RADIO SETUPCOMPLETE message on the uplink DCCH using AM RLC.

At step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 6, the UE shall transmit UE CAPABILITY INFORMATION on the uplink DCCH using AM RLC.

### 8.2.6.64 Physical channel reconfigurations for transition from CELL_DCH to CELL_DCH (activation and de-activation of UL 16QAM ): Success

#### 8.2.6.64.1 Definition and applicability

All UEs which support FDD and UL 16QAM

#### 8.2.6.64.2 Conformance requirement

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

…

If the IE "UL 16QAM settings" is included, the UE shall:

1> indicate to lower layers to operate in 16QAM mode, using the parameters contained in the IE

Reference

3GPP TS 25.331 clause 8.6.6.37, 8.6.6.42

#### 8.2.6.64.3 Test purpose

1. To confirm that the UE starts E-DCH transmission using UL 16QAM mode according to PHYSICAL CHANNEL RECONFIGURATION message on DCCH.
2. To confirm that the UE stops E-DCH transmission using UL 16QAM mode according to PHYSICAL CHANNEL RECONFIGURATION message on DCCH

#### 8.2.6.64.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: Idle state (State 3 or State 7) as specified in clause 7.4 of TS 34.108.Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH
- UE supports UL 16QAM
- UE fully supports F-DPCH

Test Procedure

The UE is brought to the CELL_DCH state after a successful incoming call attempt. The SS follows the procedure in TS 34.108 clause 7.1.3 (Mobile Terminated), to set up a user RAB, but with the default RAB replaced by the one described in 34.108, clause 6.10.2.4.6.3: Interactive or background / PS RAB + SRBs mapped onto E-DCH and HS-DSCH.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes IE "UL 16QAM settings". The UE should be configured with UL 16QAM for E-DCH transmission and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC. The UE should use UL 16QAM E-DCH transmission for the data loopback test. The SS transmits PHYSICAL CHANNEL RECONFIGURATION message which omits UL 16QAM settings. The UE should deactivate UL 16QAM and then transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC. The UE should use conventional QPSK E-DCH transmission for the data loopback test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | Paging Type 1 | The SS transmits the message, which includes a allocated identity (P-TMSI). |
| 1a | → | | RRC CONNECTION REQUEST | |
| 1b | ← | | RRC CONNECTION SETUP | |
| 1c | → | | RRC CONNECTION SETUP COMPLETE | |
| 1d | → | | SERVICE REQUEST | |
| 1e | ← | | AUTHENTICATION AND CIPHERING REQUEST | |
| 1f | → | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 1g | ← | | SECURITY MODE COMMAND | |
| 1h | → | | SECURITY MODE COMPLETE | |
| 1i | ← | | ACTIVATE RB TEST MODE | |
| 1j | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 1k | ← | | RADIO BEARER SETUP | RRC RAB SETUP<br>See specific message contents for this message |
| 1l | → | | RADIO BEARER SETUP COMPLETE | |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Including IE " UL 16QAM configuration" for activation of 16QAM on E-DCH |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ←→ | | Check for UL 16QAM | SS should verify that UL 16QAM is activated on E-DCH according to the sub test procedure below |
| 5 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | ←→ | | Check for UL QPSK | SS should verify that QPSK is activated on E-DCH according to the sub test procedure below |
| 8 | ← | | DEACTIVATE RB TEST MODE | |
| 9 | → | | DEACTIVATE RB TEST MODE COMPLETE | |

Test Procedure to Check for UL 16QAM and QPSK

Refer to section 14.7.1a.3 for the specific parameters related to the loopback test for this section.

Expected sub sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | (Void) | |
| 2 | | | (Void) | |
| 3 | ← | | CLOSE UE TEST LOOP (DCCH) | TC<br>UE test mode 1<br>RLC SDU size is set to 7992 (Note 4) |
| 4 | → | | CLOSE UE TEST LOOP COMPLETE (DCCH) | |
| 5 | SS | | | The SS sets the HS-DSCH TFRC test point ($N_{PDUs}$ = 1, *M* = QPSK, *N*codes = 1 and TFRI = 19).<br>and the number of HARQ processes is 6 as per section 14.7.1a.3 |
| 6 | ← | | DOWNLINK MAC-hs PDU (HS-DSCH#1) | For each DTCH mapped on HS-DSCH the SS sends test data. MAC-d PDU size is configured for 336 bits in the test case, please refer to Note 3. |
| 7 | → | | SI indicating data | |
| 8 | ← | | Absolute grant | Grant value 31 for maximum bit rate |
| 9 | → | | UPLINK RLC PDUs | If UL 16QAM is active then UE will use 2ms TTI transport block size table 3 (Note 1, also ref 25.331, section 10.3.6.99) with E-TFCI 70 (Note 2, Note 4). SS shall check the E-FTCI to verify 16QAM modulation on UL<br><br>If UL QSPK is active then UE will use 2ms TTI transport block size table 1 (Note 1) with E-TFCI 100. SS will check E-TFCI to verify QPSK as per “normal” E-DCH transmission |
| 10 | ← | | Absolute grant | Grant value 1, removal of SG |
| 11 | ← | | OPEN UE TEST LOOP (DCCH) | |
| 12 | → | | OPEN UE TEST LOOP COMPLETE (DCCH) | |
| 13 | | | (Void) | |
| 14 | | | (Void) | |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return the data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.
NOTE 4: The UL RLC SDU size is calculated as 25*320-8= 7992, such that TB size 8790 (factoring in the RLC Header size and the RLC ACK) corresponding to E-TFCI 70 will be selected. With PLnon-max = 0.84, [((8790+24[CRC] )/2[numblocks] ) *3 [TC] +12[Trellis bits]*2[numblocks] = 25458 bits. 25458* PLnon-max = 21384.72, this guarantees as per algorithm in 25.212 clause 4.8.4.1,16QAM to be selected [$2\times M_2+2\times M_4$]

Specific Message Contents

RADIO BEARER SETUP (Step 1k)

The contents of the Radio Bearer Setup message is identical to the message sub-type titled as “This IE is needed for "Packet to CELL_DCH / E-DCH / HS-DSCH using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH"” as found in 34.108 clause 9 with the following exception

| - Serving Grant | Not Present |
| -UL 16QAM settings | Not Present |

#### 8.2.6.64.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 4 the UE should use UL 16QAM E-DCH transmission for the data loopback test.

After step 6 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 7 the UE should use UL QPSK E-DCH transmission for the data loopback test.

### 8.2.6.65 Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, Serving HS-DSCH cell change with 64QAM and MIMO enabled)

#### 8.2.6.65.1 Definition and applicability

UE category supports combined 64QAM and MIMO activation. UE support FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.6.65.2 Conformance requiremen

Extract from 25.331

1> if any IEs related to MIMO are stored in the UE:

2> determine the value for the MIMO_STATUS variable and take the corresponding actions as described in subclause 8.5.33.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

1> trigger lower layers to stop operation in MIMO mode.

NOTE: This subclause applies to FDD and 1.28 Mcps TDD only.

[…]

If the IE "MIMO parameters" is included, the UE shall:

1> act as specified in clauses 8.5.32 and 8.5.33;

1> If the IE "MIMO operation" is set to "start":

2> If the MIMO_STATUS variable is set to FALSE:

3> the UE behaviour is undefined.

2> otherwise:

3> indicate to lower layers to start operation in MIMO mode, using the parameter values stored in the variable MIMO_PARAMS.

1> If the IE "MIMO operation" is set to "continue":

2> If the MIMO_STATUS variable is set to FALSE:

3> the UE behaviour is undefined.

1> for FDD, if the IE "Primary CPICH usage for Channel Estimation" is set to "FALSE":

2> the UE behavior is undefined.

1> for FDD, if the IE "S-CPICH Info" is included and if the IE "Channelisation code" in MIMO pilot configuration is different from the IE "Channelisation Code" in Secondary CPICH info:

2> the UE behavior is undefined.

NOTE: This subclause applies to FDD and 1.28 Mcps TDD only.

| >>Downlink 64QAM configured | OP | | Enumerated (TRUE) | Absence of this IE means that the HS-SCCH does not use the 64QAM format. The presence of this IE means the UE uses the octet aligned table [15]. | REL-7 |
| >>HS-DSCH TB size table | CV-*Not64QAM* | | Enumerated (octet aligned) | If this IE is present, octet aligned table [15] is used, else bit aligned table [15] is used. | REL-7 |

| Condition | Explanation |
|---|---|
| *Not64QAM* | This IE is optionally present if 64QAM is not configured and MAC-ehs is configured. Otherwise it is not needed. |

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.32, 8.5.33, 8.6.6.41, 10.3.6.23a

### 8.2.6.65.3 Test purpose

2. To confirm that the UE is able to perform a timing re-initialised hard handover to another frequency without prior measurement on the target frequency in conjunction with a serving HS-DSCH cell change and with MIMO and 64QAM enabled according to the received PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.65.4 Method of test

Initial Condition

System Simulator: 2 cells –2 cells - Cell 1 on frequency $f_1$, and Cell 6 on frequency $f_2$. Cells 1 and 6 have different primary scrambling codes (FDD only)

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM and MIMO

- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The UE is initially in CELL_DCH state of Cell 1 and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with MIMO configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. UE sends combined CQI/PCI reports of type A/B continuosly every 2 ms.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard handover with serving HS-DSCH cell change to Cell 6 on frequency $f_2$. At the activation time, the UE changes to Cell , and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on Cell 6.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the configured 64QAM and MIMO parameters. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE using the 64QAM and MIMO configuration.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEAER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA with 64QAM and MIMO configuration |
| 2 | → | | RADIO BEARER SETUP COMPLETE | After RRC message reception, UE should continuously transmit composite CQI/PCI reports of type A or type B. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 6. SRB2 on HS-DSCH using 64QAM and MIMO configuration |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | SRB2 on Cell 6 |
| 5 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH using 64QAM and MIMO configuration on Cell 6 |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH using MIMO configuration on Cell 6 |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY ENQUIRY (Step 5)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY INFORMATION (Step 6)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY INFORMATION CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108 clause 9.1

#### 8.2.6.65.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the uplink DCCH using AM RLC.

At step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 7, the UE shall transmit UE CAPABILITY INFORMATION on the uplink DCCH using AM RLC.

### 8.2.6.66 Physical Channel Reconfiguration from CELL_PCH to CELL_FACH: Success (autonomous transitions without cell update procedure)

#### 8.2.6.66.1 Definition and applicability

UE supports FDD and Enhanced Uplink in CELL_FACH state.

#### 8.2.6.66.2 Conformance requirement

Extract from 25.331

This procedure is used to transmit paging information to selected UEs in idle mode, CELL_PCH or URA_PCH state using the paging control channel (PCCH). Upper layers in the network may request paging, to e.g. establish a signalling connection. UTRAN may initiate paging for UEs in CELL_PCH or URA_PCH state to trigger a cell update procedure and for UEs in CELL_PCH when the variable HSPA_RNTI_STORED_CELL_PCH is set to TRUE to trigger a measurement report procedure. In addition, UTRAN may initiate paging for UEs in idle mode, CELL_PCH and URA_PCH state to trigger reading of updated system information. UTRAN may also initiate paging for UEs in CELL_PCH and URA_PCH state to release the RRC connection.

[…]

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in connected mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

1> if the IE "Used paging identity" is a UTRAN single UE identity and if this U-RNTI is the same as the U-RNTI allocated to the UE stored in the UE variable U_RNTI:

2> if the optional IE "CN originated page to connected mode UE" is included:

3> indicate reception of paging; and

3> forward the IE "CN domain identity", the IE "Paging cause" and the IE "Paging record type identifier" to the upper layers.

2> if the IE "Release indicator" in the IE "RRC connection release information" has the value "Release":

3> release all its radio resources;

3> indicate the release of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to the upper layers;

3> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

3> clear the variable ESTABLISHED_RABS;

3> pass the value of the IE "Release cause" received in the IE "Release information" to upper layers;

3> enter idle mode;

3> perform the actions specified in subclause 8.5.2 when entering idle mode;

3> and the procedure ends.

2> otherwise:

3> if variable HSPA_RNTI_STORED_CELL_PCH is set to TRUE:

4> move to CELL_FACH state as specified in subclause 8.5.56.

3> else:

[….]

If the UE after state transition remains in CELL_FACH state, it shall

1> start the timer T305 using its initial value if timer T305 is not running and periodical cell update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity";

1> if variable READY_FOR_COMMON_EDCH is set to TRUE:

2> configure the Enhanced Uplink in CELL_FACH state and Idle mode as specified in subclause 8.5.45 for FDD and 8.5.45a for 1.28 Mcps TDD.

1> else:

2> select PRACH according to subclause 8.5.17;

1> for 3.84 Mcps TDD and 7.68 Mcps TDD; or

1> for FDD and 1.28 Mcps TDD, if the UE does not support HS-DSCH reception in CELL_FACH state; or

1> if the IE "HS-DSCH common system information" is not included in System Information Block type 5 or System Information Block type 5bis; or

1> for 1.28 Mcps TDD, if the IE "Common E-DCH system info" is not included in System Information Block type 5:

2> select Secondary CCPCH according to subclause 8.5.19;

2> take the actions related to the HS_DSCH_RECEPTION_GENERAL variable as described in subclause 8.5.37a.

1> else:

2> For FDD, if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "RACH" in the UL; and

2> if the UE does not supports E-DCH transmission in CELL_FACH state and Idle mode or the IE "Common E-DCH system info" is not included system information block type 5 or 5bis; and

2> if variable H_RNTI and variable C_RNTI are set:

3> start to receive HS-DSCH according to the procedure in subclause 8.5.36.

2> else:

3> if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "E-DCH" in the UL; and

3> if variable READY_FOR_COMMON_EDCH is set to TRUE; and

3> if variable H_RNTI and variable C_RNTI and variable E-RNTI are set:

4> start to receive HS-DSCH according to the procedure in subclause 8.5.36.

3> else:

4> clear variable C_RNTI and delete any stored C-RNTI value;

4> clear variable H_RNTI and delete any stored H-RNTI value;

4> clear variable E_RNTI and delete any stored E-RNTI value;

4> clear any stored IEs "HARQ info";

4> set the variable INVALID_CONFIGURATION to TRUE.

[…]

The variable HSPA_RNTI_STORED_CELL_PCH shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_PCH state or the UE after state transition enters CELL_PCH state if the variable HSPA_RNTI_STORED_CELL_PCH is determined according to subclause 8.2.2.3 or 8.3.1.6; and

1> the UE supports E-DCH transmission in CELL_FACH state and Idle mode; and

1> the UE supports HS-DSCH reception in CELL_FACH state; and

1> the IE "HS-DSCH common system information" is included in system information block type 5 or 5bis; and

1> the IE "Common E-DCH system info" is included in system information block type 5 or 5bis; and

1> the IE "HS-DSCH paging system information" is not included in system information block type 5 or 5bis; and

1> the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "E-DCH" in the UL; and

1> variable H-RNTI is set; and

1> variable E_RNTI is set; and

1> IE "New C-RNTI" is included in the received message if the variable HSPA_RNTI_STORED_CELL_PCH is determined according to subclause 8.2.2.3 or 8.3.1.6, or variable C_RNTI is set if the variable HSPA_RNTI_STORED_CELL_PCH is determined according to subclause 8.3.1.2.

If any of the above conditions is not met and the variable HSPA_RNTI_STORED_CELL_PCH is set to TRUE, the UE shall:

1> set the variable HSPA_RNTI_STORED_CELL_PCH to FALSE.

If the variable HSPA_RNTI_STORED_CELL_PCH is set to TRUE:

1> if the UE has uplink RLC data PDU or uplink RLC control PDU on RB1 or upwards to transmit: or

1> if the UE is requested to move into CELL_FACH state by paging type 1 as described in subclause 8.1.2.3, UE shall:

2> move the UE to CELL_FACH state;

2> set the variable HSPA_RNTI_STORED_CELL_PCH to FALSE;

2> stop timer T319 if it is running;

2> restart the timer T305 if it is set to any value other than "infinity";

2> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

2> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

2> for FDD, if the variable READY_FOR_COMMON_EDCH is set to TRUE:

3> initiate the measurement report procedure as specified in subclause 8.4.2;

3> not prohibit periodical status transmission in RLC;

3> configure the Enhanced Uplink in CELL_FACH state and Idle mode as specified in subclause 8.5.45;

3> start to receive HS-DSCH according to the procedure in subclause 8.5.36.

[…]

In CELL_PCH or URA_PCH state, the UE shall:

1> if the measurement reporting is not initiated according to subclause 8.5.40 or subclause 8.5.56:

2> if variable READY_FOR_COMMON_EDCH is set to TRUE:

3> move to CELL_FACH;

3> transmit a MEASUREMENT REPORT message on the uplink DCCH when the reporting criteria stored in variable MEASUREMENT_IDENTITY are fulfilled for any ongoing UE positioning measurement which is being performed in the UE.

2> else:

3> first perform the cell update procedure according to subclause 8.3.1, using the cause "uplink data transmission", in order to transit to CELL_FACH state; and then

3> transmit a MEASUREMENT REPORT message on the uplink DCCH when the reporting criteria stored in variable MEASUREMENT_IDENTITY are fulfilled for any ongoing UE positioning measurement which is being performed in the UE.

For FDD, the UE in CELL_PCH state shall:

1> if variable H_RNTI is set:

2> if the measurement reporting is initiated according to subclause 8.5.40 or subclause 8.5.56:

3> set the IE "measurement identity" to "16";

3> not set the IE "measured results" or "E-UTRA measured results";

3> include the IE "measured results on RACH";

3> if an event triggered traffic volume measurement has been configured:

4> if the TCTV is larger than the threshold in the IE "Reporting threshold" for a traffic volume measurement stored in the MEASUREMENT_IDENTITY variable and that traffic volume measurement has "measurement identity" equal to 4, "Traffic volume event identity" equal to "4a", "Measurement validity" equal to "all states" or "all states except CELL_DCH":

5> set the IE "Traffic volume event identity" to "4a".

3> and then transmit the MEASUREMENT REPORT message on the uplink DCCH using AM RLC; when the MEASUREMENT REPORT message has been submitted to lower layers for transmission the procedure ends.

[….]

### 8.2.6.66.3 Test purpose

1. To confirm that UE performs transition from CELL_PCH to CELL_FACH state without the cell update procedure

### 8.2.6.66.4 Method of test

Initial Condition

System Simulator: 1 cell.

For system information block 5 see specific message contents.

UE: UE: PS-DCCH Enhanced CELL_FACH (state 6-8) as specified in clause 7.4 of TS 34.108 with SRB mapping on common E-DCH /HS-DSCH

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports of common E-DCH

Test Procedure

The UE is in CELL_FACH state under default condition A6 (RRC CONNECTION SETUP). The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to move the UE to CELL_PCH state.The UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using AM RLC message and moves to CELL_PCH state. The SS transmits a PAGING TYPE 1 over SCCPCH which includes a matched identifier and the optional IE "CN originated page to connected mode UE" The UE then moves to CELL_FACH state and transmits a MEASUREMENT REPORT. The UE shall then transmit an UPLINK DIRECT TRANSFER message using AM RLC on DCCH using common E-DCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS moves UE to CELL_PCH state.UE stores H-RNTI, C-RNTI and E-RNTI variables in CELL_PCH state. |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before start of state transition. |
| 3 | | | | Reconfiguration of Physical Channel after state transition. |
| 4 | ← | | PAGING TYPE 1 | Includes Matched identifier and optional IE “CN originated page to connected mode UE" |
| 5 | → | | MEASUREMENT REPORT | The UE moves to CELL FACH. This message shall contain IE "Measurement identity" set to "16” |
| 6 | → | | UPLINK DIRECT TRANSFER | Response to the paging message sent in step 4 |
| 7 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| CN domain identity | PS domain |
| NAS message | Not checked |
| Measured results on RACH | Not checked |

#### 8.2.6.66.5 Test requirement

1. After paging type 1 reception the UE transits to CELL-FACH state without performing a cell update procedure.

### 8.2.6.67 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of SPS operation without initial SPS resource) (1.28 Mcps TDD)

#### 8.2.6.67.1 Definition and applicability

All UEs which support TDD and SPS operation.

#### 8.2.6.67.2 Conformance requirement

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the HS_DSCH_SPS_STATUS variable.

The variable HS_DSCH_SPS_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> the IE "HS-DSCH SPS information" is included in the received message.

If any of the above conditions is not met and the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> set the variable HS_DSCH_SPS_STATUS to FALSE;

1> clear the variable HS_DSCH_SPS_PARAMS;

1> stop all HS-DSCH SPS related activities.

Whenever the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> configure the physical and MAC layers to operate according to the HS_DSCH_SPS_PARAMS.

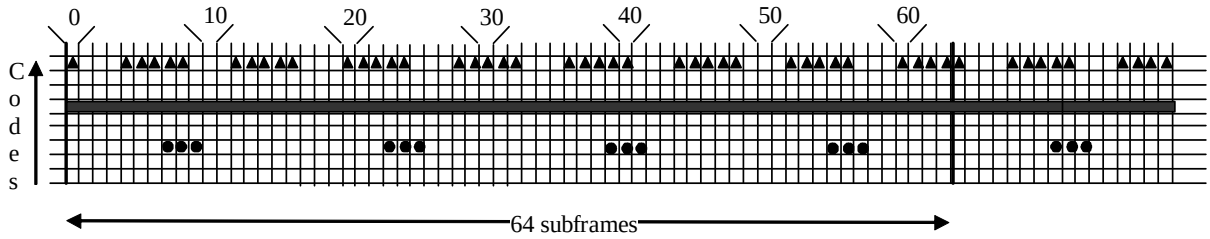
If variable HS_DSCH_SPS_STATUS is set to TRUE and the serving HS-DSCH cell was changed as a result of the received message and the value of IE "HS-DSCH SPS information" included in this message is "Continue HS-DSCH SPS operation", then UE behaviour is unspecified.

The subframes, i.e. TTI in 5ms, of non-scheduled E-PUCH allocated can be determined from "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", or of initial SPS E-PUCH and HS-PDSCH allocated can be determined from "Activation time", "Subframe number", "Repetition period" and "Repetition length" as below:

The parameter "$Offset_{sub}$" is defined to denote the offset of assigned E-PUCH or HS-PDSCH physical resource within each Repetition period and numerated in subframe number.

"$Offset_{sub}$" to be used is calculated by the following equation:

(Activation time* 2+ Subframe number) mod Repetition period = $Offset_{sub}$.



Here, a new term subCFN is defined to represent the Subframe within a specified CFN, and subCFN within a specified CFN is counted as below:

CFN* 2+ Subframe number = subCFN.

SubFrames from $subCFN_{off}$ to $subCFN_{off}$ + Repetition length - 1 belong to the allocation with $subCFN_{off}$ fulfilling the following equation:

$subCFN_{off}$ mod Repetition period = $Offset_{sub}$.

Example of usage:

▲ physic. channel (Code 7; Repetition period=8; Repetition length=5; Activation time = 2; Subframe number=0 => $Offset_{sub}$ = 4 => $subCFN_{off}$ = 4, 12, 20, 28, 36, 44, 52, 60)

■ physic. channel (Code 5; Repetition Period=1 => Repetition length=0; => $subCFN_{off}$ = 0, 1, 2, 3, 4, ... (continuous allocation))

● physic. channel (Code 3; Repetition period=16; Repetition length=3; Activation time = 11; Subframe number=1; =>$Offset_{sub}$ = 7 => $subCFN_{off}$ = 7, 23, 39, 55 )

**Figure 8.6.6.16a-1: Examples for subframe allocations in TDD**

If the IE "SPS information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the IE "E-DCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "E-DCH SPS operation" is set to "New E-DCH SPS operation":

3> after the UE has received IE "E-HICH Information":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> if the IE "EI" is included:

6> consider the E-HICH has the same configuration as that in the IE "E-HICH Info" for 1.28Mcps TDD which has the same value of EI indicated by the IE "EI" in this message.

5> else:

6> use the same configuration as the E-HICH for non-schedule transmission.

4> else:

5> store the E-HICH configuration according to the IEs "Timeslot Number", "Channelisation Code" and midamble configuration IEs.

4> store and use the Signature Sequence indicated by the IE "Signature Sequence Group Index".

3> if the IE "Transmission Pattern List" is included:

4> store the contents of the IE in the variable E_DCH_SPS_PARAMS.

3> if the IE "Initial SPS info for E-DCH" is included:

4> perform E-DCH SPS operation on the semi-persistent E-PUCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the E_DCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.54.

2> if the IE "Initial SPS info for E-DCH" is included, the calculation of assigned initial E-DCH SPS transmission grant is specified in subclause 8.6.6.16a

1> else if the IE "E-DCH SPS Information" is not included, the UE shall:

2> set the variable E_DCH_SPS_STATUS to FALSE;

2> clear the variable E_DCH_SPS_PARAMS;

2> stop all E-DCH SPS related activities.

1> if the IE "HS-DSCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "HS-DSCH SPS operation" is set to "New HS-DSCH SPS operation":

3> if the IE "Transport Block Size List" or the IE "Reception Pattern List" is included:

4> store the contents of the IE in the variable HS_DSCH_SPS_PARAMS.

3> if the IE "HARQ Info for Semi-Persistent Scheduling" is included:

4> calculate the size of each virtual IR buffer according to following equation:

Size of virtual IR soft buffer = Total buffer for HS-SCCH SPS operation / $N_{IR}$

where

- Total buffer for HS-SCCH SPS operation is signalled in the IE "Process Memory size", and the IE is the total size of the virtual IR buffers which could be used in HS-SCCH SPS operation;

- $N_{IR}$ is the value of the IE "Number of Processes", and the IE is the number of HARQ processes which could be used in HS-SCCH SPS operation.

3> after the UE has received IE "HS-SICH List":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> transmit the HS-SICH according to the configuration in the IE "HS-SCCH Configuration" for 1.28Mcps TDD, of which the position listed in the IE "HS-SCCH Set Configuration in" in ascending order is indicated by the IE "HS-SCCH Index" in this message.

4> else:

5> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

3> if the IE "Initial SPS info for HS-DSCH" is included:

4> perform HS-SCCH SPS operation on the semi-persistent HS-PDSCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the HS_DSCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.55.

2> if the IE "Initial SPS info for HS-DSCH" is included, the calculation of assigned initial HS-DSCH SPS transmission grant is specified in subclause 8.6.6.16a

1> else if the IE "HS-DSCH SPS Information" is not included, the UE shall:

2> set the variable HS_DSCH_SPS_STATUS to FALSE;

2> clear the variable HS_DSCH_SPS_PARAMS;

2> stop all HS-DSCH SPS related activities.

### 8.2.6.67.3 Test purpose

To confirm that the UE reconfigures the physical layer to perform SPS operation according to the IE E-DCH SPS Information and HS-DSCH SPS Information received in PHYSICAL CHANNEL RECONFIGURATION message from the SS.

### 8.2.6.67.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A13 in cell 1 as specified in clause 7.4 of TS 34.108

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports SPS operation

Test Procedure

The UE is in state 6-18 under condition A13 as specified in TS 34.108 clause 7.4 in cell 1 and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. UE re-configures the physical layer to perform SPS operation according to the IE E-DCH SPS Information and HS-DSCH SPS Information. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See message contents |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (TDD)

### 8.2.6.67.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 2, the UE shall be in Cell_DCH state.

## 8.2.6.68 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of SPS operation with initial SPS resource) (1.28 Mcps TDD)

### 8.2.6.68.1 Definition and applicability

All UEs which support TDD and SPS operation.

### 8.2.6.68.2 Conformance requirement

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the HS_DSCH_SPS_STATUS variable.

The variable HS_DSCH_SPS_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> the IE "HS-DSCH SPS information" is included in the received message.

If any of the above conditions is not met and the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> set the variable HS_DSCH_SPS_STATUS to FALSE;

1> clear the variable HS_DSCH_SPS_PARAMS;

1> stop all HS-DSCH SPS related activities.

Whenever the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> configure the physical and MAC layers to operate according to the HS_DSCH_SPS_PARAMS.

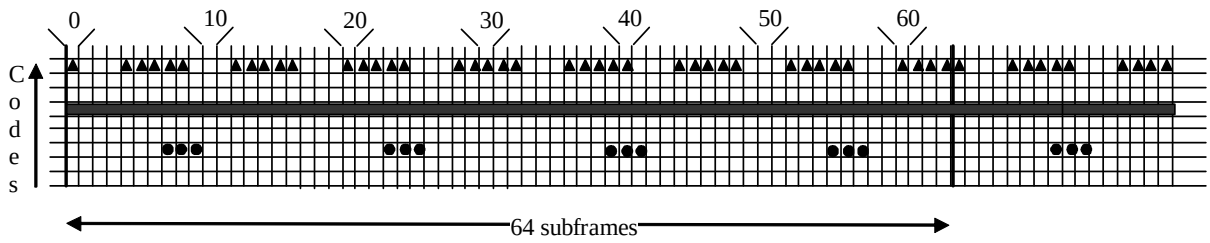
If variable HS_DSCH_SPS_STATUS is set to TRUE and the serving HS-DSCH cell was changed as a result of the received message and the value of IE "HS-DSCH SPS information" included in this message is "Continue HS-DSCH SPS operation", then UE behaviour is unspecified.

The subframes, i.e. TTI in 5ms, of non-scheduled E-PUCH allocated can be determined from "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", or of initial SPS E-PUCH and HS-PDSCH allocated can be determined from "Activation time","Subframe number", " Repetition period " and " Repetition length" as below:

The parameter "$Offset_{sub}$" is defined to denote the offset of assigned E-PUCH or HS-PDSCH physical resource within each Repetition period and numerated in subframe number.

"$Offset_{sub}$" to be used is calculated by the following equation:

(Activation time* 2+ Subframe number) mod Repetition period = $Offset_{sub}$.



Here, a new term subCFN is defined to represent the Subframe within a specified CFN, and subCFN within a specified CFN is counted as below:

CFN* 2+ Subframe number = subCFN.

SubFrames from $subCFN_{off}$ to $subCFN_{off}$ + Repetition length - 1 belong to the allocation with $subCFN_{off}$ fulfilling the following equation:

$subCFN_{off}$ mod Repetition period = $Offset_{sub}$.

Example of usage:

▲ physic. channel (Code 7; Repetition period=8; Repetition length=5; Activation time = 2; Subframe number=0 => $Offset_{sub}$ = 4 => $subCFN_{off}$ = 4, 12, 20, 28, 36, 44, 52, 60)

■ physic. channel (Code 5; Repetition Period=1 => Repetition length=0; => $subCFN_{off}$ = 0, 1, 2, 3, 4, ... (continuous allocation))

● physic. channel (Code 3; Repetition period=16; Repetition length=3; Activation time = 11; Subframe number=1; =>$Offset_{sub}$ = 7 => $subCFN_{off}$ = 7, 23, 39, 55 )

**Figure 8.6.6.16a-1: Examples for subframe allocations in TDD**

If the IE "SPS information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the IE "E-DCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "E-DCH SPS operation" is set to "New E-DCH SPS operation":

3> after the UE has received IE "E-HICH Information":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> if the IE "EI" is included:

6> consider the E-HICH has the same configuration as that in the IE "E-HICH Info" for 1.28Mcps TDD which has the same value of EI indicated by the IE "EI" in this message.

5> else:

6> use the same configuration as the E-HICH for non-schedule transmission.

4> else:

5> store the E-HICH configuration according to the IEs "Timeslot Number", "Channelisation Code" and midamble configuration IEs.

4> store and use the Signature Sequence indicated by the IE "Signature Sequence Group Index".

3> if the IE "Transmission Pattern List" is included:

4> store the contents of the IE in the variable E_DCH_SPS_PARAMS.

3> if the IE "Initial SPS info for E-DCH" is included:

4> perform E-DCH SPS operation on the semi-persistent E-PUCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the E_DCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.54.

2> if the IE "Initial SPS info for E-DCH" is included, the calculation of assigned initial E-DCH SPS transmission grant is specified in subclause 8.6.6.16a

1> else if the IE "E-DCH SPS Information" is not included, the UE shall:

2> set the variable E_DCH_SPS_STATUS to FALSE;

2> clear the variable E_DCH_SPS_PARAMS;

2> stop all E-DCH SPS related activities.

1> if the IE "HS-DSCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "HS-DSCH SPS operation" is set to "New HS-DSCH SPS operation":

3> if the IE "Transport Block Size List" or the IE "Reception Pattern List" is included:

4> store the contents of the IE in the variable HS_DSCH_SPS_PARAMS.

3> if the IE "HARQ Info for Semi-Persistent Scheduling" is included:

4> calculate the size of each virtual IR buffer according to following equation:

Size of virtual IR soft buffer = Total buffer for HS-SCCH SPS operation / $N_{IR}$

where

- Total buffer for HS-SCCH SPS operation is signalled in the IE "Process Memory size", and the IE is the total size of the virtual IR buffers which could be used in HS-SCCH SPS operation;
- $N_{IR}$ is the value of the IE "Number of Processes", and the IE is the number of HARQ processes which could be used in HS-SCCH SPS operation.

3> after the UE has received IE "HS-SICH List":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> transmit the HS-SICH according to the configuration in the IE "HS-SCCH Configuration" for 1.28Mcps TDD, of which the position listed in the IE "HS-SCCH Set Configuration in" in ascending order is indicated by the IE "HS-SCCH Index" in this message.

4> else:

5> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

3> if the IE "Initial SPS info for HS-DSCH" is included:

4> perform HS-SCCH SPS operation on the semi-persistent HS-PDSCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the HS_DSCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.55.

2> if the IE "Initial SPS info for HS-DSCH" is included, the calculation of assigned initial HS-DSCH SPS transmission grant is specified in subclause 8.6.6.16a

1> else if the IE "HS-DSCH SPS Information" is not included, the UE shall:

2> set the variable HS_DSCH_SPS_STATUS to FALSE;

2> clear the variable HS_DSCH_SPS_PARAMS;

2> stop all HS-DSCH SPS related activities.

#### 8.2.6.68.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 2, the UE shall be in Cell_DCH state.

### 8.2.6.69 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of Control Channel DRX operation) (1.28 Mcps TDD)

#### 8.2.6.69.1 Definition and applicability

All UEs which support TDD and Control Channel DRX.

#### 8.2.6.69.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or

…

it shall:

…

1> for 1.28 Mcps TDD, if the IEs "Control Channel DRX Information" is stored in the UE:

2> determine the value for the CONTROL_CHANNEL_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.53.

…

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the CONTROL_CHANNEL_DRX_STATUS variable.

The variable CONTROL_CHANNEL_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH RECEPTION is set to TRUE;

1> the IE "Control Channel DRX information" is included in the received message.

If any of the above conditions is not met and the variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable CONTROL_CHANNEL_DRX_STATUS to FALSE;

1> clear the variable CONTROL_CHANNEL_DRX_PARAMS;

1> disable the Control Channel DRX related activities.

If variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE and the serving HS-DSCH cell was changed as a result of the received message, the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE after receiving this message and the value of IE "Control Channel DRX information" included in this message is "Continue Control Channel DRX operation ", the UE shall:

1> continue the Control Channel DRX related activities with the IE in the variable CONTROL_CHANNEL_DRX_PARAMS.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.53

### 8.2.6.69.3 Test purpose

To confirm that the UE reconfigures the physical layer to perform Control Channel DRX according to the IE Control Channel DRX information received in PHYSICAL CHANNEL RECONFIGURATION message from the SS.

### 8.2.6.69.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A13 in cell 1 as specified in clause 7.4 of TS 34.108

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports Control Channel DRX

Test Procedure

The UE is in state 6-18 under condition A13 as specified in TS 34.108 clause 7.4 in cell 1 and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. UE re-configures the physical layer to perform Control Channel DRX at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration. The UE then transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | Physical Channel reconfiguration | |
| 2 | → | | Physical Channel reconfiguration complete | |
| 3 | SS | | | The SS waits to allow sufficient time for control channel DRX be active, and timer inactivity Threshold for HS-SCCH DRX cycle to expire, and then verifies that the DRX operation has been activated successfully. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS34.108, with the following exceptions:

| Information Element | Value/remark |

### 8.2.6.69.5 Test requirements

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 3, the control channel DRX operation has been activated successfully.

After step 3, the UE shall be in Cell_DCH state

## 8.2.7 Physical Shared Channel Allocation [TDD only]

[Editor's note: This message is not included in Release99 so this is FFS.]

## 8.2.8 PUSCH capacity request [TDD only]

[Editor's note: This message is not included in Release99 so this is FFS.]

## 8.2.9 Void

## 8.2.10 WLAN Interworking in RRC Connected state

### 8.2.10.1 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN (RSRPmeas, BackhaulRateUlWLAN)

#### 8.2.10.1.1 Definition

FFS

#### 8.2.10.1.2 Conformance requirement

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

…

The upper layers in the UE shall be notified (see TS 24.302 [28]) when and for which WLAN(s), that matches all the provided identifiers (in sub-clause 5.10.3) for a specific entry in the list, the following conditions 1 and 2 for steering traffic from UTRAN to WLAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the UTRAN serving cell:

   $Qrxlevmeas < Thresh_{ServingOffloadWLAN, Low}$; or

   $Qqualmeas < Thresh_{ServingOffloadWLAN, Low2}$.

2. In the target WLAN:

   $ChannelUtilizationWLAN < Thresh_{ChUtilWLAN, Low}$; and

   $BackhaulRateDlWLAN > Thresh_{BackhRateDLWLAN, High}$; and

   $BackhaulRateUlWLAN > Thresh_{BackhRateULWLAN, High}$; and

   $BeaconRSSI > Thresh_{BeaconRSSIWLAN, High}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH. If not all metrics related to the provided thresholds can be acquired for a WLAN BSS, the UE shall exclude that WLAN BSS from the evaluation of the above rule.

…

The upper layers in the UE shall be notified (see TS 24.302 [28]) when the following conditions 3 or 4 for steering traffic from WLAN to UTRAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the source WLAN:

   $ChannelUtilizationWLAN > Thresh_{ChUtilWLAN, High}$; or

   $BackhaulRateDlWLAN < Thresh_{BackhRateDLWLAN, Low}$; or

   $BackhaulRateUlWLAN < Thresh_{BackhRateULWLAN, Low}$; or

   $BeaconRSSI < Thresh_{BeaconRSSIWLAN, Low}$.

2. In the target UTRANcell:

   $Qrxlevmeas > Thresh_{ServingOffloadWLAN, High}$; and

   $Qqualmeas > Thresh_{ServingOffloadWLAN, High2}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH.

References

8.2.10.1.3 Test purpose

1. To verify that a UE offloads from UTRA RRC_Connected to WLAN when $RSRP_{meas}$ < ThreshServingOffloadWLAN, Low and BackhaulRateUlWLAN > $Thresh_{BackhRateULWLAN, High}$.
2. To verify that a UE offloads from WLAN to UTRA RRC_Connected when $RSRP_{meas}$ > ThreshServingOffloadWLAN, High and BackhaulRateUlWLAN > $Thresh_{BackhRateULWLAN, Low}$

8.2.10.1.4 Method of test

Initial Condition

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- UE is in State 6-16 on Cell 1 as specified in clause 7.4 of TS 34.108.

The reference system configuration from TS 34.108 clause 6.1 is used in Cell 1.

Tables 8.2.10.1.4-1 and 8.2.10.4-2 illustrate the downlink parameters to be applied to the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the Test Procedure.

**Table 8.2.10.1.4-1**

| Parameter | Unit | Cell 1 | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -60 |

**Table 8.2.10.1.4-2**

| Parameter | Unit | Cell 39 | | |

| BackhaulRateUlWLAN | kbps | r2048 | r16384 | r16384 |

Test Procedure

Initially, UE is in State 6-16 on Cell 1 as specified in clause 7.4 of TS 34.108

The SS activates the WLAN Cell 39. In Cell 1, SS transmits a UTRAN MOBILITY INFORMATION message to the UE which includes *Threshold Serving RSCP* and *Threshold Backhaul Bandwidth*. UE sends the UTRAN MOBILITY INFORMATION CONFIRM message to SS

SS configures the cell 1 and cell 39 parameters according to column “T1” in 8.2.10.1.4-1. After *TsteeringWLAN* expiry, SS calls for generic test procedure C.6.1 of TS 34.123-1 to check that the PDN connection is offloaded from UTRAN to WLAN (Cell 39).

SS configures the cell 1 and cell 39 parameters according to column “T2” in 8.2.10.1.4-2. After *TsteeringWLAN* expiry, SS calls for generic test procedure C.6.2 to check that the PDN connection is offloaded from WLAN to UTRAN.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |

| | | | |
|---|---|---|---|
| 1 | - | - | SS activates cell 39 |
| 2 | ← | UTRAN MOBILITY INFORMATION | - |
| 3 | → | UTRAN MOBILITY INFORMATION CONFIRM | - |
| 4 | - | - | SS configures the cell 1 and cell 39 parameters according to column “T1” in 8.2.10.1.4-1 |
| 5 | | - | Wait for TsteeringWLAN |
| 6 | ←→ | CALL C.6.1 | If the test result of C.6.1 indicates that the PDN connection is offloaded from UTRAN to WLAN (Cell 39), the test passes, otherwise it fails. |
| 7 | - | - | Wait for 5 seconds |
| 8 | - | | SS configures cell 1 and cell 39 parameters according to column “T2” in 8.2.10.1.4-2 |
| 9 | | - | Wait for TsteeringWLAN |
| 10 | ←→ | CALL C.6.2 | If the test result of C.6.2 indicates that the PDN connection is offloaded from WLAN to UTRAN (Cell 1), the test passes, otherwise it fails. |

Specific Message Content UTRAN MOBILITY INFORMATION (Step 2)

| -TsteeringWLAN | 7 |
| -WLAN Identifier List | Only 1 WLAN identifier broadcasted |
| - WLAN Identifier | |
| - WLAN Type ID | |
| -SSID | Set to value same as transmitted by Cell 39 |
| -BSSID | Not Present |
| -HESSID | Not Present |

Test requirement

1) In Step 6, UE shall not offload PDN to Cell 39.

2) In Step 12, UE shall offload PDN to Cell 39.

3) In Step 16, UE shall offload PDN back to Cell 1.

## 8.2.10.4 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN ($RSRQ_{meas}$, BackhaulRateDlWLAN)

### 8.2.10.4.1 Definition

### 8.2.10.4.2 Conformance requirement

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

…

The upper layers in the UE shall be notified (see TS 24.302 [28]) when and for which WLAN(s), that matches all the provided identifiers (in sub-clause 5.10.3) for a specific entry in the list, the following conditions 1 and 2 for steering traffic from UTRAN to WLAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the UTRAN serving cell:

   $Qrxlevmeas < Thresh_{ServingOffloadWLAN, Low}$; or

   $Qqualmeas < Thresh_{ServingOffloadWLAN, Low2}$.

2. In the target WLAN:

   $ChannelUtilizationWLAN < Thresh_{ChUtilWLAN, Low}$; and

   $BackhaulRateDlWLAN > Thresh_{BackhRateDLWLAN, High}$; and

   $BackhaulRateUlWLAN > Thresh_{BackhRateULWLAN, High}$; and

   $BeaconRSSI > Thresh_{BeaconRSSIWLAN, High}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH. If not all metrics related to the provided thresholds can be acquired for a WLAN BSS, the UE shall exclude that WLAN BSS from the evaluation of the above rule.

…

The upper layers in the UE shall be notified (see TS 24.302 [28]) when the following conditions 3 or 4 for steering traffic from WLAN to UTRAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the source WLAN:

   $ChannelUtilizationWLAN > Thresh_{ChUtilWLAN, High}$; or

   $BackhaulRateDlWLAN < Thresh_{BackhRateDLWLAN, Low}$; or

   $BackhaulRateUlWLAN < Thresh_{BackhRateULWLAN, Low}$; or

   $BeaconRSSI < Thresh_{BeaconRSSIWLAN, Low}$.

2. In the target UTRANcell:

   $Qrxlevmeas > Thresh_{ServingOffloadWLAN, High}$; and

   $Qqualmeas > Thresh_{ServingOffloadWLAN, High2}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH.

References

### 8.2.10.4.3 Test purpose

1. To verify that a UE offloads from UTRA RRC_Connected to WLAN when $RSRQ_{meas}$ < ThreshServingOffloadWLAN, Low2 and BackhaulRateDlWLAN > $Thresh_{BackhRateDLWLAN, High}$

2. To verify that a UE offloads from WLAN to UTRA RRC_Connected when $RSRQ_{meas}$ > ThreshServingOffloadWLAN, High2 and BackhaulRateDlWLAN > $Thresh_{BackhRateDLWLAN, Low}$

### 8.2.10.4.4 Method of test

#### Initial Condition

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- UE is in PS+PS-DCCH+DTCH_DCH (State 6-16) on Cell 1 as specified in clause 7.4 of TS 34.108

The reference system configuration from TS 34.108 clause 6.1 is used in Cell 1

Tables 8.2.10.4.4-1 and 8.2.10.4.4-2 illustrate the downlink parameters to be applied to the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the Test Procedure.

**Table 8.2.10.4.4-1**

| Parameter | Unit | Cell 1 | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | |
| CPICH Ec | dBm/3.84MHz | -60 | -75 | -60 |
| Ioc (Noise) | dBm/3.84MHz | -60 | -60 | -60 |
| CPICH_Ec/No | dB | -7.87 | -15.65 | -7.87 |

**Table 8.2.10.4.4-2**

| Parameter | Unit | Cell 39 | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| DL Backhaul Rate | kbps | off | r16384 | r16384 |

#### Test Procedure

Initially, UE is in PS+PS-DCCH+DTCH_DCH (State 6-16) on Cell 1 as specified in clause 7.4 of TS 34.108

The SS activates the WLAN Cell 39. In Cell 1, SS transmits a UTRAN MOBILITY INFORMATION message to the UE which includes *Threshold Serving RSRQ* and *Threshold Backhaul*. UE sends the UTRAN MOBILITY INFORMATION CONFIRM message to SS

SS configures the cell 1 and cell 39 parameters according to column “T1” in 8.2.10.4.4-1/2. After *TsteeringWLAN* expiry, SS calls for generic test procedure C.6.1 of TS 34.123-1 to check that the PDN connection is offloaded from UTRAN to WLAN (Cell 39).

SS configures the cell 1 and cell 39 parameters according to column “T2” in 8.2.10.4.4-1/2. After *TsteeringWLAN* expiry, SS calls for generic test procedure C.6.2 to check that the PDN connection is offloaded from WLAN to UTRAN.

#### Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |

| | | | |
|---|---|---|---|
| 1 | - | - | SS activates cell 39 |
| 2 | ← | UTRAN MOBILITY INFORMATION | - |
| 3 | → | UTRAN MOBILITY INFORMATION CONFIRM | - |
| 4 | - | - | SS configures the cell 1 and cell 39 parameters according to column “T1” in 8.2.10.4.4-1/2 |
| 5 | | - | Wait for TsteeringWLAN |
| 6 | ←→ | CALL C.6.1 | If the test result of C.6.1 indicates that the PDN connection is offloaded from UTRAN to WLAN (Cell 39) |
| 7 | - | - | Wait for 5 seconds |
| 8 | - | | SS configures cell 1 and cell 39 parameters according to column “T2” in 8.2.10.4.4-1/2 |
| 9 | | - | Wait for TsteeringWLAN |
| 10 | ←→ | CALL C.6.2 | If the test result of C.6.2 indicates that the PDN connection is offloaded from WLAN to UTRAN (Cell 1) |

Specific Message Content UTRAN MOBILITY INFORMATION (Step 2)

Test requirement

1) In Step 6, UE shall offload PDN to Cell 39

2) In Step 10, UE shall offload PDN back to Cell 1

## 8.2.10.5 WLAN Offload / T330 expiry

### 8.2.10.5.1 Definition

### 8.2.10.5.2 Conformance requirement

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

…

The UE shall:

1> if T330 expires:

2> clear the variable WLAN_OFFLOAD_INFO;

2> use the information stored in the variable SYSTEM_INFO_WLAN_OFFLOAD_INFO as specified in [4], and forward it to the upper layers.

…

References

1. TS 25.331, clause 8.6.7.30.

### 8.2.10.5.3 Test purpose

1. To verify that a UE is moved to idle state and T330 started. Upon expiry of T330, the following conditions are met for $Thresh_{ServingOffloadWLAN, Low}$ and $Thresh_{ChUtilWLAN, Low}$ values included in SIB 23. The UE offloads to WLAN AP.

2. To verify that a UE offloads from WLAN to UTRA RRC_Idle when $RSRP_{meas} < Thresh_{ServingOffloadWLAN, High}$ and ChannelUtilizationWLAN > $Thresh_{ChUtilWLAN, High}$.

### 8.2.10.5.4 Method of test

Initial Condition

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- UE is in PS+PS-DCCH+DTCH_DCH (State 6-16) on Cell 1 as specified in clause 7.4 of TS 34.108

The reference system configuration from TS 34.108 clause 6.1 is used in Cell 1.

Tables 8.2.10.2.4-1 and 8.2.10.2.4-2 illustrate the downlink parameters to be applied to the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the Test Procedure.

**Table 8.2.10.5.4-1**

| Parameter | Unit | Cell 1 | | |

| UTRA RF Channel Number | | Mid Range Test Frequency | | |
| CPICH Ec | dBm/3.84MHz | -60 | -75 | -70 |

**Table 8.2.10.5.4-2: Void**

**Table 8.2.10.5.4-3**

| Parameter | Unit | Cell 39 | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| ChannelUtilization | - | off | 45 | 120 |

Test Procedure

Initially, UE is in Connected State.

The SS activates the WLAN Cell 39. In Cell 1, SS transmits a UTRAN MOBILITY INFORMATION message to the UE which includes $Thresh_{ServingOffloadWLAN, Low}$ and $Thresh_{ChUtilWLAN, Low}$. UE sends the UTRAN MOBILITY INFORMATION CONFIRM message to SS.

UE is moved to Idle State and T330 starts.

The timer T330 expires.

SS configures the cell 1 and cell 39 parameters according to column "T1" in 8.2.10.2.4-1/2. After TsteeringWLAN expiry, SS calls for generic test procedure C.6.1 of TS 34.123-1 to check that the PDN connection is offloaded from UTRAN to WLAN (Cell 39) as per values of $Thresh_{ServingOffloadWLAN, Low}$ and $Thresh_{ChUtilWLAN, Low}$ in SIB23.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS activates Cell 39 at T0. |
| 2 | ← | | UTRAN MOBILITY INFORMATION | |
| 3 | → | | UTRAN MOBILITY INFORMATION CONFIRM | - |
| 4 | ← | | RRC CONNECTION RELEASE | T330 starts as UE moves to Idle state |
| 5 | | | | SS configures the cell 1 and cell 39 parameters according to column "T1" in 8.2.10.5.4-1/2 |
| 6 | - | | - | Wait for 300 seconds to allow T330 expiry |
| 7 | ←→ | | CALL C.6.1 | If the test result of C.6.1 indicates that the PDN connection is offloaded from UTRAN to WLAN (Cell 39) as per thresholds in SIB 23 |
| 8 | - | | | SS configures cell 1 and cell 39 parameters according to column "T2" in 8.2.10.5.4-1/2 |
| 9 | | | - | Wait for TsteeringWLAN |
| 10 | ←→ | | CALL C.6.2 | If the test result of C.6.2 indicates that the PDN connection is offloaded from WLAN to UTRAN (Cell 1) |

Specific Message Content

Test requirement

1) 1) In Step 7, UE shall offload PDN to Cell 39.

In Step 10, UE shall offload PDN connection back to UTRAN Cell 1

## 8.2.10.6 Void

## 8.2.10.7 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN (ANDSF and RAN rules co-existence)

### 8.2.10.7.1 Definition

### 8.2.10.7.2 Conformance requirement

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

| | |
|---|---|
| ChannelUtilizationWLAN | WLAN channel utilization as defined in sub-clause 8.4.2.30 in [24] |
| BackhaulRateDlWLAN | WLAN DLBandwidth as defined in sub-clause 9.1.2 in [25] |
| BackhaulRateUlWLAN | WLAN ULBandwidth as defined sub-clause 9.1.2 in [25] |
| BeaconRSSI | WLAN Beacon RSSI as defined in [26] and [27] |

The upper layers in the UE shall be notified (see TS 24.302 [28]) when and for which WLAN(s), that matches all the provided identifiers (in sub-clause 5.10.3) for a specific entry in the list, the following conditions 1 and 2 for steering traffic from UTRAN to WLAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the UTRAN serving cell:

   $Qrxlevmeas < Thresh_{ServingOffloadWLAN, Low}$; or

   $Qqualmeas < Thresh_{ServingOffloadWLAN, Low2}$.

2. In the target WLAN:

   $ChannelUtilizationWLAN < Thresh_{ChUtilWLAN, Low}$; and

   $BackhaulRateDlWLAN > Thresh_{BackhRateDLWLAN, High}$; and

   $BackhaulRateUlWLAN > Thresh_{BackhRateULWLAN, High}$; and

   $BeaconRSSI > Thresh_{BeaconRSSIWLAN, High}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH. If not all metrics related to the provided thresholds can be acquired for a WLAN BSS, the UE shall exclude that WLAN BSS from the evaluation of the above rule.

The upper layers in the UE shall be notified (see TS 24.302 [28]) when the following conditions 3 or 4 for steering traffic from WLAN to UTRAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the source WLAN:

   $ChannelUtilizationWLAN > Thresh_{ChUtilWLAN, High}$; or

   $BackhaulRateDlWLAN < Thresh_{BackhRateDLWLAN, Low}$; or

   $BackhaulRateUlWLAN < Thresh_{BackhRateULWLAN, Low}$; or

   $BeaconRSSI < Thresh_{BeaconRSSIWLAN, Low}$.

2. In the target UTRANcell:

   $Qrxlevmeas > Thresh_{ServingOffloadWLAN, High}$; and

   $Qqualmeas > Thresh_{ServingOffloadWLAN, High2}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH.

If the FDD UE is configured with DCH only, the reference cell to use, for the rules defined in this sub-clause, is the best cell in active set.

…

The WLAN access selection and traffic routing can be controlled either by ANDSF rules or by RAN rules.

The ANDSF rules control the WLAN access selection and traffic routing if:

a) the UE has ANDSF rules but no RAN rules; or

b) the UE has both ANDSF rules and RAN rules; and:

   1) the UE is not capable to simultaneously route IP traffic to both 3GPP access and WLAN; and:

      A) the UE is not roaming and the UE has at least one ISMP rule from HPLMN;

      B) the UE is roaming in a VPLMN contained in the visited PLMNs with preferred rules and the UE has at least one ISMP rule from VPLMN; or

      C) the UE is roaming in a VPLMN not contained in the visited PLMNs with preferred rules and the UE has at least one ISMP rule from HPLMN; or

   2) the UE is capable to simultaneously route IP traffic to both 3GPP access and WLAN; and:

      A) the UE is not roaming and the UE has a valid ISRP rule from HPLMN;

      B) the UE is roaming in a VPLMN contained in the visited PLMNs with preferred rules and the UE has a valid ISRP rule from VPLMN; or

      C) the UE is roaming in a VPLMN not contained in the visited PLMNs with preferred rules and the UE has a valid ISRP rule from HPLMN.

The RAN rules control the WLAN access selection and traffic routing if:

a) the UE has RAN rules but no ANDSF rules; or

b) the UE has both ANDSF rules and RAN rules; and:

   1) the UE is not capable to simultaneously route IP traffic to both 3GPP access and WLAN; and:

      A) the UE is not roaming and the UE has no ISMP rules from HPLMN;

      B) the UE is roaming in a VPLMN contained in the visited PLMNs with preferred rules and the UE has no ISMP rules from VPLMN; or

C) the UE is roaming in a VPLMN not contained in the visited PLMNs with preferred rules and the UE has no ISMP rules from HPLMN; or

2) the UE is capable to simultaneously route IP traffic to both 3GPP access and WLAN, and:

A) the UE is not roaming and the UE has no valid ISRP rule from HPLMN;

B) the UE is roaming in a VPLMN contained in the visited PLMNs with preferred rules and the UE has no valid ISRP rule from VPLMN; or

C) the UE is roaming in a VPLMN not contained in the visited PLMNs with preferred rules and the UE has no valid ISRP rule from HPLMN.

### 8.2.10.7.3 Test purpose

1. To verify that UE does not perform WLAN offload when offload condition by ANDSF rules is not satisfied and by RAN rules is satisfied.

2. To verify that UE perform WLAN offload when offload condition by ANDSF is satisfied.

### 8.2.10.7.4 Method of test

Initial Condition

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- UE has configured an ISRP ANDSF rule using RAN thresholds of BackhaulRate DlWLAN.- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- UE is in PS+PS-DCCH+DTCH_DCH (State 6-16) on Cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- Supports of ANDSF and RAN rules co-existence Yes/No

The reference system configuration from TS 34.108 clause 6.1 is used in Cell 1.

Tables 8.2.10.7.4-1 and 8.2.10.7.4-2 illustrate the downlink parameters to be applied to the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" ~ “T4”is to be applied subsequently. The exact instants on which these values shall be applied are described in the Test Procedure.

Test requirement

1. In Step 6, UE shall not offload the PDN connection to WLAN Cell 39.
2. In Step 10, UE shall offload the PDN connection to WLAN Cell 39.
3. In Step 14, UE shall not offload the PDN connection back to UTRAN Cell 1.
4. In Step 18, UE shall offload the PDN connection back to UTRAN Cell 1.

# 8.3 RRC connection mobility procedure

## 8.3.1 Cell Update

### 8.3.1.1 Cell Update: cell reselection in CELL_FACH

#### 8.3.1.1.1 Definition

-

#### 8.3.1.1.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_FACH or CELL_PCH state and the UE performs cell re-selection; or

3> if the UE is in CELL_FACH state and the variable C_RNTI is empty:

4> perform cell update using the cause "cell reselection".

…

When initiating cell update procedure, the UE shall:

1> stop timer T305;

1> if the UE is in CELL_DCH state:

…

…

1> move to CELL_FACH state, if not already in that state;

1> if the UE performs cell re-selection:

2> clear the variable C_RNTI; and

2> stop using that C_RNTI just cleared from the variable C_RNTI in MAC.

1> set CFN in relation to SFN of current cell according to TS 25.331 subclause 8.5.15;

1> in case of a cell update procedure:

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

2> submit the CELL UPDATE message for transmission on the uplink CCCH.

…

1> set counter V302 to 1;

1> start timer T302 when the MAC layer indicates success or failure in transmitting the message.

…

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

The UE shall set the IEs in the CELL UPDATE message as follows:

1> set the IE "Cell update cause" corresponding to the cause specified in TS 25.331 subclause 8.3.1.2 that is valid when the CELL UPDATE message is submitted to lower layers for transmission;

NOTE: During the time period starting from when a cell update procedure is initiated by the UE until when the procedure ends, additional CELL UPDATE messages may be transmitted by the UE with different causes.

1> set the IE "U-RNTI" to the value of the variable U_RNTI;

1> if the value of the variable PROTOCOL_ERROR_INDICATOR is TRUE:

…

1> if the value of the variable FAILURE_INDICATOR is TRUE:

…

…

When the UE receives a CELL UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1> stop timer T302;

1> in case of a cell update procedure and the CELL UPDATE CONFIRM message:

2> includes "RB information elements"; and/or

2> includes "Transport channel information elements"; and/or

2> includes "Physical channel information elements"; and

2> if the variable ORDERED_RECONFIGURATION is set to FALSE:

3> set the variable ORDERED_RECONFIGURATION to TRUE.

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified otherwise in the following:

…

…

1> enter a state according to subclause 8.6.3.3 applied on the CELL UPDATE CONFIRM / URA UPDATE CONFIRM message.

…

If the UE after state transition remains in CELL_FACH state, it shall

1> start the timer T305 using its initial value if timer T305 is not running and periodical cell update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity";

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> not prohibit periodical status transmission in RLC;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

If the UE after the state transition remains in CELL_FACH state; and

- a C-RNTI is stored in the variable C_RNTI;

…

the UE shall:

…

1> in case of a cell update procedure:

2> set the IE "RRC transaction identifier" in any response message transmitted below to the value of "RRC transaction identifier" in the entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry.

…

1> transmit a response message as specified in TS 25.331 subclause 8.3.1.7;

…

If the CELL UPDATE CONFIRM message:

- includes the IE "RB information to release list":

the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include the IE "RB information to release list"; and

- includes the IE "RB information to reconfigure list"; or

- includes the IE "RB information to be affected list":

the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and

- includes "Transport channel information elements":

the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- includes "Physical channel information elements":

the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- does not include "CN information elements"; and
- does not include the IE "Ciphering mode info"; and
- does not include the IE "Integrity protection mode info"; and
- does not include the IE "New C-RNTI"; and
- does not include the IE "New U-RNTI":

the UE shall:

1> transmit no response message.

If the new state is CELL_FACH, the response message shall be transmitted using the new configuration after the state transition., and the UE shall:

…

1> if the variable PDCP_SN_INFO is empty:

…

2> if the CELL UPDATE CONFIRM or URA UPDATE CONFIRM message did not contain the IE "Ciphering mode info":

3> when RLC has been requested to transmit the response message,

4> continue with the remainder of the procedure.

…

If any or several of the following conditions are true:

…;

- reselection to another UTRA cell (including the previously serving cell) before completion of the cell update or URA update procedure;

the UE shall:

1> stop T302 if it is running;

…

1> check whether it is still in "in service area";

…

1> in case of a cell update procedure:

2> clear any entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS.

If the UE detects "in service area" if it has not entered idle mode, and:

1> if V302 is equal to or smaller than N302, the UE shall:

2> if the UE performed cell re-selection:

3> delete its C-RNTI.

2> in case of a cell update procedure:

3> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

3> submit the CELL UPDATE message for transmission on the uplink CCCH.

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302, the UE shall:

…

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.1.3 Test purpose

1. To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell.

2. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection.

8.3.1.1.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.1**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

Table 8.3.1.1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions. SS switches the power settings repeatedly between columns "T1" and "T0", whenever the description below specifies that the transmission power settings for cell 1 and cell 2 be reversed.

The UE is in the CELL_FACH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall find cell 2 to be more suitable for service and hence perform a cell reselection. After the completion of cell reselection, the UE shall transmits a CELL UPDATE message to the SS on the uplink CCCH of cell 2 and set IE "Cell update cause" to "Cell Reselection". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL_FACH", to the UE on the downlink DCCH. UE shall verify that IE "New C-RNTI" is not included in the downlink message and shall send a CELL UPDATE message to SS again. SS shall then send a CELL UPDATE CONFIRM message which includes a valid IE "New C-RNTI". SS verifies that the UE send UTRAN MOBILITY INFORMATION CONFIRM message.. UE shall stay in CELL_FACH state. SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with CELL UPDATE CONFIRM message and allocates new C-RNTI and U-RNTI identities to the UE. The IE "RRC State Indicator" is set to "CELL_FACH" in this message. The UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. Following this, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall initiate a cell update procedure by transmitting a CELL UPDATE message and stating the cause as 'cell re-selection'. SS replies with a CELL UPDATE CONFIRM message which contains IE "Physical channel information elements" and IE "RRC State Indicator" is set to "CELL_DCH". The UE shall move to CELL_DCH state and send PHSICAL CHANNEL RECONFIGURATION COMPLETE message. The SS shall transmit PHYSICAL CHANNEL RECONFIGURATION message, asking the UE to move to CELL_FACH state. The UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after transiting to CELL_FACH state. Then, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with a CELL UPDATE CONFIRM message which contains IE "Transport channel information elements" and IE "RRC State Indicator" is set to "CELL_DCH". The UE shall move to CELL_DCH state and send TRANSPORT CHANNEL RECONFIGURATION COMPLETE message. The SS shall transmit PHYSICAL CHANNEL RECONFIGURATION message, asking the UE to move to CELL_FACH state. The UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after transiting to CELL_FACH state. Following this, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 2. SS replies with a CELL UPDATE CONFIRM message which contains IE "RB information to be affected list". The UE shall send RADIO BEARER RECONFIGURATION COMPLETE message. Then, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with a CELL UPDATE CONFIRM message which contains IE "RB information to release list". The UE shall send RADIO BEARER RELEASE COMPLETE message. Finally, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 2. SS shall not respond to this message but SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS shall then send CELL UPDATE CONFIRM message to UE. UE shall reply with UTRAN MOBILITY INFORMATION CONFIRM message. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state in cell 1 |
| 2 | | | Void | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.1. The UE shall find that the cell 2 is better for service and perform a reselection. SS waits for the maximum duration required for the UE to camp to cell 2. |
| 3 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" |
| 4 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_FACH". |
| 4a | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" |
| 4b | ← | | CELL UPDATE CONFIRM | See message content. |
| 5 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 6 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 7 | → | | CELL UPDATE | |
| 8 | ← | | CELL UPDATE CONFIRM | New C-RNTI and U-RNTI identities are assigned to the UE. IE "RRC State Indicator" is set to "CELL_FACH". |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 11 | → | | CELL UPDATE | |
| 12 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_DCH".<br>IE "Physical channel information elements" is included in this message |
| 12a | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 13 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The UE is in CELL_DCH now. The SS shall send PHYSICAL CHANNEL RECONFIGURATION message to the UE asking the UE to transit to CELL_FACH state. |
| 14 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 15 | | | | The SS reverses the transmission power level of cell 1 and cell 2. |
| 16 | → | | CELL UPDATE | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 17 | ← | | CELL UPDATE CONFIRM | IE "Physical channel information elements" is included in this message, and IE "RRC State Indicator" is set to "CELL_DCH". IE "Transport channel information elements" is included in this message |
| 18 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 19 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The UE is in CELL_DCH now. The SS shall send PHYSICAL CHANNEL RECONFIGURATION message to the UE asking the UE to transit to CELL_FACH state. |
| 20 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 21 | | | | The SS reverses the transmission power level of cell 1 and cell 2. |
| 22 | → | | CELL UPDATE | |
| 23 | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE.<br>IE "RRC State Indicator" is set to "CELL_FACH".<br>IE "RB information to reconfigure list" and IE "RB information to be affected list" is included in this message. |
| 24 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 25 | | | | The SS reverses the transmission power level of cell 1 and cell 2. |
| 26 | → | | CELL UPDATE | |
| 27 | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE.<br>IE "RRC State Indicator" is set to "CELL_FACH".<br>IE "RB information to release list" is included in this message |
| 28 | → | | RADIO BEARER RELEASE COMPLETE | |
| 29 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 30 | → | | CELL UPDATE | |
| 31 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 32 | → | | CELL UPDATE | |
| 33 | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE. |
| 34 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 35 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

CELL UPDATE (Step 3, 4a, 7,, 11, 16, 22, 30 and 32)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | In step 3, 4a and 7 check to see if set to '0000 0000 0000 0000 0001'.<br><br>In step 11, 16, 22, 26, 30 and 32, check to see if set to same string in IE "S-RNTI" in IE "New U-RNTI" of CELL UPDATE CONFIRM message in previous assignment |
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108, clause 9.

CELL UPDATE CONFIRM (Step 4b)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |
| RRC transaction identifier | Selects an arbitrary integer between 0 and 3, but is different from that used in step 4. |

CELL UPDATE CONFIRM (Step 8)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | |
| - SRNC Identity | '0000 0000 0001' |
| - S-RNTI | An arbitrary 20-bits string which is different from original S-RNTI |
| New C-RNTI | '0000 0000 0000 1111' |

CELL UPDATE CONFIRM (Step 12 )

Use the same message sub-type found in step 8 and k=0, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement<br>Uplink DPCH info<br><br>Downlink information common for all radio links<br><br>Downlink information per radio link list | <br>Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS)<br>Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS)<br>Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 12a)

Use the same message sub-type found in [9] TS 34.108 clause 9.

PHYSICAL CHANNEL RECONFIGURATION (Step 13)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_DCH in PS":

CELL UPDATE CONFIRM (Step 17)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| UL Transport channel information for all transport channels | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Added or Reconfigured uplink TrCH information | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| DL Transport channel information for all transport channels | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Added or Reconfigured downlink TrCH information | Same as RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| CHOICE channel requirement | |
| Uplink DPCH info | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Downlink information common for all radio links | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Downlink information per radio link list | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 14)

Use the same message sub-type found in [9] TS 34.108 clause 9.

PHYSICAL CHANNEL RECONFIGURATION (Step 19)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_DCH in PS", with following exception.

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0000 0000 0000 1111' |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 20)

Use the same message sub-type found in [9] TS 34.108 clause 9.

CELL UPDATE CONFIRM (Step 23)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to be reconfigure | |
| New C-RNTI<br>- RB identity<br>- PDCP info<br>- PDCP SN info<br>- RLC info<br>- RB Information Release List<br>- RB Information Reconfiguration List | '1010 1010 1010 1010'<br>20<br>Not Present<br>Not Present<br>Not Present<br>Not Present<br>Present |
| - RB Information Affected List | Present |

CELL UPDATE CONFIRM (Step 27)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0000 0000 0000 1111' |
| RB information to release<br>-RB identity | <br>4 |

CELL UPDATE CONFIRM (Step 33)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

#### 8.3.1.1.5 Test requirement

At step 3 the UE shall reselect to cell 2 and then it shall transmit a CELL UPDATE message which, sets the value "cell reselection" in IE "Cell update cause".

At step 4a the UE shall transmit CELL UPDATE message which sets the value "cell reselection" in IE "Cell update cause".

At step 4b, the SS shall send a CELL UPDATE CONFIRM.

At step 5, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

At step 7 the UE shall sent a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 9, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

At step 11 the UE shall sent a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 12, the SS shall send a CELL UPDATE CONFIRM taking the UE into CELL_DCH state. In addition, it also specifies the IE “Physical Channel Information elements”.

At step 12a, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the new physical channel assigned.

At step 13 and 14, the SS uses PHYSICAL CHANNEL RECONFIGURATION to take the UE into CELL_FACH state.

At step 15, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 16 the UE shall sent a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 17, the SS shall send a CELL UPDATE CONFIRM and take the UE into CELL_DCH state. In addition, it also specifies the IE “Physical Channel Information elements” and “Transport Channel Information elements”.

At step 18, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE.

At step 19 and 20, the SS uses PHYSICAL CHANNEL RECONFIGURATION to take the UE into CELL_FACH state.

At step 21, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 22, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 23, the SS shall send a CELL UPDATE CONFIRM taking the UE into CELL_FACH state. In addition, it also specifies “RB Information Reconfigure List and RB Information Affected List Information”.

At step 24, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE.

At step 25, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 26, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 27, the SS shall send a CELL UPDATE CONFIRM taking the UE into CELL_FACH state. In addition, it also specifies the IE “RB Information to release list”.

At step 28, the UE shall transmit a RADIO BEARER RELEASE COMPLETE.

At step 29, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 30, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 31, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 32, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 33, the SS shall send a CELL UPDATE CONFIRM

At step 34, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message

## 8.3.1.1a Cell Update: cell reselection in CELL_FACH (Cells belong to different frequency bands)

### 8.3.1.1a.1 Definition

This test case is identical to test case 8.3.1.1 except that the cells belong to different frequency bands.

NOTE: The test case 8.3.1.1 is an intra frequency test.

### 8.3.1.1a.2 Conformance requirement

Same conformance requirement as clause 8.3.1.1.2

### 8.3.1.1a.3 Test purpose

1. To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell in different frequency band.

2. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection

### 8.3.1.1a.4 Method of test

Initial Condition

Same initial conditions as clause 8.3.1.1.4 except,

Cell 2 is mapped to cell 4 (inter frequency) of 34.108 clause 6.1 and both cells belong to different frequency bands.

Following updated System information is transmitted in both cells after UE is brought to initial state of PS-DCCH+DTCH_FACH (state 6-11) in cell 1.

MASTER INFORMATION BLOCK

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| MIB Value Tag | Set to (Current MIB value tag + 1) |
| SIB 4 Cell Value tag | Set to (Current SIB4 value tag + 1) |
| SB 1 Cell Value tag | Set to (Current SIB4 value tag + 1) |

SCHEDULING BLOCK 1

| Information Element | Value/remark |
|---|---|
| SIB 11 Cell Value Tag | Set to (Current SIB 11 value tag + 1) |

System Information Block type 4

Use the same message type found in clause 6.1.0b of TS 34.108, with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| -Qualmin | -16dB |

System Information Block type 11

Use the same message type found in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | TRUE |
| - Inter-frequency TDD measurement indicator | FALSE |
| - Inter-RAT measurement indicators | Not Present |

SYSTEM INFORMATION CHANGE INDICATION

| Information Element | Value/remark |
|---|---|
| Message Type | |
| BCCH modification info | |
| MIB Value tag | Set equal to Value tag sent in modified MIB |

Related ICS/IXIT statement(s)

- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as clause 8.3.1.1.4 with the following exception

After step 30, SS shall send CELL UPDATE CONFIRM message to the UE. UE shall reply with UTRAN MOBILITY INFORMATION CONFIRM message.

NOTE: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected sequence

Same expected sequence as clause 8.3.1.1.4 with the following additional test steps:

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 30a | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE. |
| 30b | → | | UTRAN MOBILITY INFORMATION CONFIRM | |

Specific Message Contents

Same specific message contents as clause 8.3.1.1.4. The message content for the additional test steps are given below.

CELL UPDATE CONFIRM (Step 30a)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0000000000000001' |

#### 8.3.1.1a.5 Test requirement

Same test requirements as clause 8.3.1.1.5 with the following additional test requirements:

At step 30a, the SS shall send a CELL UPDATE CONFIRM

At step 30b, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message

### 8.3.1.1b Cell Update: cell reselection in CELL_FACH(TDD)

#### 8.3.1.1b.1 Definition

All UEs which support TDD

#### 8.3.1.1b.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_FACH or CELL_PCH state and the UE performs cell re-selection; or

3> if the UE is in CELL_FACH state and the variable C_RNTI is empty:

4> perform cell update using the cause "cell reselection".

…

When initiating cell update procedure, the UE shall:

1> stop timer T305;

1> if the UE is in CELL_DCH state:

…

…

1> move to CELL_FACH state, if not already in that state;

1> if the UE performs cell re-selection:

2> clear the variable C_RNTI; and

2> stop using that C_RNTI just cleared from the variable C_RNTI in MAC.

1> set CFN in relation to SFN of current cell according to TS 25.331 subclause 8.5.15;

1> in case of a cell update procedure:

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

2> submit the CELL UPDATE message for transmission on the uplink CCCH.

…

1> set counter V302 to 1;

1> start timer T302 when the MAC layer indicates success or failure in transmitting the message.

…

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

The UE shall set the IEs in the CELL UPDATE message as follows:

1> set the IE "Cell update cause" corresponding to the cause specified in TS 25.331 subclause 8.3.1.2 that is valid when the CELL UPDATE message is submitted to lower layers for transmission;

NOTE: During the time period starting from when a cell update procedure is initiated by the UE until when the procedure ends, additional CELL UPDATE messages may be transmitted by the UE with different causes.

1> set the IE "U-RNTI" to the value of the variable U_RNTI;

1> if the value of the variable PROTOCOL_ERROR_INDICATOR is TRUE:

…

1> if the value of the variable FAILURE_INDICATOR is TRUE:

…

…

When the UE receives a CELL UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1> stop timer T302;

1> in case of a cell update procedure and the CELL UPDATE CONFIRM message:

2> includes "RB information elements"; and/or

2> includes "Transport channel information elements"; and/or

2> includes "Physical channel information elements"; and

2> if the variable ORDERED_RECONFIGURATION is set to FALSE:

3> set the variable ORDERED_RECONFIGURATION to TRUE.

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified otherwise in the following:

…

…

1> enter a state according to subclause 8.6.3.3 applied on the CELL UPDATE CONFIRM / URA UPDATE CONFIRM message.

…

If the UE after state transition remains in CELL_FACH state, it shall

1> start the timer T305 using its initial value if timer T305 is not running and periodical cell update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity";

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> not prohibit periodical status transmission in RLC;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

If the UE after the state transition remains in CELL_FACH state; and

- a C-RNTI is stored in the variable C_RNTI;

…

the UE shall:

…

1> in case of a cell update procedure:

2> set the IE "RRC transaction identifier" in any response message transmitted below to the value of "RRC transaction identifier" in the entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry.

…

1> transmit a response message as specified in TS 25.331 subclause 8.3.1.7;

…

If the CELL UPDATE CONFIRM message:

- includes the IE "RB information to release list":

the UE shall:

1> transmit a RADIO BEARER RELEASE COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include the IE "RB information to release list"; and
- includes the IE "RB information to reconfigure list"; or
- includes the IE "RB information to be affected list":

the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- includes "Transport channel information elements":

the UE shall:

1> transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- includes "Physical channel information elements":

the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and

- does not include "CN information elements"; and
- does not include the IE "Ciphering mode info"; and
- does not include the IE "Integrity protection mode info"; and
- does not include the IE "New C-RNTI"; and
- does not include the IE "New U-RNTI":

the UE shall:

1> transmit no response message.

If the new state is CELL_FACH, the response message shall be transmitted using the new configuration after the state transition., and the UE shall:

…

1> if the variable PDCP_SN_INFO is empty:

…

2> if the CELL UPDATE CONFIRM or URA UPDATE CONFIRM message did not contain the IE "Ciphering mode info":

3> when RLC has been requested to transmit the response message,

4> continue with the remainder of the procedure.

…

If any or several of the following conditions are true:

…;

- reselection to another UTRA cell (including the previously serving cell) before completion of the cell update or URA update procedure;

the UE shall:

1> stop T302 if it is running;

…

1> check whether it is still in "in service area";

…

1> in case of a cell update procedure:

2> clear any entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS.

If the UE detects "in service area" if it has not entered idle mode, and:

1> if V302 is equal to or smaller than N302, the UE shall:

2> if the UE performed cell re-selection:

3> delete its C-RNTI.

2> in case of a cell update procedure:

3> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

3> submit the CELL UPDATE message for transmission on the uplink CCCH.

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302, the UE shall:

…

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.1b.3 Test purpose

1. To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell.
2. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection.

### 8.3.1.1b.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active. Each cell configure 3 carriers, one is the primary carrier, the other two are secondary carrier.

Detail in the table follows:

| Parameter | Cell 1 | Cell 2 |
|---|---|---|
| UTRA RF Channel Number1 | Ch. 1 | Ch. 2 |
| UTRA RF Channel Number1 | Ch. 2 | Ch.3 |
| UTRA RF Channel Number1 | Ch.3 | Ch.1 |

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.1b**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Ch. 1 | | Ch. 1 | |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

Table 8.3.1.1b illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions. SS switches the power settings repeatedly between columns "T1" and "T0", whenever the description below specifies that the transmission power settings for cell 1 and cell 2 be reversed.

The UE is in the CELL_FACH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1b. The UE shall find cell 2 to be more suitable for service and hence perform a cell reselection. After the completion of cell reselection, the UE shall transmits a CELL UPDATE message to the SS on the uplink CCCH of cell 2 and set IE "Cell update cause" to "Cell Reselection". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL_FACH", to the UE on the downlink DCCH. UE shall verify that IE "New C-RNTI" is not included in the downlink message and shall send a CELL UPDATE message to SS again. SS shall then send a CELL UPDATE CONFIRM message which includes a valid IE "New C-RNTI". SS verifies that the UE send UTRAN MOBILITY INFORMATION CONFIRM message.. UE shall stay in CELL_FACH state. SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1b. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with CELL UPDATE CONFIRM message and allocates new C-RNTI and U-RNTI identities to the UE. The IE "RRC State Indicator" is set to "CELL_FACH" in this message. The UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. Following this, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1b. The UE shall initiate a cell update procedure by transmitting a CELL UPDATE message and stating the cause as 'cell re-selection'. SS replies with a CELL UPDATE CONFIRM message which contains IE "Physical channel information elements" and IE "RRC State Indicator" is set to "CELL_DCH". The UE shall move to CELL_DCH state and send PHSICAL CHANNEL RECONFIGURATION COMPLETE message. The SS shall transmit PHYSICAL CHANNEL RECONFIGURATION message, asking the UE to move to CELL_FACH state. The UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after transiting to CELL_FACH state. Then, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1b. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with a CELL UPDATE CONFIRM message which contains IE "Transport channel information elements" and IE "RRC State Indicator" is set to "CELL_DCH". The UE shall move to CELL_DCH state and send TRANSPORT CHANNEL RECONFIGURATION COMPLETE message. The SS shall transmit PHYSICAL CHANNEL RECONFIGURATION message, asking the UE to move to CELL_FACH state. The UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after transiting to CELL_FACH state. Following this, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1b. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 2. SS replies with a CELL UPDATE CONFIRM message which contains IE "RB information to be affected list". The UE shall send RADIO BEARER RECONFIGURATION COMPLETE message. Then, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1b. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with a CELL UPDATE CONFIRM message which contains IE "RB information to release list". The UE shall send RADIO BEARER RELEASE COMPLETE message. Finally, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1b. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 2. SS shall not respond to this message but SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1b. UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS shall then send CELL UPDATE CONFIRM message to UE. UE shall reply with UTRAN MOBILITY INFORMATION CONFIRM message. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state in cell 1 |
| 2 | | | Void | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.1b. The UE shall find that the cell 2 is better for service and perform a reselection. SS waits for the maximum duration required for the UE to camp to cell 2. |
| 3 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" |
| 4 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_FACH". |
| 4a | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" |
| 4b | ← | | CELL UPDATE CONFIRM | See message content. |
| 5 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 6 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 7 | → | | CELL UPDATE | |
| 8 | ← | | CELL UPDATE CONFIRM | New C-RNTI and U-RNTI identities are assigned to the UE. IE "RRC State Indicator" is set to "CELL_FACH". |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 11 | → | | CELL UPDATE | |
| 12 | → | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_DCH".<br>IE "Physical channel information elements" is included in this message |
| 12a | ← | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 13 | → | | PHYSICAL CHANNEL RECONFIGURATION | The UE is in CELL_DCH now. The SS shall send PHYSICAL CHANNEL RECONFIGURATION message to the UE asking the UE to transit to CELL_FACH state. |
| 14 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 15 | | | | The SS reverses the transmission power level of cell 1 and cell 2. |
| 16 | → | | CELL UPDATE | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 17 | ← | | CELL UPDATE CONFIRM | IE "Physical channel information elements" is included in this message, and IE "RRC State Indicator" is set to "CELL_DCH". IE "Transport channel information elements" is included in this message |
| 18 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 19 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The UE is in CELL_DCH now. The SS shall send PHYSICAL CHANNEL RECONFIGURATION message to the UE asking the UE to transit to CELL_FACH state. |
| 20 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 21 | | | | The SS reverses the transmission power level of cell 1 and cell 2. |
| 22 | → | | CELL UPDATE | |
| 23 | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE.<br>IE "RRC State Indicator" is set to "CELL_FACH".<br>IE "RB information to reconfigure list" and IE "RB information to be affected list" is included in this message. |
| 24 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 25 | | | | The SS reverses the transmission power level of cell 1 and cell 2. |
| 26 | → | | CELL UPDATE | |
| 27 | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE.<br>IE "RRC State Indicator" is set to "CELL_FACH".<br>IE "RB information to release list" is included in this message |
| 28 | → | | RADIO BEARER RELEASE COMPLETE | |
| 29 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 30 | → | | CELL UPDATE | |
| 31 | | | | SS reverses the transmission power level of cell 1 and cell 2. |
| 32 | → | | CELL UPDATE | |
| 33 | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE. |
| 34 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 35 | | | | SS reverses the transmission power level of cell 1 and cell 2 |
| 36 | → | | CELL UPDATE | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 37 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_DCH".<br>IE " Physical channel information elements" and "Freq Info" is included in this message and is indicated on the secondary carrier. |
| 38 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE response the message on the DPCH of the secondary carrier. |
| 39 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1

Use the same message found in TS 34.108 , with the exceptions of the following IEs：

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

CELL UPDATE (Step 3, 4a, 7, 11, 16, 22, 30 and 32)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | In step 3, 4a and 7 check to see if set to '0000 0000 0000 0000 0001'.<br><br>In step 11, 16, 22, 26, 30 and 32, check to see if set to same string in IE "S-RNTI" in IE "New U-RNTI" of CELL UPDATE CONFIRM message in previous assignment |
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108, clause 9.

CELL UPDATE CONFIRM (Step 4b)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |
| RRC transaction identifier | Selects an arbitrary integer between 0 and 3, but is different from that used in step 4. |

CELL UPDATE CONFIRM (Step 8)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI<br>- SRNC Identity<br>- S-RNTI<br><br>New C-RNTI | <br>'0000 0000 0001'<br>An arbitrary 20-bits string which is different from original S-RNTI<br>'0000 0000 0000 1111' |

CELL UPDATE CONFIRM (Step 12 )

Use the same message sub-type found in step 8 and k=0, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement<br>Uplink DPCH info<br><br>Downlink information common for all radio links<br><br>Downlink information per radio link list | <br>Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS)<br>Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS)<br>Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 12a)

Use the same message sub-type found in [9] TS 34.108 clause 9.

PHYSICAL CHANNEL RECONFIGURATION (Step 13)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_DCH in PS":

CELL UPDATE CONFIRM (Step 17)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| UL Transport channel information for all transport channels | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Added or Reconfigured uplink TrCH information | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| DL Transport channel information for all transport channels | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Added or Reconfigured downlink TrCH information | Same as RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| CHOICE channel requirement | |
| Uplink DPCH info | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Downlink information common for all radio links | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |
| Downlink information per radio link list | Same as the IE in RADIO BEARER SETUP (Packet to CELL_DCH from CELL_FACH in PS) |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 14)

Use the same message sub-type found in [9] TS 34.108 clause 9.

PHYSICAL CHANNEL RECONFIGURATION (Step 19)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_DCH in PS", with following exception.

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0000 0000 0000 1111' |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 20)

Use the same message sub-type found in [9] TS 34.108 clause 9.

CELL UPDATE CONFIRM (Step 23)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to be reconfigure | |
| New C-RNTI<br>- RB identity<br>- PDCP info<br>- PDCP SN info<br>- RLC info<br>- RB Information Release List<br>- RB Information Reconfiguration List | '1010 1010 1010 1010'<br>20<br>Not Present<br>Not Present<br>Not Present<br>Not Present<br>Present |
| - RB Information Affected List | Present |

CELL UPDATE CONFIRM (Step 27)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0000 0000 0000 1111' |
| RB information to release<br>-RB identity | <br>4 |

CELL UPDATE CONFIRM (Step 33)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

CELL UPDATE CONFIRM (Step 36)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions：

| Information Element | Value/remark |
|---|---|
| CellUpdateConfirm-CCCH-r4-TDD128-add-ext-IEs | |
| frequencyInfo | The secondary carrier frequency of cell 2 |

Contents of System Information Block type 3

Use the same message found in TS 34.108, with the following exceptions，

| - mapping-LCR | 0 |

### 8.3.1.1b.5 Test requirement

At step 3 the UE shall reselect to cell 2 and then it shall transmit a CELL UPDATE message which sets the value "cell reselection" in IE "Cell update cause".

At step 4a the UE shall transmit CELL UPDATE message which sets the value "cell reselection" in IE "Cell update cause".

At step 4b, the SS shall send a CELL UPDATE CONFIRM.

At step 5, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

At step 7 the UE shall sent a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 9, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

At step 11 the UE shall sent a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 12, the SS shall send a CELL UPDATE CONFIRM taking the UE into CELL_DCH state. In addition, it also specifies the IE “Physical Channel Information elements”.

At step 12a, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the new physical channel assigned.

At step 13 and 14, the SS uses PHYSICAL CHANNEL RECONFIGURATION to take the UE into CELL_FACH state.

At step 15, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 16 the UE shall sent a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 17, the SS shall send a CELL UPDATE CONFIRM and take the UE into CELL_DCH state. In addition, it also specifies the IE “Physical Channel Information elements” and “Transport Channel Information elements”.

At step 18, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE.

At step 19 and 20, the SS uses PHYSICAL CHANNEL RECONFIGURATION to take the UE into CELL_FACH state.

At step 21, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 22, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 23, the SS shall send a CELL UPDATE CONFIRM taking the UE into CELL_FACH state. In addition, it also specifies “RB Information Reconfigure List and RB Information Affected List Information”.

At step 24, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE.

At step 25, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 26, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 27, the SS shall send a CELL UPDATE CONFIRM taking the UE into CELL_FACH state. In addition, it also specifies the IE “RB Information to release list”.

At step 28, the UE shall transmit a RADIO BEARER RELEASE COMPLETE.

At step 29, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 30, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 31, the SS reverses the transmission power level of cell 1 and 2 causing the UE to reselect to a different cell.

At step 32, the UE shall send a CELL UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.

At step 33, the SS shall send a CELL UPDATE CONFIRM.

At step 34, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

At step 38, the UE shall transmit a “PHYSICAL CHANNEL RECONFIGURATION COMPLETE” on the secondary carrier.

## 8.3.1.1c Cell Update: cell reselection in CELL_FACH (Cells belong to different frequency bands for LCR TDD)

### 8.3.1.1c.1 Definition

This test case is identical to test case 8.3.1.1b except that the cells belong to different frequency bands.

NOTE: The test case 8.3.1.1b is an intra frequency test.

### 8.3.1.1c.2 Conformance requirement

Same conformance requirement as clause 8.3.1.1b.2

### 8.3.1.1c.3 Test purpose

1. To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell in different frequency band.

2. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection

### 8.3.1.1c.4 Method of test

#### Initial Condition

Same initial conditions as clause 8.3.1.1b.4 except,

Cell 2 is mapped to cell 4 (inter frequency) of 34.108 clause 6.1 and both cells belong to different frequency bands.

Following updated System information is transmitted in both cells after UE is brought to initial state of PS-DCCH+DTCH_FACH (state 6-11) in cell 1.

#### MASTER INFORMATION BLOCK

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| MIB Value Tag | Set to (Current MIB value tag + 1) |
| SIB 4 Cell Value tag | Set to (Current SIB4 value tag + 1) |
| SB 1 Cell Value tag | Set to (Current SIB4 value tag + 1) |

#### SCHEDULING BLOCK 1

| Information Element | Value/remark |
|---|---|
| SIB 11 Cell Value Tag | Set to (Current SIB 11 value tag + 1) |

#### System Information Block type 4

Use the same message type found in clause 6.1.0b of TS 34.108, with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| -Qrxlevmin | -115dBm |

#### System Information Block type 11

Use the same message type found in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | FALSE |
| - Inter-frequency TDD 3.84Mcps measurement indicator | FALSE |
| - Inter-frequency TDD 1.28Mcps measurement indicator | TRUE |
| - Inter-RAT measurement indicators | Not Present |

SYSTEM INFORMATION CHANGE INDICATION

| Information Element | Value/remark |
|---|---|
| Message Type | |
| BCCH modification info | |
| MIB Value tag | Set equal to Value tag sent in modified MIB |

Related ICS/IXIT statement(s)

- UE supports multiple bands simultaneously: yes/no

Test Procedure

Same test procedure as clause 8.3.1.1b.4 with the following exception

After step 30, SS shall send CELL UPDATE CONFIRM message to the UE. UE shall reply with UTRAN MOBILITY INFORMATION CONFIRM message.

NOTE: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected sequence

Same expected sequence as clause 8.3.1.1b.4 with the following additional test steps:

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 30a | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE. |
| 30b | → | | UTRAN MOBILITY INFORMATION CONFIRM | |

Specific Message Contents

Same specific message contents as clause 8.3.1.1b.4. The message content for the additional test steps are given below.

CELL UPDATE CONFIRM (Step 30a)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0000000000000001' |

8.3.1.1c.5 Test requirement

Same test requirements as clause 8.3.1.1b.5 with the following additional test requirements:

At step 30a, the SS shall send a CELL UPDATE CONFIRM

At step 30b, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message

## 8.3.1.1d Inter-frequency absolute priority based reselection in CELL_FACH (Lower Priority)

### 8.3.1.1d.1 Definition

This test case verifies reselection to the cells on different frequency bands and requires UE to support Priority Based Reselection in CELL_FACH.

### 8.3.1.1d.2 Conformance requirement

…

If the UE has received absolute priority information for inter-frequency layers, the UE shall follow these rules:

…

- For inter-frequency layers with a priority equal or lower than the priority of the current serving layer:
  - If $Srxlev_{\mathbf{ServingCell}} > S_{prioritysearch1}$ and $Squal_{\mathbf{ServingCell}} > S_{prioritysearch2}$ the UE may choose not to perform measurements of inter-frequency layers of equal or lower priority.
  - If $Srxlev_{\mathbf{ServingCell}} <= S_{prioritysearch1}$ or $Squal_{\mathbf{ServingCell}} <= S_{prioritysearch2}$ the UE shall perform measurements of inter-frequency layers of equal or lower priority.
- The UE may choose not to perform measurements of inter-frequency layers for which the UE has no absolute priority.

…

Absolute priorities of different absolute priority layers may be provided to the UE. The following cell reselection criteria are used for inter-frequency cells if absolute priority information for inter-frequency is available to the UE, and inter-RAT cells if absolute priority information for inter-RAT is available to the UE.

…

The following definitions apply for the layers for which $Thresh_{x,high2}$ or $Thresh_{x,low2}$ are not provided:

- Criterion 1: the $Srxlev_{nonServingCell,x}$ of a cell on an evaluated higher absolute priority layer is greater than $Thresh_{x,high}$ during a time interval Treselection;
- Criterion 2: ($Srxlev_{ServingCell} < Thresh_{serving,low}$ or $Squal_{ServingCell} < = Thresh_{serving,low2}$) and the $Srxlev_{nonServingCell,x}$ of a inter-frequency cell on an evaluated equal absolute priority layer is greater than $Thresh_{x,low}$ during a time interval Treselection;
- Criterion 3: ($Srxlev_{ServingCell} < Thresh_{serving,low}$ or $Squal_{ServingCell} <= Thresh_{serving,low2}$) and the $Srxlev_{nonServingCell,x}$ of a cell on an evaluated lower absolute priority layer is greater than $Thresh_{x,low}$ during a time interval Treselection;

…

Cell reselection to a cell on a higher absolute priority layer than the camped frequency shall be performed if criterion 1 or 4 is fulfilled.

…

Cell reselection to a cell on a lower absolute priority layer than the camped frequency shall be performed if criterion 3 or 5 is fulfilled.

If more than one cell meets the above criteria, the UE shall reselect the cell with the highest $Srxlev_{nonServingCell,x}$ among the cells meeting the criteria on the highest absolute priority layer.

The UE shall not perform cell reselection to cells for which the cell selection criterion S is not fulfilled.

The UE shall not perform cell reselection until more than 1 second has elapsed since the UE camped on the current serving cell.

…

The UE should not perform cell reselection while the UE has an allocated common E-DCH resource.

For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 (see [4]), while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 (see [4]).

In all the above criteria the values of $Treselection_s$, $Treselection_{s,PCH}$ or $Treselection_{s,FACH}$ apply for Treselection and are scaled according to the UE mobility state, as specified in 5.2.6.1.1a.

…

If the cell is not operating in MBSFN mode according to subclause 8.1.1.6.3 the UE should store all relevant IEs included in this system information block. If the cell is not operating in MBSFN mode according to subclause 8.1.1.6.3 the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> clear every stored value of "$Threshx_{, high}$", "$Thresh_{x, low}$", "$Threshx_{, high2}$", "$Thresh_{x, low2}$" , "EUTRA-RSRQ-offsetWB" and "EUTRA-RSRQOnAllSymbolsOffset" in every occurrence of the IE "Priority Info List" in the variable PRIORITY_INFO_LIST.

1> otherwise:

2> clear the variable PRIORITY_INFO_LIST.

1> clear the variable EUTRA_FREQUENCY_INFO_LIST;

1> act upon the received IE "UTRA priority info list" as described in subclause 8.6.7.3a;

….

If the IE "UTRA priority info list" is received in System Information Block Type 19, the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> store the value of the IEs "$S_{prioritysearch1}$", "$S_{prioritysearch2}$", "$Thresh_{serving,low}$" and "$Thresh_{serving,low2}$" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST;

2> if any of the values in any of the occurrences of the IE "Frequency List" in any occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST is the frequency of the serving cell:

3> store the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> otherwise:

3> clear the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA FDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA TDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

1> otherwise:

2> update the PRIORITY_INFO_LIST IE "Priority status" to cause "sys_info_priority".

2> store information in the IE "UTRA Serving Cell" in the IE "UTRA Serving Cell" within the variable PRIORITY_INFO_LIST;

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA FDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

….

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA FDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD" in that occurrence of the IE "Frequency List".

…

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA TDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA TDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD" in that occurrence of the IE "Frequency List".

### 8.3.1.1d.3 Test purpose

1. Verify that for a UE signalling both FGI 3 and FGI 4, when Inter-Frequency cells with high , equal or low priority are present and SIB19 Cell_FACH Absolute Priority Measurement Indicator is set to “ALL Layers”, the

UE while in Cell_FACH state performs inter-frequency measurements and reselects to a lower priority Inter-frequency cells only when corresponding cell re-selection criteria are met.

### 8.3.1.1d.4 Method of test

Initial conditions

System Simulator:

- 3 cells Cell 1, Cell 4 and Cell 7. Cell1 belongs to a different frequency band than Cell 4 and Cell 7.
- Cell 1 as the active cell with SS downlink transmission power settings according to "T0" in table 8.3.1.1d below.
- SIB19 to be transmitted by Cell1 with neighbour configuration mentioned below.

User Equipment:

- UE is brought to CELL_FACH state on Cell 1 with "T0" in table 8.3.1.1d below.
- UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports UTRA FDD. yes/no
- UE supports EUTRA yes/no
- UE supports FGI4 (UTRA CELL_FACH absolute priority cell reselection for all priority layers) yes/no

NOTE: UEs that indicate support of EUTRA Feature group Indicator FGI4 also indicate support of EUTRA Feature group Indicator FGI3

**Table 8.3.1.1d**

| Parameter | Unit | Cell 1 | | | Cell 4 | | | Cell 7 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency (primary band) | | | High Range Test Frequency (secondary band) | | | Low Range Test Frequency (secondary band) | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -65 | -80 | -75 | -75 | -70 | -90 | -75 | -65 |
| Srxlev* | dB | 21 | 16 | 1 | 6 | 6 | 11 | -9 | 6 | 16 |
| qRxLevMinFDD | dB | -81 | | | -81 | | | -81 | | |
| Note:<br>-Srxlev is calculated in UE.<br>During T1, UE should not meet the higher nor lower priority reselection criteria<br>During T2, UE should meet lower priority cell reselection criteria, and should not meet the higher priority reselection criteria | | | | | | | | | | |

Table 8.3.1.1d illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions. SS switches the power settings between columns "T1" and "T0" and between columns "T2" and "T1", whenever the description below specifies that the transmission power settings for cell 1, cell 4 and cell 5 be reversed.

The UE is in CELL_FACH state, camping onto cell 1. SS transmits MIB with the "MIB value tag" IE different from the original setting and the SIB TYPE 19 with cell 7 as the higher priority cell and cell 4 as the lower priority cell. SS notifies the UE by sending a SYSTEM INFORMATION CHANGE INDICATION with the BCCH modification and SS waits for 5s to ensure UE reads all the SIB information. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1d. The UE does not reselect to cell 7 or cell 4 as power levels do not meet the absolute priority cell reselection criteria defined in SIB 19. SS monitors that the UE does not send CELL UPDATE message on cell 4 or cell 7. SS configures its downlink transmission power settings according to columns "T2" in table 8.3.1.1d. SS waits for the "$T_{reselection}$" time configured in SIB3. The UE shall find reselect lower priority cell 4 as the absolute priority reselection criteria is met. The UE shall not reselect to higher priority cell 7 as the absolute priority reselection criteria is not met. The UE shall transmit a CELL UPDATE with cause "CELL RESELECTION" on cell 4. SS shall respond with CELL UPDATE CONFIRM message. UE sends UTRAN MOBILITY INFORMATION CONFIRM MESSAGE SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state in cell 1 |
| 2 | ← | | SYSTEM INFORMATION BLOCK TYPE 19 | SS transmits MIB with the “MIB Value Tag” IE different from the original setting and the SIB TYPE 19 with cell 5 as the higher priority cell and cell 4 as the lower priority cell (See specific message contents). |
| 3 | ← | | SYSTEM INFORMATION CHANGE INDICATION | SS notifies the UE by sending a SYSTEM INFORMATION CHANGE INDICATION with the BCCH modification (See specific message contents) and waits for 5s for UE to read all SIB information. |
| 4 | ← | | | SS configures its downlink transmission power settings according to columns “T1” in table 8.3.1.1d. SS checks that no message is received on cell 4 or cell 5 even after expiry of Treselection. |
| 5 | ← | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.3.1.1d. |
| 6 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" SS receives message on cell 4. |
| 7 | ← | | CELL UPDATE CONFIRM | New C-RNTI and U-RNTI identities are assigned to the UE. IE "RRC State Indicator" is set to "CELL_FACH". |
| 8 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

| New C-RNTI | '1010 1010 1010 1010' |

#### 8.3.1.1d.5 Test requirements

1) At step 4, UE does not reselect to a higher priority Cell 7 nor to a lower priority cell 4

2) At step 6, UE reselects to lower priority Cell 4.

### 8.3.1.1e Inter-frequency absolute priority based reselection in CELL_FACH (Higher Priority)

#### 8.3.1.1e.1 Definition

This test case verifies reselection to the cells on different frequency bands and requires UE to support Priority Based Reselection in CELL_FACH.

#### 8.3.1.1e.2 Conformance requirement

If the UE has received absolute priority information for inter-frequency layers, the UE shall follow these rules:

- The UE shall perform measurements of inter-frequency layers with a priority higher than the priority of the current serving layer.

NOTE: The rate of these measurements may vary depending on whether Srxlev and Squal of the serving cell are above or below $S_{prioritysearch1}$ and $S_{prioritysearch2}$. This is specified in [10].

…

Absolute priorities of different absolute priority layers may be provided to the UE. The following cell reselection criteria are used for inter-frequency cells if absolute priority information for inter-frequency is available to the UE, and inter-RAT cells if absolute priority information for inter-RAT is available to the UE.

…

If priority information is provided for any inter-frequency layers, cells belonging to inter-frequency layers for which no priority or no threshold is assigned shall not be considered for reselection.

…

If none of the inter-frequency layers in UTRAN are provided with both priority and threshold parameters, the cell reselection criteria in subclause 5.2.6.1.4 shall apply for inter-frequency layers in UTRAN.

…

If both criteria in subclause 5.2.6.1.4 and criteria in subclause 5.2.6.1.4a are simultaneously fulfilled, the order in which the reselection criteria are evaluated is left to UE implementation.

…

The UE may apply either priorities broadcast in system information or priorities received through dedicated signalling. The rules regarding which set of priorities shall apply are defined in [4]. UE specific priorities shall be cleared when the validity time of the UE specific priorities expires, or when a PLMN selection is performed on request by NAS. UE specific priorities are not applied in camped on any cell state.

…

The following definitions apply for the layers for which $Thresh_{x,high2}$ or $Thresh_{x,low2}$ are not provided:

- Criterion 1: the $Srxlev_{nonServingCell,x}$ of a cell on an evaluated higher absolute priority layer is greater than $Thresh_{x,high}$ during a time interval Treselection;

…

The following definitions apply for the layers for which both $Thresh_{x,high2}$ and $Thresh_{x,low2}$ are provided:

- Criterion 4: the $Squal_{nonServingCell,x}$ of a cell on an evaluated higher absolute priority layer is greater than $Thresh_{x,high2}$ during a time interval Treselection;

…

Cell reselection to a cell on a higher absolute priority layer than the camped frequency shall be performed if criterion 1 or 4 is fulfilled.

…

If more than one cell meets the above criteria, the UE shall reselect the cell with the highest $Srxlev_{nonServingCell,x}$ among the cells meeting the criteria on the highest absolute priority layer.

The UE shall not perform cell reselection to cells for which the cell selection criterion S is not fulfilled.

The UE shall not perform cell reselection until more than 1 second has elapsed since the UE camped on the current serving cell.

…

The UE should not perform cell reselection while the UE has an allocated common E-DCH resource.

For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 (see [4]), while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 (see [4]).

In all the above criteria the values of $Treselection_{s}$, $Treselection_{s,PCH}$ or $Treselection_{s,FACH}$ apply for Treselection and are scaled according to the UE mobility state, as specified in 5.2.6.1.1a.

…

If the cell is not operating in MBSFN mode according to subclause 8.1.1.6.3 the UE should store all relevant IEs included in this system information block. If the cell is not operating in MBSFN mode according to subclause 8.1.1.6.3 the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> clear every stored value of "$Threshx_{, high}$", "$Thresh_{x, low}$", "$Threshx_{, high2}$", "$Thresh_{x, low2}$" , "EUTRA-RSRQ-offsetWB" and "EUTRA-RSRQOnAllSymbolsOffset" in every occurrence of the IE "Priority Info List" in the variable PRIORITY_INFO_LIST.

1> otherwise:

2> clear the variable PRIORITY_INFO_LIST.

1> clear the variable EUTRA_FREQUENCY_INFO_LIST;

1> act upon the received IE "UTRA priority info list" as described in subclause 8.6.7.3a;

….

If the IE "UTRA priority info list" is received in System Information Block Type 19, the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> store the value of the IEs "$S_{prioritysearch1}$", "$S_{prioritysearch2}$", "$Thresh_{serving,low}$" and "$Thresh_{serving,low2}$" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST;

2> if any of the values in any of the occurrences of the IE "Frequency List" in any occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST is the frequency of the serving cell:

3> store the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> otherwise:

3> clear the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA FDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA TDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

1> otherwise:

2> update the PRIORITY_INFO_LIST IE "Priority status" to cause "sys_info_priority".

2> store information in the IE "UTRA Serving Cell" in the IE "UTRA Serving Cell" within the variable PRIORITY_INFO_LIST;

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA FDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

….

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA FDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD" in that occurrence of the IE "Frequency List".

…

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA TDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA TDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD" in that occurrence of the IE "Frequency List".

References

2. TS 25.331, clause 8.1.1.6.19, 8.6.7.3a

### 8.3.1.1e.3 Test purpose

1. Verify that for a UE signalling both FGI 3 and FGI 4, when Inter-Frequency cells with high , equal or low priority are present and SIB19 Cell_FACH_Absolute_Priority_Measurement_Indicator is set to “HIGH Layers” , the UE while in Cell_FACH state performs inter-frequency measurements and reselects to only high priority Inter-frequency cells only when corresponding cell re-selection criteria are met.

### 8.3.1.1e.4 Method of test

Initial conditions

System Simulator:

- 3 cells Cell 1, Cell 4 and Cell 7. Cell 1 belongs to a different frequency band than Cell 4 and Cell 7.
- Cell 1 as the active cell with SS downlink transmission power settings according to “T0” in table 8.3.1.1e below.
- SIB19 to be transmitted by Cell 1 with neighbour configuration mentioned below.

User Equipment:

- UE is brought to CELL_FACH state on Cell 1 with “T0” in table 8.3.1.1e below.
- UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports UTRA FDD yes/no
- UE supports EUTRA yes/no
- UE supports FGI3 (UTRA CELL_FACH absolute priority cell reselection for high priority layers) or FGI4 (UTRA CELL_FACH absolute priority cell reselection for all layers) yes/no

**Table 8.3.1.1e**

| Parameter | Unit | Cell 1 | | | Cell 4 | | | Cell 7 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency (primary band) | | | High Range Test Frequency (secondary band) | | | Low Range Test Frequency (secondary band) | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | -60 | -75 | -65 | -60 | -90 | -80 | -62 |
| Srxlev* | dB | 21 | 21 | 21 | 6 | 16 | 21 | -9 | 1 | 19 |
| qRxLevMinFDD | dB | -81 | | | -81 | | | -81 | | |
| Note:<br>Srxlev is calculated in UE.<br>During T1, UE should not meet the higher priority reselection criteria nor lower priority selection criteria<br>During T2, UE should meet higher priority reselection criteria | | | | | | | | | | |

Table 8.3.1.1e illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions. SS switches the power settings between columns "T1" and "T0" and between columns “T2” and “T1”, whenever the description below specifies that the transmission power settings for cell 1, cell 4 and cell 5 be reversed.

The UE is in CELL_FACH state, camping onto cell 1. SS transmits MIB with the “MIB value tag” IE different from the original setting and the SIB TYPE 19 with cell 7 as the higher priority cell and cell 4 as the lower priority cell. SS notifies the UE by sending a SYSTEM INFORMATION CHANGE INDICATION with the BCCH modification and SS waits for 5s to ensure UE reads all the SIB information. SS configures its downlink transmission power settings according to columns “T1” in table 8.3.1.1e.

The UE does not reselect to cell 7 or cell 4 as power levels do not meet the absolute priority cell reselection criteria defined in SIB 19. SS monitors that the UE does not send CELL UPDATE message on cell 4 or cell 7. SS configures its downlink transmission power settings according to columns “T2” in table 8.3.1.1e. SS waits for the “$T_{reselection}$” time configured in SIB3. The UE shall perform reselection to higher priority cell 7 as the absolute priority reselection criteria is met. The UE shall not reselect to lower priority cell 4 as the absolute priority reselection criteria is not met. The UE shall transmit a CELL UPDATE with cause “CELL RESELECTION” on cell 7. SS shall respond with CELL UPDATE CONFIRM message. UE sends UTRAN MOBILITY INFORMATION CONFIRM MESSAGE. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state in cell 1 |
| 2 | ← | | SYSTEM INFORMATION BLOCK TYPE 19 | SS transmits MIB with the “MIB Value Tag” IE different from the original setting and the SIB TYPE 19 with cell 5 as the higher priority cell and cell 4 as the lower priority cell (See specific message contents). |
| 3 | ← | | SYSTEM INFORMATION CHANGE INDICATION | SS notifies the UE by sending a SYSTEM INFORMATION CHANGE INDICATION with the BCCH modification (See specific message contents) and waits for 5s for UE to read all SIB information. |
| 4 | ← | | | SS configures its downlink transmission power settings according to columns “T1” in table 8.3.1.1e. SS checks that no message is received on cell 4 or cell 5 even after expiry of Treselection. |
| 5 | ← | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.3.1.1e. |
| 6 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause". SS receives message on cell 5. |
| 7 | ← | | CELL UPDATE CONFIRM | New C-RNTI and U-RNTI identities are assigned to the UE. IE "RRC State Indicator" is set to "CELL_FACH". |
| 8 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

### 8.3.1.1e.5 Test requirements

1) At step 4, UE does not reselects to a higher priority Cell 7 and lower priority cell 4.

2) At step 6, UE reselects to higher priority Cell 7.

## 8.3.1.1f Inter-frequency reselection to a no priority layer when NW and UE supports absolute priority in CELL_FACH

### 8.3.1.1f.1 Definition

This test case is identical to test case 8.3.1.1a from inter-frequency neighbours and reselection perspective and identical to testcase 8.3.1.1d from the NW and UE capability perspective (i.e. SIB19, FGI3 and FGI4). With NW and UE supporting absolute priority in CELL_FACH and inter-frequency layers are not configured with priority, UE is expected to perform cell reselection in CELL_FACH to cells belonging to different frequency bands.

### 8.3.1.1f.2 Conformance requirement

Same conformance requirement as clause 8.3.1.1.2

…

If none of the inter-frequency layers in UTRAN are provided with both priority and threshold parameters, the cell reselection criteria in subclause 5.2.6.1.4 shall apply for inter-frequency layers in UTRAN.

…

Reference

3GPP TS 25.331 clause 8.3.1

3GPP TS 25.304 clause 5.2.6.1.4a

### 8.3.1.1f.3 Test purpose

1. To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell in different frequency band.
2. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection.

### 8.3.1.1f.4 Method of test

Initial Condition

Same initial conditions as clause 8.3.1.1.4 except,

Cell 2 is mapped to cell 4 (inter frequency) of 34.108 clause 6.1 and both cells belong to different frequency bands. Cell 1 on Primary Band and Cell 4 on secondary band.

User Equipment:

- UE is brought to CELL_FACH state on Cell 1 with “T0” as per table 8.3.1.1.
- UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports multiple bands simultaneously yes/no
- UE supports EUTRA yes/no
- UE supports FGI4 (UTRA CELL_FACH absolute priority cell reselection for all priority layers) yes/no

NOTE: UE’s that indicate support of EUTRA Feature group Indicator FGI4 also indicate support of EUTRA Feature group Indicator FGI3.

Refer to Test Procedure in clause 8.3.1.1.4

After step 30a, SS shall send CELL UPDATE CONFIRM message to the UE. UE shall reply with UTRAN MOBILITY INFORMATION CONFIRM message.

Steps 31 to 34 from 8.3.1.1.4 shall be skipped.

Expected Sequence

Same expected sequence as clause 8.3.1.1.4 with the following additional test steps:

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 30a | ← | | CELL UPDATE CONFIRM | New C-RNTI identity is assigned to the UE. *IE "RRC State Indicator" is set to Cell_FACH* |
| 30b | → | | UTRAN MOBILITY INFORMATION CONFIRM | Go to Step 35 to verify that UE is in CELL_FACH state. |

Specific Message Contents

MASTER INFORMATION BLOCK

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |

CELL UPDATE CONFIRM (Step 30a)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0000000000000001' |

Test Procedure

Same test procedure as clause 8.3.1.1.4 with the following exception

After step 30a, SS shall send CELL UPDATE CONFIRM message to the UE. UE shall reply with UTRAN MOBILITY INFORMATION CONFIRM message.

NOTE: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

### 8.3.1.1f.5 Test requirement

Same test requirements as clause 8.3.1.1.5 with the following additional test requirements:

At step 30a, the SS shall send a CELL UPDATE CONFIRM

At step 30b, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message

### 8.3.1.2 Cell Update: cell reselection in CELL_PCH

#### 8.3.1.2.1 Definition

#### 8.3.1.2.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_FACH or CELL_PCH state and the UE performs cell re-selection; or

3> if the UE is in CELL_FACH state and the variable C_RNTI is empty:

4> perform cell update using the cause "cell reselection".

When initiating cell update procedure, the UE shall:

1> stop timer T305;

1> if the UE is in CELL_DCH state:

…

…

1> move to CELL_FACH state, if not already in that state;

1> if the UE performs cell re-selection:

2> clear the variable C_RNTI; and

2> stop using that C_RNTI just cleared from the variable C_RNTI in MAC.

1> set CFN in relation to SFN of current cell according to TS 25.331 subclause 8.5.15;

1> in case of a cell update procedure:

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

2> submit the CELL UPDATE message for transmission on the uplink CCCH.

…

1> set counter V302 to 1;

1> start timer T302 when the MAC layer indicates success or failure in transmitting the message.

…

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

The UE shall set the IEs in the CELL UPDATE message as follows:

1> set the IE "Cell update cause" corresponding to the cause specified in TS 25.331 subclause 8.3.1.2 that is valid when the CELL UPDATE message is submitted to lower layers for transmission;

NOTE: During the time period starting from when a cell update procedure is initiated by the UE until when the procedure ends, additional CELL UPDATE messages may be transmitted by the UE with different causes.

1> set the IE "U-RNTI" to the value of the variable U_RNTI;

1> if the value of the variable PROTOCOL_ERROR_INDICATOR is TRUE:

…

1> if the value of the variable FAILURE_INDICATOR is TRUE:

…

…

When the UE receives a CELL UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1> stop timer T302;

1> in case of a cell update procedure and the CELL UPDATE CONFIRM message:

…

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified otherwise in the following:

…

…

1> enter a state according to subclause 8.6.3.3 applied on the CELL UPDATE CONFIRM / URA UPDATE CONFIRM message.

…

If the UE after state transition enters CELL_PCH state, it shall:

…

1> start the timer T305 using its initial value if timer T305 is not running and periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity";

1> select Secondary CCPCH according to subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging Occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2 in CELL_PCH state.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- does not include "CN information elements"; and
- does not include the IE "Ciphering mode info"; and
- does not include the IE "Integrity protection mode info"; and
- does not include the IE "New C-RNTI"; and
- does not include the IE "New U-RNTI":

the UE shall:

1> transmit no response message.

Reference

3GPP TS 25.331 clause 8.3.1.

#### 8.3.1.2.3 Test purpose

1. To confirm that the UE, in CELL_PCH state, executes a cell update procedure after the successful reselection of another UTRA cell.

#### 8.3.1.2.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: CELL_PCH (state 6-12) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is brought to CELL_PCH state and is camped onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The value "cell reselection" shall be set in IE "Cell update cause" in CELL UPDATE message. Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_PCH". After receiving this message, the UE returns to CELL_PCH state without transmitting any uplink message. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to CELL_PCH state in cell 1 |
| 2 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. |
| 3 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection" |
| 4 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |
| 5 | | | | The UE is in CELL_PCH state. |
| 6 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

CELL UPDATE (Steps 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.3.1.2.5 Test requirement

After step 2 the UE shall reselect to cell 2 and transmit a CELL UPDATE message, containing the IE "Cell update cause" set to "cell reselection".

After step 4, the UE shall enter CELL_PCH state.

### 8.3.1.3 Cell Update: periodical cell update in CELL_FACH

#### 8.3.1.3.1 Definition

#### 8.3.1.3.2 Conformance requirement

UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

…

1> Periodical cell update:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_FACH or CELL_PCH state; and

2> if the timer T305 expires; and

2> if the criteria for "in service area" as specified in TS 25.331 subclause 8.5.5.2 is fulfilled; and

2> if periodic updating has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity":

3> perform cell update using the cause "periodical cell update".

When initiating the cell update procedure, the UE shall:

1> stop timer T305;

…

1> move to CELL_FACH state, if not already in that state;

…

1> set CFN in relation to SFN of current cell according to TS 25.331 subclause 8.5.15;

1> in case of a cell update procedure:

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

2> submit the CELL UPDATE message for transmission on the uplink CCCH.

1> set counter V302 to 1;

1> start timer T302 when the MAC layer indicates success or failure in transmitting the message.

…

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

The UE shall set the IEs in the CELL UPDATE message as follows:

1> set the IE "Cell update cause" corresponding to the cause specified in TS 25.331 subclause 8.3.1.2 that is valid when the CELL UPDATE message is submitted to lower layers for transmission;

NOTE: During the time period starting from when a cell update procedure is initiated by the UE until when the procedure ends, additional CELL UPDATE messages may be transmitted by the UE with different causes.

1> set the IE "U-RNTI" to the value of the variable U_RNTI;

…

When the UE receives a CELL UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1> stop timer T302;

…

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified otherwise in the following:

1> enter a state according to TS 25.331 subclause 8.6.3.3 applied on the CELL UPDATE CONFIRM / URA UPDATE CONFIRM message.

If the UE after state transition remains in CELL_FACH state, it shall

1> start the timer T305 using its initial value if timer T305 is not running and periodical cell update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity";

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> not prohibit periodical status transmission in RLC;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

If the UE after the state transition remains in CELL_FACH state; and

- a C-RNTI is stored in the variable C_RNTI;

or

- the UE after the state transition moves to another state than the CELL_FACH state:

the UE shall:

1> in case of a cell update procedure:

2> set the IE "RRC transaction identifier" in any response message transmitted below to the value of "RRC transaction identifier" in the entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry.

1> transmit a response message as specified in TS 25.331 subclause 8.3.1.7;

1> in case of a cell update procedure:

2> clear the entry for the CELL UPDATE CONFIRM message in the table "Rejected transactions" in the variable TRANSACTIONS.

1> set the variable CELL_UPDATE_STARTED to FALSE;

1> clear the variable SECURITY_MODIFICATION.

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- does not include "CN information elements"; and
- does not include the IE "Ciphering mode info"; and
- does not include the IE "Integrity protection mode info"; and
- does not include the IE "New C-RNTI"; and
- does not include the IE "New U-RNTI":

the UE shall:

1> transmit no response message.

…

When the UE receives a UTRAN MOBILITY INFORMATION message, it shall:

1> act on received information elements as specified in TS 25.331 subclause 8.6;

1> if the IE "UE Timers and constants in connected mode" is present:

2> store the values of the IE "UE Timers and constants in connected mode" in the variable TIMERS_AND_CONSTANTS, replacing any previously stored value for each timer and constant; and

2> for each updated timer value:

3> start using the new value next time the timer is started;

2> for each updated constant value:

3> start using the new value directly;

1> set the IE "RRC transaction identifier" in the UTRAN MOBILITY INFORMATION CONFIRM message to the value of "RRC transaction identifier" in the entry for the UTRAN MOBILITY INFORMATION message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC;

…

Reference

3GPP TS 25.331 clause 8.3.1, 8.3.3.3.

### 8.3.1.3.3 Test purpose

1. To confirm that the UE executes a periodical cell update procedure following the expiry of timer T305.

### 8.3.1.3.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.3**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

Table 8.3.1.3 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_FACH state. When the UE detects the expiry of timer T305 according to the settings in system information, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH with a cause indicating periodical cell updating. SS replies with a CELL UPDATE CONFIRM message, and IE "RRC State Indicator" is set to "CELL_FACH". SS verifies that the UE does not transmit any uplink message. SS then waits for T305 to expire again. The UE shall send another CELL UPDATE message to report periodic cell updating. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message which includes the IEs "new C-RNTI", "new U-RNTI" to the UE on the downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. Next, SS transmits UTRAN MOBILITY INFORMATION message, which includes IE "T305" set to "infinity", to UE. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.3, causing the UE to enter CELL_FACH state in cell 2 and transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". Then SS shall transmit CELL UPDATE CONFIRM. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. SS then monitors the uplink CCCH for a period of 60 minutes (ideally the SS should monitor this up to the maximum possible value for timer T305 (720 minutes), but for practical reasons 60 minutes (twice default timer of 30 minutes) is regarded as being sufficient) and verifies that no CELL_UPDATE message is received. After this, the SS transmits UTRAN MOBILITY INFORMATION message, which includes IE "T305" set to '5', to UE. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.3, causing the UE to enter CELL_FACH state in cell 1 and transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". Then SS shall transmit CELL UPDATE CONFIRM. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. UE shall resume periodic cell updating procedure and transmit CELL_UPDATE message after T305 (5 minutes) expires.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state. SS waits until T305 has expired. |
| 2 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "periodical cell updating" |
| 3 | ← | | CELL UPDATE CONFIRM | No RNTI identities are given. No information on PRACH and S-CCPCH are provided. |
| 4 | | | | SS verifies that no uplink message is received from UE. SS waits for another period to allow T305 to expire. |
| 5 | → | | CELL UPDATE | Set to "periodical cell update" in IE "Cell update cause" upon the expiry of timer T305. |
| 6 | ← | | CELL UPDATE CONFIRM | Including IEs "new C-RNTI", "new U-RNTI" and IE "RRC State Indicator" is set to "CELL_FACH" |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | ← | | UTRAN MOBILITY INFORMATION | IE "T305" is set to Infinity. |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.3 |
| 11 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "cell reselection". |
| 12 | ← | | CELL UPDATE CONFIRM | |
| 12a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 13 | | | | SS waits for 60 minutes and checks that no CELL UPDATE message is transmitted on uplink PRACH channel. |
| 14 | ← | | UTRAN MOBILITY INFORMATION | IE "T305" is set to '5. |
| 15 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 16 | | | | SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.3.1.3 |
| 17 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "cell reselection". |
| 18 | ← | | CELL UPDATE CONFIRM | |
| 18a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 19 | → | | CELL UPDATE | UE shall transmit this message with "cell update cause" set to "periodical cell updating" after T305 expires. |
| 20 | ← | | CELL UPDATE CONFIRM | |
| 21 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

CELL UPDATE (Step 2 and 5)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'periodical cell updating' |

CELL UPDATE (Step 11 and 17)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to same bit string as in IE "S-RNTI" in IE "U-RNTI" of the CELL UPDATE CONFIRM message sent in step 6. |
| Cell Update Cause | Check to see if set to "cell reselection" |

CELL UPDATE CONFIRM (Step 3 and 20)

Use the same message sub-type found in TS 34.108, clause 9.

CELL UPDATE CONFIRM (Step 6, 12 and 18)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | |
| - SRNC Identity | Set to '0000 0000 0001' |
| - S-RNTI | Set to an arbitrary string different from '0000 0000 0000 0000 0001' |
| New C-RNTI | '1010 1010 1010 1010' |

CELL UPDATE (Step 19)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to same bit string as in IE "S-RNTI" in IE "U-RNTI" of the CELL UPDATE CONFIRM message sent in step 6. |
| Cell Update Cause | Check to see if set to 'periodical cell updating' |

UTRAN MOBILITY INFORMATION (Step 8)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| UE Timers and constants in connected mode | |
| - T305 | infinity |

UTRAN MOBILITY INFORMATION (Step 14)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| UE Timers and constants in connected mode<br>- T305 | <br>5 |

#### 8.3.1.3.5 Test requirement

After step 1 the UE shall detect the expiry of timer T305 and then transmits a CELL UPDATE message setting value "periodical cell update" into IE "Cell update cause".

After step 3 the UE shall not send any uplink message as a response to CELL UPDATE CONFIRM message sent in step 3.

After step 4 the UE shall send a CELL UPDATE message, specifying the cell updating cause to be "periodical cell update".

After step 6 the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH.

After step 8, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 10, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "cell reselection" on the uplink CCCH.

After step 12, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

Between step 12a and 14, the UE shall not transmit any CELL UPDATE message.

After step 14, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 16, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "cell reselection" on the uplink CCCH.

After step 18, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 18a, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "periodical cell update" on the uplink CCCH.

### 8.3.1.3a Cell Update: periodical cell update in CELL_FACH (1.28 Mcps TDD Only)

#### 8.3.1.3a.1 Definition

#### 8.3.1.3a.2 Conformance requirement

UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

…

1> Periodical cell update:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_FACH or CELL_PCH state; and

2> if the timer T305 expires; and

2> if the criteria for "in service area" as specified in TS 25.331 subclause 8.5.5.2 is fulfilled; and

2> if periodic updating has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity":

3> perform cell update using the cause "periodical cell update".

When initiating the cell update procedure, the UE shall:

1> stop timer T305;

…

1> move to CELL_FACH state, if not already in that state;

…

1> set CFN in relation to SFN of current cell according to TS 25.331 subclause 8.5.15;

1> in case of a cell update procedure:

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3a;

2> submit the CELL UPDATE message for transmission on the uplink CCCH.

1> set counter V302 to 1;

1> start timer T302 when the MAC layer indicates success or failure in transmitting the message.

…

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

The UE shall set the IEs in the CELL UPDATE message as follows:

1> set the IE "Cell update cause" corresponding to the cause specified in TS 25.331 subclause 8.3.1.2 that is valid when the CELL UPDATE message is submitted to lower layers for transmission;

NOTE: During the time period starting from when a cell update procedure is initiated by the UE until when the procedure ends, additional CELL UPDATE messages may be transmitted by the UE with different causes.

1> set the IE "U-RNTI" to the value of the variable U_RNTI;

…

When the UE receives a CELL UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1> stop timer T302;

…

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified otherwise in the following:

1> enter a state according to TS 25.331 subclause 8.6.3.3 applied on the CELL UPDATE CONFIRM / URA UPDATE CONFIRM message.

If the UE after state transition remains in CELL_FACH state, it shall

1> start the timer T305 using its initial value if timer T305 is not running and periodical cell update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity";

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> not prohibit periodical status transmission in RLC;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

If the UE after the state transition remains in CELL_FACH state; and

- a C-RNTI is stored in the variable C_RNTI;

or

- the UE after the state transition moves to another state than the CELL_FACH state:

the UE shall:

1> in case of a cell update procedure:

2> set the IE "RRC transaction identifier" in any response message transmitted below to the value of "RRC transaction identifier" in the entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry.

1> transmit a response message as specified in TS 25.331 subclause 8.3.1.7;

1> in case of a cell update procedure:

2> clear the entry for the CELL UPDATE CONFIRM message in the table "Rejected transactions" in the variable TRANSACTIONS.

1> set the variable CELL_UPDATE_STARTED to FALSE;

1> clear the variable SECURITY_MODIFICATION.

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and

- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- does not include "CN information elements"; and
- does not include the IE "Ciphering mode info"; and
- does not include the IE "Integrity protection mode info"; and
- does not include the IE "New C-RNTI"; and
- does not include the IE "New U-RNTI":

the UE shall:

1> transmit no response message.

…

When the UE receives a UTRAN MOBILITY INFORMATION message, it shall:

1> act on received information elements as specified in TS 25.331 subclause 8.6;

1> if the IE "UE Timers and constants in connected mode" is present:

2> store the values of the IE "UE Timers and constants in connected mode" in the variable TIMERS_AND_CONSTANTS, replacing any previously stored value for each timer and constant; and

2> for each updated timer value:

3> start using the new value next time the timer is started;

2> for each updated constant value:

3> start using the new value directly;

1> set the IE "RRC transaction identifier" in the UTRAN MOBILITY INFORMATION CONFIRM message to the value of "RRC transaction identifier" in the entry for the UTRAN MOBILITY INFORMATION message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC;

…

Reference

3GPP TS 25.331 clause 8.3.1, 8.3.3.3.

### 8.3.1.3a.3 Test purpose

1. To confirm that the UE executes a periodical cell update procedure following the expiry of timer T305.

2. To confirm that the UE can indicate the UpPCH shifting position according to a CELL UPDATE CONFIRM message received from the SS and complete the process.

### 8.3.1.3a.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.3a**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

Table 8.3.1.3a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_FACH state. When the UE detects the expiry of timer T305 according to the settings in system information, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH with a cause indicating periodical cell updating. SS replies with a CELL UPDATE CONFIRM message, and IE "RRC State Indicator" is set to "CELL_FACH". SS verifies that the UE does not transmit any uplink message. SS then waits for T305 to expire again. The UE shall send another CELL UPDATE message to report periodic cell updating. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message which includes the IEs "new C-RNTI", "new U-RNTI" to the UE on the downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. Next, SS transmits UTRAN MOBILITY INFORMATION message, which includes IE "T305" set to "infinity", to UE. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.3a, causing the UE to enter CELL_FACH state in cell 2 and transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". Then SS shall transmit CELL UPDATE CONFIRM. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. SS then monitors the uplink CCCH for a period of 60 minutes (ideally the SS should monitor this up to the maximum possible value for timer T305 (720 minutes), but for practical reasons 60 minutes (twice default timer of 30 minutes) is regarded as being sufficient) and verifies that no CELL_UPDATE message is received. After this, the SS transmits UTRAN MOBILITY INFORMATION message, which includes IE "T305" set to '5', to UE. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.3a, causing the UE to enter CELL_FACH state in cell 1 and transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". Then SS shall transmit CELL UPDATE CONFIRM. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. UE shall resume periodic cell updating procedure and transmit CELL_UPDATE message after T305 (5 minutes) expires. SS should transmit CELL UPDATE CONFIRM. If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. After T305 (5 minutes) expires, UE transmits CELL UPDATE at CELL1. SS indicates that UE is in CELL_DCH state and changes the carrier and UpPCH shifting position. UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state. SS waits until T305 has expired. |
| 2 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "periodical cell updating" |
| 3 | ← | | CELL UPDATE CONFIRM | No RNTI identities are given. No information on PRACH and S-CCPCH are provided. |
| 4 | | | | SS verifies that no uplink message is received from UE. SS waits for another period to allow T305 to expire. |
| 5 | → | | CELL UPDATE | Set to "periodical cell update" in IE "Cell update cause" upon the expiry of timer T305. |
| 6 | ← | | CELL UPDATE CONFIRM | Including IEs "new C-RNTI", "new U-RNTI" and IE "RRC State Indicator" is set to "CELL_FACH" |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | ← | | UTRAN MOBILITY INFORMATION | IE "T305" is set to Infinity. |
| 9 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 10 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.3a |
| 11 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "cell reselection". |
| 12 | ← | | CELL UPDATE CONFIRM | |
| 12a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 13 | | | | SS waits for 60 minutes and checks that no CELL UPDATE message is transmitted on uplink PRACH channel. |
| 14 | ← | | UTRAN MOBILITY INFORMATION | IE "T305" is set to '5. |
| 15 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 16 | | | | SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.3.1.3a |
| 17 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "cell reselection". |
| 18 | ← | | CELL UPDATE CONFIRM | |
| 18a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 19 | → | | CELL UPDATE | UE shall transmit this message with "cell update cause" set to "periodical cell updating" after T305 expires. |
| 20 | ← | | CELL UPDATE CONFIRM | |
| 21 | | | Void | |
| 22 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "periodical cell updating" |
| 23 | ← | | CELL UPDATE CONFIRM | UE is in CELL_DCCH state at cell1 and specify the frequency info and UpPCH shifting position. |

| | | | |
|---|---|---|---|
| 24 | → | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE transmits the message on DPCH channel. |
| 25 | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

CELL UPDATE (Step 2 and 5)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'periodical cell updating' |

CELL UPDATE (Step 11 and 17)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to same bit string as in IE "S-RNTI" in IE "U-RNTI" of the CELL UPDATE CONFIRM message sent in step 6. |
| Cell Update Cause | Check to see if set to "cell reselection" |

CELL UPDATE CONFIRM (Step 3 and 20)

Use the same message sub-type found in TS 34.108, clause 9.

CELL UPDATE CONFIRM (Step 6, 12 and 18)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | |
| - SRNC Identity | Set to '0000 0000 0001' |
| - S-RNTI | Set to an arbitrary string different from '0000 0000 0000 0000 0001' |
| New C-RNTI | '1010 1010 1010 1010' |

CELL UPDATE (Step 19)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to same bit string as in IE "S-RNTI" in IE "U-RNTI" of the CELL UPDATE CONFIRM message sent in step 6. |
| Cell Update Cause | Check to see if set to 'periodical cell updating' |

UTRAN MOBILITY INFORMATION (Step 8)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| UE Timers and constants in connected mode | |
| - T305 | infinity |

UTRAN MOBILITY INFORMATION (Step 14)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| UE Timers and constants in connected mode | |
| - T305 | 5 |

CELL UPDATE CONFIRM (Step23)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| PhysicalChannelReconfigurationn-r4-TDD128-add-ext-IEs | |
| PhysicalChannelReconfiguration -r4-TDD128-add-ext | |
| UpPCHpositionInfo | 22 |

### 8.3.1.3a.5 Test requirement

After step 1 the UE shall detect the expiry of timer T305 and then transmits a CELL UPDATE message setting value "periodical cell update" into IE "Cell update cause".

After step 3 the UE shall not send any uplink message as a response to CELL UPDATE CONFIRM message sent in step 3.

After step 4 the UE shall send a CELL UPDATE message, specifying the cell updating cause to be "periodical cell update".

After step 6 the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH.

After step 8, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 10, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "cell reselection" on the uplink CCCH.

After step 12, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

Between step 12a and 14, the UE shall not transmit any CELL UPDATE message.

After step 14, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 16, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "cell reselection" on the uplink CCCH.

After step 18, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 18a, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "periodical cell update" on the uplink CCCH.

### 8.3.1.4 Cell Update: periodical cell update in CELL_PCH

#### 8.3.1.4.1 Definition

#### 8.3.1.4.2 Conformance requirement

UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

…

1> Periodical cell update:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_FACH or CELL_PCH state; and

2> if the timer T305 expires; and

2> if the criteria for "in service area" as specified in TS 25.331 subclause 8.5.5.2 is fulfilled; and

2> if periodic updating has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity":

3> perform cell update using the cause "periodical cell update".

When the UE receives a UTRAN MOBILITY INFORMATION message, it shall:

1> act on received information elements as specified in TS 25.331 subclause 8.6;

1> if the IE "UE Timers and constants in connected mode" is present:

2> store the values of the IE "UE Timers and constants in connected mode" in the variable TIMERS_AND_CONSTANTS, replacing any previously stored value for each timer and constant; and

2> for each updated timer value:

3> start using the new value next time the timer is started;

2> for each updated constant value:

3> start using the new value directly;

1> set the IE "RRC transaction identifier" in the UTRAN MOBILITY INFORMATION CONFIRM message to the value of "RRC transaction identifier" in the entry for the UTRAN MOBILITY INFORMATION message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC;

…

Reference

3GPP TS 25.331 clause 8.3.1, 8.3.3.3.

### 8.3.1.4.3 Test purpose

1. To confirm that the UE, in CELL_PCH state, executes a cell update procedure after the expiry of timer T305.

### 8.3.1.4.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: CELL_PCH (state 6-12) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.4**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

Table 8.3.1.4 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE starts from CELL_PCH state. When the UE detects the expiry of periodic cell updating timer T305 according to the system information, the UE moves to CELL_FACH state. It shall transmit a CELL UPDATE message on the uplink CCCH and set the value "periodical cell update" into IE "Cell update cause". SS answers with a CELL UPDATE CONFIRM message on the downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. SS transmits UTRAN MOBILITY INFORMATION message, which includes IE "T305" set to "infinity", to UE. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.4, causing the UE to enter CELL_FACH state in cell 2 and transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". Then SS shall transmit CELL UPDATE CONFIRM with IE "RRC state indicator" set to "CELL_PCH" on the downlink CCCH. Then UE shall enter CELL_PCH state. SS then monitors the uplink CCCH for a period of 60 minutes (ideally the SS should monitor this up to the maximum possible value for timer T305 (720 minutes), but for practical reasons 60 minutes (twice default timer of 30 minutes) is regarded as being sufficient) and verifies that no CELL_UPDATE message is received. SS then configures its downlink transmission power settings according to columns "T0" in table 8.3.1.4, causing the UE to enter CELL_FACH state in cell 1 and transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". Then SS shall transmit CELL UPDATE CONFIRM on the downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. Next, SS transmits UTRAN MOBILITY INFORMATION message, which includes IE "T305" set to "5", to UE. UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.4, causing the UE to enter CELL_FACH state in cell 2 and transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". Then SS shall transmit CELL UPDATE CONFIRM with IE "RRC state indicator" set to "CELL_PCH" on the downlink CCCH. Then UE shall enter CELL_PCH state. After T305 expires, UE shall transmit CELL UPDATE message with IE "cell update cause" set to "periodical cell update". SS shall transmit CELL UPDATE CONFIRM message on the downlink CCCH to end the procedure.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_PCH state. SS waits until T305 has expired. Wait for CELL UPDATE message and then verify that the time of arrival of this message is in the range of T305 value +/- 10 % after it entered CELL_PCH state |
| 2 | → | | CELL UPDATE | The UE shall move to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "periodical cell update". |
| 3 | ← | | CELL UPDATE CONFIRM | |
| 3a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 4 | ← | | UTRAN MOBILITY INFORMATION | IE "T305" is set to 'infinity'. |
| 5 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 6 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.4. |
| 7 | → | | CELL UPDATE | The UE shall move to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection". |
| 8 | ← | | CELL UPDATE CONFIRM | UE enters CELL_PCH state after receiving this message. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 9 | | | | SS waits for 60 minutes and checks that no CELL UPDATE message is transmitted on uplink PRACH channel. |
| 10 | | | | SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.3.1.4. |
| 11 | → | | CELL UPDATE | The UE shall move to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection". |
| 12 | ← | | CELL UPDATE CONFIRM | |
| 12a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 13 | ← | | UTRAN MOBILITY INFORMATION | IE "T305" is set to '5'. |
| 14 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 15 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.4. |
| 16 | → | | CELL UPDATE | The UE shall move to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection". |
| 17 | ← | | CELL UPDATE CONFIRM | UE enters CELL_PCH state after receiving this message. |
| 18 | | | | SS wait for T305 timer to expire |
| 19 | → | | CELL UPDATE | IE "Cell update cause" shall be set to "periodical cell update". |
| 20 | ← | | CELL UPDATE CONFIRM | |
| 21 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

CELL UPDATE (Step 2 and 19)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'periodical cell update' |

CELL UPDATE (Step 7, 11 and 16)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to "cell reselection" |

CELL UPDATE CONFIRM (Step 3 and 12)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

CELL UPDATE CONFIRM (Step 8, 17 and 20)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC state indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

UTRAN MOBILITY INFORMATION (Step 4 and 13)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| UE Timers and constants in connected mode | |
| - T305 | Set to 'infinity' in step 4 and '5' in step 13 |

#### 8.3.1.4.5 Test requirement

After step 1 the UE shall detect the expiry of timer T305, it shall then move to CELL_FACH state and transmits a CELL UPDATE message with the IE "Cell update cause" set to "periodical cell update".

After step 3, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 4, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 6, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "cell reselection" on the uplink CCCH.

After step 8 and before step 10, the UE shall not transmit any CELL UPDATE messages.

After step 10, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "cell reselection" on the uplink CCCH.

After step 12, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 13, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 15, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "cell reselection" on the uplink CCCH.

After step 18 the UE shall transmit a CELL UPDATE message stating the cell update cause to be periodic updating.

## 8.3.1.5 Cell Update: UL data transmission in URA_PCH

### 8.3.1.5.1 Definition

### 8.3.1.5.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

2> if the UE is in URA_PCH or CELL_PCH state; and

2> if the UE has uplink RLC data PDU or uplink RLC control PDU on RB1 or upwards to transmit:

3> perform cell update using the cause "uplink data transmission".

…

Reference

3GPP TS 25.331 clause 8.3.1 and 8.1.2

### 8.3.1.5.3 Test purpose

1. To confirm that the UE executes a cell update procedure when the UE transmits uplink data if the UE is in URA_PCH state.

### 8.3.1.5.4 Method of test

Initial Condition

System Simulator: 1cell

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

The UE has been registered in both CS and PS domains.

Test Procedure

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "RRC State Indicator" set to "URA_PCH". The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to URA_PCH state. The SS transmits a PAGING TYPE 1 message which includes a matched U-RNTI and the optional IE "CN originated page to connected mode UE". The UE then moves to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value "uplink data transmission". After receiving such a message, SS transmits CELL UPDATE CONFIRM message on downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. The UE shall stay in CELL_FACH state and transmit an INITIAL DIRECT TRANSFER message using AM RLC on DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to CELL_FACH state. |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "RRC State Indicator" set to "URA_PCH" |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE moves to URA_PCH state. |
| 5a | ← | | PAGING TYPE 1 | Includes Matched identifier and optional IE “CN originated page to connected mode UE" |
| 6 | → | | CELL UPDATE | The UE shall move to CELL FACH state with the message set to "uplink data transmission" in IE "Cell update cause". |
| 7 | ← | | CELL UPDATE CONFIRM | See message content. |
| 7a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | → | | INITIAL DIRECT TRANSFER | Response to the paging message sent in step 5a |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_FACH in PS", with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator<br>URA identity<br>UTRAN DRX cycle length coefficient | URA_PCH<br>0000 0000 0000 0001B<br>3 |

PAGING TYPE 1 (Step 5a)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | |
| - SRNC Identity | Set to the previously assigned SRNC identity |
| - S-RNTI | Set to previously assigned S-RNTI |
| - CN originated page to connected mode UE | |
| -Paging cause | Terminating Call supported by the UE in the CS domain |
| -CN domain identity | CS Domain |
| -Paging record type identifier | Set to "IMSI (GSM-MAP)" for UEs supporting GSM-MAP core network type or "IMSI (DS-41)" for UEs supporting ANSI-41 core network type. |
| BCCH modification info | Not Present |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'uplink data transmission' |

CELL UPDATE CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Set to an arbitrary string different from '1010 1010 1010 1010' |

INITIAL DIRECT TRANSFER (Step 8) – for UEs supporting GSM-MAP core networks

Check to see if the same message type found in TS 34.108 clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| CN domain identity | CS domain |
| Intra Domain NAS Node Selector | |
| - CHOICE version | R99 |
| -- CHOICE CN type | GSM |
| --- CHOICE Routing basis | Local(P)TMSI |
| ---- Routing parameter | This bit string is set to bits b14 through b23 of the TMSI. The TMSI consists of 4 octets (32bits). This can be represented by a string of bits numbered from b0 to b31, with bit b0 being the least significant<br>The "Routing parameter" bit string consists of bits b14 through b23 of the TMSI.<br>The first/ leftmost/ most significant bit of the bit string contains bit b23 of the TMSI |
| --- Entered parameter | Not checked |
| NAS message | Not checked |

INITIAL DIRECT TRANSFER (Step 8) – for UEs supporting ANSI-41 core networks

| Information Element | Value/remark |
|---|---|
| CN domain identity | CS Domain |
| Intra Domain NAS Node Selector | |
| - CHOICE version | ANSI-41 : Bitstring(14), all bits set to 0 |
| NAS message | Not checked |
| START | Not checked |
| Measured results on RACH | Not checked |

### 8.3.1.5.5 Test requirement

After step 4, UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to URA_PCH state.

After step 5a, the UE shall move to CELL_FACH state to initiate a cell update procedure and transmits a CELL UPDATE message which is set to "uplink data transmission" in IE "Cell update cause".

After step 7, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 7a, UE shall transmit INITIAL DIRECT TRANSFER message to SS using AM RLC on DCCH.

## 8.3.1.6 Cell Update: UL data transmission in CELL_PCH

### 8.3.1.6.1 Definition

### 8.3.1.6.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

2> if the UE is in URA_PCH or CELL_PCH state; and

2> if the UE has uplink RLC data PDU or uplink RLC control PDU on RB1 or upwards to transmit:

3> perform cell update using the cause "uplink data transmission".

…

Reference

3GPP TS 25.331 clause 8.3.1 and 8.1.2

### 8.3.1.6.3 Test purpose

1. To confirm that the UE executes a cell update procedure when the UE transmits uplink data if the UE is in CELL_PCH state.

### 8.3.1.6.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

The UE is registered in both CS and PS domains.

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "RRC State Indicator" set to "CELL_PCH". The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_PCH state. The SS transmits a PAGING TYPE 1 message which includes a matched U-RNTI and the optional IE "CN originated page to connected mode UE". The UE then moves to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value "uplink data transmission". After receiving such a message, SS transmits a CELL UPDATE CONFIRM message on downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. The UE shall stay in CELL_FACH state and transmit an INITIAL DIRECT TRANSFER message using AM RLC on DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to CELL_FACH state. |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "RRC State Indicator" set to "CELL_PCH" |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE moves to CELL_PCH state. |
| 5a | ← | | PAGING TYPE 1 | Includes Matched identifier and optional IE “CN originated page to connected mode UE" |
| 6 | → | | CELL UPDATE | The UE moves to CELL FACH state and transmit this message which is set to "uplink data transmission" in IE "Cell update cause". |
| 7 | ← | | CELL UPDATE CONFIRM | See message content. |
| 7a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | → | | INITIAL DIRECT TRANSFER | Response to the paging message sent in step 5a |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_FACH in PS", with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

PAGING TYPE 1 (Step 5a)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | |
| - SRNC Identity | Set to the previously assigned SRNC identity |
| - S-RNTI | Set to previously assigned S-RNTI |
| - CN originated page to connected mode UE | |
| -Paging cause | Terminating Call supported by the UE in the CS domain |
| -CN domain identity | CS Domain |
| -Paging record type identifier | Set to "IMSI (GSM-MAP)" for UEs supporting GSM-MAP core network type or "IMSI (DS-41)" for UEs supporting ANSI-41 core network type. |
| BCCH modification info | Not Present |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'uplink data transmission' |

CELL UPDATE CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Set to an arbitrary string different from '1010 1010 1010 1010' |

INITIAL DIRECT TRANSFER (Step 8) – for UEs supporting GSM-MAP core networks

Check to see if the same message type found in TS 34.108 clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| CN domain identity | CS domain |
| Intra Domain NAS Node Selector | |
| - CHOICE version | R99 |
| -- CHOICE CN type | GSM |
| --- CHOICE Routing basis | Local(P)TMSI |
| ---- Routing parameter | This bit string is set to bits b14 through b23 of the TMSI. The TMSI consists of 4 octets (32bits). This can be represented by a string of bits numbered from b0 to b31, with bit b0 being the least significant<br>The "Routing parameter" bit string consists of bits b14 through b23 of the TMSI.<br>The first/ leftmost/ most significant bit of the bit string contains bit b23 of the TMSI |
| --- Entered parameter | Not checked |
| NAS message | Not checked |

INITIAL DIRECT TRANSFER (Step 8) – for UEs supporting ANSI-41 core networks

| Information Element | Value/remark |
|---|---|
| CN domain identity | CS Domain |
| Intra Domain NAS Node Selector | |
| - CHOICE version | ANSI-41 : Bitstring(14), all bits set to 0 |
| NAS message | Not checked |
| START | Not checked |
| Measured results on RACH | Not checked |

8.3.1.6.5 Test requirement

After step 4, UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_PCH state.

After step 5, the UE shall move to CELL_FACH state to initiate a cell update procedure and transmits a CELL UPDATE message which is set to "uplink data transmission" in IE "Cell update cause".

After step 7, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 7a, UE shall transmit a INITIAL DIRECT TRANSFER message to SS using AM RLC on DCCH.

### 8.3.1.7 Void

### 8.3.1.8 Void

### 8.3.1.9 Cell Update: re-entering of service area after T305 expiry and being out of service area

#### 8.3.1.9.1 Definition

#### 8.3.1.9.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_FACH or CELL_PCH state; and

2> if the UE has been out of service area and re-enters service area before T307 or T317 expires:

3> perform cell update using the cause "re-entering service area".

…

When the T305 expires and the UE detects that it is "out of service area" as specified in TS 25.331 subclause 8.5.5.1, the UE shall

1> start timer T307;

…

If the UE detects "in service area" according to TS 25.331 subclause 8.5.5.2 and timer T307 or T317 is running, the UE shall:

1> check the value of V302; and

1> if V302 is equal to or smaller than N302:

2> in case of a cell update procedure:

3> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

3> submit the CELL UPDATE message for transmission on the uplink CCCH.

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302:

…

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.9.3 Test purpose

1. To confirm that the UE performs a cell search after experiencing an "out of service area" condition.
2. To confirm that the UE initiates cell updating procedure if it manages to re-enter the service area.

8.3.1.9.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108, using the specific message contents as specified below.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| T305 | 5 minutes |
| T307 | 50 seconds |
| T317 | 600 seconds |

Specific timer tolerances

Use the same timer tolerances found in subclause 4.2.3 of TS 34.108, with the following exceptions.

T305: +/- 10 s

T307: +/- 2 s

Test Procedure

**Table 8.3.1.9**

| Parameter | Unit | Cell 1 | |
|---|---|---|---|
| | | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -80 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -80 |

Table 8.3.1.9 illustrates the downlink power to be applied at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_FACH state. The content of the SYSTEM INFORMATION BLOCK TYPE 3 and 4 is modified. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.9 so that S<0. The UE shall detect that it is out of service area. Following the expiry of periodic cell updating timer T305 according to the system information, and within the time interval equivalent to T307 timer value, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.9 so that S>0. The UE shall find that it is back in service area, and transmit a CELL UPDATE message to the SS on the uplink CCCH. In this message, the IE "Cell update cause" shall be set to "re-entered service area". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set "CELL_PCH" on the downlink DCCH. The UE shall enter CELL_PCH state. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.9 so that S<0. Following the expiry of periodic cell updating timer T305 according to the system information, the UE shall detect that it is out of service area. Within the time interval equivalent to T307 timer value, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.9 so that S>0. The UE shall find that it is back in service area, move to CELL_FACH and transmits a CELL UPDATE message to the SS on the uplink CCCH. In this message, the IE "Cell update cause" shall be set to "re-entered service area". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message on the downlink DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state of cell 1. |
| 1a | ← | | MASTER INFORMATION BLOCK<br>SYSTEM INFORMATION BLOCK TYPE 3 and 4 | SS changes the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK (see specific message contents). |
| 1b | ← | | SYSTEM INFORMATION CHANGE INDICATION | |
| 2 | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.9 so that its S value falls below 0. |
| 3 | | | | The UE shall detect an "out of service" condition and it shall search for other cells to camp on. Upon expiry of timer T305, UE starts T307 timer.. |
| 4 | | | | SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.9. |
| 5 | → | | CELL UPDATE | The value "re-entered service area" shall be found in IE "Cell update cause" in this message |
| 6 | ← | | CELL UPDATE CONFIRM | "RRC State Indicator" is set to "CELL_PCH" |
| 7 | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.9 so that its S value falls below 0 and waits 5 minutes and 10 seconds until T305 has expired. |
| 8 | | | | SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.9. |
| 9 | → | | CELL UPDATE | UE shall move to CELL_FACH. It shall transmit this message with cell update cause set to "re-entered service area" |
| 10 | ← | | CELL UPDATE CONFIRM | |

| | | | |
|---|---|---|---|
| 11 | ←→ | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

MASTER INFORMATION BLOCK (Step 1a)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value. |
| SIB 3 Cell Value tag | Set to (Current SIB3 value tag + 1) |
| SIB 4 Cell Value tag | Set to (Current SIB4 value tag + 1) |

SYSTEM INFORMATION BLOCK TYPE 3 and 4 (Step 1a)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| Qrxlevmin | -35 (-69 dBm) |

SYSTEM INFORMATION CHANGE INDICATION (Step 1b)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| BCCH modification info | |
| MIB Value tag | Set equal to Value tag sent in modified MIB in step 1a. |

CELL UPDATE (Step 5 and 9)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 're-entered service area' |

CELL UPDATE CONFIRM (Step 6 and 10)

Use the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

### 8.3.1.9.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message in which the IE "Cell update cause" is set to the value "re-entered service area".

After step 8 the UE shall move to CELL_FACH and then transmit a CELL UPDATE message, with the IE "Cell Update Cause" set to "re-entered service area".

## 8.3.1.10 Cell Update: expiry of T307 after T305 expiry and being out of service area

### 8.3.1.10.1 Definition

### 8.3.1.10.2 Conformance requirement

When the T307 expires, the UE shall:

1> move to idle mode;

1> release all dedicated resources;

1> perform other actions when entering idle mode from connected mode as specified in TS 25.331 subclause 8.5.2;

1> and the procedure ends.

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.10.3 Test purpose

1 To confirm that the UE moves to idle mode after the expiry of T307, indicating that it is out of service area when attempting to perform a periodic cell updating procedure.

### 8.3.1.10.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Timer T305 is set to 5min.

Test Procedure

**Table 8.3.1.10**

| Parameter | Unit | Cell 1 | |
|---|---|---|---|
| | | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -80 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -80 |

Table 8.3.1.10 illustrates the downlink power to be applied at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in CELL_FACH state at the start of the test. Before the expiry of periodic cell updating timer T305, the content of the SYSTEM INFORMATION BLOCK TYPE 3 and 4 is modified. After T305 expires, UE shall transmit CELL UPDATE message with IE "cell update cause" set to "periodical cell update". SS shall transmit CELL UPDATE CONFIRM message. Now the UE and SS are synchronized. Immediately after the cell update procedure is finalized, the SS starts a delay timer $T_{delay}$ (see below for limits on the timer value). When $T_{delay}$ expires the SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.10 so that S<0 and this results in a "out of service area" condition. The SS continues to listen to the uplink channel to detect possible attempts to perform a cell updating procedure. The UE shall not send any CELL UPDATE message on the uplink CCCH, instead it triggers timer T307 after expiry of T305. After the expiry of timer T305+T307+10% margin since completion of the cell update procedure, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.10 so that S>0, the UE shall enter idle state. SS waits for 60s and then calls for generic procedure C.1 to check that UE is in idle mode state.

NOTE 1: The value chosen for Tdelay should be midway between the following logical minimum and maximum values:

Minimum > T305 + T307 – T317

Maximum < T305

NOTE 2: TS 25.331 (from June 2003) specifies that the UE should treat any value of T317 received from UTRAN as though it is equal to infinity. Nevertheless, the value of T317 used in Note 1 should be the value broadcast in SIB1 by the SS (or the implied default value if none is broadcast).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to CELL_FACH state. |
| 1a | ← | | MASTER INFORMATION BLOCK<br>SYSTEM INFORMATION BLOCK TYPE 3 and 4 | SS changes the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK (see specific message contents). |
| 1b | ← | | SYSTEM INFORMATION CHANGE INDICATION | |
| 1c | → | | CELL UPDATE | IE "Cell update cause" shall be set to "periodical cell update". |
| 1d | ← | | CELL UPDATE CONFIRM | |
| 1e | | | | SS waits $T_{delay}$ (see above) |
| 2a | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.10 so that the cell is no longer suitable for camping. The UE shall detect that it is out of service area and refrains from transmitting CELL UPDATE message due to periodic cell updating. |
| 2b | | | | SS waits a further (T305+T307- $T_{delay}$) +10% for UE to enter idle mode. |
| 3 | | | | The UE detects the expiry of timer T305 and it searches for other cells to camp on. After the expiry of timer T307, the UE shall enter idle mode. SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.10 so that the cell is suitable for camping. SS waits for 60s. |
| 4 | ←→ | | CALL C.1 | If the test result of C.1 indicates that UE is in idle mode state, the test passes, otherwise it fails. |

Specific Message Contents

MASTER INFORMATION BLOCK (Step 1a)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value. |

CELL UPDATE (Step 1c)

The same message found in Annex A shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'periodical cell updating' |

#### 8.3.1.10.5 Test requirement

After step 3 the UE shall move to idle mode.

### 8.3.1.11 Cell Update: Success after T302 time-out

#### 8.3.1.11.1 Definition

#### 8.3.1.11.2 Conformance requirement

If any or several of the following conditions are true:

- expiry of timer T302;

…

the UE shall:

1> check whether it is still in "in service area";

1> in case of a cell update procedure:

2> clear any entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS.

If the UE detects "in service area" if it has not entered idle mode, and:

1> if V302 is equal to or smaller than N302, the UE shall:

2> in case of a cell update procedure:

3> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

3> submit the CELL UPDATE message for transmission on the uplink CCCH.

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302, the UE shall:

…

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.11.3 Test purpose

1. To confirm that the UE repeats the transmission of CELL UPDATE message after failing to receive any response from the SS before T302 timer expires.

8.3.1.11.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

At the start of the test, the UE is brought to CELL_FACH state. When the UE detects the expiry of periodic cell updating timer T305 according to the system information, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH. The IE "Cell update cause" in this message shall be set to "periodical cell update". SS ignores this message, and the UE shall then re-transmit a CELL UPDATE message after the expiry of timer T302. When the SS has received (N302+1) such messages, it transmits a CELL UPDATE CONFIRM message with new values for "C-RNTI" to the UE. Finally, the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE starts from CELL_FACH state. SS initializes its internal counter K to 0 and waits until the expiry of T305 timer. |
| 2 | → | | CELL UPDATE | The value "periodical cell update" shall be set in IE "Cell update cause". |
| 3 | | | | If K is equal to N302 then proceeds to step 5. |
| 4 | | | | SS increments counter K, transmits no response to the UE and waits for an additional period equal to the value of timer T302. The next step is step 2. |
| 5 | ← | | CELL UPDATE CONFIRM | The message includes IEs "new C-RNTI". The IE "RRC State Indicator" is set to "CELL_FACH". |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

CELL UPDATE (Step 2)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Periodic cell updating' |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Set to an arbitrary string different from '1010 1010 1010 1010' |

#### 8.3.1.11.5 Test requirement

After step 1 the UE shall detect the expiry of timer T305 then transmit a CELL UPDATE message on the uplink CCCH, setting "periodical cell update" into IE "Cell update cause".

After step 2 the UE shall re-transmits a CELL UPDATE message after the expiry of timer T302. A total of (N302+1) transmissions of CELL UPDATE message shall be detected in SS.

After step 5 the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH and stay at CELL_FACH state.

### 8.3.1.12 Cell Update: Failure (After Maximum Re-transmissions)

#### 8.3.1.12.1 Definition

#### 8.3.1.12.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

…

1> Periodical cell update:

…

2> if the UE is in CELL_FACH or CELL_PCH state; and

2> if the timer T305 expires; and

2> if the criteria for "in service area" as specified in subclause 8.5.5.2 in TS 25.331 is fulfilled; and

2> if periodic updating has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity":

3> perform cell update using the cause "periodical cell update".

…

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

1> set the IE "Cell update cause" corresponding to the cause specified in subclause 8.3.1.2 in TS 25.331 that is valid when the CELL UPDATE message is submitted to lower layers for transmission;

…

If any or several of the following conditions are true:

- expiry of timer T302;

…

the UE shall:

1> stop T302 if it is running;

…

1> check whether it is still in "in service area" (see subclause 8.5.5.2) in TS 25.331;

…

1> in case of a cell update procedure:

2> clear any entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS.

…

If the UE detects "in service area" if it has not entered idle mode, and:

1> if V302 is equal to or smaller than N302, the UE shall:

…

1> if V302 is greater than N302, the UE shall:

…

2> in case of a cell update procedure:

3> clear the entry for the CELL UPDATE CONFIRM message in the table "Rejected transactions" in the variable TRANSACTIONS.

…

2> release all its radio resources;

2> enter idle mode;

2> other actions the UE shall perform when entering idle mode from connected mode are specified in TS 25.331subclause 8.5.2;

2> and the procedure ends.

Reference

3GPP TS 25.331 clause 8.3.1.2, 8.3.1.3, 8.3.1.1.2.

### 8.3.1.12.3 Test purpose

1. To confirm that the UE repeats the cell update procedure upon the expiry of timer T302 and moves to idle state when its internal counter V302 is greater than N302.

### 8.3.1.12.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_FACH (state 6-11)as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is initially in CELL_FACH state. When the UE detects the expiry of periodic cell updating timer T305, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH to perform a periodic cell updating procedure. The

SS ignores this message, and the UE shall attempt to re-transmit a CELL UPDATE message up to a maximum of (N302) times after the expiry of timer T302. After (N302) attempts of retransmission, the UE shall return to idle state. SS waits for 5s and then calls for generic procedure C.1 to check that UE is in idle mode state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state. SS sets its internal counter K=0 and waits for a period equals to timer value T305. |
| 2 | → | | CELL UPDATE | The value "periodical cell update" shall be set in IE "Cell update cause". |
| 3 | | | | SS transmits no response to the UE and increments counter K with 1. |
| 4 | | | | SS waits for an additional period equal to T302 timer and if K is not greater than N302, then next step is step 2. Else the next step is step 5. |
| 5 | | | | The UE shall enter idle mode state. |
| 6 | ←→ | | CALL C.1 | If the test result of C.1 indicates that UE is in idle mode state, the test passes, otherwise it fails. |

Specific Message Contents

CELL UPDATE (Step 2)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Periodical cell update' |

#### 8.3.1.12.5 Test requirement

After step 1 the UE shall transmit a CELL UPDATE message on the uplink CCCH and set value "periodical cell update" into IE "Cell update cause".

After step 3 and if K is not greater than N302, the UE shall retry to transmit a CELL UPDATE message.

After step 3 and if K is greater than N302, the UE shall stop transmitting CELL UPDATE message and then enters idle state.

### 8.3.1.13 Cell Update: Reception of Invalid CELL UPDATE CONFIRM Message

#### 8.3.1.13.1 Definition

#### 8.3.1.13.2 Conformance Requirement

If the UE receives an CELL UPDATE CONFIRM message, which contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to TS 25.331 clause 9, the UE shall perform procedure specific error handling as follows:

1> If V302 is equal to or smaller than N302, the UE shall:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> in case of a cell update procedure:

3> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

3> submit the CELL UPDATE message for transmission on the uplink CCCH.

…

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302, the UE shall:

…

2> release all its radio resources;

2> enter idle mode;

2> Other actions the UE shall perform when entering idle mode from connected mode are specified in TS 25.331 subclause 8.5.2;

2> the procedure ends.

Reference

3GPP TS 25.331 clause 8.3.1.11.

### 8.3.1.13.3 Test Purpose

1. To confirm that the UE retransmits a CELL UPDATE message when it receives an invalid CELL UPDATE CONFIRM message, before the number of retransmissions has reached the maximum allowed value.

### 8.3.1.13.4 Method of Test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH (state 6-12) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is brought to CELL_PCH state at the beginning of the test. SS pages the UE by sending a PAGING TYPE 1 message using the U-RNTI identity assigned during RRC connection establishment procedure. The UE shall transmit a CELL UPDATE message on the uplink CCCH. Upon receiving such a message, the SS replies with an invalid CELL UPDATE CONFIRM message on downlink DCCH using UM RLC. The UE shall detect the protocol error and re-transmit a CELL UPDATE message up to a maximum of N302 times. SS then transmit a valid CELL UPDATE CONFIRM message. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE 1 | The UE is in the CELL_PCH state. SS pages for the UE using the allocated connected mode identity (U-RNTI). |
| 2 | → | | CELL UPDATE | Check that the value "paging response" is set in IE "Cell update cause". |
| 3 | ← | | CELL UPDATE CONFIRM | See specific message content. |
| 4 | → | | CELL UPDATE | Check that the value "paging response" is set in IE "Cell update cause", the value "protocol error" is set in IE "failure cause" and the value "Message extension not comprehended" is set in IE "Protocol error information". |
| 5 | ← | | CELL UPDATE CONFIRM | See message content. |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |

Specific Message Content

CELL UPDATE (Step 2)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Paging Response' |

CELL UPDATE CONFIRM (Step 3)

Use the CELL UPDATE CONFIRM message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Critical extensions | 'FF'H |

CELL UPDATE (Step 4)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Paging Response' |
| Failure cause | Check to see if it is set to 'protocol error' |
| -Protocol error information | Check to see if it is set to "Message extension not comprehended" |

PAGING TYPE 1 (Step 1)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Page record list<br>- Paging record<br>- CHOICE Used paging identity<br>- U-RNTI<br>- SRNC Identity<br>- S-RNTI | <br><br>UTRAN identity<br><br>'0000 0000 0001'<br>'0000 0000 0000 0000 0001' |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

#### 8.3.1.13.5 Test Requirement

After step 1 the UE shall transmit a CELL UPDATE message on the uplink CCCH, setting "paging response" into IE "Cell update cause".

After step 3 the UE shall transmit a CELL UPDATE message on the uplink CCCH, setting "paging response" into IE "Cell update cause", "protocol error" into IE "failure cause" and "Message extension not comprehended" into IE "Protocol error information".

After step 5, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

### 8.3.1.14 Cell Update: Incompatible simultaneous reconfiguration

#### 8.3.1.14.1 Definition

#### 8.3.1.14.2 Conformance Requirement

In case of a cell update procedure and if the received CELL UPDATE CONFIRM message

- includes "RB information elements"; and/or
- includes "Transport channel information elements"; and/or
- includes "Physical channel information elements"; and
- the variable ORDERED_RECONFIGURATION is set to TRUE because of an ongoing Reconfiguration procedure; and/or
- if the variable INCOMPATIBLE_SECURITY_RECONFIGURATION becomes set to TRUE of the received CELL UPDATE CONFIRM message:

the UE shall:

1> if V302 is equal to or smaller than N302:

2> if, caused by the received CELL UPDATE CONFIRM message

…

3> if the variable ORDERED_RECONFIGURATION is set to TRUE caused by the received CELL UPDATE CONFIRM message in case of a cell update procedure:

4> set the variable ORDERED_RECONFIGURATION to FALSE.

2> set the variable FAILURE_INDICATOR to TRUE;

2> set the variable FAILURE_CAUSE to "Incompatible simultaneous reconfiguration";

2> set the content of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

2> submit the CELL UPDATE message for transmission on the uplink CCCH;

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302:

…

Reference

3GPP TS 25.331 clause 8.3.1.9a

### 8.3.1.14.3 Test Purpose

1. To confirm that the UE retransmits a CELL UPDATE message when it receives a CELL UPDATE CONFIRM message that includes "Physical channel information elements" and UE's variable ORDERED_RECONFIGURATION is set to TRUE because of an ongoing Reconfiguration procedure, before the number of retransmissions has reached the maximum allowed value.

### 8.3.1.14.4 Method of Test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH (state 6-12) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is brought to CELL_PCH state at the beginning of the test. SS pages the UE by sending a PAGING TYPE 1 message using the U-RNTI identity assigned during RRC connection establishment procedure. The UE shall transmit a CELL UPDATE message on the uplink CCCH. Upon receiving such a message, the SS replies with a CELL UPDATE CONFIRM message contains IE "Physical channel information elements". Following that, SS immediately transmits another CELL UPDATE CONFIRM message contains IE "Physical channel information elements" before the "activation time" indicated in the previous CELL UPDATE CONFIRM message expires. The UE shall re-transmit a CELL UPDATE message with the same cause as the previous CELL UPDATE message and failure cause as "Incompatible simultaneous reconfiguration". SS then transmits a CELL UPDATE CONFIRM message to end the procedure.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE 1 | |
| 2 | → | | CELL UPDATE | |
| 3 | ← | | CELL UPDATE CONFIRM | SS transmits this message including IE "Physical channel information elements". |
| 4 | ← | | CELL UPDATE CONFIRM | Sent before the activation time specified in the message in step 3 has elapsed. |
| 5 | → | | CELL UPDATE | |
| 6 | ← | | CELL UPDATE CONFIRM | |

Specific Message Content

CELL UPDATE (Step 2)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Paging Response' |

CELL UPDATE (Step 5)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Paging Response' |
| Failure cause | Check to see if set to 'Incompatible simultaneous reconfiguration' |

CELL UPDATE CONFIRM (Step 3)

Use the same message sub-type found in TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Activation Time Info | Current CFN-[current CFN mod 8 + 8 ] |
| Maximum allowed UL TX power | 30 dBm |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Activation Time Info | Current CFN-[current CFN mod 8 + 8 ] |
| Maximum allowed UL TX power | 25 dBm |

PAGING TYPE 1 (Step 1)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Page record list | |
| - Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | |
| - SRNC Identity | '0000 0000 0001' |
| - S-RNTI | '0000 0000 0000 0000 0001' |

#### 8.3.1.14.5 Test Requirement

After step 1, UE shall transmit a CELL UPDATE message.

After step 4 the UE shall re-transmit a CELL UPDATE message with failure cause set to "Incompatible simultaneous reconfiguration".

### 8.3.1.15 Cell Update: Unrecoverable error in Acknowledged Mode RLC SRB

#### 8.3.1.15.1 Definition

#### 8.3.1.15.2 Conformance Requirement

A UE shall initiate the cell update procedure in the following cases:

…

1> RLC unrecoverable error:

…

2> if the UE detects RLC unrecoverable error in an AM RLC entity:

3> perform cell update using the cause "RLC unrecoverable error".

…

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if an unrecoverable error in any of the AM RLC entities for the signalling radio bearers RB2, RB3 or RB4 is detected:

2> set the IE "AM_RLC error indication (RB2, RB3 or RB4)" to TRUE.

1> otherwise:

2> set the IE "AM_RLC error indication (RB2, RB3 or RB4)" to FALSE.

…

When the UTRAN receives a CELL UPDATE/URA UPDATE message, the UTRAN should:

…

1> initiate an RRC connection release procedure (see subclause 8.1.4 in TS 25.331) by transmitting an RRC CONNECTION RELEASE message on the downlink CCCH. In particular UTRAN should:

2> if the CELL UPDATE message was sent because of an unrecoverable error in RB2, RB3 or RB4:

3> initiate an RRC connection release procedure by transmitting an RRC CONNECTION RELEASE message on the downlink CCCH.

Reference

3GPP TS 25.331 clause 8.3.1.2, 8.3.1.3, 8.3.1.5

### 8.3.1.15.3 Test Purpose

- To confirm that the UE reports the occurrence of an unrecoverable error in a C-plane AM RLC entity by initiating cell update procedure.
- To confirm that UE enters idle mode state after receiving RRC CONNECTION RELEASE message on the downlink CCCH.

### 8.3.1.15.4 Method of Test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE

The RRC CONNECTION SETUP message used in the initial setup should be as shown under Specific Message Contents below.

Test Procedure

The UE is initially in CELL_DCH state. SS sends a UE CAPABILITY ENQUIRY message on the DCCH using AM mode. The UE shall reply with a UE CAPABILITY INFORMATION message, sent using AM RLC on the DCCH.

SS does not acknowledge the AM PDUs carrying this message. The UE shall continue to re-transmit the AM PDU carrying UE CAPABILITY INFORMATION message until the maximum re-transmission count is reached.

Thereafter, the UE shall start sending RESET PDUs to request that the AM RLC entity for RRC signalling be re-initialized. SS ignores all RESET PDUs from the UE.

At this point, the UE shall initiate a cell update procedure by transmitting a CELL UPDATE message on the uplink CCCH. The CELL UPDATE message shall specify the value "TRUE" in IE "AM_RLC error indicator (RB2, RB3 or RB4)" and "RLC unrecoverable error" as the cell update cause.

SS sends RRC CONNECTION RELEASE message on the downlink CCCH to UE. SS waits for 5 s and then calls for generic procedure C.1 to check that UE is in idle mode state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is initially in CELL_DCH state. |
| 2 | ← | | UE CAPABILITY ENQUIRY | |
| 3 | → | | UE CAPABILITY INFORMATION | SS does not acknowledge any of the AM PDUs carrying the UE CAPABILITY INFORMATION message. The UE shall re-transmit these AM PDUs until the maximum number has been reached. |
| 4 | | | | UE shall start to transmit a RESET PDU. SS does not respond to any RESET PDU frames originated from the UE. |
| 5 | → | | CELL UPDATE | IE "AM_RLC Error Indication (RB2, RB3 or RB4)" shall be set to 'TRUE' |
| 6 | ← | | RRC CONNECTION RELEASE | Sends this message on the downlink CCCH and includes UE's UTRAN identity. After SS sent this message, SS waits for 5s. |
| 7 | ←→ | | CALL C.1 | If the test result of C.1 indicates that UE is in idle mode state, the test passes, otherwise it fails. |

Specific Message Contents

RRC CONNECTION SETUP (message used in the initial setup)

UE CAPABILITY ENQUIRY (Step 2)

Use the same message found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION (Step 3)

Only the message type IE is checked for this message.

CELL UPDATE (Step 5)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| AM_RLC error indicator (RB2, RB3 or RB4) | Check to see if set to 'TRUE' |
| Cell update cause | Check to see if set to 'RLC unrecoverable error' |

RRC CONNECTION RELEASE (Step 6)

Use the same message found in TS 34.108 clause 9.

#### 8.3.1.15.5 Test Requirement

After step 4 the UE shall transmit a CELL UPDATE message on the uplink CCCH to report the occurrence of an unrecoverable error in AM RLC entity for RB2, RB3 or RB4 data as well as cell update cause set to "RLC unrecoverable error".

### 8.3.1.16 Void

### 8.3.1.17 Cell Update: Failure (UTRAN initiate an RRC connection release procedure on CCCH)

#### 8.3.1.17.1 Definition

#### 8.3.1.17.2 Conformance requirement

When the UTRAN receives a CELL UPDATE/URA UPDATE message, the UTRAN should:

1> … or

1> initiate an RRC connection release procedure (see subclause 8.1.4 in TS 25.331) by transmitting an RRC CONNECTION RELEASE message on the downlink CCCH.

…

The UE shall receive and act on an RRC CONNECTION RELEASE message in states CELL_DCH and CELL_FACH. Furthermore this procedure can interrupt any ongoing procedures with the UE in the above listed states.

When the UE receives the first RRC CONNECTION RELEASE message; and

1> if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or

1> if the message is received on DCCH:

the UE shall:

…

1> in state CELL_FACH:

…

2> if the RRC CONNECTION RELEASE message was received on the CCCH:

3> …

3> enter idle mode;

Reference

3GPP TS 25.331 clause 8.3.1.5, 8.1.4.3

### 8.3.1.17.3 Test purpose

To confirm that the UE moves to idle state upon the reception of a RRC CONNECTION RELEASE message on CCCH.

### 8.3.1.17.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH_FACH (state 6-11)

Test Procedure

The UE is initially in CELL_FACH state. When the UE detects the expiry of periodic cell updating timer T305, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH to perform a periodical cell updating procedure. The SS transmits a RRC CONNECTION RELEASE message on downlink CCCH. The UE shall return to idle mode after release of all current signalling flows and radio access bearers. SS calls for generic procedure C.1 to check that UE is in Idle Mode state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | → | | CELL UPDATE | The value "periodical cell update" shall be set in IE "Cell update cause" and this message shall be sent upon expiry of timer T305. |
| 2 | ← | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to the UE. After SS sent this message SS waits for 5 seconds. |
| 3 | | | Void | |
| 4 | | | Void | |
| 5 | | | | The UE shall enter idle mode state. |
| 6 | ←→ | | CALL C.1 | If the test result of C.1 indicates that UE is in idle mode state, the test passes, otherwise it fails. |

Specific Message Contents

CELL UPDATE (Step 1)

The same message found in Clause 9 of TS 34.108 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Periodical cell update' |

RRC CONNECTION RELEASE (Step 2)

Use the same message sub-type found in Clause 9 of TS 34.108.

#### 8.3.1.17.5 Test requirement

In step 1 the UE shall transmit a CELL UPDATE message on the uplink CCCH and set value "periodical cell update" into IE "Cell update cause".

After step 4 the UE shall enter idle mode.

### 8.3.1.18 Cell Update: Radio Link Failure (T314>0, T315=0), CS RAB established

#### 8.3.1.18.1 Definition

#### 8.3.1.18.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

2> if the UE is in CELL_DCH state and the criteria for radio link failure is met as specified in TS 25.331 subclause 8.5.6:

3> perform cell update using the cause "radio link failure".

…

When initiating the cell update procedure, the UE shall:

1> stop timer T305;

1> if the UE is in CELL_DCH state:

2> in the variable RB_TIMER_INDICATOR, set the IE "T314 expired" and the IE "T315 expired" to FALSE;

2> if the stored values of the timer T314 and timer T315 are both equal to zero; or

2> if the stored value of the timer T314 is equal to zero and there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315":

…

2> if the stored value of the timer T314 is equal to zero:

…

2> if the stored value of the timer T315 is equal to zero:

3> release all radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315";

3> in the variable RB_TIMER_INDICATOR set the IE "T315 expired" to TRUE.

2> if the stored value of the timer T314 is greater than zero:

3> if there are radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314":

4> start timer T314.

3> if there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314" or "useT315":

4> start timer T314.

2> if the stored value of the timer T315 is greater than zero:

…

2> for the released radio bearer(s):

3> delete the information about the radio bearer from the variable ESTABLISHED_RABS;

3> when all radio bearers belonging to the same radio access bearer have been released:

4> indicate local end release of the radio access bearer to upper layers using the CN domain identity together with the RAB identity stored in the variable ESTABLISHED_RABS;

4> delete all information about the radio access bearer from the variable ESTABLISHED_RABS.

2> select a suitable UTRA cell according to TS 25.304;

2> set the variable ORDERED_RECONFIGURATION to FALSE.

1> set the variables PROTOCOL_ERROR_INDICATOR, FAILURE_INDICATOR, UNSUPPORTED_CONFIGURATION and INVALID_CONFIGURATION to FALSE;

1> set the variable CELL_UPDATE_STARTED to TRUE;

1> if the UE is not already in CELL_FACH state:

2> move to CELL_FACH state;

2> select PRACH according to TS 25.331 subclause 8.5.17;

2> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

2> use the transport format set given in system information as specified in TS 25.331 subclause 8.6.5.1.

1> if the UE performs cell re-selection:

2> clear the variable C_RNTI; and

2> stop using that C_RNTI just cleared from the variable C_RNTI in MAC.

1> set CFN in relation to SFN of current cell according to TS 25.331 subclause 8.5.15;

1> in case of a cell update procedure:

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

2> submit the CELL UPDATE message for transmission on the uplink CCCH.

1> set counter V302 to 1;

1> start timer T302 when the MAC layer indicates success or failure in transmitting the message.

…

If the received CELL UPDATE CONFIRM message would cause the UE to transit to CELL_DCH state:

1> if the UE failed to establish the physical channel(s) indicated in the received CELL UPDATE CONFIRM message according to the criteria defined in subclause 8.5.4 in TS 25.331are not fulfilled; or

…

the UE shall:

…

1> if the variable ORDERED_RECONFIGURATION is set to TRUE caused by the received CELL UPDATE CONFIRM message in case of a cell update procedure:

2> set the variable ORDERED_RECONFIGURATION to FALSE.

1> if V302 is equal to or smaller than N302:

2> select a suitable UTRA cell according to TS 25.304;

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3, except for the IE "Cell update cause" which shall be set to "Radio link failure";

2> submit the CELL UPDATE message for transmission on the uplink CCCH;

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302:

…

If the IE "Downlink DPCH info common for all RL" is included in a message used to perform a Timing re-initialised hard handover or the IE "Downlink DPCH info common for all RL" is included in a message other than RB SETUP used to transfer the UE from a state different from Cell_DCH to Cell_DCH, and ciphering is active for any radio bearer using RLC-TM, the UE shall, after having activated the dedicated physical channels indicated by that IE:

…

1> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info" in the response message;”

…

Reference

3GPP TS 25.331 clauses 8.3.1.2, 8.3.1.7a, 8.6.6.28.

### 8.3.1.18.3 Test purpose

1. To confirm that the UE shall try to find a new cell after detecting that a radio link failure has occurred.
2. To confirm that the UE performs a cell selection procedure when it fails to configure the physical channel(s) indicated in the CELL UPDATE CONFIRM message.

8.3.1.18.4 Method of test

Initial Condition

System Simulator: 2 cells (Cell 1 and cell 2 are active).

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: CS_DCCH+DTCH_DCH (state 6-9).

Test Procedure

**Table 8.3.1.18**

| Parameter | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -60 | -75 | -60 | -85 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -60 | -75 | -60 | -85 |

Table 8.3.1.18 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is brought to CELL_DCH state in a cell 1 after making a successful outgoing call attempt. After the call has been established, SS configures its downlink transmission power settings according to column "T1" in table 8.3.1.18. The UE shall detect a radio link failure in cell 1.

Then it shall attempt to re-select to cell 2. After that, it shall transmit CELL UPDATE on the uplink CCCH to SS. The SS transmits CELL UPDATE CONFIRM message which includes dedicated transport and physical channel parameters on downlink DCCH. SS shall not configure according to this message. Instead, SS configures its downlink transmission power settings according to column "T2" in table 8.3.1.18. UE shall fail to establish the dedicated channel in cell 2.

UE shall re-select to cell 1 and transmit a CELL UPDATE message with IE "Cell update cause" set to "Radio link failure". Then SS responds with a CELL UPDATE CONFIRM message on downlink DCCH. Then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | | Void | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | | | | SS configures cell 1 and 2 according to column "T1" in table 8.3.1.18. SS starts to listen to the uplink CCCH of cell 2. |
| 5 | | | Void | |
| 6 | | | | The UE detects the radio link failure. |
| 7 | → | | CELL UPDATE | The UE shall find a new cell 2 and the value "radio link failure" shall be set in IE "Cell update cause". |
| 8 | ← | | CELL UPDATE CONFIRM | Including dedicated physical channel parameters. |
| 9 | | | | SS does not configure according to the message in step 8. SS configures cell 1 and 2 according to column "T2" in table 8.3.1.18. |
| 10 | → | | CELL UPDATE | UE shall select cell 1 and transmit this message |
| 11 | ← | | CELL UPDATE CONFIRM | See message content. |
| 12 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108 titled "System Information Block type 1 (supported PLMN type is GSM-MAP)", with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |
| - T313 | 2 |
| - T315 | 0 |

CELL UPDATE (Step 7)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI<br>-SRNC Identity<br>- S-RNTI | <br>Check to see if set to value assigned in cell 1.<br>Check to see if set to value assigned in cell 1. |
| AM_RLC error indication (RB2, RB3 or RB4) | Not checked |
| Cell Update Cause | Check to see if set to 'radio link failure' |
| RB timer indicator<br>- T314 expired<br>- T315 expired | <br>FALSE<br>TRUE |

CELL UPDATE CONFIRM (Step 8 and 11)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| RRC transaction identifier | Selects an arbitrary integer between 0 to 3, but different values should be used for step 8 and 11. |
| UL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| Added or Reconfigured TrCH information list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| DL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| Added or Reconfigured TrCH information list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |

CELL UPDATE (Step 10)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| -SRNC Identity | Check to see if set to value assigned in cell 1. |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to 'radio link failure' |
| Failure cause | This IE is not Checked. |
| RB timer indicator | |
| - T314 expired | FALSE |
| - T315 expired | TRUE |

TRANSPORT CHANNEL RECONFIGURATION COMPLETE (Step 12)

Use the same message found in TS 34.108 clause 9, with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | This IE is checked to see if it is present in the case ciphering is activated. |

### 8.3.1.18.5 Test requirement

After step 6, the UE shall detect the presence of cell 2, perform cell re-selection and transmit a CELL UPDATE message.

After step 9, the UE shall transmit a CELL UPDATE message with IE "Cell update cause" set to "Radio link failure".

After step 11, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC with IE “Uplink counter synchronisation info” as present in case ciphering is activated.

## 8.3.1.19 Void

## 8.3.1.20 Cell Update: Reception of CELL UPDATE CONFIRM Message that causes invalid configuration

### 8.3.1.20.1 Definition

### 8.3.1.20.2 Conformance Requirement

If the variable INVALID_CONFIGURATION is set to TRUE, the UE shall:

1> if V302 is equal to or smaller than N302:

2> if, caused by the received CELL UPDATE CONFIRM message

3> if the variable ORDERED_RECONFIGURATION is set to TRUE caused by the received CELL UPDATE CONFIRM message in case of a cell update procedure:

4> set the variable ORDERED_RECONFIGURATION to FALSE.

2> in case of a cell update procedure:

3> set the variable FAILURE_INDICATOR to TRUE;

3> set the variable FAILURE_CAUSE to "Invalid configuration";

3> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

3> submit the CELL UPDATE message for transmission on the uplink CCCH.

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302:

…

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.20.3 Test Purpose

1. To confirm that the UE retransmits a CELL UPDATE message when it receives a CELL UPDATE CONFIRM message that will trigger an invalid configuration in the UE, if the number of retransmissions has not reached the maximum allowed value.

### 8.3.1.20.4 Method of Test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH (state 6-12) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is brought to CELL_PCH state at the beginning of the test. SS pages the UE by sending a PAGING TYPE 1 message using the U-RNTI identity assigned during RRC connection establishment procedure. The UE shall transmit a CELL UPDATE message on the uplink CCCH. Upon receiving such a message, the SS replies with a CELL UPDATE CONFIRM message which is set to give an invalid configuration. The UE shall re-transmit CELL UPDATE message. SS responds with a valid CELL UPDATE CONFIRM message to end the procedure. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ← | PAGING TYPE 1 | The UE is in the CELL_PCH state. SS pages for the UE using the allocated connected mode identity (U-RNTI). |
| 2 | → | | CELL UPDATE | If CELL UPDATE message is received, check that the value "paging response" is set in IE "Cell update cause". |
| 3 | | ← | CELL UPDATE CONFIRM | SS transmits an invalid message. |
| 4 | → | | CELL UPDATE | IE "failure cause" is set to "invalid configuration" |
| 5 | | ← | CELL UPDATE CONFIRM | |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |

Specific Message Content

CELL UPDATE (Step 2)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Paging Response' |

CELL UPDATE CONFIRM (Step 3)

Use the same message sub-type found in TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_DCH |
| Uplink DPCH info | Not Present |

CELL UPDATE (Step 4)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Paging Response' |
| Failure cause | Check to see if it is set to 'invalid configuration' |

PAGING TYPE 1 (Step 1)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Page record list<br>- Paging record<br>- CHOICE Used paging identity<br>- U-RNTI<br>- SRNC Identity<br>- S-RNTI | <br><br>UTRAN identity<br><br>'0000 0000 0001'<br>'0000 0000 0000 0000 0001' |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

#### 8.3.1.20.5 Test Requirement

After step 1 the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "paging response".

After step 3 the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "paging response" and IE "failure cause" set to "invalid configuration".

After step 5, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

### 8.3.1.21 Cell Update: Cell reselection to cell of another PLMN belonging to the equivalent PLMN list

#### 8.3.1.21.1 Definition

#### 8.3.1.21.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1.- Cell reselection:

- if none of the criteria for performing cell update with the causes specified above in the current clause is met; and
- if the UE is in CELL_FACH or CELL_PCH state; and
- if the UE performs cell re-selection or the variable C_RNTI is empty:
  - perform cell update using the cause "cell reselection".

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.
   - The cell is part of the selected PLMN or, of a PLMN considered as equivalent by the UE according to the information provided by the NAS.
   - The cell is not barred.
   - The cell is not part of the list of "forbidden LAs for roaming"
   - The cell selection criteria are fulfilled.
3. The Mobile Equipment shall store a list of "equivalent PLMNs". This list is replaced or deleted at the end of each location update procedure, routing area update procedure and GPRS attach procedure. The stored list

consists of a list of equivalent PLMNs as downloaded by the network plus the PLMN code of the network that downloaded the list. The stored list shall not be deleted when the MS is switched off. The stored list shall be deleted if the SIM is removed. The maximum number of possible entries in the stored list is six.

Reference

3GPP TS 25.331 clause 8.3.1.2.

3GPP TS 25.304 clause 4.3.

3GPP TS 24.008 clause 4.4.1.

### 8.3.1.21.3 Test purpose

1. To confirm that the UE executes a cell update procedure after a successful reselection to another UTRA cell with a PLMN identity different from the original cell but with a PLMN identity that is part of the equivalent PLMN list in the UE.

2. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection.

NOTE: Verifies conformance requirement 1, 2 and 3.

3. To confirm that the UE refrains from executing a cell update procedure to a better UTRA cell with another PLMN identity when that PLMN identity is not part of the equivalent PLMN list in the UE.

NOTE: Verifies conformance requirement 1, 2 and 3.

NOTE: Test case in 8.3.1.1 is a test where the UE reselects to a cell with the same PLMN identity as the registered PLMN.

### 8.3.1.21.4 Method of test

Initial Condition

System Simulator: 3 cells - Cell 1 is active, with the downlink transmission power shown in column marked "T0" in table 8.3.1.21, while cell 4 and cell 7 is inactive.

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

UE: Shall have stored equivalent PLMN list containing PLMN-1 and PLMN-2. The equivalent PLMN list stored in the UE shall not contain PLMN-3.

Test Procedure

The SS activates Cell 1, 4 & 7 according table 8.3.1.21.

**Table 8.3.1.21**

| Parameter | Unit | Cell 1 | | | Cell 4 | | | Cell 7 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | | Low Range Test Frequency | | |
| PLMN identity | | PLMN-1 | | | PLMN-2 | | | PLMN-3 | | |
| CPICH Ec (FDD) | dBm | -60 | -72 | -72 | OFF | -60 | -66 | OFF | OFF | -60 |
| P-CCPCH RSCP (TDD) | dBm | -62 | -74 | -74 | OFF | -62 | -68 | OFF | OFF | -62 |

Table 8.3.1.21-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently.

a) At T1, the SS activates Cell 4, and monitors Cell 4 for received messages from UE.

b) UE re-selects to Cell 4, and sends a CELL UPDATE. The SS shall reply with CELL UPDATE CONFIRM message on downlink DCCH.

c) At T2, the SS activates Cell 7, and monitors Cell 7 for received messages from UE.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | UE is camped on Cell 1 and registered to PLMN1 |
| 1a | ← | | MASTER INFORMATION BLOCK<br>SCHEDULING BLOCK 1<br>SYSTEM INFORMATION BLOCK TYPE 4<br>SYSTEM INFORMATION BLOCK TYPE 11 | SS transmits MIB and SB1 with a new value Tag. Simultaneously SS transmits modified SIB 4 and 11, with contents given in specific message contents |
| 1b | ← | | SYSTEM INFORMATION CHANGE INDICATION | Including 'MIB Value TAG' set to the value currently being transmitted |
| 1c | | | | Wait 5 seconds to allow UE to read new system information |
| 1d | | | | SS shall activate Cell 4. The UE shall not re-select Cell 4 until Cell 1 power level is set according to T1. |
| 2 | → | | CELL UPDATE | At T1: Sent in Cell 4<br>The value "cell reselection" set in IE "Cell update cause". |
| 3 | ← | | CELL UPDATE CONFIRM | |
| 4 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 4a | | | | SS shall activate Cell 7 and set power level according to T2. |
| 5 | | | | At T2: No message sent by UE |

Specific Message Contents

MASTER INFORMATION BLOCK (Step 1a)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| MIB Value Tag | Set to (Current MIB value tag + 1) |
| SIB 4 Cell Value tag | Set to (Current SIB4 value tag + 1) |
| SB 1 Cell Value tag | Set to (Current SB 1 value tag + 1) |

SCHEDULING BLOCK 1 (Step 1a)

| Information Element | Value/remark |
|---|---|
| SIB 11 Cell Value tag | Set to (Current SIB 11 value tag + 1) |

System Information Block type 4 (Step 1a)

Use the same message type found in clause 6.1.0b of TS 34.108, with the following exceptions:

| | |
|---|---|
| - Qqualmin | -16 |

System Information Block type 11 (Step 1a)

Use the same message type found in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | TRUE |
| - Inter-frequency TDD measurement indicator | FALSE |
| - Inter-RAT measurement indicators | Not Present |

SYSTEM INFORMATION CHANGE INDICATION (Step 1b)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| BCCH modification info | |
| MIB Value tag | Set equal to Value tag sent in modified MIB in step 1a |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type titled "CELL UPDATE CONFIRM message" in TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| - New C-RNTI | '1010 1010 1010 1010' |

#### 8.3.1.21.5 Test requirement

After step 1c, the UE shall send a CELL UPDATE at T1.

After step 4, the UE shall refrain from sending a cell update (or any other message) after T2.

### 8.3.1.22 Cell update: Restricted cell reselection to a cell belonging to forbidden LA list (Cell_FACH)

#### 8.3.1.22.1 Definition

#### 8.3.1.22.2 Conformance requirement

1. -Cell reselection:

   - if none of the criteria for performing cell update with the causes specified above in the current clause is met; and

   - if the UE is in CELL_FACH or CELL_PCH state; and

   - if the UE performs cell re-selection or the variable C_RNTI is empty:

     - perform cell update using the cause "cell reselection".

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   - The cell is part of the selected PLMN or, of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

   - The cell is not barred.

   - The cell is not part of the list of "forbidden LAs for roaming"

   - The cell selection criteria are fulfilled.

3. The Mobile Equipment shall contain a list of "forbidden location areas for roaming", as well as a list of "forbidden location areas for regional provision of service". These lists shall be erased when the MS is switched off or when the SIM is removed, and periodically (with period in the range 12 to 24 hours). The location area

identification received on the BCCH that triggered the location updating request shall be added to the suitable list whenever a location update reject message is received with the cause "Roaming not allowed in this location area" or with the cause "Location Area not allowed". The lists shall accommodate each 10 or more location area identifications. When the list is full and a new entry has to be inserted, the oldest entry shall be deleted.

Reference

3GPP TS 25.331 clause 8.3.1.2.

3GPP TS 25.304 clause 4.3.

3GPP TS 24.008 clause 4.4.1.

### 8.3.1.22.3 Test purpose

1. To confirm that the UE executes a cell update procedure after a successful reselection of another UTRA cell with a LA identity that is not part of the list of LAs stored in the UE as "forbidden location areas for roaming".

2. To confirm that if the UE get a release message and is moved to idle mode, performs a registration update where the LA list is updated and the UE again enters connected mode, that the UE refrains from selecting that same UTRA cell if that is part of the forbidden LA list.

NOTE: Test case in 8.3.1.1 is a test where the UE reselects to a cell with the same LA identity as the LA identity in the original cell.

NOTE: Test case in 8.1.3.2 is a test where normal RRC connection release on DCCH in CELL_FACH state is tested.

NOTE: Test case in 8.1.9 is a test where normal RRC connection request and location registration is tested.

### 8.3.1.22.4 Method of test

Initial Condition

System Simulator:

- 2 cells - Cell 1 is active, with the downlink transmission power shown in column marked "T0" in table 8.3.1.22, while cell 4 is inactive.

- Qqualmin value for Cell 1 and Cell 4 is set to -16 dB in SIB4 (FDD only) (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

UE: Shall have an empty list of LAs stored that are "forbidden location areas for roaming".

Related ICS/IXIT statements

Support of PS service Yes/No

Test Procedure

**Table 8.3.1.22**

| Parameter | Unit | Cell 1 | | Cell 4 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| LA identity | | LA-ID 1 | | LA-ID 2 | |
| CPICH Ec (FDD) | dBm | -60 | -66 | Cell 4 is switched off | -60 |
| P-CCPCH RSCP (TDD) | dBm | -62 | -68 | Cell 4 is switched off | -62 |

Table 8.3.1.22-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1"is to be applied subsequently.

a) At T1, verify that the UE reselects to cell 4 and sends a cell update.

b) SS sends a RRC connection release message to the UE from cell 4 on CCCH.

c) The UE performs a routing area update to cell 4 (RRC Connection request, setup, initial direct transfer, DL direct transfer (with LA forbidden for roaming), RRC connection release.)

d) The UE reselects cell 1 again although this is not the best cell.

e) The UE performs a routing area update to cell 1 (RRC Connection request, setup, initial direct transfer, DL direct transfer (without LA forbidden for roaming)).

f) Keep the UE in RRC Connected mode in CELL_FACH state.

g) Make sure the UE refrains from reselecting cell 4 and does not send a cell update (or any other message) in cell 4.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | → | | CELL UPDATE | At T1: Sent in Cell 4<br>The value "cell reselection" set in IE "Cell update cause". |
| 2 | ← | | RRC CONNECTION RELEASE | This message is sent on CCCH.<br>The value "Normal event" is set in IE "Release cause" |
| 3 | | | Void | |
| 4 | → | | RRC CONNECTION REQUEST | The value "Registration" is set in IE "Establishment cause" |
| 5 | ← | | RRC CONNECTION SETUP | Transits the UE to CELL_FACH state. |
| 6 | → | | RRC CONNECTION SETUP COMPLETE | |
| 7 | → | | INITIAL DIRECT TRANSFER | Includes GMM message ROUTING AREA UPDATE REQUEST. |
| 7a | ← | | SECURITY MODE COMMAND | The SS starts integrity protection. |
| 7b | → | | SECURITY MODE COMPLETE | |
| 8 | ← | | DOWNLINK DIRECT TRANSFER | Includes GMM message ROUTING AREA UPDATE REJECT with reject cause “No Suitable Cells In Location Area” |
| 9 | ← | | RRC CONNECTION RELEASE | This message is sent on DCCH.<br>The value "Normal event" is set in IE "Release cause" |
| 10 | → | | RRC CONNECTION RELEASE COMPLETE | |
| 11 | → | | RRC CONNECTION REQUEST | Sent in Cell 1.<br>The value "Registration" is set in IE "Establishment cause" |
| 12 | ← | | RRC CONNECTION SETUP | Transits the UE to CELL_FACH state. |
| 13 | → | | RRC CONNECTION SETUP COMPLETE | |
| 14 | → | | INITIAL DIRECT TRANSFER | Includes GMM message ROUTING AREA UPDATE REQUEST. |
| 14a | ← | | SECURITY MODE COMMAND | |
| 14b | → | | SECURITY MODE COMPLETE | |
| 15 | ← | | DOWNLINK DIRECT TRANSFER | Includes GMM message ROUTING AREA UPDATE ACCEPT. |

Specific Message Contents

System Information Block type 4

Use the same message type found in clause 6.1.0b of TS 34.108, with the following exceptions:

| | |
|---|---|
| - Qqualmin | -16 |

System Information Block type 11 (FDD)

Use the same message type found in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | TRUE |
| - Inter-frequency TDD measurement indicator | FALSE |
| - Inter-RAT measurement indicators | Not Present |

CELL UPDATE (Step 1)

The same message found in TS34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'cell reselection' |

RRC CONNECTION RELEASE (Step 2, 9)

Use the same message sub-type found in TS34.108 clause 9.

RRC CONNECTION RELEASE COMPLETE (Step 10)

Use the same message sub-type found in TS34.108 clause 9. Only the message type IE in this message will be checked.

RRC CONNECTION REQUEST (Step 4, 11)

Use the same message sub-type found in TS34.108 clause 9.

RRC CONNECTION SETUP (Step 5, 12)

Use the same message sub-type found in TS34.108 clause 9.

RRC CONNECTION SETUP COMPLETE (Step 6, 13)

Use the same message sub-type found in TS34.108 clause 9.

INITIAL DIRECT TRANSFER (Step 7, 14)

Use the same message sub-type found in TS34.108 clause 9.

DOWNLINK DIRECT TRANSFER (Step 8, 15)

Use the same message sub-type found in TS34.108 clause 9.

8.3.1.22.5 Test requirement

In step 1, the UE shall send a CELL UPDATE in Cell 4 at T1 and attempt registration update in Cell 4.

After step 2, the UE shall transmit RRC CONNECTION REQUEST message.

After step 5, the UE shall transmit RRC CONNECTION SETUP COMPLETE message, followed by an INITIAL DIRECT TRANSFER message

Since the registration update is rejected in Cell 4, UE shall transmit RRC CONNECTION RELEASE COMPLETE message after receiving RRC CONNECTION RELEASE message from SS. UE shall not send any more messages in Cell 4.

After step 9, the UE shall transmit RRC CONNECTION REQUEST message in cell 1.

After step 12, the UE shall transmit RRC CONNECTION SETUP COMPLETE message followed by INITIAL DIRECT TRANSFER message.

## 8.3.1.23 Cell Update: HCS cell reselection in CELL_FACH

### 8.3.1.23.1 Definition

### 8.3.1.23.2 Conformance requirement

1. The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is defined by:

$$H_s = Q_{meas,s} - Qhcs_s$$

$$H_n = Q_{meas,n} - Qhcs_n - TO_n * L_n$$

…

2. The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} - TO_n * (1 - L_n)$$

where:

$$TO_n = TEMP_OFFSET_n * W(PENALTY_TIME_n - T_n)$$

$L_n = 0$ if $HCS_PRIO_n = HCS_PRIO_s$
$L_n = 1$ if $HCS_PRIO_n <> HCS_PRIO_s$

$W(x) = 0$ for $x < 0$
$W(x) = 1$ for $x >= 0$

$TEMP_OFFSET_n$ applies an offset to the H and R criteria for the duration of $PENALTY_TIME_n$ after a timer $T_n$ has started for that neighbouring cell.

The timer $T_n$ is implemented for each neighbouring cell. $T_n$ shall be started from zero when one of the following conditions becomes true:

- if $HCS_PRIO_n <> HCS_PRIO_s$ and

$$Q_{meas,n} > Qhcs_n$$

Or

- if $HCS_PRIO_n = HCS_PRIO_s$ and

  - for serving FDD and neighbour FDD cells if the quality measure for cell selection and reselection is set to CPICH RSCP in the serving cell, and:

$$Q_{meas,n} > Q_{meas,s} + Qoffset1_{s,n}$$

  - for serving FDD and neighbour FDD cells if the quality measure for cell selection and reselection is set to CPICH Ec/No in the serving cell, and:

$$Q_{meas,n} > Q_{meas,s} + Qoffset2_{s,n}$$

  - for all other serving and neighbour cells:

$$Q_{meas,n} > Q_{meas,s} + Qoffset1_{s,n}$$

$T_n$ for the associated neighbour cell shall be stopped as soon as any of the above conditions are no longer fulfilled. Any value calculated for $TO_n$ is valid only if the associated timer $T_n$ is still running else $TO_n$ shall be set to zero.

At cell-reselection, a timer $T_n$ is stopped only if the corresponding cell is not a neighbour cell of the new serving cell, or if the criteria given above for starting timer $T_n$ for the corresponding cell is no longer fulfilled with the parameters of the new serving cell. On cell re-selection, timer $T_n$ shall be continued to be run for the corresponding cells but the criteria given above shall be evaluated with parameters broadcast in the new serving cell if the corresponding cells are neighbours of the new serving cell.

…

**3. The cell selection criterion S used for cell reselection is fulfilled when:**

| | |
|---|---|
| for FDD cells: | Srxlev > 0 AND Squal > 0 |
| for TDD cells: | Srxlev > 0 |
| for GSM cells: | Srxlev > 0 |

Where :

$$Squal = Q_{qualmeas} - Qqualmin$$

$$Srxlev = Q_{rxlevmeas} - Qrxlevmin - Pcompensation$$

…

4. The UE shall perform ranking of all cells that fulfil the S criterion among

   - all cells that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0**.** Note that this rule is not valid when UE high-mobility is detected.

   - all cells, not considering HCS priority levels, if no cell fulfil the criterion H >= 0. This case is also valid when it is indicated in system information that HCS is not used, that is when serving cell does not belong to a hierarchical cell structure.

The cells shall be ranked according to the R criteria.

The best ranked cell is the cell with the highest R value.

5. If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.
- more than 1 second has elapsed since the UE camped on the current serving cell.

…

6. The *cell reselection* process in Connected Mode is the same as *cell reselection evaluation process* used for idle mode, described in subclause 5.2.6 of 25.304.

7. A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_FACH or CELL_PCH state and the UE performs cell re-selection; or

3> if the UE is in CELL_FACH state and the variable C_RNTI is empty:

4> perform cell update using the cause "cell reselection".

Reference

3GPP TS 25.304 clause 5.2.6.1.4

3GPP TS 25.304 clause 5.4.3

3GPP TS 25.331 clause 8.3.1

### 8.3.1.23.3 Test purpose

1. To confirm that the UE can read HCS related SIB information and act upon all HCS parameters in CELL_FACH state.
2. To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell in CELL_FACH state.
3. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection.

8.3.1.23.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1 is active with downlink transmission power shown in Column To in Table 8.3.1.23-1. Cell 2 and 3 are switched off.

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

Specific Message Content

For system information blocks 4 and 11 for Cell 1 (gives IE's which are different from defaults given in 34.108 sec 6.1) to be transmitted before idle update preamble.

Contents of System Information Block type 4 (FDD)

| R* (After PenaltyTime) | | n.a. | n.a. | n.a. | n.a. | n.a. | -48 | n.a. | n.a. | -58 |

(*) NOTE: this parameter is calculated internally in the UE and is only shown for clarification of the test procedure.

The UE is in the CELL_FACH state, camping onto cell 1. SS configures Cell 2 and 3 with power levels given in column "TO" and starts to broadcast BCCH on the primary CCPCH in cell 2 & 3. UE shall remain camped on the Cell 1 even after expiry of penalty time i.e. 40 seconds. SS sets downlink transmission power settings according to columns "T1" in table 8.3.1.23-1. The UE shall find cell 3 to be more suitable for service and hence perform a cell reselection to cell 3 after at-least 40 Seconds (Penalty Time) after the power levels have been changed. After the completion of cell reselection, the UE shall transmit a CELL UPDATE message to the SS on the uplink CCCH of cell 3 and set IE "Cell update cause" to "Cell Reselection". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL_FACH", to the UE on the downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. UE shall stay in CELL_FACH state. SS then sets downlink transmission power settings according to columns "T2" in table 8.3.1.23-1. The UE shall find cell 2 to be more suitable for service after the expiry of the penalty time and hence perform a cell reselection to cell 2 after the power levels have been changed. After the completion of cell reselection, the UE shall transmit a CELL UPDATE message to the SS on the uplink CCCH of cell 2 and set IE "Cell update cause" to "Cell Reselection". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL_FACH", to the UE on the downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. UE shall stay in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state in cell 1 |
| 2 | ← | | BCCH | SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.3.1.23-1. The SS starts to broadcast BCCH on the primary CCPCH in cell 2 and Cell 3. The UE shall still find Cell 1 best for service even after penalty time of 40 seconds, and shall remain in Cell 1 in CELL_FACH State |
| 3 | | | | SS changes the power levels as per column 'T1' in the table 8.3.1.23-1. For the time equal to Penalty time 40 Seconds, after the change in power levels, the UE shall still find Cell 1 as best for service and remain in cell 1. After Penalty time of 40 Seconds, UE shall find Cell 3 better for service and perform a reselection. SS waits for the maximum duration required for the UE to camp to cell 3. |
| 4 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" Received in Cell 3 |
| 5 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_FACH". |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | | | | SS changes the power levels as per column 'T2' in the table 8.3.1.23-1. For the time equal to penalty time of 40 seconds, after the change in power levels, the UE shall still find cell 3 as best for service and remain in Cell 3. After penalty time of 40 seconds, UE shall find Cell 2 better for service and perform a reselection. SS waits for the maximum duration required for the UE to camp to cell 2. |
| 8 | → | | CELL UPDATE | Received in Cell 2 |
| 9 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_FACH". |
| 10 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |

Specific Message Contents

The contents of system information block 4 and 11 messages are identical as system information block 4 and 11 messages as found in 34.108 clause 6.1 with the following exceptions:

CELL UPDATE

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 5 and 9)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

#### 8.3.1.23.5 Test requirement

After step 3 the UE shall reselect to cell 3 and then it shall transmit a CELL UPDATE message which, sets the value "cell reselection" in IE "Cell update cause".

After step 5 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 7 the UE shall reselect to cell 2 and then it shall transmit a CELL UPDATE message which, sets the value "cell reselection" in IE "Cell update cause".

After step 9 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

### 8.3.1.24 Cell Update: HCS cell reselection in CELL_PCH

#### 8.3.1.24.1 Definition

#### 8.3.1.24.2 Conformance requirement

1. The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is defined by:

$$H_s = Q_{meas,s} - Qhcs_s$$

$$H_n = Q_{meas,n} - Qhcs_n - TO_n * L_n$$

…

2. The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} - TO_n * (1 - L_n)$$

where:

$TO_n = TEMP_OFFSET_n * W(PENALTY_TIME_n - T_n)$

$L_n = 0$ if $HCS_PRIO_n = HCS_PRIO_s$
$L_n = 1$ if $HCS_PRIO_n <> HCS_PRIO_s$

$W(x) = 0$ for $x < 0$
$W(x) = 1$ for $x >= 0$

$TEMP_OFFSET_n$ applies an offset to the H and R criteria for the duration of $PENALTY_TIME_n$ after a timer $T_n$ has started for that neighbouring cell.

The timer $T_n$ is implemented for each neighbouring cell. $T_n$ shall be started from zero when one of the following conditions becomes true:

- if $HCS_PRIO_n <> HCS_PRIO_s$ and

$$Q_{meas,n} > Qhcs_n$$

Or

- if $HCS_PRIO_n = HCS_PRIO_s$ and
  - for serving FDD and neighbour FDD cells if the quality measure for cell selection and reselection is set to CPICH RSCP in the serving cell, and:

$$Q_{meas,n} > Q_{meas,s} + Qoffset1_{s,n}$$

  - for serving FDD and neighbour FDD cells if the quality measure for cell selection and reselection is set to CPICH Ec/No in the serving cell, and:

$$Q_{meas,n} > Q_{meas,s} + Qoffset2_{s,n}$$

  - for all other serving and neighbour cells:

$$Q_{meas,n} > Q_{meas,s} + Qoffset1_{s,n}$$

$T_n$ for the associated neighbour cell shall be stopped as soon as any of the above conditions are no longer fulfilled. Any value calculated for $TO_n$ is valid only if the associated timer $T_n$ is still running else $TO_n$ shall be set to zero.

At cell-reselection, a timer $T_n$ is stopped only if the corresponding cell is not a neighbour cell of the new serving cell, or if the criteria given above for starting timer $T_n$ for the corresponding cell is no longer fulfilled with the parameters of the new serving cell. On cell re-selection, timer $T_n$ shall be continued to be run for the corresponding cells but the criteria given above shall be evaluated with parameters broadcast in the new serving cell if the corresponding cells are neighbours of the new serving cell.

…

**3. The cell selection criterion S used for cell reselection is fulfilled when:**

| | |
|---|---|
| for FDD cells: | Srxlev > 0 AND Squal > 0 |
| for TDD cells: | Srxlev > 0 |
| for GSM cells: | Srxlev > 0 |

Where :

$Squal = Q_{qualmeas} - Qqualmin$

$Srxlev = Q_{rxlevmeas} - Qrxlevmin - Pcompensation$

…

4. The UE shall perform ranking of all cells that fulfil the S criterion among

- all cells that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0**.** Note that this rule is not valid when UE high-mobility is detected.
- all cells, not considering HCS priority levels, if no cell fulfil the criterion H >= 0. This case is also valid when it is indicated in system information that HCS is not used, that is when serving cell does not belong to a hierarchical cell structure.

The cells shall be ranked according to the R criteria.

The best ranked cell is the cell with the highest R value.

5. If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.
- more than 1 second has elapsed since the UE camped on the current serving cell.

…

6. The *cell reselection* process in Connected Mode is the same as *cell reselection evaluation process* used for idle mode, described in subclause 5.2.6 of 25.304.

7. A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

…

1> Re-entering service area:

…

1> RLC unrecoverable error:

…

1> Cell reselection:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_FACH or CELL_PCH state and the UE performs cell re-selection; or

3> if the UE is in CELL_FACH state and the variable C_RNTI is empty:

4> perform cell update using the cause "cell reselection".

Reference

3GPP TS 25.304 clause 5.2.6.1.4

3GPP TS 25.304 clause 5.4.3

3GPP TS 25.331 clause 8.3.1

### 8.3.1.24.3 Test purpose

1. To confirm that the UE can read HCS related SIB information and act upon all HCS parameters in CELL_PCH state.
2. To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell in CELL_PCH state.
3. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection.

### 8.3.1.24.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1 is active with downlink transmission power shown in Column To in table 8.3.1.24-1. Cell 2 and 3 are switched off.

UE: CELL_PCH (state 6-12) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Specific Message Content

For system information blocks 4 and 11 for Cell 1 (gives IE's which are different from defaults given in 34.108 sec 6.1) to be transmitted before idle update preamble.

Test Procedure

**Table 8.3.1.24-1**

| Parameter | Unit | Cell 1 | | | Cell 2 | | | Cell 3 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| Cell id in system information | | 1 | | | 2 | | | 3 | | |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| HCS Priority | | 6 | | | 7 | | | 7 | | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | -65 | -65 | -82 | -82 | -68 | -82 | -68 | -68 |
| P-CCPCH RSCP (TDD) | dBm | -61 | -61 | -61 | -80 | -80 | -67 | -80 | -73 | -73 |
| H* (During penalty time) | | 15 | 10 | -inf | -inf | -inf | 7 | -inf | -inf | 7 |
| H* (After PenaltyTime) | | 15 | 10 | 10 | -7 | -7 | 7 | -7 | 7 | 7 |
| R* (During PenaltyTime) | | n.a. | n.a. | n.a. | n.a. | n.a. | -inf | n.a. | n.a. | -58 |
| R* (After PenaltyTime) | | n.a. | n.a. | n.a. | n.a. | n.a. | -48 | n.a. | n.a. | -58 |

(*) Note: this parameter is calculated internally in the UE and is only shown for clarification of the test procedure.

The UE is in the CELL_PCH state, camping onto cell 1. SS configures Cell 2 and 3 with power levels given in column "TO" and starts to broadcast BCCH on the primary CCPCH in cell 2 & 3. UE shall remain camped on the Cell 1 even after expiry of penalty time i.e. 40 seconds. SS sets downlink transmission power settings according to columns "T1" in table 8.3.1.24-1. The UE shall find cell 3 to be more suitable for service and hence perform a cell reselection to cell 3 after at-least 40 Seconds (Penalty Time) after the power levels have been changed. After the completion of cell reselection, the UE shall move to CELL_FACH state and transmit a CELL UPDATE message to the SS on the uplink CCCH of cell 3 and set IE "Cell update cause" to "Cell Reselection". After SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL_PCH", to the UE on the downlink CCCH. UE shall return to CELL_PCH state in Cell 3 and will not transmit anything on PRACH. SS then sets downlink transmission power settings according to columns "T2" in table 8.3.1.24-1. The UE shall find cell 2 to be more suitable for service after the expiry of penalty time and hence perform a cell reselection to cell 2 after the power levels have been changed. After the completion of cell reselection, the UE shall move to CELL_FACH state and transmit a CELL UPDATE message to the SS on the uplink CCCH of cell 2 and set IE "Cell update cause" to "Cell Reselection". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL_PCH", to the UE on the downlink DCCH. UE shall return to CELL_PCH state in Cell 2 and will not transmit anything on PRACH.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_PCH state in cell 1 |
| 2 | ← | | BCCH | SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.3.1.24-1. The SS starts to broadcast BCCH on the primary CCPCH in cell 2 and Cell 3. The UE shall still find Cell 1 best for service even after penalty time of 40 seconds, and shall remain in Cell 1 in CELL_PCH State |
| 3 | | | | SS changes the power levels as per column 'T1' in the table 8.3.1.24-1. For the time equal to Penalty time 40 Seconds, after the change in power levels, the UE shall still find Cell 1 as best for service and remain in cell 1. After Penalty time of 40 Seconds, UE shall find Cell 3 better for service and perform a reselection. SS waits for the maximum duration required for the UE to camp to cell 3. |
| 4 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection". Received in Cell 3 |
| 5 | ← | | CELL UPDATE CONFIRM | Message sent on CCCH with IE "RRC State Indicator" is set to "CELL_PCH". |
| 7 | | | | SS changes the power levels as per column 'T2' in the table 8.3.1.24-1. SS Checks that no cell update message is received during penalty time as the UE shall find Cell 2 better for service and perform a reselection after the expiry of penalty time. SS waits for the maximum duration required for the UE to camp to cell 2. |
| 8 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection". Received in Cell 2 |
| 9 | ← | | CELL UPDATE CONFIRM | Message sent on DCCH with IE "RRC State Indicator" is set to "CELL_PCH". |

Specific Message Contents

CELL UPDATE

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 5 and 8)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.3.1.24.5 Test requirement

After step 3 the UE shall reselect to cell 3 and then it shall transmit a CELL UPDATE message which, sets the value "cell reselection" in IE "Cell update cause".

After step 6 the UE shall reselect to cell 2 and then it shall transmit a CELL UPDATE message which, sets the value "cell reselection" in IE "Cell update cause".

### 8.3.1.25 CELL UPDATE: Radio Link Failure (T314=0, T315=0)

#### 8.3.1.25.1 Definition

#### 8.3.1.25.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_DCH state and the criteria for radio link failure is met as specified in TS 25.331 subclause 8.5.6; or

…

4> perform cell update using the cause "radio link failure".

When initiating cell update procedure, the UE shall:

…

1> if the UE is in CELL_DCH state:

…

2> if the stored values of the timer T314 and timer T315 are both equal to zero; or

…

3> release all its radio resources;

3> indicate release (abort) of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to upper layers;

3> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

3> clear the variable ESTABLISHED_RABS;

3> enter idle mode;

3> perform other actions when entering idle mode from connected mode as specified in TS 25.331 subclause 8.5.2;

3> and the procedure ends.

Reference

3GPP TS 25.331 clause 8.3.1.2

### 8.3.1.25.3 Test purpose

1. To confirm that the UE releases all resources and enters idle mode when there is a radio link failure.

### 8.3.1.25.4 Method of test

Initial Condition

System Simulator: 2 cells (Cell 1 and Cell 2 are active).

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) or PS+CS-DCCH+DTCH_DCH (state 6-14) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) and services supported by the UE. If UE supports PS+CS but only supports streaming service in CS domain then state 6-9, 6-10 are applied.

Specific Message Content

For SIB type 1 message to be transmitted throughout the test, use the message titled “System Information Block type 1 (supported PLMN type is GSM-MAP)” as found in TS 34.108 clause 6, with the following exception.

| Information Element | Value/remark |
|---|---|
| - T314 | 0 |
| - T315 | 0 |

Test Procedure

**Table 8.3.1.25**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.25 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked ‘T0’ denote the initial conditions.

The UE is brought to CELL_DCH state in a cell 1 after making a successful outgoing call attempt. After the call has been established, SS configures its downlink transmission power settings according to column ‘T1’ in table 8.3.1.25. The UE shall detect a radio link failure in cell 1 and indicate to the non-access stratum the release of all the radio bearers. Then it shall attempt to re-select to cell 2. After that, it shall then enter idle mode state. SS calls for generic procedure C.1 to check that UE is in Idle Mode state in cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | In the initial set up procedure, the SS shall request UE to set timer T314 and T315 to 0. |
| 2 | | | | SS configures cell 1 and 2 according to column 'T1' in table 8.3.1.25. |
| 3 | | | | SS waits for 5 seconds. |
| 4 | ←→ | | CALL C.1 | SS execute this procedure in cell 2. If the test result of C.1 indicates that UE is in Idle Mode state, the test passes, otherwise it fails. |

Specific Message Contents

None.

8.3.1.25.5 Test requirement

After step 2, the UE shall release all its radio bearers.

After step 3, the UE shall be in idle mode state in cell 2.

## 8.3.1.26 Cell Update: Radio Link Failure (T314>0, T315=0), PS RAB established

8.3.1.26.1 Definition

8.3.1.26.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_DCH state; and

2> if the criteria for radio link failure is met as specified in TS 25.331 subclause 8.5.6:

3> perform cell update using the cause "radio link failure".

…

When initiating the cell update procedure, the UE shall:

1> stop timer T305;

1> if the UE is in CELL_DCH state:

2> in the variable RB_TIMER_INDICATOR, set the IE "T314 expired" and the IE "T315 expired" to FALSE;

2> if the stored values of the timer T314 and timer T315 are both equal to zero; or

2> if the stored value of the timer T314 is equal to zero and there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315":

…

2> if the stored value of the timer T314 is equal to zero:

…

2> if the stored value of the timer T315 is equal to zero:

3> release all radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315";

3> in the variable RB_TIMER_INDICATOR set the IE "T315 expired" to TRUE.

2> if the stored value of the timer T314 is greater than zero:

3> if there are radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314":

4> start timer T314.

3> if there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314" or "useT315":

4> start timer T314.

2> if the stored value of the timer T315 is greater than zero:

…

2> for the released radio bearer(s):

3> delete the information about the radio bearer from the variable ESTABLISHED_RABS;

3> when all radio bearers belonging to the same radio access bearer have been released:

4> indicate local end release of the radio access bearer to upper layers using the CN domain identity together with the RAB identity stored in the variable ESTABLISHED_RABS;

4> delete all information about the radio access bearer from the variable ESTABLISHED_RABS.

2> select a suitable UTRA cell according to TS 25.304;

2> set the variable ORDERED_RECONFIGURATION to FALSE.

1> set the variables PROTOCOL_ERROR_INDICATOR, FAILURE_INDICATOR, UNSUPPORTED_CONFIGURATION and INVALID_CONFIGURATION to FALSE;

1> set the variable CELL_UPDATE_STARTED to TRUE;

1> if the UE is not already in CELL_FACH state:

2> move to CELL_FACH state;

2> select PRACH according to s TS 25.331 subclause 8.5.17;

2> select Secondary CCPCH according to s TS 25.331 subclause 8.5.19;

2> use the transport format set given in system information as specified in TS 25.331 subclause 8.6.5.1.

1> if the UE performs cell re-selection:

2> clear the variable C_RNTI; and

2> stop using that C_RNTI just cleared from the variable C_RNTI in MAC.

1> set CFN in relation to SFN of current cell according to TS 25.331 subclause 8.5.15;

1> in case of a cell update procedure:

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3;

2> submit the CELL UPDATE message for transmission on the uplink CCCH.

1> set counter V302 to 1;

1> start timer T302 when the MAC layer indicates success or failure in transmitting the message.

…

If the received CELL UPDATE CONFIRM message would cause the UE to transit to CELL_DCH state; and

1> in case of a received CELL UPDATE CONFIRM message:

2> if the UE failed to establish the physical channel(s) indicated in the received CELL UPDATE CONFIRM message

…

the UE shall:

1> if the variable ORDERED_RECONFIGURATION is set to TRUE caused by the received CELL UPDATE CONFIRM message in case of a cell update procedure:

2> set the variable ORDERED_RECONFIGURATION to FALSE.

1> if V302 is equal to or smaller than N302:

2> select a suitable UTRA cell according to TS 25.304;

2> set the contents of the CELL UPDATE message according to TS 25.331 subclause 8.3.1.3, except for the IE "Cell update cause" which shall be set to "Radio link failure";

2> submit the CELL UPDATE message for transmission on the uplink CCCH;

2> increment counter V302;

2> restart timer T302 when the MAC layer indicates success or failure to transmit the message.

1> if V302 is greater than N302:

…

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.26.3 Test purpose

1. To confirm that the UE shall indicate to the non-access stratum the release of radio access bearer which is associated with T315 and try to find a new cell after detecting that a radio link failure has occurred.

### 8.3.1.26.4 Method of test

Initial Condition

System Simulator: 2 cells (Cell 1 and cell 2 are active).

UE: PS_DCCH+DTCH_DCH (state 6-10) in cell 1 or PS+CS-DCCH+DTCH_DCH (state 6-14) in cell 1, if UE supports both CS and PS domains.

Specific Message Content

For SIB type 1 message to be transmitted throughout the test, use the message titled “System Information Block type 1 (supported PLMN type is GSM-MAP)” as found in TS 34.108 clause 6, with the following exception.

| Information Element | Value/remark |
|---|---|
| - T315 | 0 |

Test Procedure

**Table 8.3.1.26**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.26 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is brought to CELL_DCH state in a cell 1 after making a successful outgoing call attempt. After the call has been established, SS configures its downlink transmission power settings according to column "T1" in table 8.3.1.26. The UE shall detect a radio link failure in cell 1.

UE shall release of the radio bearer which is associated with T315, if the latter has been set up in the initial condition.

Then it shall attempt to re-select to cell 2. After that, it shall then enter CELL_FACH state and transmit CELL UPDATE on the uplink CCCH to SS. The SS transmits CELL UPDATE CONFIRM message which includes dedicated physical channel parameters on downlink DCCH. Then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

SS transmits COUNTER CHECK message to UE. UE shall transmit a COUNTER CHECK RESPONSE message back to SS.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures cell 1 and 2 according to column "T1" in table 8.3.1.26. SS starts to listen to the uplink CCCH of cell 2. |
| 2 | | | | The UE detects the radio link failure. |
| 3 | → | | CELL UPDATE | The UE shall find a new cell 2 and the value "radio link failure" shall be set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | Including dedicated physical channel parameters. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ← | | COUNTER CHECK | SS sent the COUNT-C info for the RBs that were established in the initial condition. |
| 7 | → | | COUNTER CHECK RESPONSE | |

Specific Message Contents

CELL UPDATE (Step 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| -SRNC Identity | Check to see if set to value assigned in cell 1. |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to 'radio link failure' |
| RB timer indicator | |
| - T314 expired | FALSE |
| - T315 expired | TRUE |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

If the initial condition of the UE is in state 6-10, then

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | Same as the set defined in RRC CONNECTION SETUP message: UM (Transition to CELL_DCH) found in TS 34.108 clause 9. |
| Downlink information common for all radio links | Same as the set defined in RRC CONNECTION SETUP message: UM (Transition to CELL_DCH) found in TS 34.108 clause 9. |
| Downlink information per radio link list | Same as the set defined in RRC CONNECTION SETUP message: UM (Transition to CELL_DCH) found in TS 34.108 clause 9. |

If the initial condition of the UE is in state 6-14, then

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A1, A2, A7 or A8. |

COUNTER CHECK (Step 6)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | 0 |
| Integrity check info | Calculated value |
| RB COUNT-C MSB information | |
| - RB identity | Set to the RB identity that was release by the UE upon radio link failure |
| - COUNT-C MSB uplink | Arbitrary COUNT-C MSB |
| - COUNT-C MSB downlink | Arbitrary COUNT-C MSB |

COUNTER CHECK RESPONSE (Step 7)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | 0 |
| Integrity check info | Not checked |
| RB COUNT-C information | |
| - RB identity | Check to see if set to the RB identity that was release by the UE upon radio link failure |
| - COUNT-C uplink | Check to see if COUNT-C MSB is set to arbitrary value given in step 13 and LSB is fill with '0' |
| - COUNT-C downlink | Check to see if COUNT-C MSB is set to arbitrary value given in step 13 and LSB is fill with '0' |

#### 8.3.1.26.5 Test requirement

After step 2, the UE shall detect the presence of cell 2, perform cell re-selection and transmit a CELL UPDATE message.

After step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6, the UE shall transmit a COUNTER CHECK RESPONSE message with the MSB part of the COUNT-C values set identical to COUNT-C MSB values in the COUNTER CHECK message in step 6.

### 8.3.1.27 Cell Update: Radio Link Failure (T314=0, T315>0), CS RAB

#### 8.3.1.27.1 Definition

#### 8.3.1.27.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_DCH state; and

2> if the criteria for radio link failure is met as specified in TS 25.331 subclause 8.5.6:

3> perform cell update using the cause "radio link failure".

…

When initiating the cell update procedure, the UE shall:

1> stop timer T305;

1> if the UE is in CELL_DCH state:

2> in the variable RB_TIMER_INDICATOR, set the IE "T314 expired" and the IE "T315 expired" to FALSE;

…

2> if the stored values of the timer T314 and timer T315 are both equal to zero; or

2> if the stored value of the timer T314 is equal to zero and there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315":

3> release all its radio resources;

3> indicate release (abort) of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to upper layers;

3> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

3> clear the variable ESTABLISHED_RABS;

3> enter idle mode;

3> perform other actions when entering idle mode from connected mode as specified in subclause 8.5.2;

3> and the procedure ends.

2> for the released radio bearer(s):

3> delete the information about the radio bearer from the variable ESTABLISHED_RABS;

3> when all radio bearers belonging to the same radio access bearer have been released:

4> indicate local end release of the radio access bearer to upper layers using the CN domain identity together with the RAB identity stored in the variable ESTABLISHED_RABS;

4> delete all information about the radio access bearer from the variable ESTABLISHED_RABS.

2> select a suitable UTRA cell according to TS 25.304;

2> set the variable ORDERED_RECONFIGURATION to FALSE.

…

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.27.3 Test purpose

1. To confirm that the UE release radio access bearer which is associated with T314 and try to find a new cell after detecting that a radio link failure has occurred.

### 8.3.1.27.4 Method of test

Initial Condition

System Simulator: 2 cells (Cell 1 and Cell 2 are active).

UE: CS_DCCH+DTCH_DCH (state 6-9).

Specific Message Content

For SIB type 1 message to be transmitted throughout the test, use the message titled “System Information Block type 1 (supported PLMN type is GSM-MAP)” as found in TS 34.108 clause 6, with the following exception.

| Information Element | Value/remark |
|---|---|
| - T314 | 0 |

Test Procedure

**Table 8.3.1.27**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.27 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked 'T0' denote the initial conditions.

The UE is brought to CELL_DCH state in a cell 1 after making a successful outgoing call attempt. After the call has been established, SS configures its downlink transmission power settings according to column 'T1' in table 8.3.1.27. The UE shall detect a radio link failure in cell 1.

The UE shall release radio bearer associated with T314 and enter idle mode state. SS calls for generic procedure C.1 to check that UE is in Idle Mode state in cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures cell 1 and 2 according to column 'T1' in table 8.3.1.27. SS starts to listen to the uplink CCCH of cell 2. |
| 2 | | | | The UE detects the radio link failure. |
| 3 | ←→ | | CALL C.1 | SS execute this procedure in cell 2. If the test result of C.1 indicates that UE is in Idle Mode state, the test passes. Otherwise it fails. |

Specific Message Contents

None.

8.3.1.27.5 Test requirement

After step 2, the UE shall detect the presence of cell 2 and enter idle mode state in cell 2.

## 8.3.1.28 Cell Update: Radio Link Failure (T314=0, T315>0), PS RAB

8.3.1.28.1 Definition

8.3.1.28.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_DCH state; and

2> if the criteria for radio link failure is met as specified in TS 25.331 subclause 8.5.6:

3> perform cell update using the cause "radio link failure".

…

When initiating the cell update procedure, the UE shall:

1> stop timer T305;

1> if the UE is in CELL_DCH state:

2> in the variable RB_TIMER_INDICATOR, set the IE "T314 expired" and the IE "T315 expired" to FALSE;

2> if the stored values of the timer T314 and timer T315 are both equal to zero; or

2> if the stored value of the timer T314 is equal to zero and there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315":

…

2> if the stored value of the timer T314 is equal to zero:

3> release all radio bearers, associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314";

3> in the variable RB_TIMER_INDICATOR set the IE "T314 expired" to TRUE.

…

2> if the stored value of the timer T315 is greater than zero:

3> if there are radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315":

4> start timer T315.

2> for the released radio bearer(s):

3> delete the information about the radio bearer from the variable ESTABLISHED_RABS;

3> when all radio bearers belonging to the same radio access bearer have been released:

4> indicate local end release of the radio access bearer to upper layers using the CN domain identity together with the RAB identity stored in the variable ESTABLISHED_RABS;

4> delete all information about the radio access bearer from the variable ESTABLISHED_RABS.

2> select a suitable UTRA cell according to TS 25.304;

2> set the variable ORDERED_RECONFIGURATION to FALSE.

…

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.28.3 Test purpose

1. To confirm that the UE release radio access bearer which is associated with T314 and try to find a new cell after detecting that a radio link failure has occurred.

8.3.1.28.4 Method of test

Initial Condition

System Simulator: 2 cells (Cell 1 and Cell 2 are active).

UE: PS_DCCH+DTCH_DCH (state 6-10) in cell 1 or PS+CS-DCCH+DTCH_DCH (state 6-14) in cell 1, if UE supports both CS and PS domains.

Specific Message Content

For SIB type 1 message to be transmitted throughout the test, use the message titled "System Information Block type 1 (supported PLMN type is GSM-MAP)" as found in TS 34.108 clause 6, with the following exception.

| Information Element | Value/remark |
|---|---|
| - T314 | 0 |

Test Procedure

**Table 8.3.1.28**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.28 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked 'T0' denote the initial conditions.

The UE is brought to CELL_DCH state in a cell 1 after making a successful outgoing call attempt. After the call has been established, SS configures its downlink transmission power settings according to column 'T1' in table 8.3.1.28. The UE shall detect a radio link failure in cell 1.

The UE shall attempt to re-select to cell 2. After that, it shall then enter CELL_FACH state and transmit CELL UPDATE on the uplink CCCH to SS. The SS transmits CELL UPDATE CONFIRM message which includes dedicated physical channel parameters on downlink DCCH. Then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH. SS transmits COUNTER CHECK message to UE. UE shall transmit a COUNTER CHECK RESPONSE message back to SS.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures cell 1 and 2 according to column 'T1' in table 8.3.1.28. SS starts to listen to the uplink CCCH of cell 2. |
| 2 | | | | The UE detects the radio link failure. |
| 3 | → | | CELL UPDATE | The UE shall find a new cell 2 and the value "radio link failure" shall be set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | See message content. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ← | | COUNTER CHECK | SS sent the COUNT-C info for the RBs that were established in the initial condition. |
| 7 | → | | COUNTER CHECK RESPONSE | |

Specific Message Contents

CELL UPDATE (Step 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to 'radio link failure' |
| RB timer indicator | |
| - T314 expired | TRUE |
| - T315 expired | FALSE |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4, with the following exception: A non-zero value in the range of 0-16777216 used for cell 2. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

COUNTER CHECK (Step 6)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | 0 |
| Integrity check info | Calculated value |
| RB COUNT-C MSB information | |
| - RB identity | Set to the RB identity that was set up in the initial condition |
| - COUNT-C MSB uplink | Set to the value stored in the SS |
| - COUNT-C MSB downlink | Set to the value stored in the SS |

COUNTER CHECK RESPONSE (Step 7)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | 0 |
| Integrity check info | Not checked |
| RB COUNT-C information | Not present |

#### 8.3.1.28.5 Test requirement

After step 2, the UE shall detect the presence of cell 2, perform cell re-selection and transmit a CELL UPDATE message.

At step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 7, the UE shall transmit a COUNTER CHECK RESPONSE message without including IE “RB COUNT-C information”.

### 8.3.1.29 Cell Update: Radio Link Failure (T314>0, T315>0), CS RAB

#### 8.3.1.29.1 Definition

#### 8.3.1.29.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_DCH state; and

2> if the criteria for radio link failure is met as specified in TS 25.331 subclause 8.5.6:

3> perform cell update using the cause "radio link failure".

…

When initiating the cell update procedure, the UE shall:

…

1> if the UE is in CELL_DCH state:

2> in the variable RB_TIMER_INDICATOR, set the IE "T314 expired" and the IE "T315 expired" to FALSE;

…

2> if the stored value of the timer T314 is greater than zero:

3> if there are radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314":

4> start timer T314.

3> if there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314" or "useT315":

4> start timer T314.

2> if the stored value of the timer T315 is greater than zero:

3> if there are radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315":

4> start timer T315.

…

Upon expiry of timer T314 the UE shall:

1> if timer T302 is running:

…

1> if timer T302 is not running and timer T315 is running:

2> set IE "T314 expired" in variable RB_TIMER_INDICATOR to TRUE;

2> release locally all radio bearers which are associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314";

2> indicate release of those radio access bearers to upper layers;

2> delete all information about those radio access bearers from the variable ESTABLISHED_RABS.

1> if timers T302 and T315 are not running:

2> clear the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

2> clear the variable INTEGRITY_PROTECTION_ACTIVATION_INFO;

2> clear the variable PDCP_SN_INFO;

2> clear the entry for the CELL UPDATE CONFIRM message in the table "Rejected transactions" in the variable TRANSACTIONS;

2> release all its radio resources;

2> indicate release (abort) of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to upper layers;

2> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

2> clear the variable ESTABLISHED_RABS;

2> set the variable CELL_UPDATE_STARTED to FALSE;

2> enter idle mode;

2> other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

2> and the procedure ends.

Upon expiry of timer T315 the UE shall:

1> if timer T302 is running:

…

1> if timer T302 is not running and timer T314 is running:

2> set IE "T315 expired" in variable RB_TIMER_INDICATOR to TRUE;

2> release locally all radio bearers which are associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "use T315";

2> indicate release of those radio access bearers to upper layers;

2> delete all information about those radio access bearers from the variable ESTABLISHED_RABS.

1> if timers T302 and T314 are not running:

2> clear the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

2> clear the variable INTEGRITY_PROTECTION_ACTIVATION_INFO;

2> clear the variable PDCP_SN_INFO;

2> clear the entry for the CELL UPDATE CONFIRM message in the table "Rejected transactions" in the variable TRANSACTIONS;

2> release all its radio resources;

2> indicate release (abort) of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to upper layers;

2> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

2> clear the variable ESTABLISHED_RABS;

2> set the variable CELL_UPDATE_STARTED to FALSE;

2> enter idle mode;

2> other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

2> and the procedure ends.

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.29.3 Test purpose

1. To confirm that the UE shall indicate to the non-access stratum the release of radio access bearer which is associated with T314 and try to find a new cell after detecting that a radio link failure has occurred.

2. To confirm that the UE enters idle mode after T314 expires and T302 and T315 are not running.

### 8.3.1.29.4 Method of test

Initial Condition

System Simulator: 1 cell (Cell 1 is active).

UE: CS_DCCH+DTCH_DCH (state 6-9).

Specific Message Content

For SIB type 1 message to be transmitted throughout the test, use the message titled "System Information Block type 1 (supported PLMN type is GSM-MAP)" as found in TS 34.108 clause 6, with the following exception.

| Information Element | Value/remark |
|---|---|
| - T314 | 12 |
| - T315 | 30 |

Test Procedure

| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF |

The UE is brought to CELL_DCH state after making a successful outgoing call attempt. After the call has been established, SS configures its downlink transmission power settings according to column 'T1' in table 8.3.1.29. The UE shall detect a radio link failure in cell 1.

The SS shall wait for 12s (see Note 1) and then configure its downlink transmission power settings according to column 'T0' in table 8.3.1.29. The UE shall release radio bearer associated with T314 and enter idle mode state. SS calls for generic procedure C.1 to check that UE is in Idle Mode state in cell 1.

NOTE 1: Considering the timer tolerance of the UE, T314 may expire between 12s±0.3s, therefore the SS must wait for at least 12.3s before it reconfigures it downlink transmission power. Since SS has a timer tolerance of 10% or 2*TTI+55ms (consider the greater value of the two), the test case shall set the SS to reconfigure the power level 13.67s after the SS configures the power settings according to column 'T1' in table 8.3.1.29.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures cell 1 according to column 'T1' in table 8.3.1.29. |
| 2 | | | | SS waits for 12s after the completion of step 1 and then configures cell 1 according to column 'T0' in table 8.3.1.29. |
| 3 | ←→ | | CALL C.1 | SS execute this procedure in cell 1. If the test result of C.1 indicates that UE is in Idle Mode state, the test passes. Otherwise it fails. |

Specific Message Contents

None.

8.3.1.29.5 Test requirement

After step 2, the UE shall detect the presence of cell 1 and enter idle mode state in cell 1.

## 8.3.1.30 Cell Update: Radio Link Failure (T314>0, T315>0), PS RAB

### 8.3.1.30.1 Definition

### 8.3.1.30.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Paging response:

…

1> Radio link failure:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in CELL_DCH state; and

2> if the criteria for radio link failure is met as specified in TS 25.331 subclause 8.5.6:

3> perform cell update using the cause "radio link failure".

…

When initiating the cell update procedure, the UE shall:

…

1> if the UE is in CELL_DCH state:

2> in the variable RB_TIMER_INDICATOR, set the IE "T314 expired" and the IE "T315 expired" to FALSE;

…

2> if the stored value of the timer T314 is greater than zero:

3> if there are radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314":

4> start timer T314.

3> if there are no radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314" or "useT315":

4> start timer T314.

2> if the stored value of the timer T315 is greater than zero:

3> if there are radio bearers associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT315":

4> start timer T315.

…

Upon expiry of timer T314 the UE shall:

1> if timer T302 is running:

…

1> if timer T302 is not running and timer T315 is running:

2> set IE "T314 expired" in variable RB_TIMER_INDICATOR to TRUE;

2> release locally all radio bearers which are associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "useT314";

2> indicate release of those radio access bearers to upper layers;

2> delete all information about those radio access bearers from the variable ESTABLISHED_RABS.

1> if timers T302 and T315 are not running:

2> clear the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

2> clear the variable INTEGRITY_PROTECTION_ACTIVATION_INFO;

2> clear the variable PDCP_SN_INFO;

2> clear the entry for the CELL UPDATE CONFIRM message in the table "Rejected transactions" in the variable TRANSACTIONS;

2> release all its radio resources;

2> indicate release (abort) of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to upper layers;

2> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

2> clear the variable ESTABLISHED_RABS;

2> set the variable CELL_UPDATE_STARTED to FALSE;

2> enter idle mode;

2> other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

2> and the procedure ends.

Upon expiry of timer T315 the UE shall:

1> if timer T302 is running:

…

1> if timer T302 is not running and timer T314 is running:

2> set IE "T315 expired" in variable RB_TIMER_INDICATOR to TRUE;

2> release locally all radio bearers which are associated with any radio access bearers for which in the variable ESTABLISHED_RABS the value of the IE "Re-establishment timer" is set to "use T315";

2> indicate release of those radio access bearers to upper layers;

2> delete all information about those radio access bearers from the variable ESTABLISHED_RABS.

1> if timers T302 and T314 are not running:

2> clear the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

2> clear the variable INTEGRITY_PROTECTION_ACTIVATION_INFO;

2> clear the variable PDCP_SN_INFO;

2> clear the entry for the CELL UPDATE CONFIRM message in the table "Rejected transactions" in the variable TRANSACTIONS;

2> release all its radio resources;

2> indicate release (abort) of the established signalling connections (as stored in the variable ESTABLISHED_SIGNALLING_CONNECTIONS) and established radio access bearers (as stored in the variable ESTABLISHED_RABS) to upper layers;

2> clear the variable ESTABLISHED_SIGNALLING_CONNECTIONS;

2> clear the variable ESTABLISHED_RABS;

2> set the variable CELL_UPDATE_STARTED to FALSE;

2> enter idle mode;

2> other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

2> and the procedure ends.

Reference

3GPP TS 25.331 clause 8.3.1

### 8.3.1.30.3 Test purpose

1. To confirm that the UE shall indicate to the non-access stratum the release of radio access bearer which is associated with T315 and try to find a new cell after detecting that a radio link failure has occurred.
2. To confirm that the UE shall indicate to the non-access stratum the release of radio access bearer which is associated with T314 and try to find a new cell after detecting that a radio link failure has occurred. (This test purpose is only applicable when CS RAB is set up in the initial condition.)
3. To confirm that the UE enters idle mode after T315 expires and T302 and T314 are not running.

### 8.3.1.30.4 Method of test

Initial Condition

System Simulator: 1 cell (Cell 1 is active).

UE: PS_DCCH+DTCH_DCH (state 6-10 or PS+CS-DCCH+DTCH_DCH (state 6-14), as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) and services supported by the UE. If UE supports PS+CS but only supports streaming service in CS domain then state 6-10 is applied.

Specific Message Content

For SIB type 1 message to be transmitted throughout the test, use the message titled “System Information Block type 1 (supported PLMN type is GSM-MAP)” as found in TS 34.108 clause 6, with the following exception.

| Information Element | Value/remark |
|---|---|
| - T314 | 12 |
| - T315 | 60 |
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

Test Procedure

**Table 8.3.1.30**

| Parameter | Unit | Cell 1 | |
|---|---|---|---|
| | | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF |

The UE is brought to CELL_DCH state after making a successful outgoing call attempt. After the call has been established, SS configures its downlink transmission power settings according to column 'T1' in table 8.3.1.30. The UE shall detect a radio link failure in cell 1.

Case A (the initial condition of the UE is in state 6-10):

The SS shall wait for 69.3s (see Note 2) and then configure its downlink transmission power settings according to column 'T0' in table 8.3.1.30. The UE shall release radio bearer associated with T315 and enter idle mode state. SS calls for generic procedure C.1 to check that UE is in Idle Mode state in cell 1.

Case B (the initial condition of the UE is in state 6-14):

The SS shall wait for 16.5s (see Note 1) and then configure its downlink transmission power settings according to column 'T0' in table 8.3.1.30. The UE shall release radio bearer associated with T314 and attempt to re-select to cell 1. After that, it shall then enter CELL_FACH state and transmit CELL UPDATE on the uplink CCCH to SS. The SS transmits CELL UPDATE CONFIRM message which includes dedicated physical channel and transport channel parameters on downlink DCCH. Then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH. The UE may also optionally send "Signalling Connection Release Indicator for CS domain, which can occur before or after TRANSPORT CHANNEL RECONFIGURATION COMPLETE message. SS transmits COUNTER CHECK message to UE. UE shall transmit a COUNTER CHECK RESPONSE message back to SS. Then SS configures its downlink transmission power settings according to column 'T1' in table 8.3.1.30. The UE shall detect a radio link failure in cell 1. The SS shall wait for 69.3s (see Note 2) and then configure its downlink transmission power settings according to column 'T0' in table 8.3.1.30. The UE shall release radio bearer associated with T315 and enter idle mode state. SS calls for generic procedure C.1 to check that UE is in Idle Mode state in cell 1.

NOTE 1: Considering the timer tolerance of the UE, T314 may expire in 12s, therefore the SS must wait for at least 12.0s plus T313 (3.0s) for UE to detect Radio Link Failure before it reconfigures downlink transmission power. Since SS has a timer tolerance of 10% or 2*TTI+55ms (consider the greater value of the two), the test case shall set the SS to reconfigure the power level 16.5s after the SS configures the power settings according to column 'T1' in table 8.3.1.30.

NOTE 2: Considering the timer tolerance of the UE, T315 may expire in 60s, therefore the SS must wait for at least 60.0s plus T313 (3.0s) for UE to detect Radio Link Failure before it reconfigures it downlink transmission power. Since SS has a timer tolerance of 10% or 2*TTI+55ms (consider the greater value of the two), the test case shall set the SS to reconfigure the power level 69.3s after the SS configures the power settings according to column 'T1' in table 8.3.1.30.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures cell 1 according to column 'T1' in table 8.3.1.30. |
| 2 | | | | For Case A, go to step 9. SS waits for 16.5s after the completion of step 1 (for Case B) and then configures cell 1 according to column 'T0' in table 8.3.1.30. |
| 3 | → | | CELL UPDATE | UE shall select cell 1 and enter CELL_FACH state to transmit this message |
| 4 | ← | | CELL UPDATE CONFIRM | See message content. |
| 4a | → | | SIGNALLING CONNECTION RELEASE INDICATION | UE can optionally send this PDU. Steps 4a and 5 can occur in any order. |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |
| 6 | ← | | COUNTER CHECK | SS sent the COUNT-C info for the RBs that were established in the initial condition. |
| 7 | → | | COUNTER CHECK RESPONSE | |
| 8 | | | | SS configures cell 1 according to column 'T1' in table 8.3.1.30. |
| 9 | | | | SS waits for 69.3s after the completion of step 1 (for Case A) or step 8 (for Case B) and then configures cell 1 according to column 'T0' in table 8.3.1.30. |
| 10 | ←→ | | CALL C.1 | SS execute this procedure in cell 1. If the test result of C.1 indicates that UE is in Idle Mode state, the test passes. Otherwise it fails. |

Specific Message Contents

CELL UPDATE (Step 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to 'radio link failure' |
| RB timer indicator | |
| - T314 expired | TRUE |
| - T315 expired | FALSE |

SIGNALLING CONNECTION RELEASE INDICATION (Step 4a)

| Information Element | Value/remark |
|---|---|
| CN domain identity | CS domain |

CELL UPDATE CONFIRM (Step 4) if CS service to be tested for RRC test cases is Speech

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| UL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 1 |
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 2 |
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 3 |
| DL Transport channel information common for all transport channel | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Deleted DL TrCH information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 6 |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 7 |
| Deleted DL TrCH Information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 8 |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

CELL UPDATE CONFIRM (Step 4) , if CS service to be tested for RRC test cases is non-speech

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| UL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Deleted UL TrCH Information | |
| - Uplink transport channel type | DCH |
| - Transport channel identity | 1 |
| DL Transport channel information common for all transport channel | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Deleted DL TrCH information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 6 |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

COUNTER CHECK (Step 6)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | 0 |
| Integrity check info | Calculated value |
| RB COUNT-C MSB information | |
| - RB identity | Set to the RB identity that was set up in the initial condition and support PS service. |
| - COUNT-C MSB uplink | Set to the value stored in the SS |
| - COUNT-C MSB downlink | Set to the value stored in the SS |

COUNTER CHECK RESPONSE (Step 7)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | 0 |
| Integrity check info | Not checked |
| RB COUNT-C information | Not present |

#### 8.3.1.30.5 Test requirement

Case A:

After step 2, the UE shall detect the presence of cell 1 and enter idle mode state in cell 1.

Case B:

After step 2, the UE shall detect the presence of cell 1, perform cell re-selection and transmit a CELL UPDATE message.

After step 4, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6, the UE shall transmit a COUNTER CHECK RESPONSE message without including IE “RB COUNT-C information”.

After step 9, the UE shall detect the presence of cell 1 and enter idle mode state in cell 1.

### 8.3.1.31 Cell Update: re-entering of service area from URA_PCH after T316 expiry but before T317 expiry

#### 8.3.1.31.1 Definition

#### 8.3.1.31.2 Conformance requirement

If the UE detects the "out of service area" and the UE is in URA_PCH or CELL_PCH state it shall perform the following actions:

1> start timer T316;

1> perform processes described in subclause 7.2.2.

….

In the URA_PCH or CELL_PCH state the UE shall perform the following actions:

NOTE: Neither DCCH nor DTCH are available in these states.

1> if the UE is "in service area":

….

1> if the UE is "out of service area":

2> perform cell selection process as specified in [4];

2> run timer T316;

2> run timer T305.

….

On T316 expiry the UE shall perform the following actions. The UE shall:

1> if "out of service area" is detected:

2> start timer T317;

2> move to CELL_FACH state;

2> perform processes described in subclause 7.2.2.

1> if "in service area" is detected:

….

If the UE detects "in service area" before T317 expiry the UE shall perform the following actions. If no cell update procedure or URA update procedure is ongoing, the UE shall:

1> stop T317;

1> if T307 is active:

2> stop T307.

1> initiate the cell update procedure using as cause "Re-entering service area" as specified in subclause 8.3.1;

1> perform processes described in subclause 7.2.2.

If a cell update procedure or URA update procedure is ongoing, the UE shall:

1> stop T317;

1> perform the actions as specified in 8.3.1.

Reference

3GPP TS 25.331 clause 8.3.1, 8.5.5.1.1, 8.5.5.2.2, 8.5.5.3, 7.2.2.1, and 7.2.2.2.

#### 8.3.1.31.3 Test purpose

To confirm that the UE executes a cell update procedure when the UE re-enters the service area before the expiry of timer T317, after expiry of T316.

#### 8.3.1.31.4 Method of test

Initial Condition

System Simulator: 1 cell with URA-ID 1 and the downlink transmission power shown in column marked "T0" in table 8.3.1.31.

UE: URA_PCH (state 6-13) as specified in clause 7.4 of TS 34.108, with URA-ID 1 in the list of URA-ID.

Test Procedure

**Table 8.3.1.31**

| Parameter | Unit | Cell 1 | |
|---|---|---|---|
| | | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -80 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -80 |

Table 8.3.1.31 illustrates the downlink power to be applied at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is initially in URA_PCH state. The content of the SYSTEM INFORMATION BLOCK TYPE 3 and 4 is modified. The SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.31 so that S<0. When the UE detects that it is out of service area, it will start T316 and search for a cell to camp. SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.31 within a time equivalent to T316+T317 but larger than T316, so that S>0. The UE shall detect that it returns back in service area before T317 expires. Since the UE has moved to CELL_FACH state on expiry of T316, it shall now transmit a CELL UPDATE message which contains the value "re-entering service area" in IE "Cell update cause" to the SS on the uplink CCCH. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message which includes the IE "new C-RNTI", and "new U-RNTI" to the UE on the downlink DCCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE starts operating from URA_PCH state. |
| 1a | ← | | MASTER INFORMATION BLOCK<br>SYSTEM INFORMATION BLOCK TYPE 3 and 4 | SS changes the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK (see specific message contents). |
| 1b | ← | | PAGING TYPE 1 | Include IE "BCCH modification info" |
| | | | void | |
| | | | void | |
| 2 | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.31 such that the cell 1 is no longer suitable for camping i.e. S<0. |
| 3 | | | | The UE shall detect a "out of service area" condition, start T316. The UE shall start T317 on expiry of T316) |
| 4 | | | | 60 seconds after step 2 (see note 1), the SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.31 before T317 expires. |
| 5 | → | | CELL UPDATE | Value "re-entering service area" shall be set in IE "Cell update cause" |
| 6 | ← | | CELL UPDATE CONFIRM | |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

NOTE: The 60 seconds in step 4 should be large enough for any UE to have detected the out of service area condition (Nserv consecutive DRX cycles + 12s) and have started T317 after T316 expiry (default=30s), but well before T317 expiry.

Specific Message Contents

MASTER INFORMATION BLOCK (Step 1a)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value. |
| Scheduling information | Scheduling info for System Information Type 3 |
| - Cell Value tag | A value that is different from the previous Cell value tag |
| Scheduling information | Scheduling info for System Information Type 4 |
| - Cell Value tag | A value that is different from the previous Cell value tag |

SYSTEM INFORMATION BLOCK TYPE 3 and 4 (Step 1a)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception.

| Information Element | Value/remark |
|---|---|
| Qrxlevmin | -70 |

PAGING TYPE 1 (Step 1b)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Paging record list | Not Present |
| BCCH modification info | |
| MIB Value tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value. |
| BCCH modification time | Not present |

CELL UPDATE (Step 5)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 're-entering service area' |

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type found in TS 34.108 clause 9, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| New U-RNTI | |
| - SRNC Identity | '0000 0000 0001' |
| - S-RNTI | '0000 0000 0000 0101 0101' |
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 7)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE.

#### 8.3.1.31.5 Test requirement

After step 2 the UE shall detect that it is out of service area and shall not send a URA UPDATE on the uplink CCCH channel.

After step 4 the UE shall transmit a CELL UPDATE message which sets value "re-entering service area" into IE "Cell update cause".

After step 6 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message.

### 8.3.1.32 Cell Update: Transition from URA_PCH to CELL_DCH, start of HS-DSCH reception

#### 8.3.1.32.1 Definition

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.3.1.32.2 Conformance requirement

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in connected mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

1> if the IE "Used paging identity" is a UTRAN identity and if this U-RNTI is the same as the U-RNTI allocated to the UE:

2> if the optional IE "CN originated page to connected mode UE" is included:

3> indicate reception of paging; and

3> forward the IE "CN domain identity", the IE "Paging cause" and the IE "Paging record type identifier" to the upper layers.

2> otherwise:

3> perform a cell update procedure with cause "paging response" as specified in subclause 8.3.1.2.

2> ignore any other remaining IE "Paging record" that may be present in the message.

1> otherwise:

2> ignore that paging record.

…

A UE shall initiate the cell update procedure in the following cases:

1> Paging response:

…

…

If the IE "New H-RNTI" is included, the UE shall:

1> if the IE "Downlink HS-PDSCH Information" is also included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 of TS 25.331 applied on the received message:

2> store the value in the variable H_RNTI.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

If the IE "Added or Reconfigured DL TrCH information" is included then for the transport channel identified by the IE "DL Transport Channel Identity" the UE shall:

1> if the choice "DL parameters" is set to 'HSDSCH':

2> if the IE "HARQ Info" is included:

3> perform the actions specified in subclause 8.6.5.6b of TS 25.331.

…

If the IE "Downlink HS-PDSCH Information" is included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message, the UE shall:

1> if the IE "New H-RNTI" is included:

2> perform the actions as specified in subclause 8.6.3.1b of TS 25.331.

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33 of TS 25.331.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34 of TS 25.331.

1> For FDD, if, as a result of the received message, the variable H_RNTI is set and the UE has a stored IE "HS-SCCH Info" and a stored IE "Measurement Feedback Info"; and

1> For FDD, if the UE has received IE "Uplink DPCH Power Control Info" and stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor; and

1> For FDD, if the UE has stored IEs "MAC-hs queue to add or reconfigure list", "MAC-d PDU size Info" and "RB Mapping Info" corresponding to the HS-PDSCH configuration;

2> set the variable HS_DSCH_RECEPTION to TRUE;

2> start HS-DSCH reception procedures according to the stored HS-PDSCH configuration:

3> as stated in subclause 8.6.3.1b of TS 25.331 for the IE "H-RNTI";

3> in subclause 8.6.6.33 of TS 25.331 for the IE "HS-SCCH Info"; and

3> in subclause 8.6.6.34 of TS 25.331 for the IE "Measurement Feedback Info".

…

If the IE "HS-SCCH Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> in the case of FDD:

2> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving HS-DSCH radio link applying the scrambling code as received in the IE "DL Scrambling code".

1> in the case of TDD:

2> receive the HS-SCCH(s) according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> for HS-SCCH power control the UE shall use the "BLER target" signalled in the first occurrence of the "HS-SCCH Set Configuration".

2> in 3.84 Mcps TDD and 7.68 Mcps TDD:

3> use the parameters specified in the IE "HS-SICH power control info" for open loop power control as defined in subclause 8.5.7.

2> in 1.28 Mcps TDD:

3> use the IE " $PRX_{HS-SICH}$ " and "ACK-NAK power offset" to calculate and set an initial uplink transmission power;

3> use the IE " TPC step size" upon reception of TPC commands for closed loop power control.

…

If the IE "Measurement Feedback Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link.

Reference

3GPP TS 25.331 clauses 8.1.2, 8.3.1, 8,6,3,1, 8.6.3.1b, 8.6.5.6, 8.6.6.32, 8.6.6.33, 8.6.6.34

### 8.3.1.32.3 Test purpose

To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM message with a physical channel configuration causing it to start HS-DSCH reception.

### 8.3.1.32.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in the CELL_DCH state and has a radio bearer established that is mapped to HS-DSCH. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state.

The SS transmits a PAGING TYPE 1 message. The UE enters the CELL_FACH state to transmit a CELL UPDATE message using uplink CCCH in respond to the paging.

The SS transmits CELL UPDATE CONFIRM message which includes DPCH and HS-PDSCH physical channel parameters on the downlink DCCH. Then the UE resumes HS-DSCH reception and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the URA_PCH state |
| 2a | SS | | | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 3 | ← | | PAGING TYPE 1 | |
| 4 | → | | CELL UPDATE | The UE enters the CELL_FACH state. |
| 5 | ← | | CELL UPDATE CONFIRM | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the CELL_DCH state and starts HS-DSCH reception. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| URA Identity | 0000 0000 0000 0001B |

Paging Type 1 (Step 3)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | Equal to the U-RNTI assigned earlier. |
| - SRNC Identity | |
| - S-RNTI | |
| - CN originated page to connected mode UE | Not Present |
| BCCH modification info | Not Present |

CELL UPDATE (Step 4)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Paging response” |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

#### 8.3.1.32.5 Test requirement

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 3, the UE shall transmit a CELL UPDATE message.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.3.1.32a Cell Update: Transition from URA_PCH to CELL_DCH, start of HS-DSCH reception (Carriers belong to different frequency band for LCR TDD)

#### 8.3.1.32a.1 Definition and applicability

Same definition and applicability as in clause 8.3.1.32.1 except that UE supports the primary carrier and the secondary carriers which are configured into different frequency bands

#### 8.3.1.32a.2 Conformance requirement

Same conformance requirement as in clause 8.3.1.32 2.

#### 8.3.1.32a.3 Test purpose

Same test purpose as in clause8.3.1.32.3 except that UE can work in the primary carrier and the secondary carriers which are configured into different frequency bands.

#### 8.3.1.32a.4 Method of test

Initial Condition

System Simulator: 1 cell, three carriers, each cell configure 3 carriers, one is the primary carrier, the other two are secondary carrier, primary carrier and secondary carrier which are configured into different frequency bands.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports multiple frequency bands simultaneously

Test Procedure:

The UE is in the CELL_DCH state and has a radio bearer established that is mapped to HS-DSCH. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state.

The SS transmits a PAGING TYPE 1 message. The UE enters the CELL_FACH state to transmit a CELL UPDATE message using uplink CCCH in respond to the paging.

The SS transmits CELL UPDATE CONFIRM message which includes DPCH and HS-PDSCH physical channel parameters on the downlink DCCH. Then the UE resumes HS-DSCH reception and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

Expected sequence:

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | Note: Cell is configured with primary carrier and the secondary carriers into different frequency bands. |
| 1 | | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the URA_PCH state |
| 2a | SS | | | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 3 | ← | | PAGING TYPE 1 | |
| 4 | → | | CELL UPDATE | The UE enters the CELL_FACH state. |
| 5 | ← | | CELL UPDATE CONFIRM | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the CELL_DCH state and starts HS-DSCH reception. |

Same specific message contents as in clause8.3.1.32.4.

#### 8.3.1.32a.5 Test requirements

Same test requirements as in clause8.3.1.32.5.

### 8.3.1.33 Cell Update: Transition from CELL_PCH to CELL_DCH, start of HS-DSCH reception, frequency modification

#### 8.3.1.33.1 Definition

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.3.1.33.2 Conformance requirement

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in connected mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

1> if the IE "Used paging identity" is a UTRAN identity and if this U-RNTI is the same as the U-RNTI allocated to the UE:

2> if the optional IE "CN originated page to connected mode UE" is included:

3> indicate reception of paging; and

3> forward the IE "CN domain identity", the IE "Paging cause" and the IE "Paging record type identifier" to the upper layers.

2> otherwise:

3> perform a cell update procedure with cause "paging response" as specified in subclause 8.3.1.2.

2> ignore any other remaining IE "Paging record" that may be present in the message.

1> otherwise:

2> ignore that paging record.

…

A UE shall initiate the cell update procedure in the following cases:

1> Paging response:

…

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

…

When the UE receives a CELL UPDATE CONFIRM/URA UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

2> if the IE "Frequency info" is included in the message:

3> if the IE "RRC State Indicator" is set to the value "CELL_DCH":

4> act on the IE "Frequency info" as specified in subclause 8.6.6.1 in TS 25.331.

…

If the IE "New H-RNTI" is included, the UE shall:

1> if the IE "Downlink HS-PDSCH Information" is also included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 of TS 25.331 applied on the received message:

2> store the value in the variable H_RNTI.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

If the IE "Added or Reconfigured DL TrCH information" is included then for the transport channel identified by the IE "DL Transport Channel Identity" the UE shall:

1> if the choice "DL parameters" is set to 'HSDSCH':

2> if the IE "HARQ Info" is included:

3> perform the actions specified in subclause 8.6.5.6b of TS 25.331.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> if the IE "Frequency info" is included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info"; and

3> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only) or TS 25.224 (TDD only).

…

If the IE "Downlink HS-PDSCH Information" is included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message, the UE shall:

1> if the IE "New H-RNTI" is included:

2> perform the actions as specified in subclause 8.6.3.1b of TS 25.331.

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33 of TS 25.331.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34 of TS 25.331.

1> For FDD, if, as a result of the received message, the variable H_RNTI is set and the UE has a stored IE "HS-SCCH Info" and a stored IE "Measurement Feedback Info"; and

1> For FDD, if the UE has received IE "Uplink DPCH Power Control Info" and stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor; and

1> For FDD, if the UE has stored IEs "MAC-hs queue to add or reconfigure list", "MAC-d PDU size Info" and "RB Mapping Info" corresponding to the HS-PDSCH configuration;

2> set the variable HS_DSCH_RECEPTION to TRUE;

2> start HS-DSCH reception procedures according to the stored HS-PDSCH configuration:

3> as stated in subclause 8.6.3.1b of TS 25.331 for the IE "H-RNTI";

3> in subclause 8.6.6.33 of TS 25.331 for the IE "HS-SCCH Info"; and

3> in subclause 8.6.6.34 of TS 25.331 for the IE "Measurement Feedback Info".

…

If the IE "HS-SCCH Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> in the case of FDD:

2> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving HS-DSCH radio link applying the scrambling code as received in the IE "DL Scrambling code".

1> in the case of TDD:

2> receive the HS-SCCH(s) according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> for HS-SCCH power control the UE shall use the "BLER target" signalled in the first occurrence of the "HS-SCCH Set Configuration".

2> in 3.84 Mcps TDD and 7.68 Mcps TDD:

3> use the parameters specified in the IE "HS-SICH power control info" for open loop power control as defined in subclause 8.5.7.

2> in 1.28 Mcps TDD:

3> use the IE " $PRX_{HS-SICH}$ " and "ACK-NAK power offset" to calculate and set an initial uplink transmission power;

3> use the IE " TPC step size" upon reception of TPC commands for closed loop power control.

…

If the IE "Measurement Feedback Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link.

Reference

3GPP TS 25.331 clauses 8.1.2, 8.2.2.3, 8.2.2.4, 8.3.1, 8,6,3,1, 8.6.3.1b, 8.6.5.6, 8.6.6.1, 8.6.6.32, 8.6.6.33, 8.6.6.34

### 8.3.1.33.3 Test purpose

To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM message with a physical channel configuration causing it to start HS-DSCH reception on a different cell and frequency. To confirm that the UE enters CELL_PCH state on another frequency and stops HS-DSCH reception when it receives a PHYSICAL CHANNEL RECONFIGURATION message.

### 8.3.1.33.4 Method of test

Initial Condition

System Simulator: 2 cells - cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.3.1.33**

| Parameter | Unit | Cell 1 | | | Cell 6 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Frequency ($f_1$) | | | High Range Frequency ($f_2$) | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -72 | -60 | Off | -55 | -72 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -72 | -60 | Off | -55 | -72 |

Table 8.3.1.33 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in the CELL_DCH state in cell 1 and has a radio bearer established that is mapped to HS-DSCH. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.3.1.33.

The SS switches its downlink transmission power settings to columns "T1". The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH in cell 6. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC, selects cell 6 and enters CELL_PCH state.

The SS transmits a PAGING TYPE 1 message. The UE enters the CELL_FACH state to transmit a CELL UPDATE message using uplink CCCH in cell 6 in response to the paging.

The SS switches its downlink transmission power settings to columns "T2". The SS transmits CELL UPDATE CONFIRM message, which includes DPCH and HS-PDSCH physical channel parameters for cell 1 on the downlink DCCH. Then the UE establishes the DPCH and HS-PDSCH in cell 1 and resumes HS-DSCH reception and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH in cell 1.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 1 | | | | The UE is in CELL_DCH state in cell 1 and the SS configures its downlink transmission power setting according to columns "T1" in table 8.3.1.33. |
| 2 | | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After transmitting this message, the UE enters the CELL_PCH state in cell 6 |
| 4 | SS | | | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 5 | ← | | PAGING TYPE 1 | |
| 6 | → | | CELL UPDATE | The UE enters the CELL_FACH state. |
| 7 | SS | | | The SS switches its downlink transmission power settings to columns "T2" in table 8.3.1.33. |
| 8 | ← | | CELL UPDATE CONFIRM | |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE changes to cell 1, enters the CELL_DCH state and starts HS-DSCH reception. |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|

| - Choice mode | TDD | |
| - Choice TDD Option | 7.68 Mcps TDD | |
| - Choice SyncCase | Sync Case 2 | |
| - Timeslot | 0 | |
| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 6 | |
| - SCTD indicator | FALSE | |
| - Downlink DPCH info for each RL | Not present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

Paging Type 1 (Step 5)

| Information Element | Value/remark |
|---|---|
| Message Type<br>Paging record list<br>Paging record<br>- CHOICE Used paging identity<br>- U-RNTI<br>- SRNC Identity<br>- S-RNTI<br>- CN originated page to connected mode UE<br>BCCH modification info | <br>Only 1 entry<br><br>UTRAN identity<br>Equal to the U-RNTI assigned earlier.<br><br><br>Not Present<br>Not Present |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Paging response” |

CELL UPDATE CONFIRM (Step 8) (FDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RRC State indicator | CELL_DCH | |
| Frequency info | Set to the frequency of cell 1 | |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Set to the primary scrambling code of cell 1 | |
| - Serving HS-DSCH radio link indicator | TRUE | |
| - Downlink DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38400 | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set 1 | |
| - Code number | | |
| - Scrambling code change | No change | |
| - TPC combination index | 0 | |
| - Power offset $P_{TPC-DPDCH}$ | Not Present | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |
| - SCCPCH information for FACH | | R99 and Rel-4 only |

CELL UPDATE CONFIRM (Step 8) (1.28Mcps TDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RRC State indicator | CELL_DCH | |
| Frequency info | Set to the frequency of cell 1 | |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 1 | |
| - SCTD indicator | FALSE | |
| - Downlink DPCH info for each RL | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |

CELL UPDATE CONFIRM (Step 8) (3.84Mcps TDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RRC State indicator | CELL_DCH | |
| Frequency info | Set to the frequency of cell 1 | |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 3.84Mcps TDD | |
| - Choice SyncCase | Sync Case 2 | |
| - Timeslot | 0 | |
| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 1 | |
| - SCTD indicator | FALSE | |
| - Downlink DPCH info for each RL | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |

CELL UPDATE CONFIRM (Step 8) (7.68 Mcps TDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RRC State indicator | CELL_DCH | |
| Frequency info | Set to the frequency of cell 1 | |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information for each radio link list<br>- Downlink information for each radio link<br>- Choice mode | <br><br>TDD | |
| - Primary CCPCH info<br>- Choice mode | <br>TDD | |
| - Choice TDD Option | 7.68 Mcps TDD | |
| - Choice SyncCase | Sync Case 2 | |
| - Timeslot | 0 | |
| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 1 | |
| - SCTD indicator | FALSE | |
| - Downlink DPCH info for each RL | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |

#### 8.3.1.33.5 Test requirement

After step 2, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 5, the UE shall transmit a CELL UPDATE message.

After step 8, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC in cell 1.

### 8.3.1.33a Cell Update: Transition from CELL_PCH to CELL_DCH, start of HS-DSCH reception, frequency modification(TDD)

#### 8.3.1.33a.1 Definition

All UEs which support TDD and HS-PDSCH.

#### 8.3.1.33a.2 Conformance requirement

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in connected mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

1> if the IE "Used paging identity" is a UTRAN identity and if this U-RNTI is the same as the U-RNTI allocated to the UE:

2> if the optional IE "CN originated page to connected mode UE" is included:

3> indicate reception of paging; and

3> forward the IE "CN domain identity", the IE "Paging cause" and the IE "Paging record type identifier" to the upper layers.

2> otherwise:

3> perform a cell update procedure with cause "paging response" as specified in subclause 8.3.1.2.

2> ignore any other remaining IE "Paging record" that may be present in the message.

1> otherwise:

2> ignore that paging record.

…

A UE shall initiate the cell update procedure in the following cases:

1> Paging response:

…

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the new state is CELL_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:

1> when RLC has confirmed the successful transmission of the response message:

…

2> enter the new state (CELL_PCH);

…

When the UE receives a CELL UPDATE CONFIRM/URA UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or

- if the message is received on DCCH:

2> if the IE "Frequency info" is included in the message:

3> if the IE "RRC State Indicator" is set to the value "CELL_DCH":

4> act on the IE "Frequency info" as specified in subclause 8.6.6.1 in TS 25.331.

…

If the IE "New H-RNTI" is included, the UE shall:

1> if the IE "Downlink HS-PDSCH Information" is also included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 of TS 25.331 applied on the received message:

2> store the value in the variable H_RNTI.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

If the IE "Added or Reconfigured DL TrCH information" is included then for the transport channel identified by the IE "DL Transport Channel Identity" the UE shall:

1> if the choice "DL parameters" is set to 'HSDSCH':

2> if the IE "HARQ Info" is included:

3> perform the actions specified in subclause 8.6.5.6b of TS 25.331.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> if the IE "Frequency info" is included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info"; and

3> perform the physical layer synchronisation procedure A as specified in TS 25.224 (TDD only).

…

If the IE "Downlink HS-PDSCH Information" is included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message, the UE shall:

1> if the IE "New H-RNTI" is included:

2> perform the actions as specified in subclause 8.6.3.1b of TS 25.331.

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33 of TS 25.331.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34 of TS 25.331.

2> set the variable HS_DSCH_RECEPTION to TRUE;

2> start HS-DSCH reception procedures according to the stored HS-PDSCH configuration:

3> as stated in subclause 8.6.3.1b of TS 25.331 for the IE "H-RNTI";

3> in subclause 8.6.6.33 of TS 25.331 for the IE "HS-SCCH Info"; and

3> in subclause 8.6.6.34 of TS 25.331 for the IE "Measurement Feedback Info".

…

If the IE "HS-SCCH Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> in the case of TDD:

2> receive the HS-SCCH(s) according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> for HS-SCCH power control the UE shall use the "BLER target" signalled in the first occurrence of the "HS-SCCH Set Configuration".

2> in 3.84 Mcps TDD and 7.68 Mcps TDD:

3> use the parameters specified in the IE "HS-SICH power control info" for open loop power control as defined in subclause 8.5.7.

2> in 1.28 Mcps TDD:

3> use the IE " $PRX_{HS-SICH}$ " and "ACK-NAK power offset" to calculate and set an initial uplink transmission power;

3> use the IE " TPC step size" upon reception of TPC commands for closed loop power control.

…

If the IE "Measurement Feedback Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link.

Reference

3GPP TS 25.331 clauses 8.1.2, 8.2.2.3, 8.2.2.4, 8.3.1, 8,6,3,1, 8.6.3.1b, 8.6.5.6, 8.6.6.1, 8.6.6.32, 8.6.6.33, 8.6.6.34

### 8.3.1.33a.3 Test purpose

To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM message with a physical channel configuration causing it to start HS-DSCH reception on a different cell and frequency. To confirm that the UE enters CELL_PCH state on another frequency and stops HS-DSCH reception when it receives a PHYSICAL CHANNEL RECONFIGURATION message.

### 8.3.1.33a.4 Method of test

Initial Condition

System Simulator: 2 cells - cell 1 is active and cell 6 is inactive. Each cell configure 3 carriers, one is the primary carrier, the other two are secondary carrier.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.3.1.33a**

| Parameter | Unit | Cell 1 | | | Cell 6 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Frequency ($f_1$) | | | High Range Frequency ($f_2$) | | |
| P-CCPCH RSCP (TDD) | dBm | -60 | -72 | -60 | Off | -55 | -72 |

Table 8.3.1.33 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS34.108 clause7.4. The UE is in the CELL_DCH state in cell 1 and has a radio bearer established that is mapped to HS-DSCH. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.3.1.33a.

The SS switches its downlink transmission power settings to columns "T1". The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH in cell 6. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC, selects cell 6 and enters CELL_PCH state.

The SS transmits a PAGING TYPE 1 message. The UE enters the CELL_FACH state to transmit a CELL UPDATE message using uplink CCCH in cell 6 in response to the paging.

The SS switches its downlink transmission power settings to columns "T2". The SS transmits CELL UPDATE CONFIRM message, which includes DPCH and HS-PDSCH physical channel parameters for cell 1 on the downlink DCCH. Then the UE establishes the DPCH and HS-PDSCH in cell 1 and resumes HS-DSCH reception and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH in cell 1.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 1 | | | | The UE is in CELL_DCH state in cell 1 and the SS configures its downlink transmission power setting according to columns "T1" in table 8.3.1.33a. |
| 2 | | | PHYSICAL CHANNEL RECONFIGURATION | |
| 3 | | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | After transmitting this message, the UE enters the CELL_PCH state in cell 6 |
| 4 | SS | | | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 5 | ← | | PAGING TYPE 1 | |
| 6 | → | | CELL UPDATE | The UE enters the CELL_FACH state. |
| 7 | SS | | | The SS switches its downlink transmission power settings to columns "T2" in table 8.3.1.33a. |
| 8 | ← | | CELL UPDATE CONFIRM | |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE changes to cell 1, enters the CELL_DCH state and starts HS-DSCH reception. |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| New C-RNTI<br>RRC State Indicator<br>UTRAN DRX cycle length coefficient<br>Frequency info<br>- CHOICE mode | Not Present<br>CELL_PCH<br>3<br><br>TDD | |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 | |
| Downlink information for each radio link list<br>- Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 6 | |
| - SCTD indicator | FALSE | |
| - Downlink DPCH info for each RL | Not present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

Paging Type 1 (Step 5)

| Information Element | Value/remark |
|---|---|
| Message Type<br>Paging record list<br>Paging record<br>- CHOICE Used paging identity<br>- U-RNTI<br>- SRNC Identity<br>- S-RNTI<br>- CN originated page to connected mode UE<br>BCCH modification info | <br>Only 1 entry<br><br>UTRAN identity<br>Equal to the U-RNTI assigned earlier.<br><br><br>Not Present<br>Not Present |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Paging response” |

CELL UPDATE CONFIRM (Step 8)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RRC State indicator | CELL_DCH | |
| Frequency info | Set to the frequency of cell 1 | |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 1 | |
| - SCTD indicator | FALSE | |
| CellUpdateConfirm-CCCH-r5-TDD128-add-ext-IEs | | |
| frequencyInfo | secondary carrier frequency in cell 6 | |

#### 8.3.1.33a.5 Test requirement

After step 2, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 5, the UE shall transmit a CELL UPDATE message.

After step 8, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC in cell 1.

### 8.3.1.34 Cell Update: Transition from CELL_DCH to CELL_FACH, stop of HS-DSCH reception

#### 8.3.1.34.1 Definition

#### 8.3.1.34.2 Conformance requirement

1> Radio link failure:

…

3> if the UE is in CELL_DCH state and the criteria for radio link failure are met as specified in subclause 8.5.6 of TS 25.331; or

…

4> perform cell update using the cause "radio link failure".

When initiating the URA update or cell update procedure, the UE shall:

…

1> if HS-DSCH is configured:

2> stop any HS-DSCH reception procedures;

2> clear any stored HS-PDSCH configuration;

2> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

2> release all HARQ resources;

2> remove any H-RNTI stored;

2> clear the variable H_RNTI;

2> set the variable HS_DSCH_RECEPTION to FALSE.

1> if the UE is not already in CELL_FACH state:

2> move to CELL_FACH state;

2> select PRACH according to subclause 8.5.17 of TS 25.331;

2> select Secondary CCPCH according to subclause 8.5.19 of TS 25.331;

2> use the transport format set given in system information as specified in subclause 8.6.5.1 of TS 25.331.

Reference

3GPP TS 25.331 clauses 8.3.1.2

### 8.3.1.34.3 Test purpose

To confirm that the UE stops HS-DSCH reception after a radio link failure in CELL_DCH during HS-DSCH reception.

### 8.3.1.34.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 2 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.34**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.34 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in the CELL_DCH state and has a radio bearer

established that is mapped to HS-DSCH. SS configures its downlink transmission power settings according to column "T1" in table 8.3.1.34. The UE shall detect a radio link failure in cell 1.

Then it shall attempt to re-select to cell 2. After that, it shall then enter CELL_FACH state and transmit a CELL UPDATE message on the uplink CCCH to SS.

The SS transmits a CELL UPDATE CONFIRM message which request the UE to transit to CELL_FACH state. The UE responds with a RADIO BEARER RECONFIGURATION COMPLETE message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | | | | SS configures cell 1 and 2 according to column "T1" in table 8.3.1.34. SS starts to listen to the uplink CCCH of cell 2. |
| 2 | | | | The UE detects the radio link failure and stops reception of HS-DSCH. |
| 3 | → | | CELL UPDATE | The UE shall find a new cell 2 and the value "radio link failure" shall be set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |

Specific Message Contents

System Information Block type 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |
| - T313 | 2 |

RADIO BEARER SETUP (Step 0) (FDD)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, with the following exception; |
| - MAC-d PDU size | 656 |

RADIO BEARER SETUP (Step 0) (TDD)

Use the same message as specified for "Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108.

CELL UPDATE (Step 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Radio link failure” |

CELL UPDATE CONFIRM (Step 4) (FDD)

Use the same message sub-type found in TS 34.108 clause 9 with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '0101 0101 0101 0101' |
| RLC re-establish indicator (RB2, RB3 and RB4) | TRUE |
| RB information to reconfigure list | |
| - RB information to reconfigure | (AM DCCH for RRC) |
| - RB identity | 2 |
| - PDCP info | Not Present |

| Deleted DL TrCH Information | |
| - Downlink transport channel type | HS-DSCH |
| - DL HS-DSCH MAC-d flow identity | 0 |

#### 8.3.1.34.5 Test requirement

After step 2, the UE shall transmit a CELL UPDATE message and stop HS-DSCH reception.

### 8.3.1.35 Cell Update: Transition from CELL_DCH to CELL_DCH, with active HS-DSCH reception

#### 8.3.1.35.1 Definition

#### 8.3.1.35.2 Conformance requirement

1> Radio link failure:

…

3> if the UE is in CELL_DCH state and the criteria for radio link failure are met as specified in subclause 8.5.6 of TS 25.331; or

…

4> perform cell update using the cause "radio link failure".

When initiating the URA update or cell update procedure, the UE shall:

…

1> if HS-DSCH is configured:

2> stop any HS-DSCH reception procedures;

2> clear any stored HS-PDSCH configuration;

2> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

2> release all HARQ resources;

2> remove any H-RNTI stored;

2> clear the variable H_RNTI;

2> set the variable HS_DSCH_RECEPTION to FALSE.

Reference

3GPP TS 25.331 clauses 8.3.1.2

#### 8.3.1.35.3 Test purpose

To confirm that the UE keeps the RB mapping option for HS-DSCH reception after a radio link failure in CELL_DCH during HS-DSCH reception.

#### 8.3.1.35.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 2 is inactive.

Specific Message Contents

System Information Block type 11

Use the default system information block with the same type specified in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Periodic Reporting/Event Trigger Reporting Mode | Event trigger |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Intra-frequency measurement reporting criteria | |
| - Parameters required for each event | 3 kinds |
| - Intra-frequency event identity | 1a |
| - Time to trigger | 5000 |

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents)

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.35**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.35 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in the CELL_DCH state and has a radio bearer established that is mapped to HS-DSCH. SS configures its downlink transmission power settings according to column "T1" in table 8.3.1.35. The UE shall detect a radio link failure in cell 1.

Then it shall attempt to re-select to cell 2. After that, it shall then enter CELL_FACH state and transmit a CELL UPDATE message on the uplink CCCH to SS.

The SS transmits a CELL UPDATE CONFIRM message which request the UE to transit to CELL_DCH state and start reception of HS-DSCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | | | | SS configures cell 1 and 2 according to column "T1" in table 8.3.1.35. SS starts to listen to the uplink CCCH of cell 2. |
| 2 | | | | The UE detects the radio link failure and stops reception of HS-DSCH. |
| 3 | → | | CELL UPDATE | The UE shall find a new cell 2 and the value "radio link failure" shall be set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |
| - T313 | 2 |

RADIO BEARER SETUP (Step 0)

Use the same message as specified for “Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108.

CELL UPDATE (Step 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Radio link failure” |

CELL UPDATE CONFIRM (Step 4)(FDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RRC State indicator | CELL_DCH |
| | |
| UL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10 |
| DL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| CHOICE channel requirement<br><br>- Scrambling Code Number | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10,with the following exception<br>A non-zero value in the range of 0-16777215 used for cell 2 |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10 |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10 |
| Downlink information per radio link list<br><br>- Primary CPICH info<br>- Primary scrambling code | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, with the following exception;<br><br>150 |

CELL UPDATE CONFIRM (Step 4)(1.28Mcps TDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RRC State indicator | CELL_DCH |
| UL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10 |
| DL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10 |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10 |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10 |
| Downlink information per radio link list<br><br>- Primary CCPCH info<br>- Cell parameters ID | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, with the following exception;<br><br>Set to the Cell parameters ID for cell 2 |

#### 8.3.1.35.5 Test requirement

After step 2, the UE shall transmit a CELL UPDATE message.

After step 4, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and start reception of HS-DSCH.

### 8.3.1.36 Cell Update: Transition from CELL_DCH to CELL_FACH (stop of HS-DSCH reception with frequency modification)

#### 8.3.1.36.1 Definition

(All UEs which support FDD or TDD and HS-PDSCH.)

#### 8.3.1.36.2 Conformance requirement

1> Radio link failure:

…

3> if the UE is in CELL_DCH state and the criteria for radio link failure are met as specified in subclause 8.5.6; or

…

4> perform cell update using the cause "radio link failure".

When initiating the URA update or cell update procedure, the UE shall:

…

1> if HS-DSCH is configured:

2> stop any HS-DSCH reception procedures;

2> clear any stored HS-PDSCH configuration;

2> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

2> release all HARQ resources;

2> remove any H-RNTI stored;

2> clear the variable H_RNTI;

2> set the variable HS_DSCH_RECEPTION to FALSE.

1> if the UE is not already in CELL_FACH state:

2> move to CELL_FACH state;

2> select PRACH according to subclause 8.5.17;

2> select Secondary CCPCH according to subclause 8.5.19;

2> use the transport format set given in system information as specified in subclause 8.6.5.1.

Reference

3GPP TS 25.331 clauses 8.3.1.2

#### 8.3.1.36.3 Test purpose

To confirm that the UE stops HS-DSCH reception after a radio link failure in CELL_DCH during HS-DSCH reception.

8.3.1.36.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.36**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.36 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in the CELL_DCH state and has a radio bearer established that is mapped to HS-DSCH. SS configures its downlink transmission power settings according to column "T1" in table 8.3.1.36. The UE shall detect a radio link failure in cell 1.

Then it shall attempt to re-select to cell 6. After that, it shall then enter CELL_FACH state and transmit a CELL UPDATE message on the uplink CCCH to SS.

The SS transmits a CELL UPDATE CONFIRM message which requests the UE to transit to CELL_FACH state. The UE responds with a RADIO BEARER RECONFIGURATION COMPLETE message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | | | | SS configures cell 1 and 6 according to column "T1" in table 8.3.1.36. SS starts to listen to the uplink CCCH of cell 6. |
| 2 | | | | The UE detects the radio link failure and stops reception of HS-DSCH. |
| 3 | → | | CELL UPDATE | The UE shall find a new cell 6 and the value "radio link failure" shall be set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |

Specific Message Contents

System Information Block type 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |
| - T313 | 2 |

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108.

CELL UPDATE (Step 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Radio link failure” |

CELL UPDATE CONFIRM (Step 4) (FDD)

Use the same message sub-type found in TS 34.108 clause 9 with the exception of the following IEs:

| Information Element | Value/remark | Version |
|---|---|---|
| New C-RNTI | '0101 0101 0101 0101' | |

#### 8.3.1.36.5 Test requirement

After step 2, the UE shall transmit a CELL UPDATE message and stop HS-DSCH reception.

### 8.3.1.37 Cell Update: Transition from CELL_DCH to CELL_DCH (with active HS-DSCH reception and frequency modification)

#### 8.3.1.37.1 Definition

(All UEs which support FDD or TDD and HS-PDSCH.)

#### 8.3.1.37.2 Conformance requirement

1> Radio link failure:

…

3> if the UE is in CELL_DCH state and the criteria for radio link failure are met as specified in subclause 8.5.6; or

…

4> perform cell update using the cause "radio link failure".

When initiating the URA update or cell update procedure, the UE shall:

…

1> if HS-DSCH is configured:

2> stop any HS-DSCH reception procedures;

2> clear any stored HS-PDSCH configuration;

2> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

2> release all HARQ resources;

2> remove any H-RNTI stored;

2> clear the variable H_RNTI;

2> set the variable HS_DSCH_RECEPTION to FALSE.

Reference

3GPP TS 25.331 clauses 8.3.1.2

#### 8.3.1.37.3 Test purpose

To confirm that the UE keeps the RB mapping option for HS-DSCH reception after a radio link failure in CELL_DCH during HS-DSCH reception.

8.3.1.37.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.37**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -75 | -60 |

Table 8.3.1.37 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_DCH state and only signalling radio bearers have been established. SS initiates P25 to make the UE to move to state 6-17 as specified in TS 34.108 clause 7.4. The UE is in the CELL_DCH state and has a radio bearer established that is mapped to HS-DSCH. SS configures its downlink transmission power settings according to column "T1" in table 8.3.1.37. The UE shall detect a radio link failure in cell 1.

Then it shall attempt to re-select to cell 6. After that, it shall then enter CELL_FACH state and transmit a CELL UPDATE message on the uplink CCCH to SS.

The SS transmits a CELL UPDATE CONFIRM message which requests the UE to transit to CELL_DCH state and start reception of HS-DSCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message. (Step 0) |
| 1 | | | | SS configures cell 1 and 6 according to column "T1" in table 8.3.1.37. SS starts to listen to the uplink CCCH of cell 6. |
| 2 | | | | The UE detects the radio link failure and stops reception of HS-DSCH. |
| 3 | → | | CELL UPDATE | The UE shall find a new cell 6 and the value "radio link failure" shall be set in IE "Cell update cause". |
| 4 | ← | | CELL UPDATE CONFIRM | |
| 5 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | |

Specific Message Contents

System Information Block type 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |
| - T313 | 2 |

RADIO BEARER SETUP (Step 0) (FDD)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, with the following exceptions |
| - PDCP info | Not present |
| - Transmission RLC discard | |
| - MAX_DAT | 10 |
| - Transmission window size | 256 |
| - Timer_RST | 1000 |
| - Max_RST | 12 |
| - Timer_poll_prohibit | 50 |
| - Timer_poll | 400 |
| - Poll_Windows | 80 |
| - Receiving window size | 2047 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 50 |
| UL Transport channel Information for all transport channels | |
| - CHOICE Gain Factors | Computed Gain Factors (The last TFC is set to Signalled Gain Factors) |
| - Gain factorβc | 9 (equal or higher than 64 kbps and below 384 kbps)<br>6 (equal or higher than 384 kbps) |
| - Gain factorβd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, with the following exception; |
| - MAC-d PDU size | 656 |
| Maximum allowed UL TX power | 24dBm |
| CHOICE channel requirement | |
| - $\Delta_{ACK}$ | 6 |
| - $\Delta_{NACK}$ | 6 |
| Downlink HS-PDSCH Information | |
| - Measurement Feedback Info | |
| - POhsdsch | 9dB |
| - CQI Feedback cycle, k | 10ms |
| - $\Delta_{CQI}$ | 3 |

RADIO BEARER SETUP (Step 0) (1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Maximum allowed UL TX power | 24dBm |

CELL UPDATE (Step 3)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Radio link failure” |

CELL UPDATE CONFIRM (Step 4) (FDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| | |
| RRC State indicator | CELL_DCH |
| RLC re-establish indicator (RB2, RB3 and RB4) | TRUE |
| UL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, with the following exceptions; |
| - CHOICE Gain Factors | Computed Gain Factors (The last TFC is set to Signalled Gain Factors) |
| - Gainfactorβc | 9 (equal or higher than 64 kbps and below 384 kbps)<br>6 (equal or higher than 384 kbps) |
| - Gain factorβd | 15<br>(Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) |
| DL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| Added or Reconfigured DL TrCH information list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| - MAC-d PDU size | 656 |
| Frequency info<br>- UARFCN uplink (Nu) | This IE should be present, if the default duplex distance defined for the operating frequency band is not used. |
| - UARFCN downlink (Nd) | Same downlink UARFCN as used for cell 6 |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, with the following exceptions; |
| - $\Delta_{ACK}$ | 6 |
| - $\Delta_{NACK}$ | 6 |
| - Scrambling Code Number | A non-zero value in the range of 0-16777215 used for cell 6 |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, with the following exceptions; |
| - Measurement Feedback Info | |
| - POhsdsch | 9dB |
| - CQI Feedback cycle, k | 10ms |
| - $\Delta_{CQI}$ | 3 |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10; |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9, with the following exception; |
| - Primary CPICH info | |
| - Primary scrambling code | 350 |

CELL UPDATE CONFIRM (Step 4) ( 1.28Mcps TDD )

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RRC State indicator | CELL_DCH |
| RLC re-establish indicator (RB2, RB3 and RB4) | TRUE |
| UL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| DL Transport channel information common for all transport channels | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| Added or Reconfigured DL TrCH information list<br><br><br>- MAC-d PDU size | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10.<br>656 |

8.3.1.37.5 Test requirement

After step 2, the UE shall transmit a CELL UPDATE message.

After step 4, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and start reception of HS-DSCH.

## 8.3.1.38 Cell Update: state specific handling of $T_{reselection}$ and $Q_{hyst}$ for cell reselection in CELL_FACH

### 8.3.1.38.1 Conformance requirement

2. The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} - TO_n * (1 - L_n)$$

The cells shall be ranked according to the R criteria specified above, deriving $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in [10] and [11] for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate $R_n$, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate $R_s$. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,PCH}$ to calculate $R_s$, if provided in SIB4 [see 4]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,FACH}$ to calculate $R_s$, if provided in SIB4 [see 4].

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH Ec/No, the UE shall perform a second ranking of the FDD cells according to the R criteria specified above, but using the measurement quantity CPICH Ec/No for deriving the $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values of the FDD cells. The offset $Qoffset2_{s,n}$ is used for $Qoffset_{s,n}$ to calculate $R_n$, the hysteresis $Qhyst2_s$ is used for $Qhyst_s$ to calculate $R_s$. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst2_{s,PCH}$ to calculate $R_s$, if provided in SIB4 [see 4]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst2_{s,FACH}$ to calculate $R_s$, if provided in SIB4 [see 4]. If the usage of HCS is indicated in system information, $TEMP_OFFSET2_n$ is used to calculate $TO_n$. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating $R_n$. Following this second ranking, the UE shall perform cell re-selection to the best ranked FDD cell.

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection. For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 [see 4], while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 [see 4]. For hierarchical cell structures when high mobility state has not been detected, if according to the HCS rules the serving cell is not ranked then all the ranked cells are considered to be better ranked than the serving cell.

**$Qhyst1_{s,FACH}$**

This specifies the hysteresis value (Qhyst) to be used in RRC connected mode state CELL_FACH. It is used for TDD and GSM cells and for FDD cells in case the quality measure for cell selection and re-selection is set to CPICH RSCP. If this parameter is not provided in SIB4, $Qhyst1_s$ shall be used.

**$Qhyst2_{s,FACH}$**

This specifies the hysteresis value (Qhyst) to be used in RRC connected mode state CELL_FACH. It is used for FDD cells if the quality measure for cell selection and re-selection is set to CPICH Ec/No. If this parameter is not provided in SIB4, $Qhyst2_s$ shall be used.

**$Treselection_{s,FACH}$**

This specifies the cell reselection timer value the UE shall use in RRC connected mode state CELL_FACH if provided in SIB4, otherwise $Treselection_s$ shall be used.

A UE shall initiate the cell update procedure in the following cases:

…

1> Cell reselection:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_FACH or CELL_PCH state and the UE performs cell re-selection; or

3> if the UE is in CELL_FACH state and the variable C_RNTI is empty:

4> perform cell update using the cause "cell reselection".

the UE shall:

…

1> in case of a cell update procedure:

2> set the IE "RRC transaction identifier" in any response message transmitted below to the value of "RRC transaction identifier" in the entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry.

…

1> transmit a response message as specified in TS 25.331 subclause 8.3.1.7;

…

Reference

3GPP TS 25.304 clause 5.2.6.1.4.

3GPP TS 25.304 clause 5.4.3.

3GPP TS 25.331 clause 8.3.1.

### 8.3.1.38.2 Test purpose

1. To confirm that the UE uses the correct SIB 4 IEs to perform cell reselection calculation in CELL_FACH.

### 8.3.1.38.3 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 4 are active.

UE: PS-DCCH+DTCH_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.38**

| Parameter | Unit | Cell 1 | | | Cell 4 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | -67 | -82 | OFF | -60 | -60 |

Table 8.3.1.38 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions. SS switches the power settings to columns "T1" and “T2”, when the description below specifies.

The UE is in the CELL_FACH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.38. The UE shall remain on cell 1 even after expiry of Treselecion. SS configures its downlink transmission power settings according to columns "T2" in table 8.3.1.38. The UE shall find cell 4 to be more suitable for service after expiry of Treselection, and shall transmit a CELL UPDATE message to the SS on the uplink CCCH of cell 4 and set IE "Cell update cause" to "Cell Reselection". SS checks this is received after expiry of Treselection. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL_FACH", and a valid IE "New C-RNTI", to the UE on the downlink DCCH. UE responds with UTRAN MOBILITY INFORMATION CONFIRM message.. UE shall stay in CELL_FACH state. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_FACH state in cell 1 |
| 2 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.38. SS checks that no message is received even after expiry of Treselection. |
| 3 | | | | SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.3.1.38. The UE shall find that the cell 4 is better for service and perform a reselection. SS checks that no message is received until Treselection expires. |
| 4 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" |
| 5 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_FACH". |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 4 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Cell selection and re-selection info | |
| - CHOICE mode | FDD |
| - s-Intersearch | Not Present |
| - Qqualmin | -24 dB |
| - Qrxlevmin | -58 (-115 dBm) |
| - $Qhyst1_s$ | 0 (0 dB) |
| - $Qhyst1_{s,FACH}$ | 7 (14 dB) |
| - $Treselection_{s,FACH}$ | 6 seconds |

System Information Block type 11 (FDD)

Use the same message type found in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info<br>- FACH Measurement occasion cycle length coefficient | <br>3 |
| - Inter-frequency FDD measurement indicator | TRUE |
| - Inter-frequency TDD measurement indicator | FALSE |
| - Inter-RAT measurement indicators | Not Present |

CELL UPDATE (Step 4)

The same message found in TS 34.108, clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

#### 8.3.1.38.4 Test requirement

At step 2 no cell update is received, even after expiry of Treselelection

At step 3 no cell update is received until after Treselection has expired.

At step 4 the UE shall reselect to cell 4 and then it shall transmit a CELL UPDATE message which sets the value "cell reselection" in IE "Cell update cause".

### 8.3.1.39 Cell Update: state specific handling of $T_{reselection}$ and $Q_{hyst}$ for cell reselection in CELL_PCH

#### 8.3.1.39.1 Conformance requirement

2. The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} - TO_n * (1 - L_n)$$

The cells shall be ranked according to the R criteria specified above, deriving $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in [10] and [11] for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate $R_n$, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate $R_s$. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,PCH}$ to calculate $R_s$, if provided in SIB4 [see 4]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,FACH}$ to calculate $R_s$, if provided in SIB4 [see 4].

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH Ec/No, the UE shall perform a second ranking of the FDD cells according to the R criteria specified above, but using the measurement quantity CPICH Ec/No for deriving the $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values of the FDD cells. The offset $Qoffset2_{s,n}$ is used for $Qoffset_{s,n}$ to calculate $R_n$, the hysteresis $Qhyst2_s$ is used for $Qhyst_s$ to calculate

$R_s$. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst2_{s,PCH}$ to calculate $R_s$, if provided in SIB4 [see 4]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst2_{s,FACH}$ to calculate $R_s$, if provided in SIB4 [see 4]. If the usage of HCS is indicated in system information, $TEMP_OFFSET2_n$ is used to calculate $TO_n$. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating $R_n$. Following this second ranking, the UE shall perform cell re-selection to the best ranked FDD cell.

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection. For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 [see 4], while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 [see 4]. For hierarchical cell structures when high mobility state has not been detected, if according to the HCS rules the serving cell is not ranked then all the ranked cells are considered to be better ranked than the serving cell.

**$Qhyst1_{s,PCH}$**

This specifies the hysteresis value (Qhyst) to be used in RRC connected mode states CELL_PCH and URA_PCH. It is used for TDD and GSM cells and for FDD cells in case the quality measure for cell selection and re-selection is set to CPICH RSCP. If this parameter is not provided in SIB4, $Qhyst1_s$ shall be used.

**$Qhyst2_{s,PCH}$**

This specifies the hysteresis value (Qhyst) to be used in RRC connected mode states CELL_PCH and URA_PCH. It is used for FDD cells if the quality measure for cell selection and re-selection is set to CPICH Ec/No. If this parameter is not provided in SIB4, $Qhyst2_s$ shall be used.

**$Treselection_{s,PCH}$**

This specifies the cell reselection timer value the UE shall use in RRC connected mode states CELL_PCH and URA_PCH if provided in SIB4, otherwise $Treselection_s$ shall be used.

A UE shall initiate the cell update procedure in the following cases:

…

1> Cell reselection:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met:

3> if the UE is in CELL_FACH or CELL_PCH state and the UE performs cell re-selection; or

3> if the UE is in CELL_FACH state and the variable C_RNTI is empty:

4> perform cell update using the cause "cell reselection".

the UE shall:

…

1> in case of a cell update procedure:

2> set the IE "RRC transaction identifier" in any response message transmitted below to the value of "RRC transaction identifier" in the entry for the CELL UPDATE CONFIRM message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry.

…

1> transmit a response message as specified in TS 25.331 subclause 8.3.1.7;

…

Reference

### 8.3.1.39.2 Test purpose

1. To confirm that the UE uses the correct SIB 4 IEs to perform cell reselection calculation in CELL_PCH.

### 8.3.1.39.3 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 4 are active.

UE: CELL_PCH (state 6-12) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.3.1.39**

| Parameter | Unit | Cell 1 | | | Cell 4 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | -67 | -82 | OFF | -60 | -60 |

Table 8.3.1.39 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions. SS switches the power settings to columns "T1" and “T2”, when the description below specifies.

The UE is brought to CELL_PCH state and is camped onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.39. The UE shall remain on cell 1 even after expiry of Treselecion. SS configures its downlink transmission power settings according to columns "T2" in table 8.3.1.39. The UE shall find cell 4 to be more suitable for service after expiry of Treselection, and shall transmit a CELL UPDATE message to the SS on the uplink CCCH of cell 4 and set IE "Cell update cause" to "Cell Reselection". SS checks this is received after expiry of Treselection. Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_PCH". After receiving this message, the UE returns to CELL_PCH state without transmitting any uplink message. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to CELL_PCH state in cell 1 |
| 2 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.39. SS checks that no message is received even after expiry of Treselection. |
| 3 | | | | SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.3.1.39. The UE shall find that the cell 4 is better for service and perform a reselection. SS checks that no message is received until Treselection expires. |
| 4 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection" |
| 5 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |
| 6 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 4 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - Cell selection and re-selection info | |
| - CHOICE mode | FDD |
| - s-Intersearch | Not Present |
| - Qqualmin | -24 dB |
| - Qrxlevmin | -58 (-115 dBm) |
| - $Qhyst1_S$ | 0 (0 dB) |
| - $Qhyst1_{S,PCH}$ | 7 (14 dB) |
| - $Treselection_{S,PCH}$ | 15 seconds |

CELL UPDATE (Steps 4)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator<br>UTRAN DRX cycle length coefficient | CELL_PCH<br>3 |

#### 8.3.1.39.4 Test requirement

At step 2 no cell update is received, even after expiry of Treselelection

At step 3 no cell update is received until after Treselection has expired.

At step 4 the UE shall reselect to cell 4 and then it shall transmit a CELL UPDATE message which sets the value "cell reselection" in IE "Cell update cause".

### 8.3.1.40 Cell update: Transition from CELL_PCH to CELL_DCH, inclusion of establishment cause

#### 8.3.1.40.1 Definition

#### 8.3.1.40.2 Conformance requirement

Upon initiation of the initial direct transfer procedure when the UE is in CELL_PCH or URA_PCH state, the UE shall:

1> perform a cell update procedure, according to subclause 8.3.1, using the cause "uplink data transmission";

1> when the cell update procedure completed successfully:

2> continue with the initial direct transfer procedure as below.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if the variable ESTABLISHMENT_CAUSE is initialised:

2> include the IE "Establishment cause" and set it to the value of the variable ESTABLISHMENT_CAUSE.

2> if the value of the variable ESTABLISHMENT_CAUSE is set to "Originating Conversational Call" or "Emergency Call" and a CS call is being initiated:

3> set the value of the IE "Call type" to "speech", "video" or "other" according to the call being initiated.

…

When the UE receives a CELL UPDATE CONFIRM/URA UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

the UE shall:

…

1> if the variable ESTABLISHMENT_CAUSE is set:

2> clear the variable ESTABLISHMENT_CAUSE.

Reference

3GPP TS 25.331 clause 8.1.8.2, 8.3.1.3, 8.3.1.6 and 10.2.7

### 8.3.1.40.3 Test purpose

1. To confirm that, in the case the Cell Update procedure is initiated by a UE in CELL_PCH state in order to transmit the Initial Direct Transfer message, the UE shall include the IE “Establishment cause” and the IE “CS Call type” for a Rel-7 or later UE in the Cell Update message.

2. To confirm that the IE “Establishment Cause” is not included in the following Initial Direct Transfer message.

### 8.3.1.40.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: CELL_PCH (state 6-12) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports PS+CS

Test Procedure

The test operator is prompted to make an out-going CS call. The UE shall transmit a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value "uplink data transmission", IE “Establishment cause” set to “Originating conversational call” and IE “CS Call type” present for a Rel-7 or later UE. After receiving such a message, SS transmits a CELL UPDATE CONFIRM message on downlink DCCH to send the UE to CELL_DCH state. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits an INITIAL DIRECT TRANSFER message using AM RLC on DCCH with the IE “Establishment cause” set to “Not Present”. After reception of the CM Service Request message from the UE, the SS will send a CM Service Reject to complete the Service Request procedure.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS prompts the test operator to make an outgoing CS call. |
| 2 | → | | CELL UPDATE | The UE sets "Cell update cause" IE as "uplink data transmission", “Establishment cause” IE as “Originating Conversational Call” and “CS Call type” is present for a Rel-7 or later UE. |
| 3 | ← | | CELL UPDATE CONFIRM | See message content. UE moves to CELL_DCH state |
| 3a | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | → | | INITIAL DIRECT TRANSFER ( CM SERVICE REQUEST ) | The IE “Establishment cause” is not present. |
| 5 | ← | | DOWNLINK DIRECT TRANSFER ( CM SERVICE REJECT ) | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1.0b of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

CELL UPDATE (Step 2)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark | Version |
|---|---|---|
| Cell Update Cause<br>Establishment cause<br>CS Call Type | uplink data transmission<br>originating Conversational Call<br>Checked that this IE is present | <br><br>Rel-7 or later |

CELL UPDATE CONFIRM (Step 3)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 3a)

Use the default message with the same message type specified in clause 9 of TS 34.108.

INITIAL DIRECT TRANSFER (Step 4)

Use the default message with the same message type specified in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| CN Domain Identity | CS domain |
| Establishment cause | Not Present |

### 8.3.1.40.5 Test requirement

After step 1, the UE shall transmit a CELL UPDATE message where the IE "Cell update cause" is set to "uplink data transmission", the IE “Establishment cause” is set to “Originating conversation call” and the IE “CS Call Type” is present for a Rel-7 or later UE.

After step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 3a, the UE shall transmit an INITIAL DIRECT TRANSFER message to SS using AM RLC on DCCH in CELL_DCH state with no Establishment cause IE.

## 8.3.1.41 Cell Update: Transition from URA_PCH to CELL_DCH: Success (start of E-DCH transmission)

### 8.3.1.41.1 Definition

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

### 8.3.1.41.2 Conformance requirement

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in connected mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

1> if the IE "Used paging identity" is a UTRAN identity and if this U-RNTI is the same as the U-RNTI allocated to the UE:

2> if the optional IE "CN originated page to connected mode UE" is included:

3> indicate reception of paging; and

3> forward the IE "CN domain identity", the IE "Paging cause" and the IE "Paging record type identifier" to the upper layers.

2> otherwise:

3> perform a cell update procedure with cause "paging response" as specified in subclause 8.3.1.2.

2> ignore any other remaining IE "Paging record" that may be present in the message.

1> otherwise:

2> ignore that paging record.

…

A UE shall initiate the cell update procedure in the following cases:

1> Paging response:

…

1> Uplink data transmission:

2> if the UE is in URA_PCH or CELL_PCH state; and

2> if the UE has uplink RLC data PDU or uplink RLC control PDU on RB1 or upwards to transmit:

3> perform cell update using the cause "uplink data transmission".

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

When the UE receives a CELL UPDATE CONFIRM/URA UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1>act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following:

2> if the IE "Frequency info" is included in the message:

3> if the IE "RRC State Indicator" is set to the value "CELL_DCH":

4> act on the IE "Frequency info" as specified in subclause 8.6.6.1 in TS 25.331.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2), and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

…

If the IE "New H-RNTI" is included, the UE shall:

1> store the value in the variable H_RNTI.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Downlink HS-PDSCH Information" is included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message, the UE shall:

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33 of TS 25.331.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34 of TS 25.331.

1> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

If the IE "HS-SCCH Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> in the case of FDD:

2> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving HS-DSCH radio link applying the scrambling code as received in the IE "DL Scrambling code".

1> in the case of TDD:

2> receive the HS-SCCH(s) according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> for HS-SCCH power control the UE shall use the "BLER target" signalled in the first occurrence of the "HS-SCCH Set Configuration", and the UE shall also use the IE "Power Control GAP" for 1.28 Mcps TDD.

2> in 3.84 Mcps TDD and 7.68 Mcps TDD:

3> use the parameters specified in the IE "HS-SICH power control info" for open loop power control as defined in subclause 8.5.7.

2> in 1.28 Mcps TDD:

3> use the IE " $PRX_{HS-SICH}$ " to calculate and set an initial uplink transmission power;

3> use the IE " TPC step size" upon reception of TPC commands for closed loop power control;

3> perform closed loop power control on HS-SICH within the interval indicated in the IE "Power Control GAP";

3> use the IE "Pathloss compensation switch" to determine if the pathloss compensation from the beacon channel estimation should be taken into account for closed loop power control on HS-SICH;

3> use default value of "Uplink synchronisation frequency" and same value of "Uplink synchronisation step size" in "Uplink DPCH info" for HS-SICH upon reception of SS commands for closed loop uplink synchronisation on HS-SICH.

If the IE "Measurement Feedback Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link.

2> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving E-DCH radio link.

2> if the IE "E-AGCH Info" is included:

3> store the newly received E-AGCH configuration.

2> if the IE "E-HICH information" is included:

3> store this E-HICH configuration for the concerning radio link.

2> if the IE "E-RGCH information" is included:

3> store this E-RGCH configuration for the concerning radio link.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

…

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

#### Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4, 8.3.1, 8.5.28, 8.6.3.14, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.37.

### 8.3.1.41.3 Test purpose

To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM message with a physical channel configuration causing it to start E-DCH transmission and HS_DSCH reception.

To confirm that the UE executes a cell update procedure when the UE transmits uplink data if the UE is in CELL_PCH state.

### 8.3.1.41.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents)

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A12 for FDD or A11 for 1.28 Mcps TDD as specified in clause 7.4 of TS 34.108.

#### Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH for FDD or E-PUCH for TDD

#### Test Procedure

The UE is in the CELL_DCH state and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state.

The SS transmits a PAGING TYPE 1 message. The UE then enters the CELL_FACH state to transmit a CELL UPDATE message to the SS on the uplink CCCH with the IE “Cell update cause" set to value “Paging response” in response to the paging.

The SS transmits CELL UPDATE CONFIRM message which includes HS-PDSCH and E-DPDCH for FDD or E-PUCH for 1.28 Mcps TDD physical channel parameters on the downlink DCCH. Then the UE resumes E-DCH transmission and HS-DSCH reception, and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the URA_PCH state |
| 3 | ← | | PAGING TYPE 1 | |
| 4 | → | | CELL UPDATE | The UE enters the CELL_FACH state. |
| 5 | ← | | CELL UPDATE CONFIRM | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the CELL_DCH state and starts E-DCH transmission and HS-DSCH reception. |

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| -UE Timers and constants in connected mode<br>- T312 | <br>2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| URA Identity | 0000 0000 0000 0001B |

Paging Type 1 (Step 3)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | Equal to the U-RNTI assigned earlier. |
| - SRNC Identity | |
| - S-RNTI | |
| - CN originated page to connected mode UE | Not Present |
| BCCH modification info | Not Present |

CELL UPDATE (Step 4)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI<br>- S-RNTI<br>- SRNC Identity<br>Cell Update Cause | <br>Check to see if set to value assigned in cell 1.<br>Check to see if set to value assigned in cell 1.<br>Check to see if set to “Paging response” |

CELL UPDATE CONFIRM (Step 5) (FDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| New Primary E-RNTI | '1010 1010 1010 1010' |
| New Secondary E-RNTI | Not Present |
| RRC State indicator | CELL_DCH |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12. |
| E-DCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12. |
| Downlink HS-PDSCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12. |
| Downlink information common for all radio links<br><br><br>- Timing indicator<br>- Default DPCH Offset Value | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 except for the following IEs.<br>Initialize<br>Arbitrary set to value 0..306688 by step of 512 |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12. |

CELL UPDATE CONFIRM (Step 5) (TDD)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| New E-RNTI | '1010 1010 1010 1010' |
| RRC State indicator | CELL_DCH |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |
| E-DCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |
| Downlink HS-PDSCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |
| Downlink information common for all radio links<br><br><br>- Timing indicator<br>- Default DPCH Offset Value | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11 except for the following IEs.<br>Initialize<br>Arbitrary set to value 0..7 |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |

#### 8.3.1.41.5 Test requirement

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 3, the UE shall transmit a CELL UPDATE message on uplink CCCH.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.3.1.41a Cell Update: Transition from URA_PCH to CELL_DCH: Success (start of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only)

#### 8.3.1.41a.1 Definition

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

#### 8.3.1.41a.2 Conformance requirement

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in connected mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

1> if the IE "Used paging identity" is a UTRAN identity and if this U-RNTI is the same as the U-RNTI allocated to the UE:

2> if the optional IE "CN originated page to connected mode UE" is included:

3> indicate reception of paging; and

3> forward the IE "CN domain identity", the IE "Paging cause" and the IE "Paging record type identifier" to the upper layers.

2> otherwise:

3> perform a cell update procedure with cause "paging response" as specified in subclause 8.3.1.2.

2> ignore any other remaining IE "Paging record" that may be present in the message.

1> otherwise:

2> ignore that paging record.

…

A UE shall initiate the cell update procedure in the following cases:

1> Paging response:

…

1> Uplink data transmission:

2> if the UE is in URA_PCH or CELL_PCH state; and

2> if the UE has uplink RLC data PDU or uplink RLC control PDU on RB1 or upwards to transmit:

3> perform cell update using the cause "uplink data transmission".

…

In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

When the UE receives a CELL UPDATE CONFIRM/URA UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1>act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following:

2> if the IE "Frequency info" is included in the message:

3> if the IE "RRC State Indicator" is set to the value "CELL_DCH":

4> act on the IE "Frequency info" as specified in subclause 8.6.6.1 in TS 25.331.

…

If the IE "New H-RNTI" is included, the UE shall:

2> store the value in the variable H_RNTI.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Downlink HS-PDSCH Information" is included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message, the UE shall:

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33 of TS 25.331.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34 of TS 25.331.

1> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

If the IE "HS-SCCH Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> in the case of FDD:

2> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving HS-DSCH radio link applying the scrambling code as received in the IE "DL Scrambling code".

1> in the case of TDD:

2> receive the HS-SCCH(s) according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> for HS-SCCH power control the UE shall use the "BLER target" signalled in the first occurrence of the "HS-SCCH Set Configuration", and the UE shall also use the IE "Power Control GAP" for 1.28 Mcps TDD.

2> in 3.84 Mcps TDD and 7.68 Mcps TDD:

3> use the parameters specified in the IE "HS-SICH power control info" for open loop power control as defined in subclause 8.5.7.

2> in 1.28 Mcps TDD:

3> use the IE " $PRX_{HS-SICH}$ " to calculate and set an initial uplink transmission power;

3> use the IE " TPC step size" upon reception of TPC commands for closed loop power control;

3> perform closed loop power control on HS-SICH within the interval indicated in the IE "Power Control GAP";

3> use the IE "Pathloss compensation switch" to determine if the pathloss compensation from the beacon channel estimation should be taken into account for closed loop power control on HS-SICH;

3> use default value of "Uplink synchronisation frequency" and same value of "Uplink synchronisation step size" in "Uplink DPCH info" for HS-SICH upon reception of SS commands for closed loop uplink synchronisation on HS-SICH.

If the IE "Measurement Feedback Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving HS-DSCH radio link.

2> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

3> consider this radio link as the serving E-DCH radio link.

2> if the IE "E-AGCH Info" is included:

3> store the newly received E-AGCH configuration.

2> if the IE "E-HICH information" is included:

3> store this E-HICH configuration for the concerning radio link.

2> if the IE "E-RGCH information" is included:

3> store this E-RGCH configuration for the concerning radio link.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

…

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4, 8.3.1, 8.5.28, 8.6.3.14, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.1, 8.6.6.37, 8.6.6.43.

### 8.3.1.41a.3 Test purpose

To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM message with a physical channel configuration causing it to start E-DCH transmission and HS_DSCH reception in the multi-frequency network environment.

To confirm that the UE executes a cell update procedure when the UE transmits uplink data if the UE is in CELL_PCH state, in the multi-frequency network environment.

### 8.3.1.41a.4 Method of test

Initial Condition

System Simulator: 1 cell, 3 frequency (one is primary frequency, others are secondary frequency)

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents)

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A11 for 1.28 Mcps TDD as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports E-PUCH

Test Procedure

The UE is in the CELL_DCH state and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception at one secondary frequency of the cell.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA_PCH state.

The SS transmits a PAGING TYPE 1 message. The UE then enters the CELL_FACH state to transmit a CELL UPDATE message to the SS on the uplink CCCH with the IE “Cell update cause" set to value “Paging response” in response to the paging.

The SS transmits CELL UPDATE CONFIRM message which includes HS-PDSCH and E-PUCH physical channel parameters on the downlink DCCH. Then the UE resumes E-DCH transmission and HS-DSCH reception, and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the URA_PCH state |
| 3 | ← | | PAGING TYPE 1 | |
| 4 | → | | CELL UPDATE | The UE enters the CELL_FACH state. |
| 5 | ← | | CELL UPDATE CONFIRM | |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters the CELL_DCH state and starts E-DCH transmission and HS-DSCH reception. |

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| -UE Timers and constants in connected mode<br>- T312 | <br>2 |

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| URA Identity | 0000 0000 0000 0001B |

Paging Type 1 (Step 3)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | Equal to the U-RNTI assigned earlier. |
| - SRNC Identity | |
| - S-RNTI | |
| - CN originated page to connected mode UE | Not Present |
| BCCH modification info | Not Present |

CELL UPDATE (Step 4)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - S-RNTI | Check to see if set to value assigned in cell 1. |
| - SRNC Identity | Check to see if set to value assigned in cell 1. |
| Cell Update Cause | Check to see if set to “Paging response” |

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| New E-RNTI | '1010 1010 1010 1010' |
| RRC State indicator | CELL_DCH |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN downlink (Nd) | Set to the primary frequency of the cell |
| Multi-frequency Info | |
| - Second Frequency Info | Same as one secondary frequency of the cell |
| - FPACH Frequency Info | Not present |
| - UpPCH Position Info | Not present |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |
| E-DCH Info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |
| Downlink HS-PDSCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |
| Downlink information common for all radio links<br><br><br>- Timing indicator<br>- Default DPCH Offset Value | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11 except for the following IEs.<br>Initialize<br>Arbitrary set to value 0..7 |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11. |

#### 8.3.1.41a.5 Test requirement

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 3, the UE shall transmit a CELL UPDATE message on uplink CCCH.

After step 5, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.3.1.42 Cell Update: Transition from CELL_PCH to CELL_DCH: Success (frequency modification, start of E-DCH transmission)

#### 8.3.1.42.1 Definition

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH..

#### 8.3.1.42.2 Conformance requirement

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in connected mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

1> if the IE "Used paging identity" is a UTRAN identity and if this U-RNTI is the same as the U-RNTI allocated to the UE:

2> if the optional IE "CN originated page to connected mode UE" is included:

3> indicate reception of paging; and

3> forward the IE "CN domain identity", the IE "Paging cause" and the IE "Paging record type identifier" to the upper layers.

2> otherwise:

3> perform a cell update procedure with cause "paging response" as specified in subclause 8.3.1.2.

2> ignore any other remaining IE "Paging record" that may be present in the message.

1> otherwise:

2> ignore that paging record.

…

A UE shall initiate the cell update procedure in the following cases:

1> Paging response:

…

1> Uplink data transmission:

2> if the UE is in URA_PCH or CELL_PCH state; and

2> if the UE has uplink RLC data PDU or uplink RLC control PDU on RB1 or upwards to transmit:

3> perform cell update using the cause "uplink data transmission".

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

When the UE receives a CELL UPDATE CONFIRM/URA UPDATE CONFIRM message; and

- if the message is received on the CCCH, and IE "U-RNTI" is present and has the same value as the variable U_RNTI; or
- if the message is received on DCCH:

the UE shall:

1>act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following:

2> if the IE "Frequency info" is included in the message:

3> if the IE "RRC State Indicator" is set to the value "CELL_DCH":

4> act on the IE "Frequency info" as specified in subclause 8.6.6.1 in TS 25.331.

…

If the IE "New H-RNTI" is included, the UE shall:

1> if the IE "Downlink HS-PDSCH Information" is also included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 of TS 25.331 applied on the received message:

2> store the value in the variable H_RNTI.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2), and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

…

If the IE "Downlink HS-PDSCH Information" is included and the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message, the UE shall:

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33 of TS 25.331.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34 of TS 25.331.

1> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

If the IE "HS-SCCH Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> in the case of FDD:

2> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving HS-DSCH radio link applying the scrambling code as received in the IE "DL Scrambling code".

1> in the case of TDD:

2> receive the HS-SCCH(s) according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

2> for HS-SCCH power control the UE shall use the "BLER target" signalled in the first occurrence of the "HS-SCCH Set Configuration", and the UE shall also use the IE "Power Control GAP" for 1.28 Mcps TDD.

2> in 3.84 Mcps TDD and 7.68 Mcps TDD:

3> use the parameters specified in the IE "HS-SICH power control info" for open loop power control as defined in subclause 8.5.7.

2> in 1.28 Mcps TDD:

3> use the IE " $PRX_{HS-SICH}$ " to calculate and set an initial uplink transmission power;

3> use the IE " TPC step size" upon reception of TPC commands for closed loop power control;

3> perform closed loop power control on HS-SICH within the interval indicated in the IE "Power Control GAP";

3> use the IE "Pathloss compensation switch" to determine if the pathloss compensation from the beacon channel estimation should be taken into account for closed loop power control on HS-SICH;

3> use default value of "Uplink synchronisation frequency" and same value of "Uplink synchronisation step size" in "Uplink DPCH info" for HS-SICH upon reception of SS commands for closed loop uplink synchronisation on HS-SICH.

If the IE "Measurement Feedback Info" is included, the UE shall:

1> store the received configuration.

When the variable HS_DSCH_RECEPTION is set to TRUE the UE shall:

1> use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

…

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4, 8.3.1, 8.6.3.1,8.6.3.1b,8.6.3.14, 8.6.5.6,8.6.5.16, 8.6.5.17, 8.6.6.1, 8.6.6.32, 8.6.6.33, 8.6.6.34, 8.6.6.37.

### 8.3.1.42.3 Test purpose

To confirm that the UE enters the CELL_DCH state after it receives a CELL UPDATE CONFIRM message with a physical channel configuration causing it to start E-DCH transmission and HS-DSCH reception on a different cell and frequency.

To confirm that the UE enters CELL_PCH state on another frequency and stops E-DCH transmission and HS-DSCH reception when it receives a RADIO BEARER RECONFIGURATION message.

### 8.3.1.42.4 Method of test

Initial Condition

System Simulator: 2 cells - cell 1 is active and cell 6 is inactive.

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A13 for FDD or A12 for 1.28 Mcps TDD as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

- UE supports E-DPDCH for FDD or E-PUCH for TDD

Test Procedure

**Table 8.3.1.42**

| Parameter | Unit | Cell 1 | | | Cell 6 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Frequency (f1) | | | High Range Frequency (f2) | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -72 | -60 | Off | -55 | -72 |
| P-CCPCH RSCP (1.28 Mcps TDD) | dBm | -60 | -72 | -60 | Off | -55 | -72 |

Table 8.3.1.42 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power setting according to columns "T0" in table 8.3.1.42. UE is in state 6-18 as specified in TS34.108 clause 7.4 in cell 1and has a radio bearer established mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

The SS switches its downlink transmission power settings to columns "T1". The SS transmits a RADIO BEARER RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH in cell 6. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC, selects cell 6 and enters CELL_PCH state.

The SS transmits a PAGING TYPE 1 message. The UE then enters the CELL_FACH state to transmit a CELL UPDATE message to the SS on the uplink CCCH with the IE “Cell update cause" set to value “Paging response” in response to the paging.

The SS switches its downlink transmission power settings to columns "T2". The SS transmits CELL UPDATE CONFIRM message, which invokes UE to re-map the SRB's & the PS RAB on E-DCH/HS-DSCH for cell 1. Then the UE establishes HS-DSCH and E-DCH in cell 1, and resumes E-DCH transmission and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH in cell 1.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_DCH state in cell 1 and the SS configures its downlink transmission power setting according to columns "T1" in table 8.3.1.42. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | After transmitting this message, the UE enters the CELL_PCH state in cell 6 |
| 4 | SS | | | SS sends the L2 ack on the RADIO BEARER RECONFIGURATION COMPLETE message and then waits 5 seconds to allow the UE to read system information before the next step.<br>Note: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |
| 5 | ← | | PAGING TYPE 1 | |
| 6 | → | | CELL UPDATE | The UE enters the CELL_FACH state. |
| 7 | SS | | | The SS switches its downlink transmission power settings to columns "T2" in table 8.3.1.42. |
| 8 | ← | | CELL UPDATE CONFIRM | |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE changes to cell 1, enters the CELL_DCH state and starts E-DCH transmission and HS-DSCH reception. |
