UE: CELL_DCH (state 6-5 or state 6-7) as specified in clause 7.4 of TS 34.108 [9], depending on the CN domain(s) supported by the UE.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (4 Cells) (UE HS-DSCH Category 31 or 32)

Test Procedure

Same as test procedure in subclause 8.2.1.44.4.4.

Specific Message Contents

RADIO BEARER SETUP (Step 2)

PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A35, as specified in clause 7.4 of TS 34.108 [9] using dual band carrier combination with 4 carriers (2,2).

#### 8.2.1.44.5.5 Test requirements

Same as in subclause 8.2.1.44.4.5.

### 8.2.1.45 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of Multiflow HSDPA for Single and Dual bands/Intra Node B

NOTE: The Radio Bearer Reconfiguration test case 8.2.1.45 for Multiflow HSDPA has been split in to Single Frequency/Dual Cell on Single Band, Dual Frequency/Three Cells on Single Band and Dual Frequency/Three Cells on Dual bands test cases. The test cases have been designed to cover Multiflow HSDPA carrier combinations that will enable testing of all UEs supporting FDD HS-DSCH physical layer categories 21, 22, 23, 24, 25, 26, 27, 28. 29 and 30.

### 8.2.1.45.1 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 2cell/single frequency Multiflow HSDPA , Intra-NodeB

#### 8.2.1.45.1.1 Definition and applicability

UE categories (Cat 21, Cat 22, Cat 23, Cat 24, Cat 25, Cat 26, Cat 27 or Cat 28) which support combination of Multiflow HSDPA on Single Frequency/Dual Cell (SF-DC)..

UE supports FDD.

8.2.1.45.1.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

- clear that entry;

1bis> in TDD, if the procedure is used to perform a handover to a cell where timing advance is enabled, and the UE can calculate the timing advance value in the new cell (i.e. in a synchronous TDD network):

2> set the IE "Uplink Timing Advance" according to subclause 8.6.6.26.In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…..

The UE shall:

1> be able to receive any of the following messages:

2> RADIO BEARER SETUP message; or

2> RADIO BEARER RECONFIGURATION message; or

2> RADIO BEARER RELEASE message; or

…...

If the UE receives:

- a RADIO BEARER SETUP message; or
- a RADIO BEARER RECONFIGURATION message; or
- a RADIO BEARER RELEASE message; or

…

it shall:

1> stop and reset timer T324 if running;

1> stop monitoring target cell HS-SCCH;

1> set the variable ORDERED_RECONFIGURATION to TRUE;

…

The UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

The UE may first release the physical channel configuration used at reception of the reconfiguration message. The UE shall then:

1> enter a state according to subclause 8.6.3.3.

…

In case the UE receives a RADIO BEARER SETUP message with the IE "Specification mode" not set to "Complete Specification", the UE behaviour is unspecified.

The UE shall:

1> if IE "Default configuration for CELL_FACH" is set:

2> if the message is RADIO BEARER RECONFIGURATION:

3> if IE "new U-RNTI" is included:

4> act in accordance with the default parameters according to section 13.8.

3> else:

4> the UE behaviour is unspecified.

For FDD: in CELL_DCH state, in case the UE receives a Target cell HS-SCCH order the UE shall:

1> ignore RADIO BEARER SETUP, RADIO BEARER RECONFIGURATION, TRANSPORT CHANNEL RECONFIGURATION or PHYSICAL CHANNEL RECONFIGURATION messages as described in subclause 8.6.3.11.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

…

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> if the IE "E-DCH info" was not included in the message:

2> for FDD:

3> stop any E-AGCH, E-RGCH and E-HICH reception procedures;

3> stop any E-DPCCH and E-DPDCH transmission procedures;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

…

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

…

If there are more than one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE and the corresponding entries in the variable DOWNLINK_SECONDARY_CELL_INFO indicate that the network has configured non-contiguous multi-cell operation together with dual band operation:

1> the UE behaviour is not specified.

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

1> partition the soft memory buffer in the MAC-ehs, used for the secondary serving HS-DSCH cells reception, using the information in the IE "HARQ Info" of the serving HS-DSCH cell and performing the procedure described in subclause 8.6.5.6b;

1> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in subclause 8.5.60.

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

…

The variable MULTIFLOW_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is TRUE;

1> at least one of the entries in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is TRUE;

1> the IE "Multiflow configuration" is present in all the entries in DOWNLINK_SECONDARY_CELL_INFO.

If any of the above conditions is not met and the variable MULTIFLOW_STATUS is set to TRUE, the UE shall:

1> set the variable MULTIFLOW_STATUS to FALSE.

Whenever the variable MULTIFLOW_STATUS is set to TRUE, the UE shall:

1> perform Multiflow data reception as specified in [51];

1> indicate to lower layers value of "Multiflow configuration" IE of each entry in DOWNLINK_SECONDARY_CELL_INFO;

1> for every entry in DOWNLINK_SECONDARY_CELL_INFO:

2> if the stored UARFCN downlink (Nd) in the entry is the same as the value of the serving HS-DSCH cell:

3> if the IE "Multiflow time reference cell" is not present:

4> indicate to lower layers that the serving HS-DSCH cell is time reference for HS-DPCCH;

3> else:

4> indicate to lower layers that the cell is a time reference for HS-DPCCH;

2> else:

3> if the IE "Multiflow time reference cell" is present:

4> indicate to lower layers that the cell and the time reference cell are in the same cell group as specified in [27];

3> else:

4> indicate to lower layers that the cell and the non-time reference cell are in the same cell group as specified in [27];

1> If there is at least one entry in DOWNLINK_SECONDARY_CELL_INFO with the IE "Multiflow cell", value of which is set to "inter-NodeB":

2> configure two MAC-ehs entities;

2> associate with the first MAC-ehs entity the serving HS-DSCH cell and all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "intra-NodeB";

2> associate with the second MAC-ehs entity all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "inter-NodeB";

Whenever the variable MULTIFLOW_STATUS is set to FALSE, the UE shall:

1> stop Multiflow operation;

1> if Timer_Reordering was configured for the receiving RLC entity:

2> configure the receiving RLC entity not to use the corresponding function;

1> if two MAC-ehs entities were configured for the inter-Node B Multiflow operation:

2> configure one MAC-ehs entity;

1> indicate to lower layers that the serving HS-DSCH cell must be used as a time reference for HS-DPCCH.

…..

The UE shall initiate the UE capability update procedure in the following situations:

1> the UE receives a UE CAPABILITY ENQUIRY message from the UTRAN;

1> while in CELL_DCH or CELL_FACH state, the UE capabilities change compared to those stored in the variable UE_CAPABILITY_TRANSFERRED, and the variable RNC_CAPABILITY_CHANGE_SUPPORT is set to TRUE.

If the UE CAPABILITY INFORMATION message is sent in response to a UE CAPABILITY ENQUIRY message, the UE shall:

1> include the IE "RRC transaction identifier"; and

1> set it to the value of "RRC transaction identifier" in the entry for the UE CAPABILITY ENQUIRY message in the table "Accepted transactions" in the variable TRANSACTIONS;

…

1> for the UE capabilities defined in REL-6 or later:

2> include the information elements associated with the capabilities included in the variable UE_CAPABILITY_REQUESTED and the variable UE_CAPABILITY_TRANSFERRED.

If the UE CAPABILITY INFORMATION message is sent because one or more of the UE capabilities change compared to those stored in the variable UE_CAPABILITY_TRANSFERRED while in connected state, the UE shall:

…

1> for the UE capabilities defined in REL-6 or later, include the information elements associated with the capabilities included in the variable UE_CAPABILITY_TRANSFERRED.

…

If the UE supports dual cell operation on adjacent or non-contiguous frequencies or in different bands, the UE shall signal a value in the "HS-DSCH physical layer category extension 2" IE.

…

If the UE supports Multiflow operation on two cells, the UE shall signal a value in the "HS-DSCH physical layer category extension 2" IE.

If the UE supports Multiflow operation on three cells, the UE shall signal a value in the "HS-DSCH physical layer category extension 4" IE.

If the UE supports Multiflow operation on four cells, the UE shall signal a value in the "HS-DSCH physical layer category extension 5" IE.

…

If the UE signals an "HS-DSCH physical layer category extension 2" of 21, it shall signal an "HS-DSCH physical layer category extension" of 9, 10, 13, 14, 15, 16, 17 or 18.

If the UE signals an "HS-DSCH physical layer category extension 2" of 22, it shall signal an "HS-DSCH physical layer category extension" of 10, 14, 16 or 18.

If the UE signals an "HS-DSCH physical layer category extension 2" of 23, it shall signal an "HS-DSCH physical layer category extension" of 13, 14, 17, 18, 19 or 20.

If the UE signals an "HS-DSCH physical layer category extension 2" of 24, it shall signal an "HS-DSCH physical layer category extension" of 14, 18 or 20.

…

If the UE supports 16QAM in the uplink, the UE shall signal a value in the "E-DCH physical layer category extension" IE.

If the UE supports Dual Cell E-DCH operation, the UE shall signal a value in the "E-DCH physical layer category extension 2" IE.

If the UE signals a value in the "E-DCH physical layer category extension 2" IE, it shall signal an "E-DCH physical layer category" of 6.

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.5.51, 8.5.71, 8.1.6.2

8.2.1.45.1.3 Test purpose

To confirm that the UE establishes radio bearer mapped to HS-DSCH, transits from CELL_DCH to CELL_DCH state, and starts simultaneous 16QAM reception over multiflow HSDPA operation (Single Frequency/Dual Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER SETUP message.

8.2.1.45.1.4 Method of test

Initial Condition

System Simulator:

2 cells –Cell 1/2 with Cell 1 (f1) (Serving HS-DSCH cell), and Cell 2 (f1) (Assisting Serving HS-DSCH cell) – One Carrier on DL Band A (Single Band SF-DC). Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-7) as specified in clause 7.4 of TS 34.108[9]. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on two cells on one frequency (UE Category 21-24)

Test Procedure

The UE is in CELL_DCH state. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message includes RAB information to configure PS domain RB on E-DCH/HSDPA (with SF-DC-HSDPA, and 16 QAM simultaneously configured for L1). SRBs are mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

SS sends UE CAPABILITY ENQUIRY on Serving Cell and Assisting Serving Cell using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 2*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1 and Cell 2.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | SS configures two cells. |
| 1 | ← | | RADIO BEARER SETUP | Configuration of PS RB on E-DCH/HSDPA , using Multiflow HSDPA, and 16QAM configuration |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on DCH from Anchor Cell 1, and Cell 2. |
| 4 | → | | UE CAPABILITY INFORMATION | |
| 5 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 6 | | | | SS checks for 2 CQI reports at 2 ms interval with:<br>- concatenated CQI Report for Serving Cell (Cell 1) and Assisting Serving cell (Cell 2). |
| 7 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A41, as specified in clause 7.4 of TS 34.108 [9] using Single band carrier combination.

#### 8.2.1.45.1.5 Test requirements

At step 2 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 4 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 6 the UE shall transmit CQI reports for the 2 cells.

### 8.2.1.45.2 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 3 cell/two frequencies Multiflow HSDPA for Single band, Intra-NodeB

#### 8.2.1.45.2.1 Definition and applicability

UE categories (Cat 29 or Cat 30) which support combination of Multiflow HSDPA on Dual Frequency/3 Cell on Single Band (SB-DF-3C)..

UE supports FDD.

#### 8.2.1.45.2.2 Conformance requirement

Same as Subclause 8.2.1.45.1.2

#### 8.2.1.45.2.3 Test purpose

To confirm that the UE establishes radio bearer mapped to HS-DSCH, transits from CELL_DCH to CELL_DCH state, and starts simultaneous 16QAM reception over multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER SETUP message.

#### 8.2.1.45.2.4 Method of test

Initial Condition

System Simulator:

SS configures Cells 2 and 3 as per Table 5. 0aB of TS 25.101 [21] and TS 34.108 [9], clause 5.1.1.

3 cells –Cell 1/2/3 with Cell 1 (f1) (Serving HS-DSCH cell), and Cell 2 (f1) (Assisting Serving HS-DSCH cell) and Cell 3(f2) (Assisting Secondary serving HS-DSCH Cell) – Two Carriers on Band A. (Single Band DF-3C). Assisting serving and Assisting Secondary serving cells have the same radio frame timing. Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-7) with SRBs mapped on DCH/DCH. The procedure P9b in TS 34.108[9], clause 7.4.2.4a is executed to add Cell2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on 3 cells on dual frequency (UE Category 29-30)

Test Procedure

The UE is in CELL_DCH state. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message includes RAB information to configure PS domain RB on E-DCH/HSDPA (with DF-3C-HSDPA) and 16 QAM simultaneously configured for L1. SRBs are mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

To check that the UE has activated Multiflow HSDPA operation, the SS sends UE CAPABILITY ENQUIRY on Serving cell and Assisting serving cell using SRB2 mapped onto DCH. The UE shall respond to the message in turn with UE CAPABILITY INFORMATION message sent to Serving Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 4*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1, Cell 2 and Cell 3.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | SS configures three cells. |
| 1 | | ← | RADIO BEARER SETUP | Configuration of PS RB on E-DCH/HSDPA , using Multiflow HSDPA, and 16QAM configuration |
| 2 | | → | RADIO BEARER SETUP COMPLETE | |
| 2a | | | VOID | |
| 3 | | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on DCH |
| 4 | | → | UE CAPABILITY INFORMATION | |
| 5 | | ← | UE CAPABILITY INFORMATION CONFIRM | |
| 6 | | | | SS checks for 2 CQI reports at 4 ms interval with:<br>- CQI Report for Serving Cell (Cell 1)<br>- concatenated CQI Report for Assisting Serving Cell (Cell 2) and<br>- CQI Report for Assisting Secondary Cell (Cell 3) |
| 7 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A42, as specified in clause 7.4 of TS 34.108 [9] using Single band Dual Frequency combination with 3 cells.

#### 8.2.1.45.2.5 Test requirements

At step 2 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 4 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 6 the UE shall transmit CQI reports for the 3 cells.

### 8.2.1.45.3 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 3 cells/two frequencies Multiflow HSDPA for Dual Bands, intra-NodeB

#### 8.2.1.45.3.1 Definition and applicability

UE categories (Cat 29 or Cat 30) which support combination of Multiflow HSDPA on Dual Frequency/3 Cell on Dual Band..

UE supports FDD.

#### 8.2.1.45.3.2 Conformance requirement

Same as Subclause 8.2.1.45.1.2

#### 8.2.1.45.3.3 Test purpose

To confirm that the UE establishes radio bearer mapped to HS-DSCH, transits from CELL_DCH to CELL_DCH state, and starts simultaneous 16QAM reception over multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Dual band) according to the received RADIO BEARER SETUP message.

#### 8.2.1.45.3.4 Method of test

Initial Condition

System Simulator:

SS configures Cells 2 and 3 as per Table 5.0aC of TS 25.101 [21] and TS 34.108 [9]], clause 5.1.1.

3 cells –Cell 1/2/3 with Cell 1 (f1) (Serving HS-DSCH cell), and Cell 2 (f1) (Assisting Serving HS-DSCH cell) and Cell 3(f2) (Assisting Secondary HS-DSCH cell) – One Carrier on Band A, and One Carrier on Band B. (Dual Band DF-3C). Assisting Serving and Assisting Secondary serving cells have the same radio frame timing. Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-7) as specified in clause 7.4 of TS 34.108 [9], depending on the CN domain(s) supported by the UE. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on 3 cells on dual frequency (UE Category 29-30)

Test Procedure

The UE is in CELL_DCH state. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message includes RAB information to configure PS domain RB on E-DCH/HSDPA (with DF-3C-HSDPA) and 16 QAM simultaneously configured for L1). SRBs are mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

SS sends UE CAPABILITY ENQUIRY on using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension4*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

To check that the UE has activated Multiflow HSDPA operation, SS checks that UE sends CQI reports for Cell 1, Cell 2 and Cell 3.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | SS configures three cells. |
| 1 | | ← | RADIO BEARER SETUP | Configuration of PS RB on E-DCH/HSDPA , using Multiflow HSDPA, and 16QAM configuration |
| 2 | | → | RADIO BEARER SETUP COMPLETE | |

| 7 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A42, as specified in clause 7.4 of TS 34.108 [9] using Dual band Dual Frequency combination with 3 cells.

#### 8.2.1.45.3.5 Test requirements

Same as Subclause 8.2.1.45.2.5

### 8.2.1.46 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of Multiflow HSDPA for different bands/Inter Node B, 16QAM/64QAM, 16QAM, assisting serving cell as time reference cell

NOTE: The Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH for Multiflow HSDPA have been split into single band (with two cells on one frequency and with three cells on two frequencies), and dual band (with three cells on two frequencies).

### 8.2.1.46.1 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 2cell/single frequency Multiflow HSDPA for single band, inter-NodeB, 16QAM/64QAM, 16QAM, assisting serving cell as time reference cell

#### 8.2.1.46.1.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on two cells on one frequency in single band.

8.2.1.46.1.2 Conformance requirement

…

If the UE receives:

...

- a RADIO BEARER RECONFIGURATION message; or

it shall:

…

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only).

…

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in TS 25.331 subclause 8.5.60

…

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

…

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> TS 25.331 subclause 8.6.3.1b for the IE "H-RNTI";

2> TS 25.331 subclause 8.6.5.6b for the IE "HARQ info";

2> TS 25.331 subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> TS 25.331 subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in TS 25.331 subclause 8.5.44.

[…]

1> perform Multiflow data reception as specified in [51];

1> indicate to lower layers value of "Multiflow configuration" IE of each entry in DOWNLINK_SECONDARY_CELL_INFO;

1> for every entry in DOWNLINK_SECONDARY_CELL_INFO:

2> if the stored UARFCN downlink (Nd) in the entry is the same as the value of the serving HS-DSCH cell:

3> if the IE "Multiflow time reference cell" is not present:

4> indicate to lower layers that the serving HS-DSCH cell is time reference for HS-DPCCH;

3> else:

4> indicate to lower layers that the cell is a time reference for HS-DPCCH;

2> else:

3> if the IE "Multiflow time reference cell" is present:

4> indicate to lower layers that the cell and the time reference cell are in the same cell group as specified in [27];

3> else:

4> indicate to lower layers that the cell and the non-time reference cell are in the same cell group as specified in [27];

1> If there is at least one entry in DOWNLINK_SECONDARY_CELL_INFO with the IE "Multiflow cell", value of which is set to "inter-NodeB":

2> configure two MAC-ehs entities;

2> associate with the first MAC-ehs entity the serving HS-DSCH cell and all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "intra-NodeB";

2> associate with the second MAC-ehs entity all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "inter-NodeB";

Whenever the variable MULTIFLOW_STATUS is set to FALSE, the UE shall:

1> stop Multiflow operation;

1> if Timer_Reordering was configured for the receiving RLC entity:

2> configure the receiving RLC entity not to use the corresponding function;

1> if two MAC-ehs entities were configured for the inter-Node B Multiflow operation:

2> configure one MAC-ehs entity;

1> indicate to lower layers that the serving HS-DSCH cell must be used as a time reference for HS-DPCCH.

[…]

3GPP TS 25.331 clause 8.2.2.3, 8.5.32, 8.5.33, 8.5.71

### 8.2.1.46.1.3 Test purpose

To confirm that the UE establishes radio bearer mapped to HS-DSCH, transits from CELL_DCH to CELL_DCH state, and starts simultaneous 16QAM/64QAM reception over multiflow HSDPA operation (Single Frequency/Dual Cell Multiflow HSDPA for Single band) with the assisting cell as a time reference one according to the received RADIO BEARER SETUP message

### 8.2.1.46.1.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 with Cell 1 (f1) (Serving cell), and Cell 2 (f1) (Assisting serving cell) –One Carrier on Band A. Tcell of Cell 1 is set to 3840 chips (1.5 slots).

UE: CELL_DCH (state 6-7) as specified in clause 7.4 of TS 34.108 [9]. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD

- UE category supports Multiflow HSDPA operation on two cells on one frequency (UE Category 21-24)

Test Procedure

The UE is in CELL_DCH state. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message includes RAB information to configure PS domain RB on E-DCH/HSDPA. SRBs are mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 2"*. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1 and Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | SS configures two cells. |
| 1 | | ← | RADIO BEARER SETUP | Configuration of PS RB on E-DCH/HSDPA using Multiflow HSDPA |
| 2 | | → | RADIO BEARER SETUP COMPLETE | |
| 3 | | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH. |
| 4 | | → | UE CAPABILITY INFORMATION | |
| 5 | | ← | UE CAPABILITY INFORMATION CONFIRM | |
| 6 | | | | SS checks for 2 CQI reports at 2 ms interval with:<br>- concatenated CQI Report for Serving cell (Cell 1) and Assisting serving cell (Cell 2). |
| 7 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH |

RADIO BEARER SETUP (Step 1)

PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A44, as specified in clause 7.4 of TS 34.108 [9] using Single band with 1 carrier combination.

#### 8.2.1.46.1.5 Test requirements

At step 2 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 4 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

At step 6 the UE shall transmit CQI reports.

### 8.2.1.46.2 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 3 cell/two frequencies Multiflow HSDPA for single band, inter-NodeB, 16QAM/64QAM, 16QAM, assisting serving cell as time reference cell

#### 8.2.1.46.2.1 Definition and applicability

UE categories that support Multiflow HSDPA operation on three cells on two frequencies in single band.

#### 8.2.1.46.2.2 Conformance requirement

Same as in sub-clause 8.2.1.46.1.2.

8.2.1.46.2.3 Test purpose

To confirm that the UE establishes radio bearer mapped to HS-DSCH, transits from CELL_DCH to CELL_DCH state, and starts simultaneous 16QAM/64QAM reception over multiflow HSDPA operation (Dual Frequency/3 Cell Multiflow HSDPA for Single band) with the assisting cell as a time reference one according to the received RADIO BEARER SETUP message.

8.2.1.46.2.4 Method of test

Initial Condition

System Simulator: 3 cells –Cell 1/2/3 with Cell 1 (f1) (Serving cell), and Cell 2 (f1) (Assisting serving cell) and Cell 3(f2) (Secondary serving cell) – Two carriers on Band A. Tcell of Cell 1 and Cell 3 is set to 3840 chips (1.5 slots).

(Ref. to Table 5.0aB of TS 25.101 [21])

UE: CELL_DCH (state 6-7) as specified in clause 7.4 of TS 34.108 [9]. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on three cells on two frequencies (UE Category 29)

Test Procedure

The UE is in CELL_DCH state. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message includes RAB information to configure PS domain RB on E-DCH/HSDPA. SRBs are mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 4"*. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1, Cell 2 and Cell 3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | SS configures three cells. |
| 1 | ← | | RADIO BEARER SETUP | Configuration of PS RB on E-DCH/HSDPA using Multiflow HSDPA |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH. |
| 4 | → | | UE CAPABILITY INFORMATION | |
| 5 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 6 | | | | SS checks for 2 CQI reports at 4 ms interval with:<br>- concatenated CQI report for Serving cell (Cell 1) and Secondary serving cell (Cell 3)<br>- CQI report for Assisting serving cell (Cell 2) |
| 7 | | | | SS calls for generic procedure C.3 to check that UE is in CELL_DCH |

### 8.2.1.47 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of DCH Enhancements in Basic Mode

#### 8.2.1.47.1 Definition and applicability

All UEs which supports DCH Enhancements in Basic Mode.

UE supports FDD.

#### 8.2.1.47.2 Conformance requirement

The UE shall:

1> be able to receive any of the following messages:

2> RADIO BEARER SETUP message; or

…

…

If the UE receives:

- a RADIO BEARER SETUP message; or

…

it shall:

1> stop and reset timer T324 if running;

1> stop monitoring target cell HS-SCCH;

1> set the variable ORDERED_RECONFIGURATION to TRUE;

…

In case the UE receives a RADIO BEARER SETUP message with the IE "Specification mode" not set to "Complete Specification", the UE behaviour is unspecified.

The UE shall:

….

For FDD: in CELL_DCH state, in case the UE receives a Target cell HS-SCCH order the UE shall:

1> ignore RADIO BEARER SETUP, RADIO BEARER RECONFIGURATION, TRANSPORT CHANNEL RECONFIGURATION or PHYSICAL CHANNEL RECONFIGURATION messages as described in subclause 8.6.3.11.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

…

2> remove any C-RNTI from MAC;

2> clear the variable C_RNTI.

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> for FDD, determine the value for the READY_FOR_COMMON_ERGCH variable and take the corresponding actions as described in subclause 8.5.75;

1> if the IE "E-DCH info" was not included in the message:

2> for FDD:

3> stop any E-AGCH, E-RGCH and E-HICH reception procedures;

3> stop any E-DPCCH and E-DPDCH transmission procedures;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

…

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

...

1> if "DPCH frame offset" is included for one or more RLs in the active set, and the reconfiguration procedure does not request a timing reinitialized hard handover (see subclause 8.3.5.1):

2> use its value to determine the beginning of the DPCH or F-DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH or F-DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

...

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

...

1> if IE "RRC state indicator" is set to "CELL_DCH":

2> if the variable DEFERRED_MEASUREMENT_STATUS is set to TRUE:

3> if System Information Block type 11 is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block, or

3> if System Information Block type 11bis is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block, or

3> if System Information Block type 11ter is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block, or

3> if System Information Block type 12 is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block:

4> include IE "Deferred measurement control reading".

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> if the IE "Deferred measurement control reading" was included in the response message:

2> clear the variable CELL_INFO_LIST.

…

…

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

The UE shall:

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> if the received reconfiguration message contained the IE "Ciphering mode info":

2> resume data transmission on any suspended radio bearer and signalling radio bearer mapped on RLC-AM or RLC-UM;

2> set the IE "Reconfiguration" in the variable CIPHERING_STATUS to FALSE; and

2> clear the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO.

1> if the received reconfiguration message contained the IE "Integrity protection mode info":

2> allow the transmission of RRC messages on all signalling radio bearers with any RRC SN;

2> set "Uplink RRC Message sequence number" for signalling radio bearer RB0 in the variable INTEGRITY_PROTECTION_INFO to a value such that next RRC message to be sent on uplink RB0 will use the new integrity protection configuration;

2> set the IE "Reconfiguration" in the variable INTEGRITY_PROTECTION_INFO to FALSE; and

2> clear the variable INTEGRITY_PROTECTION_ACTIVATION_INFO.

1> clear the variable PDCP_SN_INFO;

1> clear the variable START_VALUE_TO_TRANSMIT;

1> clear the variable SECURITY_MODIFICATION.

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4

### 8.2.1.47.3 Test purpose

To confirm that the UE establishes radio bearer, mapped to DCH, transits from CELL_DCH to CELL_DCH state, and starts DCH Enhancements in Basic Mode according to the received RADIO BEARER SETUP message.

### 8.2.1.47.4 Method of test

Initial Condition

System Simulator: 1 cell –Cell 1

UE: Idle state (state 7) as specified in clause 7.4 of TS 34.108, on the CS/PS domain supported by the UE.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports DCH Enhancements

Test Procedure

The UE is in idle state. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message includes RAB information to configure CS domain RB on DCH (with DCH Enhancements configured for L1). SRB is mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Mobile originated call/session establishment |
| 2 | ← | | RADIO BEARER SETUP | Configuration of CS RB on DCH , using DCH Enhancements configuration |
| 3 | → | | RADIO BEARER SETUP COMPLETE | |
| 4 | ← | | TRANSPORT FORMAT COMBINATION CONTROL (DCCH) | RRC<br>Transport format combinations is limited to "Restricted UL TFCIs", as specified for the sub-test 2 in 14.2.4.3 |
| 5 | ← | | CLOSED UE TEST LOOP (DCCH) | UE Test Loop Mode1 |
| 6 | → | | CLOSED UE TEST LOOP COMPLETE (DCCH) | |
| 7 | ← | | DOWNLINK RLC SDU | Send test data using the downlink transport format combination under test |
| 8 | → | | UPLINK RLC SDU | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 2)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Speech in CS" – Condition A2, as found in clause 9 of TS 34.108, with the following exceptions:

8.2.1.47.5 Test requirements

1. At step 3 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

2. At step 8 the UE shall return an RLC SDU on each of RB5, RB6 and RB7 with transmitted transport format by the SS, having the same content as sent by SS.

## 8.2.1.48 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of DCH Enhancements in Full Mode

8.2.1.48.1 Definition and applicability

All UEs which supports DCH Enhancements in Full Mode.

UE supports FDD.

8.2.1.48.2 Conformance requirement

The UE shall:

1> be able to receive any of the following messages:

2> RADIO BEARER SETUP message; or

…

…

If the UE receives:

- a RADIO BEARER SETUP message; or

…

it shall:

1> stop and reset timer T324 if running;

1> stop monitoring target cell HS-SCCH;

1> set the variable ORDERED_RECONFIGURATION to TRUE;

…

In case the UE receives a RADIO BEARER SETUP message with the IE "Specification mode" not set to "Complete Specification", the UE behaviour is unspecified.

The UE shall:

…

For FDD: in CELL_DCH state, in case the UE receives a Target cell HS-SCCH order the UE shall:

1> ignore RADIO BEARER SETUP, RADIO BEARER RECONFIGURATION, TRANSPORT CHANNEL RECONFIGURATION or PHYSICAL CHANNEL RECONFIGURATION messages as described in sub clause 8.6.3.11.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

…

2> remove any C-RNTI from MAC;

2> clear the variable C_RNTI.

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in sub clause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in sub clause 8.5.46;

1> for FDD, determine the value for the READY_FOR_COMMON_ERGCH variable and take the corresponding actions as described in sub clause 8.5.75;

1> if the IE "E-DCH info" was not included in the message:

2> for FDD:

3> stop any E-AGCH, E-RGCH and E-HICH reception procedures;

3> stop any E-DPCCH and E-DPDCH transmission procedures;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

…

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

...

1> if "DPCH frame offset" is included for one or more RLs in the active set, and the reconfiguration procedure does not request a timing reinitialized hard handover (see subclause 8.3.5.1):

2> use its value to determine the beginning of the DPCH or F-DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH or F-DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

…

The UE shall transmit a response message as specified in sub clause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

1> if IE "RRC state indicator" is set to "CELL_DCH":

2> if the variable DEFERRED_MEASUREMENT_STATUS is set to TRUE:

3> if System Information Block type 11 is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block, or

3> if System Information Block type 11bis is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block, or

3> if System Information Block type 11ter is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block, or

3> if System Information Block type 12 is scheduled on the BCCH and the UE has not read nor stored the IEs present in this System Information Block:

4> include IE "Deferred measurement control reading".

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> if the IE "Deferred measurement control reading" was included in the response message:

2> clear the variable CELL_INFO_LIST.

…

…

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

…

The UE shall:

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> if the received reconfiguration message contained the IE "Ciphering mode info":

2> resume data transmission on any suspended radio bearer and signalling radio bearer mapped on RLC-AM or RLC-UM;

2> set the IE "Reconfiguration" in the variable CIPHERING_STATUS to FALSE; and

2> clear the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO.

1> if the received reconfiguration message contained the IE "Integrity protection mode info":

2> allow the transmission of RRC messages on all signalling radio bearers with any RRC SN;

2> set "Uplink RRC Message sequence number" for signalling radio bearer RB0 in the variable INTEGRITY_PROTECTION_INFO to a value such that next RRC message to be sent on uplink RB0 will use the new integrity protection configuration;

2> set the IE "Reconfiguration" in the variable INTEGRITY_PROTECTION_INFO to FALSE; and

2> clear the variable INTEGRITY_PROTECTION_ACTIVATION_INFO.

1> clear the variable PDCP_SN_INFO;

1> clear the variable START_VALUE_TO_TRANSMIT;

1> clear the variable SECURITY_MODIFICATION.

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4

8.2.1.48.3 Test purpose

To confirm that the UE establishes radio bearer, mapped to DCH, transits from CELL_DCH to CELL_DCH state, and starts DCH Enhancements in Full Mode according to the received RADIO BEARER SETUP message.

8.2.1.48.4 Method of test

Initial Condition

System Simulator: 1 cell –Cell 1

UE: Idle state (state 7) as specified in clause 7.4 of TS 34.108, on the CS/PS domain supported by the UE.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports DCH Enhancements in Full Mode

Test Procedure

The UE is in idle state. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message includes RAB information to configure CS domain RB on DCH (with DCH Enhancements configured for L1). SRB is mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Mobile originated call/session establishment |
| 2 | ← | | RADIO BEARER SETUP | Configuration of CS RB on DCH, using DCH Enhancements configuration |
| 3 | → | | RADIO BEARER SETUP COMPLETE | |
| 4 | ← | | TRANSPORT FORMAT COMBINATION CONTROL (DCCH) | RRC<br>Transport format combinations is limited to "Restricted UL TFCIs", as specified for the sub-test 2 in 14.2.4.3 |
| 5 | ← | | CLOSED UE TEST LOOP (DCCH) | UE Test Loop Mode1 |
| 6 | → | | CLOSED UE TEST LOOP COMPLETE (DCCH) | |
| 7 | ← | | DOWNLINK RLC SDU | Send test data using the downlink transport format combination under test |
| 8 | → | | UPLINK RLC SDU | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 2)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Speech in CS" – Condition A2, as found in clause 9 of TS 34.108, with the following exceptions:

8.2.1.48.5 Test requirements

1. At step 3 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

2. At step 8 the UE shall return an RLC SDU on each of RB5, RB6 and RB7 with transmitted transport format by the SS, having the same content as sent by SS.

## 8.2.2 Radio Bearer Reconfiguration

### 8.2.2.1 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success

8.2.2.1.1 Definition

8.2.2.1.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.2.1.3 Test purpose

To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which indicates a change of UL scrambling code and change of RLC parameters.

8.2.2.1.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which commands a change of UL scrambling code (for FDD) and UL channelisation code (for 1.28 Mcps TDD) and change of RLC parameters to be performed. The UE reconfigures the new parameter and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

The SS transmits a new RADIO BEARER RECONFIGURATION message to the UE, which commands the UE to reconfigure RLC parameters. The UE reconfigures the new parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | UL scrambling code is modified. RLC configuration is modified. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | | | Void | |
| 6 | ← | | RADIO BEARER RECONFIGURATION | RLC configuration is modified. |
| 7 | | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | Void | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

| A1 | This IE need for "Non speech in CS" |
| A2 | This IE need for "Speech in CS" |
| A3 | This IE need for "Packet to CELL_DCH from CELL_DCH in PS" |

RADIO BEARER RECONFIGURATION (TDD) (Step 6)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| CHOICE mode | TDD |
| Uplink DPCH timeslots and codes | |
| - First timeslot code list | Assigned by SS |
| Downlink information common for all radio links | Not Present |
| Downlink information per radio link list | |
| - Downlink information for each radio link | |
| - Primary CCPCH info | Set to same as used for cell 1 |

8.2.2.1.5 Test requirement

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the new DPCH after the specified activation time has expired.

After step 6, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.1a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (TDD Only)

### 8.2.2.1a.1 Definition

The features and operation of UpPCH shifting have been introduced to core specification (TS 25.331 clause 8.6.6.26) for LCR TDD.

### 8.2.2.1a.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> 1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

When UE is in the stage of RB Reconfiguring, it shall perform RB setup procedure to the neighbour cell and enter CELL_DCH state according to neighbour cell parameters and UpPCH position indicated by the RADIO BEARER RECONFIGURATION message.

### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.2.1a.3 Test purpose

To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which indicates a change of UL scrambling code and change of RLC parameters.

To verify the UE successfully identify the UpPCH position of neighbour cell in RB RECONFIG message and perform RB reconfigure procedure to the neighbour cell based on the configuration from SS.

8.2.2.1a.4 Method of test

Initial Condition

System Simulator: 1 2 cells. Cell 1 is in the UARFCN 1 and Cell 4 is in the UARFCN 4. UpPCH shifting=22 in the cell 4 of UARFCN 4.

UE: CS-DCCH +DTCH_DCH (state 6-59) or PS-DCCH+DTCH_DCH (state 6-107) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

| Parameter | Unit | Cell 1 | | Cell 4 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| P-CCPCH RSCP(TDD) | dBm | -55 | -72 | Off | -55 |

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which commands a change of UL scrambling code (for FDD) and UL channelization code (for 1.28 Mcps TDD) and change of RLC parameters to be performed. The UE reconfigures the new parameter and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

The SS transmits a new RADIO BEARER RECONFIGURATION message to the UE, which commands the UE to reconfigure RLC parameters. The UE reconfigures the new parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

UE is in the CELL_DCH state. SS send RADIO BEARER RECONFIGURATION to UE containing the parameters of destination cell and a change of RLC parameter. UE reconfigures the new parameter and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH of CELL 4 using AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | UL scrambling code is modified. RLC configuration is modified. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | | | Void | |
| 6 | ← | | RADIO BEARER RECONFIGURATION | RLC configuration is modified. |
| 7 | | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | Void | |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| 10 | ← | | RADIO BEARER RECONFIGURATION | Notify UE setup radio bearer in Cell 4 and indicate frequency of neighbour cell and UpPCH position |
| 11 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 12 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (FDD1.28Mcps TDD) (Step 3)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in clause 9 of TS 34.108, with the following exceptions:

#### 8.2.2.1a.5 Test requirement

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the new DPCH after the specified activation time has expired.

After step 611, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message and enter the state of CELL_DCH in Cell 4.

### 8.2.2.2 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Unsupported configuration)

#### 8.2.2.2.1 Definition

#### 8.2.2.2.2 Conformance requirement

If the UTRAN instructs the UE to use a configuration, which it does not support and/or if the received message causes the variable UNSUPPORTED_CONFIGURATION to be set to TRUE, the UE shall:

1> transmit a failure response as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "configuration unsupported".

1> set the variable UNSUPPORTED_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

The UE shall:

1> in case of reception of a RADIO BEARER RECONFIGURATION message:

…

2> transmit a RADIO BEARER RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

…

The UE should set the variable UNSUPPORTED_CONFIGURATION to TRUE if the received message is not according to the UE capabilities.

Reference

3GPP TS 25.331 clause 8.2.2.6, 8.2.2.9, 8.5.20.

8.2.2.2.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.

8.2.2.2.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC. UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Including unsupported configuration by the UE |
| 2 | → | | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the radio bearer. |
| 3 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b and 3)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

RADIO BEARER RECONFIGURATION (FDD) (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN uplink (Nu)<br>- UARFCN downlink (Nd) | <br>FDD<br>0<br>950 |

RADIO BEARER RECONFIGURATION (TDD) (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt) | <br>TDD<br>0 |

RADIO BEARER RECONFIGURATION FAILURE (Step 2)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Message Type<br>Failure cause | <br>Not checked |

#### 8.2.2.2.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC .

After step 2, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

### 8.2.2.3 Void

### 8.2.2.4 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection)

#### 8.2.2.4.1 Definition

#### 8.2.2.4.2 Conformance requirement

If the received message caused the UE to be in CELL_DCH state and the UE failed to establish the dedicated physical channel(s) indicated in the received message the UE shall:

1> revert to the configuration prior to the reception of the message (old configuration);

1> if the old configuration includes dedicated physical channels (CELL_DCH state) and the UE is unable to revert to the old configuration:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1, using the cause "radio link failure";

2> after the cell update procedure has completed successfully:

3> proceed as below.

…

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "physical channel failure".

1> set the variable ORDERED_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- includes "Physical channel information elements":

the UE shall:

1> transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message using AM RLC.

…

The UE shall:

1> in case of reception of a RADIO BEARER RECONFIGURATION message:

…

2> transmit a RADIO BEARER RECONFIGURATION FAILURE as response message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.7, 8.2.2.9, 8.3.1.7.

#### 8.2.2.4.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message after it completes a cell update procedure when the UE cannot reconfigure the new radio bearer and a subsequent failure to revert to the old configuration.

#### 8.2.2.4.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS. The SS transmits a RADIO BEARER RECONFIGURATION message, which includes the new radio bearer parameters, to the UE. After the reception of the acknowledgement for the RADIO BEARER RECONFIGURATION message in SS, the SS shall not reconfigure dedicated physical channel in accordance with the settings in the message and release the previous configuration. The UE discovers that it cannot reconfigure the new radio bearer and wants to revert to the old configuration, but the UE cannot revert to the old configuration. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH after receiving a CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" to IE "failure cause". UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 0b | → | | MEASUREMENT REPORT | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | | | | The SS does not reconfigure the dedicated physical channel in accordance with the RADIO BEARER RECONFIGURATION message and shall release the old configuration. |
| 3 | → | | CELL UPDATE | The value "radio link failure" shall be set in IE "Cell update cause". |
| 4 | | | | The SS configures the dedicated physical channel according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 5 | ← | | CELL UPDATE CONFIRM | This message include IE "Physical channel information elements". |
| 6 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 7 | → | | RADIO BEARER RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure" |
| 8 | → | | MEASUREMENT REPORT | |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

MEASUREMENT CONTROL (Step 0a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 7 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 0b and 8)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions and the order in which the RBs are reported is not checked:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 7 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

RADIO BEARER RECONFIGURATION message (Step 1) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Clause 9 of TS 34.108 with the following exceptions

| Information Element | Value/remark |
|---|---|
| CHOICE channel requirement | |
| Scrambling code number | Set to different value other then the one specified in Radio Bearer Setup message |
| - Downlink information for each radio links | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary CPICH scrambling code | Ref. to the Default setting for cell 2 in TS 34.108 clause 6.1 (FDD) |

RADIO BEARER RECONFIGURATION message (Step 1) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in Clause 9 of TS 34.108 with the following exceptions

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio link list | |
| - Downlink information for each radio links | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Ref. to the Default setting for cell 2 in TS 34.108 clause 6.1 (TDD) |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "radio link failure" |

CELL UPDATE CONFIRM (Step 5) (FDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | Uplink DPCH info |
| - UplinkDPCH Info | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information common for all radio links | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

CELL UPDATE CONFIRM (Step 5) (TDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_DCH |
| Uplink DPCH timeslots and codes | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information common for all radio links | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 6)

Use the same message found in TS 34.108 clause 9, with the exceptions of the following IEs:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | This IE is not checked. |

RADIO BEARER RECONFIGURATION FAILURE (Step 7)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | "physical channel failure" |

#### 8.2.2.4.5 Test requirement

After step 0a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "radio link failure".

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

After step 7, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

### 8.2.2.5 Void

### 8.2.2.6 Void

### 8.2.2.7 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Continue and stop)

#### 8.2.2.7.1 Definition

#### 8.2.2.7.2 Conformance requirement

If the IE "RB information to reconfigure" is included, the UE shall apply the following actions on the radio bearer identified with the value of the IE "RB identity". The UE shall:

…

- if the IE "RB stop/continue" is included; and
  - if the "RB identity" has a value greater than 2; and
    - if the value of the IE "RB stop/continue" is "stop":
      - configure the RLC entity for the radio bearer to stop;
      - set the IE "RB started" in the variable ESTABLISHED_RABS to "stopped" for that radio bearer;
    - if the value of the IE "RB stop/continue" is "continue":
      - configure the RLC entity for the radio bearer to continue;

- set the IE "RB started" in the variable ESTABLISHED_RABS to "started" for that radio bearer;

Reference

3GPP TS 25.331 clause 8.2.2, 8.6.4.5.

8.2.2.7.3 Test purpose

To confirm that the UE reconfigures new radio bearer and stop the transmission and reception of the RLC entity belonging to the RB identity specified in the RADIO BEARER RECONFIGURATION message.

To confirm that the UE reconfigures new radio bearer and restart the transmission and reception of the RLC entity belonging to the RB identity specified in the RADIO BEARER RECONFIGURATION message.

8.2.2.7.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message including IE "RB stop/continue" set to "continue" for radio bearer with RB identity '3'. The UE reconfigures new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. Then, the SS transmits an IDENTITY REQUEST message using AM RLC, the UE responds a IDENTITY RESPONSE message. The SS transmits a RADIO BEARER RECONFIGURATION message including IE "RB stop/continue" set to "stop" for radio bearer with RB identity "3". The UE reconfigures new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. Then, the SS transmits a IDENTITY REQUEST message using AM RLC, the UE does not acknowledge this message and also does not respond with a IDENTITY RESPONSE message. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | This message include IE "RB stop/continue" set to "continue". |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | IDENTITY REQUEST | |
| 3a | → | | IDENTITY RESPONSE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | This message include IE "RB stop/continue" set to "stop". |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ← | | IDENTITY REQUEST | |
| 7 | → | | | The SS shall not receive any data from the UE. |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)(FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list<br>RB information to reconfigure<br>-RB identity<br>-RB stop/continue | <br><br>3<br>"continue" | |
| UL Transport channel information for all transport channels | Not Present | |
| Added or Reconfigured UL TrCH information | Not Present | |
| CHOICE mode | Not Present | |
| DL Transport channel information common for all transport channel | Not Present | |
| Deleted DL TrCH information | Not Present | |
| Added or Reconfigured DL TrCH information | Not Present | |
| Frequency info | Not Present | |
| CHOICE channel requirement | Not Present | |
| CHOICE Mode<br>- Downlink PDSCH information | FDD<br>Not Present | <br>R99 and Rel-4 only |
| Downlink information common for all radio links | Not Present | |
| Downlink information per radio link list | | |
| -Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | <br><br>Set to same code as used for cell 1 | |

RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list<br>RB information to reconfigure<br>-RB identity<br>-RB stop/continue | <br><br>3<br>"continue" |
| UL Transport channel information for all transport channels | Not Present |

| Downlink information per radio link list | |
| -Downlink information for each radio link<br>- Primary CCPCH info | <br>Set to same code as used for cell 1 |

RADIO BEARER RECONFIGURATION (Step 4)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list<br>RB information to reconfigure<br>-RB identity<br>-RB stop/continue | <br><br>3<br>"stop" |

#### 8.2.2.7.5 Test requirement

After step 3 the UE shall respond with a IDENTITY RESPONSE message.

After step 6 the UE shall not respond with a IDENTITY RESPONSE message on the stopped RB.

### 8.2.2.8 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success

#### 8.2.2.8.1 Definition

#### 8.2.2.8.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.2.8.3 Test purpose

To confirm that the UE establishes the reconfigured radio bearer(s) using common physical channel, after UE receives a RADIO BEARER RECONFIGURATION message.

### 8.2.2.8.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which invoke a transition from CELL_DCH to CELL_FACH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE selects PRACH and S-CCPCH indicated in SIB5/SIB5bis and SIB6 after entering CELL FACH state. |
| 3 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)(FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in clause 9 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

| Maximum allowed UL TX power | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 1 |

RADIO BEARER RECONFIGURATION (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in clause 9 of TS 34.108, with the following exception:

| | |
|---|---|
| Frequency info | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CCPCH info | Set to same as used for cell 1 |

#### 8.2.2.8.5 Test requirement

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.9 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success (Cell re-selection)

#### 8.2.2.9.1 Definition

#### 8.2.2.9.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to subclause 8.6.3.3.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4] on that frequency.

1> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

2> when the cell update procedure completed successfully:

1> select PRACH according to subclause 8.5.17;

1> select Secondary CCPCH according to subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.3.1.7, 8.2.2.4.

### 8.2.2.9.3 Test purpose

To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message after it completes a cell update procedure.

### 8.2.2.9.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

NOTE: The 'timer poll' value in the SS RLC transmit entity should be set to 800 ms.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which includes IE "Primary CPICH info" and no dedicated physical channel information to transit from CELL_DCH to CELL_FACH. As the UE selects another cell than the specified cell, the UE shall initiate the cell update procedure. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a

CELL UPDATE CONFIRM message on downlink DCCH after receiving a CELL UPDATE message. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Assign a transition from CELL_DCH to CELL_FACH. |
| 4 | → | | CELL UPDATE | The value "cell reselection" shall be set in IE "Cell update cause". |
| 5 | ← | | CELL UPDATE CONFIRM | See message content. |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 3) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_FACH from CELL_DCH in PS" found in clause 9 of TS 34.108, with the following exceptions:

| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| Downlink information per radio link list | |
| - Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 2 |

RADIO BEARER RECONFIGURATION (Step 3) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_FACH from CELL_DCH in PS" found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio links<br>- Primary CCPCH info | <br><br>4 Set to same as used for cell 2 |

CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "Cell reselection" |

CELL UPDATE CONFIRM (Step 5)

Use the same message type found in clause Annex A, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 6)

Only the message type is checked.

8.2.2.9.5 Test requirement

After step 3, the UE shall transmit CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 5, the UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message and then followed by RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.2.10 Radio Bearer Reconfiguration: from CELL_FACH to CELL_DCH including modification of previously signalled CELL_DCH configuration: Success

#### 8.2.2.10.1 Definition

#### 8.2.2.10.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.2.10.3 Test purpose

To confirm that the UE applies a previously signalled configuration for CELL_DCH and in addition modifies the parameters for which reconfiguration is requested in the RADIO BEARER RECONFIGURATION message that is used to initiate transition from CELL_FACH to CELL_DCH.8.2.2.10.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | This message includes IE "Uplink DPCH Info" |
| 2 | | | | Reconfiguration of radio bearer |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |

#### 8.2.2.10.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.2.11 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported configuration)

#### 8.2.2.11.1 Definition

#### 8.2.2.11.2 Conformance requirement

If the UTRAN instructs the UE to use a configuration, which it does not support and/or if the received message causes the variable UNSUPPORTED_CONFIGURATION to be set to TRUE, the UE shall:

1> transmit a failure response as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "configuration unsupported".

1> set the variable UNSUPPORTED_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

…

The UE should set the variable UNSUPPORTED_CONFIGURATION to TRUE if the received message is not according to the UE capabilities.

Reference

3GPP TS 25.331 subclause 8.2.2.6, 8.5.20.

#### 8.2.2.11.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.

#### 8.2.2.11.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which includes unsupported configuration parameters, to the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | The message includes an unsupported configuration for the UE |
| 2 | → | | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the radio bearer. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - CHOICE mode | FDD |
| - UARFCN uplink (Nu) | 0 |
| - UARFCN downlink (Nd) | 950 |

RADIO BEARER RECONFIGURATION (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN (Nt) | 0 |

RADIO BEARER RECONFIGURATION FAILURE

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Not checked. |

8.2.2.11.5 Test requirement

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC.

## 8.2.2.11a Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported configuration) (1.28 Mcps TDD Only)

### 8.2.2.11a.1 Definition

### 8.2.2.11a.2 Conformance requirement

If the UTRAN instructs the UE to use a configuration, which it does not support and/or if the received message causes the variable UNSUPPORTED_CONFIGURATION to be set to TRUE, the UE shall:

1> transmit a failure response as specified in subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to "configuration unsupported".

1> set the variable UNSUPPORTED_CONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

…

The UE should set the variable UNSUPPORTED_CONFIGURATION to TRUE if the received message is not according to the UE capabilities.

#### Reference

3GPP TS 25.331 subclause 8.2.2.6, 8.5.20.

### 8.2.2.11a.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.

### 8.2.2.11a.4 Method of test

#### Initial Condition

System Simulator: 1 cell. Configure 3 carriers, one is the primary carrier, the other two are secondary carriers.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which includes unsupported configuration parameters, to the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC. Then the SS transmits a RADIO BEARER RECONFIGURATION message to order UE to go into CELL_DCH state of secondary carrier. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH and keep in CELL_DCH state.

Expected sequence:

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | The message includes an unsupported configuration for the UE. |
| 2 | → | | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the radio bearer. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | The message includes information about secondary carrier1 |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE goes into CELL_DCH state of secondary carrier |
| 5 | ← | | RADIO BEARER RECONFIGURATION | The message includes information about secondary carrier2（different from the carrier information in step3） |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE goes into CELL_DCH state of secondary carrier2 |
| 7 | ← | | RADIO BEARER RECONFIGURATION | The message includes information about primary carrier |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE goes into CELL_DCH state of primary carrier. |

Specific Message Contents:

RADIO BEARER RECONFIGURATION (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt) | <br>TDD<br>0 |

RADIO BEARER RECONFIGURATION FAILURE

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | Not checked. |

RADIO BEARER RECONFIGURATION (step 3)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in TS 34.108 clause 9 with the following exceptions

| Information Element | Value/remark |
|---|---|
| RadioBearerReconfiguration-r4-TDD128-add-ext-IEs | |
| frequencyInfo | secondary carrier 1frequency |

RADIO BEARER RECONFIGURATION (step 5)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in TS 34.108 clause 9 with the following exceptions.

| Information Element | Value/remark |
|---|---|
| RadioBearerSetup-r4-TDD128-add-ext-IEs | |

| | |
|---|---|
| frequencyInfo | secondary carrier 2 frequency |

RADIO BEARER RECONFIGURATION (step 7)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in TS 34.108 clause 9 with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Frequency info<br>- CHOICE mode<br>- UARFCN (Nt) | <br>TDD<br>primary carrier frequency |

#### 8.2.2.11a.5 Test requirement

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC.

After step 4 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH of secondary carrier1 using AM RLC.

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH of secondary carrier 2 using AM RLC

After step 8 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH of primary carrier using AM RLC.

### 8.2.2.12 Void

### 8.2.2.13 Void

### 8.2.2.14 Void

### 8.2.2.15 Void

### 8.2.2.16 Void

### 8.2.2.17 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Success

#### 8.2.2.17.1 Definition

#### 8.2.2.17.2 Conformance requirement

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency;

2> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

8.2.2.17.3 Test purpose

To confirm that the UE establishes radio bearers according to a RADIO BEARER RECONFIGURATION message.

8.2.2.17.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message, to the UE. The UE configures the common physical channel and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | | | Void | |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

| - RB stop/continue | Not Present |
| Maximum allowed UL TX power | Not Present |

#### 8.2.2.17.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

### 8.2.2.18 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Success (Cell re-selection)

#### 8.2.2.18.1 Definition

#### 8.2.2.18.2 Conformance requirement

If the UE performs cell re-selection during the reconfiguration procedure, the UE shall:

1> initiate a cell update procedure, as specified in subclause 8.3.1;

1> continue with the reconfiguration procedure.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.2.2.8, 8.3.1.7.

#### 8.2.2.18.3 Test purpose

To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message in cell 2 when a cell re-selection occurs after receiving a RADIO BEARER RECONFIGURATION message.

#### 8.2.2.18.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 and 2 are active.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.2.18**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |
| P-CCPCH (TDD) | dBm | -60 | -75 | -75 | -60 |

Table 8.2.2.18 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL_FACH state in cell 1. The SS configures RB2 to stop transmission and reception of RLC PDUs. On transmitting a RADIO BEARER RECONFIGURATION message to the UE on RB 1, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.18. The UE shall initiate the cell reselection procedure, which may occur either before or after submitting the RADIO BEARER RECONFIGURATION COMPLETE message for transmission on the DCCH using AM RLC. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH and configure RB2 to continue transmission and reception of RLC PDUs after receiving CELL UPDATE message. Any RADIO BEARER RECONFIGURATION COMPLETE message that was previously submitted for transmission in the UE will now be received by the SS. UE transmit a UTRAN MOBILTY INFORMATION CONFIRM message on the DCCH using AM RLC. If not already done so, the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE 1: The RADIO BEARER RECONFIGURATION COMPLETE message may be received by the SS either after reception of CELL UPDATE CONFIRM (Option 1) or after transmitting UTRAN MOBILITY INFORMATION CONFIRM (Option 2).

NOTE 2: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | SS | | The SS configures RB 2 to stop transmission and reception of RLC PDUs. |
| 1 | ← | | RADIO BEARER RECONFIGURATION | The message is transmitted on RB 1. |
| 2 | | | | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.18. |
| 3 | | | Void | |
| | | | | The following messages are transmitted in cell 2. |
| 4 | → | | CELL UPDATE | The value "cell reselection" shall be set in IE "cell update cause". |
| 5 | ← | | CELL UPDATE CONFIRM | See message content. |
| 5a | | SS | | The SS configures RB 2 to continue transmission and reception of RLC PDUs. |
| 5b | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 1) | |
| 6 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 2) | |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (AM DCCH for RRC) |
| - RB identity | 2 |
| - PDCP info | Not Present |

| - Timer_STATUS_periodic | Not Present |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Maximum allowed UL TX power | Not Present |

CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | "cell reselection" |

CELL UPDATE CONFIRM (Step 5)

Use the same message type found in clause 9 of TS 34.108, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 6)

Only the message type is checked.

#### 8.2.2.18.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "cell update cause" set to "cell reselection".

After step 5 UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

The UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. This message may be received by the SS earliest after step 5a and at latest after step 6.

### 8.2.2.19 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Subsequently received)

#### 8.2.2.19.1 Definition

#### 8.2.2.19.2 Conformance requirement

If the IE "RRC transaction identifier" is included in a received message, the UE shall perform the actions below. The UE shall:

If the received message is any of the messages:

- RADIO BEARER RECONFIGURATION; or

  …

the UE shall:

2> if the variable ORDERED_RECONFIGURATION is set to TRUE; or

2> if the variable CELL_UPDATE_STARTED is set to TRUE; or

2> if the table "Accepted transactions" in the variable TRANSACTIONS contains an entry with an IE "Message Type" set to ACTIVE SET UPDATE; or

2> if the received message contains a protocol error according to TS 25.331 clause 9 causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE:

3> if the IE "RRC transaction identifier" of the received message is identical to the "RRC transaction identifier" stored for the same "Message Type" as the received message in the table "Accepted transactions" in the variable TRANSACTIONS:

4> ignore the transaction; and

4> continue with any ongoing processes and procedures as the message was not received;

4> and end the procedure.

3> else:

…

Reference

3GPP TS 25.331 clause 8.6.3.11.

### 8.2.2.19.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER RECONFIGURATION message before the UE configures the radio bearer according to a previous RADIO BEARER RECONFIGURATION message, it ignores the new RADIO BEARER RECONFIGURATION message and configures the radio bearer according to the previous RADIO BEARER RECONFIGURATION message received.

### 8.2.2.19.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the radio bearer according to the RADIO BEARER RECONFIGURATION message prior to this new message. The UE ignores the new RADIO BEARER RECONFIGURATION message and configures according to the former RADIO BEARER RECONFIGURATION message. On completion of radio bearer configuration, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Periodic RLC STATUS PDU transmission is activated. For FDD, the UL scrambling code is set to "1". For TDD, the code combination is assigned by SS. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Sent before the "activation time" in step 1 has elapsed. Periodic RLC STATUS PDU transmission is not activated. For FDD, the UL scrambling code is set to "2".For TDD the code combination assigned is different to that assigned in step 1. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE ignores the RADIO BEARER RECONFIGURATION message in step 2 and performs configuration according to the RADIO BEARER RECONFIGURATION message in step 1. |
| 4 | | | Void | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD and PS Domain)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_DCH in PS" as found in TS 34.108 clause 9.1 with the following exceptions:

| - Primary CPICH info | | |
| - Primary scrambling code | Set to same code as used for cell 1 | |

RADIO BEARER RECONFIGURATION (Step 2) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_DCH in PS" found in TS 34.108 clause 9.1 with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| RRC transaction identifier | 0 | |
| Activation Time | Not Present | |
| CHOICE mode | TDD | |
| - Uplink DPCH timeslots and codes<br>- First timeslot code list | A different code combination to that used in step 1. | |
| Downlink information common for all radio links | Not Present | Rel-4 or later |
| Downlink information per radio link list | Not Present | R99 |
| Downlink information per radio link list | | |
| -Downlink information for each radio link<br>- Primary CCPCH info | Set to same as used for cell 1 | |

#### 8.2.2.19.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.2.20 Void

### 8.2.2.21 Void

### 8.2.2.22 Void

### 8.2.2.23 Radio Bearer Reconfiguration from CELL_FACH to CELL_PCH: Success

#### 8.2.2.23.1 Definition

#### 8.2.2.23.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If after state transition the UE enters CELL_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.2.23.3 Test purpose

To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message and enters CELL_PCH state after it received a RADIO BEARER RECONFIGURATION message, which invoke the UE to transit from CELL_FACH to CELL_PCH.

### 8.2.2.23.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and enters CELL_PCH state. SS calls for generic procedure C.4 to check that UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | SS | | | The UE is in CELL_PCH state. |
| 4 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in9 of TS 34.108 with following exceptions:

| Information Element | Value/remark |
|---|---|

8.2.2.23.5 Test requirement

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

## 8.2.2.24 Void

## 8.2.2.25 Void

## 8.2.2.26 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Incompatible Simultaneous Reconfiguration)

8.2.2.26.1 Definition

8.2.2.26.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

…

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

If the IE "Ciphering mode info" is present and if the IE "Reconfiguration" in the variable CIPHERING_STATUS is set to TRUE, the UE shall:

1> ignore this second attempt to change the ciphering configuration; and

1> set the variable INCOMPATIBLE_SECURITY_RECONFIGURATION to TRUE.

If the IE "Ciphering mode info" is present and if the IE "Reconfiguration" in the variable CIPHERING_STATUS is set to FALSE, the UE shall:

1> set the IE "Reconfiguration" in the variable CIPHERING_STATUS to TRUE;

…

If the variable INCOMPATIBLE_SECURITY_RECONFIGURATION is set to TRUE due to the received reconfiguration message, the UE shall:

1> transmit a failure response message as specified in TS 25.331 subclause 8.2.2.9, setting the information elements as specified below:

2> include the IE "RRC transaction identifier"; and

2> set it to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

2> clear that entry;

2> set the IE "failure cause" to the cause value "incompatible simultaneous reconfiguration".

1> set the variable INCOMPATIBLE_SECURITY_RECONFIGURATION to FALSE;

1> continue with any ongoing processes and procedures as if the reconfiguration message was not received.

The procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2.12a, clause 8.6.3.4.

### 8.2.2.26.3 Test purpose

1. To confirm that the UE ignores the subsequent security reconfiguration information which is contained in the RADIO BEARER RECONFIGURATION message.
2. To confirm that the UE reconfigures according to the SECURITY MODE COMMAND message.
3. To confirm that the UE transmits RADIO BEARER RECONFIGURATION FAILURE message on the uplink DCCH using AM RLC.
4. To confirm that the UE transmits SECURITY MODE COMPLETE message on the uplink DCCH using AM RLC.

### 8.2.2.26.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (state 6-9) or PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. The SS transmits a SECURITY MODE COMMAND message. SS then transmits a RADIO BEARER RECONFIGURATION message. The UE ignores the RADIO BEARER RECONFIGURATION message and transmits a RADIO BEARER RECONFIGURATION FAILURE message and configures the radio bearers according to the SECURITY MODE COMMAND message. On completion of ciphering reconfiguration, the UE shall transmit a SECURITY MODE COMPLETE message on the DCCH using AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | SECURITY MODE COMMAND | This message includes IE "Ciphering mode info". |
| 2 | ← | | RADIO BEARER RECONFIGURATION | SS send this message before the activation time in step 1 expires. This message includes IE "Ciphering mode info". |
| 3 | → | | RADIO BEARER RECONFIGURATION FAILURE | The UE ignores the ciphering mode information in step 2. |
| 4 | → | | SECURITY MODE COMPLETE | |

Specific Message Contents

SECURITY MODE COMMAND (Step 1)

If the initial state of the UE is state 6-9, use the message sub-type in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Ciphering mode info | |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Use one of the supported ciphering algorithms |
| - Ciphering activation time for DPCH | (256+CFN-(CFN MOD 8 + 8))MOD 256 |
| - Radio bearer downlink ciphering activation time info | |
| - Radio bearer activation time | |
| - RB identity | 1 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 2 |
| - RLC sequence number | Current RLC SN+4 |
| - RB identity | 3 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 4 |
| - RLC sequence number | Current RLC SN+X (Note 1) |

If the initial state of the UE is state 6-10, use the message sub-type in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Ciphering mode info | |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Use one of the supported ciphering algorithms |
| - Ciphering activation time for DPCH | (256+CFN-(CFN MOD 8 + 8))MOD 256 |
| - Radio bearer downlink ciphering activation time info | |
| - Radio bearer activation time | |
| - RB identity | 1 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 2 |
| - RLC sequence number | Current RLC SN+4 |
| - RB identity | 3 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 4 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 20 |
| - RLC sequence number | Current RLC SN+X (Note 1) |

RADIO BEARER RECONFIGURATION (for Step 2)

If the initial state of the UE is state 6-9, use the message sub-type entitled "Speech in CS" or "Non-speech in CS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Ciphering mode info | |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Use one of the supported ciphering algorithms |
| - Ciphering activation time for DPCH | (256+CFN-(CFN MOD 8 + 8))MOD 256 |
| - Radio bearer downlink ciphering activation time info | |
| - Radio bearer activation time | |
| - RB identity | 1 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 2 |
| - RLC sequence number | Current RLC SN+4 |
| - RB identity | 3 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 4 |
| - RLC sequence number | Current RLC SN+X (Note 1) |

If the initial state of the UE is state 6-10, use the message sub-type entitled "Packet to CELL_DCH from CELL_DCH in PS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Ciphering mode info | |
| - Ciphering mode command | Start/restart |
| - Ciphering algorithm | Use one of the supported ciphering algorithms |
| - Ciphering activation time for DPCH | (256+CFN-(CFN MOD 8 + 8))MOD 256 |
| - Radio bearer downlink ciphering activation time info | |
| - Radio bearer activation time | |
| - RB identity | 1 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 2 |
| - RLC sequence number | Current RLC SN+4 |
| - RB identity | 3 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 4 |
| - RLC sequence number | Current RLC SN+X (Note 1) |
| - RB identity | 20 |
| - RLC sequence number | Current RLC SN+X (Note 1) |

NOTE 1: X is set to 1.

RADIO BEARER RECONFIGURATION FAILURE (for Step 3)

Check that the message received is the same as the message sub-type found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Failure cause | incompatible simultaneous reconfiguration |

### 8.2.2.26.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC and set the failure cause to "incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a SECURITY MODE COMPLETE message on the DCCH using AM RLC specified in step 1.

## 8.2.2.27 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH (Frequency modification): Success

### 8.2.2.27.1 Definition

-

### 8.2.2.27.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RECONFIGURATION message;

it shall:

1> perform the physical layer synchronisation procedure as specified in TS 25.214 for FDD and TS 25.224 for TDD;

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the UE receives a RADIO BEARER RECONFIGURATION message including the IE "RB information to reconfigure" that only includes the IE "RB identity", the UE shall:

1> handle the message as if IE "RB information to reconfigure" was absent.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.2.27.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_DCH according to the RADIO BEARER RECONFIGURATION message.
2. To confirm that the UE transmits the RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

### 8.2.2.27.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: CS-DCCH_DTCH_DCH (state 6-9) or PS_DCCH_DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.2.27**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -72 | Off | -55 |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.2.27 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.27. For FDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code which is assigned to P-CPICH of cell 6. For TDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE shall selects cell 6 and reconfigure its radio access bearer after receiving this message, and then remains in CELL_DCH state. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC after complete configuration according to receiving RADIO BEARER RECONFIGURATION message. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.27. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.27. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6 for FDD mode or IE "Primary CCPCH info" set to cell 6 parameters. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 3) (FDD)

The contents RADIO BEARER RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to in PS" or "Speech in CS" or "Non speech from CELL_DCH to CELL_DCH in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | FDD |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

RADIO BEARER RECONFIGURATION (Step 3) (TDD)

The contents RADIO BEARER RECONFIGURATION message in this test case is identical the message sub-type indicated by "Packet to in PS" or "Speech in CS" or "Non speech from CELL_DCH to CELL_DCH in CS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| - Cell parameters ID | As used for cell 6 |

#### 8.2.2.27.5 Test requirement

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 4 the UE shall be in CELL_DCH state in cell 6.

### 8.2.2.28 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH (Transport channel type switching with frequency modification): Success

#### 8.2.2.28.1 Definition

-

#### 8.2.2.28.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the UE receives a RADIO BEARER RECONFIGURATION message including the IE "RB information to reconfigure" that only includes the IE "RB identity", the UE shall:

1> handle the message as if IE "RB information to reconfigure" was absent.

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> if the received reconfiguration message included the IE "Primary CPICH info" for FDD or the IE "Primary CCPCH info" for TDD, and the UE selects another cell than indicated by this IE:

2> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

1> select PRACH according to TS 25.331 subclause 8.5.17;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> use the transport format set given in system information;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> ignore that IE and stop using DRX.

1> if the contents of the variable C_RNTI is empty:

2> perform a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "Cell reselection";

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the new configuration after the state transition.

1> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2.

### 8.2.2.28.3 Test purpose

1. To confirm that the UE transits from CELL_DCH to CELL_FACH according to the RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

### 8.2.2.28.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 in active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.2.28**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -72 | Off | -55 |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.2.28 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in idle mode of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.28. SS requests operator to make an outgoing call. The SS and UE execute procedure P5. Next The SS and the UE execute procedure P9 and then execute procedure P13. For FDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. For TDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. On receiving the RADIO BEARER RECONFIGURATION message, the UE shall select cell 6 and transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC after complete configuration according to the RADIO BEARER RECONFIGURATION message. Upon completion of the procedure, the SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.28. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure) P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.28. |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Including IE "Frequency info" and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6 for FDD mode or IE "Primary CCPCH info" set to cell 6 parameters. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message on the common physical channel in cell 6. |
| 8 | ←→ | | CALL C.2 | f the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 5) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | FDD |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

RADIO BEARER RECONFIGURATION (Step 5) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| - Cell parameters ID | As used for cell 6 |

#### 8.2.2.28.5 Test requirement

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 7 the UE shall be in CELL_FACH state.

### 8.2.2.29 Void

### 8.2.2.30 Void

### 8.2.2.31 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH (Frequency modification): Success

#### 8.2.2.31.1 Definition

-

#### 8.2.2.31.2 Conformance requirement

If the UE receives:

…

-a RADIO BEARER RECONFIGURATION message; or

…

it shall:

…

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the UE receives a RADIO BEARER RECONFIGURATION message including the IE "RB information to reconfigure" that only includes the IE "RB identity", the UE shall:

1> handle the message as if IE "RB information to reconfigure" was absent.

NOTE: The RADIO BEARER RECONFIGURATION message always includes the IE "RB information to reconfigure". UTRAN has to include it even if it does not require the reconfiguration of any RB.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

1> in TDD when "Primary CCPCH Info" is included indicating a new target cell and "New C-RNTI" is not specified:

2> remove any C-RNTI from MAC;

2> clear the variable C_RNTI.

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

…

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

### 8.2.2.31.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_DCH according to the RADIO BEARER RECONFIGURATION message.
2. To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a dedicated physical channel in a different frequency.

### 8.2.2.31.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.2.2.31**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | Off | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | Off | -60 |

Table 8.2.2.31 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.31. For FDD mode, the SS switches its downlink transmission power settings to columns

"T1" and transmits a RADIO BEARER RECONFIGURATION message IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. For TDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE shall select cell 6 and then enter CELL_DCH state according to receiving RADIO BEARER RECONFIGURATION message. Finally the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. Upon completion of the procedure, the SS calls for generic procedure C.3 to check that UE is in CELL_DCH state in cell 6.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.31. |
| 2 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.31. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6 for FDD mode or IE "Primary CCPCH info" set to cell 6 parameters. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 5 | ←→ | | Call C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state in cell 6, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 3 for FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | FDD |
| - UARFCN uplink(Nu) | Not Present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

RADIO BEARER RECONFIGURATION (Step 3 for TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| - Cell parameters ID | As used for cell 6 |

#### 8.2.2.31.5 Test requirement

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 4 the UE shall be in CELL_DCH state in cell 6.

### 8.2.2.32 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_FACH (Frequency modification): Success

#### 8.2.2.32.1 Definition

-

#### 8.2.2.32.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the UE receives a RADIO BEARER RECONFIGURATION message including the IE "RB information to reconfigure" that only includes the IE "RB identity", the UE shall:

1> handle the message as if IE "RB information to reconfigure" was absent.

If the UE was in CELL_FACH state upon reception of the reconfiguration message and remains in CELL_FACH state, the UE shall:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency;

2> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selected another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

3> initiate a cell update procedure according to TS 25.331 subclause 8.3.1 using the cause "cell reselection";

3> when the cell update procedure completed successfully:

4> proceed as below.

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

8.2.2.32.3 Test purpose

1. To confirm that the UE transits from CELL_FACH to CELL_FACH according to the RADIO BEARER RECONFIGURATION message.
2. To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC on a common physical channel in a different frequency.

8.2.2.32.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS".

Test Procedure

**Table 8.2.2.32**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -72 | Off | -55 |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.2.32 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.32. SS requests operator to make an outgoing call. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. For FDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. For TDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE shall select cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC after it completes configuration according to the received RADIO BEARER RECONFIGURATION message. Upon completion of the procedure, the SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.32. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure) P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.32. |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6 for FDD mode or IE "Primary CCPCH info" set to cell 6 parameters. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE sends this message on a common physical channel in cell 6. |
| 8 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 6) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | FDD |
| - UARFCN uplink(Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CPICH info | |
| - Primary Scrambling Code | Set to same code as used for cell 6 |

RADIO BEARER RECONFIGURATION (Step 6) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| CHOICE mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| - Cell parameters ID | As used for cell 6 |

#### 8.2.2.32.5 Test requirement

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 6.

After step 7 the UE shall be in CELL_FACH state of cell 6.

### 8.2.2.33 Void

### 8.2.2.34 Radio Bearer Reconfiguration for transition from CELL_FACH to URA_PCH (Frequency modification): Success

#### 8.2.2.34.1 Definition

#### 8.2.2.34.2 Conformance requirement

If the UE receives:

-a RADIO BEARER RECONFIGURATION message;

it shall:

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

1> enter a state according to TS 25.331 subclause 8.6.3.3.

In case the UE receives a RADIO BEARER RECONFIGURATION message including the IE "RB information to reconfigure" that only includes the IE "RB identity", the UE shall:

1> handle the message as if IE "RB information to reconfigure" was absent.

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC, using the old configuration before the state transition.

If after state transition the UE enters URA_PCH state, the UE shall, after the state transition and transmission of the response message:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304 on that frequency.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to TS 25.304.

1> prohibit periodical status transmission in RLC;

1> remove any C-RNTI from MAC;

1> clear the variable C_RNTI;

1> select Secondary CCPCH according to TS 25.331 subclause 8.5.19;

1> if the IE "UTRAN DRX cycle length coefficient" is included in the same message:

2> use the value in the IE "UTRAN DRX Cycle length coefficient" for calculating Paging occasion and PICH Monitoring Occasion as specified in TS 25.331 subclause 8.6.3.2.

1> if the IE "UTRAN DRX cycle length coefficient" is not included in the same message:

2> keep the configuration existing before the reception of the message and transmit a failure response message as specified in TS 25.331subclause 8.2.2.9

1> if the UE enters URA_PCH state, and after cell selection the criteria for URA update caused by "URA reselection" according to subclause TS 25.331 8.3.1 is fulfilled:

2> initiate a URA update procedure according to TS 25.331 subclause 8.3.1 using the cause "URA reselection";

2> when the URA update procedure is successfully completed:

3> the procedure ends.

Reference

3GPP TS 25.331 clause 8.2.2, 8.5 and 8.6.

### 8.2.2.34.3 Test purpose

1. To confirm that the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To confirm that the UE transits from CELL_FACH to URA_PCH according to the RADIO BEARER RECONFIGURATION message.
3. To confirm that the UE selects a common physical channel in a different frequency.

### 8.2.2.34.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 are active

UE: Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

**Table 8.2.2.34**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -72 | Off | -55 |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.2.34 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 6.

The UE is in CELL_FACH state of cell 1 and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.34. SS requests operator to make an outgoing call. The SS and UE execute procedure P6. Next The SS and the UE execute procedure P10 and then execute procedure P14. For FDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6. For TDD mode, the SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and enter URA_PCH state of cell 6. Upon completion of the procedure, the SS calls for generic procedure C.5 to check that UE is in URA_PCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | System Information Block type 11 | The UE is in idle mode and camped on cell 1. The contents of System Information Block type 11 message are different from the default settings and the SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.34. SS requests operator to make an outgoing call. |
| 2 | ←→ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ←→ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ←→ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.34. |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CPICH info" set to Primary Scrambling Code assigned to P-CPICH of cell 6 for FDD mode or IE "Primary CCPCH info" set to cell 6 parameters. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmit this message on the common physical channel. n cell 1. |
| 8 | | | | The SS waits for 5 s. |
| 9 | ←→ | | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 6) (FDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | |
| CHOICE mode | FDD |
| - UARFCN uplink (Nu) | Same uplink UARFCN as used for cell 6 |
| - UARFCN downlink (Nd) | Same downlink UARFCN as used for cell 6 |
| Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 6 |

RADIO BEARER RECONFIGURATION (Step 6) (TDD)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in [9] TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | URA_PCH |
| UTRAN DRX cycle length coefficient | 3 |
| Frequency info | |
| CHOICE mode | TDD |
| - UARFCN (Nt) | Same UARFCN as used for cell 6 |
| Downlink information for each radio links | |
| - Primary CCPCH info | |
| - Cell parameters ID | As used for cell 6 |

#### 8.2.2.34.5 Test requirement

After step 6 the UE shall transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC in cell 1.

After step 8 the UE shall be in URA_PCH state in cell 6.

### 8.2.2.35 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Successful channel switching with multiple PS RABs established

#### 8.2.2.35.1 Definition

#### 8.2.2.35.2 Conformance requirement

If the IE "RB information to release" is included, the UE shall apply the following actions on the radio bearer identified with the value of the IE "RB identity". The UE shall:

1> if the IE "RB identity" is set to a value less than 4:

2> set the variable INVALID_CONFIGURATION to TRUE.

1> if the IE "RB identity" refers to a signalling radio bearer:

2> release the RLC entity for the signalling radio bearer;

2> delete the information about the signalling radio bearer from the variable ESTABLISHED_RABS.

1> if the IE "RB identity" refers to a radio bearer:

2> release the PDCP and RLC entities for that radio bearer;

2> indicate release of the RAB subflow associated with the radio bearer to upper layers;

2> delete the information about the radio bearer from the variable ESTABLISHED_RABS;

2> when all radio bearers belonging to the same radio access bearer have been released:

3> indicate release of the radio access bearer to upper layers providing the "CN domain identity" together with the "RAB identity" stored in the variable ESTABLISHED_RABS;

3> delete all information about the radio access bearer from the variable ESTABLISHED_RABS.

…

If the IE "RB mapping info" is included, the UE shall:

1> for each multiplexing option of the RB:

2> if a transport channel that would not exist as a result of the message (i.e. removed in the same message in IE "Deleted DL TrCH information" and IE "Deleted UL TrCH information") is referred to:

3> set the variable INVALID_CONFIGURATION to TRUE.

2> if a multiplexing option that maps a logical channel corresponding to a TM-RLC entity onto RACH, FACH or DSCH is included:

3> set the variable INVALID_CONFIGURATION to TRUE.

2> if the multiplexing option realises the radio bearer on the uplink (resp. on the downlink) using two logical channels with different values of the IE "Uplink transport channel type" (resp. of the IE "Downlink transport channel type"):

3> set the variable INVALID_CONFIGURATION to TRUE.

2> if that RB is using TM and the IE "Segmentation indication" is set to TRUE and, based on the multiplexing configuration resulting from this message, the logical channel corresponding to it is mapped onto the same transport channel as another logical channel:

3> set the variable INVALID_CONFIGURATION to TRUE.

2> if the transport channel considered in that multiplexing option is different from RACH and if that RB is using AM and the set of RLC sizes applicable to the logical channel transferring data PDUs has more than one element:

3> set the variable INVALID_CONFIGURATION to TRUE.

2> if that RB is using UM or TM and the multiplexing option realises it using two logical channels:

3> set the variable INVALID_CONFIGURATION to TRUE.

2> for each logical channel in that multiplexing option:

3> if the value of the IE "RLC size list" is set to "Explicit list":

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is included in the same message, and the value (index) of any IE "RLC size index" in the IE "Explicit list" does not correspond to an "RLC size" in the IE transport format set of that transport channel given in the message; or

4> if the transport channel this logical channel is mapped on in this multiplexing option is different from RACH, and if a "Transport format set" for that transport channel is not included in the same message, and the value (index) of any IE "RLC size index" in the IE "Explicit list" does not correspond to an "RLC size" in the stored transport format set of that transport channel; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is included in the same message, and the value of any IE "Logical channel list" in the transport format set is not set to "Configured"; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is not included in the same message, and the value of any IE "Logical channel list" in the stored transport format set of that transport channel is not set to "Configured":

5> set the variable INVALID_CONFIGURATION to TRUE.

3> if the value of the IE "RLC size list" is set to "All":

4> if the transport channel this logical channel is mapped on is RACH; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is included in the same message, and the value of any IE "Logical channel list" in the transport format set is not set to "Configured"; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is not included in the same message, and the value of any IE "Logical channel list" in the stored transport format set of that transport channel is not set to "Configured":

5> set the variable INVALID_CONFIGURATION to TRUE.

3> if the value of the IE "RLC size list" is set to "Configured":

4> if the transport channel this logical channel is mapped on is RACH; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is included in the same message, and for none of the RLC sizes defined for that transport channel in the "Transport format set", the "Logical Channel List" is set to "All" or given as an "Explicit List" which contains this logical channel; or

4> if a "Transport format set" for the transport channel this logical channel is mapped on in this multiplexing option is not included in the same message, and for none of the RLC sizes defined in the transport format set stored for that transport channel, the "Logical Channel List" is set to "All" or given as an "Explicit List" which contains this logical channel:

5> set the variable INVALID_CONFIGURATION to TRUE.

1> if, as a result of the message this IE is included in, several radio bearers can be mapped onto the same transport channel, and the IE "Logical Channel Identity" was not included in the RB mapping info of any of those radio bearers for a multiplexing option on that transport channel or the same "Logical Channel Identity" was used more than once in the RB mapping info of those radio bearers for the multiplexing options on that transport channel:

2> set the variable INVALID_CONFIGURATION to TRUE.

1> delete all previously stored multiplexing options for that radio bearer;

1> store each new multiplexing option for that radio bearer;

1> if the IE "Uplink transport channel type" is set to the value "RACH":

2> refer the IE "RLC size index" to the RACH Transport Format Set of the first PRACH received in the IE "PRACH system information list" received in System Information Block type 5 or System Information Block type 6.

1> determine the sets of RLC sizes that apply to the logical channels used by that RB, based on the IEs "RLC size list" and/or the IEs "Logical Channel List" included in the applicable "Transport format set" (either the ones received in the same message or the ones stored if none were received); and

1> in case the selected multiplexing option is a multiplexing option on RACH:

2> ignore the RLC size indexes that do not correspond to any RLC size within the Transport Format Set stored for RACH.

1> if RACH is the transport channel to be used on the uplink, if that RB has a multiplexing option on RACH and if it is using AM:

2> apply the largest size amongst the ones derived according to the previous bullet for the RLC size (or RLC sizes in case the RB is realised using two logical channels) for the corresponding RLC entity.

NOTE: The IE "RB mapping info" is only included in IE "Predefined RB configurations" in system information when used for Inter-RAT handover to UTRAN and there is no AM RLC size change involved in this case.

1> if that RB is using AM and the RLC size applicable to the logical channel transporting data PDUs is different from the one derived from the previously stored configuration:

2> re-establish the corresponding RLC entity;

2> configure the corresponding RLC entity with the new RLC size;

2> for each AM RLC radio bearer in the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" in the variable ESTABLISHED_RABS whose RLC size is changed; and

2> for each AM RLC signalling radio bearer in the CN domain as indicated in the IE "CN domain identity" in the variable LATEST_CONFIGURED_CN_DOMAIN whose RLC size is changed:

3> if the IE "Status" in the variable CIPHERING_STATUS of this CN domain is set to "Started":

4> if this IE was included in CELL UPDATE CONFIRM:

5> set the HFN values for the corresponding RLC entity equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if this IE was included in a reconfiguration message:

5> set the HFN values for the corresponding RLC entity equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

1> if that RB is using UM:

2> indicate the largest applicable RLC size to the corresponding RLC entity.

1> configure MAC multiplexing according to the selected multiplexing option (MAC multiplexing shall only be configured for a logical channel if the transport channel it is mapped on according to the selected multiplexing option is the same as the transport channel another logical channel is mapped on according to the multiplexing option selected for it);

1> configure the MAC with the logical channel priorities according to selected multiplexing option;

1> configure the MAC with the set of applicable RLC Sizes for each of the logical channels used for that RB;

1> if there is no multiplexing option applicable for the transport channels to be used in the RRC state indicated in the IE "RRC State Indicator" included in the received message:

2> set the variable INVALID_CONFIGURATION to TRUE.

1> if there is more than one multiplexing option applicable for the transport channels to be used in the RRC state indicated in the IE "RRC State Indicator" included in the received message:

2> set the variable INVALID_CONFIGURATION to TRUE.

In case IE "RLC info" includes IE "Downlink RLC mode " ("DL RLC logical channel info" is mandatory present) but IE "Number of downlink RLC logical channels" is absent in the corresponding IE "RB mapping info", the parameter values are exactly the same as for the corresponding UL logical channels. In case two multiplexing options are specified for the UL, the first options shall be used as default for the DL. As regards the IE "Channel type", the following rule should be applied to derive the DL channel type from the UL channel included in the IE:

| Channel used in UL | DL channel type implied by "same as" |
|---|---|
| DCH | DCH |
| RACH | FACH |
| USCH | DSCH |

If ciphering is applied, UTRAN should not map Transparent Mode RBs of different CN domains on the same transport channel. In such case the UE behaviour is not specified.

Reference

3GPP TS 25.331 clause 8.6.4.6, 8.6.4.8.

### 8.2.2.35.3 Test purpose

To confirm that the UE transit from CELL_DCH to CELL_FACH state according to a RADIO BEARER RECONFIGURATION message when having two radio access bearers established.

To confirm that the UE transit from CELL_FACH to CELL_DCH state according to a RADIO BEARER RECONFIGURATION message when having two radio access bearers established.

To confirm that the UE release two radio access bearers included in a single RADIO BEARER RELEASE message.

### 8.2.2.35.4 Method of test

Initial Condition

System Simulator: 1 cell.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH + DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Related ICS/IXIT statements

| | |
|---|---|
| Support of PS service | Yes/No |
| Secondary PDP context activation procedure | Yes/No |

Test Procedure

The UE is in CELL_DCH state of cell 1. The UE initiates the activation of a second PDP context, upon which the SS establishes a PS domain RAB and confirms the PDP context activation. The Radio Bearer Configuration will be based on the reference configuration in 34.108 section 6.10.2.4.1.57.( Interactive or background / UL:64 DL:64 kbps / PS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH).

Next, the SS transmits a RADIO BEARER RECONFIGURATION message to move the UE to CELL_FACH state. The UE shall apply the new configuration and return the RADIO BEARER RECONFIGURATION COMPLETE message.

The SS will then transmit a RADIO BEARER RECONFIGURATION message to move the UE to CELL_DCH state. The UE shall apply the new configuration and return the RADIO BEARER RECONFIGURATION COMPLETE message.

A DEACTIVATE PDP CONTEXT REQUEST message is then sent by the SS to request the UE to deactivate both PDP contexts. The UE shall reply with a DEACTIVATE PDP CONTEXT ACCEPT message. After this procedure, the SS transmits a RADIO BEARER RELEASE. The UE shall release both radio bearers and transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1. |
| 2 | → | | UPLINK DIRECT TRANSFER (ACTIVATE SECONDARY PDP CONTEXT REQUEST) | SM |
| 3 | ← | | RADIO BEARER SETUP | Establishment of second PS domain RAB |
| 4 | → | | RADIO BEARER SETUP COMPLETE | |
| 5 | ← | | DOWNLINK DIRECT TRANSFER (ACTIVATE SECONDARY PDP CONTEXT ACCEPT) | SM |
| 6 | ← | | RADIO BEARER RECONFIGURATION | To move the UE to CELL_FACH. RB reconfiguration procedure is used to:<br>- Modify RLC timer values<br>The message includes a C-RNTI and the Primary Scrambling code of cell 1. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ← | | RADIO BEARER RECONFIGURATION | To move the UE to CELL_DCH. RB reconfiguration procedure is used to:<br>- Re- specify the DCH configuration (don't re- use stored multiplexing option)<br>- Modify RLC timer values |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | DEACTIVATE PDP CONTEXT REQUEST | Request a deactivation both PDP contexts |
| 11 | → | | DEACTIVATE PDP CONTEXT ACCEPT | Accept the PDP context deactivation |
| 12 | ← | | RADIO BEARER RELEASE | Release of two PS domain RABs |
| 13 | → | | RADIO BEARER RELEASE COMPLETE | |

For Steps 2, 3, 4, 5 see also Test Case 12.9.13 "Service Request / RAB re-establishment / UE initiated / multiple PDP contexts" for additional details.

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 3)

The contents of RADIO BEARER SETUP message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | |
| - RAB identity | 0000 0110B or a value that is different from the one used for setting up the primary PDP Context. The first/ leftmost bit of the bit string contains the most significant bit of the RAB identity. |
| RB information to setup | |
| - RB identity | 22 |
| - RB mapping info | |
| - Information for each multiplexing option | 2 RBMuxOptions |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 1 |
| - Logical channel identity | 8 |
| - CHOICE RLC size list | Configured |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 6 |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 8 |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 8 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | Reference to clause 6 Parameter Set |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 8 |
| RB information to be affected | |
| - RB identity | 20 |
| - RB mapping info | |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 1 |
| - Logical channel identity | 7 |
| - CHOICE RLC size list | Configured |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 6 |
| - DL DSCH Transport channel identity | Not Present |
| - DL HS-DSCH MAC-d flow identity | Not Present |
| - Logical channel identity | 7 |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 7 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | Reference to clause 6 Parameter Set |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |

| | |
|---|---|
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 7 |

RADIO BEARER RECONFIGURATION (Step 6) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |
| RB information to reconfigure list | |
| - RB information to reconfigure | |
| - RB identity | 20 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 700 |
| - Max_RST | 6 |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | Not Present |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | FALSE |
| - Timer_STATUS_periodic | Not Present |
| - RB information to reconfigure | |
| - RB identity | 22 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 700 |
| - Max_RST | 6 |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | Not Present |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | FALSE |
| - Timer_STATUS_periodic | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 1 |

RADIO BEARER RECONFIGURATION (Step 6) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |
| RB information to reconfigure list | |
| - RB information to reconfigure | |
| - RB identity | 20 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 700 |
| - Max_RST | 6 |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | Not Present |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | FALSE |
| - Timer_STATUS_periodic | Not Present |
| - RB information to reconfigure | |
| - RB identity | 22 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 700 |
| - Max_RST | 6 |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | Not Present |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | FALSE |
| - Timer_STATUS_periodic | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CCPCH info | Set to same as used for cell 1 |

RADIO BEARER RECONFIGURATION (Step 8) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_FACH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | |
| - RB identity | 20 |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - SDU discard mode | No discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |

| - Timer_RST | 600 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 250 |
| - Timer_poll | 250 |
| - Poll_PDU | Not present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |

| Information Element | Value/remark |
|---|---|
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - RB mapping info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 1 |
| - Logical channel identity | 8 |
| - CHOICE RLC size list | Configured |
| - MAC logical channel priority | 6 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 6 |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 8 |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CCPCH info | Set to same as used for cell 1 |

RADIO BEARER RELEASE (Step 12)

The contents of RADIO BEARER RELEASE message in this test case are identical the message sub-type indicated by "Packet to CELL_DCH from CELL_DCH in PS" in [9] TS 34.108 clause 9, with the following exception:

| Information Element | Value/remark |
|---|---|
| RB information to release | |
| - RB identity | 20 |
| RB information to release | |
| - RB identity | 22 |

#### 8.2.2.35.5 Test requirement

After step 3 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 7 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 12 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.2.36 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception)

#### 8.2.2.36.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

8.2.2.36.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in FDD or 1.28 Mcps TDD caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.36.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.36.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (step 1)(FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |

| Deleted DL TrCH information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 6 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |
| Downlink information for each radio link | |
| - Serving HS-DSCH radio link indicator | TRUE |

### 8.2.2.36.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.36a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception) (TDD only)

### 8.2.2.36a.1 Definition and applicability

All UEs which support TDD and HS-PDSCH.

### 8.2.2.36a.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in FDD or 1.28 Mcps TDD caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.36a.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH on the secondary carrier according to the received RADIO BEARER RECONFIGURATION message.

To confirm the UE recognizes correctly the position of UpPCH indicated by the network and completes the access procedure according to the configuration sent by the network.

### 8.2.2.36a.4 Method of test

Initial Condition

System Simulator: 1 cell configures three carriers, one primary carrier with two secondary carriers.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17 on the secondary carrier) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state on the secondary carrier and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (step 1) ( 1.28 Mcps TDD)

| - DCH quality target | Not Present |

8.2.2.36a.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.36b Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success ( (inter-band frequency hard handover, Start and stop of HS-DSCH reception, LCR TDD band a-f))

### 8.2.2.36b.1 Definition and applicability

All UEs which support LCR TDD and HS-PDSCH.

### 8.2.2.36b.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration in FDD or 1.28 Mcps TDD caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for an HS-DSCH related reconfiguration in 3.84 Mcps TDD or 7.68 Mcps TDD caused by the received message:

3> start using, at activation time T, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.36b.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message both in LCR TDD band A and band F in conjunction with a inter-band frequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.36b.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive. cell 1 and cell 6 belong to different frequency bands.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports LCR TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.2.36b.4**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -55 | -72 | Off | -55 |

Table 8.2.2.36b.4 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 6.

SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.36b.4 The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH .It includes IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.. The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. It includes IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set to cell 6 parameters. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.36b.4. |
| 7 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception. including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set cell 6 parameters. |
| 8 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception. including IE "Frequency info" set to frequency information of cell 6 and IE "Primary CCPCH info" set cell 6 parameters. |
| 11 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 12 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (step 1) ( 1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Downlink information for each radio link | | |
| - CHOICE mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Same Cell parameters ID as used for cell 6 | |
| - SCTD indicator | FALSE | |

#### 8.2.2.36b.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 1.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 1.

After step 9, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 6.

After step 12, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 6.

### 8.2.2.36c Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success ( Start and stop of HS-DSCH reception)( In a different frequency band)

#### 8.2.2.36c.1 Definition and applicability

Same definition and applicability as in clause 8.2.2.36a except that UE supports different frequency bands for TDD.

#### 8.2.2.36c.2 Conformance requirement

Same conformance requirement as in clause 8.2.2.36a.

#### 8.2.2.36c.3 Test purpose

Same test purpose as in clause 8.2.2.36a. except that UE can work in different frequency band.

#### 8.2.2.36c.4 Method of test

Same method of test as in clause 8.2.2.36a except for Expected sequence

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 2 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 5 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| | | | | UE will run test procedure for 2 kinds of condition. The first,. primary carrier and the secondary carriers of the UE work in same frequency band. Secondly,, primary carrier and the secondary carriers of the UE work in different frequency band. |

#### 8.2.2.36c.5 Test requirements

Same test requirements as in clause 8.2.2.36a.

### 8.2.2.37 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and from CELL_FACH to CELL_DCH: Success (start and stop of HS-DSCH reception)

#### 8.2.2.37.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.2.37.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor;

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> clear any stored IE "Downlink HS-PDSCH information";

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25

8.2.2.37.3 Test purpose

To confirm that the UE transits to CELL_FACH state from CELL_DCH state and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

To confirm that the UE transits to CELL_DCH state from CELL_FACH state and starts receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.37.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_FACH (state 6-8) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_FACH state and SS establishes a radio bearer mapped on HS-DSCH by transmitting a RADIO BEARER SETUP message. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, resumes HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | ACTIVATE PDP CONTEXT ACCEPT | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and transit to CELL_FACH state, |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and transit to CELL_DCH state |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_FACH in PS" in 34.108.

RADIO BEARER RECONFIGURATION (Step 4)(FDD)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

| -Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 1 |

RADIO BEARER RECONFIGURATION (Step 6)(FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |

| Information Element | Value/remark |
|---|---|
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| - RB stop/continue | Not Present |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not Present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - POhsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | -3 dB |
| - CHOICE mode | FDD (no data) |
| Downlink information for each radio link | |
| - Serving HS-DSCH radio link indicator | TRUE |

RADIO BEARER RECONFIGURATION (Step 6) ( 1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 except for the following:

### 8.2.2.37.5 Test requirements

After step 4, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 6, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.38 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception)

### 8.2.2.38.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

### 8.2.2.38.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.6.3.1, 8.2.2.3, 8.5.25

### 8.2.2.38.3 Test purpose

To confirm that the UE reconfigures the radio bearer while being mapped to HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.38.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD

- UE supports HS-PDSCH

Test Procedure

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)(FDD)

#### 8.2.2.38.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.39 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, start and stop of HS-DSCH reception)

#### 8.2.2.39.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

#### 8.2.2.39.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.3.5.1.2, 8.5.25, 8.6.3.1

### 8.2.2.39.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.39.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.2.39**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.2.39 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.39. SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1. The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 0a | SS | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.39. |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, stop of HS-DSCH reception |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 6. |
| 2a | SS | | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.39. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, start of HS-DSCH reception |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE sends this message on a dedicated physical channel in cell 1. |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| - Cell parameters ID | Reference clause 6.1.4 Default settings for cell 1 | |
| - SCTD indicator | FALSE | |

#### 8.2.2.39.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.40 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and from CELL_FACH to CELL_DCH: Success (frequency modification, start and stop of HS-DSCH reception)

#### 8.2.2.40.1 Definition and applicability

All UEs which support FDD or TDD and HS-PDSCH.

8.2.2.40.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if "DPCH frame offset" is included for one or more RLs in the active set:

2> use its value to determine the beginning of the DPCH frame in accordance with the following:

3> if the received IE "DPCH frame offset" is across the value range border compared to the DPCH frame offset currently used by the UE:

4> consider it to be a request to adjust the timing with 256 chips across the frame border (e.g. if the UE receives value 0 while the value currently used is 38144 consider this as a request to adjust the timing with +256 chips).

3> if after taking into account value range borders, the received IE "DPCH frame offset" corresponds to a request to adjust the timing with a step exceeding 256 chips:

4> set the variable INVALID_CONFIGURATION to TRUE.

3> and the procedure ends.

2> adjust the radio link timing accordingly.

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

8.2.2.40.3 Test purpose

To confirm that the UE transits to CELL_FACH state from CELL_DCH state in another cell and frequency and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

To confirm that the UE transits to CELL_DCH state from CELL_FACH state in another cell and frequency and starts receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.40.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH

Test Procedure

**Table 8.2.2.40**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -65 | Off | -60 |
| PCCPCH (1.28Mcps TDD) | dBM | -60 | -65 | Off | -60 |

Table 8.2.2.40 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS initiates P25 to make the UE move to state 6-17 as specified in TS 34.108 clause7.4. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established in cell 1. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.2.2.40.

The SS then applies the power levels according to “T1” in table 8.2.2.40 and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ←→ | | P25 | See below for the specific message content used in RADIO BEARER SETUP message (Step 0) |
| 1 | SS | | | The SS applies the power settings according to “T1” in table 8.2.2.40. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and transit to CELL_FACH state in cell 6, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and transit to CELL_DCH state in cell 1 |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 0)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RECONFIGURATION (Step 2) (FDD)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |

#### 8.2.2.40.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC on the uplink DCCH in cell 6.

After step 4, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC on the uplink DCCH in cell 1.

### 8.2.2.41 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception, during an active CS bearer)

#### 8.2.2.41.1 Definition and applicability

All UEs which support FDD or TDD, HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

#### 8.2.2.41.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.25, 8.6.3.1

### 8.2.2.41.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH according to the received RADIO BEARER RECONFIGURATION message when a circuit-switched radio bearer is established and mapped to DCH.

### 8.2.2.41.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services

Test Procedure

The UE has only signalling radio bearers established. A PS radio bearer is established mapped to HS-DSCH with HS-DSCH reception activated. Then, a CS radio bearer is established.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | P25 | SS establishes a PS RAB mapped to HS-DSCH. See below for the specific message content used in the RADIO BEARER SETUP message. |
| 2 | ←→ | | | SS establishes a CS RAB. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception |
| 4 | | | | At the activation time, SS stops HS-DSCH transmission to the UE. |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception |
| 7 | | | | At the activation time, SS resumes HS-DSCH transmission to the UE. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for " Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RAB information for setup | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10, except for the following |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A10. |

RADIO BEARER RECONFIGURATION (step 3)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 200 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 4 |
| - Logical channel identity | Not Present |
| - CHOICE RLC size list | Configured |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 9 |
| - Logical channel identity | Not Present |
| - RB stop/continue | Not Present |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL HS-DSCH MAC-d flow identity | 0 |

RADIO BEARER RECONFIGURATION (step 6) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined in RADIO BEARER SETUP message in Step 1. |
| - RB stop/continue | Not Present |
| Deleted DL TrCH information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |
| Downlink information for each radio link | |
| - Serving HS-DSCH radio link indicator | TRUE |

RADIO BEARER RECONFIGURATION (step 6) ( 1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined in RADIO BEARER SETUP message in Step 1. |
| - RB stop/continue | Not Present |
| Deleted DL TrCH information | |
| - Downlink transport channel type | DCH |
| - Transport channel identity | 9 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |

### 8.2.2.41.5 Test requirements

After step 4, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 7, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.42 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, start and stop of HS-DSCH reception, during an active CS bearer)

### 8.2.2.42.1 Definition and applicability

All UEs which support FDD or TDD, HS-PDSCH and simultaneous CS domain speech or transparent CS data services and PS services.

### 8.2.2.42.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor;
- IE "HARQ info".

1> for 1.28 Mcps TDD, the UE has stored the following IE:

- IE "HS-PDSCH Midamble Configuration".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RB's mapped to HS-DSCH, there is at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow;

NOTE: To enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the serving HS-DSCH radio link, for TDD add/remove H-RNTI upon hard handover.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> stop any HS_SCCH reception procedures;

1> stop any HS-DSCH reception procedures;

1> clear the variable H_RNTI and remove any stored H-RNTI;

1> act as if the IE "MAC-hs reset indicator" is received and set to TRUE;

1> release all HARQ resources;

1> no long consider any radio link to be the HS-DSCH serving radio link.

NOTE: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

Whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If IE "Timing indication" has the value "initialise", UE shall:

1> execute the Timing Re-initialised hard handover procedure by following the procedure indicated in the subclause relevant to the procedure chosen by the UTRAN.

…

If the UE receives a message in which presence is needed for the IE "Activation time", and the value is other than the default value "Now", the UE shall:

1> at the activation time T:

2> for an HS-DSCH related reconfiguration caused by the received message:

3> select the HS-SCCH subframe boundary immediately before the first HS-SCCH subframe, which entirely falls within the 10 ms frame following T;

3> start using, at that HS-SCCH subframe boundary, the new HS-DSCH configuration in the received message, replacing any old HS-DSCH configuration.

2> for actions, other than a physical channel reconfiguration, caused by the received message:

3> perform the actions for the information elements in the received message as specified elsewhere.

NOTE: An "HS-DSCH related reconfiguration" includes, in particular, reconfigurations that need to be time-aligned with the 2ms subframe of the HS-SCCH, HS-PDSCH and/or HS-DPCCH. For example, start and stop of HS-SCCH reception and serving HS-DSCH cell change.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.3.5.1.2, 8.5.25, 8.6.3.1

### 8.2.2.42.3 Test purpose

To confirm that the UE starts and stops receiving the HS-DSCH in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message when a circuit-switched radio bearer is established and mapped to DCH.

8.2.2.42.4 Method of test

Initial Condition

System Simulator: 2 cells–Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_HS_DSCH (state 6-17) as specified in clause 7.4 of TS 34.108.

System Information Block type 1 (Cell 1 and Cell 6)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports CS domain speech or transparent CS data services and PS services

Test Procedure

**Table 8.2.2.42**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -55 | -55 | OFF | -55 |
| P-CCPCH RSCP (TDD) | dBm | -55 | -55 | OFF | -55 |

Table 8.2.2.42 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.2.42. The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH established. Then, a CS radio bearer is established.

SS switches its downlink transmission power setting to columns “T1” in table 8.2.2.42.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and start the reception of HS-DSCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ←→ | | | SS establishes a CS RAB. |
| 2 | SS | | | SS switches its downlink transmission power setting to columns “T1” in table 8.2.2.42. |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, stop of HS-DSCH reception |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | This message is received in cell 6. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover, start of HS-DSCH reception |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | This message is received in cell 1. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value of DPCH Frame Offset modulo 38400 | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - Secondary scrambling code | 2 | |
| - Spreading factor | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - Code number | Any value between 0 and Spreading factor-1 | |
| - Scrambling code change | Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

RADIO BEARER RECONFIGURATION (step 5) ( 1.28Mcps TDD )

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '0101 0101 0101 0101' | |
| RB information to reconfigure list | | |
| - RB information to reconfigure | (high-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | | |
| - CHOICE Uplink RLC mode | AM RLC | |
| - Transmission RLC discard | | |
| - CHOICE SDU discard mode | No Discard | |
| - MAX_DAT | 15 | |
| - Transmission window size | 128 | |
| - Timer_RST | 500 | |
| - Max_RST | 4 | |
| - Polling info | | |
| - Timer_poll_prohibit | 100 | |
| - Timer_poll | 100 | |
| - Poll_PDU | Not Present | |
| - Poll_SDU | 1 | |
| - Last transmission PDU poll | TRUE | |
| - Last retransmission PDU poll | TRUE | |
| - Poll_Windows | 99 | |
| - Timer_poll_periodic | Not Present | |
| - CHOICE Downlink RLC mode | AM RLC | |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set | |
| - In-sequence delivery | TRUE | |
| - Receiving window size | 768 | |
| - Downlink RLC status info | | |
| - Timer_status_prohibit | 100 | |
| - Timer_EPC | Not Present | |
| - Missing PDU indicator | TRUE | |
| - Timer_STATUS_periodic | Not Present | |
| - One sided RLC re-establishment | FALSE | |
| - RB mapping info | Not Present | |
| - RB stop/continue | Not Present | |
| Added or Reconfigured DL TrCH information | | |
| - Downlink transport channel type | HS-DSCH | |
| - DL Transport channel identity | Not Present | |
| - CHOICE DL parameters | HS-DSCH | |
| - HARQ Info | Not Present | |
| - Added or reconfigured MAC-d flow | | |
| - MAC-hs queue to add or reconfigure list | | |
| - MAC-hs queue Id | 0 | |
| - MAC-d Flow Identity | 0 | |
| - T1 | 50 | |
| - MAC-hs window size | 16 | |
| - MAC-d PDU size Info | | |
| - MAC-d PDU size | 336 | |
| - MAC-d PDU size index | 0 | |
| - MAC-hs queue to delete list | Not Present | |
| - DCH quality target | Not Present | |
| Frequency info | | |
| - Choice mode | TDD | |
| - UARFCN (Nt) | Same UARFCN as used for cell 1 | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indication | Initialise | |
| - CFN-targetSFN frame offset | 0 | |
| - Downlink DPCH power control information | Not Present | |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 | |

| Information Element | Value/remark | Version |
|---|---|---|
| - MAC-hs reset indicator | TRUE | |
| Downlink information per radio link list | 1 radio link | |
| Downlink information for each radio link | | |
| - CHOICE mode | TDD | |
| - Primary CCPCH info | | |
| - Choice mode | TDD | |
| - Choice TDD Option | 1.28Mcps TDD | |
| - TSTD indicator | FALSE | |
| - Cell parameters ID | Same Cell parameters ID as used for cell 1 | |
| - SCTD indicator | FALSE | |

#### 8.2.2.42.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.43 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, without pending of ciphering, frequency modification)

#### 8.2.2.43.1 Definition

#### 8.2.2.43.2 Conformance requirement

1> if the reconfiguration procedure is simultaneous with SRNS relocation procedure:

2> if the transmitted message is a RADIO BEARER RECONFIGURATION:

3> include the IE "New U-RNTI".

The UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> re-establish the RLC entity for RB2;

2> set the new uplink and downlink HFN component of COUNT-C of RB2 to MAX(uplink HFN component of COUNT-C of RB2, downlink HFN component of COUNT-C of RB2);

2> increment by one the downlink and uplink values of the HFN component of COUNT-C for RB2;

2> calculate the START value according to subclause 8.5.9 in TS 25.331;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

1> if the IE "Integrity protection mode info" was present in the received reconfiguration message:

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RB2 from and including the transmitted response message.

If the new state is CELL_DCH or CELL_FACH, the response message shall be transmitted using the new configuration after the state transition, and the UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> when RLC has confirmed the successful transmission of the response message:

3> re-establish all AM and UM RLC entities with RB identities larger than 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the corresponding CN domain;

3> re-establish the RLC entities with RB identities 1, 3 and 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the CN domain stored in the variable LATEST_CONFIGURED_CN_DOMAIN;

3> set the remaining bits of the HFN component of COUNT-C values of all UM RLC entities to zero;

3> re-initialise the PDCP header compression entities of each radio bearer in the variable ESTABLISHED_RABS as specified in TS 25.323.

…

The UE shall:

1> if IE "Integrity protection mode command" has the value "start" and the IE "Status" in the variable INTEGRITY_PROTECTION_INFO has the value "Started" and this IE was not included SECURITY MODE COMMAND:

NOTE: This case is used in SRNS relocation and in handover from GERAN *Iu mode*.

2> perform integrity protection on the received message, applying the new integrity protection configuration, as described in subclause 8.5.10.1 in TS 25.331 by:

3> using the algorithm (UIA [TS 33.102]) indicated by the IE "Integrity protection algorithm" contained in the IE "Integrity protection mode info";

3> using the IE "Integrity protection initialisation number", contained in the IE "Integrity protection mode info" as the value of FRESH [TS 33.102].

2> let RBm be the signalling radio bearer where the reconfiguration message was received and let RBn be the signalling radio bearer where the response message is transmitted;

2> for the downlink, for each signalling radio bearer, if for the signalling radio bearer, a security configuration triggered by a previous SECURITY MODE COMMAND has not yet been applied, due to the activation time for the signalling radio bearer not having been reached:

3> set "Down link RRC Message sequence number" for this signalling radio bearer in the variable INTEGRITY_PROTECTION_INFO to (activation time -1), where the activation time is the corresponding activation time for this signalling radio bearer;

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new integrity protection configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new Integrity Protection configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN associated with the previously received SECURITY MODE COMMAND.

2> start applying the new integrity protection configuration in the downlink for each signalling radio bearer in the IE "ESTABLISHED_RABS" except RBm at the next received RRC message for the corresponding signalling radio bearer;

2> start applying the new integrity protection configuration in the downlink for signalling radio bearer RBm from and including the received configuration message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RBn from and including the transmitted response message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearers other than RBn from the first message onwards.

Reference

3GPP TS 25.331 clause 8.2.2, .8.6.3.5.2.

### 8.2.2.43.3 Test purpose

1. To confirm that the UE performs a combined inter-frequency hard handover and SRNS relocation and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message in the new cell.
2. To confirm that the UE correctly applies integrity protection after the SRNS relocation.
3. To confirm that the UE accepts a gap in the downlink RRC message sequence numbering for integrity protection on signalling radio bearer 3 after SRNS relocation.
4. In the case that ciphering is applied by the network, to confirm that the UE restarts ciphering following a successful SRNS relocation.

### 8.2.2.43.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 6

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

**Table 8.2.2.43**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |
| P-CCPCH (TDD) | dBm | -60 | -75 | -75 | -60 |

Table 8.2.2.43 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.43. The SS sends a RADIO BEARER RECONFIGURATION message requesting the UE to do a timing re-initialised inter-frequency hard handover combined with SRNS relocation. This message includes the IE "RRC State Indicator" set to "CELL_DCH", IE “New U-RNTI”, the IE “Integrity protection mode info” and the IE “Timing Indication” set to “initialise”.

UE shall reselect to cell 6 and SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, a calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in the IE “Integrity protection mode info” in the RADIO BEARER RECONFIGURATION message and a COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity protection configuration, including using a gap in the downlink RRC message sequence number. The UE shall respond with an IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.43. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | If IE “Ciphering mode info” is present in the SECURITY MODE COMMAND during initial condition set-up, this message is sent after last ciphering activation time has elapsed and there is no pending ciphering activation time. New integrity protection configuration is applied on DL SRB2. LAI and RAI of cell 6 are given to the UE, and are the same as cell 1. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 6. New calculated START value is included. New integrity protection configuration is applied on UL SRB2. |
| 4 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. |
| 5 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration is applied on UL SRB3 by UE. SS uses a gap in the downlink RRC message sequence numbering. |

Specific Message Contents

System Information Block type 1 (Cell 1)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 2) – for PS domain testing only (FDD)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled “Packet to CELL_DCH from CELL_DCH in PS”, with the following exception:

| Information Element | Value/remark | Version |
|---|---|---|
| Integrity protection mode info | | |
| - Integrity protection mode command | Start | |
| - Downlink integrity protection activation info | Not Present | |
| - Integrity protection algorithm | UIA1 | |
| - Integrity protection initialisation number | SS selects an arbitrary 32 bit number for FRESH | |
| Activation time | Not present | |
| New U-RNTI | | |
| - SRNC identity | 0000 0000 0010B | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| CN Information info | | |
| - PLMN identity | Not present | |
| - CN common GSM-MAP NAS system information | | |
| - GSM-MAP NAS system information | 00 01H | |
| - CN domain related information | | |
| - CN domain identity | PS | |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | 05 00H | |
| - CN domain identity | CS | |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | 1E 01H | |
| RB information to reconfigure list | | |
| - RB information to reconfigure | (UM DCCH for RRC) | |
| - RB identity | 1 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | Values as specified for the IE “Signalling RB | |
| - RB mapping info | information to setup” for the corresponding radio bearer in the default RRC CONNECTION SETUP message (Transition to CELL_DCH ) in TS 34.108. | |
| - RB stop/continue | Not Present | |
| - RB information to reconfigure | (AM DCCH for RRC) | |
| - RB identity | 2 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | Values as specified for the IE “Signalling RB | |
| - RB mapping info | information to setup” for the corresponding radio bearer in the default RRC CONNECTION SETUP message (Transition to CELL_DCH ) in TS 34.108. | |
| - RB stop/continue | Not Present | |
| - RB information to reconfigure | (AM DCCH for NAS_DT High priority) | |
| - RB identity | 3 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | Values as specified for the IE “Signalling RB | |
| - RB mapping info | information to setup” for the corresponding radio bearer in the default RRC CONNECTION SETUP message (Transition to CELL_DCH ) in TS 34.108. | |
| - RB stop/continue | Not Present | |
| - RB information to reconfigure | (AM DCCH for NAS_DT Low priority) | |
| - RB identity | 4 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | Values as specified for the IE “Signalling RB | |
| - RB mapping info | information to setup” for the corresponding radio bearer in the default RRC CONNECTION SETUP message (Transition to CELL_DCH ) in TS 34.108. | |
| - RB stop/continue | Not Present | |
| - RB information to reconfigure | (AM DTCH) | |
| - RB identity | 20 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | Values as specified for the IE “RB information to | |

| Information Element | Value/remark | Version |
|---|---|---|
| - RB mapping info | setup" for the corresponding radio bearer for the case "Packet to CELL_DCH from CELL_DCH in PS" in the default RADIO BEARER SETUP message in TS 34.108. | |
| - RB stop/continue | Not Present | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indicator | Initialise | |
| - MAC-d HFN initial value | Not present | |
| - CFN-targetSFN frame offset | Not Present | |
| - Downlink DPCH power control information | | |
| - DPC mode | 0 (single) | |
| - CHOICE mode | FDD | |
| - Power offset $P_{Pilot-DPDCH}$ | 0 | |

| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

RADIO BEARER RECONFIGURATION COMPLETE (Step 3) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION COMPLETE (Step 3) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| COUNT-C activation time | Check that this IE is present. |
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

DOWNLINK DIRECT TRANSFER (Step 4)

Use the same message content as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Integrity check info | |
| Message authentication code | Calculated result in SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| RRC Message sequence number | Current RRC SN + 3 |
| CN domain identity | CS domain or PS domain (whichever applicable) |
| NAS message | IDENTITY REQUEST |

NOTE: "Current RRC SN" is defined as the RRC message sequence number of the next transmitted RRC message on the particular radio bearer.

### 8.2.2.43.5 Test requirement

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in RADIO BEARER RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the RADIO BEARER RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received RADIO BEARER

RECONFIGURATION message (DL) and the sent RADIO BEARER RECONFIGURATION COMPLETE message (UL).

After step 3, the UE shall respond with an IDENTITY RESPONSE message to SS and apply the new integrity protection configuration on this message.

## 8.2.2.43a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, UEA2/UIA2, without pending of ciphering, frequency modification)

### 8.2.2.43a.1 Definition

Applicable to all Rel-7 UEs which support FDD.

### 8.2.2.43a.2 Conformance requirement

Same conformance requirement as clause 8.2.2.43.2.

### 8.2.2.43a.3 Test purpose

1. To confirm that the UE performs a combined inter-frequency hard handover and SRNS relocation and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message in the new cell.
2. To confirm that the UE correctly applies integrity protection using UIA2 after the SRNS relocation.
3. To confirm that the UE accepts a gap in the downlink RRC message sequence numbering for integrity protection using UIA2 on signalling radio bearer 3 after SRNS relocation.
4. To confirm that the UE restarts ciphering using UEA2 following a successful SRNS relocation.

### 8.2.2.43a.4 Method of test

#### Initial Condition

System Simulator: 2 cells – Cell 1 and 6

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE, UEA2 and UIA2 are configured.

#### Test Procedure

Same test procedure as clause 8.2.2.43.4 except that ciphering algorithm used is UEA2 and integrity protection algorithm used is UIA2.

#### Expected sequence

Same expected sequence as clause 8.2.2.43.4

#### Specific Message Contents

Same specific message contents as clause 8.2.2.43.4 except for the following:

#### RADIO BEARER RECONFIGURATION (Step 2) – for PS domain testing only (FDD)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled “Packet to CELL_DCH from CELL_DCH in PS”, with the following exception:

| Information Element | Value/remark | Version |
|---|---|---|
| Integrity protection mode info<br>- Integrity protection algorithm | UIA2 | |

RADIO BEARER RECONFIGURATION (Step 2) – for CS domain testing only (FDD)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled “Non speech in CS” or “Speech in CS”, with the following exception:

| Information Element | Value/remark | Version |
|---|---|---|
| Integrity protection mode info<br>- Integrity protection algorithm | UIA2 | |

#### 8.2.2.43a.5 Test requirement

Same test requirement as clause 8.2.2.43.5.

### 8.2.2.43b Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, change of ciphering and integrity protection algorithms, frequency modification)

#### 8.2.2.43b.1 Definition

Applicable to all Rel-7 UEs which support FDD.

#### 8.2.2.43b.2 Conformance requirement

1> if the reconfiguration procedure is simultaneous with SRNS relocation procedure:

2> if the transmitted message is a RADIO BEARER RECONFIGURATION:

3> include the IE "New U-RNTI".

The UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> if the variable PDCP_SN_INFO is empty:

3> configure the corresponding RLC entity for all AM and UM radio bearers and AM and UM signalling radio bearers except RB2 to "stop".

2> else:

3> configure the RLC entity for signalling radio bearers RB1, RB3 and RB4 to "stop";

3> configure the RLC entity for UM and AM radio bearers for which the IE "PDCP SN Info" is not included to "stop".

2> re-establish the RLC entity for RB2;

2> for the downlink and the uplink, apply the ciphering configuration as follows:

3> if the received re-configuration message included the IE "Ciphering Mode Info":

4> use the ciphering configuration in the received message when transmitting the response message.

3> if the ciphering configuration for RB2 from a previously received SECURITY MODE COMMAND has not yet been applied because the activation times not having been reached:

4> if the previous SECURITY MODE COMMAND was received due to new keys being received:

5> consider the new ciphering configuration to include the received new keys;

5> initialise the HFN component of the uplink COUNT-C and downlink COUNT-C of SRB2 as indicated in subclause 8.1.12.3.1.

4> else if the ciphering configuration for RB2 from a previously received SECURITY MODE COMMAND has not yet been applied because of the corresponding activation times not having been

reached and the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

5> consider the new ciphering configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN;

5> initialise the HFN component of the uplink COUNT-C and downlink COUNT-C of SRB2 to the most recently transmitted IE "START list" or IE "START" for the LATEST_CONFIGURED_CN_DOMAIN at the reception of the previous SECURITY MODE COMMAND.

4> apply the new ciphering configuration immediately following RLC re-establishment.

3> else:

4> continue using the current ciphering configuration.

2> set the new uplink and downlink HFN component of COUNT-C of RB2 to MAX(uplink HFN component of COUNT-C of RB2, downlink HFN component of COUNT-C of RB2);

2> increment by one the downlink and uplink values of the HFN of COUNT-C for RB2;

2> calculate the START value according to subclause 8.5.9;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

…

1> if the received reconfiguration message contained the IE "Ciphering mode info" or contained the IE "Integrity protection mode info":

2> set the IE "Status" in the variable SECURITY_MODIFICATION for all the CN domains in the variable SECURITY_MODIFICATION to "Affected".

1> if the received reconfiguration message contained the IE "Ciphering mode info":

2> if the reconfiguration message is not used to perform SRNS relocation or a handover from GERAN *Iu mode* with change of ciphering algorithm:

3> the UE behaviour is not specified.

2> if the message is used to perform a timing re-initialised hard handover:

3> if IE "Ciphering activation time for DPCH" is included:

4> the UE behaviour is not specified.

2> else:

3> if the reconfiguration message is used to setup radio bearer(s) using RLC-TM; or

3> if radio bearer(s) using RLC-TM already exist:

4> if IE "Ciphering activation time for DPCH" is not included:

5> the UE behaviour is not specified.

1> if the received reconfiguration message contained the IE "Integrity Protection mode info":

2> if the reconfiguration message is not used to perform SRNS relocation or a handover from GERAN *Iu mode*:

3> the UE behaviour is not specified.

1> if the received reconfiguration message did not contain the IE "Ciphering activation time for DPCH" in IE "Ciphering mode info":

2> if prior to this procedure there exist no transparent mode RLC radio bearers:

3> if, at the conclusion of this procedure, the UE will be in CELL_DCH state; and

3> if, at the conclusion of this procedure, at least one transparent mode RLC radio bearer exists:

4> include the IE "COUNT-C activation time" and specify a CFN value for this IE that is a multiple of 8 frames (CFN mod 8 = 0) and lies at least 200 frames ahead of the CFN in which the response message is first transmitted.

NOTE: UTRAN should not include the IE "Ciphering mode info" in any reconfiguration message unless it is also used to perform an SRNS relocation with change of ciphering algorithm.

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

1> if the variable PDCP_SN_INFO is not empty:

2> include the IE "RB with PDCP information list" and set it to the value of the variable PDCP_SN_INFO.

1> in TDD, if the procedure is used to perform a handover to a cell where timing advance is enabled, and the UE can calculate the timing advance value in the new cell (i.e. in a synchronous TDD network):

2> set the IE "Uplink Timing Advance" according or the IE "Extended UL Timing Advance" to subclause 8.6.6.26.

1> if the IE "Integrity protection mode info" was present in the received reconfiguration message:

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RB2 from and including the transmitted response message.

…

If the new state is CELL_DCH or CELL_FACH, the response message shall be transmitted using the new configuration after the state transition, and the UE shall:

1> if the IE "Downlink counter synchronisation info" was included in the reconfiguration message; or

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> when RLC has confirmed the successful transmission of the response message:

3> if the variable PDCP_SN_INFO is empty:

4> configure the RLC entity for all AM and UM radio bearers and AM and UM signalling radio bearers except RB2 to "continue".

3> else:

4> configure the RLC entity for signalling radio bearers RB1, RB3 and RB4 to "continue";

4> configure the RLC entity for UM and AM radio bearers for which the IE "PDCP SN Info" is not included to "continue".

3> re-establish all AM and UM RLC entities with RB identities larger than 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the corresponding CN domain;

3> re-establish the RLC entities with RB identities 1, 3 and 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the CN domain stored in the variable LATEST_CONFIGURED_CN_DOMAIN;

3> set the remaining bits of the HFN component of COUNT-C values of all UM RLC entities to zero;

3> if the IE "PDCP context relocation info" is not present:

4> re-initialise the PDCP header compression entities of each radio bearer in the variable ESTABLISHED_RABS as specified in [36].

3> if the IE "PDCP context relocation info" is present:

4> perform the actions as specified in subclause 8.6.4.13.

…

1> set the IE "Status" in the variable CIPHERING_STATUS of the CN domains for which the IE "Status" of the variable SECURITY_MODIFICATION is set to "Affected" to "Started";

1> apply the new ciphering configuration in the lower layers for all RBs that belong to a CN domain for which the IE "Status" of the variable SECURITY_MODIFICATION is set to "Affected" and all signalling radio bearers:

2> using the ciphering algorithm (UEA [40]) indicated by the IE "Ciphering algorithm" as part of the new ciphering configuration;

2> for each radio bearer that belongs to a CN domain for which the IE "Status" of the variable SECURITY_MODIFICATION is set to "Affected" and all signalling radio bearers:

3> using the value of the IE "RB identity" in the variable ESTABLISHED_RABS minus one as the value of BEARER [40] in the ciphering algorithm.

1> for the downlink and the uplink, apply the new ciphering configuration as follows:

2> if the ciphering configuration for a AM or UM radio bearer or signalling radio bearer from a previously received SECURITY MODE COMMAND has not yet been applied because of the corresponding activation times not having been reached and the current received message includes the IE "DL Counter Synch Info" or the current received message is a RADIO BEARER RECONFIGURATION message and includes the IE "New U-RNTI":

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new ciphering configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new ciphering configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN.

3> apply the new ciphering configuration in uplink and downlink immediately following RLC re-establishment.

2> if the IE "Ciphering activation time for DPCH" is present in the IE "Ciphering mode info" and the UE was in CELL_DCH state prior to this procedure:

3> for radio bearers using RLC-TM:

4> apply the old ciphering configuration for CFN less than the number indicated in the IE "Ciphering activation time for DPCH";

4> apply the new ciphering configuration for CFN greater than or equal to the number indicated in IE "Ciphering activation time for DPCH".

2> if the IE "Radio bearer downlink ciphering activation time info" is present:

3> apply the following procedure for each radio bearer and signalling radio bearers using RLC-AM or RLC-UM indicated by the IE "RB identity":

4> suspend uplink transmission on the radio bearer or the signalling radio bearer (except for the SRB where the response message is transmitted) according to the following:

5> do not transmit RLC PDUs with sequence number greater than or equal to the uplink activation time, where the uplink activation time is selected according to the rules below.

4> select an "RLC sequence number" at which (activation) time the new ciphering configuration shall be applied in uplink for that radio bearer according to the following:

5> consider a ciphering activation time in uplink to be pending until the RLC sequence number of the next RLC PDU to be transmitted for the first time is equal to or larger than the selected activation time;

5> for each radio bearer and signalling radio bearer that has no pending ciphering activation time in uplink as set by a previous procedure changing the security configuration:

6> set a suitable value that would ensure a minimised delay in the change to the latest ciphering configuration.

5> for each radio bearer and signalling radio bearer that has a pending ciphering activation time in uplink as set by a previous procedure changing the security configuration:

6> for radio bearers and signalling radio bearers except SRB2:

7> set the same value as the pending ciphering activation time.

6> for signalling radio bearer SRB2:

7> set a suitable value that would ensure a minimised delay in the change to the latest ciphering configuration.

4> store the selected "RLC sequence number" for that radio bearer in the entry for the radio bearer in the variable RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO;

4> switch to the new ciphering configuration according to the following:

5> use the old ciphering configuration for the transmitted and received RLC PDUs with RLC sequence numbers smaller than the corresponding RLC sequence numbers indicated in the IE "Radio bearer uplink ciphering activation time info" sent to UTRAN and in the received IE "Radio bearer downlink ciphering activation time info" received from UTRAN, respectively;

5> use the new ciphering configuration for the transmitted and received RLC PDUs with RLC sequence numbers greater than or equal to the corresponding RLC sequence numbers indicated in the IE "Radio bearer uplink ciphering activation time info" sent to UTRAN and in the received IE "Radio bearer downlink ciphering activation time info" received from UTRAN, respectively;

5> for a radio bearer using RLC-AM, when the RLC sequence number indicated in the IE "Radio bearer downlink ciphering activation time info" falls below the RLC receiving window and the RLC sequence number indicated in the IE "Radio bearer uplink ciphering activation time info" falls below the RLC transmission window, the UE may release the old ciphering configuration for that radio bearer;

5> if an RLC reset or re-establishment of the transmitting side of an RLC entity occurs before the activation time for the new ciphering configuration has been reached in uplink, ignore the activation time and apply the new ciphering configuration in uplink immediately after the RLC reset or RLC re-establishment;

5> if an RLC reset or re-establishment of the receiving side of an RLC entity occurs before the activation time for the new ciphering configuration has been reached in downlink, ignore the activation time and apply the new ciphering configuration in downlink immediately after the RLC reset or RLC re-establishment.

2> if the current received message includes the IE "Downlink counter synchronisation info" or the current received message is a RADIO BEARER RECONFIGURATION message and includes the IE "New U-RNTI":

3> apply the new ciphering configuration in uplink and downlink immediately following RLC re-establishment.

…

The UE shall:

1> if IE "Integrity protection mode command" has the value "start" and the IE "Status" in the variable INTEGRITY_PROTECTION_INFO has the value "Started" and this IE was not included SECURITY MODE COMMAND:

NOTE: This case is used in SRNS relocation and in handover from GERAN *Iu mode*.

2> perform integrity protection on the received message, applying the new integrity protection configuration, as described in subclause 8.5.10.1 in TS 25.331 by:

3> using the algorithm (UIA [TS 33.102]) indicated by the IE "Integrity protection algorithm" contained in the IE "Integrity protection mode info";

3> using the IE "Integrity protection initialisation number", contained in the IE "Integrity protection mode info" as the value of FRESH [TS 33.102].

2> let RBm be the signalling radio bearer where the reconfiguration message was received and let RBn be the signalling radio bearer where the response message is transmitted;

2> for the downlink, for each signalling radio bearer, if for the signalling radio bearer, a security configuration triggered by a previous SECURITY MODE COMMAND has not yet been applied, due to the activation time for the signalling radio bearer not having been reached:

3> set "Down link RRC Message sequence number" for this signalling radio bearer in the variable INTEGRITY_PROTECTION_INFO to (activation time -1), where the activation time is the corresponding activation time for this signalling radio bearer;

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new integrity protection configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new Integrity Protection configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN associated with the previously received SECURITY MODE COMMAND.

2> start applying the new integrity protection configuration in the downlink for each signalling radio bearer in the IE "ESTABLISHED_RABS" except RBm at the next received RRC message for the corresponding signalling radio bearer;

2> start applying the new integrity protection configuration in the downlink for signalling radio bearer RBm from and including the received configuration message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RBn from and including the transmitted response message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearers other than RBn from the first message onwards.

### Reference

3GPP TS 25.331 clause 8.2.2, 8.6.3.4, 8.6.3.5.2.

### 8.2.2.43b.3 Test purpose

1. To confirm that the UE performs a combined inter-frequency hard handover and SRNS relocation and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message in the new cell.

2. To confirm that the UE correctly applies new ciphering and integrity protection algorithms after the SRNS relocation from UEA1/UIA1 to UEA2/UIA2

3. To confirm that the UE correctly applies new ciphering and integrity protection algorithms after the SRNS relocation from UEA2/UIA2 to UEA1/UIA1

8.2.2.43b.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 6

UE: PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE. UEA1 and UIA1 are configured.

Test Procedure

**Table 8.2.2.43b**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |

Table 8.2.2.43b illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1 with UEA1 and UIA1 configured. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.43b. The SS sends a RADIO BEARER RECONFIGURATION message requesting the UE to do a timing re-initialised inter-frequency hard handover combined with SRNS relocation, with change of ciphering and integrity algorithms. This message includes the IE "RRC State Indicator" set to "CELL_DCH", IE “New U-RNTI”, the IE “Integrity protection mode info” with UIA2, the UE “Ciphering Mode Info” with UEA2, and the IE “Timing Indication” set to “initialise”.

UE shall reselect to cell 6 and SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, a calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in the IE “Integrity protection mode info” in the RADIO BEARER RECONFIGURATION message and a COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity protection configuration, including using a gap in the downlink RRC message sequence number. The UE shall respond with an IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.43b. The SS sends a RADIO BEARER RECONFIGURATION message requesting the UE to do a timing re-initialised inter-frequency hard handover to Cell 1 combined with SRNS relocation, with change of ciphering and integrity algorithms. This message includes the IE "RRC State Indicator" set to "CELL_DCH", IE “New U-RNTI”, the IE “Integrity protection mode info” with UIA1, the UE “Ciphering Mode Info” with UEA1, and the IE “Timing Indication” set to “initialise”.

UE shall reselect to cell 1 and SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message. This message also includes a calculated new START value according to the formula “$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2”, a calculated IE ”Integrity Check Info” using a new FRESH value as included in IE “Integrity protection initialisation number” in the IE “Integrity protection mode info” in the RADIO BEARER RECONFIGURATION message and a COUNT-I that includes subsequent HFN as used in the old integrity protection configuration.

SS then send IDENTITY REQUEST message on the DCCH using RLC-AM (SRB3) in order to confirm that the UE can communicate on SRB3 by using new integrity protection configuration, including using a gap in the downlink RRC message sequence number. The UE shall respond with an IDENTITY RESPONSE message on the uplink DCCH using RLC-AM (SRB3).

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.43. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | This message is sent after last ciphering activation time has elapsed and there is no pending ciphering activation time, to configure UEA2 and UIA2. LAI and RAI of cell 6 are given to the UE, and are the same as cell 1. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 6. New calculated START value is included. New integrity protection configuration using UIA2 is applied on UL SRB2. |
| 4 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. |
| 5 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration UIA2 and ciphering algorithm UEA2 is applied on UL SRB3 by UE. |
| 6 | SS | | | SS applies the downlink transmission power settings, according to the values in columns "T0" of table 8.2.2.43. |
| 7 | ← | | RADIO BEARER RECONFIGURATION | To configure UEA1 and UIA1. LAI and RAI of cell 1 are given to the UE, and are the same as cell 6. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 1. New calculated START value is included. New integrity protection configuration using UIA1 is applied on UL SRB2. |
| 9 | ← | | DOWNLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY REQUEST. New integrity protection configuration is applied on DL SRB3. |
| 10 | → | | UPLINK DIRECT TRANSFER | NAS message embedded in this is IDENTITY RESPONSE. SS confirms that new integrity protection configuration UIA1 and ciphering algorithm UEA1 is applied on UL SRB3 by UE. |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 3 and 8) – for PS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 3 and 8) – for CS domain testing only

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| COUNT-C activation time | Check that this IE is present. |
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

DOWNLINK DIRECT TRANSFER (Steps 4 and 9)

Use the same message content as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Integrity check info | |
| Message authentication code | Calculated result in SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| RRC Message sequence number | Current RRC SN + 3 |
| CN domain identity | CS domain or PS domain (whichever applicable) |
| NAS message | IDENTITY REQUEST |

NOTE: "Current RRC SN" is defined as the RRC message sequence number of the next transmitted RRC message on the particular radio bearer.

#### 8.2.2.43.5 Test requirement

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in RADIO BEARER RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the RADIO BEARER RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received RADIO BEARER RECONFIGURATION message (DL) and the sent RADIO BEARER RECONFIGURATION COMPLETE message (UL).

After step 4, the UE shall respond with an IDENTITY RESPONSE message to SS and apply the new integrity protection algorithm UIA2 and ciphering algorithm UEA1 on this message.

After step 7, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC which includes a calculated new START value according to the formula "$START_X' = MSB_{20}$ (MAX {COUNT-C, COUNT-I | radio bearers and signalling radio bearers using the most recently configured $CK_X$ and $IK_X$}) + 2", calculated IE "Integrity Check Info" using the new FRESH value as included in IE "Integrity protection initialisation number" in IE "Integrity protection mode info" in RADIO BEARER RECONFIGURATION message and COUNT-I that includes subsequent HFN as used in the old integrity protection configuration. The UE, further more, shall apply the new integrity protection configuration for the first received/sent RRC message on SRB0, SRB3, and SRB4 after receiving the RADIO BEARER RECONFIGURATION message (i.e. immediately). For SRB2 the new integrity protection configuration shall be applied from and including the received RADIO BEARER RECONFIGURATION message (DL) and the sent RADIO BEARER RECONFIGURATION COMPLETE message (UL).

After step 9, the UE shall respond with an IDENTITY RESPONSE message to SS and apply the new integrity protection algorithm UIA1 and ciphering algorithm UEA1 on this message.

### 8.2.2.44 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active E-DCH transmission)

#### 8.2.2.44.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.44.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28

### 8.2.2.44.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters during active E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.44.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A12, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure Timer_poll_prohibit_, Timer_poll & Timer_status_prohibit to 200ms. After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |

#### 8.2.2.44.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.44a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active E-DCH transmission, F-DPCH configured)

#### 8.2.2.44a.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH and fully support F-DPCH.

#### 8.2.2.44a.2 Conformance requirement

Same conformance requirement as in clause 8.2.2.44.2

#### 8.2.2.44a.3 Test purpose

Same test purpose as in clause 8.2.2.44.3

#### 8.2.2.44a.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A14, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH
- UE supports E-DPDCH
- UE fully supports F-DPCH

Test Procedure

Same test procedure as in clause 8.2.2.44.4 except that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE using AM RLC on E-DCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

Same specific message content as in clause 8.2.2.44.4

#### 8.2.2.44a.5 Test requirements

Same test requirements as in clause 8.2.2.44.5.

### 8.2.2.45 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of E-DCH transmission)

#### 8.2.2.45.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH or all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.45.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in increasing transmission power, by correct setting of the reference E-TFCI power offsets.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.45.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.45.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A13 (FDD or 3.84Mcps TDD or 7.68Mcps TDD )/A11(1.28Mcps TDD) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/DCH.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH transmission and HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, resumes E-DCH transmission and HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission and HS-DSCH reception and transit to CELL_FACH state, |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission and HS-DSCH reception and transit to CELL_DCH state |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |

| Downlink information for each radio link list | |

### 8.2.2.45.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.45a Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only)

### 8.2.2.45a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

### 8.2.2.45a.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in increasing transmission power, by correct setting of the reference E-TFCI power offsets.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.1,8.6.6.4, 8.6.6.37, 8.6.6.43.

### 8.2.2.45a.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message, in the multi-frequency network environment.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message, in the multi-frequency network environment.

### 8.2.2.45a.4 Method of test

Initial Condition

System Simulator: 1 cell, 3 frequency (one is primary frequency, others are secondary frequency)

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A11(1.28Mcps TDD) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports E-PUCH

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/DCH on one secondary frequency of cell 1.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, and IE "Frequency info" set as primary frequency of cell 1. After the UE receives this message, it stops E-DCH transmission and HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE, and IE "Frequency info " set as primary frequency of cell 1,and IE "Multi-frequency Info" set as one secondary frequency of cell 1. After the UE receives this message, it moves to CELL_DCH state, resumes E-DCH transmission and HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission and HS-DSCH reception and transit to CELL_FACH state, |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission and HS-DSCH reception and transit to CELL_DCH state |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.45a.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.46 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start and stop of E-DCH transmission)

#### 8.2.2.46.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH or all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.46.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info".
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for FDD:

2> if the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value(s) in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> for TDD:

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in increasing transmission power, by correct setting of the reference E-TFCI power offsets.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.46.3 Test purpose

To confirm that the UE starts and stops transmitting the E-DCH, while maintaining HS-DSCH reception, in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.46.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A12 (FDD or 3.84Mcps TDD or 7.68Mcps TDD )/A11(1.28Mcps TDD) in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

**Table 8.2.2.46**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.2.46 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.46.

The UE is in cell 1 and has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on DCH/DCH.

The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop E-DCH transmission but keep HS-DSCH reception. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and resume E-DCH transmission. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.46. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and stop of E-DCH transmission, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 4 | SS | | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.46. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and start of E-DCH transmission. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 1. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 2) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |

| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined for RB25 in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN downlink(Nt) | Same downlink UARFCN as used for cell 6 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - CFN-targetSFN frame offset | 0 |
| - Downlink DPCH power control information | Not Present |
| - CHOICE mode | TDD |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 3.84Mcps |
| - Default DPCH Offset Value | Arbitrary set to value 0..7 |
| - MAC-hs reset indicator | TRUE |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Set to the same as cell 6 |

RADIO BEARER RECONFIGURATION (Step 2) (7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |

| Information Element | Value/remark |
|---|---|
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined for RB25 in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN downlink(Nt) | Same downlink UARFCN as used for cell 6 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - CFN-targetSFN frame offset | 0 |
| - Downlink DPCH power control information | Not Present |
| - CHOICE mode | TDD |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 7.68Mcps |
| - Default DPCH Offset Value | Arbitrary set to value 0..7 |
| - MAC-hs reset indicator | TRUE |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Set to the same as cell 6 |

RADIO BEARER RECONFIGURATION (Step 2) (1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |

| Information Element | Value/remark |
|---|---|
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined for RB25 in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A9. |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN downlink(Nt) | Same downlink UARFCN as used for cell 6 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - CFN-targetSFN frame offset | 0 |
| - Downlink DPCH power control information | Not Present |
| - CHOICE mode | TDD |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Default DPCH Offset Value | Arbitrary set to value 0..7 |
| - MAC-hs reset indicator | TRUE |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - Cell parameters ID | Set to the same as cell 6 |

RADIO BEARER RECONFIGURATION (Step 5)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| New Primary E-RNTI | '1010 1010 1010 1010' |
| RB information to reconfigure list | |

| Information Element | Value/remark |
|---|---|
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 256 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Same as the set defined for RB25 in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12. |
| - RB stop/continue | Not Present |

| Information Element | Value/remark |
|---|---|
| UL Transport channel information common for all transport channels | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12. |
| Added or Reconfigured UL TrCH information | To achieve the same set as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12:<br>1 E-DCH added, 1 DCH reconfigured. |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - E-DCH Transmission Time Interval | 10 ms |
| - HARQ info for E-DCH | |
| - HARQ RV Configuration | rvtable |
| - Added or reconfigured E-DCH MAC-d flow | |
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| - Uplink transport channel type | DCH |
| - UL Transport channel identity | 1 |
| - TFS | |
| - CHOICE Transport channel type | Dedicated transport channels |
| - Dynamic Transport format information | |
| - RLC Size | Reference to TS 34.108 clause 6.10 Parameter Set |
| - Number of TBs and TTI List | (This IE is repeated for TFI number.) |

#### 8.2.2.46.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.46a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH Success (inter-band frequency hard handover, start and stop of E-DCH transmission, LCR TDD band a-f)

#### 8.2.2.46a.1 Definition and applicability

All UEs which support LCR TDD and both band a and band f.

#### 8.2.2.46.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

…

1> For TDD:

2> the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

…

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

…

1>For TDD:

2>perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH and E-DPDCH transmission procedures.

…

1> for TDD:

…

2> if the IE "New E-RNTI" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

3> store the new value in the variable E_RNTI;

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

…

1> for TDD:

2> use the value of New E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

…

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

…

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

…

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

…

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

…

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

…

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.46a.3 Test purpose

To confirm that the UE starts and stops transmitting the E-DCH, while maintaining HS-DSCH reception, in conjunction with a inter-band frequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.46a.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A11(1.28Mcps TDD) in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports TDD
- UE supports HS-PDSCH
- UE supports E-PUCH
- UE supports band a and band f

Test Procedure

**Table 8.2.2.46a: Time instances of cell power level**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency of the band a | | Mid Range Test Frequency of the band f | |
| P-CCPCH RSCP (TDD) | dBm/1.28MHz | -60 | -70 | -70 | -60 |

Table 8.2.2.46 illustrate the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.46.

The UE is in cell 1 and has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on DCH/DCH.

The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.46 and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop E-DCH transmission but keep HS-DSCH reception. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" in the table 8.2.2.46 and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and resume E-DCH transmission. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.46 |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and stop of E-DCH transmission, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 4 | | SS | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.46. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and start of E-DCH transmission. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 1. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.46a.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

### 8.2.2.47 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of E-DCH transmission)

#### 8.2.2.47.1 Definition

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.47.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…

If the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" (FDD only) are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the new value(s) in the variable E_RNTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New Primary E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

NOTE: In case of multiple E-DCH MAC-d flows, IE "Added or Reconfigured UL TrCH information" is only included once. If the IE "Added or Reconfigured UL TrCH information" is included more than once with the IE "Uplink transport channel type" set to 'E-DCH', the UE behaviour is unspecified.

…

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

If the received "E-DCH Transmission Time Interval" is 2 ms and the previously stored TTI was 10 ms:

1> not send any data on E-DPDCH in first 8 TTIs after activation time of new TTI.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU’s from the E-DCH MAC-d flow indicated in the IE “E-DCH MAC-d flow identity” with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE “E-DCH MAC-d flow multiplexing list”.

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e or MAC-i PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to 'FALSE' and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New Primary E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in strictly increasing order of transmission power prior to quantization, by correct setting of the reference E-TFCI power offsets otherwise the UE behaviour is unspecified.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e or MAC-i/is entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.7, 8.6.5.16 (FDD only), 8.6.5.17, 8.6.5.18, 8.6.6.4, 8.6.6.37

### 8.2.2.47.3 Test purpose

1) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state with frequency modification and stops E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message.

2) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state with frequency modification and starts E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message.

### 8.2.2.47.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A13, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

**Table 8.2.2.47**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -60 | -70 |

Table 8.2.2.47 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH in cell 1.The SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.2.47.

The SS then applies the power level according to “T1” in table 8.2.2.47 and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception and E-DCH transmission, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, the SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes the HS-DSCH reception and E-DCH transmission and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS calls for generic procedure C.3 to check the UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and E-DCH transmission |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and E-DCH transmission |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

### 8.2.2.47.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

## 8.2.2.47a Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of E-DCH transmission, F-DPCH Configured)

### 8.2.2.47a.1 Definition

All UEs which support FDD and HS-PDSCH and E-DPDCH.

### 8.2.2.47a.2 Conformance requirement

Same conformance requirement as in clause 8.2.2.47.2

### 8.2.2.47a.3 Test purpose

Same test purpose as in clause 8.2.2.47.3

### 8.2.2.47a.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A14, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports FDD
- UE supports HS-PDSCH
- UE supports E-DPDCH
- UE fully supports F-DPCH

Test Procedure

Same test procedure as in clause 8.2.2.47.4

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 clause 9 with the following exceptions:

#### 8.2.2.47a.5 Test requirements

Same test requirement as in clause 8.2.2.47.5

### 8.2.2.47b Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification in the multi-frequency network environment, start and stop of E-DCH transmission, for 1.28Mcps TDD only)

#### 8.2.2.47b.1 Definition

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.47b.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…

If the IE "New Primary E-RNTI" and/or the IE "New Secondary E-RNTI" (FDD only) are/is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the new value(s) in the variable E_RNTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

If, after the completion of this procedure, the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> clear the variable E-RNTI.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> use the value of the Primary E-RNTI and/or Secondary E-RNTI stored in the variable E_RNTI as UE identities in the E-AGCH reception procedure in the physical layer.

1> for TDD:

2> use the value of New Primary E-RNTI stored in the variable E_RNTI as the UE identity in the E-AGCH reception procedure and the E-RUCCH transmission procedure in the physical layer.

…

If the IE "Added or Reconfigured UL TrCH information" is included then the UE shall:

1> for the transport channel identified by the IE "UL Transport Channel Identity" and IE "Uplink transport channel type":

2> perform the actions for the IE "Transport Format Set" as specified in subclause 8.6.5.1.

NOTE: The UE stores the UL transport channel configuration until it is explicitly deleted by a message containing the IE "Deleted UL TrCH information" or the UE leaves RRC Connected mode.

1> if the choice "UL parameters" is set to 'E-DCH':

2> for FDD:

3> apply the values of the IE "E-DCH Transmission Time Interval" and the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for TDD:

3> apply the value of the IE "HARQ info for E-DCH" to all E-DCH MAC-d flows.

2> for the IE "HARQ Info for E-DCH":

3> perform the actions specified in subclause 8.6.5.17.

2> if the IE "Added or Reconfigured E-DCH MAC-d Flow list " is included:

3> for each MAC-d flow identified by the IE "Mac-d flow identity":

4> perform the actions as specified in subclause 8.6.5.18.

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

NOTE: In case of multiple E-DCH MAC-d flows, IE "Added or Reconfigured UL TrCH information" is only included once. If the IE "Added or Reconfigured UL TrCH information" is included more than once with the IE "Uplink transport channel type" set to 'E-DCH', the UE behaviour is unspecified.

…

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "E-DCH Transmission Time Interval" is included, the UE shall:

1> store the received TTI;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH.

If the received "E-DCH Transmission Time Interval" is 2 ms and the previously stored TTI was 10 ms:

1> not send any data on E-DPDCH in first 8 TTIs after activation time of new TTI.

…

If the IE "HARQ Info for E-DCH" is included, the UE shall:

1> store the received configuration;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration".

…

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e or MAC-i PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> if the UE is in TDD mode and shared transport channels are assigned to the UE:

3> start to receive the indicated Secondary CCPCH.

2> if the UE is in TDD mode and no shared transport channels are assigned to the UE:

3> set the variable UNSUPPORTED_CONFIGURATION to TRUE.

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New Primary E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> for FDD:

2> if the IE "E-DPCCH Info" is included:

3> store the newly received E-DPCCH configuration.

2> if the IE "E-DPDCH Info" is included:

3> store the newly received E-DPDCH configuration.

2> if the IE "UL 16QAM settings" is not included:

3> indicate to lower layers to stop any operation in 16QAM mode.

1> for 3.84/7.68 Mcps TDD:

2> if the IE "E-RUCCH Info" is included:

3> store the newly received E-RUCCH configuration.

2> if the IE "E-PUCH Info" is included:

NOTE 1: The UTRAN should ensure the ordering of the E-TFCI table in strictly increasing order of transmission power prior to quantization, by correct setting of the reference E-TFCI power offsets otherwise the UE behaviour is unspecified.

NOTE 2: If a reference E-TFCI signalled to the UE is outside the UE physical channel capability, the UE behaviour is unspecified.

NOTE 2a: If E-TFCI boost is signalled to the UE and a reference E-TFCI <= E-TFCI Boost is signalled to the UE with a Reference E-TFCI PO of value 30 or 31, the UE behaviour is unspecified.

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e or MAC-i/is entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

…

If, after completion of the procedure, the UE will be in CELL_DCH state, the UE shall:

1> for FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, if the IE "Frequency info" is included; or

1> for 1.28 Mcps TDD, if the IE "Frequency info" is included and the "Second Frequency info" is not included:

2> if the frequency is different from the currently used frequency:

3> store and use the frequency indicated by the IE "Frequency Info";

3> if the received message is used to perform a Timing-maintained hard handover (see subclause 8.3.5.2),and IE "Timing maintained Synchronization indicator" is included:

4> not perform any physical layer synchronisation procedure (FDD only);

3> else:

4> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

2> if the frequency is the same as the currently used frequency:

3> continue to use the currently used frequency;

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

1> for 1.28 Mcps TDD, if both the IE "Frequency info" and the IE "Second Frequency info" are included:

2> the frequency in IE "Frequency info" is used as the primary frequency, and the frequency in IE "Second Frequency info" is used as the secondary frequency;

2> store the primary frequency;

2> if the secondary frequency is different with the currently used frequency:

3> store and use the secondary frequency.

2> if the secondary frequency is the same as the currently used frequency:

3> continue to use the currently used frequency.

1> if the IE "Frequency info" is not included and the UE has a currently used frequency:

2> continue to use the currently used frequency;

…

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28, 8.6.3.14, 8.6.5.5, 8.6.5.7, 8.6.5.16, 8.6.5.17, 8.6.5.18, 8.6.6.1, 8.6.6.4, 8.6.6.37, 8.6.6.43.

### 8.2.2.47b.3 Test purpose

1) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state with frequency modification and stops E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message in the multi-frequency network environment.

2) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state with frequency modification and starts E-DCH transmission according to the received a RADIO BEARER RECONFIGURATION message in the multi-frequency network environment.

### 8.2.2.47b.4 Method of test

Initial Condition

System Simulator:

2 cells

- Cell 1 is active, 3 frequency (one is primary frequency, others are secondary frequency)
- Cell 6 is inactive, 1 frequency

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A13, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH
- UE supports E-PUCH

Test Procedure

**Table 8.2.2.47b**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| P-CCPCH RSCP | dBm | -60 | -70 | -60 | -70 |

Table 8.2.2.47b illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH at the secondary frequency in cell 1.The SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.2.47b.

The SS then applies the power level according to “T1” in table 8.2.2.47b and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception and E-DCH transmission, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, the SS transmits a RADIO BEARER RECONFIGURATION message to the UE, and IE "Frequency info " set as primary frequency of cell 1 , IE "Multi-frequency Info " set as one secondary frequency of cell 1 and IE “Cell parameters ID” set as Cell ID of cell 1. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes the HS-DSCH reception and E-DCH transmission and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS calls for generic procedure C.3 to check the UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception and E-DCH transmission |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and E-DCH transmission |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.47b.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.48 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of E-DCH transmission)

#### 8.2.2.48.1 Definition and applicability

All UEs which support FDD and HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.48.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…….

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AICH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…….

If the IE "Added or reconfigured E-DCH MAC-d flow" is included, the UE shall:

1> if the IE "E-DCH MAC-d flow power offset" is included:

2> configure the power offset indicated in the IE "E-DCH MAC-d flow power offset" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow maximum number of retransmissions" is included:

2> configure the maximum number of retransmissions indicated in the IE "E-DCH MAC-d flow maximum number of retransmissions" for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> for 1.28 Mcps TDD, if the IE "E-DCH MAC-d flow retransmission timer" is included:

2> configure the retransmission timer for the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity".

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

1> else:

2> if previously the IE "E-DCH MAC-d flow multiplexing list" was already received for this E-DCH MAC-d flow:

3> continue to only multiplex E-DCH PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed according to the previously received IE "E-DCH MAC-d flow multiplexing list".

2> else (never received the IE "E-DCH MAC-d flow multiplexing list" for this E-DCH MAC-d flow):

3> allow multiplexing of MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from any other E-DCH MAC-d flow in the same MAC-e PDU.

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e or MAC-i PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow (i.e. including MAC-e/es or MAC-i/is headers) not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDU's for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH/E-RGCH (see [15]).

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

1> perform the actions as specified in subclause 8.5.21;

……..

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an Uplink transport channel is requested to be deleted:

2> delete any information about the transport channel identified by the IE "UL TrCH identity" and the IE "Uplink transport channel type".

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.28, 8.6.5.18 , 8.6.5.7

### 8.2.2.48.3 Test purpose

1. To confirm that the UE reconfigures the radio bearer parameters and stops E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.48.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A12 (FDD) /A11(1.28Mcps TDD), as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission |
| 2 | | | | At the activation time, SS stops E-DCH reception from the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission |
| 5 | | | | At the activation time, SS resumes E-DCH reception from the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| - BLER Quality value | -20 (-2.0) |

RADIO BEARER RECONFIGURATION (Step 1)( 1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - CHOICE RLC info type | RLC info |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 200 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | Not Present |
| - MAC-hs queue to delete list | |
| - MAC-hs queue Id | 0 |
| - DCH quality target | Not present |
| - Downlink transport channel type | DCH |
| - DL Transport channel identity | 6 |
| - CHOICE DL parameters | Explicit |

| - Number of Transport blocks | Reference to clause 6.11 Parameter Set |
| - Semi-static Transport Format information | |
| - Transmission time interval | Reference to clause 6.11 Parameter Set |
| - Type of channel coding | Reference to clause 6.11 Parameter Set |
| - Coding Rate | Reference to clause 6.11 Parameter Set |

| | |
|---|---|
| - Rate matching attribute | Reference to clause 6.11 Parameter Set |
| - CRC size | Reference to clause 6.11 Parameter Set |
| - DCH quality target | |
| - BLER Quality value | -20 (-2.0) |

RADIO BEARER RECONFIGURATION (Step 1) (3.84Mcps TDD and 7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - CHOICE RLC info type | RLC info |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 200 |
| - Timer_poll | 200 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | Not Present |
| - MAC-hs queue to delete list | |
| - MAC-hs queue Id | 0 |
| - DCH quality target | Not present |
| - Downlink transport channel type | DCH |
| - DL Transport channel identity | 6 |
| - CHOICE DL parameters | Explicit |
| - TFS | |
| - CHOICE Transport channel type | Dedicated transport channel |
| - Dynamic transport format information | |
| - RLC Size | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Number of TBs and TTI List | (This IE is repeated for TFI number.) |
| - Dynamic transport format information | |
| - Transmission Time Interval | Not Present |
| - Number of Transport blocks | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |

| | |
|---|---|
| - Semi-static Transport Format information | |
| - Transmission time interval | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Type of channel coding | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Coding Rate | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - Rate matching attribute | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - CRC size | Reference to clause 6.10 Parameter Set for 3.84Mcps TDD. Reference to clause 6.11 Parameter Set for 7.68Mcps TDD. |
| - DCH quality target | |
| - BLER Quality value | -20 (-2.0) |

RADIO BEARER RECONFIGURATION (Step 4) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H –RNTI | '1010 1010 1010 1010' |
| New Primary E –RNTI | '1010 1010 1010 1010' |
| New Secondary E-RNTI | Not Present |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 256 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| UL Transport channel information common for all transport channels | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | DCH-USCH |
| - UL TrCH type | DCH |
| - UL TrCH identity | 1 |
| Added or Reconfigured UL TrCH information | 1 E-DCH added |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - E-DCH Transmission Time Interval | 10 ms |
| - HARQ info for E-DCH | |
| - HARQ RV Configuration | rvtable |
| - Added or reconfigured E-DCH MAC-d flow | |
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| DL Transport channel information common for all transport channel | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Deleted DL TrCH information | |
| - CHOICE DL TrCH type | DCH |
| - DL Transport channel identity | 6 |

| | |
|---|---|
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |
| Uplink DPCH info | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 but without HARQ information which is already stored in the UE |
| - Uplink DPCH power control info | |
| - DPCCH power offset | -40 (-80dB) |
| - PC Preamble | 1 frame |
| - SRB delay | 7 frames |
| - Power Control Algorithm | Algorithm1 |
| - TPC step size | 0 (1dB) |
| - $\Delta_{ACK}$ | Not Present |
| - $\Delta_{NACK}$ | Not Present |
| - Ack-Nack repetition factor | Not Present |
| - HARQ_preamble_mode | 0 |
| - Scrambling code type | Long |
| - Scrambling code number | 0 (0 to 16777215) |
| - Number of DPDCH | Not Present(1) |
| - spreading factor | Reference to TS 34.108 clause 6.10 Parameter Set |
| - TFCI existence | Reference to TS 34.108 clause 6.10 Parameter Set |
| - Number of FBI bit | Reference to TS 34.108 clause 6.10 Parameter Set |
| - Puncturing Limit | Reference to TS 34.108 clause 6.10 Parameter Set |
| Downlink information common for all radio links | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Downlink information for each radio link | |
| - Serving HS-DSCH radio link indicator | TRUE |
| - Serving E-DCH radio link indicator | TRUE |
| - E-AGCH Info | |
| - E-AGCH Channelisation Code | 10 |
| - CHOICE E-HICH Information | |
| - E-HICH Information | |
| - Channelisation code | 4 |
| - Signature sequence | 1 |
| - CHOICE E-RGCH Information | |
| - E-RGCH Information | |
| - Signature Sequence | 0 |
| - RG combination index | 0 |

RADIO BEARER RECONFIGURATION (Step 4)( 1.28Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H –RNTI | '1010 1010 1010 1010' |
| New Primary E –RNTI | '1010 1010 1010 1010' |
| New Secondary E-RNTI | Not Present |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 256 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |

| Downlink information for each radio link | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A11 |

RADIO BEARER RECONFIGURATION (Step 4) (3.84Mcps TDD and 7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| New H –RNTI | '1010 1010 1010 1010' |
| New Primary E –RNTI | '1010 1010 1010 1010' |
| New Secondary E-RNTI | Not Present |
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - CHOICE SDU discard mode | No Discard |
| - MAX_DAT | 15 |
| - Transmission window size | 256 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Windows | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE Downlink RLC PDU Size | Reference to TS 34.108 clause 6 Parameter Set |
| - In-sequence delivery | TRUE |
| - Receiving window size | 768 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 100 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - One sided RLC re-establishment | FALSE |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| UL Transport channel information common for all transport channels | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Deleted UL TrCH information | |
| - CHOICE UL TrCH identity | DCH-USCH |
| - UL TrCH type | DCH |
| - UL TrCH identity | 1 |
| Added or Reconfigured UL TrCH information | 1 E-DCH added |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - CHOICE mode | TDD |
| - HARQ info for E-DCH | |
| - HARQ RV Configuration | rvtable |
| - Added or reconfigured E-DCH MAC-d flow | |
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| DL Transport channel information common for all transport channel | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 |
| Deleted DL TrCH information | |
| - CHOICE DL TrCH type | DCH |
| - DL Transport channel identity | 6 |

| | |
|---|---|
| Added or Reconfigured DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | Not Present |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not Present |
| - DCH quality target | Not Present |
| Uplink DPCH info | Same as defined in the RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A12 but without HARQ information which is already stored in the UE |
| - Uplink DPCH power control info | |
| - CHOICE mode | TDD |
| - UL target SIR | Not Present |
| - CHOICE UL OL PC info | Broadcast UL OL PC info |
| - CHOICE mode | TDD |
| - Uplink Timing Advance Control | |
| - CHOICE Timing Advance | Enabled |
| - CHOICE TDD option | 3.84 Mcps TDD |
| - UL Timing Advance | Determined by observed timing deviation of the RACH at the node B |
| - UL CCTrCH List | 1 CCTrCh |
| - TFCS Id | 1 |
| - UL target SIR | +20dB |
| - Activation time | Not present |
| - Duration | Not present |
| - Common timeslot info | |
| - 2nd interleaving mode | Reference to clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) |
| - TFCI coding | Reference to clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) |
| - Puncturing Limit | Reference to clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) |
| - Repetition Period | Reference to clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) |
| - Repetition Length | Reference to clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) |
| - Uplink DPCH timeslots and codes | |
| - Dynamic SF usage | TRUE |
| - Timeslot number | The number of an uplink timeslot that has unassigned codes. |
| - TFCI existence | TRUE |
| - Midamble shift and burst type | |
| - CHOICE TDD option | 3.84 Mcps |
| - CHOICE Burst Type | Reference to clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) |
| - Midamble Allocation Mode | Default |
| - Midamble configuration | Choose lowest possible Kcell value given burst type |
| - CHOICE TDD option | 3.84 Mcps TDD or 7.68 Mcps TDD |
| - First timeslot Code List | Repeated (1,2) for each channelisation code assigned in the slot to meet the needs of clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD). |
| - Channelisation code | (i/SF) where i denotes an unassigned code matching the SF specified in clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD). |
| - CHOICE more timeslots | The presence of this IE depends upon the number of resources specified in clause 6.10 Parameter Set (3.84Mcps TDD), 6.11 Parameter Set (7.68Mcps TDD) and the number of slots in which they are being assigned. |

#### 8.2.2.48.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.49 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_PCH: Success (stop of E-DCH transmission)

#### 8.2.2.49.1 Definition and applicability

All UEs which support FDD, HS-PDSCH and E-DPDCH and all UEs which support TDD and HS-PDSCH and E-PUCH.

#### 8.2.2.49.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable E_DCH_TRANSMISSION shall be set to "TRUE" only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

If any of the above conditions is not met and the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable E_DCH_TRANSMISSION to FALSE;

1> stop any E-AGCH and E-HICH reception procedures;

1> For FDD:

2> stop any E-RGCH reception procedures.

1> For FDD:

2> stop any E-DPCCH and E-DPDCH transmission procedures.

1> For TDD:

2> stop any E-RUCCH and E-PUCH transmission procedures.

1> clear the variable E_RNTI;

1> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

1> release all E-DCH HARQ resources;

1> no longer consider any radio link to be the serving E-DCH radio link.

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]). For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, the UE shall use the lowest E-DCH capability category, as specified in [35], to signal the UL control information on E-UCCH.

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest E-DCH capability category when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> not perform E-AGCH, E-HICH and E-RGCH reception procedures;

1> not perform E-DPCCH, E-DPDCH, E-RUCCH and/or E-PUCH transmission procedures.

…

If the IE "RB information to reconfigure" is included, the UE shall apply the following actions on the radio bearer identified with the value of the IE "RB identity". The UE shall:

1> perform the actions for the IE "RB mapping info", according to subclause 8.6.4.8, applied for the radio bearer;

…

If the IE "Deleted UL TrCH information" is included the UE shall:

1> if an Uplink transport channel is requested to be deleted:

2> delete any information about the transport channel identified by the IE "UL TrCH identity" and the IE" Uplink transport channel type".

1> if an E-DCH MAC-d flow is requested to be deleted:

2> delete any information about the E-DCH MAC-d flow identified by the IE "E-DCH MAC-d flow identity";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

If the IE "Deleted DL TrCH information" is included the UE shall:

1> if a Downlink transport channel is requested to be deleted:

2> delete any information about the transport channel identified by the IE "DL TrCH identity".

1> if a DL MAC-d flow is requested to be deleted:

2> delete any information about the DL HS-DSCH MAC-d flow identified by the IE "MAC-d Flow Identity", i.e. delete any information about MAC-hs queue(s) mapped onto this MAC-d flow.

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> clear any stored IE "Downlink HS-PDSCH information";

1> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

1> clear any stored IE "E-DCH information";

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.28, 8.6.4.5, 8.6.5.7, 8.6.5.8,.

### 8.2.2.49.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_PCH state, and stops E-DCH transmission and HS-DSCH reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.49.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A13 (FDD) /A12 (1.28Mcps TDD) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE supports HS-PDSCH
- UE supports E-DPDCH (FDD only)
- UE supports E-PUCH (TDD only)

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/DCH.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH transmission and HS-DSCH reception, transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and moves to CELL_PCH state.

SS calls for generic procedure C.4 to check that the UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ← | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | Stop of E-DCH transmission and HS-DSCH reception and transit to CELL_PCH state. |
| 3 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

#### 8.2.2.49.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.50 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (from speech to speech plus PS data with modification of downlink spreading factor)

#### 8.2.2.50.1 Definition

-

#### 8.2.2.50.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> if the IE "Downlink information for each radio link" is absent, not change its current DL Physical channel configuration.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

- clear that entry;

1bis> in TDD, if the procedure is used to perform a handover to a cell where timing advance is enabled, and the UE can calculate the timing advance value in the new cell (i.e. in a synchronous TDD network):

2> set the IE "Uplink Timing Advance" according to subclause 8.6.6.26.In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

##### Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4.

#### 8.2.2.50.3 Test purpose

To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which indicates a change of radio bearer configuration from a single radio bearer (speech) to a multi radio bearer configuration (speech + PS data) including reconfiguration of downlink spreading factor.

#### 8.2.2.50.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: Idle state (State 7) as specified in clause 7.4 of TS 34.108.

##### Test Procedure

The UE is brought to the CELL_DCH state after a successful incoming call attempt. The SS follows the procedure in TS 34.108 clause 7.1.3 (Mobile Terminated), to set up a user radio bearer, but with the default radio bearer replaced by the one specified in TS 34.108, clause 6.10.2.4.1.9: Conversational / speech / UL:5.9 DL:5.9 kbps / CS RAB + UL:3.4

DL:3.4 kbps SRBs for DCCH (the speech RB uses DL SF=256). The radio bearer is placed into UE test loop mode 1 as described in 34.109 clause 5.3. The SS sends RLC SDUs on the speech radio bearer in downlink and verifies that the UE returns RLC SDUs with the same content in uplink. The SS opens the UE test loop.

A PS service request is triggered by a PAGING TYPE 2 message from the SS causing a SERVICE REQUEST to be sent from the UE to the SS. The SS transmits a RADIO BEARER SETUP message, which commands the UE to reconfigure its user RB from the speech radio bearer to the combined speech and PS radio bearer as specified in TS 34.108, clause 6.10.2.4.1.40: Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH. This reconfiguration involves reconfiguration of the downlink spreading factor from 256 to 128. The radio bearers are placed into UE test loop mode 1 as described in 34.109 clause 5.3. The SS sends RLC SDUs on the speech and PS radio bearers in downlink and verifies that the UE returns RLC SDUs with the same content in uplink on both the speech and PS radio bearers. The SS opens the UE test loop.

SS calls for the generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE 1 (PCCH) | RRC |
| 2 | → | | RRC CONNECTION REQUEST | RRC |
| 3 | ← | | RRC CONNECTION SETUP | RRC |
| 4 | → | | RRC CONNECTION SETUP COMPLETE | RRC |

| 22 | → | | SECURITY MODE COMPLETE | RRC see note 1 |
| 23 | ← | | RADIO BEARER SETUP | RRC<br>The 12.2 kbps speech (DL SF=128) + 64 kbps PS RB is configured.<br>See specific message contents for this message |
| 24 | → | | RADIO BEARER SETUP COMPLETE | |
| 25 | ← | | CLOSE UE TEST LOOP | TC<br>UE Test Loop Mode1 |
| 26 | → | | CLOSE UE TEST LOOP COMPLETE | TC |
| 27 | → ← | | Data | The SS sends data on the speech RB and the PS RB and verifies that the UE returned data in uplink for the speech RB and the PS RB has the same content as sent in downlink. |
| 28 | ← | | OPEN UE TEST LOOP | TC |
| 29 | → | | OPEN UE TEST LOOP COMPLETE | TC |
| 30 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Note 1. The SECURITY MODE COMMAND procedure in steps 20 and 21 is performed in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.

Specific Message Contents

RADIO BEARER SETUP (Step 12)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Speech in CS" as found in clause 9 of TS 34.108 using the speech RB as specified in TS 34.108, clause 6.10.2.4.1.9: Conversational / speech / UL:5.9 DL:5.9 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs.

RADIO BEARER SETUP (Step 23)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type titled as "Packet RAB Setup after Speech RAB Setup in CELL_DCH" (condition A11) as found in clause 9 of TS 34.108 using the speech RB + PS RB as specified in TS 34.108, clause 6.10.2.4.1.40: Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH, except for the following:

#### 8.2.2.50.5 Test requirement

At step 16 the UE shall return data on the speech RB in uplink with the same content as sent by the SS in downlink.

At step 26 the UE shall return data on the speech RB and the PS RB in uplink with the same content as sent by the SS in downlink.

### 8.2.2.51 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active discontinuous uplink transmission)

#### 8.2.2.51.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.51.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.51.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters during active DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.51.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1, DTX and, if supported, DRX are active.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure Timer_poll_prohibit_, Timer_poll & Timer_status_prohibit to 200ms. After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used (i.e. duration of 10 consecutive DTX cycle 2). |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.51.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 3 the time between 11 consecutive CQI indications shall be 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

### 8.2.2.52 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of discontinuous uplink transmission)

#### 8.2.2.52.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.52.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.52.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.52.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/HS-DSCH, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH / DPCCH discontinuous transmission and HS-DSCH reception, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, resumes E-DCH transmission with DTX and HS-DSCH reception (with DRX if supported) and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission with DTX and HS-DSCH reception and transit to CELL_FACH state, |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission with DTX and HS-DSCH reception (with DRX if supported) and transit to CELL_DCH state |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.52.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.2.53 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start and stop of discontinuous uplink transmission)

#### 8.2.2.53.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.53.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.53.3 Test purpose

To confirm that the UE starts and stops transmitting the E-DCH (with DTX), while maintaining HS-DSCH reception, in conjunction with a interfrequency hard handover without prior measurement on the target frequency according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.53.4 Method of test

Initial Condition

System Simulator: 2 cells–Cells 1 and 6 are active.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20 in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

**Table 8.2.2.53**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.2.53 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The SS has configured its downlink transmission power settings according to columns "T0" in table 8.2.2.53.

The UE is in cell 1 and has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/ HS-DSCH, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active. .

The SS switches its downlink transmission power settings to columns "T1" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform a timing re-initialised interfrequency hard handover to cell 6 and stop E-DCH / DPCCH discontinuous transmission but keep HS-DSCH reception (DRX will be deactivated if enabled by the UE). The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 6.

The SS switches its downlink transmission power settings to columns "T0" and transmits a RADIO BEARER RECONFIGURATION message instructing the UE to perform an interfrequency hard handover to cell 1 and resume E-DCH transmission with DTX. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 1.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms.

SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | The SS switches its downlink transmission power settings to columns "T1" in table 8.2.2.53. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and stop of E-DCH transmission with DTX, |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 6. |
| 4 | | SS | | The SS switches its downlink transmission power settings to columns "T0" in table 8.2.2.53. |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Hard handover to another frequency and start of E-DCH transmission with DTX (and DRX if supported). |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in cell 1. |
| 7 | | SS | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 2)

#### 8.2.2.53.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 6.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message in cell 1.

At step 7 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.2.54 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of discontinuous uplink transmission)

#### 8.2.2.54.1 Definition

All UEs which support FDD and UL DTX.

#### 8.2.2.54.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.54.3 Test purpose

1) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state with frequency modification and stops E-DCH / DPCCH discontinuous transmission according to the received a RADIO BEARER RECONFIGURATION message.

2) To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state with frequency modification and starts E-DCH / DPCCH discontinuous transmission according to the received a RADIO BEARER RECONFIGURATION message.

### 8.2.2.54.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and cell 6 is inactive.

UE: PS_DCCH_DTCH_E-DCH/HS-DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

**Table 8.2.2.54**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency ($f_1$) | | High Range Test Frequency ($f_2$) | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |

Table 8.2.2.54 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in CELL_DCH state and has a radio bearer mapped on HS-DSCH and E-DCH in cell 1, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active. .The SS has configured its downlink transmission power setting according to columns “T0” in table 8.2.2.54.

The SS then applies the power level according to “T1” in table 8.2.2.54 and transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops HS-DSCH reception and E-DCH / DPCCH discontinuous transmission, moves to CELL_FACH state in cell 6 and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, the SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state in cell 1, resumes the HS-DSCH reception and E-DCH transmission, with DTX (and DRX if supported) and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms. The SS calls for generic procedure C.3 to check the UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of HS-DSCH reception (with DRX if supported) and E-DCH transmission with DTX |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Start of HS-DSCH reception and E-DCH transmission with DTX/DRX |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.2.2.54.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.2.55 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of discontinuous uplink transmission)

#### 8.2.2.55.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.55.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

#### 8.2.2.55.3 Test purpose

1. To confirm that the UE reconfigures the radio bearer parameters and stops E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters and starts E-DCH / DPCCH discontinuous transmission according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.55.4 Method of test

##### Initial Condition

System Simulator: 1 cell

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20, as specified in clause 7.4 of TS 34.108.

##### Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

##### Test Procedure

The UE is in CELL_DCH state and has a user radio bearer mapped on E-DCH/HS-DSCH established in cell 1, E-DCH transmission Time Interval is set to 10ms, DTX and, if supported, DRX are active.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to stop the discontinuous transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message instructing the UE to start the discontinuous transmission on E-DCH. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission and HS-DSCH reception. |
| 2 | | | | At the activation time, SS stops E-DCH reception with DTX from the UE. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission with DTX and HS-DSCH reception (with DRX if supported) |
| 5 | | | | At the activation time, SS resumes E-DCH reception with DTX from the UE. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | SS | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 400ms (i.e. duration of 10 consecutive DTX cycle 2). |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

#### 8.2.2.55.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7 the time between 11 consecutive CQI indications shall be 400ms.

### 8.2.2.56 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_PCH: Success (stop of discontinuous uplink transmission)

#### 8.2.2.56.1 Definition and applicability

All UEs which support FDD and UL DTX.

#### 8.2.2.56.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE receives RRC CONNECTION SETUP, ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the DTX_DRX_STATUS variable.

The variable DTX_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> both variables HS_DSCH RECEPTION and E_DCH_TRANSMISSION are set to TRUE;

1> no DCH transport channel is configured;

1> the variable DTX_DRX_PARAMS is set;

1> the UE has received the IE "DTX-DRX timing information".

If any of the above conditions is not met and the variable DTX_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable DTX_DRX_STATUS to FALSE;

1> clear the variable DTX_DRX_PARAMS;

1> stop DTX-DRX mode related activities.

If variable DTX_DRX_STATUS is set to true and the serving HS-DSCH cell was changed as a result of the received message the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable DTX_DRX_STATUS is set to TRUE after receiving this message and the value of IE "DTX-DRX timing information" included in this message is not "Continue", the UE shall:

1> if the variable DTX_DRX_STATUS was set to TRUE before receiving this message:

2> re-configure the physical layer to perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration;

2> let the MAC layer continue with the current restriction on E-DCH transmission and monitoring of absolute and relative grant channels from the frame boundary where the uplink transmission starts with the new configuration and for the duration of the IE "Enabling Delay".

1> else:

2> perform discontinuous uplink DPCCH transmission and enable discontinuous downlink reception operations by configuring the physical layer according to the variable DTX_DRX_PARAMS at the CFN corresponding to the frame boundary that is offset by the value of the IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration.

1> configure the MAC layer to start restricting E-DCH transmissions and monitor absolute and relative grant channels at the CFN corresponding to the frame boundary that is offset by the value of IE "Enabling Delay" from the frame boundary where uplink transmission starts with new configuration taking into account the IEs "UE DTX DRX Offset", "MAC DTX Cycle", "MAC Inactivity Threshold" and "Inactivity Threshold for UE Grant Monitoring".

…

If the IE "DTX-DRX timing information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "timing" is set to "New timing":

2> use the newly received DTX-DRX timing configuration.

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34.

…

If the IE "DTX–DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> store the contents of the IE in the variable DTX_DRX_PARAMS;

1> determine the value for the DTX_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.34;

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple of the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DTX cycle 2" is not an integer multiple or a divisor of the value of the IE "CQI Feedback cycle, k"; or

1> if the value of the IE "UE DPCCH burst 1" is greater than the value of the IE "UE DTX cycle 1"; or

1> if the value of the IE "UE DPCCH burst 2" is greater than the value of the IE "UE DTX cycle 2"; or

1> if the IE "UE DTX long preamble length" is set to 4 or 15 slots and the value of the IE "Inactivity Threshold for UE DTX cycle 2" is less than 4 TTIs (for 10ms E-DCH TTI) or 8 TTIs (for 2ms E-DCH TTI); or

1> if the IE "UE DRX cycle" is not an integer multiple or a divisor of the value of the IE "UE DTX cycle 1"; or

1> if the IE "DRX Information" is included in this message while the IE "DTX information" is not included in this message; or

1> if the value of the IE "UE DTX cycle 1" is not an integer multiple or a divisor of the value of the IE "MAC DTX cycle":

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.34, 8.6.6.38, 8.6.6.39

### 8.2.2.56.3 Test purpose

To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_PCH state, and stops E-DCH / DPCCH discontinuous transmission and HS-DSCH reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.56.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A20 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports DPCCH Discontinuous Transmission

Test Procedure

The UE has a radio bearer mapped to the E-DCH/HS-DSCH and the signalling radio bearers mapped on E-DCH/HS-DSCH, DTX and, if supported, DRX are active.

The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications shall be 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops E-DCH / DPCCH discontinuous transmission and HS-DSCH reception, transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and moves to CELL_PCH state.

SS calls for generic procedure C.4 to check that the UE is in CELL_PCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The SS waits to allow sufficient time for DTX cycle 2 to be active, and CQI DTX Timer to expire, and then verifies that the time between 11 consecutive CQI indications is 320ms if 2ms TTI is used, or 400ms if 10ms TTI is used (i.e. duration of 10 consecutive DTX cycle 2). |
| 1 | ← | | RADIO BEARER RECONFIGURATION | |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | Stop of E-DCH transmission and HS-DSCH reception with DTX (and DRX if supported) and transit to CELL_PCH state. |
| 3 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | CELL_PCH |

#### 8.2.2.56.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.57 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving HS-DSCH cell change between MAC-hs and MAC-ehs)

#### 8.2.2.57.1 Definition and applicability

All UEs which support FDD or 1.28Mcps TDD and MAC-ehs.

#### 8.2.2.57.2 Conformance requirement

Upon reception of the IE "RLC Info", the UE shall:

[…]

1> if the IE "Downlink RLC mode" is present and is set to "AM RLC":

2> if IE "DL RLC PDU size" is not present:

3> determining the downlink RLC PDU size will be handled at RLC level as described in [16], without any configuration from RRC.

NOTE: The case where this mandatory IE is not present is meant to handle the interaction with a network using an earlier release of the specification.

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the downlink RLC PDU size.

2> else, if the DL RLC PDU size is set to "flexible size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 7 bits:

3> configure the corresponding RLC entity with flexible RLC PDU size and the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and DL RLC PDU size value is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is set to "flexible size" and the indicated RLC length indicator size is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is changed to" fixed size" from "flexible size"; or

2> the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 15 bits:

NOTE: The downlink RLC PDU size set in the RLC entity can either be explicitly configured or, in case no explicit configuration is provided, derived by the first received RLC PDU [16].

3> if the IE "one sided RLC re-establishment" is set to TRUE:

4> re-establish the receiving side of the corresponding RLC entity.

3> else:

4> re-establish the corresponding RLC entity.

3> if the DL RLC PDU size is set to "fixed size":

4> configure the corresponding RLC entity with the new downlink RLC PDU size.

3> if the DL RLC PDU size is set to "flexible size":

4> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

3> if the UE supports the lossless DL RLC PDU size change and PDCP was configured for that radio bearer with the IE "Support for lossless SRNS relocation or for lossless DL RLC PDU size change" set to TRUE:

4> include the current DL PDCP receive sequence number and the radio bearer identity for that radio bearer in the variable PDCP_SN_INFO.

3> if the IE "Status" in the variable CIPHERING_STATUS of the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" for this radio bearer is set to "Started":

4> if the RLC re-establishment is caused by a CELL UPDATE CONFIRM:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if the RLC re-establishment is caused by a reconfiguration message:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

…

1> if the received reconfiguration message did not include the IE "Downlink counter synchronisation info":

2> if the variable START_VALUE_TO_TRANSMIT is set:

3> include and set the IE "START" to the value of that variable.

2> if the variable START_VALUE_TO_TRANSMIT is not set and the IE "New U-RNTI" is included:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

2> if the received reconfiguration message caused a change in the RLC PDU size, a change from flexible to fixed DL RLC PDU size or a change of the RLC LI size for any RB using RLC-AM:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for the CN domain associated with the corresponding RB identity in the IE "START list" in the IE "Uplink counter synchronisation info".

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK}$, $\Delta_{NACK}$ and Ack-NACK Repetition factor.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the IE "HS-PDSCH Midamble Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored "PLCCH Info".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RBs mapped to HS-DSCH, there is either:

2> at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow; or

2> at least one MAC-ehs reordering queue configured for the associated logical channel.

NOTE 1: For TDD and for FDD in CELL_DCH, to enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the concerning MAC-ehs reordering queue, add/remove the serving HS-DSCH radio link or, for TDD add/remove H-RNTI upon hard handover.

NOTE 2: For TDD and for FDD in CELL_DCH, if HS_DSCH_RECEPTION is set to TRUE and a reconfiguration, an inter-RAT handover from UTRAN, or a cell change order procedure is initiated, the UE checks the conditions only when the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure is successfully completed. Doing so ensures that, in case of failure in the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure, the UE can return to the old configuration as if the message was not received, e.g. without performing a MAC-HS reset.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> for TDD and for FDD in CELL_DCH:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-hs/ehs entity [15];

2> release all HARQ resources;

2> no long consider any radio link to be the HS-DSCH serving radio link.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, if no downlink DPCH is assigned the UE shall clear the uplink DPCH configuration and initiate the Cell Update procedure according to subclause 8.3.1, cause "radio link failure".

NOTE 3: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "Added or Reconfigured MAC-ehs reordering queue", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

2> for 1.28 Mcps TDD, when performing reception on signalling radio bearer before RAB has been established.

3> if MAC-ehs is not configured,

4> use the table of transport block size for the HS-DSCH physical layer category 1 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 1 as specified in [35].

3> else,

4> use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 9 as specified in [35].

NOTE 4: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest HSDPA capability category, as specified in [35], when performing scheduling and signalling the control information on HS-SCCH, as it is not possible for Node B to be aware of the UE's HSDPA capability category during this period.

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

In CELL_DCH, whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

[…]

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

[…]

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

[…]

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

[…]

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

NOTE: The Release '99 RADIO BEARER RECONFIGURATION message always includes at least one IE "Downlink information for each radio link" containing the mandatory IEs, even if UTRAN does not require the reconfiguration of any radio link.

…

If the IE "Downlink information common for all radio links " is included the UE shall:

1> if the IE "Downlink DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28.

1> if the IE "Downlink F-DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28a.

1> if the IE choice "mode" is set to 'FDD':

2> perform actions for the IE "DPCH compressed mode info" as specified in subclause 8.6.6.15;

2> perform actions for the IE "Tx Diversity mode" as specified in subclause 8.6.6.24.

1> if the IE "MAC-hs reset indicator" is included:

2> if the serving HS-DSCH radio link is the same radio link as prior to the reception of the message; and

2> if, as a result of the reconfiguration message where this IE is received, the MAC header type (i.e., either MAC-hs or MAC-ehs) is unchanged:

3> the UE behaviour is unspecified.

2> reset the MAC-hs/ehs entity [15].

NOTE: If the MAC header type is changed, either from MAC-hs to MAC-ehs or from MAC-ehs to MAC-hs, UTRAN should include the IE "MAC-hs reset indicator" in order to ensure a reset of the MAC-hs/ehs entity in the UE prior to MAC-hs/ehs reconfiguration, otherwise the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.6.4.9, 8.2.2.3, 8.5.25, 8.6.6.4, 8.6.6.27.

### 8.2.2.57.3 Test purpose

1. To verify that the UE is able to successfully perform an AM data RB reconfiguration from fixed RLC to flexible RLC, and that:
   a. When the RLC Length Indicator size is unchanged, the RLC AM entity is not re-established.
   b. When the RLC Length Indicator size is changed, the RLC AM entity is re-established.

2. To verify that the UE is able to successfully perform an AM data RB reconfiguration from flexible RLC to fixed RLC and that the RLC AM entity is re-established.

3. To verify that the UE is able to successfully perform a serving HS-DSCH cell change:
   a. With reconfiguration from using a MAC-hs entity to using a MAC-ehs entity.
   b. With reconfiguration from using a MAC-ehs entity to using a MAC-hs entity.

### 8.2.2.57.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and Cell 2 is inactive.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A14 (FDD)/A13(1.28Mcps TDD), as specified in clause 7.4 of TS 34.108.

System Information Block type 11 (Cell 1)

Use the same message sub-type found in clause 6.1 of TS 34.108, with the following exception:

| | |
|---|---|
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not Present<br>Absence of this IE is equivalent to default value 1 |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Not present<br>(This IE shall be ignored by the UE for SIB11) |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | Not present<br>Absence of this IE is equivalent to default value 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1.4 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity indicator | FALSE |
| - Cell Selection and Re-selection info | Not Present<br>(The IE shall be absent as this is the serving cell) |
| - Intra-frequency cell id | 2 |
| - Cell info | |
| - Cell individual offset | Not present<br>Absence of this IE is equivalent to default value 0dB |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1.4 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity indicator | FALSE |
| - Cell Selection and Re-selection info | Not present<br>For neighbouring cell, if HCS is not used and all the parameters in cell selection and re-selection info are Default value, this IE is absent. |
| - Intra-frequency cell id | 3 |
| - Cell info | Same content as specified for Intra-frequency cell id=2 with the exception that value for Primary scrambling code shall be according to clause titled "Default settings for cell No.3 (FDD)" in clause 6.1.4 |
| - Intra-frequency cell id | 7 |
| - Cell info | Same content as specified for Intra-frequency cell id=2 with the exception that value for Primary scrambling code shall be according to clause titled "Default settings for cell No.7 (FDD)" in clause 6.1.4<br>Note that this cell can also be configured as an inter-frequency cell on f3. |
| - Intra-frequency cell id | 8 |
| - Cell info | Same content as specified for Intra-frequency cell id=2 with the exception that value for Primary scrambling code shall be according to clause titled "Default settings for cell No.8 (FDD)" in clause 6.1.4<br>Note that this cell can also be configured as an inter-frequency cell on f3. |
| - Intra-frequency cell id | 11 |
| - Cell info | Same content as specified for Intra-frequency cell id=2 with the exception that value for Primary scrambling code shall be according to clause titled "Default settings for cell No.11 (FDD)" in clause 6.1.4 |

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28Mcps TDD
- UE supports MAC-ehs

Test Procedure

**Table 8.2.2.57**

| Parameter | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | OFF | -60 | -60 |
| P-CCPCH RSCP | dBm | -60 | -66 | | -66 | -60 | |

Table 8.2.2.57 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0", "T1" and "T2", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for Cell 1 and Cell 2. Columns marked "T0" denote the initial conditions.

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-hs).

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RB from fixed to flexible with no change of LI size. The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall not re-establish its configured DL AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS configures its downlink transmission power settings according to columns "T2" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 1 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-hs), and with reconfiguration of the AM data RB from flexible to fixed with no change of LI size. The UE shall move to Cell 1 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1. The SS shall re-establish its configured AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS configures its downlink transmission power settings according to columns "T0" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RB from fixed to flexible with change of LI size (from 7 bits LI to 15 bits LI). The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall re-establish its configured AM RLC entities. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS calls generic procedure C.3 to check that the UE is in CELL_DCH state on Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57 |
| 1a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) / 1g (1.28Mcps TDD). |
| 2 | ← | | RADIO BEARER RECONFIGURATION | |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2. |
| 4 | ← | | UE CAPABILITY ENQUIRY | |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 7 | | SS | | SS configures its downlink transmission power settings according to columns "T2" in table 8.2.2.57. Then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. |
| 7a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) / 1g (1.28Mcps TDD). |
| 8 | ← | | RADIO BEARER RECONFIGURATION | |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 1.<br>SS applies the new start value for RB 25 in UL and DL. |
| 10 | ← | | UE CAPABILITY ENQUIRY | |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 13 | | SS | | SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.57. Then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57. |
| 13a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) / 1g (1.28Mcps TDD). |
| 14 | ← | | RADIO BEARER RECONFIGURATION | |
| 15 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2.<br>SS applies the new start value for 25 in UL and DL. |
| 16 | ← | | UE CAPABILITY ENQUIRY | |
| 17 | → | | UE CAPABILITY INFORMATION | |
| 18 | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 19 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Steps 1a and 13a) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

MEASUREMENT REPORT (Steps 1a and 13a)(1.28Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 1 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 2 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1g |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 2 |

RADIO BEARER RECONFIGURATION (Step 2) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| | Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN (Nt) | Same UARFCN as used for Cell 2 |
| CHOICE channel requirement | Not Present |
| E-DCH Info | Not Present |

RADIO BEARER RECONFIGURATION COMPLETE (Step 3)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY ENQUIRY (Steps 4, 10, 16)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION (Steps 5, 11, 17)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Steps 6, 12, 18)

Use the same message sub-type found in TS 34.108 clause 9.

MEASUREMENT REPORT (Step 7a) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |

MEASUREMENT REPORT (Step 7a)(1.28Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 2 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 1 |
| - Proposed TGSN | Checked that this IE is absent |
| - Primary CCPCH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Timeslot list | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1g |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 1 |

RADIO BEARER RECONFIGURATION (Step 8) (FDD)

Use the same message as specified in step 2, except for the following.

| Information Element | Value/remark |
|---|---|

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (UM DCCH for RRC) |
| - RB mapping info | |

| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - Cell parameters ID | Set to the Cell parameters ID for Cell 1 |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 9, 15)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION (Step 14)

Use the same message as specified in step 2, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Flexible size |
| - Length indicator size | 15-bit |

### 8.2.2.57.5 Test requirements

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 4, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 1a).

After step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3b).

After step 10, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 2).

After step 14, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 16, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC (verifies test purpose 1b).

## 8.2.2.57a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving HS-DSCH cell change between MAC-hs and MAC-ehs) with SRBs mapped on E-DCH/DCH

### 8.2.2.57a.1 Definition and applicability

All UEs which support FDD and MAC-ehs or 1.28Mcps TDD and MAC-ehs.

### 8.2.2.57a.2 Conformance requirement

Upon reception of the IE "RLC Info", the UE shall:

[…]

1> if the IE "Downlink RLC mode" is present and is set to "AM RLC":

2> if IE "DL RLC PDU size" is not present:

3> determining the downlink RLC PDU size will be handled at RLC level as described in [16], without any configuration from RRC.

NOTE: The case where this mandatory IE is not present is meant to handle the interaction with a network using an earlier release of the specification.

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the downlink RLC PDU size.

2> else, if the DL RLC PDU size is set to "flexible size" and no downlink RLC PDU size is currently set in the RLC entity:

3> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 7 bits:

3> configure the corresponding RLC entity with flexible RLC PDU size and the RLC length indicator size indicated in the IE "Length indicator size".

2> else, if the IE "DL RLC PDU size" is present, the DL RLC PDU size is set to "fixed size" and DL RLC PDU size value is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is set to "flexible size" and the indicated RLC length indicator size is different from the one currently set in the RLC entity; or

2> the DL RLC PDU size is changed to "fixed size" from "flexible size"; or

2> the DL RLC PDU size is changed to "flexible size" from "fixed size" and the indicated RLC length indicator size is 15 bits:

NOTE: The downlink RLC PDU size set in the RLC entity can either be explicitly configured or, in case no explicit configuration is provided, derived by the first received RLC PDU [16].

3> if the IE "one sided RLC re-establishment" is set to TRUE:

4> re-establish the receiving side of the corresponding RLC entity.

3> else:

4> re-establish the corresponding RLC entity.

3> if the DL RLC PDU size is set to "fixed size":

4> configure the corresponding RLC entity with the new downlink RLC PDU size.

3> if the DL RLC PDU size is set to "flexible size":

4> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

3> if the UE supports the lossless DL RLC PDU size change and PDCP was configured for that radio bearer with the IE "Support for lossless SRNS relocation or for lossless DL RLC PDU size change" set to TRUE:

4> include the current DL PDCP receive sequence number and the radio bearer identity for that radio bearer in the variable PDCP_SN_INFO.

3> if the IE "Status" in the variable CIPHERING_STATUS of the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" for this radio bearer is set to "Started":

4> if the RLC re-establishment is caused by a CELL UPDATE CONFIRM:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if the RLC re-establishment is caused by a reconfiguration message:

5> if only the receiving side of the RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

…

1> if the received reconfiguration message did not include the IE "Downlink counter synchronisation info":

2> if the variable START_VALUE_TO_TRANSMIT is set:

3> include and set the IE "START" to the value of that variable.

2> if the variable START_VALUE_TO_TRANSMIT is not set and the IE "New U-RNTI" is included:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

2> if the received reconfiguration message caused a change in the RLC PDU size, a change from flexible to fixed DL RLC PDU size or a change of the RLC LI size for any RB using RLC-AM:

3> calculate the START value according to subclause 8.5.9;

3> include the calculated START values for the CN domain associated with the corresponding RB identity in the IE "START list" in the IE "Uplink counter synchronisation info".

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";

- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the IE "HS-PDSCH Midamble Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored "PLCCH Info".

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RBs mapped to HS-DSCH, there is either:

2> at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow; or

2> at least one MAC-ehs reordering queue configured for the associated logical channel.

NOTE 1: For TDD and for FDD in CELL_DCH, to enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the concerning MAC-ehs reordering queue, add/remove the serving HS-DSCH radio link or, for TDD add/remove H-RNTI upon hard handover.

NOTE 2: For TDD and for FDD in CELL_DCH, if HS_DSCH_RECEPTION is set to TRUE and a reconfiguration, an inter-RAT handover from UTRAN, or a cell change order procedure is initiated, the UE checks the conditions only when the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure is successfully completed. Doing so ensures that, in case of failure in the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure, the UE can return to the old configuration as if the message was not received, e.g. without performing a MAC-HS reset.

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION to FALSE;

1> for TDD and for FDD in CELL_DCH:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-hs/ehs entity [15];

2> release all HARQ resources;

2> no long consider any radio link to be the HS-DSCH serving radio link.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, if no downlink DPCH is assigned the UE shall clear the uplink DPCH configuration and initiate the Cell Update procedure according to subclause 8.3.1, cause "radio link failure".

NOTE 3: If configured for HS-DSCH and not explicitly indicated as being cleared, the UE will have still stored the IEs "HARQ info", "Added or Reconfigured MAC-d flow", "Added or Reconfigured MAC-ehs reordering queue", "RB mapping Info" and "Downlink HS-PDSCH information".

Whenever the variable HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> perform HS_SCCH reception procedures according to the stored HS-SCCH configuration as stated in:

2> subclause 8.6.6.33 for the IE "HS-SCCH Info".

2> for 1.28 Mcps TDD, when performing reception on signalling radio bearer before RAB has been established.

3> if MAC-ehs is not configured,

4> use the table of transport block size for the HS-DSCH physical layer category 1 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 1 as specified in [35].

3> else,

4> use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15], and consider the UE capability "Total number of soft channel bits in HS-DSCH" equal to that of the HS-DSCH physical layer category 9 as specified in [35].

NOTE 4: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the lowest HSDPA capability category, as specified in [35], when performing scheduling and signalling the control information on HS-SCCH, as it is not possible for Node B to be aware of the UE's HSDPA capability category during this period.

1> perform HS-DSCH reception procedures according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info".

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

In CELL_DCH, whenever the variable HS_DSCH_RECEPTION is set to FALSE, the UE shall:

1> not perform HS_SCCH reception procedures;

1> not perform HS-DSCH reception procedures.

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

[…]

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link and no longer consider any other radio link as serving HS-DSCH radio link.

[…]

2> act on the other IEs contained in the IE "Downlink information for each radio link" as specified in subclause 8.6 applied on this radio link.

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

[…]

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

[…]

2> for each optional IE part of the IE "Downlink information for each radio link" that is not present:

3> do not change its current downlink physical channel configuration corresponding to the IE, which is absent, if not stated otherwise elsewhere.

NOTE: The Release '99 RADIO BEARER RECONFIGURATION message always includes at least one IE "Downlink information for each radio link" containing the mandatory IEs, even if UTRAN does not require the reconfiguration of any radio link.

…

If the IE "Downlink information common for all radio links " is included the UE shall:

1> if the IE "Downlink DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28.

1> if the IE "Downlink F-DPCH info common for all RL" is included:

2> perform actions as specified in subclause 8.6.6.28a.

1> if the IE choice "mode" is set to 'FDD':

2> perform actions for the IE "DPCH compressed mode info" as specified in subclause 8.6.6.15;

2> perform actions for the IE "Tx Diversity mode" as specified in subclause 8.6.6.24.

1> if the IE "MAC-hs reset indicator" is included:

2> if the serving HS-DSCH radio link is the same radio link as prior to the reception of the message; and

2> if, as a result of the reconfiguration message where this IE is received, the MAC header type (i.e., either MAC-hs or MAC-ehs) is unchanged:

3> the UE behaviour is unspecified.

2> reset the MAC-hs/ehs entity [15].

NOTE: If the MAC header type is changed, either from MAC-hs to MAC-ehs or from MAC-ehs to MAC-hs, UTRAN should include the IE "MAC-hs reset indicator" in order to ensure a reset of the MAC-hs/ehs entity in the UE prior to MAC-hs/ehs reconfiguration, otherwise the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.6.4.9, 8.2.2.3, 8.5.25, 8.6.6.4, 8.6.6.27.

### 8.2.2.57a.3 Test purpose

1. To verify that the UE is able to successfully perform an RLC AM reconfiguration from fixed RLC to flexible RLC, and that:
   a. When the RLC Length Indicator size is unchanged, the RLC AM entity is not re-established.
   b. When the RLC Length Indicator size is changed, the RLC AM entity is re-established.

2. To verify that the UE is able to successfully perform an RLC AM reconfiguration from flexible RLC to fixed RLC and that the RLC AM entity is re-established.

3. To verify that the UE is able to successfully perform a serving HS-DSCH cell change:
   a. With reconfiguration from using a MAC-hs entity to using a MAC-ehs entity.
   b. With reconfiguration from using a MAC-ehs entity to using a MAC-hs entity.

### 8.2.2.57a.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and Cell 2 is inactive.

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A13 (FDD)/A13(1.28Mcps TDD), as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28Mcps TDD
- UE supports MAC-ehs

Test Procedure

**Table 8.2.2.57a-1**

| Parameter | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | OFF | -60 | -60 |
| P-CCPCH RSCP | dBm | -60 | -66 | | -66 | -60 | |

Table 8.2.2.57a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0", "T1" and "T2", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for Cell 1 and Cell 2. Columns marked "T0" denote the initial conditions.

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-hs).

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RBs from fixed to flexible with no change of LI size. The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall not re-establish its configured DL AM RLC entities.

The SS configures its downlink transmission power settings according to columns "T2" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 1 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-hs), and with reconfiguration of the AM data RBs from flexible to fixed with no change of LI size. The UE shall move to Cell 1 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1. The SS shall re-establish its configured AM RLC entities.

The SS configures its downlink transmission power settings according to columns "T0" and then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1. The UE shall be triggered to transmit a MEASUREMENT REPORT message which includes the primary scrambling code for Cell 2. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing maintained hard handover with serving HS-DSCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs), and with reconfiguration of the AM data RBs from fixed to flexible with change of LI size (from 7 bits LI to 15 bits LI). The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall re-establish its configured AM RLC entities.

The SS calls generic procedure C.3 to check that the UE is in CELL_DCH state on Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1 |
| 2 | → | | MEASUREMENT REPORT | Reporting event 1a (FDD) / 1g (1.28Mcps TDD). |
| 3 | ← | | ACTIVATE RB TEST MODE | |

| 14 | → ← | | Data | The SS sends data on the RB25 in downlink and verifies that the UE returned data in uplink has the same content as sent in downlink. |
| 15 | SS | | | SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.57a-1. Then after a wait time of 5 seconds SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.57a-1. |
| 16 | → | | MEASUREMENT REPORT | Reporting event 1a (FDD) / 1g (1.28Mcps TDD). |
| 17 | ← | | RADIO BEARER RECONFIGURATION | |
| 18 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2.<br>SS applies the new start value for RB25 in UL and DL. |
| 19 | → ← | | Data | The SS sends data on the RB25 in downlink and verifies that the UE returned data in uplink has the same content as sent in downlink. |

| | | | |
|---|---|---|---|
| 20 | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Steps 2 and 16) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

MEASUREMENT REPORT (Steps 2 and 16)(1.28Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |

RADIO BEARER RECONFIGURATION (Step 12) (FDD)

Use the same message as specified in step 7, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Fixed size |
| - DL RLC PDU size | 336 bits |
| - RB mapping info | |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-hs |
| - DL HS-DSCH MAC-d flow identity | 0 |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-ehs |
| - DL HS-DSCH MAC-ehs Queue Id | 0 |
| Added or Reconfigured DL TrCH information | |
| - CHOICE DL MAC header type | MAC-hs |

| Information Element | Value/remark |
|---|---|
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 (for DTCH) |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not present |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code for Cell 1 |

RADIO BEARER RECONFIGURATION (Step 12)(1.28Mcps TDD)

Use the same message as specified in step 7, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Fixed size |
| - DL RLC PDU size | 336 bits |
| - RB mapping info | |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-hs |
| - DL HS-DSCH MAC-d flow identity | 0 |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - CHOICE DL MAC header type | MAC-ehs |
| - DL HS-DSCH MAC-ehs Queue Id | 0 |
| Added or Reconfigured DL TrCH information | |
| - CHOICE DL MAC header type | MAC-hs |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | |
| - MAC-hs queue Id | 0 (for DTCH) |
| - MAC-d Flow Identity | 0 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 336 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not present |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE mode | TDD |
| - Cell parameters ID | Set to the Cell parameters ID for Cell 1 |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 13, 18)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION (Step 17)

Use the same message as specified in step 7, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RLC info | |
| - CHOICE Downlink RLC mode | AM RLC |
| - CHOICE DL RLC PDU size | Flexible size |
| - Length indicator size | 15-bit |

#### 8.2.2.57a.5 Test requirements

After step 7, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 8, the UE shall return data on the uplink DCCH using AM RLC has the same content as sent in downlink (verifies test purpose 1a).

After step 12, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3b).

After step 13, the UE shall return data on the uplink DCCH using AM RLC has the same content as sent in downlink (verifies test purpose 2).

After step 17, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

After step 18, the UE shall return data on the uplink DCCH using AM RLC has the same content as sent in downlink (verifies test purpose 1b).

### 8.2.2.58 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Reconfigurations between CS voice over DCH and CS voice over HSPA)

#### 8.2.2.58.1 Definition and applicability

All UEs which support FDD and CS voice over HSPA.

#### 8.2.2.58.2 Conformance requirement

If the IE "RAB information for setup" is included, the procedure is used to establish or establish/release (only if CS domain RAB mapping is reconfigured between DCH and EDCH/HSPA) radio bearers belonging to a radio access bearer, and the UE shall:

1> if the radio access bearer identified with the IE "RAB info" does not exist in the variable ESTABLISHED_RABS:

2> create a new entry for the radio access bearer in the variable ESTABLISHED_RABS;

2> store the content of the IE "RAB info" in the entry for the radio access bearer in the variable ESTABLISHED_RABS;

2> indicate the establishment of each radio access bearer to the upper layer entity using the IE "CN domain identity", forwarding the content of the IE "RAB identity" and the IEs NAS Synchronization Indicator as well as the following IEs if included in the IE "RAB info": "MBMS Session identity" and/ or "MBMS Service Identity";

2> if prior to this procedure there exists no transparent mode radio bearer for the CN domain included in the IE "CN domain identity" and at least one transparent mode radio bearer is included in the IE "RB information to setup"; or

2> if at least one RLC-AM or RLC-UM radio bearer is included in the IE "RB information to setup":

3> calculate the START value only once during this procedure (the same START value shall be used on all new radio bearers created for this radio access bearer) according to subclause 8.5.9 for the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" part of the IE "RAB information to setup";

3> store the calculated START value in the variable START_VALUE_TO_TRANSMIT.

1> if the radio access bearer identified with the IE "RAB identity" in the IE "RAB info" already exists in the variable ESTABLISHED_RABS:

2> for each radio bearer in the variable ESTABLISHED_RABS for that radio access bearer:

3> release the PDCP and RLC entities for that radio bearer;

3> release the RAB subflow associated with the radio bearer;

3> delete the information about the radio bearer from the variable ESTABLISHED_RABS.

1> for each radio bearer in the IE "RB information to setup":

2> if the radio bearer identified with the IE "RB identity" does not exist in the variable ESTABLISHED_RABS:

3> perform the actions specified in subclause 8.6.4.3;

3> store information about the new radio bearer in the entry for the radio access bearer identified by "RAB info" in the variable ESTABLISHED_RABS;

3> create a new RAB subflow for the radio access bearer;

3> number the RAB subflow in ascending order, assigning the smallest number to the RAB subflow corresponding to the first radio bearer in the list;

3> if the IE "CN domain identity" in the IE "RAB info" is set to "PS domain" and the number of RAB subflows for the radio access bearer is greater than 1:

4> set the variable INVALID_CONFIGURATION to TRUE.

2> if the radio bearer identified with the IE "RB identity" already exists in the variable ESTABLISHED_RABS:

3> set the variable INVALID_CONFIGURATION to TRUE.

1> If CS voice service is configured over HSDPA and EDCH:

2> if the IE "UL AMR rate" is included in the IE "RAB information for setup", UE shall forward the content to upper layers;

2> if the IE "Max CS delay" is included in the IE "RAB information for setup", UE shall use the information in the IE "Max CS delay" to determine the maximum buffering of the voice frames (see [36]).

Reference

3GPP TS 25.331 clause 8.6.4.2

### 8.2.2.58.3 Test purpose

1 To confirm that the UE reconfigures CS domain RAB mapping from DCH to EDCH/HSPA according to the received RADIO BEARER SETUP message.

2 To confirm that the UE reconfigures CS domain RAB mapping from EDCH/HSPA to DCH according to the received RADIO BEARER SETUP message.

### 8.2.2.58.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (state 6-9) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports CS voice over HSPA

Test Procedure

The UE is in CELL_DCH state.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to reconfigure CS domain RAB mapping from DCH to EDCH/HSPA. The UE reconfigures the new bearers and transmits a RADIO BEARER SETUP COMPLETE on the DCCH.

Then, SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to reconfigure CS domain RAB mapping from EDCH/HSPA to DCH. The UE reconfigures the new bearers and transmits a RADIO BEARER SETUP COMPLETE on the DCCH.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Reconfiguration of CS RAB mapping from DCH to EDCH/HSPA |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER SETUP | Reconfiguration of CS RAB mapping from EDCH/HSPA to DCH |
| 4 | → | | RADIO BEARER SETUP COMPLETE | |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Speech to CELL_DCH / E-DCH / HS-DSCH CS RAB with DTX/DRX and enhanced data rate using one multiplexing option (1/1) and SRBs mapped on E-DCH/HSDSCH" in 34.108, except for the following:

RADIO BEARER SETUP (Step 3)

Use the same message as specified for "Speech to CELL_DCH from CELL_DCH in CS" in 34.108, except for the following:

| | |
|---|---|
| RB information to reconfigure list | |
| - RB identity | 1 (UM DCCH for RRC) |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL transport channel identity | 5 |
| - Logical channel identity | 1 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - MAC logical channel priority | 1 |
| - Downlink RLC logical channel info | |
| - Number of RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 10 |
| - Logical channel identity | 1 |
| - RB identity | 2 (AM DCCH for RRC) |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL transport channel identity | 5 |
| - Logical channel identity | 2 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - MAC logical channel priority | 2 |
| - Downlink RLC logical channel info | |
| - Number of RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 10 |
| - Logical channel identity | 2 |
| - RB identity | 3 (AM DCCH for NAS High Priority) |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL transport channel identity | 5 |
| - Logical channel identity | 3 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - MAC logical channel priority | 3 |
| - Downlink RLC logical channel info | |
| - Number of RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 10 |
| - Logical channel identity | 3 |
| - RB identity | 4 (AM DCCH for NAS Low Priority) |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | DCH |
| - UL transport channel identity | 5 |
| - Logical channel identity | 4 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - MAC logical channel priority | 4 |
| - Downlink RLC logical channel info | |
| - Number of RLC logical channels | 1 |
| - Downlink transport channel type | DCH |
| - DL DCH Transport channel identity | 10 |
| - Logical channel identity | 4 |
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |
| - Uplink transport channel type | E-DCH |

| | |
|---|---|
| - E-DCH MAC-d flow identity | 2 |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - DL HS-DSCH MAC-ehs Queue Id | 0 |
| - Downlink transport channel type | HS-DSCH |
| - DL HS-DSCH MAC-ehs Queue Id | 1 |

#### 8.2.2.58.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

After step 3, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

### 8.2.2.59 Radio Bearer Reconfiguration from Cell FACH ( Cell supporting HS-DSCH in Cell FACH) to CELL_FACH( Cell not supporting HS-DSCH in Cell FACH): Success (Cell re-selection)

#### 8.2.2.59.1 Definition and applicability

All UEs which support FDD and HS-PDSCH in CELL_FACH.

#### 8.2.2.59.2 Conformance requirement

If the UE performs cell re-selection during the reconfiguration procedure, the UE shall:

1> initiate a cell update procedure, as specified in subclause 8.3.1;

1> continue with the reconfiguration procedure.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS_SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

3GPP TS 25.331 clauses 8.2.2.3, 8.2.2.4 ,8.2.2.8,8.3.1.7,8.5.36, 8.5.37

### 8.2.2.59.3 Test purpose

1. To confirm that the UE stops HS-DSCH reception, starts FACH reception on S-CCPCH, and transmits RADIO BEARER RECONFIGURATION COMPLETE message in cell 2 when a cell re-selection occurs after receiving a RADIO BEARER RECONFIGURATION message via HS-DSCH in CELL_FACH.

### 8.2.2.59.4 Method of test

Initial Condition

System Simulator: 2 cells: Cell 1 configures HS-DSCH for CELL_FACH in System Information Type 5/5bis, Cell 2 sends the default system information (HS-DSCH for CELL_FACH not configured)

UE:CELL_FACH state as specified in clause 7.4 of TS 34.108, with a valid H-RNTI

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH in CELL_FACH

SYSTEM INFORMATION BLOCK TYPE 5/5bis (see specific message contents).

Test Procedure

**Table 8.2.2.59**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -75 | -75 | -60 |

Table 8.2.2.59 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_FACH state in Cell 1 and has a radio bearer established that is mapped to HS-DSCH and RACH. The SS configures RB2 to stop transmission and reception of RLC PDUs. On transmitting a RADIO BEARER RECONFIGURATION message to the UE on RB 1 with radio bearers mapping information updated, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.59. The UE shall initiate the cell reselection procedure, which may occur either before or after submitting the RADIO BEARER RECONFIGURATION COMPLETE message for transmission on the DCCH using AM RLC. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH and configure RB2 to continue transmission and reception of RLC PDUs after receiving CELL UPDATE message. Any RADIO BEARER RECONFIGURATION COMPLETE message that was previously submitted for transmission in the UE will now be received by the SS. UE transmit a UTRAN MOBILTY INFORMATION CONFIRM message on the DCCH using AM RLC. If not already done so, the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE 1: The RADIO BEARER RECONFIGURATION COMPLETE message may be received by the SS either after transmission of CELL UPDATE CONFIRM (Option 1) or after reception UTRAN MOBILITY INFORMATION CONFIRM (Option 2).

NOTE 2: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | SS | | | The SS configures RB 2 to stop transmission and reception of RLC PDUs. |
| 1 | ← | | RADIO BEARER RECONFIGURATION | The message is transmitted on RB 1. Transmitted by the SS on HS-DSCH. IE "RRC State Indicator" is set to "CELL_FACH" and radio bearer mapped to RACH/SCCPCH |
| 2 | | | | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.59. |
| | | | | The following messages are transmitted in cell 2. |
| 3 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" and “HS-PDSCH in CELL_FACH” is set to TRUE. |
| 4 | ← | | CELL UPDATE CONFIRM | See message content. |
| 5 | SS | | | The SS configures RB 2 to continue transmission and reception of RLC PDUs. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 1) | Transmitted by the UE on RACH |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | Transmitted by the UE on RACH. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 2) | Transmitted by the UE on RACH. |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (UM DCCH for RRC) |
| - RB identity | 1 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |
| HS-PDSCH in CELL_FACH | Check to see if set to TRUE |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 7)

Only the message type is checked.

#### 8.2.2.59.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "cell update cause" set to "cell reselection" and “HS-PDSCH in CELL_FACH” set to TRUE.

After step 5 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

The UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. This message may be received by the SS earliest after step 5 and at latest after step 7.

### 8.2.2.59a Radio Bearer Reconfiguration from Cell FACH ( Cell supporting E-DCH and HS-DSCH in Cell FACH) to CELL_FACH( Cell not supporting E-DCH and HS-DSCH in Cell FACH): Success (Cell re-selection)(1.28Mcps TDD only)

#### 8.2.2.59a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and E-DCH and HS-PDSCH in CELL_FACH.

#### 8.2.2.59a.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

2> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

If the UE performs cell re-selection during the reconfiguration procedure, the UE shall:

1> initiate a cell update procedure, as specified in subclause 8.3.1;

1> continue with the reconfiguration procedure.

…

If the CELL UPDATE CONFIRM message:

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and

- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or
- includes the IE "New U-RNTI":
- includes the IE "Downlink counter synchronisation info" and the IE "New U-RNTI":

NOTE: In the case of a cell update procedure during an ongoing reconfiguration procedure moving the UE into CELL_PCH/URA_PCH the CELL UPDATE CONFIRM message should include the IE "New C-RNTI".

the UE shall:

1> transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information".

1> for 1.28 Mcps TDD, System Information Block type 5 includes IE "Common E-DCH system info".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> for FDD, receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> for 1.28 Mcps TDD, receive the HS-SCCH(s) according to the stored HS-SCCH configuration, applying the HS-PDSCH midamble code according to the stored HS-PDSCH midamble configuration;

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for FDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

1> and for 1.28 Mcps TDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH according to the stored HS-SCCH configuration with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

NOTE: For 1.28 Mcps TDD, when performing HS-DSCH reception in CELL_FACH state, the UE shall use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15].

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS-SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

3GPP TS 25.331 clauses 8.2.2.4 ,8.2.2.8,8.3.1.7,8.5.36

### 8.2.2.59a.3 Test purpose

1. To confirm that the UE stops E-DCH transmission and HS-DSCH reception, starts RACH transmission and FACH reception on S-CCPCH, and transmits RADIO BEARER RECONFIGURATION COMPLETE message in cell 2 when a cell re-selection occurs after receiving a RADIO BEARER RECONFIGURATION message via E-DCH and HS-DSCH in CELL_FACH.

### 8.2.2.59a.4 Method of test

#### Initial Condition

System Simulator: 2 cells: Cell 1 configures E-DCH and HS-DSCH for CELL_FACH in System Information Type 5/5bis, Cell 2 sends the default system information (E-DCH and HS-DSCH for CELL_FACH not configured)

UE:CELL_FACH state as specified in clause 7.4 of TS 34.108, with a valid H-RNTI

#### Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports E-DCH and HS-PDSCH in CELL_FACH

SYSTEM INFORMATION BLOCK TYPE 5 (see specific message contents).

Test Procedure

**Table 8.2.2.59a**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

Table 8.2.2.59a illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denote the initial conditions.

The UE is in CELL_FACH state in Cell 1 and has a radio bearer established that is mapped to HS-DSCH and E-DCH. The SS configures RB2 to stop transmission and reception of RLC PDUs. On transmitting a RADIO BEARER RECONFIGURATION message to the UE on RB 1 with radio bearers mapped to RACH and SCCPCH, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.59a. The UE shall initiate the cell reselection procedure, which may occur either before or after submitting the RADIO BEARER RECONFIGURATION COMPLETE message for transmission on the DCCH using AM RLC. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink DCCH and configure RB2 to continue transmission and reception of RLC PDUs after receiving CELL UPDATE message. Any RADIO BEARER RECONFIGURATION COMPLETE message that was previously submitted for transmission in the UE will now be received by the SS. UE transmit a UTRAN MOBILTY INFORMATION CONFIRM message on the DCCH using AM RLC. If not already done so, the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE 1: The RADIO BEARER RECONFIGURATION COMPLETE message may be received by the SS either after transmission of CELL UPDATE CONFIRM (Option 1) or after reception UTRAN MOBILITY INFORMATION CONFIRM (Option 2).

NOTE 2: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | SS | | | The SS configures RB 2 to stop transmission and reception of RLC PDUs. |
| 1 | ← | | RADIO BEARER RECONFIGURATION | The message is transmitted on RB 1. Transmitted by the SS on HS-DSCH. IE "RRC State Indicator" is set to "CELL_FACH" and radio bearer mapped to RACH/SCCPCH |
| 2 | | | | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.59a. |
| | | | | The following messages are transmitted in cell 2. |
| 3 | → | | CELL UPDATE | Value "cell reselection" shall be indicated in IE "Cell update cause" and “HS-PDSCH in CELL_FACH” is set to TRUE. |
| 4 | ← | | CELL UPDATE CONFIRM | See message content. |
| 5 | SS | | | The SS configures RB 2 to continue transmission and reception of RLC PDUs. |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 1) | Transmitted by the UE on RACH |
| 7 | → | | UTRAN MOBILITY INFORMATION CONFIRM | Transmitted by the UE on RACH. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE (Option 2) | Transmitted by the UE on RACH. |
| 9 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (UM DCCH for RRC) |
| - RB identity | 1 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 1 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 1 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 1 |
| - RB stop/continue | Not Present |
| - RB information to reconfigure | (AM DCCH for RRC) |
| - RB identity | 2 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 2 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 2 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 2 |
| - RB stop/continue | Not Present |
| - RB information to reconfigure | (AM DCCH for NAS_DT High priority) |
| - RB identity | 3 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 3 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 3 |

| | |
|---|---|
| - Downlink RLC logical channel info | |

| - Logical channel identity | 4 |
| - RB stop/continue | Not Present |
| - RB information to reconfigure | (AM DTCH) |
| - RB identity | 25 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | Not Present |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RBMuxOption |
| - RLC logical channel mapping indicator | Not Present |
| - Number of uplink RLC logical channels | 1 |
| - Uplink transport channel type | RACH |
| - UL Transport channel identity | Not Present |
| - Logical channel identity | 7 |
| - CHOICE RLC size list | Explicit list |
| - RLC size index | According to clause 6.11 |
| - MAC logical channel priority | 8 |
| - Downlink RLC logical channel info | |
| - Number of downlink RLC logical channels | 1 |
| - Downlink transport channel type | FACH |
| - DL DCH Transport channel identity | Not Present |
| - DL DSCH Transport channel identity | Not Present |
| - Logical channel identity | 7 |
| - RB stop/continue | Not Present |
| Maximum allowed UL TX power | Not Present |

CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |
| HS-PDSCH in CELL_FACH | Check to see if set to TRUE |

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 7)

Only the message type is checked.

#### 8.2.2.59a.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "cell update cause" set to "cell reselection" and “HS-PDSCH in CELL_FACH” set to TRUE.

After step 5 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the DCCH using AM RLC.

The UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. This message may be received by the SS earliest after step 5 and at latest after step 7.

### 8.2.2.60 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and CELL_FACH to CELL_DCH: Success (with HS-DSCH reception in Enhanced FACH DL)

#### 8.2.2.60.1 Definition and applicability

All UEs which support FDD, fully support F-DPCH and HS-PDSCH in CELL_FACH.

#### 8.2.2.60.2 Conformance requirement

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4] on that frequency;

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> 2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> 2> select a suitable UTRA cell according to [4];

3> 2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received

reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state, initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> select PRACH according to subclause 8.5.17;

1> for TDD; or

1> for FDD, if the UE does not support HS-DSCH reception; or

1> if the IE "HS-DSCH common system information" is not included in System Information Block type 5 or System Information Block type 5bis:

2> select Secondary CCPCH according to subclause 8.5.19;

2> use the transport format set given in system information;

2> take the actions related to the HS_DSCH_RECEPTION_GENERAL variable as described in subclause 8.5.37a.

1> else:

2> if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "RACH" in the UL; and

2> if variable H_RNTI and variable C_RNTI are set:

3> start to receive HS-DSCH according to the procedure in subclause 8.5.36.

2> else:

3> clear variable C_RNTI and delete any stored C-RNTI value;

3> clear variable H_RNTI and delete any stored H-RNTI value;

3> clear any stored IE "HARQ Info".

…

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

1> in TDD when "Primary CCPCH Info" is included indicating a new target cell and "New C-RNTI" is not specified:

2> remove any C-RNTI from MAC;

2> clear the variable C_RNTI.

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> if any IEs related to HS-DSCH are stored in the UE:

2> clear any stored IE "Downlink HS-PDSCH information";

2> for 1.28Mcps TDD, clear the IE "HS-PDSCH Midamble Configuration" and the IE "HS-SCCH Set Configuration" in the IE "DL Multi Carrier Information";

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

1> if any IEs related to E-DCH are stored in the UE:

2> clear any stored IE "E-DCH info";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

4> 2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

5> 2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

6> 2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

7> 2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS_SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS_SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.25, 8.5.36

### 8.2.2.60.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state and back again, according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters and transits from CELL_FACH to CELL_DCH state, and starts E-DCH transmission according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.60.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DPDCH (FDD only)
- UE fully supports F-DPCH

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, with signalling radio bearers mapped on E-DCH/HS-DSCH. After the UE receives this message, it establishes a radio bearer and maps it to the E-DCH/HS-DSCH. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts E-DCH transmission HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Radio bearer mapping onto E-DCH/HS-DSCH with SRB mapped onto E-DCH/HS-DSCH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Stop of E-DCH transmission, ongoing HS-DSCH transmission and transit to CELL_FACH state, |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission, ongoing HS-DSCH transmission and transit to CELL_DCH state |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH (1/1) and SRBs mapped on E-DCH/HS-DSCH" (condition A14) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| **RAB information for setup** | |
| - RAB identity | (high-speed AM DTCH for PS domain)<br>0000 0101B |
| - CN domain identity | PS domain |
| - NAS Synchronisation | Not Present |
| - Re-establishment timer | Use T315 |
| - RB information to setup | |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH information<br>- Uplink transport channel type<br>- E-DCH MAC-d flow identity<br>- Uplink transport channel type<br>- E-DCH MAC-d flow identity | <br>E-DCH<br>1<br>E-DCH<br>2 |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code<br>- Serving HS-DSCH radio link indicator | Set to same code as used for cell 1<br>TRUE |

RADIO BEARER RECONFIGURATION (Step 5)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20. |
| Uplink DPCH info<br>E-DCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20. |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20 with the following exception |
| - HS-DSCH TB size table | Octet Aligned |
| Downlink information for each radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20. |

#### 8.2.2.60.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.60a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and CELL_FACH to CELL_DCH: Success (with ongoing E-DCH transmission and HS-DSCH reception) (1.28Mcps TDD only)

#### 8.2.2.60a.1 Definition and applicability

All UEs which support 1.28Mcps TDD and E-DCH, HS-PDSCH in CELL_FACH.

#### 8.2.2.60a.2 Conformance requirement

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> if the IE "Frequency info" is included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4] on that frequency;

2> if the UE finds a suitable UTRA cell on that frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state:

6> if variable READY_FOR_COMMON_EDCH is set to TRUE:

7> move to CELL_FACH state and proceed as below.

6> else:

7> if variable H_RNTI and variable C_RNTI are set:

8> proceed as below.

7> else:

8> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

2> else, if the UE can not find a suitable UTRA cell on that frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state:

5> if variable READY_FOR_COMMON_EDCH is set to TRUE:

6> move to CELL_FACH state and proceed as below.

5> else:

6> if variable H_RNTI and variable C_RNTI are set:

7> proceed as below.

6> else:

7> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> if the IE "Frequency info" is not included in the received reconfiguration message:

2> select a suitable UTRA cell according to [4];

2> if the UE finds a suitable UTRA cell on the current frequency:

3> if the received reconfiguration message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selects another cell than indicated by this IE or the received reconfiguration message did not include the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD):

4> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

4> when the cell update procedure completed successfully:

5> if the UE is in CELL_PCH or URA_PCH state:

6> if variable READY_FOR_COMMON_EDCH is set to TRUE:

7> move to CELL_FACH state and proceed as below.

6> else:

7> if variable H_RNTI and variable C_RNTI are set:

8> proceed as below.

7> else:

8> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

2> else, if the UE can not find a suitable UTRA cell on the current frequency but it finds a suitable UTRA cell on another frequency:

3> initiate a cell update procedure according to subclause 8.3.1 using the cause "Cell reselection";

3> when the cell update procedure completed successfully:

4> if the UE is in CELL_PCH or URA_PCH state:

5> if variable READY_FOR_COMMON_EDCH is set to TRUE:

6> move to CELL_FACH state and proceed as below.

5> else:

6> if variable H_RNTI and variable C_RNTI are set:

7> proceed as below.

6> else:

7> initiate a cell update procedure according to subclause 8.3.1 using the cause "Uplink data transmission" and proceed as below.

1> start timer T305 using its initial value if timer T305 is not running and if periodical update has been configured by T305 in the IE "UE Timers and constants in connected mode" set to any other value than "infinity" in the variable TIMERS_AND_CONSTANTS;

1> if variable READY_FOR_COMMON_EDCH is set to FALSE:

2> select PRACH according to subclause 8.5.17;

1> else:

2> configure the Enhanced Uplink in CELL_FACH state and Idle mode as specified in subclause 8.5.45 for FDD and 8.5.45a for 1.28 Mcps TDD.

1> for 3.84 Mcps and 1.28 Mcps TDD; or

1> for FDD, if the UE does not support HS-DSCH reception in CELL_FACH state; or

1> if the IE "HS-DSCH common system information" is not included in System Information Block type 5 or System Information Block type 5bis; or

1> for 1.28 Mcps TDD, if the IE "Common E-DCH system info" is not included in System Information Block type 5:

2> select Secondary CCPCH according to subclause 8.5.19;

2> use the transport format set given in system information;

2> take the actions related to the HS_DSCH_RECEPTION_GENERAL variable as described in subclause 8.5.37a.

1> else:

2> for FDD if variable READY_FOR_COMMON_EDCH is set to FALSE:

3> if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "RACH" in the UL; and

3> if variable H_RNTI and variable C_RNTI are set:

4> start to receive HS-DSCH according to the procedure in subclause 8.5.36.

3> else:

4> clear variable C_RNTI and delete any stored C-RNTI value;

4> clear variable H_RNTI and delete any stored H-RNTI value;

4> clear any stored IE "HARQ Info".

2> else:

3> if the RBs have the multiplexing option with transport channel type "HS-DSCH" for the DL and transport channel type "E-DCH" in the UL; and

3> if the IEs "new Primary E-RNTI", "new H-RNTI" and "new C-RNTI" are included:

4> store the "new Primary E-RNTI" according to subclause 8.6.3.14;

4> store the "new H-RNTI" according to subclause 8.6.3.1b;

4> store the "new C-RNTI" according to subclause 8.6.3.9;

4> and start to receive HS-DSCH according to the procedure in subclause 8.5.36.

3> else:

4> clear variable C_RNTI and delete any stored C-RNTI value;

4> clear variable H_RNTI and delete any stored H-RNTI value;

4> clear variable E_RNTI and delete any stored E-RNTI value;

4> clear any stored IE "HARQ Info";

4> set the variable INVALID_CONFIGURATION to TRUE.

…

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

1> in TDD when "Primary CCPCH Info" is included indicating a new target cell and "New C-RNTI" is not specified:

2> remove any C-RNTI from MAC;

2> clear the variable C_RNTI.

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> if the IE "E-DCH info" was not included in the message:

2> for FDD:

3> stop any E-AGCH, E-RGCH and E-HICH reception procedures;

3> stop any E-DPCCH and E-DPDCH transmission procedures;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

2> for 1.28 Mcps TDD:

3> stop any E-AGCH and E-HICH reception procedures;

3> stop any E-RUCCH and E-PUCH transmission procedure;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

If after state transition the UE leaves CELL_DCH state, the UE shall, before state transition:

1> clear any stored IE "E-DCH info";

1> clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

1> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

If after state transition the UE leaves CELL_DCH state, the UE shall, after the state transition:

1> if any IEs related to HS-DSCH are stored in the UE:

2> clear any stored IE "Downlink HS-PDSCH information";

2> clear any stored IE "Downlink Secondary Cell Info FDD";

2> clear all the entries from the variable TARGET_CELL_PRECONFIGURATION;

2> for 1.28Mcps TDD, clear the IE "HS-PDSCH Midamble Configuration" and the IE "HS-SCCH Set Configuration" in the IE "DL Multi Carrier Information";

2> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

1> if any IEs related to E-DCH are stored in the UE:

2> clear any stored IE "E-DCH info";

2> clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

2> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

…

The variable HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> for FDD and 1.28 Mcps TDD:

2> the UE is in CELL_DCH state.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD:

2> a dedicated physical channel is allocated to the UE in the uplink.

1> the variable H_RNTI is set;

1> the UE has a stored IE "HS-SCCH info";

1> the UE has a stored IE "HARQ info";

1> for FDD:

2> one of the radio links in the active set is configured as the serving HS-DSCH radio link;

2> the UE has stored the following IEs:

- IE "Measurement Feedback Info";
- IE "Uplink DPCH Power Control Info" including stored $\Delta_{ACK,}$ $\Delta_{NACK}$ and Ack-NACK Repetition factor.

1> for 3.84 Mcps TDD or 7.68 Mcps TDD, the UE has stored the IE "HS-PDSCH Timeslot Configuration" and either of the following conditions are met:

2> a dedicated physical channel is allocated to the UE in the downlink;

2> the UE has stored $D_{hs\text{-}sync}$.

1> for 1.28 Mcps TDD, the UE has stored the IE "HS-PDSCH Midamble Configuration":

1> there is at least one RB mapped to HS-DSCH;

1> at least for one of the RBs mapped to HS-DSCH, there is either:

2> at least one MAC-hs queue (including the IE "MAC-d PDU size Info") configured for the concerning MAC-d flow; or

2> at least one MAC-ehs reordering queue configured for the associated logical channel.

NOTE 1: In CELL_DCH, to enable or disable HS-DSCH reception, the UTRAN has the possibility to add/remove the concerning HS-DSCH related RB mapping options, add/remove the concerning MAC-d flows or, for FDD, add/remove the concerning MAC-ehs reordering queue, add/remove the serving HS-DSCH radio link or, for TDD add/remove H-RNTI upon hard handover.

NOTE 2: In CELL_DCH, if HS_DSCH_RECEPTION is set to TRUE and a reconfiguration, an inter-RAT handover from UTRAN, or a cell change order procedure is initiated, the UE checks the conditions only when the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure is successfully completed. Doing so ensures that, in case of failure in the reconfiguration, inter-RAT handover from UTRAN, or cell change order procedure, the UE can return to the old configuration as if the message was not received, e.g. without performing a MAC-HS reset.

…

The variable HS_DSCH_RECEPTION_CELL_FACH_STATE shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH;

1> the variable H_RNTI is set;

1> the variable C_RNTI is set;

1> System Information Block type 5 or System Information Block type 5bis includes IE "HS-DSCH common system information";

1> for 1.28 Mcps TDD, System Information Block type 5 includes IE "Common E-DCH system info".

If any of the above conditions is not met and the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_CELL_FACH_STATE to FALSE;

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> set the variable HS_DSCH_RECEPTION_OF_ETWS_ENABLED to FALSE;

2> set the variable HS_DSCH_RECEPTION_GENERAL to FALSE;

2> stop any HS-SCCH reception procedures;

2> stop any HS-DSCH reception procedures;

2> clear the variable H_RNTI and remove any stored H-RNTI;

2> reset the MAC-ehs entity [15];

2> release all HARQ resources;

2> clear any stored IEs "HARQ info";

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> for FDD, receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> for 1.28 Mcps TDD, receive the HS-SCCH(s) according to the stored HS-SCCH configuration, applying the HS-PDSCH midamble code according to the stored HS-PDSCH midamble configuration;

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

1> and for FDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

1> and for 1.28 Mcps TDD, for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH according to the stored HS-SCCH configuration with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information".

NOTE: For 1.28 Mcps TDD, when performing HS-DSCH reception in CELL_FACH state, the UE shall use the table of transport block size for the HS-DSCH physical layer category 9 as specified in [15].

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to FALSE, the UE shall:

1> if the UE is in CELL_FACH and variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to FALSE:

2> not perform HS-SCCH reception procedures;

2> not perform HS-DSCH reception procedures.

3GPP TS 25.331 clauses 8.2.2.3, 8.5.25, 8.5.36

### 8.2.2.60a.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state and back again, with ongoing E-DCH transmission and HS-DSCH reception, according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters and transits from CELL_FACH to CELL_DCH state, with ongoing E-DCH transmission and HS-DSCH reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.60a.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DCH

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, with signalling radio bearers mapped on E-DCH/HS-DSCH. After the UE receives this message, it establishes a radio bearer and maps it to the E-DCH/HS-DSCH. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_FACH state, with continuous E-DCH transmission, HS-DSCH reception, and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts E-DCH transmission whilst maintaining HS-DSCH reception and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that the UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Radio bearer mapping onto E-DCH/HS-DSCH with SRB mapped onto E-DCH/HS-DSCH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Continue E-DCH transmission, HS-DSCH transmission and transit to CELL_FACH state, |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | Start of E-DCH transmission, ongoing HS-DSCH transmission and transit to CELL_DCH state |
| 6 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH (1/1) and SRBs mapped on E-DCH/HS-DSCH" (condition A13) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| **RAB information for setup** | |
| - RAB identity | (high-speed AM DTCH for PS domain)<br>0000 0101B |
| - CN domain identity | PS domain |
| - NAS Synchronisation | Not Present |
| - Re-establishment timer | Use T315 |
| - RB information to setup | |
| - RB identity | 25 |
| - PDCP Info | Not Present |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - SDU discard mode | No discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 500 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 100 |
| - Timer_poll | 100 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |
| - Timer_poll_periodic | Not Present |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '1010 1010 1010 1010' |
| New E-RNTI | '1010 1010 1010 1010' |
| E-DCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |

RADIO BEARER RECONFIGURATION (Step 5)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Uplink DPCH info<br>E-DCH info<br>Downlink HS-PDSCH Information<br>Downlink information for each radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |

#### 8.2.2.60a.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

After step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.61 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving E-DCH cell change between MAC-e/es and MAC-i/is)

#### 8.2.2.61.1 Definition and applicability

All UEs which support FDD or 1.28Mcps TDD and MAC-i/is

#### 8.2.2.61.2 Conformance requirement

1> if the uplink RLC PDU size is set to "flexible size" and no uplink RLC PDU size is currently set in the RLC entity:

2> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

1> if the uplink RLC PDU size is changed from "fixed" to "flexible size" and the RLC length indicator size is 7 bits:

2> configure the corresponding RLC entity with flexible RLC PDU size and the RLC length indicator size indicated in the IE "Length indicator size".

1> if that RB is using AM and the RLC size applicable to the uplink logical channel transporting data PDUs is different from the one derived from the previously stored configuration; or

1> if that RB is using AM and the RLC size applicable to the uplink logical channel transporting data PDUs changed from "flexible size" to "fixed size"; or

1> if that RB is using AM and "flexible size" RLC PDUs and the Length Indicator size applicable to the uplink logical channel transporting data PDUs is different from the one derived from the previously stored configuration; or

1> if that RB is using AM and the RLC PDU size applicable to the uplink logical channel transporting data PDUs changed from "fixed size" to "flexible size" and the indicated RLC length indicator size is 15 bits; and

1> none of the following conditions is met:

- the RLC size change is caused by a CELL UPDATE CONFIRM and the CELL UPDATE CONFIRM message includes the IE "Downlink counter synchronisation info".

- the RLC size change is caused by a reconfiguration message, and a cell update procedure occurs during the reconfiguration procedure and the CELL UPDATE CONFIRM message includes the IE "Downlink counter synchronisation info".

- the RLC size change is caused by a reconfiguration message, and a cell update procedure occurs during this reconfiguration procedure and the CELL UPDATE CONFIRM message includes the IE "RLC re-establish indicator" being set to TRUE for the corresponding radio bearer.

2> if the RLC size change is caused by a reconfiguration message or a CELL UPDATE CONFIRM; and

2> the IE "one sided RLC re-establishment" is included in that message and is set to TRUE:

3> re-establish the transmitting side of the corresponding RLC entity.

2> else:

3> re-establish the corresponding RLC entity.

2> if the RLC PDU size is set to "fixed size":

3> configure the corresponding RLC entity with the new uplink RLC size.

2> if the RLC PDU size is set to "flexible size":

3> configure the corresponding RLC entity with the RLC length indicator size indicated in the IE "Length indicator size".

2> for each AM RLC radio bearer in the CN domain as indicated in the IE "CN domain identity" in the IE "RAB info" in the variable ESTABLISHED_RABS whose RLC size is changed; and

2> for each AM RLC signalling radio bearer in the CN domain as indicated in the IE "CN domain identity" in the variable LATEST_CONFIGURED_CN_DOMAIN whose RLC size is changed:

3> if the IE "Status" in the variable CIPHERING_STATUS of this CN domain is set to "Started":

4> if the information causing the RLC re-establishment was included in system information:

5> set the HFN values for the corresponding RLC entity equal to the value of the IE "START" for this CN domain that will be included in the CELL UPDATE message following cell reselection.

NOTE: Since the UE cannot predict the START value at the time of the next CELL UPDATE transmission in the future, UTRAN should desist from changing the RLC size for a signalling radio bearer within a cell. Other than this case the change in RLC size for a signalling radio bearer is known to the UE when reading system information following cell reselection.

4> if the RLC re-establishment is caused by a CELL UPDATE CONFIRM:

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

5> if only the transmitting side of the RLC entity was re-established:

6> set the HFN value for the corresponding RLC entity in the uplink equal to the value of the IE "START" included in the latest transmitted CELL UPDATE message for this CN domain.

4> if the RLC re-establishment is caused by a reconfiguration message:

5> if the whole RLC entity was re-established:

6> set the HFN values for the corresponding RLC entity in uplink and downlink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

5> if only the transmitting side of the RLC entity was re-established:

6> set the HFN value for the corresponding RLC entity in the direction uplink equal to the value of the IE "START" that will be included in the reconfiguration complete message for this CN domain.

NOTE1: If the UTRAN modifies the RLC size for RB2 on any reconfiguration message or Cell Update Confirm message, the UE behaviour is unspecified in this version of the specification.

NOTE2: The UE cannot rely on the configured Transport Formats to determine the RLC sizes to be used in downlink for a particular logical channel. This size can be signalled explicitly in the RLC Info IE.

1> if that RB is using AM or UM; and

1> MAC-i/is is configured and the RLC PDU size is set to "flexible size":

2> indicate the largest RLC size applicable for uplink to the corresponding RLC entity;

2> indicate the minimum RLC size applicable for the uplink to the corresponding RLC entity.

…

If the IE "E-DCH Info" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

[…]

1> if the IE "MAC-es/e reset indicator" is included:

2> reset the MAC-es/e or MAC-i/is entity [15].

NOTE 3: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the IE "E-DCH Transmission Time Interval" is reconfigured, the UE behaviour is unspecified.

NOTE 4: If the IE "MAC-es/e reset indicator" is not set to TRUE in case the UL MAC header type is reconfigured from MAC-es/e to MAC-is/i or from MAC-is/i to MAC-e/es, the UE behaviour is unspecified.

NOTE 5: If the IE "MAC-es/e reset indicator" is not included in the IE "E-DCH Info" and 16QAM operation starts or stops, the UE behaviour is unspecified.

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

…

The variable E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_RNTI includes either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI;

1> For FDD:

2> the UE has stored the following IEs:

- IE "E-DCH Transmission Time Interval";
- IE "HARQ info for E-DCH";
- IE "E-DCH info", including the IE "E-DPCCH info" and the IE "E-DPDCH info";
- one of the radio links in the active set is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH configuration" and the IE "E-AGCH info".

1> For TDD:

2> for non-scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-PUCH info";
- IE "Non-scheduled transmission grant info".

2> for scheduled transmission, the UE has stored the following IEs:

- IE "HARQ info for E-DCH";
- IE "E-DCH information", including the IE "E-RUCCH info" and the IE "E-PUCH info";
- IE "E-HICH info";
- IE "E-AGCH info".

1> there is at least one logical channel mapped to E-DCH for which:

2> the corresponding E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset" and "E-DCH MAC-d flow maximum number of retransmissions", and the transmission grant type are configured.

[…]

Whenever the variable E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1>For FDD:

2> perform E_AGCH reception procedures according to the stored E_AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI" and the IE "New Secondary E-RNTI".

2> perform E-HICH reception procedures for all radio links in the E-DCH active set;

2> perform E-RGCH reception procedures for all radio links in the active set for which an E-RGCH configuration has been provided;

2> perform E-DPCCH transmission procedures according to the stored E-DPCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-DPCCH Info".

2> perform E-DPDCH transmission procedures according to the stored E-DPDCH configuration as stated in:

3> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

3> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

3> subclause 8.6.6.37 for the IE "E-DPDCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

1>For TDD:

2> if scheduled transmission is configured, perform E-AGCH reception procedures according to the stored E-AGCH configuration as stated in:

3> subclause 8.6.3.14 for the IE "New Primary E-RNTI".

2> Perform E-HICH reception;

2> for 3.84/7.68 Mcps TDD, perform E-RUCCH transmission procedures according to the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

2> for 1.28 Mcps TDD, if scheduled transmission is configured, perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]) and the stored E-RUCCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-RUCCH Info".

NOTE 1: The PRACH configuration is signalled directly to the UE in "E-RUCCH Info" IE in case of E-DCH serving cell change.

2> Perform E-PUCH transmission procedures according to the stored E-PUCH configuration as stated in:

3> subclause 8.6.6.37 for the IE "E-PUCH Info".

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Non-scheduled transmission grant info" is configured shall:

3> obey the scheduling and size restrictions as specified for that MAC-d flow (see subclause 8.6.5.18).

2> inclusion of MAC-d PDU's in a MAC-e or MAC-i PDU for logical channels belonging to a MAC-d flow for which the IE "Scheduled transmission grant info" is configured shall:

3> be performed in accordance with the received scheduling grant on E-AGCH (see [15]); and

3> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

2> obtain and format the appropriate information on E-UCCH (see [15]).

2> for 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established,

3> if MAC-i/is is not configured,

4> use the tables of transport block size for the E-DCH physical layer category 1 as specified in [15].

3> else,

4> use the tables of transport block size for the E-DCH physical layer category 3 as specified in [15].

NOTE 2: For 1.28 Mcps TDD, when performing transmission on signalling radio bearer before RAB has been established, UTRAN should use the same rules with the UE as described above, when performing configuration, scheduling and reading the control information on E-UCCH, as it is not possible for Node B to be aware of the UE's E-DCH capability category during this period.

Whenever the variable E_DCH_TRANSMISSION is set to FALSE, the UE in CELL_DCH state shall:

1> not perform E-AGCH, E-HICH and/or E-RGCH reception procedures;

…

If the IE "Downlink information for each radio link" is included in a received message, the UE shall:

1> if the UE would enter CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

[…]

2> For FDD:

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link and no longer consider any other radio link as serving E-DCH radio link.

3> if the IE "E-AGCH Info" is included for the serving E-DCH radio link:

4> store the newly received E-AGCH configuration.

NOTE: The UTRAN should always include the IE "E-AGCH info" if the serving E-DCH radio link indicated in the message is another radio link than the serving E-DCH radio link prior to the procedure.

3> if the IE "E-HICH information" is included:

4> store this E-HICH configuration for the concerning radio link.

3> if the IE "E-HICH information" is included or previously stored:

4> store this E-RGCH configuration for the concerning radio link, if included.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> for TDD:

3> if the IE "E-AGCH Info" is included:

4> store the newly received E-AGCH configuration.

3> if the IE "E-HICH information" is included:

4> store the E-HICH configuration.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

[…]

1> in addition, if the message was received in CELL_DCH state and the UE remains in CELL_DCH state according to subclause 8.6.3.3 applied on the received message:

2> For FDD:

3> if the IE "Serving HS-DSCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving HS-DSCH radio link;

4> if the serving HS-DSCH radio link was another radio link than this radio link prior to reception of the message and the IE "H-RNTI" is not included:

5> clear the variable H_RNTI.

3> if the IE "Serving HS-DSCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving HS-DSCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving HS-DSCH radio link.

3> determine the value for the HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25;

3> if the IE "Serving E-DCH radio link indicator" is set to 'TRUE':

4> consider this radio link as the serving E-DCH radio link;

4> if the serving E-DCH radio link was another radio link than this radio link prior to reception of the message:

5> if the IE "New Primary E-RNTI" is not included:

6> clear the Primary E-RNTI stored in the variable E_RNTI.

5> if the IE "New Secondary E-RNTI" is not included:

6> clear the Secondary E-RNTI stored in the variable E_RNTI.

3> if the IE "Serving E-DCH radio link indicator" is set to ‘FALSE’ and this radio link was considered the serving E-DCH radio link prior to reception of this message:

4> no longer consider this radio link as the serving E-DCH radio link.

3> if the IE "E-HICH release indicator" is present:

4> delete the stored E-HICH, E-AGCH and E-RGCH (if any) configurations.

3> if the IE "E-RGCH release indicator" is present:

4> delete the stored E-RGCH configuration for this RL.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

2> For TDD:

3> if the IE "H-RNTI" is not included and the primary CCPCH has changed:

4> clear the variable H_RNTI.

3> determine the value for the HS-DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.25.

2> for TDD:

3> if the IE "New Primary E-RNTI" is not included:

4> clear the variable E_RNTI.

3> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

Reference

3GPP TS 25.331 clauses 8.5.21, 8.5.28, 8.6.6.4, 8.6.6.37,

### 8.2.2.61.3 Test purpose

1. To verify that the UE is able to successfully perform an AM data reconfiguration from fixed RLC to flexible RLC, and that:

a. When the RLC Length Indicator size is unchanged, the RLC AM entity is not re-established.

b. When the RLC Length Indicator size is changed, the RLC AM entity is re-established.

2. To verify that the UE is able to successfully perform an AM data reconfiguration from flexible RLC to fixed RLC and that the RLC AM entity is re-established.

3. To verify that the UE is able to successfully perform a serving E-DCH cell change:

a. With reconfiguration from using a MAC-e/es entity to using a MAC-i/is entity.

b. With reconfiguration from using a MAC-i/is entity to using a MAC-e/es entity.

### 8.2.2.61.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and Cell 2 is inactive.

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the RB according to 34.108 clause 6.10.2.4.6.3 (FDD) / 6.11.5.4.7.4 (1.28Mcps TDD) configured according to Alt 2 (Fixed RLC + MAC-e/es ) with MAC-d flow, associated with PS RAB, configured for scheduled transmissions.

The radio bearer is placed into UE test loop mode 1.

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28Mcps TDD
- UE supports MAC-i/is

Test Procedure

**Table 8.2.2.61**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.2.2.61 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for Cell 1 and Cell 2.

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH(MAC-e/es)/HS-DSCH.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61 and transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard handover with serving E-DCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH(MAC-i/is)/HS-DSCH, and with reconfiguration of the UL AM data RBs from fixed to flexible with no change of LI size. The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall not re-establish its configured UL AM RLC entities. The SS initiates the data transmission on RB25 in the downlink which is returned by the UE on the uplink to verify the latest configured RLC .

The SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.61 and transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard handover with serving E-DCH cell change to Cell 1 with the SRBs and the PS RAB mapped on E-DCH(MAC-e/es)/HS-DSCH, and with reconfiguration of the UL AM data RBs from flexible to fixed with no change of LI size. The UE shall move to Cell 1 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1. The SS shall re-establish its configured AM RLC entities. The SS initiates the data transmission on RB25 in the downlink which is returned by the UE on the uplink to verify the latest configured RLC .

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61 and transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform a timing re-initialized hard handover with serving E-DCH cell change to Cell 2 with the SRBs and the PS RAB mapped on E-DCH(MAC-i/is)/HS-DSCH, and with reconfiguration of the AM data RBs from fixed to flexible with change of LI size (from 7 bits LI to 15 bits LI). The UE shall move to Cell 2 at the Activation Time signalled in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2. The SS shall re-establish its configured UL AM RLC entities. SS initiates the data transmission on RB25 in the downlink which is returned by the UE on the uplink. The SS calls generic procedure C.3 to check that the UE is in CELL_DCH state on Cell 2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61 |
| 1a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) |
| 2 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure RB 25 with uplink RLC PDU size as flexible size with length indicator size as 7-bit |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 4 | ← | | DOWNLINK RLC SDU | The SS sends data on the RB25 in downlink |
| 5 | → | | UPLINK RLC SDU | The SS verifies that the UE returned data in uplink has the same content as sent in downlink |
| 6 | | SS | | SS configures its downlink transmission power settings according to columns "T0" in table 8.2.2.61 |
| 6a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) |
| 7 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure RB 25 with uplink RLC PDU size as fixed size |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 1.<br>SS applies the new start value for RB 25 in UL and DL |
| 9 | ← | | DOWNLINK RLC SDU | The SS sends data on the RB25 in downlink |
| 10 | → | | UPLINK RLC SDU | The SS verifies that the UE returned data in uplink has the same content as sent in downlink |
| 11 | | SS | | SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.61 |
| 11a | → | | MEASUREMENT REPORT | Reporting event 1A (FDD) |
| 12 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure RB 25 with uplink RLC PDU size as flexible size with length indicator size as 15-bit |
| 13 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE transmits this message in Cell 2.<br>SS applies the new start value for RB 25 in UL and DL. |
| 14 | →<br>← | | DOWNLINK RLC SDU | The SS sends data on the RB25 in downlink. |
| 15 | → | | UPLINK RLC SDU | The SS verifies that the UE returned data in uplink has the same content as sent in downlink |
| 16 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Steps 1a and 11a) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (Cell 1 and Cell 2 could be in any order) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Not checked |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Not Checked |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

RADIO BEARER RECONFIGURATION (Step 2)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 7 |
| - E-DCH MAC-d flow identity | 2 |
| - CHOICE RLC PDU Size | Flexible size |
| - Length indicator size | 7-bit |
| - Minimum UL RLC PDU size | See clause 6.10 |
| - Largest UL RLC PDU size | See clause 6.10 |
| - Use special value of HE field | TRUE |
| Deleted TrCH information list | |
| - Deleted UL TrCH information | (for DCCH) |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |

| Information Element | Value/remark |
|---|---|
| - Deleted UL TrCH information | (for DTCH) |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| Added or Reconfigured UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - UL MAC header type | MAC-i/is |
| - CHOICE mode | FDD |
| - E-DCH Transmission Time interval | 2 |
| - HARQ info for E-DCH | Rvtable |
| - Added or reconfigured E-DCH MAC-d flow | (for DCCH) |
| - E-DCH MAC-d flow identity | 1 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Non-scheduled transmission grant info |
| - CHOICE mode | FDD |
| - Max MAC-e PDU contents size | 168 |
| - 2ms non-scheduled transmission grant HARQ process allocation | Not Present |
| - Added or reconfigured E-DCH MAC-d flow | (for DTCH) |
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| E-DCH info | |
| - MAC-es/e reset indicator | TRUE |
| - E-DPCCH info | NOT PRESENT |
| - E-DPDCH info | NOT PRESENT |
| - Scheduled Transmission configuration | NOT PRESENT |
| - UL 16QAM settings | NOT PRESENT |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code for Cell 1 |

MEASUREMENT REPORT (Steps 6a) (FDD)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (Cell 1 and Cell 2 could be in any order) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Not checked |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Not Checked |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |

RADIO BEARER RECONFIGURATION (Step 7) (FDD)

Use the same message as specified in "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 7 |
| - E-DCH MAC-d flow identity | 2 |
| - CHOICE *RLC PDU Size* | Fixed size |
| - DDI | 5 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 336 bits |
| Deleted TrCH information list | |
| - Deleted UL TrCH information | (for DCCH) |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |
| - Deleted UL TrCH information | (for DTCH) |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - UL MAC header type | Not Present |
| - CHOICE mode | FDD |
| - E-DCH Transmission Time interval | 2 |
| - HARQ info for E-DCH | rvtable |
| - Added or reconfigured E-DCH MAC-d flow | (for DCCH) |
| - E-DCH MAC-d flow identity | 1 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Non-scheduled transmission grant info |
| - CHOICE mode | FDD |
| - Max MAC-e PDU contents size | 168 |
| - 2ms non-scheduled transmission grant HARQ process allocation | Not Present |
| - Added or reconfigured E-DCH MAC-d flow | (for DTCH) |
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| E-DCH info | |
| - MAC-es/e reset indicator | TRUE |
| - E-DPCCH info | NOT PRESENT |
| - E-DPDCH info | NOT PRESENT |
| - Scheduled Transmission configuration | NOT PRESENT |
| - UL 16QAM settings | NOT PRESENT |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code for Cell 1 |

RADIO BEARER RECONFIGURATION (Step 7)(1.28Mcps TDD)

Use the same message as specified in "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (UM DCCH for RRC) |
| - RB identity | 1 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 1 |
| - E-DCH MAC-d flow identity | 1 |
| - DDI | 1 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - RB information to reconfigure | (AM DCCH for RRC) |
| - RB identity | 2 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 2 |
| - E-DCH MAC-d flow identity | 1 |
| - DDI | 2 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - RB information to reconfigure | (AM DCCH for NAS_DT High priority) |
| - RB identity | 3 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 3 |
| - E-DCH MAC-d flow identity | 1 |
| - DDI | 3 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - RB information to reconfigure | (AM DCCH for NAS_DT Low priority) |
| - RB identity | 4 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 4 |
| - E-DCH MAC-d flow identity | 1 |
| - DDI | 4 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 144 bits |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RB mapping info | |
| - Uplink transport channel type | E-DCH |
| - Logical channel identity | 7 |
| - E-DCH MAC-d flow identity | 2 |
| - DDI | 5 |
| - RLC PDU size list | 1 RLC PDU size |
| - RLC PDU size | 336 bits |
| Deleted TrCH information list | |
| - Deleted UL TrCH information | (for DCCH) |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |
| - Deleted UL TrCH information | (for DTCH) |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |
| Added or Reconfigured UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - CHOICE UL parameters | E-DCH |
| - UL MAC header type | Not Present |
| - CHOICE mode | TDD |
| - HARQ info for E-DCH | Rvtable |
| - Added or reconfigured E-DCH MAC-d flow | (for DCCH) |
| - E-DCH MAC-d flow identity | 1 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| - Added or reconfigured E-DCH MAC-d flow | (for DTCH) |

| Information Element | Value/remark |
|---|---|
| - E-DCH MAC-d flow identity | 2 |
| - E-DCH MAC-d flow power offset | 0 |
| - E-DCH MAC-d flow maximum number of retransmissions | 7 |
| - E-DCH MAC-d flow multiplexing list | Not Present |
| - CHOICE transmission grant type | Scheduled grant info |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Cell parameters ID | Set to the cell parameters id for Cell 1 |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 3, 8, 13)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION (Step 12)

Use the same message as specified in "Packet to CELL_DCH from CELL_DCH in PS" in 34.108, except for the following.

| Information Element | Value/remark |
|---|---|
| RB information to reconfigure list | |
| - RB information to reconfigure | (high-speed AM DTCH) |
| - RB identity | 25 |
| - RB mapping info | |

### 8.2.2.61.5 Test requirements

At step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

At step 5, the UE shall transmit loopback PDU to verify the flexible RLC configuration for uplink using AM data (verifies test purpose 1a).

At step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3b).

At step 10, the UE shall transmit the loopback PDU to verify the flexible RLC configuration for uplink using AM data (verifies test purpose 2).

At step 13, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC (verifies test purpose 3a).

At step 15, the UE shall return data on the uplink DTCH using AM data has the same content as sent in downlink (verifies test purpose 1b).

## 8.2.2.62 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (activation and deactivation of MIMO)

### 8.2.2.62.1 Definition and applicability

All UE categories which support MIMO

### 8.2.2.62.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

1> trigger lower layers to stop operation in MIMO mode.

[…]

With the exception of the provisions of subclause 6A.3, the following shall apply when the UE is configured in MIMO mode:

1) The UE derives the PCI value as defined in subclause 6A.4 and either a type A or a type B CQI value as defined in subclause 6A.2.2 depending on which type of CQI shall be reported as defined below.

### Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33

3GPP TS 25.214 clause 6A.1.2.2

#### 8.2.2.62.3 Test purpose

1. To confirm that the UE reconfigures the radio bearer parameters and starts MIMO reception according to the received RADIO BEARER SETUP message.

2. To confirm that the UE configures the physical channels to stop MIMO reception according to the received PHYSICAL CHANNEL RECONFIGURATION message.

#### 8.2.2.62.4 Method of test

##### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

##### Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports MIMO

##### Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with MIMO configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. UE sends combined CQI/PCI reports of type A and B continuously every 2 ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, using MIMO configuration, to the UE to deactivate MIMO and reconfigure SRB and user plane bearers for normal HS-DSCH reception i.e. non MIMO. The UE shall respond with PHYSICAL CHANNEL RECONFIGURATION COMPLETE. UE sends CQI reports every 8ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | | | | UE should transmit composite CQI/PCI reports of type A and type B. The SS should check that for 10 consecutive CQI reports, 5 are type A and 5 of type B |
| 4 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SRB2 on HS-DSCH with MIMO parameters absent |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 9 | | | | UE should transmit CQI reports without PCI values every 8ms |
| 10 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 sent on HS-DSCH |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH |

#### 8.2.2.62.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 3, the UE shall transmit CQI reports of type A and type B.

At step 5 and step 11, the UE shall transmit UE CAPABILITY INFORMATION using AM RLC.

At step 8, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.2.63 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (activation and de-activation of 64QAM)

#### 8.2.2.63.1 Definition and Applicability

All UEs which support FDD ,mac-ehs and 64QAM

#### 8.2.2.63.2 Conformance Requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Extract From 25.331 clause 8.6.6.36:

If the IE "Downlink HS-PDSCH Information" is included and the UE would be in CELL_DCH state after completion of this procedure, the UE shall:

1> for 1.28 Mcps TDD, if the HS-PDSCH has been configured by the IE "DL Multi-carrier information":

2> clear other stored carriers configuration in the IE "DL Multi-carrier information".

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34.

1> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

[…]

Reference(s)

TS 25.331 clause 8.6.6.36, 10.3.6.23a

### 8.2.2.63.3 Test purpose

1. To confirm that the UE starts HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.

2. To confirm that the UE stops HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.

### 8.2.2.63.4 Method of test

Initial conditions

System Simulator:

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17b, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports mac-ehs
- UE supports 64QAM

Test Procedure

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs).

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure for DL 64QAM reception which includes IE " Downlink HS-PDSCH Information". After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the configured 64QAM parameters. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE using 64QAM configuration. The SS transmits RADIO BEARER RECONFIGURATION message using SRB2 on HS-DSCH which omits DL 64 QAM settings. The UE shall deactivate DL 64 QAM and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC. The SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using HS-DSCH. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE using SRB2 on HS-DSCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Activation of 64QAM on HS-DSCH Including IE "Downlink HS-PDSCH Information". |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH using 64QAM |
| 4 | → | | UE CAPABILITY INFORMATION | |
| 5 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH using 64QAM |
| 6 | ← | | RADIO BEARER RECONFIGURATION | Deactivation of 64QAM on HS-DSCH. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | ← | | UE CAPABILITY ENQUIRY | SRB2 on HS-DSCH |
| 9 | → | | UE CAPABILITY INFORMATION | |
| 10 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 2 HS-SCCH |
| - HS-SCCH Channelisation Code | 6 |
| - HS-SCCH Channelisation Code | 7 |

| | |
|---|---|
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |

| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| - HS-DSCH TB size table | Octet aligned |

#### 8.2.2.63.5 Test requirements

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 3 the UE should receive UE CAPABILITY ENQUIRY mapped on DL 64QAM HS-DSCH-mac-ehs

At step 5 the UE should receive UE CAPABILITY INFORMATION CONFIRM mapped on DL 64QAM HS-DSCH-mac-ehs

At step 7 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 8 the UE should receive SRB UE CAPABILITY ENQUIRY mapped on DLQPSK HS-DSCH.

### 8.2.2.63a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH with SRBs on E-DCH/DCH : Success (activation and de-activation of 64QAM)

#### 8.2.2.63a.1 Definition and Applicability

All UEs which support FDD ,mac-ehs and 64QAM

#### 8.2.2.63a.2 Conformance Requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

2> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

Extract From 25.331 clause 8.6.6.36:

If the IE "Downlink HS-PDSCH Information" is included and the UE would be in CELL_DCH state after completion of this procedure, the UE shall:

1> for 1.28 Mcps TDD, if the HS-PDSCH has been configured by the IE "DL Multi-carrier information":

2> clear other stored carriers configuration in the IE "DL Multi-carrier information".

1> if the IE "HS-SCCH Info" is included:

2> act as specified in subclause 8.6.6.33.

1> if the IE "Measurement Feedback Info" is included:

2> act as specified in subclause 8.6.6.34.

2> if the IE "HS-DSCH Timeslot Configuration" or "HS-PDSCH Midamble Configuration" is included:

2> store the received configuration;

2> determine the value for the HS_DSCH_RECEPTION variable and take actions as described in subclause 8.5.25.

Reference(s)

TS 25.331 clause 8.6.6.36, 10.3.6.23a

### 8.2.2.63a.3 Test purpose

1. To confirm that the UE starts HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.

2. To confirm that the UE stops HS-DSCH transmission using DL 64QAM mode according to RADIO BEARER RECONFIGURATION message on DCCH.

### 8.2.2.63a.4 Method of test

Initial conditions

System Simulator:

UE: PS_DCCH_DCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17e, as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports mac-ehs
- UE supports 64QAM

Test Procedure

The UE is initially in CELL_DCH state with the SRBs and a PS RAB mapped on E-DCH/HS-DSCH (MAC-ehs).

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to reconfigure for DL 64QAM reception which includes IE " Downlink HS-PDSCH Information". After the UE receives this message, it reconfigures the radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. . The SS transmits RADIO BEARER RECONFIGURATION message using SRB2 and omits DL 64 QAM settings. The UE shall deactivate DL 64 QAM and then transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC..

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Activation of 64QAM on HS-DSCH Including IE "Downlink HS-PDSCH Information". |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Deactivation of 64QAM on HS-DSCH. |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 2 HS-SCCH |
| - HS-SCCH Channelisation Code | 6 |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | TRUE |
| - HS-DSCH TB size table | Octet aligned |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" under condition A3, as specified in clause 7.4 of TS 34.108, except for the following:

| Information Element | Value/remark |
|---|---|
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | Use 1 HS-SCCH |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Pohsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| - HS-DSCH TB size table | Not present |

#### 8.2.2.63a.5 Test requirements

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

At step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### 8.2.2.64 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (simultaneous activation and deactivation of 64QAM and MIMO)

#### 8.2.2.64.1 Definition and applicability

UE category supports combined 64QAM and MIMO activation. UE support FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.64.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

4> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

[…]

With the exception of the provisions of subclause 6A.3, the following shall apply when the UE is configured in MIMO mode:

1) The UE derives the PCI value as defined in subclause 6A.4 and either a type A or a type B CQI value as defined in subclause 6A.2.2 depending on which type of CQI shall be reported as defined below.

3GPP TS 25.214 clause 6A.1.2.2

### 8.2.2.64.3 Test purpose

3. To confirm that the UE reconfigures the radio bearer parameters and starts simultaneous 64QAM and MIMO reception according to the received RADIO BEARER SETUP message.

4. To confirm that the UE configures the physical channels to stop simultaneous 64QAM and MIMO reception according to the received PHYSICAL CHANNEL RECONFIGURATION message.

8.2.2.64.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information for setup IE to configure PS domain RAB and perform SRB mapping from DCH to EDCH/HSDPA (with MIMO and 64QAM simultaneously configured for L1). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO and 64QAM configuration with separate parallel data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, using MIMO and 64QAMconfiguration, to the UE to deactivate MIMO and reconfigure SRB and user plane bearers for normal HS-DSCH reception i.e. non MIMO, non 64QAM. The UE shall respond with PHYSICAL CHANNEL RECONFIGURATION COMPLETE. UE sends CQI reports every 8ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Setup PS RAB on EDCH/HSDPA. Reconfiguration of SRB mapping from DCH to EDCH/HSDPA and configuration of 64QAM and MIMO |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | | | | UE should transmit composite CQI/PCI reports of type A or type B. The SS should check that for 10 consecutive CQI reports, 5 are type A and 5 of type B |
| 4 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. parallel data stream on antenna 1 and antenna 2 with separate modulation patterns on P-CPICH and 64QAM |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO and 64QAM |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SRB2 on HS-DSCH to deactivate MIMO and 64QAM |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 9 | | | | UE should transmit CQI reports without PCI values every 8ms |
| 10 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 sent on HS-DSCH |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 on HS-DSCH |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / HS-DSCH with enhanced data rate and RLC AM using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH (MAC-ehs)" except for the following

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured DL TrCH information | 1 TrCH (HS-DSCH for DTCH and DCCH) |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | |
| - Number of Processes | 12 |
| - CHOICE *Memory Partitioning* | Implicit |
| - CHOICE *DL MAC header type* | |
| - Added or reconfigured MAC-d flow | |
| - MAC-hs queue to add or reconfigure list | (two queues) |
| - MAC-ehs queue Id | 0 (for DTCH) |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-ehs queue Id | 1 (for DCCH) |
| - MAC-d Flow Identity | 1 |
| - T1 | 50 |
| - MAC-hs window size | 16 |
| - MAC-d PDU size Info | |
| - MAC-d PDU size | 148 |
| - MAC-d PDU size index | 0 |
| - MAC-hs queue to delete list | Not present |
| - DCH quality target | Not present |
| MIMO Parameters | |
| - MIMO Operation | Start |

| Information Element | Value/remark |
|---|---|
| - CHOICE mode | FDD |
| - MIMO N_cqi_typeA/M_cqi ratio | 1/2 |
| - MIMO pilot configuration | |
| - CHOICE Second CPICH pattern | Antenna1 S-CPICH |
| - Channelisation code | 13 |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not Present |
| - HS-SCCH Channelisation Code Information | Use 1 HS-SCCH |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - POhsdsch | 6 dB |
| - CQI Feedback cycle, k | 2 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 |
| - CHOICE mode | FDD |
| - Downlink 64QAM configured | TRUE |
| - HS-DSCH TB size table | Not Present |
| - Downlink information for each radio link | |
| - Choice mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Ref. to the Default setting (Condition 17b Radio Bearer Setup) |
| - Serving HS-DSCH radio link indicator | TRUE |
| - Serving E-DCH radio link indicator | TRUE |
| - Downlink DPCH info for each RL | Not Present |
| - Downlink F-DPCH info for each RL | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used |
| - F-DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38 400 |
| - F-DPCH slot format | Not Present |
| - Secondary CPICH info | Not Present |
| - Secondary scrambling code | Not Present |
| - Code number | 11 |
| - TPC combination index | 0 |
| - E-AGCH Info | |
| - E-AGCH Channelisation Code | 10 |
| - CHOICE E-HICH Information | |
| - E-HICH Information | |
| - Channelisation code | 4 |
| - Signature sequence | 1 |
| - CHOICE E-RGCH Information | Not Present |

UE CAPABILITY ENQUIRY (Steps 4, 10)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY INFORMATION (Steps 5, 11, 17)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Steps 6, 12)

Use the same message sub-type found in TS 34.108 clause 9.1

PHYSICAL CHANNEL RECONFIGURATION (Step 7) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| HARQ Info | |
| - Number of processes | 6 |
| - CHOICE *Memory Partitioning* | |
| - Implicit | |
| Frequency info | Not present |
| MIMO Parameters | Not Present |
| Maximum allowed UL TX power | Not present |
| Uplink DPCH info | Not present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Measurement Power Offset | 12 (6 dB) |
| - CQI Feedback cycle, k | 8 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not Present |
| - HS-DSCH TB size table | Octet Aligned |
| Downlink information common for all radio links | Not Present |
| Downlink information for each radio link list | Not Present |

#### 8.2.2.64.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 3, the UE shall transmit CQI reports of type A and type B.

At step 5 and step 11, the UE shall transmit UE CAPABILITY INFORMATION using AM RLC.

At step 8, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

### 8.2.2.65 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH (Enhanced UL/DL) Success

#### 8.2.2.65.1 Definition and applicability

UE supports FDD and Enhanced Uplink in CELL_FACH state.

#### 8.2.2.65.2 Conformance requirement

Extract from 25.331

If variable READY_FOR_COMMON_EDCH is set to TRUE the UE shall:

1> configure and use the MAC and the physical layer for the PRACH preamble transmission according to the parameters included in the selected "PRACH preamble control parameters (for Enhanced Uplink)" IE according [15];

1> compile a list of candidate common E-DCH resource configuration in the order of appearance as contained in IE "Common E-DCH Resource Configuration information list".

If variable READY_FOR_COMMON_EDCH is set to TRUE, then after receiving the "E-DCH resource index" by MAC with the CMAC-STATUS primitive, the UE selects the Common E-DCH Resource Configuration from the list of candidate common E-DCH resource configuration as follows:

"Index of the selected Common E-DCH resource configuration" = "E-DCH resource index".

After selection of a common E-DCH resource configuration, the UE shall configure MAC and the physical layer for E-DCH and HSDPA transmission according to the following:

1> configure Uplink DPCH in accordance with the uplink DPCCH slot format 1 [26], the IE "Uplink DPCH code info" and IE "Uplink DPCH power control info";

1> if IE "ACK/NACK support on HS-DPCCH" is set to TRUE:

2> configure the HS-DPCCH in accordance with HS-DPCCH slot format [26], the HS-DPCCH code [28] and IE "Uplink DPCH power control info".

1> configure the common E-DCH MAC-d flows as described in subclause 8.6.5.24;

1> configure the UL E-DPCCH in accordance with the IE "E-DPCCH info" configuration;

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH;

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration";

1> use the same scrambling code for F-DPCH, E-RGCH, E-HICH and E-AGCH reception as configured for the Primary CPICH;

1> use a channelization code for F-DPCH reception as configured by IE "F-DPCH Code number";

1> configure F-DPCH in accordance with the F-DPCH slot format #0 [26];

1> apply the DPC_Mode=0 for F-DPCH according to [29];

1> configure the MAC with the stored IE "E-DPDCH info" configuration and/or the information contained in IE "Scheduled Transmission configuration";

1> configure the E-HICH in accordance with the IE "E-HICH info" configuration;

1> configure the E-AGCH in accordance with the IE "E-AGCH info" configuration;

1> configure the E-RGCH in accordance with the IE "E-RGCH info" configuration if an E-RGCH configuration has been provided with the system information;

1> configure the radio link as the serving E-DCH radio link;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46.

[…]

If after state transition the UE enters CELL_FACH state, the UE shall, after the state transition:

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

[…]

The variable READY_FOR_COMMON_EDCH shall be set to TRUE only when all the following conditions are met:

1> if the UE is in CELL_FACH state or in Idle mode:

2> the UE supports E-DCH transmission in CELL_FACH state and Idle mode;

2> the IE "HS-DSCH common system information" is included in system information block type 5 or 5bis;

2> the IE "Common E-DCH system info" is included system information block type 5 or 5bis.

[…]

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.45, 8.5.46, 8.5.47,

8.2.2.65.3 Test Purpose

1. To confirm that the UE successfully transits to Enhanced CELL_FACH state (common E-DCH / HS-DSCH) from CELL_DCH, according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.65.4 Method of test

Initial Conditions

System Simulator: 1 cell.

UE: PS-DCCH+DTCH DCH (state 6-10) as specified in clause 7.4 of TS 34.108 with SRB and user plane mappings on E-DCH /HS-DSCH under condition A30 RADIO BEARER SETUP.

The SS transmits SIB5 with common E-DCH/HS-DSCH information.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports of common E-DCH

Test Procedure

The UE is in CELL_DCH state,

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to release dedicated resources and transit to Enhanced CELL_FACH state. After receiving this message, the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC with HS-DSCH reception and E-DCH transmission. UE shall obtain the configuration for Enhanced UL/DL for CELL_FACH from SIB5. The SS calls generic procedure C.2 to check that the UE is in CELL_FACH state.

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Transit to CELL_FACH state and release dedicated resources. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | - | | Void | |
| 4 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 5 (FDD)

Use the same message type found in clause 6.1 of TS 34.108 condition B3 “Only for cells which configure common E-DCH and HS-DSCH reception in CELL_FACH”.

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| - Signalling RB information to setup | |

### 8.2.2.65.5 Test requirements

After step 1, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 4, the UE shall be in Enhanced CELL_FACH state.

## 8.2.2.66 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of SPS operation)

### 8.2.2.66.1 Definition and applicability

All UEs which support TDD and SPS operation.

### 8.2.2.66.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or
- a RADIO BEARER RECONFIGURATION message; or
- a RADIO BEARER RELEASE message; or
- a TRANSPORT CHANNEL RECONFIGURATION message; or
- a PHYSICAL CHANNEL RECONFIGURATION message; or

…

it shall:

…

1> for 1.28 Mcps TDD, if the IE "SPS information" is stored in the UE:

2> determine the value for the E_DCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.54;

2> determine the value for the HS_DSCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.55.

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the E_DCH_SPS_STATUS variable.

The variable E_DCH_SPS_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable E_DCH_TRANSMISSION is set to TRUE;

1> the IE "E-DCH SPS information" is included in the received message.

If any of the above conditions is not met and the variable E_DCH_SPS_STATUS is set to TRUE, the UE shall:

1> set the variable E_DCH_SPS_STATUS to FALSE;

1> clear the variable E_DCH_SPS_PARAMS;

1> stop all E-DCH SPS related activities.

Whenever the variable E_DCH_SPS_STATUS is set to TRUE, the UE shall:

1> configure the physical and MAC layers to operate according to the E_DCH_SPS_PARAMS.

If variable E_DCH_SPS_STATUS is set to TRUE and the serving E-DCH cell was changed as a result of the received message and the value of IE "E-DCH SPS Information" included in this message is "Continue E-DCH SPS operation", then UE behaviour is unspecified.

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the HS_DSCH_SPS_STATUS variable.

The variable HS_DSCH_SPS_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> the IE "HS-DSCH SPS information" is included in the received message.

If any of the above conditions is not met and the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> set the variable HS_DSCH_SPS_STATUS to FALSE;

1> clear the variable HS_DSCH_SPS_PARAMS;

1> stop all HS-DSCH SPS related activities.

Whenever the variable HS_DSCH_SPS_STATUS is set to TRUE, the UE shall:

1> configure the physical and MAC layers to operate according to the HS_DSCH_SPS_PARAMS.

If variable HS_DSCH_SPS_STATUS is set to TRUE and the serving HS-DSCH cell was changed as a result of the received message and the value of IE "HS-DSCH SPS information" included in this message is "Continue HS-DSCH SPS operation", then UE behaviour is unspecified.

If the IE "SPS information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the IE "E-DCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "E-DCH SPS operation" is set to "New E-DCH SPS operation":

3> after the UE has received IE "E-HICH Information":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> if the IE "EI" is included:

6> consider the E-HICH has the same configuration as that in the IE "E-HICH Info" for 1.28Mcps TDD which has the same value of EI indicated by the IE "EI" in this message.

5> else:

6> use the same configuration as the E-HICH for non-schedule transmission.

4> else:

5> store the E-HICH configuration according to the IEs "Timeslot Number", "Channelisation Code" and midamble configuration IEs.

4> store and use the Signature Sequence indicated by the IE "Signature Sequence Group Index".

3> if the IE "Transmission Pattern List" is included:

4> store the contents of the IE in the variable E_DCH_SPS_PARAMS.

3> if the IE "Initial SPS info for E-DCH" is included:

4> perform E-DCH SPS operation on the semi-persistent E-PUCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the E_DCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.54.

1> else if the IE "E-DCH SPS Information" is not included, the UE shall:

2> set the variable E_DCH_SPS_STATUS to FALSE;

2> clear the variable E_DCH_SPS_PARAMS;

2> stop all E-DCH SPS related activities.

1> if the IE "HS-DSCH SPS Information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

2> if the CHOICE "HS-DSCH SPS operation" is set to "New HS-DSCH SPS operation":

3> if the IE "Transport Block Size List" or the IE "Reception Pattern List" is included:

4> store the contents of the IE in the variable HS_DSCH_SPS_PARAMS.

3> if the IE "HARQ Info for Semi-Persistent Scheduling" is included:

4> calculate the size of each virtual IR buffer according to following equation:

Size of virtual IR soft buffer = Total buffer for HS-SCCH SPS operation / $N_{IR}$

where

- Total buffer for HS-SCCH SPS operation is signalled in the IE "Process Memory size", and the IE is the total size of the virtual IR buffers which could be used in HS-SCCH SPS operation;
- $N_{IR}$ is the value of the IE "Number of Processes", and the IE is the number of HARQ processes which could be used in HS-SCCH SPS operation.

3> after the UE has received IE "HS-SICH List":

4> if the CHOICE "Configuration Mode" is set to "Implicit":

5> transmit the HS-SICH according to the configuration in the IE "HS-SCCH Configuration" for 1.28Mcps TDD, of which the position listed in the IE "HS-SCCH Set Configuration" in ascending order is indicated by the IE "HS-SCCH Index" in this message.

4> else:

5> transmit the HS-SICH according to the IEs "Timeslot Number", "Channelisation Code" and Midamble configuration IEs.

3> if the IE "Initial SPS info for HS-DSCH" is included:

4> perform HS-SCCH SPS operation on the semi-persistent HS-PDSCH resource configured by the IE at the CFN determined by the IE "Activation Time" and the IE "Subframe number".

2> determine the value for the HS_DSCH_SPS_STATUS variable and take the corresponding actions as described in subclause 8.5.55.

1> else if the IE "HS-DSCH SPS Information" is not included, the UE shall:

2> set the variable HS_DSCH_SPS_STATUS to FALSE;

2> clear the variable HS_DSCH_SPS_PARAMS;

2> stop all HS-DSCH SPS related activities.

Reference

3GPP TS 25.331 clauses 8.2.2.3, 8.5.54, 8.5.55, 8.6.6.47

### 8.2.2.66.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops SPS operation according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts SPS operation according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.66.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DCH
- UE supports SPS operation

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, and configure the SPS operation. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops SPS operation, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a UE CAPABILITY ENQUIRY message without SPS operation. The UE shall respond with a UE CAPABILITY INFORMATION message and finally the SS replies with UE CAPABILITY INFORMATION CONFIRM without SPS operation.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts SPS operation and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS transmits a UE CAPABILITY ENQUIRY message with SPS operation. The UE shall respond with a UE CAPABILITY INFORMATION message and finally the SS replies with UE CAPABILITY INFORMATION CONFIRM, send with SPS operation.

The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Radio bearer mapping onto E-DCH/HS-DSCH with SRB mapped onto E-DCH/HS-DSCH |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Move to CELL_FACH state and stop of SPS operation |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | UE CAPABILITY ENQUIRY | The SS transmits this message without SPS operation |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | ← | | UE CAPABILITY INFORMATION CONFIRM | The SS transmits this message without SPS operation |
| 8 | ← | | RADIO BEARER RECONFIGURATION | Move to CELL_DCH state and start SPS operation |
| 9 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 10 | ← | | UE CAPABILITY ENQUIRY | The SS transmits this message with SPS operation |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | The SS transmits this message with SPS operation |
| 13 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| - DCH quality target | Not Present |
| SPS Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A19 |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |

RADIO BEARER RECONFIGURATION (Step 8)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| SPS Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A19 |

#### 8.2.2.66.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 5, the UE shall transmit a UE CAPABILITY INFORMATION message without SPS operation.

After step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 10, the UE shall transmit a UE CAPABILITY INFORMATION message with SPS operation.

### 8.2.2.67 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of Control Channel DRX operation)

#### 8.2.2.67.1 Definition and applicability

All UEs which support TDD and Control Channel DRX operation.

8.2.2.67.2 Conformance requirement

If the UE receives:

- a RADIO BEARER SETUP message; or
- a RADIO BEARER RECONFIGURATION message; or
- a RADIO BEARER RELEASE message; or
- a TRANSPORT CHANNEL RECONFIGURATION message; or
- a PHYSICAL CHANNEL RECONFIGURATION message; or

…

it shall:

…

1> for 1.28 Mcps TDD, if the IEs "Control Channel DRX Information" is stored in the UE:

2> determine the value for the CONTROL_CHANNEL_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.53.

…

If the UE receives RRC CONNECTION SETUP, CELL UPDATE CONFIRM, or any reconfiguration message:

1> the UE shall determine the value for the CONTROL_CHANNEL_DRX_STATUS variable.

The variable CONTROL_CHANNEL_DRX_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH RECEPTION is set to TRUE;

1> the IE "Control Channel DRX information" is included in the received message.

If any of the above conditions is not met and the variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE, the UE shall:

1> set the variable CONTROL_CHANNEL_DRX_STATUS to FALSE;

1> clear the variable CONTROL_CHANNEL_DRX_PARAMS;

1> disable the Control Channel DRX related activities.

If variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE and the serving HS-DSCH cell was changed as a result of the received message, the UE shall instruct the physical layer to consider HS-SCCH orders were never received.

Whenever the variable CONTROL_CHANNEL_DRX_STATUS is set to TRUE after receiving this message and the value of IE "Control Channel DRX information" included in this message is "Continue Control Channel DRX operation ", the UE shall:

1> continue the Control Channel DRX related activities with the IE in the variable CONTROL_CHANNEL_DRX_PARAMS.

If the IE "Control Channel DRX information" is included and the UE will be in CELL_DCH state after completion of this procedure, the UE shall:

1> if the CHOICE "*Control Channel DRX operation*" is set to "New Control Channel DRX operation":

2> store the contents of the IE in the variable CONTROL_CHANNEL_DRX_PARAMS, replacing or clearing any previously stored "Control Channel DRX operation";

2> use the newly received Control Channel DRX configuration.

2> if the IE "E-AGCH DRX Information" is not included:

3> not perform E-AGCH discontinuous reception.

1> if the CHOICE "*Control Channel DRX operation*" is set to "Continue", and the message is used to perform a hard handover (as specified in subclause 8.6.6.3a):

2> the UE behaviour is unspecified.

1> determine the value for the CONTROL_CHANNEL_DRX_STATUS variable and take the corresponding actions as described in subclause 8.5.53.

1> if the IE "E-AGCH DRX Information" is included, and the variable E_DCH_TRANSMISSION is set to FALSE:

2> the UE behaviour is unspecified.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.53, 8.6.6.46

### 8.2.2.67.3 Test purpose

1 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_DCH to CELL_FACH state, and stops Control Channel DRX operation according to the received RADIO BEARER RECONFIGURATION message.

2 To confirm that the UE reconfigures radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts Control Channel DRX operation according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.67.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS_DCCH_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports 1.28Mcps TDD
- UE supports HS-PDSCH in CELL_FACH
- UE supports E-DCH
- UE supports Control Channel DRX operation

Test Procedure

The UE is in CELL_DCH state. Only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio bearer mapped on E-DCH/HS-DSCH, and configure the Control Channel DRX operation. The UE shall transmit a RADIO BEARER SETUP COMPLETE message using AM RLC.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it stops Control Channel DRX operation, moves to CELL_FACH state and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE. After the UE receives this message, it moves to CELL_DCH state, starts Control Channel DRX operation and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" in 34.108 (condition A5) in TS 34.108 clause 9, except for the following, except for the following:

| Information Element | Value/remark |
|---|---|
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 1 |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 2 |

RADIO BEARER RECONFIGURATION (Step 6)

Use the same message as specified for "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 (condition A4) in TS 34.108 clause 9, except for the following:

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | 1 E-DCH added with one DCCH Mac-d flow and one DTCH Mac-d flow. Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A18. |
| Control Channel DRX information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A20 |

### 8.2.2.67.5 Test requirements

After step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 5, the control channel DRX operation has not been activated.

After step 6, the UE shall transmit a RADIO BEARER RECONFIGURATION.

After step 8, the control channel DRX operation has been activated successfully.

## 8.2.2.68 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell and MIMO)

### 8.2.2.68.1 Definition and applicability

All UE categories which support combination of DC-HSDPA and MIMO. UE supports FDD and F-DPCH or Enhanced F-DPCH.

### 8.2.2.68.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

5> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

3> trigger lower layers to stop operation in MIMO mode.

[…]

The variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the IE "Downlink Secondary Cell Info FDD" is not empty;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on both or neither of the serving HS-DSCH cell and the secondary serving HS-DSCH cell.

If any of the above conditions is not met and the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the IE "Downlink Secondary Cell Info FDD";

1> flush the HARQ buffers of the HARQ entity associated to the secondary serving HS-DSCH cell;

1> release HARQ resources associated to the secondary serving HS-DSCH cell.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message which includes the IE "Downlink secondary cell info FDD" for the secondary serving HS-DSCH cell, the UE shall:

1> if the IE "Secondary cell MIMO parameters" is not included in the IE "Downlink secondary cell info FDD":

2> clear the SECONDARY_CELL_MIMO_PARAMS variable;

1> if the CHOICE "Configuration Info" in the IE "Secondary cell MIMO parameters" has the value "Continue":

2> continue using the stored parameters in the SECONDARY_CELL_MIMO_PARAMS variable;

1> otherwise:

2> if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the SECONDARY_CELL_MIMO_PARAMS variable.

2> if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the SECONDARY_CELL_MIMO_PARAMS variable.

1> determine the value of the SECONDARY_CELL_MIMO_STATUS variable.

[…]

Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33, 8.5.51, 8.5.57

### 8.2.2.68.3 Test purpose

5. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop simultaneous Dual-Cell, MIMO and 16QAM reception according to the received RADIO BEARER RECONFIGURATION message.

6. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous Dual-Cell, MIMO and 16QAM reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.68.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 DC HSDPA cell(s) with Cell 1 (Anchor Carrier) and Cell 2 (Secondary Carrier)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A31 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 16QAM, DC-HSDPA and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate DC-HSDPA and MIMO feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HS-DSCH (with DC-HSDPA and MIMO simultaneously configured for L1). SRB is mapped to E-DCH/HS-DSCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS checks that UE sends composite CQI/PCI reports on each stream for Cell 1 and Cell 2.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivate DC-HSDPA and MIMO. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HS-DSCH, using DC-HSDPA and MIMO configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | | | | SS starts monitoring CQI reports on HS-DPCCH received from the UE on Primary Cell 1 and Secondary Cell 2. SS waits for 10 CQI reports and verifies that UE on each stream transmits composite CQI/PCI reports. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with exception as follow:

### 8.2.2.68.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 6, the UE shall on each stream on both Cell 1 and Cell 2 transmit composite CQI reports.

## 8.2.2.68a Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell for different bands and MIMO)

The scope and description of the present TC is the same as test case 8.2.2.68 with the following differences:

- Test case applicability limited to Rel-10 or later releases UE supporting dual band operation.
- Cells configuration: Cell 4 replaces Cell 2.
- Cell 1 and Cell 4 are configured on different bands.

## 8.2.2.69 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell, MIMO and 64QAM)

### 8.2.2.69.1 Definition and applicability

All UE categories which support combination of 64QAM, DC-HSDPA and MIMO. UE supports FDD and F-DPCH or Enhanced F-DPCH.

### 8.2.2.69.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

6> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

4> trigger lower layers to stop operation in MIMO mode.

[…]

The variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the IE "Downlink Secondary Cell Info FDD" is not empty;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on both or neither of the serving HS-DSCH cell and the secondary serving HS-DSCH cell.

If any of the above conditions is not met and the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the IE "Downlink Secondary Cell Info FDD";

1> flush the HARQ buffers of the HARQ entity associated to the secondary serving HS-DSCH cell;

1> release HARQ resources associated to the secondary serving HS-DSCH cell.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message which includes the IE "Downlink secondary cell info FDD" for the secondary serving HS-DSCH cell, the UE shall:

1> if the IE "Secondary cell MIMO parameters" is not included in the IE "Downlink secondary cell info FDD":

2> clear the SECONDARY_CELL_MIMO_PARAMS variable;

1> if the CHOICE "Configuration Info" in the IE "Secondary cell MIMO parameters" has the value "Continue":

2> continue using the stored parameters in the SECONDARY_CELL_MIMO_PARAMS variable;

1> otherwise:

2> if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the SECONDARY_CELL_MIMO_PARAMS variable.

2> if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the SECONDARY_CELL_MIMO_PARAMS variable.

1> determine the value of the SECONDARY_CELL_MIMO_STATUS variable.

[…]

Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33, 8.5.51, 8.5.57

### 8.2.2.69.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop simultaneous 64QAM, Dual-Cell and MIMO reception according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous 64QAM, Dual-Cell and MIMO reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.69.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 DC HSDPA cell(s) with Cell 1 (Anchor Carrier) and Cell 2 (Secondary Carrier)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A32 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, DC-HSDPA and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate DC-HSDPA and MIMO feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HS-DSCH (with DC-HSDPA and MIMO

simultaneously configured for L1). SRB is mapped to E-DCH/HS-DSCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

SS checks that UE sends composite CQI/PCI reports on each stream for Cell 1 and Cell 2.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivate DC-HSDPA and MIMO. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HS-DSCH, using DC-HSDPA and MIMO configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | | | | SS starts monitoring CQI reports on HS-DPCCH received from the UE on Primary Cell 1 and Secondary Cell 2. SS waits for 10 CQI reports and verifies that UE on each stream transmits composite CQI/PCI reports. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in [9] TS 34.108 clause 9 with exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list | | |

### 8.2.2.69.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 6, the UE shall on each stream on both Cell 1 and Cell 2 transmit composite CQI reports.

## 8.2.2.69a Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell for different bands, MIMO and 64QAM)

The scope and description of the present TC is the same as test case 8.2.2.69 with the following differences:

- Test case applicability limited to Rel-10 or later releases UE supporting dual band operation.
- Cells configuration: Cell 4 replaces Cell 2.
- Cell 1 and Cell 4 are configured on different bands.

## 8.2.2.70 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH with PCI Restrictions and S-CPICH Power Offset IEs: Success (64QAM +MIMO)

### 8.2.2.70.1 Definition and applicability

All UE categories which support combined 64QAM and MIMO.

UE supports FDD and F-DPCH or Enhanced F-DPCH

### 8.2.2.70.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_type A/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_type A/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

2> for 1.28 Mcps TDD, if the IE "MIMO SF Mode for HS-PDSCH dual stream" is included:

3> store the value of the IE "MIMO SF Mode for HS-PDSCH dual stream" in the MIMO_PARAMS variable.

2> if the IE "MIMO operation" is set to "start":

3> for FDD, if the IE "Precoding weight set restriction" is included:

4> store the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is configured.

3> else:

4> clear the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is not configured.

2> else if the IE "MIMO operation" is set to "continue":

3> if the IE "Precoding weight set restriction" is included:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> UE behaviour is undefined.

3> else:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> continue MIMO operation without using "Precoding weight set restriction".

NOTE: This subclause applies to FDD and 1.28 Mcps TDD only.

[…]

1> for FDD, if the IE "Secondary CPICH Info" is included and if the IE "Channelisation code" in MIMO pilot configuration is different from the IE "Channelisation Code" in Secondary CPICH info:

2> the UE behaviour is undefined.

1> for FDD, if the IE "Secondary CPICH Info" is included and if the IE "Power Offset For S-CPICH for MIMO" is provided, then pass the offset value received in the IE "Power Offset For S-CPICH for MIMO" to the lower layers.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_type A/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

1> trigger lower layers to stop operation in MIMO mode.

[…]

With the exception of the provisions of subclause 6A.3, the following shall apply when the UE is configured in MIMO mode:

1) The UE derives the PCI value as defined in subclause 6A.4 and either a type A or a type B CQI value as

defined in subclause 6A.2.2 depending on which type of CQI shall be reported as defined below.

[…]

If the UE is not configured with precoding weight set restriction by the higher layers, the optimum precoding weight $w_2^{\text{pref}}$ for antenna 2 is taken from the set:

$$w_2^{\text{pref}} \in \left\{ \frac{1+j}{2} \quad \frac{1-j}{2} \quad \frac{-1+j}{2} \quad \frac{-1-j}{2} \right\}$$

If the UE is configured with precoding weight set restriction by the higher layers, the optimum precoding vector weight $w_2^{\text{pref}}$ for antenna 2 is taken from the set as defined in table 7J0.

**Table 7J0: Selection of the precoding weight set when the precoding weight set restriction is configured by higher layers**

| Number of Transport Blocks preferred in the composite PCI/CQI report | Precoding weight set from which the optimum precoding weight $w_2^{\text{pref}}$ for antenna 2 is taken. |
|---|---|
| 1 | $w_2^{\text{pref}} \in \left\{ \frac{1+j}{2} \quad \frac{-1-j}{2} \right\}$ |
| 2 | $w_2^{\text{pref}} \in \left\{ \frac{1+j}{2} \quad \frac{1-j}{2} \quad \frac{-1+j}{2} \quad \frac{-1-j}{2} \right\}$ |

The precoding weight $w_2^{\text{pref}}$ is mapped to PCI values as defined in table 7J.

**Table 7J: Mapping of preferred precoding weight $w_2^{\text{pref}}$ to PCI values**

| $w_2^{\text{pref}}$ | PCI value |
|---|---|
| $\frac{1+j}{2}$ | 0 |
| $\frac{1-j}{2}$ | 1 |
| $\frac{-1+j}{2}$ | 2 |
| $\frac{-1-j}{2}$ | 3 |

3GPP TS 25.331 clause 8.5.32, 8.5.33, 8.6.6.41

3GPP TS 25.214 clause 6A.1.2.2, 6A.4

8.2.2.70.3 Test purpose

1. To confirm that the UE configures the lower layers with PCI restriction and S-CPICH Power offset IEs as signalled in RADIO BEARER SETUP message.

2. To confirm that the UE retains the PCI restriction and S-CPICH Power offset IEs when MIMO operation is set to "continue" according to the received RADIO BEARER RECONFIGURATION message (when PCI restriction and S-CPICH Power offset IEs are excluded).

3. To confirm that UE does not configure PCI restriction when the IE is not signalled and continue previously configured S-CPICH Power offset when MIMO operation is set to "start" according to the received RADIO BEARER RECONFIGURATION message.

4. To confirm that UE does not configure PCI restriction and continue previously configured S-CPICH Power offset upon receiving RADIO BEARER RECONFIGURATION message when PCI restriction and S-CPICH Power offset IEs are signalled but MIMO operation is set to “continue”.

8.2.2.70.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) under condition A28 as specified in clause 9 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM and MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

**Table 8.2.2.70-1**

| Parameter | Unit | Tx0-Rx0 | | | | Tx1-Rx1 | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| CPICH Ec (FDD) | dBm/3.84MHz | -50 | -50 | -50 | -50 | -90 | -90 | -90 | -90 |

The UE is in CELL_DCH state and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information setup IE to configure PS domain RAB, and perform SRB mapping from DCH to E-DCH/HSDPA (with MIMO configured for L1with PCI restriction and S-CPICH power offset). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. The UE shall configure the lower layers with signalled S-CPICH Power offset. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values reported shall be restricted to 0 or 3 for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, restriction shall not apply.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE with MIMO operation set as CONTINUE (PCI restriction and S-CPICH Power offset IEs are excluded). The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE shall continue to use the previously configured S-CPICH power offset IE signalled. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values shall still be restricted to 0 or 3 for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, restriction shall not apply.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

Then, SS transmits a RADIO BEARER RECONFIGURATION message, using MIMO configuration, to the UE to change the NM ratio and start MIMO operation with new parameters without PCI restriction and S-CPICH Power offset IEs being signalled. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE shall continue to use the previously configured S-CPICH power offset IE. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values used for type A CQIs are no longer restricted and can range from values 0-3.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE with MIMO operation set as CONTINUE (PCI restriction and S-CPICH Power offset IEs are signalled). The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE shall continue to use the previously configured S-CPICH power offset. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values shall not be restricted and can range from values 0-3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Setup PS RAB on E-DCH/HSDPA. Reconfiguration of SRB mapping from DCH to E-DCH/HSDPA. PCI restriction and S-CPICH Power offset IEs are signalled. |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 250 are type A and 250 of type B. PCI values of 0 or 3 shall be used by the UE for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, the restriction does not apply. The UE shall configure the lower layers with signalled S-CPICH Power offset. |
| 4 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 7 | ← | | RADIO BEARER RECONFIGURATION | SRB2 on HS-DSCH with MIMO operation set to CONTINUE. PCI restriction and S-CPICH Power offset IEs are excluded. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 9 | | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 250 are type A and 250 of type B. PCI values of 0 or 3 shall be used by the UE for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, the restriction does not apply. |
| 10 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 13 | ← | | RADIO BEARER RECONFIGURATION | SRB2 on HS-DSCH with MIMO operation set to START, NM ratio changed to 4/5 and PCI restriction, S-CPICH Power offset IEs are excluded. |
| 14 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |

| | | | |
|---|---|---|---|
| 15 | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 400 are type A and 100 of type B. PCI values of 0 - 3 shall be used by the UE for type A CQIs. |
| 16 | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 17 | → | UE CAPABILITY INFORMATION | |
| 18 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 19 | ← | RADIO BEARER RECONFIGURATION | SRB2 on HS-DSCH with MIMO operation set to CONTINUE, and PCI restriction, S-CPICH Power offset IEs are present. |
| 20 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 21 | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 400 are type A and 100 of type B. PCI values of 0 - 3 shall be used by the UE for type A CQIs. |

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / HS-DSCH with enhanced data rate and RLC AM" and SRBs mapped on E-DCH/HS-DSCH (Mac-ehs) under condition A28 as specified in clause 9 in TS 34.108, except for the following

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured DL TrCH information | 1 TrCH (HS-DSCH for DTCH and DCCH) |
| - Downlink transport channel type | HS-DSCH |
| - DL Transport channel identity | Not Present |
| - CHOICE DL parameters | HS-DSCH |
| - HARQ Info | |
| - Number of Processes | 12 |

UE CAPABILITY ENQUIRY (Steps 4, 10, 16)

Use the same message sub-type found in TS 34.108 clause 9.1

UE CAPABILITY INFORMATION (Steps 5, 11, 17)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Steps 6, 12, 18)

Use the same message sub-type found in TS 34.108 clause 9.1

RADIO BEARER RECONFIGURATION (Step 7) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| HARQ Info | |
| - Number of processes | 12 |
| - CHOICE *Memory Partitioning* | |
| - Implicit | |
| Frequency info | Not present |
| MIMO Parameters | |
| - MIMO Operation | CONTINUE |
| - CHOICE mode | FDD |
| Maximum allowed UL TX power | Not present |
| Uplink DPCH info | Not present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Measurement Power Offset | 12 (6 dB) |
| - CQI Feedback cycle, k | 2 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Present |
| - HS-DSCH TB size table | Octet Aligned |
| Downlink information common for all radio links | Not Present |
| Downlink information for each radio link list | Not Present |
| MIMO-PilotConfiguration-v7f0ext | |
| - s-cpich-PowerOffset-Mimo | Not present |
| MIMO-Parameters-v7g0ext | |
| -precodingWeightSetRestriction | Not present |

RADIO BEARER RECONFIGURATION (Step 13) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| HARQ Info | |
| - Number of processes | 12 |
| - CHOICE *Memory Partitioning* | |
| - Implicit | |
| Frequency info | Not present |
| MIMO Parameters | |
| - MIMO Operation | START |
| - CHOICE mode | FDD |
| - MIMO N_cqi_type A/M_cqi ratio | 4/5 |
| - MIMO pilot configuration | |
| - CHOICE Second CPICH pattern Antenna1 | S-CPICH |
| - Channelisation code | 13 |
| Maximum allowed UL TX power | Not present |
| Uplink DPCH info | Not present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Measurement Power Offset | 12 (6 dB) |
| - CQI Feedback cycle, k | 2 ms |
| - CQI repetition factor | 1 |

| -precodingWeightSetRestriction | Not present |

RADIO BEARER RECONFIGURATION (Step 19) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| HARQ Info | |
| - Number of processes | 12 |
| - CHOICE *Memory Partitioning* | |
| - Implicit | |
| Frequency info | Not present |
| MIMO Parameters | |
| - MIMO Operation | CONTINUE |
| - CHOICE mode | FDD |
| Maximum allowed UL TX power | Not present |
| Uplink DPCH info | Not present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - Measurement Power Offset | 12 (6 dB) |
| - CQI Feedback cycle, k | 2 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Present |
| - HS-DSCH TB size table | Octet Aligned |
| Downlink information common for all radio links | Not Present |
| Downlink information for each radio link list | Not Present |
| MIMO-PilotConfiguration-v7f0ext | |
| - s-cpich-PowerOffset-Mimo | -3 |
| MIMO-Parameters-v7g0ext | |
| -precodingWeightSetRestriction | TRUE |

### 8.2.2.70.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 3 and step 9, the UE shall transmit CQI reports of type A and type B. PCI values of 0 or 3 shall be used by the UE for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, the restriction does not apply. The UE shall configure the lower layers with signalled S-CPICH Power offset.

At step 5, 11 and 17 the UE shall transmit UE CAPABILITY INFORMATION using AM RLC.

At step 8, 14 and 20, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message

At step 15, the UE shall transmit CQI reports of type A and type B as per the signalled N_M Ratio. PCI values of 0 to 3 shall be used by the UE for type A CQIs being reported. The UE shall configure the lower layers with S-CPICH Power offset signalled previously i.e. in RADIO BEARER SETUP message.

At step 21, the UE shall transmit CQI reports of type A and type B. PCI values of 0 to 3 shall be used by the UE for type A CQIs being reported. The UE shall configure the lower layers with S-CPICH Power offset signalled previously i.e. in RADIO BEARER SETUP message.

## 8.2.2.71 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH with PCI Restrictions and S-CPICH Power Offset IEs: Success (16QAM +MIMO)

### 8.2.2.71.1 Definition and applicability

All UE categories which support MIMO.

UE supports FDD and F-DPCH or Enhanced F-DPCH

8.2.2.71.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_type A/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_type A/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

2> for 1.28 Mcps TDD, if the IE "MIMO SF Mode for HS-PDSCH dual stream" is included:

3> store the value of the IE "MIMO SF Mode for HS-PDSCH dual stream" in the MIMO_PARAMS variable.

2> if the IE "MIMO operation" is set to "start":

3> for FDD, if the IE "Precoding weight set restriction" is included:

4> store the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is configured.

3> else:

4> clear the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is not configured.

2> else if the IE "MIMO operation" is set to "continue":

3> if the IE "Precoding weight set restriction" is included:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> UE behaviour is undefined.

3> else:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> continue MIMO operation without using "Precoding weight set restriction".

NOTE: This subclause applies to FDD and 1.28 Mcps TDD only.

[…]

1> for FDD, if the IE "Secondary CPICH Info" is included and if the IE "Channelisation code" in MIMO pilot configuration is different from the IE "Channelisation Code" in Secondary CPICH info:

2> the UE behaviour is undefined.

1> for FDD, if the IE "Secondary CPICH Info" is included and if the IE "Power Offset For S-CPICH for MIMO" is provided, then pass the offset value received in the IE "Power Offset For S-CPICH for MIMO" to the lower layers.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_type A/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

1> trigger lower layers to stop operation in MIMO mode.

[…]

With the exception of the provisions of subclause 6A.3, the following shall apply when the UE is configured in MIMO mode:

2) The UE derives the PCI value as defined in subclause 6A.4 and either a type A or a type B CQI value as

defined in subclause 6A.2.2 depending on which type of CQI shall be reported as defined below.

[…]

If the UE is not configured with precoding weight set restriction by the higher layers, the optimum precoding weight $w_2^{\text{pref}}$ for antenna 2 is taken from the set:

$$w_2^{\text{pref}} \in \left\{ \frac{1+j}{2} \quad \frac{1-j}{2} \quad \frac{-1+j}{2} \quad \frac{-1-j}{2} \right\}$$

If the UE is configured with precoding weight set restriction by the higher layers, the optimum precoding vector weight $w_2^{\text{pref}}$ for antenna 2 is taken from the set as defined in table 7J0.

**Table 7J0: Selection of the precoding weight set when the precoding weight set restriction is configured by higher layers**

| Number of Transport Blocks preferred in the composite PCI/CQI report | Precoding weight set from which the optimum precoding weight $w_2^{\text{pref}}$ for antenna 2 is taken. |
|---|---|
| 1 | $w_2^{\text{pref}} \in \left\{ \frac{1+j}{2} \quad \frac{-1-j}{2} \right\}$ |
| 2 | $w_2^{\text{pref}} \in \left\{ \frac{1+j}{2} \quad \frac{1-j}{2} \quad \frac{-1+j}{2} \quad \frac{-1-j}{2} \right\}$ |

The precoding weight $w_2^{\text{pref}}$ is mapped to PCI values as defined in table 7J.

**Table 7J: Mapping of preferred precoding weight $w_2^{\text{pref}}$ to PCI values**

| $w_2^{\text{pref}}$ | PCI value |
|---|---|
| $\frac{1+j}{2}$ | 0 |
| $\frac{1-j}{2}$ | 1 |
| $\frac{-1+j}{2}$ | 2 |
| $\frac{-1-j}{2}$ | 3 |

Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33, 8.6.6.41

3GPP TS 25.214 clause 6A.1.2.2, 6A.4

8.2.2.71.3 Test purpose

1. To confirm that the UE configures the lower layers with PCI restriction and S-CPICH Power offset IEs as signalled in RADIO BEARER SETUP message.

2. To confirm that the UE retains the PCI restriction and S-CPICH Power offset IEs when MIMO operation is set to "CONTINUE" according to the received RADIO BEARER RECONFIGURATION message (when PCI restriction and S-CPICH Power offset IEs are excluded).

3. To confirm that UE does not configure PCI restriction when the IE is not signalled and continue previously configured S-CPICH Power offset when MIMO operation is set to "start" according to the received RADIO BEARER RECONFIGURATION message.

4. To confirm that UE does not configure PCI restriction and continue previously configured S-CPICH Power offset upon receiving RADIO BEARER RECONFIGURATION message when PCI restriction and S-CPICH Power offset IEs are signalled but MIMO operation is set to "CONTINUE".

8.2.2.71.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD

- UE category supports MIMO
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

**Table 8.2.2.71-1**

| Parameter | Unit | Tx0-Rx0 | Tx1-Rx1 |
|---|---|---|---|
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -63 |

The UE is in CELL_DCH state and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information setup IE to configure PS domain RAB, and perform SRB mapping to E-DCH/HS-DSCH (with MIMO configured for L1with PCI restriction and S-CPICH power offset). The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. The UE shall configure the lower layers with signalled S-CPICH Power offset. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values reported shall be restricted to 0 or 3 for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, restriction shall not apply.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE with MIMO operation set as “CONTINUE” (PCI restriction and S-CPICH Power offset IEs are excluded). The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE shall continue to use the previously configured S-CPICH power offset IE signalled. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values shall still be restricted to 0 or 3 for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, restriction shall not apply.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

Then, SS transmits a RADIO BEARER RECONFIGURATION message, using MIMO configuration, to the UE to change the NM ratio and start MIMO operation with new parameters without PCI restriction and S-CPICH Power offset IEs being signalled. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE shall continue to use the previously configured S-CPICH power offset IE. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values used for type A CQIs are no longer restricted and can range from values 0-3.

Then, SS transmits a RADIO BEARER RECONFIGURATION message to the UE with MIMO operation set as “continue” (PCI restriction and S-CPICH Power offset IEs are signalled). The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE shall continue to use the previously configured S-CPICH power offset. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms. The PCI values shall not be restricted and can range from values 0-3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Setup PS RAB on E-DCH/HS-DSCH.<br>PCI restriction and S-CPICH Power offset IEs are signalled. |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 250 are type A and 250 of type B.<br>PCI values of 0 or 3 shall be used by the UE for type A CQIs where one transport block is preferred.<br>For type A CQIs where two transport blocks are preferred, the restriction does not apply.<br>The UE shall configure the lower layers with signalled S-CPICH Power offset. |
| 4 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 5 | → | | UE CAPABILITY INFORMATION | |
| 6 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 7 | ← | | RADIO BEARER RECONFIGURATION | SRB2 on HS-DSCH with MIMO operation set to “continue”. PCI restriction and S-CPICH Power offset IEs are excluded. |
| 8 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 9 | | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 250 are type A and 250 of type B.<br>PCI values of 0 or 3 shall be used by the UE for type A CQIs where one transport block is preferred.<br>For type A CQIs where two transport blocks are preferred, the restriction does not apply. |
| 10 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 13 | ← | | RADIO BEARER RECONFIGURATION | SRB2 on HS-DSCH with MIMO operation set to START, NM ratio changed to 4/5 and PCI restriction, S-CPICH Power offset IEs are excluded. |
| 14 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |

| | | | |
|---|---|---|---|
| 15 | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 400 are type A and 100 of type B. PCI values of 0 - 3 shall be used by the UE for type A CQIs. |
| 16 | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |
| 17 | → | UE CAPABILITY INFORMATION | |
| 18 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH using configured L1 MIMO |
| 19 | ← | RADIO BEARER RECONFIGURATION | SRB2 on HS-DSCH with MIMO operation set to “continue”, and PCI restriction, S-CPICH Power offset IEs are present. |
| 20 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 21 | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 400 are type A and 100 of type B. PCI values of 0 - 3 shall be used by the UE for type A CQIs. |

| MIMO-Parameters-v7g0ext | |
| -precodingWeightSetRestriction | TRUE |

#### 8.2.2.71.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 3 and step 9, the UE shall transmit CQI reports of type A and type B. PCI values of 0 or 3 shall be used by the UE for type A CQIs where one transport block is preferred. For type A CQIs where two transport blocks are preferred, the restriction does not apply. The UE shall configure the lower layers with signalled S-CPICH Power offset.

At step 5, 11 and 17, the UE shall transmit UE CAPABILITY INFORMATION using AM RLC.

At step 8, 14 and 20, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message

At step 15, the UE shall transmit CQI reports of type A and type B as per the signalled N_M Ratio. PCI values of 0 to 3 shall be used by the UE for type A CQIs being reported. The UE shall configure the lower layers with S-CPICH Power offset signalled previously i.e. in RADIO BEARER SETUP message.

At step 21, the UE shall transmit CQI reports of type A and type B. PCI values of 0 to 3 shall be used by the UE for type A CQIs being reported. The UE shall configure the lower layers with S-CPICH Power offset signalled previously i.e. in RADIO BEARER SETUP message.

### 8.2.2.72 Radio Bearer Reconfiguration for S-CPICH based MIMO with DPCH in STTD: (16QAM +MIMO)

#### 8.2.2.72.1 Definition and applicability

All UE categories which support MIMO.

UE supports FDD and F-DPCH or Enhanced F-DPCH

#### 8.2.2.72.2 Conformance requirement

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_type A/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_type A/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

2> for 1.28 Mcps TDD, if the IE "MIMO SF Mode for HS-PDSCH dual stream" is included:

3> store the value of the IE "MIMO SF Mode for HS-PDSCH dual stream" in the MIMO_PARAMS variable.

2> if the IE "MIMO operation" is set to "start":

3> for FDD, if the IE "Precoding weight set restriction" is included:

4> store the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is configured.

3> else:

4> clear the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is not configured.

2> else if the IE "MIMO operation" is set to "continue":

3> if the IE "Precoding weight set restriction" is included:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> UE behaviour is undefined.

3> else:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> continue MIMO operation without using "Precoding weight set restriction".

NOTE: This subclause applies to FDD and 1.28 Mcps TDD only.

[…]

1> for FDD, if the IE "Secondary CPICH Info" is included and if the IE "Channelisation code" in MIMO pilot configuration is different from the IE "Channelisation Code" in Secondary CPICH info:

2> the UE behaviour is undefined.

1> for FDD, if the IE "Secondary CPICH Info" is included and if the IE "Power Offset For S-CPICH for MIMO" is provided, then pass the offset value received in the IE "Power Offset For S-CPICH for MIMO" to the lower layers.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_type A/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

1> for 1.28 Mcps TDD, the variable MIMO_PARAMS contains a value for the IE "MIMO SF Mode for HS-PDSCH dual stream".

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

5> trigger lower layers to stop operation in MIMO mode.

[…]

If the IE "Tx Diversity Mode" is included the UE shall:

1> if the value of the IE "Tx Diversity Mode" is STTD:

2> configure the Layer 1 to use the Tx diversity mode indicated in the IE "Tx Diversity Mode" for the radio links for which the IE "Closed loop timing adjustment mode" is included, ignoring the actual value of IE "Closed loop timing adjustment mode".

1> if the value of the IE "Tx Diversity Mode" is closed loop mode 1:

2> configure the Layer 1 to use the Tx diversity mode indicated in the IE "Tx Diversity Mode" for the radio links for which the IE "Closed loop timing adjustment mode" is included, using the actual value of the IE "Closed loop timing adjustment mode".

1> if the value of the IE "Tx Diversity Mode" is "none":

2> configure the Layer 1 not to use Tx diversity for all radio links in the active set.

If the IE "Tx Diversity Mode" is not included, the UE shall:

1> continue to use the already configured Tx diversity mode;

1> in case no Tx diversity mode has been configured:

2> do not apply Tx diversity.

For F-DPCH the UE shall:

1> if the IE "STTD indication" is included in the IE "Downlink F-DPCH info for each RL":

2> use STTD for F-DPCH on the radio links for which the IE "STTD indication" is set to TRUE

Reference

3GPP TS 25.331 clause 8.5.32, 8.5.33, 8.6.6.41, 8.6.6.24

#### 8.2.2.72.3 Test purpose

1. To confirm that the UE configures the radio bearer parameters and starts MIMO reception according to the received RADIO BEARER SETUP message and configures layer 1 to use STTD as Tx diversity mode for F-DPCH.

2. To confirm that the UE configures the radio bearers to stop MIMO reception according to the received RADIO BEARER RECONFIGURATION message and configures layer 1 to use STTD as Tx diversity mode for F-DPCH.

#### 8.2.2.72.4 Method of test

##### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

##### Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports MIMO
- UE supports F-DPCH or Enhanced F-DPCH

##### Test Procedure

The UE is in CELL_DCH state and only signalling radio bearers have been established.

The SS transmits a RADIO BEARER SETUP message including the RAB Information setup IE to configure PS domain RAB, and perform SRB mapping to E-DCH/HS-DSCH (with MIMO configured for L1). The tx-diversity mode for F-DPCH shall be set to STTD. The UE transmits a RADIO BEARER SETUP COMPLETE on DCCH. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

The SS transmits a RADIO BEARER RECONFIGURATION message, using MIMO configuration to the UE to deactivate MIMO and configure user plane bearers for normal HS-DSCH reception i.e. non MIMO. The tx-diversity mode for F-DPCH shall be set to STTD. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE sends combined CQI/PCI reports of type A/B continuously every 8 ms.

Then, SS transmits a UE CAPABILITY ENQUIRY message on DL SRB2 using the MIMO configuration with single data streams for the SS transmit antennae. The UE shall respond with a UE CAPABILITY INFORMATION message. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message to the UE.

Then, SS transmits a RADIO BEARER RECONFIGURATION message, using MIMO configuration, to the UE to change the NM ratio and start MIMO operation. The tx-diversity mode for F-DPCH shall be set to STTD. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. UE sends combined CQI/PCI reports of type A/B continuously every 2 ms.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | Setup PS RAB on E-DCH/HS-DSCH.<br>Tx-diversity mode for F-DPCH is set to STTD. |
| 2 | → | | RADIO BEARER SETUP COMPLETE | |
| 3 | | | | UE shall transmit composite CQI/PCI reports of type A or type B. The SS shall check that for 500 consecutive CQI reports, 250 are type A and 250 of type B. |
| 4 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 is sent using the configured L1 MIMO configuration. i.e. single stream on antenna 1 and antenna 2 with separate modulation patterns on S-CPICH |

#### 8.2.2.72.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 3, the UE shall transmit CQI reports of type A and type B as per the signalled N_M ratio.

At step 5, 11 and 17 the UE shall transmit UE CAPABILITY INFORMATION using AM RLC.

At step 8 and 14, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message

At step 15, the UE shall transmit CQI reports of type A and type B as per the signalled N_M Ratio.

### 8.2.2.73 FFS

### 8.2.2.74 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success Activation and Deactivation of Dual-Cell for different band.

#### 8.2.2.74.1 Definition and applicability

All UE categories which support Dual Cell HSDPA. UE supports F-DPCH or Enhanced F-DPCH.

#### 8.2.2.74.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

The variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the IE "Downlink Secondary Cell Info FDD" is not empty;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on both or neither of the serving HS-DSCH cell and the secondary serving HS-DSCH cell.

If any of the above conditions is not met and the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the IE "Downlink Secondary Cell Info FDD";

1> flush the HARQ buffers of the HARQ entity associated to the secondary serving HS-DSCH cell;

1> release HARQ resources associated to the secondary serving HS-DSCH cell.

[…]

The UE shall initiate the UE capability update procedure in the following situations:

1> the UE receives a UE CAPABILITY ENQUIRY message from the UTRAN;

1> while in CELL_DCH or CELL_FACH state, the UE capabilities change compared to those stored in the variable UE_CAPABILITY_TRANSFERRED, and the variable RNC_CAPABILITY_CHANGE_SUPPORT is set to TRUE.

[…]

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.5.51, 8.1.6,

8.2.2.74.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop simultaneous Dual-Band Dual-Cell and 16QAM reception according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous Dual-Band, Dual-Cell and 16QAM reception according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.74.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 DC HSDPA cell(s) with Cell 1 (Anchor Carrier) and Cell 2 (Secondary Carrier)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A25 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports dual band operation
- UE category supports combined 16QAM and DC-HSDPA.
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DB-DC configuration, to the UE to deactivate DB DC HSDPA feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HS-DSCH (with DB DC HSDPA configured for L1). SRB is mapped to E-DCH/HS-DSCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated DB DC HSDPA, the SS sends UE CAPABILITY ENQUIRY on both Anchor Carrier Cell and Secondary Carrier Cell using SRB2 mapped onto HS-DSCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it should include the IE "*HS-DSCH physical layer category extension 2*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

The UE sends two combined CQI reports at every 8 ms.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivate DB DC-HSDPA. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HS-DSCH, using DC-HSDPA configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on HS-DSCH from Anchor Carrier Cell 1. |
| 7 | → | | UE CAPABILITY INFORMATION | |
| 8 | | | | SS should check that for a set of CQI reports (both carrier) at every 8 ms period. |
| 9 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 1. |
| 10 | ← | | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier Cell 2. |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 2. |

### 8.2.2.74.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7, the UE should transmit UE CAPABILITY INFORMATION on SRB2.

At step 8, the UE shall transmit two CQI reports of type A.

At step 11, the UE should transmit UE CAPABILITY INFORMATION on SRB2.

## 8.2.2.75 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success Activation and Deactivation of Dual-Cell for different bands and 64QAM

### 8.2.2.75.1 Definition and applicability

All UE categories which support Dual Cell HSDPA. UE supports F-DPCH or Enhanced F-DPCH.

### 8.2.2.75.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (for FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

The variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the IE "Downlink Secondary Cell Info FDD" is not empty;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on both or neither of the serving HS-DSCH cell and the secondary serving HS-DSCH cell.

If any of the above conditions is not met and the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the IE "Downlink Secondary Cell Info FDD";

1> flush the HARQ buffers of the HARQ entity associated to the secondary serving HS-DSCH cell;

1> release HARQ resources associated to the secondary serving HS-DSCH cell.

[…]

The UE shall initiate the UE capability update procedure in the following situations:

1> the UE receives a UE CAPABILITY ENQUIRY message from the UTRAN;

2> while in CELL_DCH or CELL_FACH state, the UE capabilities change compared to those stored in the variable UE_CAPABILITY_TRANSFERRED, and the variable RNC_CAPABILITY_CHANGE_SUPPORT is set to TRUE.

[…]

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.5.51, 8.1.6,

### 8.2.2.75.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop simultaneous Dual-Band Dual-Cell and 64QAM reception according to the received RADIO BEARER RECONFIGURATION message.
2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous Dual-Band, Dual-Cell and 64QAM reception according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.75.4 Method of test

Initial Condition

System Simulator: 2 cells –Cell 1/2 DC HSDPA cell(s) with Cell 1 (Anchor Carrier) and Cell 2 (Secondary Carrier)

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A25 as specified in clause 7.4 of TS 34.108 with exception as specified in specific message content for RADIO BEARER SETUP message.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports dual band operation
- UE category supports combined 64QAM and DC-HSDPA.
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DB-DC configuration, to the UE to deactivate DB DC HSDPA feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE. SS calls for generic procedure.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HS-DSCH (with DB DC HSDPA configured for L1). SRB is mapped to E-DCH/HS-DSCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated DB DC HSDPA, the SS sends UE CAPABILITY ENQUIRY on both Anchor Carrier Cell and Secondary Carrier Cell using SRB2 mapped onto HS-DSCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it should include the IE "*HS-DSCH physical layer category extension 2*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

The UE sends two combined CQI reports at every 8 ms.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivate DB DC-HSDPA. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HS-DSCH, using DC-HSDPA configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on HS-DSCH from Anchor Carrier Cell 1. |
| 7 | → | | UE CAPABILITY INFORMATION | |
| 8 | | | | SS should check that for a set of CQI reports (both carrier) at every 8 ms period. |
| 9 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 1. |
| 10 | ← | | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier Cell 2. |
| 11 | → | | UE CAPABILITY INFORMATION | |
| 12 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 2. |

### 8.2.2.75.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7, the UE should transmit UE CAPABILITY INFORMATION on SRB2.

At step 8, the UE shall transmit two CQI reports of type A.

At step 11, the UE should transmit UE CAPABILITY INFORMATION on SRB2.

## 8.2.2.76 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Success (start and stop Dual-Cell HSUPA (QPSK) and Dual-Cell HSDPA (16QAM) operation)

### 8.2.2.76.1 Definition and applicability

All UEs supporting Dual Cell HSUPA; and supporting F-DPCH or Enhanced F-DPCH.

### 8.2.2.76.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable SECONDARY_CELL_E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the UE has stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI are included in the stored IE "Secondary serving E-DCH cell info";

1> the IE "Number of DPDCH" in the IE "Uplink DPCH info" is set to 0;

1> the variable E_DCH_TRANSMISSION is set to TRUE;

1> the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE;

If any of the above conditions are not met and the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_E_DCH_TRANSMISSION to FALSE;

1> stop any F-DPCH, E-AGCH, E-HICH and E-RGCH reception procedures on the downlink frequency associated with the secondary uplink frequency;

1> stop any DPCCH, E-DPCCH and E-DPDCH transmission procedures on the secondary uplink frequency;

1> release all E-DCH HARQ resources for the secondary uplink frequency;

1> do not configure "TSN field extension" for the MAC-i/is entity;

1> reset the MAC-i/is entity [15];

1> clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> remove all the radio links associated to the secondary E-DCH active set.

If all of the above conditions are met and the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> set the variable SECONDARY_CELL_E_DCH_TRANSMISSION to TRUE;

1> configure "TSN field extension" for the MAC-i/is entity;

1> reset the MAC-i/is entity [15].

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE, and the secondary uplink frequency is an activated uplink frequency, the UE shall:

1> perform E_AGCH reception procedures on the secondary serving E-DCH cell according to the stored E_AGCH configuration as stated in:

2> subclause 8.6.3.14 for the IE "Primary E-RNTI" and the IE "Secondary E-RNTI" for secondary serving E-DCH cell.

1> perform E-HICH reception procedures for all radio links in the secondary E-DCH active set;

1> perform E-RGCH reception procedures for all radio links in the secondary E-DCH active set for which an E-RGCH configuration has been provided;

1> perform uplink DPCCH transmission on the secondary uplink frequency according to the stored uplink DPCH info configuration as stated in:

2> subclause 8.6.6.6 for the IE "Uplink DPCH info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPCCH transmission procedures on the secondary uplink frequency according to the stored E-DPCCH configuration as stated in:

2> subclause 8.6.6.37 for the IE "E-DPCCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPDCH transmission procedures on the secondary uplink frequency according to the stored E-DPDCH configuration as stated in:

2> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

2> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

2> subclause 8.6.6.37 for the IE "E-DPDCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> inclusion of MAC-d PDU's in a MAC-i PDU for logical channels on the secondary uplink frequency shall:

2> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]) on the downlink frequency associated with the secondary uplink frequency; and

2> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to FALSE, or the secondary uplink frequency is not an activated uplink frequency, the UE shall:

1> not perform F-DPCH, E-AGCH, E-HICH and E-RGCH reception procedures on the downlink frequency associated with the secondary uplink frequency;

1> not perform DPCCH, E-DPCCH and E-DPDCH transmission procedures on the secondary uplink frequency.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.58

### 8.2.2.76.3 Test purpose

1. To verify that the UE, when UE is in CELL_DCH state with Dual-Cell E-DCH (Configured) and Dual-Cell HSDPA (Configured and Activated) enters CELL_FACH state and reconfigures the physical channels to stop Dual-Cell E-DCH and Dual-Cell HSDPA operation according to the received Radio Bearer Reconfiguration message.

2. To verify that the UE in CELL_FACH state enters CELL_DCH state and reconfigures the radio bearer parameters for Dual-Cell on E-DCH (Configured) and Dual-Cell HSDPA (Configured and activated) operation with QPSK in UL and 16QAM in DL according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.76.4 Method of test

Initial Condition

System Simulator: 2 cells

- Cell 1/2 DC-HSUPA and DC-HSDPA cell(s) with Cell 1 (Serving HS.DSCH cell/Primary uplink frequency) and Cell 2 (Secondary serving HS.DSCH cell /Secondary uplink frequency)

UE: PS_DCCH+DTCH E-DCH/HS-DSCH (state 6-18) under condition A25c, as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE category supports combined 16QAM and DC-HSDPA and DC-HSUPA.
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The UE is in CELL_DCH state with DC-HSUPA (Configured) and DC-HSDPA (Configured and Activated).

The SS transmits a RADIO BEARER RECONFIGURATION message for transition to CELL_FACH to stop DC-HSUPA and DC-HSDPA operation.The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on EDCH/HSDPA (with DC-HSDPA and DC-HSUPA configured for L1). SRBs are mapped to E-DCH/HS-DSCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Note : "*DC-HSUPA and DC-HSDPA operation*" in above text implies DC-HSUPA in Configured state and DC-HSDPA in Configured and Activated state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which stops DC-HSUPA and DC-HSDPA operation. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ←→ | | Void | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HS-DSCH, using DC-HSUPA, DC-HSDPA and 16 QAM configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 [9] clause 9 with exception as follow:

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2, 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

#### 8.2.2.76.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.77 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Success (Dual-Cell HSUPA (QPSK) and Dual-Cell HSDPA (64QAM))

#### 8.2.2.77.1 Definition and applicability

All UEs supporting Dual Cell HSUPA; 64QAM and supporting F-DPCH or Enhanced F-DPCH.

#### 8.2.2.77.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable SECONDARY_CELL_E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the UE has stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI are included in the stored IE "Secondary serving E-DCH cell info";

1> the IE "Number of DPDCH" in the IE "Uplink DPCH info" is set to 0;

1> the variable E_DCH_TRANSMISSION is set to TRUE;

1> the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE;

If any of the above conditions are not met and the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_E_DCH_TRANSMISSION to FALSE;

1> stop any F-DPCH, E-AGCH, E-HICH and E-RGCH reception procedures on the downlink frequency associated with the secondary uplink frequency;

1> stop any DPCCH, E-DPCCH and E-DPDCH transmission procedures on the secondary uplink frequency;

1> release all E-DCH HARQ resources for the secondary uplink frequency;

1> do not configure "TSN field extension" for the MAC-i/is entity;

1> reset the MAC-i/is entity [15];

1> clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> remove all the radio links associated to the secondary E-DCH active set.

If all of the above conditions are met and the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> set the variable SECONDARY_CELL_E_DCH_TRANSMISSION to TRUE;

1> configure "TSN field extension" for the MAC-i/is entity;

1> reset the MAC-i/is entity [15].

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE, and the secondary uplink frequency is an activated uplink frequency, the UE shall:

1> perform E_AGCH reception procedures on the secondary serving E-DCH cell according to the stored E_AGCH configuration as stated in:

2> subclause 8.6.3.14 for the IE "Primary E-RNTI" and the IE "Secondary E-RNTI" for secondary serving E-DCH cell.

1> perform E-HICH reception procedures for all radio links in the secondary E-DCH active set;

1> perform E-RGCH reception procedures for all radio links in the secondary E-DCH active set for which an E-RGCH configuration has been provided;

1> perform uplink DPCCH transmission on the secondary uplink frequency according to the stored uplink DPCH info configuration as stated in:

2> subclause 8.6.6.6 for the IE "Uplink DPCH info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPCCH transmission procedures on the secondary uplink frequency according to the stored E-DPCCH configuration as stated in:

2> subclause 8.6.6.37 for the IE "E-DPCCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPDCH transmission procedures on the secondary uplink frequency according to the stored E-DPDCH configuration as stated in:

2> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

2> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

2> subclause 8.6.6.37 for the IE "E-DPDCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> inclusion of MAC-d PDU's in a MAC-i PDU for logical channels on the secondary uplink frequency shall:

2> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]) on the downlink frequency associated with the secondary uplink frequency; and

2> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to FALSE, or the secondary uplink frequency is not an activated uplink frequency, the UE shall:

1> not perform F-DPCH, E-AGCH, E-HICH and E-RGCH reception procedures on the downlink frequency associated with the secondary uplink frequency;

1> not perform DPCCH, E-DPCCH and E-DPDCH transmission procedures on the secondary uplink frequency.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.58

### 8.2.2.77.3 Test purpose

1. To verify that the UE, when UE is in CELL_DCH state with Dual-Cell E-DCH (Configured) and Dual-Cell HSDPA (Configured and Activated) with QPSK in UL and 64QAM in DL enters CELL_FACH state and reconfigures the physical channels to stop Dual-Cell E-DCH and Dual-Cell HSDPA operation according to the received Radio Bearer Reconfiguration message.

2. To verify that the UE in CELL_FACH state enters CELL_DCH state and reconfigures the radio bearer parameters for Dual-Cell on E-DCH (Configured) and Dual-Cell HSDPA (Configured and Activated) operation with QPSK in UL and 64QAM in DL according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.77.4 Method of test

Initial Condition

System Simulator: 2 cells

- Cell 1/2 DC-HSUPA and DC-HSDPA cell(s) with Cell 1 (Serving HS.DSCH cell/Primary uplink frequency) and Cell 2 (Secondary serving HS.DSCH cell /Secondary uplink frequency)

UE: PS_DCCH+DTCH E-DCH/HS-DSCH (state 6-18) under condition A25c, as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE category supports combined 64QAM and DC-HSDPA and DC-HSUPA.
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The UE is in CELL_DCH state with DC-HSUPA (Configured) and DC-HSDPA (Configured and Activated).

The SS transmits a RADIO BEARER RECONFIGURATION message for transition to CELL_FACH to stop DC-HSUPA, DC-HSDPA and 64QAM operation.The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on EDCH/HSDPA (with DC-HSDPA , DC-HSUPA and 64QAM configured for L1). SRBs are mapped to E-DCH/HS-DSCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which stops DC-HSUPA, DC-HSDPA and 64QAM operation. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HS-DSCH, using DC-HSUPA, DC-HSDPA and 64QAM configuration |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 [9] clause 9 with exception as follow:

| Information Element | Value/remark | Version |

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2, 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

#### 8.2.2.77.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.78 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Success (start and stop Dual-Cell HSUPA (16QAM) and Dual-Cell HSDPA (16QAM) operation)

#### 8.2.2.78.1 Definition and applicability

All UEs supporting uplink 16QAM, Dual Cell HSUPA; and supporting F-DPCH or Enhanced F-DPCH.

#### 8.2.2.78.2 Conformance requirement

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

…

The variable SECONDARY_CELL_E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the UE has stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> either the Primary E-RNTI or the Secondary E-RNTI or both the Primary and the Secondary E-RNTI are included in the stored IE "Secondary serving E-DCH cell info";

1> the IE "Number of DPDCH" in the IE "Uplink DPCH info" is set to 0;

1> the variable E_DCH_TRANSMISSION is set to TRUE;

1> the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE;

If any of the above conditions are not met and the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> set the variable SECONDARY_CELL_E_DCH_TRANSMISSION to FALSE;

1> stop any F-DPCH, E-AGCH, E-HICH and E-RGCH reception procedures on the downlink frequency associated with the secondary uplink frequency;

1> stop any DPCCH, E-DPCCH and E-DPDCH transmission procedures on the secondary uplink frequency;

1> release all E-DCH HARQ resources for the secondary uplink frequency;

1> do not configure "TSN field extension" for the MAC-i/is entity;

1> reset the MAC-i/is entity [15];

1> clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

1> remove all the radio links associated to the secondary E-DCH active set.

If all of the above conditions are met and the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to FALSE, the UE shall:

1> set the variable SECONDARY_CELL_E_DCH_TRANSMISSION to TRUE;

1> configure "TSN field extension" for the MAC-i/is entity;

1> reset the MAC-i/is entity [15].

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE, and the secondary uplink frequency is an activated uplink frequency, the UE shall:

1> perform E_AGCH reception procedures on the secondary serving E-DCH cell according to the stored E_AGCH configuration as stated in:

2> subclause 8.6.3.14 for the IE "Primary E-RNTI" and the IE "Secondary E-RNTI" for secondary serving E-DCH cell.

1> perform E-HICH reception procedures for all radio links in the secondary E-DCH active set;

1> perform E-RGCH reception procedures for all radio links in the secondary E-DCH active set for which an E-RGCH configuration has been provided;

1> perform uplink DPCCH transmission on the secondary uplink frequency according to the stored uplink DPCH info configuration as stated in:

2> subclause 8.6.6.6 for the IE "Uplink DPCH info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPCCH transmission procedures on the secondary uplink frequency according to the stored E-DPCCH configuration as stated in:

2> subclause 8.6.6.37 for the IE "E-DPCCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPDCH transmission procedures on the secondary uplink frequency according to the stored E-DPDCH configuration as stated in:

2> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

2> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

2> subclause 8.6.6.37 for the IE "E-DPDCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> inclusion of MAC-d PDU's in a MAC-i PDU for logical channels on the secondary uplink frequency shall:

2> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]) on the downlink frequency associated with the secondary uplink frequency; and

2> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to FALSE, or the secondary uplink frequency is not an activated uplink frequency, the UE shall:

1> not perform F-DPCH, E-AGCH, E-HICH and E-RGCH reception procedures on the downlink frequency associated with the secondary uplink frequency;

1> not perform DPCCH, E-DPCCH and E-DPDCH transmission procedures on the secondary uplink frequency.

Reference

3GPP TS 25.331 clauses 8.2.2.4, 8.5.58

### 8.2.2.78.3 Test purpose

1. To verify that the UE, when UE is in CELL_DCH state with Dual-Cell E-DCH (Configured) and Dual-Cell HSDPA (Configured and Activated) enters CELL_FACH state and reconfigures the physical channels to stop Dual-Cell E-DCH and Dual-Cell HSDPA operation according to the received Radio Bearer Reconfiguration message.

2. To verify that the UE in CELL_FACH state enters CELL_DCH state and reconfigures the radio bearer parameters for Dual-Cell on E-DCH (Configured) and Dual-Cell HSDPA (Configured and Activated) operation

with 16QAM in UL and 16QAM in DL according to the received RADIO BEARER RECONFIGURATION message.

8.2.2.78.4 Method of test

Initial Condition

System Simulator: 2 cells

- Cell 1/2 DC-HSUPA and DC-HSDPA cell(s) with Cell 1 (Serving HS.DSCH cell/Primary uplink frequency) and Cell 2 (Secondary serving HS.DSCH cell /Secondary uplink frequency)

UE: PS_DCCH+DTCH E-DCH/HS-DSCH (state 6-18) under condition A25c, as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD or TDD
- UE category supports combined uplink and downlink 16QAM and DC-HSDPA and DC-HSUPA.
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The UE is in CELL_DCH state with DC-HSUPA (Configured) and DC-HSDPA (Configured and Activated).

The SS transmits a RADIO BEARER RECONFIGURATION message for transition to CELL_FACH to stop DC-HSUPA and DC-HSDPA operation. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on EDCH/HS-DSCH (with DC-HSDPA and 16QAM configured for L1; and DC-HSUPA and 16QAM configured for L1). SRBs are mapped to E-DCH/HS-DSCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which stops DC-HSUPA and DC-HSDPA operation. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | | Void | |
| 4 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HS-DSCH, with 16QAM for both DC-HSUPA and DC-HSDPA. |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 [9] clause 9 with exception as follow:

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2, 5)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

#### 8.2.2.78.5 Test requirements

At step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 5, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.2.2.79 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of 3C-HSDPA or 4C-HSDPA, MIMO and 64QAM)

NOTE: The Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH for 3C-HSDPA and 4C-HSDPA have been split in to Single band 3C-HSDPA, 3C-HSDPA Dual band (1-2), 3C-HSDPA Dual band(2-1), 4C-HSDPA Dual Band(3-1) and 4C-HSDPA, Dual Band(2-2). The test cases are designed to cover number of MIMO carrier combination that will enable testing of all UEs supporting FDD HS-DSCH physical layer categories 30 or 32.

#### 8.2.2.79.1 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Single Band, 64 QAM and MIMO

##### 8.2.2.79.1.1 Definition and applicability

UE categories (Cat 30 or Cat 32) which support combination of 3C-HSDPA or 4C-HSDPA, MIMO and 64 QAM.

UE supports FDD and F-DPCH or Enhanced F-DPCH.

8.2.2.79.1.2 Conformance requirement

….

If the UE receives:

....

- a RADIO BEARER RECONFIGURATION message; or

….

it shall:

….

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only).

….

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

….

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

….

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

….

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

….

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

1> otherwise:

2> for FDD, if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the MIMO_PARAMS variable.

2> for FDD, if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the MIMO_PARAMS variable.

….

2> if the IE "MIMO operation" is set to "start":

3> for FDD, if the IE "Precoding weight set restriction" is included:

4> store the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is configured.

3> else:

4> clear the value of the IE "Precoding weight set restriction" in the MIMO_PARAMS variable. In addition, it shall be indicated to lower layers that precoding weight set restriction is not configured.

2> else if the IE "MIMO operation" is set to "continue":

3> if the IE "Precoding weight set restriction" is included:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> UE behaviour is undefined.

3> else:

4> if the IE "Precoding weight set restriction" is already stored in the variable MIMO_PARAMS before receiving this message:

5> continue using "Precoding weight set restriction" for MIMO operation.

4> else:

5> continue MIMO operation without using "Precoding weight set restriction".

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message, the UE shall:

1> take actions related to the MIMO_PARAMS variable as specified in TS 25.331 subclause 8.5.32;

1> determine the value of the MIMO_STATUS variable.

The MIMO_STATUS variable shall be set to TRUE only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> for FDD, if the UE does not support MIMO only with single stream restriction, or if UE that signalled an HS-DSCH physical layer category of 17 or 18 supports MIMO only with single stream restriction but 64QAM is not configured for downlink, the variable MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> for FDD, the variable MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

….

If any of the above conditions is not met and the MIMO_STATUS variable is set to TRUE, the UE shall:

1> set the MIMO_STATUS variable to FALSE;

1> clear the MIMO_PARAMS variable;

1> trigger lower layers to stop operation in MIMO mode on the serving HS-DSCH cell.

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in TS 25.331 subclause 8.5.60

….

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

….

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> TS 25.331 subclause 8.6.3.1b for the IE "H-RNTI";

2> TS 25.331 subclause 8.6.5.6b for the IE "HARQ info";

2> TS 25.331 subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> TS 25.331 subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in TS 25.331 subclause 8.5.44.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message which includes the IE "Downlink secondary cell info FDD" for any of the secondary serving HS-DSCH cells, the UE shall:

1> if the IE "Secondary cell MIMO parameters" is not included in the IE "Downlink secondary cell info FDD":

2> clear the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable;

1> if the CHOICE "Configuration Info" in the IE "Secondary cell MIMO parameters" has the value "Continue":

2> continue using the stored parameters in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable;

1> otherwise:

2> if the IE "MIMO N_cqi_typeA/M_cqi ratio" is included:

3> store the value of the IE "MIMO N_cqi_typeA/M_cqi ratio" in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable.

2> if the IE "MIMO pilot configuration" is included:

3> store the value of the IE "MIMO pilot configuration" in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable.

2> if the IE "Precoding weight set restriction" is included in the IE "Secondary cell MIMO parameters":

3> store the value of the IE "Precoding weight set restriction" in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable;

2> else if the IE "Precoding weight set restriction" is not included in the IE "Secondary cell MIMO parameters":

3> if the IE "MIMO operation" is included in the IE "MIMO parameters" and it is set to "start":

4> if the IE "Precoding weight set restriction" is included in the IE "MIMO parameters":

5> store the value of the IE "Precoding weight set restriction" in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable;

4> else if the IE "Precoding weight set restriction" is not included in the IE "MIMO parameters":

5> clear the value of the IE "Precoding weight set restriction" in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable;

3> else if the IE "MIMO operation" is included in the IE "MIMO parameters" and it is set to "continue" and if the IE "Precoding weight set restriction" is present in the variable MIMO_PARAMS:

4> copy the value of the IE "Precoding weight set restriction" in the variable MIMO_PARAMS and store it in the IE "Precoding weight set restriction" in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable;

3> else:

4> clear the value of the IE "Precoding weight set restriction" in the corresponding entry in the SECONDARY_CELL_MIMO_PARAMS variable.

2> RRC shall indicate to lower layers whether precoding weight set restriction is configured based on the value of the IE "Precoding weight set restriction" in the variable SECONDARY_CELL_MIMO_PARAMS.

1> determine the value of the SECONDARY_CELL_MIMO_STATUS variable for the corresponding secondary serving HS-DSCH cell.

The SECONDARY_CELL_MIMO_STATUS variable shall be set to TRUE for a secondary serving HS-DSCH cell only when all the following conditions are met:

1> The UE is in CELL_DCH state;

1> the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE for that secondary serving HS-DSCH cell;

1> if the UE does not support MIMO only with single stream restriction, the corresponding entry in the variable SECONDARY_CELL_MIMO_PARAMS contains a value for the IE "MIMO N_cqi_typeA/M_cqi ratio"; and

1> the corresponding entry in the variable SECONDARY_CELL_MIMO_PARAMS contains a value for the IE "MIMO pilot configuration".

If any of the above conditions is not met and the SECONDARY_CELL_MIMO_STATUS variable is set to TRUE for that secondary serving HS-DSCH cell, the UE shall:

1> set the entry in the SECONDARY_CELL_MIMO_STATUS variable corresponding to that secondary serving HS-DSCH cell to FALSE;

1> clear the entry in the SECONDARY_CELL_MIMO_PARAMS variable corresponding to that secondary serving HS-DSCH cell;

1> trigger lower layers to stop MIMO operation on that secondary serving HS-DSCH cell.

Whenever the entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE for a secondary serving HS-DSCH cell, the UE shall:

1> if the UE supports MIMO only with single stream restriction (FDD only):

2> indicate to lower layers to start operation in MIMO mode restricted to single stream transmission on that secondary serving HS-DSCH cell, using the parameter values stored in the corresponding entry in the variable SECONDARY_CELL_MIMO_PARAMS.

1> else:

2> indicate to lower layers to start operation in MIMO mode on that secondary serving HS-DSCH cell, using the parameter values stored in the corresponding entry in the variable SECONDARY_CELL_MIMO_PARAMS.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.5.32, 8.5.33, 8.5.51, 8.5.57

### 8.2.2.79.1.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop simultaneous 64QAM and MIMO reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous 64QAM and MIMO reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.79.1.4 Method of test

Initial Condition

System Simulator: 3 cells –Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – Three Carriers (One Anchor Carrier and Two Secondary Carriers) on DL Band A and no Carriers on DL Band B (Single Band 3C- HSDPA) where f1, f2 and f3 are adjacent frequencies on Band A.

(Ref. to Table 5.0aB and Table 5.0aC of TS 25.101 [21])

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A33 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (3 Cells) and MIMO (UE Category 30 or Category 32)
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate 3C-HSDPA and MIMO features. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HSDPA (with 3C-HSDPA, 64 QAM and MIMO simultaneously configured for L1). SRBs are mapped to E-DCH/HSDPA. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated 3C-HSDPA, the SS sends UE CAPABILITY ENQUIRY on both Anchor Carrier Cell and Secondary Carrier Cell using SRB2 mapped onto HS-DSCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 4*. The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends composite CQI/PCI reports on each stream for Cell 1, Cell 2 and Cell 3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |

| | | | |
|---|---|---|---|
| 1 | ← | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivates 3C-HSDPA, 64 QAM and MIMO. |
| 2 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HSDPA, using 3C-HSDPA, 64QAM and MIMO configuration |
| 4 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 on HS-DSCH from Anchor Cell 1. |
| 6 | → | UE CAPABILITY INFORMATION | |
| 7 | | | SS checks for CQI reports at 4 ms interval with:<br>- concatenated composite CQI/PCI Type A Report for Anchor Carrier (Cell 1) and Secondary Carrier 2 (Cell 3)<br>- composite CQI/PCI Type A Report for Secondary Carrier 1 (Cell 2). |
| 8 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 1. |
| 9 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 1- Cell 2. |
| 10 | → | UE CAPABILITY INFORMATION | |
| 11 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 2. |
| 12 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 2- Cell 3. |
| 13 | → | UE CAPABILITY INFORMATION | |
| 14 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 3. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified for condition A5 "Packet to CELL_FACH from CELL_DCH in PS" in TS 34.108 [9] clause 9 with exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list | | |
| - RB information to reconfigure | (High-speed AM DTCH) | |
| - RB identity | 25 | |

8.2.2.79.1.5 Test requirements

At step 2 and 4 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7 the UE shall transmit three composite CQI/PCI reports of Type A.

At step 6, 10 and 13 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

## 8.2.2.79.2 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Dual Bands, 64 QAM and MIMO (1-2)

8.2.2.79.2.1 Definition and applicability

UE categories (Cat 30 or Cat 32) which support combination of 3C-HSDPA or 4C-HSDPA, MIMO and 64 QAM.

UE supports FDD and F-DPCH or Enhanced F-DPCH.

8.2.2.79.2.2 Conformance requirement

Same as subclause 8.2.2.79.1.2

8.2.2.79.2.3 Test purpose

Same as subclause 8.2.2.79.1.3

8.2.2.79.2.4 Method of test

Initial Condition

System Simulator: 3 cells –Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – One Anchor Carrier on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 3C-HSDPA) where f2 and f3 are adjacent frequencies on Band B

(Ref. to Table 5.0aB and Table 5.0aC of TS 25.101 [21])

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A33 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (3 Cells) and MIMO (UE Category 30 or Category 32)
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

Same as subclause 8.2.2.79.1.4

8.2.2.79.2.5 Test requirements

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (4 Cells) and MIMO (UE Category 32)
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate 4C-HSDPA and MIMO features. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HSDPA (with 4C-HSDPA, 64 QAM and MIMO simultaneously configured for L1). SRBs are mapped to E-DCH/HSDPA. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated 4C-HSDPA, the SS sends UE CAPABILITY ENQUIRY on both Anchor Carrier Cell and Secondary Carrier Cell using SRB2 mapped onto HS-DSCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 5*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends composite CQI/PCI reports on each stream for Cell 1, Cell 2, Cell 3 and Cell 4.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

| | | | |
|---|---|---|---|
| 1 | ← | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivates 4C-HSDPA, 64 QAM and MIMO. |
| 2 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HSDPA, using 4C-HSDPA, 64 QAM and MIMO configuration |
| 4 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 on HS-DSCH from Anchor Cell 1. |
| 6 | → | UE CAPABILITY INFORMATION | |
| 7 | | | SS checks theCQI reports at every 4 ms interval with:<br>- concatenated composite CQI/PCI Type A Report for Anchor Carrier (Cell 1) and Secondary Carrier 2 (Cell 3)<br>- concatenated composite CQI/PCI Type A Report for Secondary Carrier 1 (Cell 2) and Secondary Carrier 3 (Cell 4). |
| 8 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 1. |
| 9 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 1 on Cell 2. |
| 10 | → | UE CAPABILITY INFORMATION | |
| 11 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 2. |
| 12 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 2 on Cell 3. |
| 13 | → | UE CAPABILITY INFORMATION | |
| 14 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 3. |
| 15 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 3 on Cell 4. |
| 16 | → | UE CAPABILITY INFORMATION | |
| 17 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 4. |

Specific Message Contents

## 8.2.2.80 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA and 4C-HSDPA for different bands and 64 QAM

NOTE: The Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH for 3C-HSDPA and 4C-HSDPA have been split in to Single band 3C-HSDPA, 3C-HSDPA Dual band (1-2), 3C-HSDPA Dual band(2-1), 4C-HSDPA Dual Band(3-1) and 4C-HSDPA Dual Band(2-2). The test cases are designed to cover number of 64QAM carrier combinations that will enable testing of all UEs supporting FDD HS-DSCH physical layer categories 29, 30, 31 or 32.

### 8.2.2.80.1 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA and for Single Band and 64 QAM

#### 8.2.2.80.1.1 Definition and applicability

UE categories (Cat 29, 30, 31 and 32) which support combination of 3C-HSDPA or 4C-HSDPA and 64 QAM

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.80.1.2 Conformance requirement

…

If the UE receives:

...

- a RADIO BEARER RECONFIGURATION message; or

it shall:

…

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only).

…

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

…

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

…

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in TS 25.331 subclause 8.5.60

…

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

…

For each entry in the the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> TS 25.331 subclause 8.6.3.1b for the IE "H-RNTI";

2> TS 25.331 subclause 8.6.5.6b for the IE "HARQ info";

2> TS 25.331 subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> TS 25.331 subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in TS 25.331 subclause 8.5.44.

[…]

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.5.32, 8.5.33

### 8.2.2.80.1.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and stops simultaneous 64QAM reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_FACH to CELL_DCH state, and starts simultaneous 64QAM reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.80.1.4 Method of test

Initial Condition

System Simulator: 3 cells –Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – Three Carriers (One Anchor Carrier and Two Secondary Carriers) on DL Band A and no Carriers on DL Band B (Single Band 3C-HSDPA) where f1, f2 and f3 are adjacent frequencies.

SS: Table 5.0aB and Table 5.0aC of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A37 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (3 Cells) (UE Category 29, 30, 31 or 32)
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate 3C-HSDPA features. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HSDPA (with 3C-HSDPA, and 64 QAM simultaneously configured for L1). SRBs are mapped to E-DCH/HSDPA. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated 3C-HSDPA, the SS sends UE CAPABILITY ENQUIRY on both Anchor Carrier Cell and Secondary Carrier Cells using SRB2 mapped onto HS-DSCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 4*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports on each stream for Cell 1, Cell 2 and Cell 3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivates 3C-HSDPA, 64 QAM. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HSDPA, using 3C-HSDPA, 64QAM configuration |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on HS-DSCH from Anchor Cell 1. |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | | | | SS checks the CQI reports (all three carriers) at every 4 ms period with:<br>- CQI Report for Anchor Carrier (Cell 1)<br>- concatenated CQI for Secondary Carrier 1 (Cell 2) and Secondary Carrier 2 (Cell 3). |
| 8 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 1. |
| 9 | ← | | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 1- Cell 2. |
| 10 | → | | UE CAPABILITY INFORMATION | |
| 11 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 2. |
| 12 | ← | | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 2- Cell 3. |
| 13 | → | | UE CAPABILITY INFORMATION | |
| 14 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 3. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified in clause 8.2.2.79.1.4 RADIO BEARER RECONFIGURATION (Step 1) (FDD).

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4)

Use the same message as specified in TS 34.108 [9] clause 9 with the exception as follow:

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronization info | Present |

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified for A4 "Packet to CELL_DCH from CELL_FACH in PS" in TS 34.108 [9] clause 9 with the exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| New H-RNTI | '1010 1010 1010 1010' | |
| New Primary E-RNTI | '1010 1010 1010 1010' | |
| RB information to reconfigure list | | |

#### 8.2.2.80.1.5 Test requirements

At step 2 and 4 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7 the UE shall transmit three CQI reports.

At step 6, 10 and 13 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

### 8.2.2.80.2 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Dual Band and 64 QAM (1-2)

#### 8.2.2.80.2.1 Definition and applicability

UE categories (Cat 29, 30, 31 and 32) which support combination of 3C-HSDPA or 4C-HSDPA and 64 QAM

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.80.2.2 Conformance requirement

Same as subclause 8.2.2.80.1.2

#### 8.2.2.80.2.3 Test purpose

Same as subclause 8.2.2.80.1.3

#### 8.2.2.80.2.4 Method of test

Initial Condition

System Simulator: Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – One Anchor Carrier on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 3C-HSDPA) where f2 and f3 are adjacent frequencies on Band B.

SS: Table 5.0aB and Table 5.0aC of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A37 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (4 Cells) (UE Category 31 or 32)
- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate 4C-HSDPA features. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HSDPA (with 4C-HSDPA, and 64 QAM simultaneously configured for L1). SRBs are mapped to E-DCH/HSDPA. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated 4C-HSDPA, the SS sends UE CAPABILITY ENQUIRY on both Anchor Carrier Cell and Secondary Carrier Cell using SRB2 mapped onto HS-DSCH. The UE shall respond to each message in turn with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 5*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports on each stream for Cell 1, Cell 2, Cell 3 and Cell 4.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |

| | | | |
|---|---|---|---|
| 1 | ← | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_FACH which deactivates 4C-HSDPA, 64 QAM. |
| 2 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB + SRB from CELL_FACH state to CELL_DCH on E-DCH/HSDPA, using 4C-HSDPA, and 64 QAM configuration |
| 4 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 on HS-DSCH from Anchor Cell 1. |
| 6 | → | UE CAPABILITY INFORMATION | |
| 7 | | | SS checks the CQI reports (four carriers) at every 4 ms period with:<br>- concatenated CQI Reports for Anchor Carrier (Cell 1) and Secondary Carrier 2 (Cell 3)<br>- concatenated CQI Reports for Secondary Carrier 1 (Cell 2) and Secondary Carrier 3 (Cell 4). |
| 8 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 1. |
| 9 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 1 on Cell 2. |
| 10 | → | UE CAPABILITY INFORMATION | |
| 11 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 2. |
| 12 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 2 on Cell 3. |
| 13 | → | UE CAPABILITY INFORMATION | |
| 14 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 3. |
| 15 | ← | UE CAPABILITY ENQUIRY | Use default message. SS configures and transmits SRB2 on HS-DSCH from Secondary Carrier 3 on Cell 4. |
| 16 | → | UE CAPABILITY INFORMATION | |
| 17 | ← | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 4. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified in clause 8.2.2.79.1.4 RADIO BEARER RECONFIGURATION (Step 1) (FDD).

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4) (FDD)

Use the same message as specified in clause 8.2.2.80.1.4 RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4) (FDD)

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified in clause 8.2.2.80.1.4 RADIO BEARER RECONFIGURATION (Step 3) with the exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in clause 6.1 (FDD) | |

#### 8.2.2.80.4.5 Test requirements

At step 2 and 4 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7 the UE shall transmit four CQI reports.

At step 6, 10, 13 and 16 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

### 8.2.2.80.5 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 4C-HSDPA for Dual Bands and 64 QAM (2-2)

#### 8.2.2.80.5.1 Definition and applicability

UE categories (Cat 31 and 32) which support combination of 4C-HSDPA and 64 QAM

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.80.5.2 Conformance requirement

Same as subclause 8.2.2.80.1.2

#### 8.2.2.80.5.3 Test purpose

Same as subclause 8.2.2.80.1.3

#### 8.2.2.80.5.4 Method of test

Initial Condition

System Simulator: Cell 1/2/3/4 4C-HSDPA cell(s) with Cell 1(f1) (Anchor Carrier) and Cell 2 (f2), Cell 3 (f3) and Cell 4 (f4) (Secondary Carriers) – Two Carriers (One Anchor Carrier and One Secondary Carriers) on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 4C-HSDPA) where f1 and f2 are adjacent frequencies on Band A and f3 and f4 are adjacent frequencies on Band B.

SS: Table 5.0aB and Table 5.0aC of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A37 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports F-DPCH or Enhanced F-DPCH

Test Procedure

Same as subclause 8.2.2.80.1.4

#### 8.2.2.80.5.5 Test requirements

Same as subclause 8.2.2.80.4.5

## 8.2.2.81 Radio Bearer Reconfiguration: 3C or 4C Activation by Serving Cell Change from non 3C-HSDPA or 4C-HSDPA capable cell to a 3C-HSDPA or 4C-HSDPA capable cell

NOTE The Radio Bearer Reconfiguration test case 8.2.2.81 for 4C-HSDPA has been split in to Single band and Dual Band test cases. The test cases have been designed to cover 3C-HSDPA / 4C-HSDPA carrier combinations that will enable testing of all UEs supporting FDD HS-DSCH physical layer categories 29, 30, 31 or 32.

### 8.2.2.81.1 Radio Bearer Reconfiguration: 3C Activation by Serving Cell Change from non 3C-HSDPA capable cell to a 3C-HSDPA capable cell/Single Band

#### 8.2.2.81.1.1 Definition and applicability

UE categories (Cat 29, Cat 30, Cat 31 or Cat 32) which support combination of 3C-HSDPA or 4C-HSDPA.

UE supports FDD.

#### 8.2.2.81.1.2 Conformance requirement

The purpose of the active set update procedure is to update the active set of the connection between the UE and UTRAN. This procedure shall be used in CELL_DCH state. The UE should keep on using the old RLs while configuring the new RLs. Also the UE should keep the transmitter turned on during the procedure. This procedure is only used in FDD mode.

…

The procedure is initiated when UTRAN orders a UE in CELL_DCH state, to make the following modifications of the active set of the connection:

a) Radio link addition to the active set;

b) Radio link removal from the active set;

c) Combined radio link addition and removal on the active set;

d) Addition of a radio link to the E-DCH active set;

e) Removal of a radio link from the E-DCH active set.

f) Radio link addition to the secondary E-DCH active set;

g) Radio link removal from the secondary E-DCH active set;

h) Combined radio link addition and removal on the secondary E-DCH active set;

The procedure also allows the addition or removal of a radio link on the downlink frequencies associated with the secondary serving HS-DSCH cells. If the UE is not operating in Dual Cell E-DCH operation, radio links on the downlink frequencies associated with the secondary serving HS-DSCH cells are not part of the active set. Otherwise, radio links on the frequency associated with the first secondary serving HS-DSCH cell, are part of the secondary E-DCH active set.

Additionally, the procedure also allows the update of Target cell preconfiguration information for existing radio link(s).

In case a), c), f) and h), UTRAN should:

1> prepare new additional radio link(s) in the UTRAN prior to the command to the UE.

In case a), b), c), d) and e), UTRAN should:

1> send an ACTIVE SET UPDATE message on downlink DCCH using AM or UM RLC;

1> create active sets that contain at least one common radio link across a DPCH or F-DPCH frame boundary as the result of one or multiple (parallel) active set update procedures.

In case f), g) and h), UTRAN should:

1> send an ACTIVE SET UPDATE message on downlink DCCH using AM or UM RLC;

1> create secondary E-DCH active sets that contain at least one common radio link across a F-DPCH frame boundary as the result of one or multiple (parallel) active set update procedures.

UTRAN should include the following information:

1> IE "Radio Link Addition Information": Downlink DPCH information and other optional parameters relevant for the radio links to be added along with the IE "Primary CPICH info" used for the reference ID to indicate which radio link to add. This IE is needed in cases a) and c) listed above;

1> IEs "Downlink Secondary Cell Info FDD": Downlink optional parameters relevant to the reception of secondary serving HS-DSCH cells;

1> IE "Uplink Secondary Cell Info FDD": Uplink optional parameters relevant to transmission on secondary uplink frequency;

1> IE "Radio Link Removal Information": IE "Primary CPICH info" used for the reference ID to indicate which radio link to remove. This IE is needed in cases b) and c) listed above;

1> IE "Radio link addition information on secondary UL frequency": Downlink F-DPCH information and other optional parameters relevant for the radio links to be added along with the IE "Primary CPICH info" used for the reference ID to indicate which radio link to add on the secondary uplink frequency. This IE is needed in cases f) and h) listed above;

1> IE "Radio link removal information on secondary UL frequency": IE "Primary CPICH info" used for the reference ID to indicate which radio link to remove on the secondary uplink frequency. This IE is needed in cases g) and h) listed above;

1> IE "E-DCH reconfiguration information": IE "Primary CPICH info" used for the reference ID along with the IE "E-HICH information" to indicate which radio link to add to the E-DCH active set. This IE is needed in case d) above, when the RL added to the E-DCH active set is already in the DCH active set;

1> IE "E-DCH reconfiguration information": IE "Primary CPICH info" used for the reference ID along with the IE "E-HICH release indicator" to indicate which radio link to remove from the E-DCH active set. This IE is needed in case e) above, when the RL removed from the E-DCH active set remains in the DCH active set.

NOTE: The UE behaviour is unspecified if SRBs are mapped on E-DCH and the value for the E_DCH_TRANSMISSION variable is changed to FALSE via the Active Set Update procedure; or if SRBs are mapped on HS-DSCH and the value for the HS_DSCH_RECEPTION variable is changed to FALSE via the Active Set Update procedure.

…

Upon reception of an ACTIVE SET UPDATE message the UE shall act upon all received information elements as specified in 8.6, unless specified otherwise in the following.

The UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

The UE shall:

1> first add the RLs indicated in the IE "Radio Link Addition Information" which are not yet contained in the UEs active set;

1> remove the RLs indicated in the IE "Radio Link Removal Information". If the UE active set is full or becomes full, an RL, which is included in the IE "Radio Link Removal Information" for removal, shall be removed before adding RL, which is included in the IE "Radio Link Addition Information" for addition;

….

If the UE receives:

....

- a RADIO BEARER RECONFIGURATION message; or

….

it shall:

….

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

….

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in subclause 8.6, unless specified in the following and perform the actions below.

….

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

….

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

….

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

….

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

….

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO or MIMO mode with four transmit antennas is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in subclause 8.5.60

….

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

1> partition the soft memory buffer in the MAC-ehs, used for the secondary serving HS-DSCH cells reception, using the information in the IE "HARQ Info" of the serving HS-DSCH cell and performing the procedure described in subclause 8.6.5.6b;

1> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in subclause 8.5.60.

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

…..

When the UE is configured with Four Carrier HSDPA operation:

…

- The mobility procedures, as defined in section 9, are supported based on the serving HS-DSCH cell. A serving cell change similar to the one shown in Figure 18-1 is possible for Four Carrier HSDPA operation.

….

When the UE is configured with Dual Cell HSDPA operation:

- the mobility procedures, as defined in section 9, are supported based on the serving HS-DSCH cell. Figure 18-1 shows an example of combined active set update and HS-Serving Cell Change based on received measurement report 1A. The procedure may also be performed in two steps with separate Active Set Update and Radio Bearer Reconfiguration messages.

3GPP TS 25.308 clause 18, 20

8.2.2.81.1.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from non 3C-HSDPA capable cell to 3C-HSDPA Single band carrier combination with 3 carriers' capable cell.

8.2.2.81.1.4 Method of test

Initial Condition

System Simulator: 4 Cells configured as per Table 5.0aB of TS 25.101 and below configurations.

Cell 1 non 3C-HSDPA cell on DL BandA,

Cell 2/3/4 3C HSDPA cell(s) with Cell 2(Anchor Carrier), Cell 3 and Cell 4 (Secondary Carriers) – One Anchor Carrier and Two Secondary Carriers on DL Band A (Single Band 3C HSDPA).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17d with MACi/is and signalling bearers mapped to E-DCH/DCH, as specified in clause 7.4 of TS 34.108 [9] using Single cell configuration.

Related ICS/IXIT statement(s)

- UE supports FDD

- UE supports More Than Two Cells (UE HS-DSCH categories 29, 30, 31 or 32) and Single band carrier combination with 3 carriers

Test Procedure

**Table 8.2.2.81.1**

| Parameter | Unit | Cell 1 | | Cell 2,3,4 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid-Range Test Frequency | | Mid-Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| | | | | | |

Table 8.2.2.81.1 illustrates the downlink power to be applied for all cells at various time instants of the test execution.

The downlink transmission power is set according to values in column "T0" in table 8.2.2.81.1. The UE has user plane bearers mapped to the E-DCH/HS-DSCH and signalling bearers mapped to E-DCH/DCH of the non 3C-HSDPA Cell.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.81.1. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for Cell 2 according to IE "Intra-frequency event identity" set to 1a.

The SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC which adds a second radio link in cell 2 and includes Downlink Secondary carriers Cell 3 and Cell 4 parameters. When the UE receives this message, at the activation time, the UE shall add cells 2,3,4 in the active set and transmit an ACTIVE SET UPDATE COMPLETE message to the SS.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform serving HS-DSCH cell change to Cell 2. When the UE receives this message, at the activation time, the UE shall configure layer 1 to begin E-DCH transmission and HS-DSCH reception using the new radio link on primary cell 2 and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2.

To check that the UE has performed serving HS-DSCH cell change to Cell 2, SS monitors CQI reports on HS-DPCCH received from the UE on Cell 2.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures its downlink transmission power settings according to column "T1" in table 8.2.2.81.1 |
| 2 | → | | MEASUREMENT REPORT | See specific message contents for this message (event '1a' for cell 2). |
| 3 | ← | | ACTIVE SET UPDATE | SS transmits this message in carrier Cell 1. The RRC message instructs the UE to add Cell 2 to the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | SS transmits this message in carrier Cell 1 on downlink DCCH using AM RLC. The RRC message instructs the UE to perform a serving E-DCH and HS-DSCH Cell change to Cell 2. |
| 6 | SS | | | At the activation time Cell 2 becomes the serving E-DCH /HS-DSCH Cell. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | | SS checks for CQI reports (all three carriers) at every 4 ms period with<br>- CQI Report for Anchor Carrier (Cell 2)<br>- concatenated CQI Report for Secondary Carrier 1 (Cell 3) and Secondary Carrier 2 (Cell 4) |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | Cell 2. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | Cell 1. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |

NOTE 1: Cell measured results for cells 1 and 2 may appear in any order.

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Activation time | (256+CFN-(CFN MOD 8 + 8))MOD 256 | |
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to TS 34.108 [9] clause 6.10.2.4 "Typical radio parameter sets" | |
| - Code Number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 1 | |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - E-HICH Information | | |
| - Channelisation code | 4 | |
| - Signature sequence | 1 | |
| - CHOICE E-RGCH Information | | |
| - E-RGCH Information | | |
| - Signature Sequence | 0 | |
| - RG combination index | 0 | |
| Downlink secondary cell info FDD | | |
| - CHOICE Configuration info | New configuration | |
| - New HRNTI | '1010 1010 1010 1010' | |
| - Downlink 64QAM configured | Not Present | |
| - HS-DSCH TB size table | Octet aligned | |
| - Primary CPICH info | | |
| - Primary scrambling code | Set to the primary scrambling code of cell 3 | |
| - DL Scrambling Code | Not Present. | |
| - HS-SCCH Channelisation Code Information | 1 HS-SCCH code | |
| - HS-SCCH Channelisation Code | 7 | |
| - Measurement Power Offset | 6 dB | |
| - UARFCN downlink (Nd) | Reference to clause 5.1 Test frequencies for 4C-HSDPA. | |
| Additional DL secondary cell info list FDD | | |
| Downlink secondary cell info FDD | | |
| - CHOICE Configuration info | New configuration | |
| - New HRNTI | '1010 1010 1010 1010' | |
| - Downlink 64QAM configured | Not Present | |
| - HS-DSCH TB size table | Octet aligned | |
| - Primary CPICH info | | |
| - Primary scrambling code | Set to the primary scrambling code of cell 4 | |
| - DL Scrambling Code | Not Present. | |
| - HS-SCCH Channelisation Code Information | 1 HS-SCCH code | |
| - HS-SCCH Channelisation Code | 7 | |
| - Measurement Power Offset | 6 dB | |
| - UARFCN downlink (Nd) | Reference to clause 5.1 Test frequencies for 4C-HSDPA. | |

RADIO BEARER RECONFIGURATION (Step 5) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 [9], except for the following.

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | Not Present |
| UL Transport channel information common for all transport channels | Not Present |

| Information Element | Value/remark |
|---|---|
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - UARFCN uplink(Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for Cell 2 |
| CHOICE channel requirement | Not Present |
| E-DCH Info | Not Present |
| CHOICE Mode | FDD |
| - Downlink PDSCH information | Not Present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - POhsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| - HS-DSCH TB size table | Octet aligned |
| Downlink information per radio link list | 2 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code for Cell 2 |
| - Cell ID | Not present |
| - Serving HS-DSCH radio link indicator | TRUE |
| - Serving E-DCH radio link indicator | TRUE |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | FDD |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used |
| - DPCH frame offset | Calculated value from Cell synchronisation information |
| - Secondary CPICH info | Not present |
| - DL channelisation code | Reference to TS 34.108 [9] clause 6.10 Parameter Set 2 |
| - Secondary scrambling code | |
| - Spreading factor | Reference to TS 34.108 [9] clause 6.10 Parameter Set |
| - Code number | Any value between 0 and Spreading factor-1 |
| - Scrambling code change | Not Present |
| - TPC combination index | 0 |
| - Closed loop timing adjustment mode | Not present |

| Information Element | Value/remark |
|---|---|
| Downlink secondary cell info FDD | |
| - CHOICE Configuration info | New configuration |
| - New HRNTI | '1010 1010 1010 1010' |
| - Downlink 64QAM configured | Not Present |
| - HS-DSCH TB size table | Octet aligned |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the primary scrambling code of cell 3 |
| - DL Scrambling Code | Not Present. |
| - HS-SCCH Channelisation Code Information | 1 HS-SCCH code |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Power Offset | 6 dB |
| - UARFCN downlink (Nd) | Reference to clause 5.1 Test frequencies for 4C-HSDPA. |
| | |
| Downlink secondary cell info FDD | New configuration |
| - CHOICE Configuration info | '1010 1010 1010 1010' |
| - New HRNTI | Not Present |
| - Downlink 64QAM configured | Octet aligned |
| - HS-DSCH TB size table | |
| - Primary CPICH info | Set to the primary scrambling code of cell 4 |
| - Primary scrambling code | Not Present. |
| - DL Scrambling Code | 1 HS-SCCH code |
| - HS-SCCH Channelisation Code Information | 7 |
| - HS-SCCH Channelisation Code | 6 dB |
| - Measurement Power Offset | Reference to clause 5.1 Test frequencies for 4C-HSDPA. |
| - UARFCN downlink (Nd) | |

RADIO BEARER RECONFIGURATION COMPLETE (Step 7)

Use the same message sub-type found in TS 34.108 [9] clause 9.

#### 8.2.2.81.1.5 Test requirements

At step 2 the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH using AM RLC.

At step 4 the UE shall transmit an ACTIVE SET UPDATE COMPLETE message to SS.

At step 7 the UE shall transmit an RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC to acknowledge the completion of the change of serving cell.

At step 8 the UE shall transmit two CQI reports on HS-DPCCH to Cell 2

### 8.2.2.81.2 Radio Bearer Reconfiguration: 3C Activation by Serving Cell Change from non 3C-HSDPA capable cell to 3C-HSDPA capable cell/Dual Band (1-2)

#### 8.2.2.81.2.1 Definition and applicability

UE categories (Cat 29, Cat 30, Cat 31 or Cat 32) which support combination of 3C-HSDPA or 4C-HSDPA and 64 QAM.

UE supports FDD and Dual Band carrier combination (1,2).

#### 8.2.2.81.2.2 Conformance requirement

Same as subclause 8.2.2.81.1.2.

#### 8.2.2.81.2.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from non 3C-HSDPA capable cell to 3C-HSDPA Dual band carrier combination (1,2) capable cell

#### 8.2.2.81.2.4 Method of test

Initial Condition

System Simulator: 4 Cells configured as per Table 5.0aC of TS 25.101 and below configurations.

Cell 1 non 3C-HSDPA cell on DL BandA,

Cell 2/3/4 3C HSDPA cell(s) with Cell 2(Anchor Carrier), Cell 3 and Cell 4 (Secondary Carriers) – One Anchor Carrier on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 3C HSDPA (1,2)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17d with MACi/is and signalling bearers mapped to E-DCH/DCH, as specified in clause 7.4 of TS 34.108 [9] using Single cell configuration

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports More Than Two Cells (UE HS-DSCH categories 29, 30, 31 or 32) and Dual band carrier combination (1,2)

Test Procedure

Same as the test procedure in subclause 8.2.2.81.1.4

#### 8.2.2.81.2.5 Test requirements

Same as subclause 8.2.2.81.1.5

### 8.2.2.81.3 Radio Bearer Reconfiguration: 3C Activation by Serving Cell Change from non 3C-HSDPA capable cell to 3C-HSDPA capable cell/Dual Band (2-1)

#### 8.2.2.81.3.1 Definition and applicability

UE categories (Cat 29, Cat 30, Cat 31 or Cat 32) which support combination of 3C-HSDPA or 4C-HSDPA and 64 QAM.

UE supports FDD and Dual Band carrier combination (2,1).

#### 8.2.2.81.3.2 Conformance requirement

Same as subclause 8.2.2.81.1.2.

#### 8.2.2.81.3.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from non 3C-HSDPA capable cell to 3C-HSDPA Dual band carrier combination (2,1) capable cell

#### 8.2.2.81.3.4 Method of test

Initial Condition

System Simulator: 4 Cells configured as per Table 5.0aC of TS 25.101 and below configurations.

Cell 1 non 3C-HSDPA cell on DL BandA,

Cell 2/3/4 3C HSDPA cell(s) with Cell 2(Anchor Carrier), Cell 3 and Cell 4 (Secondary Carriers) – One Anchor Carrier and one Secondary Carrier on DL Band A and One Secondary Carrier on DL Band B (Dual Band 3C HSDPA (2,1)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17d with MACi/is and signalling bearers mapped to E-DCH/DCH, as specified in clause 7.4 of TS 34.108 [9] using Single cell configuration

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports More Than Two Cells (UE HS-DSCH categories 29, 30, 31 or 32) and Dual band carrier combination (2,1)

Test Procedure

Same as the test procedure in subclause 8.2.2.81.1.4

#### 8.2.2.81.3.5 Test requirements

Same as subclause 8.2.2.81.1.5

### 8.2.2.81.4 Radio Bearer Reconfiguration: 4C Activation by Serving Cell Change from non 4C-HSDPA capable cell to a 4C-HSDPA capable cell/Dual Band (3-1)

#### 8.2.2.81.4.1 Definition and applicability

UE category (Cat 31and 32) which support combination of 4C-HSDPA, and 64 QAM.

UE supports FDD and 4C-HSDPA Dual Band carrier combination(3,1)

#### 8.2.2.81.4.2 Conformance requirement

Same as subclause 8.2.2.81.1.2.

#### 8.2.2.81.4.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from non 4C-HSDPA capable cell to 4C-HSDPA Dual band carrier combination (3,1) capable cell

#### 8.2.2.81.2.4 Method of test

Initial Condition

System Simulator: 5 Cells configured as per Table 5.0aC of TS 25.101 and below configurations.

Cell 1 non 4C-HSDPA cell on DL BandA,

Cell 2/3/4/5 4C HSDPA cell(s) with Cell 2 (Anchor Carrier), and Cell 3, Cell 4 and Cell 5 (Secondary Carriers) – One Anchor Carrier and Two Secondary Carriers on DL Band A and One Secondary Carrier on DL Band B (Dual Band 4C HSDPA (3,1)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17d with MACi/is and signalling bearers mapped to E-DCH/DCH, as specified in clause 7.4 of TS 34.108 [9] using Single cell configuration

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports Four cells (UE HS-DSCH categories 31 or 32) and Dual band carrier combination (3,1)

Test Procedure

**Table 8.2.2.81.4**

| Parameter | Unit | Cell 1 | | Cell 2,3,4,5 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid-Range Test Frequency | | Mid-Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| | | | | | |

Table 8.2.2.81.4 illustrates the downlink power to be applied for all cells at various time instants of the test execution.

The downlink transmission power is set according to values in column “T0” in table 8.2.2.81.4. The UE has user plane bearers mapped to the E-DCH/HS-DSCH and signalling bearers mapped to E-DCH/DCH of the non 4C-HSDPA cell.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.81.4. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for Cell 2 according to IE "Intra-frequency event identity" set to 1a.

The SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC which adds a second radio link in cell 2 and includes Downlink Secondary carriers Cell 3, Cell 4 and Cell 5 parameters When the UE

receives this message, at the activation time, the UE shall add cells 2,3,4,5 in the active set and transmit an ACTIVE SET UPDATE COMPLETE message to the SS.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform serving HS-DSCH cell change to Cell 2. When the UE receives this message, at the activation time, the UE shall configure layer 1 to begin E-DCH transmission and HS-DSCH reception using the new radio link on primary cell 2 and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 2.

To check that the UE has performed serving HS-DSCH cell change to Cell 2, SS monitors CQI reports on HS-DPCCH received from the UE on Cell 2.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures its downlink transmission power settings according to column "T1" in table 8.2.2.81.4 |
| 2 | → | | MEASUREMENT REPORT | See specific message contents for this message (event '1a' for cell 2). |
| 3 | ← | | ACTIVE SET UPDATE | SS transmits this message in primary carrier Cell 1.The RRC message instructs the UE to add Cell 2 to the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | SS transmits this message in primary carrier Cell 1 on downlink DCCH using AM RLC. The RRC message instructs the UE to perform a serving E-DCH and HS-DSCH Cell change to Cell 2. |
| 6 | SS | | | At the activation time Cell 2 becomes the serving E-DCH /HS-DSCH Cell. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | | SS checks the CQI reports (all four carriers) at every 4 ms period with:<br>- concatenated CQI Report for Anchor Carrier (Cell 2) and Secondary Carrier 2 (Cell 4)<br>- concatenated CQI Report for Secondary Carrier 1 (Cell 3) and Secondary Carrier 3 (Cell 5) |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | Cell 2. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | Cell 1. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |

NOTE 1: Cell measured results for cells 1 and 2 may appear in any order.

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is the same as in 8.2.2.81.1.4 ACTIVE SET UPDATE (Step 3), with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink secondary cell info FDD | | |
| - CHOICE Configuration info | | |
| - New HRNTI | New configuration | |
| - Downlink 64QAM configured | '1010 1010 1010 1010' | |
| - HS-DSCH TB size table | Not Present | |
| - Primary CPICH info | Octet aligned | |
| - Primary scrambling code | | |
| - DL Scrambling Code | Set to the primary scrambling code of cell 3 | |
| - HS-SCCH Channelisation Code Information | Not Present. | |
| - HS-SCCH Channelisation Code | 1 HS-SCCH code | |
| - Measurement Power Offset | 7 | |
| - UARFCN downlink (Nd) | 6 dB | |
| | Reference to clause 5.1 Test frequencies for | |
| Downlink secondary cell info FDD | 4C-HSDPA. | |
| - CHOICE Configuration info | | |
| - New HRNTI | New configuration | |
| - Downlink 64QAM configured | '1010 1010 1010 1010' | |
| - HS-DSCH TB size table | Not Present | |
| - Primary CPICH info | Octet aligned | |
| - Primary scrambling code | | |
| - DL Scrambling Code | Set to the primary scrambling code of cell 4 | |
| - HS-SCCH Channelisation Code Information | Not Present. | |
| - HS-SCCH Channelisation Code | 1 HS-SCCH code | |
| - Measurement Power Offset | 7 | |
| - UARFCN downlink (Nd) | 6 dB | |
| | Reference to clause 5.1 Test frequencies for | |
| Downlink secondary cell info FDD | 4C-HSDPA. | |
| - CHOICE Configuration info | | |
| - New HRNTI | New configuration | |
| - Downlink 64QAM configured | '1010 1010 1010 1010' | |
| - HS-DSCH TB size table | Not Present | |
| - Primary CPICH info | Octet aligned | |
| - Primary scrambling code | | |
| - DL Scrambling Code | Set to the primary scrambling code of cell 5 | |
| - HS-SCCH Channelisation Code Information | Not Present. | |
| - HS-SCCH Channelisation Code | 1 HS-SCCH code | |
| - Measurement Power Offset | 7 | |
| - UARFCN downlink (Nd) | 6 dB | |
| | Reference to clause 5.1 Test frequencies for 4C-HSDPA. | |

RADIO BEARER RECONFIGURATION (Step 5) (FDD)

Use the same message as specified in clause 8.2.2.81.1.4 RADIO BEARER RECONFIGURATION (Step 5), except for the following.

| Information Element | Value/remark |
|---|---|
| | |
| Downlink secondary cell info FDD | New configuration |
| - CHOICE Configuration info | '1010 1010 1010 1010' |
| - New HRNTI | Not Present |
| - Downlink 64QAM configured | Octet aligned |
| - HS-DSCH TB size table | |
| - Primary CPICH info | Set to the primary scrambling code of cell 3 |
| - Primary scrambling code | Not Present. |
| - DL Scrambling Code | 1 HS-SCCH code |
| - HS-SCCH Channelisation Code Information | 7 |
| - HS-SCCH Channelisation Code | 6 dB |
| - Measurement Power Offset | Reference to clause 5.1 Test frequencies for 4C-HSDPA. |
| - UARFCN downlink (Nd) | |
| | New configuration |
| Downlink secondary cell info FDD | '1010 1010 1010 1010' |
| - CHOICE Configuration info | Not Present |
| - New HRNTI | Octet aligned |
| - Downlink 64QAM configured | |
| - HS-DSCH TB size table | Set to the primary scrambling code of cell 4 |

| Information Element | Value/remark |
|---|---|
| - Primary CPICH info | Not Present. |
| - Primary scrambling code | 1 HS-SCCH code |
| - DL Scrambling Code | 7 |
| - HS-SCCH Channelisation Code Information | 6 dB |
| - HS-SCCH Channelisation Code | Reference to clause 5.1 Test frequencies for 4C-HSDPA. |
| - Measurement Power Offset | |
| - UARFCN downlink (Nd) | New configuration<br>'1010 1010 1010 1010' |
| Downlink secondary cell info FDD | Not Present |
| - CHOICE Configuration info | Octet aligned |
| - New HRNTI | |
| - Downlink 64QAM configured | Set to the primary scrambling code of cell 5 |
| - HS-DSCH TB size table | Not Present. |
| - Primary CPICH info | 1 HS-SCCH code |
| - Primary scrambling code | 7 |
| - DL Scrambling Code | 6 dB |
| - HS-SCCH Channelisation Code Information | Reference to clause 5.1 Test frequencies for 4C-HSDPA. |
| - HS-SCCH Channelisation Code | |
| - Measurement Power Offset | |
| - UARFCN downlink (Nd) | |

RADIO BEARER RECONFIGURATION COMPLETE (Step 7)

Use the same message sub-type found in TS 34.108 [9] clause 9.

#### 8.2.2.81.4.5 Test requirements

Same as subclause 8.2.2.81.1.5

### 8.2.2.81.5 Radio Bearer Reconfiguration: 4C Activation by Serving Cell Change from non 4C-HSDPA capable cell to a 4C-HSDPA capable cell/Dual Band (2-2)

#### 8.2.2.81.5.1 Definition and applicability

Same as subclause 8.2.2.81.4.1

#### 8.2.2.81.5.2 Conformance requirement

Same as subclause 8.2.2.81.1.2.

#### 8.2.2.81.5.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from non 4C-HSDPA capable cell to 4C-HSDPA Dual band carrier combination (2,2) capable cell.

#### 8.2.2.81.5.4 Method of test

Initial Condition

System Simulator: 5 Cells configured as per Table 5.0aC of TS 25.101 and below configurations.

Cell 1 non 4C-HSDPA cell on DL BandA,

Cell 2/3/4/5 4C HSDPA cell(s) with Cell 2 (Anchor Carrier), Cell 3, Cell 4 and Cell 5 (Secondary Carriers) – One Anchor Carrier and One Secondary Carrier on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 4C HSDPA (2,2)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A17d with MACi/is and signalling bearers mapped to E-DCH/DCH, as specified in clause 7.4 of TS 34.108 [9] using Single cell configuration.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports Four cells (UE HS-DSCH categories 31 or 32) and Dual band carrier combination (2,2)

Test Procedure

Same as the test procedure in subclause 8.2.2.81.4.4

#### 8.2.2.81.5.5 Test requirements

Same as subclause 8.2.2.81.1.5

### 8.2.2.82 Radio Bearer Reconfiguration: 3C or 4C Deactivation by Serving Cell Change from 3C-HSDPA or 4C-HSDPA capable cell to a non 3C-HSDPA or 4C-HSDPA capable cell

NOTE The Radio Bearer Reconfiguration test case 8.2.2.82 for 4C-HSDPA has been split in to Single band and Dual Band test cases. The test cases have been designed to cover 3C-HSDPA / 4C-HSDPA carrier combinations that will enable testing of all UEs supporting FDD HS-DSCH physical layer categories 29, 30, 31 or 32.

### 8.2.2.82.1 Radio Bearer Reconfiguration: 3C Deactivation by Serving Cell Change from 3C-HSDPA capable cell to a non 3C-HSDPA capable cell/Single Band

#### 8.2.2.82.1.1 Definition and applicability

All UEs which support FDD, 3C-HSDPA Single band operation with 3 carriers.

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.82.1.2 Conformance requirement

The purpose of the active set update procedure is to update the active set of the connection between the UE and UTRAN. This procedure shall be used in CELL_DCH state. The UE should keep on using the old RLs while configuring the new RLs. Also the UE should keep the transmitter turned on during the procedure. This procedure is only used in FDD mode.

…

The procedure is initiated when UTRAN orders a UE in CELL_DCH state, to make the following modifications of the active set of the connection:

a) Radio link addition;

b) Radio link removal;

c) Combined radio link addition and removal;

d) Addition of a radio link to the E-DCH active set;

e) Removal of a radio link from the E-DCH active set.

The procedure also allows the addition or removal of a radio link on a secondary serving HS-DSCH cell. Radio links on the secondary serving HS-DSCH cell are not part of the active set.

In case a) and c), UTRAN should:

1> prepare new additional radio link(s) in the UTRAN prior to the command to the UE.

In all cases, UTRAN should:

1> send an ACTIVE SET UPDATE message on downlink DCCH using AM or UM RLC;

1> create active sets that contain at least one common radio link across a DPCH or F-DPCH frame boundary as the result of one or multiple (parallel) active set update procedures.

UTRAN should include the following information:

1> IE "Radio Link Addition Information": Downlink DPCH information and other optional parameters relevant for the radio links to be added along with the IE "Primary CPICH info" used for the reference ID to indicate which radio link to add. This IE is needed in cases a) and c) listed above;

1> IE "Downlink Secondary Cell Info FDD": Downlink optional parameters relevant to reception of secondary serving HS-DSCH cell;

1> IE "Radio Link Removal Information": IE "Primary CPICH info" used for the reference ID to indicate which radio link to remove. This IE is needed in cases b) and c) listed above;

1> IE "E-DCH reconfiguration information": IE "Primary CPICH info" used for the reference ID along with the IE "E-HICH information" to indicate which radio link to add to the E-DCH active set. This IE is needed in case d) above, when the RL added to the E-DCH active set is already in the DCH active set;

1> IE "E-DCH reconfiguration information": IE "Primary CPICH info" used for the reference ID along with the IE "E-HICH release indicator" to indicate which radio link to remove from the E-DCH active set. This IE is needed in case e) above, when the RL removed from the E-DCH active set remains in the DCH active set.

…

Upon reception of an ACTIVE SET UPDATE message the UE shall act upon all received information elements as specified in 8.6, unless specified otherwise in the following.

The UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

The UE shall:

1> first add the RLs indicated in the IE "Radio Link Addition Information";

1> remove the RLs indicated in the IE "Radio Link Removal Information". If the UE active set is full or becomes full, an RL, which is included in the IE "Radio Link Removal Information" for removal, shall be removed before adding RL, which is included in the IE "Radio Link Addition Information" for addition;

…

If the UE receives:

...

- a RADIO BEARER RECONFIGURATION message; or

…

it shall:

…

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> if COMMON_E_DCH_TRANSMISSION is set to FALSE before entering CELL_DCH state or IE "E-DCH info" is not included in the reconfiguration message:

3> perform the physical layer synchronisation procedure A as specified in [29] (FDD only).

...

1> act upon all received information elements, or Target cell preconfiguration information in the case of received Target cell HS-SCCH order, as specified in subclause 8.6, unless specified in the following and perform the actions below.

…

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

…

The UE shall transmit a response message as specified in subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

…

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry;

…

In case the procedure was triggered by reception of a RADIO BEARER RECONFIGURATION message, the UE shall:

1> transmit a RADIO BEARER RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC.

[…]

If the UE receives an ACTIVE SET UPDATE, CELL UPDATE CONFIRM, or any reconfiguration message:

1> if the IE "MIMO parameters" is not included:

2> clear the MIMO_PARAMS variable;

2> trigger lower layers to stop operation in MIMO mode.

…

[…]

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO or MIMO mode with four transmit antennas is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

If any of the above conditions is not met for a secondary serving HS-DSCH cell, and the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is set to TRUE, the UE shall:

1> set the corresponding entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION to FALSE;

1> clear the corresponding entry in the variable DOWNLINK_SECONDARY_CELL_INFO;

1> flush the HARQ buffers of the HARQ entity associated to that secondary serving HS-DSCH cell;

1> release the HARQ resources associated to that secondary serving HS-DSCH cell.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in subclause 8.5.60

…

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, SECONDARY_CELL_MIMO_STATUS and SECONDARY_CELL_MIMO_MODE_WITH_FOUR_TRANSMIT_ANTENNAS_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

1> partition the soft memory buffer in the MAC-ehs, used for the secondary serving HS-DSCH cells reception, using the information in the IE "HARQ Info" of the serving HS-DSCH cell and performing the procedure described in subclause 8.6.5.6b;

1> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in subclause 8.5.60.

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

…

When the UE is configured with Four Carrier HSDPA operation:

…

- The mobility procedures, as defined in section 9, are supported based on the serving HS-DSCH cell. A serving cell change similar to the one shown in Figure 18-1 is possible for Four Carrier HSDPA operation.

…

When the UE is configured with Dual Cell HSDPA operation:

- the mobility procedures, as defined in section 9, are supported based on the serving HS-DSCH cell. Figure 18-1 shows an example of combined active set update and HS-Serving Cell Change based on received measurement report 1A. The procedure may also be performed in two steps with separate Active Set Update and Radio Bearer Reconfiguration messages.

[…]

Reference

3GPP TS 25.331 clause 8.3.4, 8.3.4.2, 8.2.2.3, 8.5.32, 8.5.51

3GPP TS 25.308 clause 18, 20

8.2.2.82.1.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from 3C-HSDPA Single band carrier combination with 3 carriers' capable cell to non 3C-HSDPA capable cell.

8.2.2.82.1.4 Method of test

Initial Condition

System Simulator: 4 Cells configured (Ref. to Table 5.0aB of TS 25.101 [21]).

Cell 1 non 3C-HSDPA cell on DL BandA,

Cell 2/3/4 3C HSDPA cell(s) with Cell 2(Anchor Carrier), Cell 3 and Cell 4 (Secondary Carriers) – One Anchor Carrier and Two Secondary Carriers on DL Band A (Single Band 3C HSDPA).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A36, as specified in clause 7.4 of TS 34.108 [9] using Single band carrier combination with 3 carriers.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports More Than Two Cells (UE HS-DSCH categories 29, 30, 31 or 32) and Single band carrier combination with 3 carriers

Test Procedure

**Table 8.2.2.82.1**

| Parameter | Unit | Cell 2,3,4 | | Cell 1 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid-Range Test Frequency | | Mid-Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| | | | | | |

Table 8.2.2.82.1 illustrates the downlink power to be applied for all cells at various time instants of the test execution.

The downlink transmission power is set according to values in column "T0" in table 8.2.2.82.1 The UE has user plane bearers mapped to the E-DCH/HS-DSCH of the 3C-HSDPA Cell and signalling bearers mapped to E-DCH/HS-DSCH on cell 2.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.82.1. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for Cell 1 according to IE "Intra-frequency event identity" set to 1a.

The SS transmits to the UE an ACTIVE SET UPDATE message in cell 2 which adds a second radio link cell 1. When the UE receives this message, at the activation time, the UE shall add cell1 in the active set and transmit an ACTIVE SET UPDATE COMPLETE message to the SS.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform serving HS-DSCH cell change to Cell 1. When the UE receives this message, at the activation time, the UE shall configure layer 1 to begin E-DCH transmission and HS-DSCH reception using the new radio link on primary cell 1 and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1.

To check that the UE has performed serving HS-DSCH cell change to Cell 1, SS monitors CQI reports on HS-DPCCH received from the UE on Cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures its downlink transmission power settings according to column "T1" in table 8.2.2.82.1 |
| 2 | → | | MEASUREMENT REPORT | See specific message contents for this message (event '1a' for cell 1). |
| 3 | ← | | ACTIVE SET UPDATE | SS transmits this message in primary carrier Cell 2 .The RRC message instructs the UE to add Cell 1 to the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | SS transmits this message in primary carrier Cell 2 on downlink DCCH using AM RLC. The RRC message instructs the UE to perform a serving E-DCH and HS-DSCH Cell change to Cell 1. |
| 6 | SS | | | At the activation time Cell 1 becomes the serving E-DCH /HS-DSCH Cell. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | | SS starts monitoring CQI reports on HS-DPCCH received from the UE on Cell 1. SS waits for 10 CQI reports. |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | Cell 2. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | Cell 1. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |

NOTE 1: Cell measured results for cells 1 and 2 may appear in any order.

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Activation time | (256+CFN-(CFN MOD 8 + 8))MOD 256 | |
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 1 | |
| - Downlink F-DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - F-DPCH frame offset | Calculated value from Cell synchronisation information | |
| - F-DPCH slot format | 3 if UE supports enhanced F-DPCH, otherwise Not Present | |
| - Secondary CPICH info | Not present | |
| - Secondary scrambling code | Not present | |
| - Code number | F-DPCH code number as used in Cell1 | |
| - TPC Combination Index | 1 | |
| - E-HICH Information | | |
| - Channelisation code | 4 | |
| - Signature sequence | 1 | |
| - CHOICE E-RGCH Information | | |
| - E-RGCH Information | | |
| - Signature Sequence | 0 | |
| - RG combination index | 0 | |

RADIO BEARER RECONFIGURATION (Step 5) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 [9], except for the following.

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | Not Present |
| UL Transport channel information common for all transport channels | Not Present |
| Deleted UL TrCH information | Not Present |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - UARFCN uplink(Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for Cell 1 |
| CHOICE channel requirement | Not Present |
| E-DCH Info | Not Present |
| CHOICE Mode | FDD |
| - Downlink PDSCH information | Not Present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - POhsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| Downlink information common for all radio links | |
| - Downlink F-DPCH info common for all RL | Downlink F-DPCH info common for all RL |
| - Timing Indication | Not Present |
| - Timing maintained Synchronization indicator | Not Present |
| - Downlink F-DPCH power control information | |

| Information Element | Value/remark |
|---|---|
| - CHOICE mode | FDD |
| - DPC Mode | Single TPC |
| - CHOICE mode | FDD |
| - DPCH compressed mode info | Not Present |
| - TX Diversity Mode | Not Present |
| - Default DPCH Offset Value | Not present |
| - MAC-hs reset indicator | TRUE |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code for Cell 1 |
| - Cell ID | Not present |
| - Serving HS-DSCH radio link indicator | TRUE |
| - Serving E-DCH radio link indicator | TRUE |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | FDD |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used |
| - DPCH frame offset | Calculated value from Cell synchronisation information |
| - Secondary CPICH info | Not present |
| - DL channelisation code | Reference to TS 34.108 [9] clause 6.10 Parameter Set |
| - Secondary scrambling code | 2 |
| - Spreading factor | Reference to TS 34.108 [9] clause 6.10 Parameter Set |
| - Code number | Any value between 0 and Spreading factor-1 |
| - Scrambling code change | Not Present |
| - TPC combination index | 0 |
| - Closed loop timing adjustment mode | Not present |

RADIO BEARER RECONFIGURATION COMPLETE (Step 7)

Use the same message sub-type found in TS 34.108 [9] clause 9.

#### 8.2.2.82.1.5 Test requirements

At step 2 the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH using AM RLC.

At step 4 the UE shall transmit an ACTIVE SET UPDATE COMPLETE message to SS.

At step 7 the UE shall transmit an RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC to acknowledge the completion of the active set addition procedure and the change of serving cell.

At step 8 the UE shall start transmitting CQI report on HS-DPCCH to Cell 1

### 8.2.2.82.2 Radio Bearer Reconfiguration: 3C Deactivation by Serving Cell Change from 3C-HSDPA capable cell to a non 3C-HSDPA capable cell/Dual Band (1-2)

#### 8.2.2.82.2.1 Definition and applicability

All UEs which support FDD, 3C-HSDPA Dual band operation and carrier combination (1,2).

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.82.2.2 Conformance requirement

Same as subclause 8.2.2.82.1.2.

#### 8.2.2.82.2.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from 3C-HSDPA Dual band carrier combination (1,2) capable cell to non 3C-HSDPA capable cell.

#### 8.2.2.82.2.4 Method of test

Initial Condition

System Simulator: 4 Cells configured (Ref. to Table 5.0aC of TS 25.101 [21]).

Cell 1 non 3C-HSDPA cell on DL BandA,

Cell 2/3/4 3C HSDPA cell(s) with Cell 2(Anchor Carrier), Cell 3 and Cell 4 (Secondary Carriers) – One Anchor Carrier on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 3C HSDPA (1,2)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A36, as specified in clause 7.4 of TS 34.108 [9] using Dual band carrier combination (1,2).

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports More Than Two Cells (UE HS-DSCH categories 29, 30, 31 or 32) and Dual band carrier combination (1,2)

Test Procedure

Same as the test procedure in subclause 8.2.2.82.1.4

#### 8.2.2.82.2.5 Test requirements

Same as subclause 8.2.2.82.1.5

### 8.2.2.82.3 Radio Bearer Reconfiguration: 3C Deactivation by Serving Cell Change from 3C-HSDPA capable cell to a non 3C-HSDPA capable cell/Dual Band (2-1)

#### 8.2.2.82.3.1 Definition and applicability

All UEs which support FDD, 3C-HSDPA Dual band operation and carrier combination (2,1).

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.82.3.2 Conformance requirement

Same as subclause 8.2.2.82.1.2.

#### 8.2.2.82.3.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from 3C-HSDPA Dual band carrier combination (2,1) capable cell to non 3C-HSDPA capable cell

#### 8.2.2.82.3.4 Method of test

Initial Condition

System Simulator: 4 Cells configured (Ref. to Table 5.0aC of TS 25.101 [21]).

Cell 1 non 3C-HSDPA cell on DL BandA,

Cell 2/3/4 3C HSDPA cell(s) with Cell 2 (Anchor Carrier) and Cell 3, Cell 4 (Secondary Carriers) – One Anchor Carrier and One Secondary Carrier on DL Band A and One Secondary Carrier on DL Band B (Dual Band 3C HSDPA (2,1)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A36, as specified in clause 7.4 of TS 34.108 [9] using Dual band carrier combination (2,1).

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports More Than Two Cells (UE HS-DSCH categories 29, 30, 31 or 32) and Dual band carrier combination (2,1)

Test Procedure

Same as the test procedure in subclause 8.2.2.82.1.4

#### 8.2.2.82.3.5 Test requirements

Same as subclause 8.2.2.82.1.5

### 8.2.2.82.4 Radio Bearer Reconfiguration: 4C Deactivation by Serving Cell Change from 4C-HSDPA capable cell to a non 4C-HSDPA capable cell/Dual Band (3-1)

#### 8.2.2.82.4.1 Definition and applicability

All UEs which support FDD, 4C-HSDPA Dual band operation and carrier combination (3,1).

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.82.4.2 Conformance requirement

Same as subclause 8.2.2.82.1.2.

#### 8.2.2.82.4.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from 4C-HSDPA Dual band carrier combination (3,1) capable cell to non 4C-HSDPA capable cell.

#### 8.2.2.82.2.4 Method of test

Initial Condition

System Simulator: 5 Cells configured (Ref. to Table 5.0aC of TS 25.101 [21]).

Cell 1 non 4C-HSDPA cell on DL BandA,

Cell 2/3/4/5 4C HSDPA cell(s) with Cell 2 (Anchor Carrier), and Cell 3, Cell 4 and Cell 5 (Secondary Carriers) – One Anchor Carrier and Two Secondary Carriers on DL Band A and One Secondary Carrier on DL Band B (Dual Band 4C HSDPA (3,1)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A36, as specified in clause 7.4 of TS 34.108 [9] using Dual band carrier combination (3,1).

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports Four cells (UE HS-DSCH categories 31 or 32) and Dual band carrier combination (3,1)

Test Procedure

**Table 8.2.2.82.4**

| Parameter | Unit | Cell 2,3,4,5 | | Cell 1 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid-Range Test Frequency | | Mid-Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| | | | | | |

Table 8.2.2.82.4 illustrates the downlink power to be applied for all cells at various time instants of the test execution.

The downlink transmission power is set according to values in column “T0” in table 8.2.2.82.4. The UE has user plane bearers mapped to the E-DCH/HS-DSCH of the 4C-HSDPA Cell and signalling bearers mapped to E-DCH/HS-DSCH on cell 2.

The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.82.4. The UE transmits a MEASUREMENT REPORT message, which includes the primary scrambling code for Cell 1 according to IE "Intra-frequency event identity" set to 1a.

The SS transmits to the UE an ACTIVE SET UPDATE message in cell 2 which adds a second radio link cell 1. When the UE receives this message, at the activation time, the UE shall add cell1 in the active set and transmit an ACTIVE SET UPDATE COMPLETE message to the SS.

The SS transmits a RADIO BEARER RECONFIGURATION message to the UE to request the UE to perform serving HS-DSCH cell change to Cell 1. When the UE receives this message, at the activation time, the UE shall configure layer 1 to begin E-DCH transmission and HS-DSCH reception using the new radio link on primary cell 1 and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 1.

To check that the UE has performed serving HS-DSCH cell change to Cell 1, SS monitors CQI reports on HS-DPCCH received from the UE on Cell 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | SS configures its downlink transmission power settings according to column "T1" in table 8.2.2.82.4 |
| 2 | → | | MEASUREMENT REPORT | See specific message contents for this message (event '1a' for cell 1). |
| 3 | ← | | ACTIVE SET UPDATE | SS transmits this message in primary carrier Cell 2 .The RRC message instructs the UE to add Cell 1 to the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | |
| 5 | ← | | RADIO BEARER RECONFIGURATION | SS transmits this message in primary carrier Cell 2 on downlink DCCH using AM RLC. The RRC message instructs the UE to perform a serving E-DCH and HS-DSCH Cell change to Cell 1. |
| 6 | SS | | | At the activation time Cell 1 becomes the serving E-DCH /HS-DSCH Cell. |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 8 | | | | SS starts monitoring CQI reports on HS-DPCCH received from the UE on Cell 1. SS waits for 10 CQI reports. |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

MEASUREMENT REPORT (Step 2)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | Cell 2. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | Cell 1. See Note 1 |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 [9] |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 [9] |

NOTE 1: Cell measured results for cells 1 and 2 may appear in any order.

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is the same as the message sub-type found in TS 34.108 [9], clause 9.1, with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Activation time | (256+CFN-(CFN MOD 8 + 8))MOD 256 | |
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 1 | |
| - Downlink F-DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - F-DPCH frame offset | Calculated value from Cell synchronisation information | |
| - F-DPCH slot format | 3 if UE supports enhanced F-DPCH, otherwise Not Present | |
| - Secondary CPICH info | Not present | |
| - Secondary scrambling code | Not present | |
| - Code number | F-DPCH code number as used in Cell1 | |
| - TPC Combination Index | 1 | |
| - E-HICH Information | | |
| - Channelisation code | 4 | |
| - Signature sequence | 1 | |
| - CHOICE E-RGCH Information | | |
| - E-RGCH Information | | |
| - Signature Sequence | 0 | |
| - RG combination index | 0 | |

RADIO BEARER RECONFIGURATION (Step 5) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 [9], except for the following.

| Information Element | Value/remark |
|---|---|
| New H-RNTI | '0101 0101 0101 0101' |
| RB information to reconfigure list | Not Present |
| UL Transport channel information common for all transport channels | Not Present |
| Deleted UL TrCH information | Not Present |
| Added or Reconfigured UL TrCH information | Not Present |
| DL Transport channel information common for all transport channel | Not Present |
| Added or Reconfigured DL TrCH information | Not Present |
| Frequency info | |
| - UARFCN uplink(Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for Cell 1 |
| CHOICE channel requirement | Not Present |
| E-DCH Info | Not Present |
| CHOICE Mode | FDD |
| - Downlink PDSCH information | Not Present |
| Downlink HS-PDSCH Information | |
| - HS-SCCH Info | |
| - CHOICE mode | FDD |
| - DL Scrambling Code | Not present |
| - HS-SCCH Channelisation Code Information | |
| - HS-SCCH Channelisation Code | 7 |
| - Measurement Feedback Info | |
| - CHOICE mode | FDD |
| - POhsdsch | 6 dB |
| - CQI Feedback cycle, k | 4 ms |
| - CQI repetition factor | 1 |
| - $\Delta_{CQI}$ | 5 (corresponds to 0dB in relative power offset) |
| - CHOICE mode | FDD (no data) |
| - Downlink 64QAM configured | Not present |
| Downlink information common for all radio links | |
| - Downlink F-DPCH info common for all RL | Downlink F-DPCH info common for all RL |
| - Timing Indication | Not Present |
| - Timing maintained Synchronization indicator | Not Present |
| - Downlink F-DPCH power control information | |

| Information Element | Value/remark |
|---|---|
| - CHOICE mode | FDD |
| - DPC Mode | Single TPC |
| - CHOICE mode | FDD |
| - DPCH compressed mode info | Not Present |
| - TX Diversity Mode | Not Present |
| - Default DPCH Offset Value | Not present |
| - MAC-hs reset indicator | TRUE |
| Downlink information per radio link list | 1 radio link |
| - Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | Set to the scrambling code for Cell 1 |
| - Cell ID | Not present |
| - Serving HS-DSCH radio link indicator | TRUE |
| - Serving E-DCH radio link indicator | TRUE |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | FDD |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used |
| - DPCH frame offset | Calculated value from Cell synchronisation information |
| - Secondary CPICH info | Not present |
| - DL channelisation code | Reference to TS 34.108 [9] clause 6.10 Parameter Set |
| - Secondary scrambling code | 2 |
| - Spreading factor | Reference to TS 34.108 [9] clause 6.10 Parameter Set |
| - Code number | Any value between 0 and Spreading factor-1 |
| - Scrambling code change | Not Present |
| - TPC combination index | 0 |
| - Closed loop timing adjustment mode | Not present |

RADIO BEARER RECONFIGURATION COMPLETE (Step 7)

Use the same message sub-type found in TS 34.108 [9] clause 9.

#### 8.2.2.82.4.5 Test requirements

Same as subclause 8.2.2.82.1.5

### 8.2.2.82.5 Radio Bearer Reconfiguration: 4C Deactivation by Serving Cell Change from 4C-HSDPA capable cell to a non 4C-HSDPA capable cell/Dual Band (2-2)

#### 8.2.2.82.5.1 Definition and applicability

All UEs which support FDD, 4C-HSDPA Dual band operation and carrier combination (2,2).

UE supports FDD and F-DPCH or Enhanced F-DPCH.

#### 8.2.2.82.5.2 Conformance requirement

Same as subclause 8.2.2.82.1.2.

#### 8.2.2.82.5.3 Test purpose

To confirm that the UE performs HS-DSCH serving cell change from 4C-HSDPA Dual band carrier combination (2,2) capable cell to non 4C-HSDPA capable cell.

#### 8.2.2.82.5.4 Method of test

Initial Condition

System Simulator: 5 Cells configured (Ref. to Table 5.0aC of TS 25.101 [21]).

Cell 1 non 4C-HSDPA cell on DL BandA,

Cell 2/3/4/5 4C HSDPA cell(s) with Cell 2 (Anchor Carrier), Cell 3, Cell 4 and Cell 5 (Secondary Carriers) – One Anchor Carrier and One Secondary Carrier on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 4C HSDPA (2,2)).

UE: PS_DCCH+DTCH E_DCH/HS_DSCH (state 6-18) under condition A36, as specified in clause 7.4 of TS 34.108 [9] using Dual band carrier combination (2,2).

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports Four cells (UE HS-DSCH categories 31 or 32) and Dual band carrier combination (2,2)

Test Procedure

Same as the test procedure in subclause 8.2.2.82.4.4

#### 8.2.2.82.5.5 Test requirements

Same as subclause 8.2.2.82.1.5

### 8.2.2.83 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 3C-HSDPA and 4C-HSDPA for different bands and 64 QAM

NOTE: The Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH, for 3C-HSDPA and 4C-HSDPA have been split in to Single band 3C-HSDPA, 3C-HSDPA Dual band (1-2), 3C-HSDPA Dual band(2-1), 4C-HSDPA Dual Band(3-1) and 4C-HSDPA Dual Band(2-2). The test cases are designed to cover number of 64QAM carrier combinations that will enable testing of all UEs supporting FDD HS-DSCH physical layer categories 29, 30, 31 and 32.

### 8.2.2.83.1 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 3C-HSDPA / Single band and 64 QAM

#### 8.2.2.83.1.1 Definition and applicability

UE categories (Cat 29, 30, 31 and 32) which support combination of 3C-HSDPA or 4C-HSDPA and 64 QAM.

UE supports FDD.

#### 8.2.2.83.1.2 Conformance requirement

To initiate any one of the reconfiguration procedures, UTRAN should:

1> configure new radio links in any new physical channel configuration;

1> start transmission and reception on the new radio links;

1> for a radio bearer establishment procedure:

2> transmit a RADIO BEARER SETUP message on the downlink DCCH using AM or UM RLC;

2> if signalling radio bearer RB4 is setup with this procedure and signalling radio bearers RB1-RB3 were already established prior to the procedure:

3> if the variable "LATEST_CONFIGURED_CN_DOMAIN" has been initialised:

4> connect any radio bearers setup by the same message as signalling radio bearer RB4 to the CN domain indicated in the variable "LATEST CONFIGURED CN DOMAIN".

1> for a radio bearer reconfiguration procedure:

2> transmit a RADIO BEARER RECONFIGURATION message on the downlink DCCH using AM or UM RLC.

1> for a radio bearer release procedure:

2> transmit a RADIO BEARER RELEASE message on the downlink DCCH using AM or UM RLC.

…..

In the Radio Bearer Reconfiguration procedure UTRAN may indicate that uplink transmission shall be stopped or continued on certain radio bearers. Uplink transmission on a signalling radio bearer used by the RRC signalling (signalling radio bearer RB1 or signalling radio bearer RB2) should not be stopped.

NOTE 1: The Release '99 RADIO BEARER RECONFIGURATION message always includes the IE "RB information to reconfigure", even if UTRAN does not require the reconfiguration of any RB. In these cases, UTRAN may include only the IE "RB identity" within the IE "RB information to reconfigure".

NOTE 2: The Release '99 RADIO BEARER RECONFIGURATION message always includes the IE "Downlink information per radio link list", even if UTRAN does not require the reconfiguration of any RL. In these cases, UTRAN may re-send the currently assigned values for the mandatory IEs included within the IE "Downlink information per radio link list ".

…..

The UE shall:

1> be able to receive any of the following messages:

2> RADIO BEARER SETUP message; or

2> RADIO BEARER RECONFIGURATION message; or

2> RADIO BEARER RELEASE message; or

…...

If the UE receives:

- a RADIO BEARER SETUP message; or
- a RADIO BEARER RECONFIGURATION message; or
- a RADIO BEARER RELEASE message; or

…..

it shall:

1> stop and reset timer T324 if running;

1> stop monitoring target cell HS-SCCH;

1> set the variable ORDERED_RECONFIGURATION to TRUE;

…..

The UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

The UE may first release the physical channel configuration used at reception of the reconfiguration message. The UE shall then:

1> enter a state according to subclause 8.6.3.3.

In case the UE receives a RADIO BEARER RECONFIGURATION message including the IE "RB information to reconfigure" that only includes the IE "RB identity", the UE shall:

1> handle the message as if IE "RB information to reconfigure" was absent.

NOTE: The ASN.1 "r3" version of the RADIO BEARER RECONFIGURATION message always includes the IE "RB information to reconfigure". UTRAN has to include it even if it does not require the reconfiguration of any RB.

…..

In case the UE receives a RADIO BEARER SETUP message with the IE "Specification mode" not set to "Complete Specification", the UE behaviour is unspecified.

The UE shall:

1> if IE "Default configuration for CELL_FACH" is set:

2> if the message is RADIO BEARER RECONFIGURATION:

3> if IE "new U-RNTI" is included:

4> act in accordance with the default parameters according to section 13.8.

3> else:

4> the UE behaviour is unspecified.

For FDD: in CELL_DCH state, in case the UE receives a Target cell HS-SCCH order the UE shall:

1> ignore RADIO BEARER SETUP, RADIO BEARER RECONFIGURATION, TRANSPORT CHANNEL RECONFIGURATION or PHYSICAL CHANNEL RECONFIGURATION messages as described in subclause 8.6.3.11.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

….

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> if the IE "E-DCH info" was not included in the message:

2> for FDD:

3> stop any E-AGCH, E-RGCH and E-HICH reception procedures;

3> stop any E-DPCCH and E-DPDCH transmission procedures;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

…..

If after state transition the UE leaves CELL_DCH state, the UE shall, before state transition:

1> clear any stored IE "E-DCH info";

1> for FDD, clear any stored IE "Secondary serving E-DCH cell info" and IE "Secondary E-DCH info common";

….

1> determine the value for the E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.28.

….

If the UE was in CELL_DCH state upon reception of the reconfiguration message and remains in CELL_DCH state, the UE shall:

1> if the IE "Uplink DPCH Info" is absent, not change its current UL Physical channel configuration;

1> for FDD:

2> determine the value for the SECONDARY_CELL_HS_DSCH_RECEPTION variable and take the corresponding actions as described in subclause 8.5.51.

2> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

2> if the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE:

3> if the IE "Secondary E-DCH info common" is included and the IE "Frequency info" is different from the stored "Frequency info" in the IE "Secondary E-DCH info common"; or

3> if the IE "Frequency info" is included in an IE other than the IE "Uplink secondary cell info FDD" and the frequency is different from the currently used frequency:

4> consider the secondary uplink frequency as not activated and take the corresponding actions as described in subclause 8.5.58.

3> else:

4> keep the current activation status of the secondary uplink frequency and take the corresponding actions as described in subclause 8.5.58.

….

Reference

3GPP TS 25.331 clause 8.2.2.2, 8.2.2.3, 8.5.32, 8.5.33, 8.5.51, 8.5.57

### 8.2.2.83.1.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_DCH, and to stop simultaneous 64QAM reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_DCH to CELL_DCH state, and starts simultaneous 64QAM reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.83.1.4 Method of test

Initial Condition

System Simulator:

3 cells –Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – Three Carriers (One Anchor Carrier and Two Secondary Carriers) on DL Band A (Single Band 3C-HSDPA) where f1, f2 and f3 are adjacent frequencies on Band A.

SS: Table 5.0aB of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A35 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD

- UE category supports combined 64QAM, Multi-Cell (3 Cells or 4 Cells) (UE Category 29, 30,31 or 32)

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate 3C-HSDPA feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HS-DSCH (with 3C-HSDPA and 64 QAM simultaneously configured for L1). SRBs are mapped to DCH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated 3C-HSDPA and is in CELL_DCH, the SS sends UE CAPABILITY ENQUIRY on Anchor Carrier Cell using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 4*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports on each stream for Cell 1, Cell 2 and Cell 3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_DCH which deactivates 3C-HSDPA, and 64 QAM. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB to CELL_DCH using 3C-HSDPA, and 64QAM configuration. SRBs are mapped to DCH |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH from Anchor Cell 1. |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | | | | SS checks the CQIreports (all three carriers) at every 4 ms period with:<br>- CQI Report for Anchor Carrier (Cell 1)<br>- concatenated CQI Report for Secondary Carrier 1 (Cell 2) and Secondary Carrier 2 (Cell 3). |
| 8 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on DCH from Cell 1. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified for condition A3 "Packet to CELL_DCH from CELL_DCH in PS" in TS 34.108 [9] clause 9 with exception as follow:

| Information Element | Value/remark | Version |
|---|---|---|
| RB information to reconfigure list | | |
| - RB information to reconfigure | (High-speed AM DTCH) | |
| - RB identity | 25 | |
| - PDCP info | Not Present | |

8.2.2.83.1.5 Test requirements

At step 2 and 4 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

At step 7 the UE shall transmit three CQI reports.

At step 6 the UE shall transmit UE CAPABILITY INFORMATION on SRB2.

## 8.2.2.83.2 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 3C-HSDPA / Dual band and 64 QAM (1-2)

8.2.2.83.2.1 Definition and applicability

Same as subclause 8.2.2.83.1.1

8.2.2.83.2.2 Conformance requirement

Same as subclause 8.2.2.83.1.2

8.2.2.83.2.3 Test purpose

Same as subclause 8.2.2.83.1.3

8.2.2.83.2.4 Method of test

Initial Condition

System Simulator:

3 cells –Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – One Anchor Carrier on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 3C-HSDPA) where f2 and f3 are adjacent frequencies on Band B.

SS: Table 5.0aC of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A35 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (3 Cells or 4 Cells) (UE Category 29, 30, 31 or 32)

Test Procedure

Same as subclause 8.2.2.83.1.4

8.2.2.83.2.5 Test requirements

Same as subclause 8.2.2.83.1.5

## 8.2.2.83.3 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRB on DCH: Successful Activation and Deactivation of 3C-HSDPA / Dual band and 64 QAM (2-1)

8.2.2.83.3.1 Definition and applicability

Same as subclause 8.2.2.83.1.1

#### 8.2.2.83.3.2 Conformance requirement

Same as subclause 8.2.2.83.1.2

#### 8.2.2.83.3.3 Test purpose

1. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_DCH, and to stop simultaneous 64QAM reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

2. To confirm that the UE reconfigures the radio bearer parameters, transits from CELL_DCH to CELL_DCH state, and starts simultaneous 64QAM reception over multi Carriers according to the received RADIO BEARER RECONFIGURATION message.

#### 8.2.2.83.3.4 Method of test

Initial Condition

System Simulator:

3 cells –Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – One Anchor Carrier and One Secondary Carrier on DL Band A and One Secondary Carrier on DL Band B (Dual Band 3C-HSDPA) where f1 and f2 and adjacent frequencies on Band A.

SS: Table 5.0aC of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A35 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (3 Cells) (UE Category 29, 30, 31 or 32)

Test Procedure

Same as subclause 8.2.2.83.1.4

#### 8.2.2.83.3.5 Test requirements

Same as subclause 8.2.2.83.1.5

### 8.2.2.83.4 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 4C-HSDPA / Dual band and 64 QAM (3-1)

#### 8.2.2.83.4.1 Definition and applicability

UE category (Cat 31and 32) which support combination of 4C-HSDPA, and 64 QAM.

UE supports FDD.

#### 8.2.2.83.4.2 Conformance requirement

Same as subclause 8.2.2.83.1.2

#### 8.2.2.83.4.3 Test purpose

Same as subclause 8.2.2.83.1.3

#### 8.2.2.83.4.4 Method of test

Initial Condition

System Simulator:

4 cells –Cell 1/2/3/4 4C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier) and Cell 2 (f2), Cell 3 (f3) and Cell 4 (f4) (Secondary Carriers) – Three Carriers (One Anchor Carrier and Two Secondary Carriers) on DL Band A and One Secondary Carrier on DL Band B (Dual Band 4C-HSDPA) where f1, f2 and f3 are adjacent frequencies on Band A.

SS: Table 5.0aC of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A35 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (4 Cells) (UE Category 31and 32)

Test Procedure

The SS transmits a RADIO BEARER RECONFIGURATION message, using non-DC and non-MIMO configuration, to the UE to deactivate 4C-HSDPA feature. The UE shall respond with RADIO BEARER RECONFIGURATION COMPLETE.

The UE is in CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE including RAB information to configure PS domain RB on E-DCH/HSDPA (with 4C-HSDPA, and 64 QAM simultaneously configured for L1). SRBs are mapped to E-DCH/HSDPA. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

To check that the UE has activated 4C-HSDPA, the SS sends UE CAPABILITY ENQUIRY on Anchor Carrier Cell . The UE shall respond to the message with UE CAPABILITY INFORMATION message sent to Anchor Carrier Cell 1. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 5*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports on each stream for Cell 1, Cell 2, Cell 3 and Cell 4.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER RECONFIGURATION | Reconfigure PS RB + SRB to CELL_DCH which deactivates 4C-HSDPA, 64 QAM. |
| 2 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | Reconfiguration of PS RB to CELL_DCH using 4C-HSDPA, and 64 QAM configuration. SRBs are mapped on DCH |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | |
| 5 | ← | | UE CAPABILITY ENQUIRY | Use default message. SRB2 on HS-DSCH from Anchor Cell 1. |
| 6 | → | | UE CAPABILITY INFORMATION | |
| 7 | | | | SS checks the CQI reports (four carriers) at every 4 ms period with<br>- concatenated CQI Report for Anchor Carrier (Cell 1) and Secondary Carrier 2 (Cell 3)<br>- concatenated CQI Reports for Secondary Carrier 1 (Cell 2) and Secondary Carrier 3 (Cell 4). |
| 8 | ← | | UE CAPABILITY INFORMATION CONFIRM | SRB2 is sent on HS-DSCH from Cell 1. |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message as specified in clause 8.2.2.83.1.4 RADIO BEARER RECONFIGURATION (Step 1).

RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4)

Use the same message as specified in clause 8.2.2.83.1.4 RADIO BEARER RECONFIGURATION COMPLETE (Steps 2 and 4) (FDD)

RADIO BEARER RECONFIGURATION (Step 3)

Use the same message as specified in clause 8.2.2.83.1.4 RADIO BEARER RECONFIGURATION (Step 3) with the exception as follow:

#### 8.2.2.83.5.2 Conformance requirement

Same as subclause 8.2.2.83.1.2

#### 8.2.2.83.5.3 Test purpose

Same as subclause 8.2.2.83.1.3

#### 8.2.2.83.5.4 Method of test

Initial Condition

System Simulator:

4 cells –Cell 1/2/3/4 4C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier) and Cell 2 (f2), Cell 3 (f3) and Cell 4 (f4) (Secondary Carriers) – Two Carriers (One Anchor Carrier and One Secondary Carrier) on DL Band A and Two Secondary Carriers on DL Band B (Dual Band 4C-HSDPA) where f1 and f2 are adjacent frequencies on Band A and f3 and f4 are adjacent frequencies on Band B.

SS: Table 5.0aC of TS 25.101

UE: CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under the condition A35 as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (4 Cells) (UE Category 31 and 32)

Test Procedure

Same as subclause 8.2.2.83.1.4

#### 8.2.2.83.5.5 Test requirements

Same as subclause 8.2.2.83.4.5

### 8.2.2.84 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH and from CELL_DCH to CELL_FACH: Success (Seamless SRNS relocation, without pending of ciphering, frequency modification, Default radio configuration for Cell_FACH)

#### 8.2.2.84.1 Definition and applicability

Applicable to all Rel-9 and later UEs which support FDD

#### 8.2.2.84.2 Conformance requirement

1> if the reconfiguration procedure is simultaneous with SRNS relocation procedure:

2> if the transmitted message is a RADIO BEARER RECONFIGURATION:

3> include the IE "New U-RNTI".

The UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> re-establish the RLC entity for RB2;

2> set the new uplink and downlink HFN component of COUNT-C of RB2 to MAX(uplink HFN component of COUNT-C of RB2, downlink HFN component of COUNT-C of RB2);

2> increment by one the downlink and uplink values of the HFN component of COUNT-C for RB2;

2> calculate the START value according to subclause 8.5.9 in TS 25.331;

2> include the calculated START values for each CN domain in the IE "START list" in the IE "Uplink counter synchronisation info".

1> if the IE "Integrity protection mode info" was present in the received reconfiguration message:

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RB2 from and including the transmitted response message.

If the new state is CELL_DCH or CELL_FACH, the response message shall be transmitted using the new configuration after the state transition, and the UE shall:

1> if the received reconfiguration message is a RADIO BEARER RECONFIGURATION and the IE "New U-RNTI" is included:

2> when RLC has confirmed the successful transmission of the response message:

3> re-establish all AM and UM RLC entities with RB identities larger than 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the corresponding CN domain;

3> re-establish the RLC entities with RB identities 1, 3 and 4 and set the first 20 bits of all the HFN component of the respective COUNT-C values to the START value included in the response message for the CN domain stored in the variable LATEST_CONFIGURED_CN_DOMAIN;

3> set the remaining bits of the HFN component of COUNT-C values of all UM RLC entities to zero;

3> re-initialise the PDCP header compression entities of each radio bearer in the variable ESTABLISHED_RABS as specified in TS 25.323.

…

The UE shall:

1> if IE "Integrity protection mode command" has the value "start" and the IE "Status" in the variable INTEGRITY_PROTECTION_INFO has the value "Started" and this IE was not included SECURITY MODE COMMAND:

NOTE: This case is used in SRNS relocation and in handover from GERAN *Iu mode*.

2> perform integrity protection on the received message, applying the new integrity protection configuration, as described in subclause 8.5.10.1 in TS 25.331 by:

3> using the algorithm (UIA [TS 33.102]) indicated by the IE "Integrity protection algorithm" contained in the IE "Integrity protection mode info";

3> using the IE "Integrity protection initialisation number", contained in the IE "Integrity protection mode info" as the value of FRESH [TS 33.102].

2> let RBm be the signalling radio bearer where the reconfiguration message was received and let RBn be the signalling radio bearer where the response message is transmitted;

2> for the downlink, for each signalling radio bearer, if for the signalling radio bearer, a security configuration triggered by a previous SECURITY MODE COMMAND has not yet been applied, due to the activation time for the signalling radio bearer not having been reached:

3> set "Down link RRC Message sequence number" for this signalling radio bearer in the variable INTEGRITY_PROTECTION_INFO to (activation time -1), where the activation time is the corresponding activation time for this signalling radio bearer;

3> if the previous SECURITY MODE COMMAND was received due to new keys being received:

4> consider the new integrity protection configuration to include the received new keys.

3> else if the previous SECURITY MODE COMMAND caused a change in LATEST_CONFIGURED_CN_DOMAIN:

4> consider the new Integrity Protection configuration to include the keys associated with the LATEST_CONFIGURED_CN_DOMAIN associated with the previously received SECURITY MODE COMMAND.

2> start applying the new integrity protection configuration in the downlink for each signalling radio bearer in the IE "ESTABLISHED_RABS" except RBm at the next received RRC message for the corresponding signalling radio bearer;

2> start applying the new integrity protection configuration in the downlink for signalling radio bearer RBm from and including the received configuration message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearer RBn from and including the transmitted response message;

2> start applying the new integrity protection configuration in the uplink for signalling radio bearers other than RBn from the first message onwards.

…

The UE shall:

1> if IE "Default configuration for CELL_FACH" is set:

2> if the message is RADIO BEARER RECONFIGURATION:

3> if IE "new U-RNTI" is included:

4> act in accordance with the default parameters according to section 13.8.

3> else:

4> the UE behaviour is unspecified.

…

The UE shall for each RB with radio bearer identity n listed in the default configuration with the Default configuration identity given in IE "Default configuration identity for CELL_FACH":

1> if a multiplexing option containing the combination "FACH" for the DL and "RACH" for the UL for a RB with radio bearer identity n is included in the default configuration:

2> if the radio bearer identity n is listed in explicit or another default configuration in the message received by the UE:

3> if there is no multiplexing option containing the combination "FACH" for the DL and "RACH" for the UL for this radio bearer identity n:

4> append the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n to the radio bearer mapping information for RB with radio bearer identity n.

2> else

3> store the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n and configure the transmitting and receiving RLC entities in the UE for that radio bearer according to Table 13.8.1

Reference

3GPP TS 25.331 clause 8.2.2., 8.6.3.5.2, 13.8

### 8.2.2.84.3 Test purpose

1. To confirm that the UE stores the Default Configuration for Cell_FACH provided in RADIO BEARER RECONFIGURATION message and performs a combined inter-frequency hard handover and SRNS relocation, and then transmits a RADIO BEARER RECONFIGURATION COMPLETE message in the new cell.

2. To confirm that UE configures with Default Configuration for Cell_FACH, and then transmits RADIO BEARER RECONFIGURATION COMPLETE message when reconfigured to Cell_FACH state.

### 8.2.2.84.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 and 6

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Note: RACH – FACH mapping configuration is not provided for SRBs in any configuration messages while bringing UE to Cell_DCH (state 6-10).

Test Procedure

**Table 8.2.2.84**

| Parameter | Unit | Cell 1 | | Cell 6 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -75 | -75 | -60 |

Table 8.2.2.84 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

The UE is in the CELL_DCH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.84. The SS sends a RADIO BEARER RECONFIGURATION message requesting the UE to do a timing re-initialised inter-frequency hard handover combined with SRNS relocation. This message includes the IE "RRC State Indicator" set to "CELL_DCH", IE “New U-RNTI”, and IE “DefaultConfigForCellFACH”. UE stores the Default configuration for Cell_FACH and shall reselect to cell 6. SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message.

SS then transmits RADIO BEARER RECONFIGURATION message with IE “RRC State Indicator” set to “CELL_FACH” without providing RB configuration for SRBs. UE shall move to Cell_FACH with default configurations ( as sent in previous Radio Bearer Configuration message) and SS verifies that the UE sends RADIO BEARER RECONFIGURATION COMPLETE message on Cell 6. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.x. |
| 2 | ← | | RADIO BEARER RECONFIGURATION | The message includes IE 'DefaultConfigForCellFACH' and IE 'New U-RNTI'. LAI and RAI of cell 6 are given to the UE, and are the same as cell 1. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall transmit this message after it reselects to cell 6. |
| 4 | ← | | RADIO BEARER RECONFIGURATION | The IE 'RRC State Indicator' is set to 'CELL_FACH', and RB mapping info is not provided for SRBs. |
| 5 | → | | RADIO BEARER RECONFIGURATION COMPLETE | The UE shall move to Cell_FACH state with default configuration as indicated in step2 and transmit this message on cell 6. |
| 6 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (Cell 1)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

RADIO BEARER RECONFIGURATION (Step 2)

Use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled “Packet to CELL_DCH from CELL_DCH in PS”, with the following exception:

| Information Element | Value/remark | Version |
|---|---|---|
| Integrity protection mode info | | |
| - Integrity protection mode command | Start | |
| - Downlink integrity protection activation info | Not Present | |
| - Integrity protection algorithm | UIA1 | |
| - Integrity protection initialisation number | SS selects an arbitrary 32 bit number for FRESH | |
| Activation time | Not present | |
| New U-RNTI | | |
| - SRNC identity | 0000 0000 0010B | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| CN Information info | | |
| - PLMN identity | Not present | |
| - CN common GSM-MAP NAS system information | | |
| - GSM-MAP NAS system information | 00 01H | |
| - CN domain related information | | |
| - CN domain identity | PS | |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | 05 00H | |
| - CN domain identity | CS | |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | 1E 01H | |
| Default configuration for CELL_FACH | | |
| - Default configuration mode | FDD | |
| - Default configuration identity for CELL_FACH | 0 | |
| RB information to reconfigure list | | |
| - RB identity | 20 | |
| - PDCP info | Not Present | |
| - PDCP SN info | Not Present | |
| - RLC info | Values as specified for the IE “RB information to setup” for the corresponding radio bearer for the case "Packet to CELL_DCH from CELL_DCH in PS" in the default RADIO BEARER SETUP message in TS 34.108. | |
| - RB mapping info | | |
| - RB stop/continue | Not Present | |
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing indicator | Initialise | |
| - MAC-d HFN initial value | Not present | |
| - CFN-targetSFN frame offset | Not Present | |
| - Downlink DPCH power control information | | |
| - DPC mode | 0 (single) | |
| - CHOICE mode | FDD | |
| - Power offset $P_{Pilot-DPDCH}$ | 0 | |
| - DL rate matching restriction information | Not Present | |
| - Spreading factor | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - Fixed or Flexible Position | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - TFCI existence | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - CHOICE SF | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - DPCH compressed mode info | Not Present | |
| - TX Diversity mode | None | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 | |
| Frequency info | | |
| CHOICE mode | FDD | |
| - UARFCN uplink (Nu) | Not Present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] | |
| - UARFCN downlink (Nd) | Same downlink UARFCN as used for cell 6 | |
| Downlink information per radio link list | | |
| -Downlink information for each radio link | | |
| - Choice mode | FDD | |

| Information Element | Value/remark | Version |
|---|---|---|
| - Primary CPICH info | | |
| - Primary scrambling code | Set to same code as used for cell 6 | |
| - PDSCH with SHO DCH info | Not Present | R99 and Rel-4 only |
| - PDSCH code mapping | Not Present | R99 and Rel-4 only |
| - Downlink DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38400 | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 2 | |
| - Spreading factor | Reference to TS 34.108 clause 6.10 Parameter Set | |
| - Code number | 0 | |
| - Scrambling code change | No change | |
| - TPC combination index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

RADIO BEARER RECONFIGURATION COMPLETE (Step 3)

Check that the UE uses the same message sub-type found in TS 34.108 clause 9, with the following exception.

| Information Element | Value/remark |
|---|---|
| Uplink counter synchronisation info | |
| - RB with PDCP information list | Not present |
| - START list | Check that this IE is present. |

RADIO BEARER RECONFIGURATION (Step 4)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in clause 9 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | 0000 0000 0000 0001B |
| | |
| RB information to reconfigure list | |
| - RB information to reconfigure | (AM DTCH) |
| - RB identity | 20 |
| - PDCP info | Not Present |
| - PDCP SN info | Not Present |
| - RLC info | |
| - CHOICE Uplink RLC mode | AM RLC |
| - Transmission RLC discard | |
| - SDU discard mode | No discard |
| - MAX_DAT | 15 |
| - Transmission window size | 128 |
| - Timer_RST | 600 |
| - Max_RST | 4 |
| - Polling info | |
| - Timer_poll_prohibit | 250 |
| - Timer_poll | 250 |
| - Poll_PDU | Not Present |
| - Poll_SDU | 1 |
| - Last transmission PDU poll | TRUE |
| - Last retransmission PDU poll | TRUE |
| - Poll_Window | 99 |
| - Timer_poll_periodic | Not Present |
| - CHOICE Downlink RLC mode | AM RLC |
| - In-sequence delivery | TRUE |
| - Receiving window size | 128 |
| - Downlink RLC status info | |
| - Timer_status_prohibit | 200 |
| - Timer_EPC | Not Present |
| - Missing PDU indicator | TRUE |
| - Timer_STATUS_periodic | Not Present |
| - RB mapping info | Not Present |
| - RB stop/continue | Not Present |
| Frequency info | Not Present |
| Maximum allowed UL TX power | Not Present |
| Downlink information per radio link list | |
| -Downlink information for each radio link | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 6 |

#### 8.2.2.84.5 Test requirement

At step 3, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on cell 6.

At step 5, the UE shall move to Cell_FACH with default configuration as indicated in step2 and transmit RADIO BEARER RECONFIGURATION COMPLETE message on cell 6.

### 8.2.2.85 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Successful Activation and Deactivation of Multiflow HSDPA, 16 QAM

NOTE: The Radio Bearer Reconfiguration test case 8.2.2.85 for Multiflow HSDPA has been split into Single Frequency/Dual Cell on Single Band and Dual Frequency/Three Cells on Different bands test cases. The test cases have been designed to cover Multiflow HSDPA carrier combinations that will enable testing of all UEs supporting FDD HS-DSCH physical layer categories 21, 22, 23, 24, 25, 26, 27, 28, 29 and 30.

### 8.2.2.85.1 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 2cell/Single frequency on Single Band, intra-NodeB, 16 QAM

#### 8.2.2.85.1.1 Definition and applicability

UE categories (Cat 21, Cat 22, Cat 23, Cat 24, Cat 25, Cat 26, Cat 27 or Cat 28) which support combination of Multiflow HSDPA on Single Frequency/Dual Cell (SF-DC).

UE supports FDD.

#### 8.2.2.85.1.2 Conformance requirement

If the UE receives:

- a RADIO BEARER RECONFIGURATION message; or

it shall:

1> if the UE will enter the CELL_DCH state from any state other than CELL_DCH state at the conclusion of this procedure:

2> perform the physical layer synchronisation procedure A as specified in TS 25.214 (FDD only);

1> act upon all received information elements as specified in TS 25.331 subclause 8.6, unless specified in the following and perform the actions below.

The UE shall then:

1> enter a state according to TS 25.331 subclause 8.6.3.3.

The UE shall transmit a response message as specified in TS 25.331 subclause 8.2.2.4, setting the information elements as specified below. The UE shall:

1> set the IE "RRC transaction identifier" to the value of "RRC transaction identifier" in the entry for the received message in the table "Accepted transactions" in the variable TRANSACTIONS; and

- clear that entry;

1bis> in TDD, if the procedure is used to perform a handover to a cell where timing advance is enabled, and the UE can calculate the timing advance value in the new cell (i.e. in a synchronous TDD network):

2> set the IE "Uplink Timing Advance" according to subclause 8.6.6.26.In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…..

The UE shall:

1> be able to receive any of the following messages:

2> RADIO BEARER SETUP message; or

2> RADIO BEARER RECONFIGURATION message; or

2> RADIO BEARER RELEASE message; or

…...

If the UE receives:

- a RADIO BEARER SETUP message; or
- a RADIO BEARER RECONFIGURATION message; or
- a RADIO BEARER RELEASE message; or

…

it shall:

1> stop and reset timer T324 if running;

1> stop monitoring target cell HS-SCCH;

1> set the variable ORDERED_RECONFIGURATION to TRUE;

…

The UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

The UE may first release the physical channel configuration used at reception of the reconfiguration message. The UE shall then:

1> enter a state according to subclause 8.6.3.3.

…

In case the UE receives a RADIO BEARER SETUP message with the IE "Specification mode" not set to "Complete Specification", the UE behaviour is unspecified.

The UE shall:

1> if IE "Default configuration for CELL_FACH" is set:

2> if the message is RADIO BEARER RECONFIGURATION:

3> if IE "new U-RNTI" is included:

4> act in accordance with the default parameters according to section 13.8.

3> else:

4> the UE behaviour is unspecified.

For FDD: in CELL_DCH state, in case the UE receives a Target cell HS-SCCH order the UE shall:

1> ignore RADIO BEARER SETUP, RADIO BEARER RECONFIGURATION, TRANSPORT CHANNEL RECONFIGURATION or PHYSICAL CHANNEL RECONFIGURATION messages as described in subclause 8.6.3.11.

If after state transition the UE enters CELL_DCH state, the UE shall, after the state transition:

1> in FDD; or

…

1> determine the value for the READY_FOR_COMMON_EDCH variable and take the corresponding actions as described in subclause 8.5.47;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46;

1> if the IE "E-DCH info" was not included in the message:

2> for FDD:

3> stop any E-AGCH, E-RGCH and E-HICH reception procedures;

3> stop any E-DPCCH and E-DPDCH transmission procedures;

3> act as if the IE "MAC-es/e reset indicator" was received and set to TRUE;

3> release all E-DCH HARQ resources;

3> no longer consider any radio link to be the serving E-DCH radio link.

…

In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

1> transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC.

…

An entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the corresponding IE "Downlink Secondary Cell Info FDD" is included;

1> the variable HS_DSCH_RECEPTION is set to TRUE;

1> either of the following conditions are met:

2> the IE "Memory Partitioning" is set to 'Implicit' in the IE "HARQ Info"; or

2> the IE "Memory Partitioning" is set to 'Explicit' in the IE "HARQ Info" and MIMO is configured on all or none of the serving HS-DSCH cell and the secondary serving HS-DSCH cells.

…

If there are more than one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE and the corresponding entries in the variable DOWNLINK_SECONDARY_CELL_INFO indicate that the network has configured non-contiguous multi-cell operation together with dual band operation:

1> the UE behaviour is not specified.

If there is at least one entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION set to TRUE, the UE shall:

1> apply the i-th entry in the variables DOWNLINK_SECONDARY_CELL_INFO, SECONDARY_CELL_HS_DSCH_RECEPTION, and SECONDARY_CELL_MIMO_STATUS to the i-th secondary serving HS-DSCH cell.

1> After the new configuration is applied, the UE shall renumber the configured secondary serving HS-DSCH cells and the corresponding entries in the above variables, starting from 1, contiguously, by skipping empty entries in the above variables. The secondary serving HS-DSCH cells are numbered in the order their configuration IEs appears in the message. The RRC Layer shall pass the new numbering of the secondary serving HS-DSCH cells to the lower layers.

1> partition the soft memory buffer in the MAC-ehs, used for the secondary serving HS-DSCH cells reception, using the information in the IE "HARQ Info" of the serving HS-DSCH cell and performing the procedure described in subclause 8.6.5.6b;

1> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

1> determine the configuration of "TSN field extension" for MAC-ehs entity as specified in subclause 8.5.60.

For each entry in the variable SECONDARY_CELL_HS_DSCH_RECEPTION which is set to TRUE, the UE shall:

1> receive the HS-SCCH(s) according to the corresponding IE "Downlink Secondary Cell Info FDD" on the serving HS-DSCH radio link applying the scrambling code as received in the corresponding IE "DL Scrambling code";

1> perform HS-DSCH reception procedures for the corresponding secondary serving HS-DSCH cell according to the stored HS-PDSCH configuration as stated in:

2> subclause 8.6.3.1b for the IE "H-RNTI";

2> subclause 8.6.5.6b for the IE "HARQ info";

2> subclause 8.6.6.34 for the IE "Measurement Feedback Info";

2> subclause 8.6.6.45 for the IE "Downlink Secondary Cell Info FDD";

1> use the relevant CQI reporting table as stated in subclause 8.5.44.

…

The variable MULTIFLOW_STATUS shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_DCH state;

1> the variable HS_DSCH_RECEPTION is TRUE;

1> at least one of the entries in the variable SECONDARY_CELL_HS_DSCH_RECEPTION is TRUE;

1> the IE "Multiflow configuration" is present in all the entries in DOWNLINK_SECONDARY_CELL_INFO.

If any of the above conditions is not met and the variable MULTIFLOW_STATUS is set to TRUE, the UE shall:

1> set the variable MULTIFLOW_STATUS to FALSE.

Whenever the variable MULTIFLOW_STATUS is set to TRUE, the UE shall:

1> perform Multiflow data reception as specified in [51];

1> indicate to lower layers value of "Multiflow configuration" IE of each entry in DOWNLINK_SECONDARY_CELL_INFO;

1> for every entry in DOWNLINK_SECONDARY_CELL_INFO:

2> if the stored UARFCN downlink (Nd) in the entry is the same as the value of the serving HS-DSCH cell:

3> if the IE "Multiflow time reference cell" is not present:

4> indicate to lower layers that the serving HS-DSCH cell is time reference for HS-DPCCH;

3> else:

4> indicate to lower layers that the cell is a time reference for HS-DPCCH;

2> else:

3> if the IE "Multiflow time reference cell" is present:

4> indicate to lower layers that the cell and the time reference cell are in the same cell group as specified in [27];

3> else:

4> indicate to lower layers that the cell and the non-time reference cell are in the same cell group as specified in [27];

1> If there is at least one entry in DOWNLINK_SECONDARY_CELL_INFO with the IE "Multiflow cell", value of which is set to "inter-NodeB":

2> configure two MAC-ehs entities;

2> associate with the first MAC-ehs entity the serving HS-DSCH cell and all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "intra-NodeB";

2> associate with the second MAC-ehs entity all the HS-DSCH cells, entries of which in DOWNLINK_SECONDARY_CELL_INFO have the IE "Multiflow cell" set to "inter-NodeB";

Whenever the variable MULTIFLOW_STATUS is set to FALSE, the UE shall:

1> stop Multiflow operation;

1> if Timer_Reordering was configured for the receiving RLC entity:

2> configure the receiving RLC entity not to use the corresponding function;

1> if two MAC-ehs entities were configured for the inter-Node B Multiflow operation:

2> configure one MAC-ehs entity;

1> indicate to lower layers that the serving HS-DSCH cell must be used as a time reference for HS-DPCCH.

…..

The UE shall initiate the UE capability update procedure in the following situations:

1> the UE receives a UE CAPABILITY ENQUIRY message from the UTRAN;

1> while in CELL_DCH or CELL_FACH state, the UE capabilities change compared to those stored in the variable UE_CAPABILITY_TRANSFERRED, and the variable RNC_CAPABILITY_CHANGE_SUPPORT is set to TRUE.

If the UE CAPABILITY INFORMATION message is sent in response to a UE CAPABILITY ENQUIRY message, the UE shall:

1> include the IE "RRC transaction identifier"; and

1> set it to the value of "RRC transaction identifier" in the entry for the UE CAPABILITY ENQUIRY message in the table "Accepted transactions" in the variable TRANSACTIONS;

…

1> for the UE capabilities defined in REL-6 or later:

2> include the information elements associated with the capabilities included in the variable UE_CAPABILITY_REQUESTED and the variable UE_CAPABILITY_TRANSFERRED.

If the UE CAPABILITY INFORMATION message is sent because one or more of the UE capabilities change compared to those stored in the variable UE_CAPABILITY_TRANSFERRED while in connected state, the UE shall:

…

1> for the UE capabilities defined in REL-6 or later, include the information elements associated with the capabilities included in the variable UE_CAPABILITY_TRANSFERRED.

…

If the UE supports dual cell operation on adjacent or non-contiguous frequencies or in different bands, the UE shall signal a value in the "HS-DSCH physical layer category extension 2" IE.

…

If the UE supports Multiflow operation on two cells, the UE shall signal a value in the "HS-DSCH physical layer category extension 2" IE.

If the UE supports Multiflow operation on three cells, the UE shall signal a value in the "HS-DSCH physical layer category extension 4" IE.

If the UE supports Multiflow operation on four cells, the UE shall signal a value in the "HS-DSCH physical layer category extension 5" IE.

…

If the UE signals an "HS-DSCH physical layer category extension 2" of 21, it shall signal an "HS-DSCH physical layer category extension" of 9, 10, 13, 14, 15, 16, 17 or 18.

If the UE signals an "HS-DSCH physical layer category extension 2" of 22, it shall signal an "HS-DSCH physical layer category extension" of 10, 14, 16 or 18.

If the UE signals an "HS-DSCH physical layer category extension 2" of 23, it shall signal an "HS-DSCH physical layer category extension" of 13, 14, 17, 18, 19 or 20.

If the UE signals an "HS-DSCH physical layer category extension 2" of 24, it shall signal an "HS-DSCH physical layer category extension" of 14, 18 or 20.

…

If the UE supports 16QAM in the uplink, the UE shall signal a value in the "E-DCH physical layer category extension" IE.

If the UE supports Dual Cell E-DCH operation, the UE shall signal a value in the "E-DCH physical layer category extension 2" IE.

If the UE signals a value in the "E-DCH physical layer category extension 2" IE, it shall signal an "E-DCH physical layer category" of 6.

Reference

3GPP TS 25.331 clause 8.2.2.3, 8.2.2.4, 8.5.51, 8.5.71, 8.1.6.2

### 8.2.2.85.1.3 Test purpose

1. To confirm that the UE establishes radio bearer mapped to HS-DSCH, transits from CELL_FACH to CELL_DCH state, and starts simultaneous 16QAM reception over multiflow HSDPA operation (Single Frequency/Dual Cell Multiflow HSDPA for Single band) according to the received RADIO BEARER SETUP message.

2. To confirm that the UE configures the physical channels, transits from CELL_DCH to CELL_FACH, and to stop Multiflow HSDPA operation according to the received RADIO BEARER RECONFIGURATION message.

### 8.2.2.85.1.4 Method of test

Initial Condition

System Simulator:

2 cells –Cell 1/2 with Cell 1 (f1) (Serving HS-DSCH), and Cell 2 (f1) (Assisting Serving HS-DSCH cell) – One Carrier on DL Band A (Single Band SF-DC).

Tcell of Cell 2 is set to 3840 chips (1.5 slots).

UE: CELL_FACH (state 6-11) as specified in clause 7.4 of TS 34.108 [9].

Related ICS/IXIT statement(s)

- UE supports FDD

- UE category supports Multiflow HSDPA operation on two cells on one frequency (UE Category 21-24)

Test Procedure

The UE is in CELL_FACH state with data radio bearers set up. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. This message includes RAB information to configure PS domain RB on E-DCH/HSDPA (with SF-DC-HSDPA, and 16 QAM simultaneously configured for L1). SRBs are mapped to DCH/DCH. After the UE receives this message, it configures RAB accordingly and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

The SS sends UE CAPABILITY ENQUIRY on Cell 1 and Cell 2 using SRB2 mapped onto DCH. The UE shall respond to the message with UE CAPABILITY INFORMATION message. In that RRC message, it shall include the IE "*HS-DSCH physical layer category extension 2*". The SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message.

SS checks that UE sends CQI reports for Cell 1 and Cell 2.

The SS sends a RADIO BEARER RECONFIGURATION message to reconfigure the UE to CELL_FACH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | SS configures three cells. |
| 1 | | ← | RADIO BEARER RECONFIGURATION | Configuration of PS RB on E-DCH/HSDPA , using Multiflow HSDPA, and 16QAM configuration |
| 2 | | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 3 | | ← | UE CAPABILITY ENQUIRY | Use default message. SRB2 on DCH. |
| 4 | | → | UE CAPABILITY INFORMATION | |
| 5 | | ← | UE CAPABILITY INFORMATION CONFIRM | |
| 6 | | | | SS checks for 2 CQI reports at 2 ms interval with:<br>- concatenated CQI Report for Serving cell (Cell 1) and Assisting Serving cell (Cell 2). |
| 7 | | | | Void |
| 8 | | ← | RADIO BEARER RECONFIGURATION | Reconfigure the UE to CELL_FACH which deactivates Multiflow HSDPA operation |
| 9 | | → | RADIO BEARER RECONFIGURATION COMPLETE | |

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Same as default message in clause 9 in TS 34.108 with condition "Packet to CELL_DCH from CELL_FACH in PS" except the below changes:
